BRITISH MANNERS.—"The British spectators at all the durbar celebrations belonged almost exclusively to the upper and middle classes, and any one who has been to a theater where there is no pit or gallery will have had a striking instance of how undemonstrative those classes can be," says a writer in *Blackwood's* (Edinburgh). "They may admire the magnificence of a pageant, they may respect the talents and the high position of the Viceroy of India; but it takes more than this to break through their reserve and to draw forth their applause. Even the presence of the King's brother at Delhi failed to elicit any very noticeable demonstration. This peculiarity undoubtedly reduces the effectiveness of such pageants as those of the durbar ceremonials; the comparative silence has a chilling effect, and gives no chance to enthusiasm; but it is, as we have said, a national characteristic alike of the British and of the Indian, and by no means indicates such want of loyalty as a similar attitude would betoken in a crowd composed of any of the Gallic races. An incident much more regrettable, and one which it must—we fear—be confessed was equally characteristic of the British of all classes, was the loud and derisive laughter which greeted the appearance at the durbar of one of the noblest of India's princes, and which was due solely to his being arrayed in the national state dress of his race."

NOTABLE BOOKS OF THE DAY.

A VISE-LIKE GRIP.

YOUTH. By Joseph Conrad. Cloth, 5¼ x 7¼ in., 361 pp. Price, $1.50. McClure, Phillips & Co.

THE title of this book is misleading. It is a collection of three short stories, and the first is called "Youth." But of all the graceful attributes and affluent enjoyment which the word "Youth" conjures up to the unyouthful, the one brought out by the tale is the resilience which will not accept defeat. The enthusiasm of Joseph Conrad's life is the sea, and he writes of it as buoyantly and vigorously as a dolphin plays in it. The story is not of a sparkling order; the author views life with stark severity; for him it never is the jester with cap and bells.

JOSEPH CONRAD.

In "Youth," a sailor of twenty tells the story of his first voyage, as second mate, to the East. The ship was an old tub that had been laid up for ever so long. The voyage to the East was her gradual disintegration; and the pluck with which the mate saw her through countless vicissitudes and kept his eager eye on Bankok is the *motif* of the tale. The style is powerful and luminous.

The second story, "Heart of Darkness," is a tremendously weird study of a man named Kurtz, who is agent for a trading company in a vaguely indicated tropical region, doubtless African. Conrad reminds one of Poe and of Kipling in this admirable story, by a tempered brutality of touch and a dalliance with horrors that are brain-chilling. He is a master of description, and his sojourn in the undesignated tropical region is photographic in reality. There is intensity, but not rush. He tells his story not "trippingly on the tongue," but with deliberation. The listener follows the tale itself and the voice and manner of the narrator with equal enjoyment.

The third story, "The End of the Tether," is longer than the other two together. In its appeal, which is a tenderly emotional one, it stirs the heart more worthily than the undaunted pluck of "Youth" or the grisly horror of "Heart of Darkness." It deals with the indomitable courage of an old sea-captain and the dreadful night which befell him, toiling so patiently for his daughter, thousands of miles away. It is full of deep pathos.

All of Mr. Conrad's qualities are on the side of strength. He is a sailor through and through, but he has voyaged much, or at least has taken deep soundings in the ocean of life. He has a fine reserve, a manly dignity, and wins your confidence and regard for his clean, courageous force.

"Youth" is a splendid triptych—vivid, true, artistic.

ANOTHER ROMANCE OF THE FRENCH REVOLUTION.

CALVERT OF STRATHORE. By Carter Goodloe. Cloth, 5½ x 7½ in., 377 pp. Price, $1.50. Charles Scribner's Sons.

CERTAIN themes when well handled retain a perennial interest. The French Revolution is one of these, and it forms the background as well as assists materially in developing the plot of this tale, which is essentially a love-story.

The hero, young Calvert, is a direct descendant of the family of Leonard Calvert, first governor of the colony of Maryland, and of his brother Cecil Calvert, Lord Baltimore. The story opens at the close of the American war, and while some of the French nobles who followed Lafayette, Rochambeau, and Dillon, and helped win at Yorktown American independence, are being entertained by Thomas Jefferson at Monticello. Among them is the young Marquis d'Azay, who shows to Calvert the miniature likeness of his very youthful sister. The beautiful French girl makes upon the mind of the American youth an impression the depth of which he does not realize until years afterward.

When Jefferson, a little later, goes to France as representative of his country, Calvert accompanies him as a member of the embassy. Gouverneur Morris—who later succeeded Jefferson—is also of the party, and fills the post of American minister during the Reign of Terror. French life and its seething politics are graphically presented. The leading features of the Revolution are handled vividly, and in a way that shows the writer is thoroughly conversant with the affairs of that momentous period. The different points of view regarding these affairs held by Jefferson and Morris form an interesting point in the story. The idle arrogance and petty pleasures that marked that period of French society are well portrayed.

Young Calvert is made to serve as a moral foil to this corrupt background. Of course he meets again the original of the miniature, and the services he renders her and hers make up the sort of romance of which romance readers never weary—especially where a member of the old *noblesse* elects to become the wife of an untitled American gentleman.

GORKY FROM A BRITISH STANDPOINT.

MAXIM GORKY. HIS LIFE AND WRITINGS. By E. J. Dillon. Boards, 5¼ x 7¼ in., 390 pp. Price, $1.50. McClure, Phillips & Co.

THERE have been so many tentative criticisms of the work of Alexei Maximovitch Pyeshkoff, whom we know as Maxim Gorky, and so many conflicting opinions have deen expressed concerning him that an authoritative criticism of his writing is very much needed. We hoped that Dr. E. J. Dillon's book would supply this want. His familiarity with the language and his long residence in Russia should have fitted him to write understandingly about the young Russian writer. Let us confess at once that Dr. Dillon's book is a disappointment, especially when considered as a piece of literary criticism. The book is involved and diffuse. In an effort to emphasize his arguments, the author has wrapped his meaning in a swathing of words. But this is not the most vital fault of the work. He has consistently criticized what may be termed the Gorky movement from without. That is to say, his point of view is that of the thrifty Englishman who can not lose sight of the fact that here is a writer who has idealized the lawless members of society and whose sympathies are with the disorderly portion of the community. It is natural that literature of such a nature should be repugnant to a law-abiding Anglo-Saxon, and that any comprehension of Gorky's spirit of revolt should be impossible to him. To certain traits—Gorky's appreciation of nature and his powerful word-pictures, for instance—Dr. Dillon has given all credit; he appreciates Gorky as a writer; it is the spirit which animates Gorky's work, his point of view, his ethics, with which Dr. Dillon can not sympathize. So he builds up a favorable estimate with the one hand only to tear it down with the other. The truth of the matter is, that Dr. Dillon does not care for tramps, and the sight of thieves afflicted with a *weltschmertz* is irritating to him.

When a writer has force enough to achieve the almost instant popularity that Pyeshkoff achieved; when all classes of his own people vie with each other to do him honor; and when, within ten years of the publication of his first slight sketch, he is known throughout the civilized world and his translated work is a subject of literary controversy, one may be assured that here is a man whose life and work it is worth while to study, and this quite apart from the question whether his stories happen to please the individual taste of the reader.

E. J. DILLON.

Dr. Dillon has, however, studied his subject conscientiously, with the result that he has rounded out with many interesting details the bare outlines of Gorky's life, already familiar to American readers. The book ends with a bibliography of Gorky's own writings, and the critical and biographical notices which have appeared in Russia and England, as well as the English translations of his work. The American editions of "Tales from Gorky" and "Twenty-Six and One" are not mentioned, as also Miss Isabel Hapgood's translation of "Orloff and His Wife," which contains seven other tales of the Barefoot Brigade. All American biographical articles have also been ignored, which in an American edition of an English book seems a serious omission.

ZOLA'S LAST WORK.

TRUTH (VÉRITÉ). By Emile Zola. Translated by Ernest A. Vizetelly. Cloth, 5¼ x 7½ in., 596 pp. Price, $1.50. John Lane.

A BOOK of closely packed matter, great length, and terrible import is this, the latest novel from the hand of Zola. Like all his recent work, it reads less like an average novel than like a judicial record of events of most dramatic import. The human nature with which it teems, rather than the manner of presenting it, holds the reader's interest.

It is needless to outline the contents of a work of such complex character and almost unending detail. It suffices to say that while the plot is made to turn upon the murder of a little boy of Jewish extraction.

who has been brought up a Christian, and placed under the care of a Christian Brotherhood, the whole train of events laid bare and the machinery set in motion are the same with which the world became more or less acquainted during the Dreyfus trial in France. In this case, the culprit who suffers and is tried is Simon, the Jewish uncle of the murdered lad, whose devoted love for the boy and whose willingness that he should be bred a Catholic do not count at all with the infuriated anti-Jewish populace. One Marc, a schoolmaster of the Secular party, who fights in behalf of the Jew, may be intended to portray the part played by Zola himself during the Dreyfus affair.

EMILE ZOLA.

But the wholesale persecutions of all who took sides against the Clerical party, the intrigues between priests and titled ladies, the machinations even of grandmothers to break up families and divide husband and wife in order to get control of children where any difference of religious opinion existed—all this seems carried to a point beyond belief by any one looking upon the situation from an American viewpoint. Were Zola not known as a man who stood for his conception of truth, the reader would rate most of the statements here made as the ebullitions of a crazy bigot and let them go at that.

It is hard to look upon enlightened France, the earliest and foremost factor in modern civilization for above a thousand years, as raving mad with bigotry, and upon its priesthood, even in highest places, as nothing more than banded cutthroats and assassins. Yet this is precisely what M. Zola depicts in baldest, barest language. It is even laid bare that the innocent lad was strangled by the hands of a priest.

Closing the book, one can not but wonder what good it will serve. It is an awesome thing to rekindle the flame of retaliatory bigotry at this late day. It seems plain, moreover, that the Dreyfus case was a combination of race hatred, politics, avarice, caste—anything rather than religious or theological passions. One thing M. Zola makes painfully clear, the cringing fear, innate timidity, which long persecution has bred in the soul of the Continental Jew—a fear which made many Jews act against their own race during that terrible crisis.

If there is truth in the "New-Thought" doctrine which holds that *mind* controls all forces, and that a combination of mental forces set against any individual can kill him without the intervention of hands, then it needs no theory of leaking gas to account for Zola's death. The feeling excited by this book might well have killed him.

NEW ENGLAND GHOSTS.

THE WIND IN THE ROSE-BUSH, AND OTHER TALES OF THE SUPERNATURAL. By Mary E. Wilkins. Cloth, 5½ x 7½ in., 237 pp. Price, $1.50. Doubleday, Page & Co.

IT is a long time since Mrs. Wilkins-Freeman won her spurs as a writer of fiction. Yet achievement seems only to whet her ambition for new worlds to conquer, and the latest realm entered is that of ghostland. Previously to this, her most distinctly new adventure was in the line of the historic novel, and here certainly her most ardent admirers might have wished she had left the field untried. Her entrance therein only drew attention to the fact that she could but ill compete with those who possessed more temperamental dash and historic imagination.

MARY E. WILKINS.

Her present venture, however, comes much nearer success. Mrs. Freeman's ghosts were all New Englanders when in the flesh, and readers who hope to retain full identity and traits of distinct personality after death will be likely to find solace in this volume; for the ghosts or astrals here are true New Englanders still. They are very circumspect, well-behaved ghosts, with a due sense of that restraint which holds them from carrying things too far—in short, they are artistic, both in conception and treatment, but within the same limited scope of outlook and action that mark all the author's New Englanders in the flesh. Nobody, probably, will dispute that Mrs. Freeman's people are real enough types of New England humanity as far as they go, or dispute that such types may still be found there, especially among her own Berkshire hills. What they dispute is that these types are largely representative, or as much so as they were three-quarters of a century ago, or that they represent at any period the depth, the largeness, the *seer* quality of the New England soul. Had New England at any period been duly represented by the queer quirks of personality, turns of thought, and odd crotchets that compose the men and women of Mrs. Freeman's creation, how could such men and women have founded the institutions that leave their mark upon the most permanent things in America to-day?

Mrs. Freeman is a literary artist, but not one broad or deep or psychic enough to fill the place claimed for her by some admirers. The present volume is a quite fair example of her ability. The ghosts are artistically true to their old habitat and environment, but when one parts with them it is with the feeling that they are a bit limited, stringent, unsatisfying, altho sufficiently "creepy."

CHARACTERS THAT FAIL TO CONVINCE.

THE TURQUOISE CUP. By Arthur Cosslett Smith. Cloth, 5 x 8 in., 289 pp. Price, $1.25. Charles Scribner's Sons.

HOW often it happens that after an author has achieved a well-deserved success his next work is an anti-climax. How many times we say to ourselves, "Here is a young man or a young woman whose work should be watched," and then, instead of better work, we find only trivial writing that gives the appearance of haste to take advantage of the "boom" in the market.

It would not be fair to Mr. Arthur Cosslett Smith to say that the two stories in this new book bear the mark of haste, for, on the contrary, their workmanship exhibits grace and conscientious care; but they do not deserve to be compared with the author's earlier book, "The Monk and the Dancer." The stories in that volume were also written gracefully, but the author occasionally struck a deeper note. The stories rang true; one felt that they were written because the author had something to say.

ARTHUR COSSLETT SMITH.

This later book has a touch of self-consciousness, and tho well and simply written and full of color it does not carry conviction.

We are all like children, and we must for the moment believe the characters of the tales we read are real people, if we are to get much pleasure from the reading. Once convince a child that there are no fairies and it will be long before fairy stories have their old charm. Mr. Arthur Cosslett Smith's bishop is a charming old fellow; his hero is as determined in pursuit of his lady as possible; their only fault is that we don't believe in them—they are, after all, only literature, and we know it.

AN OLD-FASHIONED DETECTIVE STORY.

THE FILIGREE BALL. By Anna Katherine Green. Illustrated by C. M. Relyea. Cloth, 5 x 7½ in., 418 pp. Price, $1.50. Bobbs, Merrill Company.

A DETECTIVE story of the old and ever popular style. There is a palatial house in Washington encompassed with an atmosphere of mystery and tragedy. In its gloomy interior the young woman who owns it takes a notion to have her marriage ceremony performed. Another tragedy is enacted, as mysterious as its predecessors, while the guests are waiting for the ceremony; and a few weeks later still the bride herself is found dead, in the same place, late at night. How was she killed? That is for you to discover. At first it looks like suicide, then it looks like murder, and you follow stealthily on the trail of first one man, then another, and then of a woman; but if you know the author well, you never feel sure of anything except this, that all your suspicions are certain in the end to prove false and the solution will be unexpected when it comes.

There are all sorts of improbable details, which you scorn to call in question if you were born to read detective stories, and are not also impelled by fate to write reviews of them with analytic pen. It is the sort of story you pore breathlessly over until late at night, then dream bad dreams about, and then remand to your subjective mind, which, alas! never forgets anything. But it is not a story of any psychological value. The "clews" are everything and the character development is nothing. Once you unravel the coil, the book has no further value or interest for you.

The filigree ball is not a dance, but a gold trinket worn as a watch-charm, and you read 309 pages before you come across any mention of it otherwise than in the title. Then it proves to be nothing but a minute magnifying-glass. It contains no secret, tho you are led to suppose it is of inestimable value. In fact, this filigree ball, which the author treats as the heart of the mystery, even taking her title from it, has no real importance and does not suggest, except very remotely, where the revelation is to be found. Yet the hero, as soon as he secures it, guesses at once where the revelation is to be found; but it is pure guessing—"inspiration" Mrs. Rohlfs calls it—not a discovery to which he is led by close analysis of facts. The story, in other words, is fatally weak at the culminating point. Link by link, the evidence is pieced together into a chain, but the last and most essential link is wholly lacking. All the same, one is so interested that he is not apt to notice the defect unless he goes back a second time over the plot to examine it analytically.

$5,000 for $510!

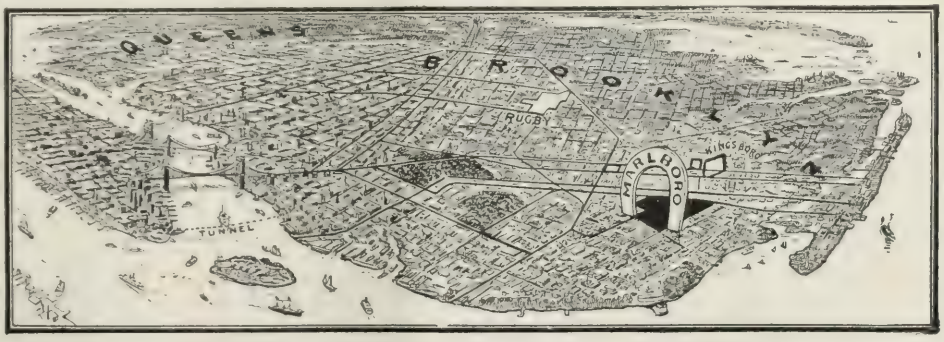
WE put the above startling headline at the top of our advertisement for two purposes—one, to induce every reader of THE LITERARY DIGEST to at least read the advertisement through. Second, in the hope that at least half of them will let us tell our story and endeavor to prove that we have an investment in New York real estate which will return to you several thousand dollars, perhaps as much as $5,000 for each $500 invested, and this $500 can be paid at the rate of **$6 a month.**

We have been advertising New York lots for three years past, and we have sold thousands to subscribers of THE LITERARY DIGEST, *The Saturday Evening Post*, *Christian Herald*, *Outlook*, *Collier's Weekly*, *Leslie's Weekly*, *etc.*, *etc.*, all of whom believe what we say or you may rest assured that these high-class publications would not continue printing our advertisements.

There are hundreds of THE LITERARY DIGEST readers who *could* invest and *would* invest if the Secretary of the United States Treasury made the above statement instead of a private corporation, and yet the private corporation in this instance may be just as capable and just as reliable as the Secretary of the Treasury. We know we have the greatest proposition in real estate ever offered in the history of cities, and our difficulty is not to convince you, but to get the chance of presenting the *facts* to you.

$500 invested for a child may put him through college; $500 invested for a young married couple will go far toward making them independent in their old years; $500 invested by a young man or a young woman will, in our opinion, pay them better than any life insurance they can possibly take out, and this $500 can be invested at $6 a month.

Direct Electric Elevated Train Service from Business Center of New York



Running Time only 35 Minutes

FARE 5 Cents

Bird's-eye View of Greater New York, showing location of Marlboro.

Your Last Chance to Buy at Present Prices

Marlboro Lots will advance 10 per cent. May 1st

For three years we have advertised our remarkable offer "$10 secures a $510 lot in Greater New York," and the result has been sales amounting to $4,660,000 to 5,500 investors in New York City and throughout the country.

With the advent of Spring the greatest activity is manifest at all of our properties. Scores of teams and hundreds of workmen are busy macadamizing streets, making granolithic walks, laying water mains, etc., and an unprecedented demand for homes is assured this year. Hundreds of persons who purchased through the mails have been here to inspect their holdings, and 75 per cent. of those who were in a financial position to do so at least doubled their original purchase. Could there be a better indorsement than this?

Remember, our offer also carries a free deed in case of death, a non-forfeiture agreement, a free round trip to New York (east of Chicago, or like distance), the highest class of park-like improvements free, **your money back with 6 per cent. interest if not found as represented.** What more can we do? Send us your name to-day for full particulars. Or, should you feel so disposed, it may be well to get best choice by sending us first payment, $10. **upon the distinct understanding that if you are not entirely satisfied with our selection, we will return you the $10.**

CURRENT POETRY.

Life the Lover.

By E. H. SOTHERN.

Could we know—ah, could we know
Whether what we might have done
Ever will have chance to grow
In the realms beyond the sun,
Then the race were lost, and won—
Lost as winter yields to spring—
Learned from limping how to run,
Learned from lisping how to sing.

Life the light and Flesh the lamp,
Flame, or lantern, which is "I"—
Earth which doth the spirit cramp,
Spirit which the Earth doth fly?
Word of hate and lover's sigh
Pass they when their sound is spent?
Shall *we* be mere memory,
Or for sorrow or content?

This may be the journey's end—
Life and Death and passing man,
Life the lover, Death the friend,

WITH YOUR PERMISSION, we are going to send you **Complimentary** one of the booklets described below.

This is our method of advertising Ex-Speaker Reed's famous and unique ten-volume library,

MODERN ELOQUENCE

All we ask is that you read the first page of the booklet, and we know you will read what follows.

We believe that the reading of any one of the 500 brilliant speeches preserved in MODERN ELOQUENCE will create a desire to own the complete library, hence our decision to send these booklets free to readers of LITERARY DIGEST.

Booklet No. 348

MERCHANTS AND MINISTERS
By HENRY WARD BEECHER

THE BENCH AND THE BAR
By JOSEPH HODGES CHOATE

THE MEDICAL PROFESSION
By SAMUEL BALDWIN WARD

INTERNATIONAL ARBITRATION
By WILLIAM MAXWELL EVARTS

Here are topics that are timely and vital to you no matter what your occupation may be.

It is not necessary now to allude to the eloquence and intellect of Beecher. Never before was his theory that the church and the store have a common interest in the foundation of morality so applicable to conditions.

Ambassador Choate was a lawyer before he was a diplomat, and whatever he has to say of his profession is replete with humor and truth.

Dr. Ward's opinions of physicians and their practice are also tinged with levity while containing at the same time much food for thought.

As for William M. Evarts, no man stood higher as an exponent of law and few excelled him in beauty of expression.

There is instruction as well as entertainment in these speeches.

Booklet No. 349

NEW ENGLAND WEATHER
By MARK TWAIN

A BLEND OF CAVALIER AND PURITAN
By HENRY C. CALDWELL

CAUSES OF UNPOPULARITY
By HEMAN LINCOLN WAYLAND

First of all these speeches are humorous, full of gentle satire and withal founded on good, solid truth.

Mark Twain has long since outlived the need for eulogy and he never said funnier things than these about New England weather.

Judge Caldwell presents the proposition that our sturdy Americanism is an outgrowth of those conflicting elements, Puritanism and Cavalierism.

Dr. Wayland proves, in delightful fashion, that New Englanders have enemies only because they are so virtuous.

The tone of all three speeches is one of originality. They are tonic and refreshing. But they are not trifles, for all that. The most casual thoughts of such men always contain something new and worth knowing.

Booklet No. 346

FREEMASONRY, ANCIENT, MODERN
By THE EARL OF CARNARVON

Universal Fraternity of Masonry
By CHARLES WHITLOCK MOORE

SPIRIT OF ODDFELLOWSHIP
By ALFRED S. PINKERTON

THE UNITY OF HUMAN NATURE
By JOHN JAY CHAPMAN

Are you a Mason? Are you an Oddfellow? The chances are that you belong to one of these or to another order, perhaps to a Greek Letter Fraternity. How many know, fully, however, the history, the meaning, and the animating spirit of these institutions?

These four brief papers are illuminating. The Earl of Carnarvon's was delivered when the present King Edward was installed as Grand Master of England, and it treats of the antiquity and universality of the Masonic order.

The others, in turn, concern the history and extent of Masonic influence, the origin and growth of Oddfellowship—a distinctively American institution—and the natural unity which binds mankind together as one family.

Even if you are not a secret society man, there is immense interest and instruction in the booklet.

Booklet No. 340

ACRES OF DIAMONDS
By RUSSELL HERRMAN CONWELL

The mammoth temple wherein Dr. Conwell preaches is filled to overflowing by thousands at every service, and wherever he delivers his great lecture, "Acres of Diamonds," in the United States, or Canada, or England, thousands rush to hear him. He must possess some marvelous secret of success.

His world-famous lecture has started many men and women on the road to success, as a consequence of hearing or reading it; and by "many" is not meant hundreds, but thousands. He has mingled, during his long life, with the mighty as well as with the lowly and unfortunate, and his every word breathes the spirit of experience and practicability.

This masterpiece of Dr. Conwell certainly is unique, instructive and entertaining, and no man who desires to succeed in life should let pass by this opportunity to read the whole lecture free of charge.

Booklet No. 341

WIT AND HUMOR
By EDWIN PERCY WHIPPLE

Carlyle said that no man who laughs heartily can be wholly bad. In this paper Mr. Whipple shows what a tremendous influence the causes of laughter have had in uplifting mankind.

With extraordinary acumen he distinguishes between wit and humor and discusses their relation to each other and their respective value in the destruction of pretense and ignorance.

But the chief interest of the lecture lies in its wealth of anecdote and illustrations. The allusions are historic and literary, and among the latter appear such names as Swift, Byron, Pope, Gay, Scott and Dickens, to mention only a few. And the beauty of these allusions is that they are not hackneyed or already familiar.

Please indicate by NUMBER your choice of Booklets. It will be mailed you promptly.

How Kuloskap Named the Animals.

By CHARLES GODFREY LELAND.

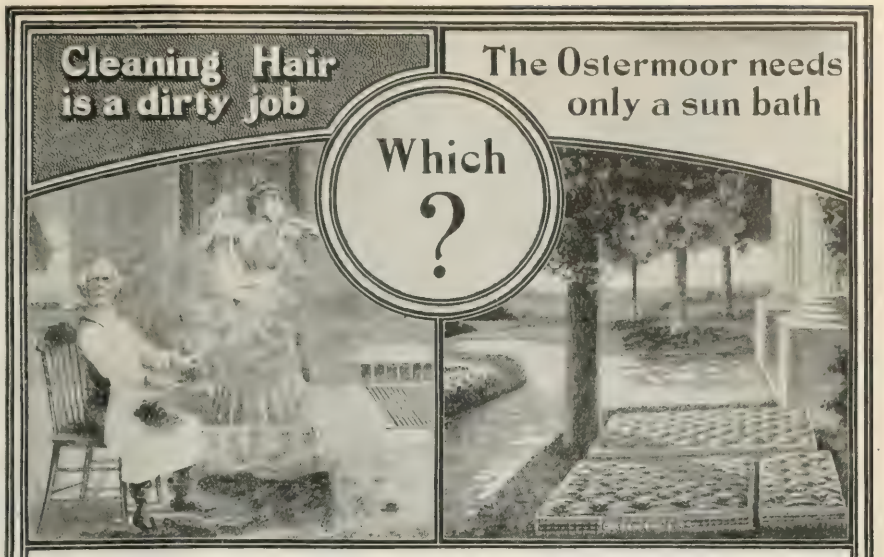
[The recent death of Mr. Leland gives an added interest to the following Passamaquoddy legend from his latest work, "Kulóskap the Master," of which he is joint author with Prof. J. D. Prince. From the introduction to the book we quote the following:

"Very few persons are aware that there has perished, or is rapidly perishing, among the Red Indians of North America, far more poetry than was ever written by all the white inhabitants, and that this native verse is often of a very high order. For the Indian sagas, or legends, or traditions were, in fact, all songs; as is the case to this day with similar lore in Italy."]

This is an ancient tale of the Lord,
Told 'mid the tales of the spirit time,
How the Master of Beasts and Men
Was born in the Sunrise land,
The land of the Wabanaki;
Tho other traditions tell
That he came from across the ocean
In a great stone canoe,
A barque which was all of granite,
Covered with trees for masts.
When the great Lord of All,
The Chief of Beasts and Men,
Descended from this ark,
He went into the land
Of the Wabanaki,
The children of the Light;
And calling all the Beasts
Gave unto each a name:
Unto the Bear, Mūūin;
And as he gave it, asked:

"Oh Bear, what would'st thou do,
If thou should'st meet a man?"
To which Mūūin replied
Simply and honestly:
"I fear him and should run."
"Well spoken," said the Lord,
"Man should be feared by all."

Now at that time, Mi'ko,
The Squirrel, was as great,
Or, some say, far more great
Than even the Northern Bear;
So the Lord Kulóskap
Took Mi'ko 'neath his hands,
And softly smoothed him down;
And as he felt the touch



HAIR MATTRESS—A Tick Stuffed

Every hair mattress is a tick stuffed with animal hair, often swarming with disease germs. Our advertising has driven the old-line makers to claim "sterilized" hair, which is absurd; for the only process that would be effective destroys the value of the hair—makes it brittle and lifeless. The hair-stuffed tick gets lumpy—has to be "made over" every three or four years, at a greater expense each time.

THE "OSTERMOOR"—Built, Not Stuffed

Each Ostermoor mattress is built—not stuffed. Hand-laid sheets of snowy whiteness, each the full size, are carefully compressed into the tick. The Ostermoor Patent Elastic Felt is purity itself, germ-free and vermin-proof. Ostermoor mattresses *cannot* get lumpy; never need renewing; an occasional sun-bath is all they require. The tick can be taken off and washed whenever soiled.

The Ostermoor Patent Elastic Felt Mattress, $15.

has met with success so great that dozens of would-be rivals have flattered themselves and us by unsuccessful attempts to imitate it. Do not be fooled! *There is but one* Ostermoor! It is not FELT if it is not an OSTERMOOR. Our name and guarantee on the end of every genuine mattress.

SEND FOR OUR HANDSOME 96-PAGE BOOK FREE

whether you want a mattress or not. There is no other mattress as good as the "Ostermoor" and we want you to know why—*we challenge comparison.* Our book, "The Test of Time," gives testimonials from such men as Rev. Dr. MacArthur and George H. Daniels, whom you *must* believe—*even if you think* WE *exaggerate.* It illustrates the various uses to which the Patent Elastic Felt is put—Pillows, Window Seat Cushions, Boat Cushions and Church Cushions, etc.

Sleep On It Thirty Nights Free

and if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability and comfort of any $50 hair mattress ever made, you can get your money back by return mail—"no questions asked."

Mi'ko grew less and less,
And dwindled until he
Was what we see him now.
Howbeit in later days,
Mi'ko was Kulóskap's dog,
And, when the Master willed,
He oft grew large again
Touched by the Master's hand,
And slew his fiercest foes.
But, being asked what he
Would do if chased by Man,
Mi'ko at once exclaimed:
"I would climb up a tree
As fast as legs could run."
"Well answered," said the Lord.
"And therefore, I ordain
That from this day henceforth
Thou and thy kind at large
Shall ever dwell in trees."

The Moose was standing by,
Intently looking on,
With great, soft, staring eyes,
Attending to it all
With deepest interest.
Calling them Kchi Mūs,
Big Moose, the Master said:
"But say what would'st thou do
If thou should'st meet with Man?"
"In faith," replied Kchi Mūs,
"I'd canter through the woods
Fast as my legs would fly."
"Well spoken," said the god,
"So shalt thou ever live
In shade and forests wild."

The Beaver being asked
What he would do, replied
That he would seek a stream
Ere he would face mankind.
So the great Lord perceived
That of all creatures born
Who walked upon the earth
The first and best was Man.

Chopin's Nocturnes.

By JOHN TODHUNTER.

I.

MUSIC AND MOONLIGHT.

Shut out the world! No sense of its mad care,
Its din and sordid strife, mar night's rich gloom,
Or with a memory trouble the delicate air
Of this one room, your own—of this one room
Your heart has made its treasury of things rare.

There sigh your gathered roses, red and white
And by yon casement, in one symphony
Of odors breathed on the warm air of night,
Verbena, and mignonette, and rosemary,
And myrtle, prelude some delicious rite.
No needs for candles when voluptuous June
Makes night one long twilight of stars and clouds,
And o'er your garden trees the royal moon
Pales with her splendor her bright courtier crowds,
And all things tremble, as to a Nocturne's tune.

Ah, give their passion utterance, key by key!
To your proud roses oft you have played alone;
To-night for no proud roses but for me
You shall set music on her silver throne,
Tho every rose should fade for jealousy.

They shall not fade; but from old Omar's tomb
Faintly their Persian sisters' breath divine
Shall, as you play, float to me through the gloom,
And East and West, as in one mystic wine,
Mingle their spirits in music and perfume.

All Nations Use

The Oldsmobile

The sun never sets on this world standard Runabout—"*The Best Thing on Wheels.*" Its strong, simple and practical construction has made it the best known Automobile among all civilized nations of the world. Its working mechanism is so free from complications that no technical training is necessary to understand it. II.

THE NOCTURNES.

The music wakes, and like a potent rime
  Charms me away to a dim land that lies
Beyond the churlish insults of gray Time,
  And in my ear slow-rippling melodies
    Whisper their legend of that golden clime.

There Love's glad child, Romance, pines not away,
  A frail flower withering in the winds of morn,
And many a dream entombed in earth's cold clay
  In that enchanted realm awakes reborn,
    The hours are kind and Beauty grows not gray.

There the wild demons that in us rave and sigh,
  Pride, Love, Grief, Joy, Despair, and Melancholy,
Robed for their parts in life's high tragedy,
  Like stately knights and damsels moving slowly
    To music, pass in sumptuous pageant by.

Now in the land of lakes or broad lagunes,
  By glimmering waters, lovers meet and part
In moonlit groves, or float where sunset swoons
  O'er cities like some Venice of the heart,
    Where all the air is full of languorous tunes.

And now perchance the dainty theme suggests
  An idyll where, with a sad smile, Watteau,
'Mong gallants trim and ladies with white breasts,
  Paints Love, in his fantastic Fontainebleau,
    Bandying with Pleasure melancholy jests.

Anon, deep luxury of sorrow—chords
  Of gloom, grave marches that in dirges die!
To what stern gods, passion's calm overlords,
  What magian race chants a sad litany?
    What serene ecstasy that plaint rewards?

III.

No more! Cease now, ere the moon sink away
  Behind those elms—ere sadness 'gin to creep
About the world's heart as the east grows gray,
  Troubling the vast solemnity of sleep,
    And we must face the light of common day.

—In March *Fortnightly Review* (London).

A Jig.

By PAUL LAURENCE DUNBAR.

My Truth.

By Edwin Latham Quarles.

God's truth is in the mystery of things,
And power is in the frailness He has wrought:
So feeling hearts have songs of holiest thought
When gentlest touches come upon the strings.
The purple hour of vesper-worship brings
Soul-flights less high than flowering meads have brought;
And in the world no surpliced one has taught
What hearts may learn from birds' low carolings.
God lives in all the fairness He has made,
And holy are the frailties of His hand;
And I am wise when I have full obeyed
The promptings I can little understand;
And I am strong when I have wept and prayed
And loved the weakness of a woman's hand.

—In March *Smart Set*.

PERSONALS.

He Knew.—A good story is told of the way in which Nathaniel Hawthorne, when he was consul at Liverpool, tested a Yankee boy. The boy, says *The Youth's Companion*, had gone to the consul's office one day to beg for passage back to his home. He had gone abroad to seek his fortune, and, not finding it, had become almost penniless.

He told a clear story, but the clerk who heard it doubted its truth.

"You're not an American," he said to the boy; but the applicant for a passage to America persisted in waiting at the office until he saw Hawthorne himself.

At last the consul appeared, gave a quick glance at the boy and began to question him.

"You want a passage to America?" he asked.

"Yes, sir!" said the boy, eagerly.

"And you say you're an American?"

"Yes, sir."

"In what part of America were you born?"

"The United States, sir."

"What State?"

"New Hampshire, sir."

"What town?"

"Exeter, sir."

Hawthorne waited a moment, and then bent toward the boy.

"Who sold the best apples in your town?" he asked.

The boy's eyes shone, and the homesick longing in them deepened.

"Skim-milk Folsom, sir!" he cried.

"It's all right," said Hawthorne to his clerk. "Give him his passage." And he shook the boy's hand and bade him Godspeed on his homeward way with much heartiness.

A Contrast Between Roosevelt and McKinley.—President Roosevelt seems, in many respects, the antithesis of President McKinley according to *Leslie's Weekly*.

One was born of aristocratic blood and amid surroundings of wealth and comfort. McKinley was born in poverty and was the son of toil and patient endeavor. Roosevelt was raised in a literary atmosphere; McKinley in the workshop and the law office. The former was the scholar in politics; the latter the practical exponent of the Ohio idea. Roosevelt has served many years in appointive offices; McKinley served in places to which he was called by the suffrages of his fellow citizens. The one is impulsive, eager, quick, and

MEAD CYCLE CO. Dept. 62G, Chicago.

strenuous; McKinley was slow, cautious, hesitant, always feeling the public pulse. Roosevelt has led public thought; McKinley led by following public opinion. Great as is the dissimilarity, both had rare elements of leadership, and Roosevelt in a day has sprung into the notice of the world and become the topic of discussion and the subject of praise in both hemispheres. It was years before McKinley attained this distinction; in fact, the real estimate of his statesmanlike qualities was only made when death marked him for its own.

Longfellow's Early Romance.—Among the hitherto unpublished letters of Longfellow, which appear in *Harper's Magazine* (April), there are two that throw some light on his youthful romance and on the rather stilted epistolary style of those days. One of the letters was written to Judge Potter by Mr. Longfellow at the time of his engagement:

BOWDOIN COLLEGE, September 26, 1830.

Dear Sir: I regretted that I had not the opportunity of conversing with you before leaving town on Wednesday morning, but the hurry of departure rendered it impossible. I wished to express the grateful acknowledgment I owe you, for the confidence you have reposed in me in placing in my hands the happiness of a daughter, and in part your own. I most ardently hope, my dear sir, that you may never have the slightest occasion to think that your confidence has been misplaced. I certainly believe you never will have: and this belief is founded upon the attachment I feel for Mary, in whom I find the inestimable virtues of a pure heart and guileless disposition—qualities which not only excite an ardent affection, but which tend to make it as durable as it is ardent.

I think I have formed a just estimate of the excellence of Mary's character. I can say to your ear, what I would not often say to hers—that I have never seen a woman in whom every look, and word, and action seemed to proceed from so gentle and innocent a spirit. Indeed, how much she possesses of all we most admire in the female character!

On this account I esteem myself highly privileged beyond the common lot in having engaged her affection and secured your approval. I hope to merit both by attention and tenderness to her, and promise myself a life of happiness in the social intercourse of your fireside and the domestic quiet of my own.

I am, dear sir, most respectfully and affectionately yours, HENRY W. LONGFELLOW.

Barnum as a Practical Joker.—At a meeting of Universalist clergymen, to which denomination Barnum belonged, he was called upon for a few remarks. He was always ready, says *The Saturday Evening Post*, and at the conclusion he stated that at the United States Mint in Philadelphia brand-new quarters could be bought for a short time at twelve and thirteen cents apiece. At the close of the meeting an old gentleman called him aside and said:

"Mr. Barnum, I am opposed to all forms of spec-

"Nothing at all; but tell me how you expect to make a profit?"

"If the quarters cost me only twelve and thirteen cents, why, I can readily sell them again at par, can I not?"

"Certainly," replied Barnum without a change of countenance, "but if you pay twelve and thirteen cents—that is twelve plus thirteen, wherein lies the profit?"

On another occasion Barnum notified the dealer from whom he bought a large amount of supplies that half the pepper he sent him was peas. The dealer indignantly denied the charge, and quite a warm correspondence followed, it being finally ended by Barnum, who inquired whether half the letters in the word "pepper" were not p's.

In his fine mansion at Bridgeport was a beautifully furnished apartment which was called the "Carey Room," it being set apart for the sweet poetesses, Alice and Phœbe Carey, whenever they visited Bridgeport. Barnum and his family were very fond of those gifted writers, as were all who knew them.

"Alice was the more thoughtful," said he, "while Phœbe was always bubbling over with good spirits and wit. I never knew a brighter woman. One day I was taking her and some friends through my museum. At the head of the stairs was the cage containing 'the Happy Family,' which included owls, cats, mice, serpents, and other creatures generally mortal enemies, but all living in perfect harmony, mainly because we kept them so stuffed with food that they had no temptation to prey upon one another. The cage stood directly at the head of the stairs, and just as we reached the top a big serpent stretched its head toward Phœbe. Forgetting the glass thickness that separated them, she was so startled that she uttered a scream, and would have fallen backward down the steps had I not caught her. Looking up to me she said: 'Thank you, Mr. Barnum; but remember that I am not the first woman that the serpent has caused to fall.'"

MORE OR LESS PUNGENT.

There Was a Difference.—SOCKSON BUSKIN: "How did you like my Hamlet?"

OLD STAGER: "Oh, it was your Hamlet, was it? Well, I did not recognize it as Shakespeare's."—*Brooklyn Life.*

Irishman." "Faith, thin, we're both related to it," was the ready retort.—London *Tit-Bits.*

Theory and Practise. The pupils were being examined on the subject of personal hygiene. A boy was asked, "What have you to do in order to keep your teeth sound and white?"

"Clean them," was the prompt reply.

"When ought you to clean them?"

"Morning, noon, and night."

"What are they to be cleaned with?"

"With a toothbrush."

"Very good; have you a toothbrush?"

"No, sir."

"Has your father a toothbrush?"

"No, sir."

"Has your mother a toothbrush?"

"No, sir."

"But how do you know about the use of toothbrushes?"

"We sell them, sir."—London *Tit-Bits.*

The Vacation.—HUSBAND: "Where do you want to go on a vacation?"

WIFE: "Oh, anywhere that's expensive and restless.—*Life.*"

Half and Half.—SMART ALECK: "Once upon a time there were three little children. Half of them were boys an'——"

DUMB DELIA: "Why, Aleck! How could there be one and a half girls?"

SMART ALECK: "There weren't. The other half was boys, too."—London *Tit-Bits.*

"Truth."—

The "naked truth" goes forth undressed;
'Tis shockingly bad form.
The "plain truth" is too plain, you see,
The smart set to adorn.

"Unvarnished truth" must polish up,
That through it we may see.
The "gospel truth" is now a myth,
And not a mystery.
The "simple truth" is simple quite,
Has no tone, no society
Is at a loss for brands of truth
It may tell with propriety.

—MOLLIE BOURKE (Godfrey) in *Life.*

New to the Road.—ELDERLY DAME (in Subway): "Is this a Harvard Square car?"

NEW CONDUCTOR: "No, mum; dis is an ee—lectric car."—*Harvard Lampoon.*

THE BOARDER: "Either half will do, thank you, Mrs. Hungerford."—*Puck.*

Not Reliable.—THE DAUGHTER: "Jack

Rev. HENRY VAN DYKE D.D., says:

"The Temple Bible is beautiful in form and well edited. I think that there is a great advantage in reading the Scriptures without the verse-divisions. It helps to remind us that the primary object with which they were given was not to supply texts, but to guide, console and enlighten life."

Rev. FLOYD W. TOMPKINS says:

"I hardly know of any other edition that can take the place of the Temple Bible. The notes alone are worth a great deal . . . and are very suggestive. Nothing can equal the advantage of having the Bible in this form. It can be studied book by book; it can be carried on a journey; its literary merit can be appreciated; and, above all, its spiritual message received."

THE TEMPLE BIBLE

Including a volume, "An Introduction to the Study of the Scriptures."

IN 25 VOLUMES, 4 x 5 INCHES

Introduction and Notes by a Distinguished Bible Scholar in Each Volume.

SIX ADDITIONAL VOLUMES, INCLUDING THE APOCRYPHA, WILL ALSO BE ISSUED.

Cloth, 40 cents; limp leather, 60 cents a volume.
Post-paid, 3 cents per volume extra :: :: ::

Rev. FRANCIS E. CLARK, President of the United Society of Christian Endeavor, says:

"Among all the many editions of the Holy Scriptures in my library, of many languages and versions, I have none that is so satisfactory to the eye, so convenient to the hand, and so helpful for study, as well as for devotional reading, as the Temple Bible. The Biblical references in English Literature is a new and very helpful feature. I congratulate you heartily on the success that the Temple Bible has already achieved."

promised that, if I accepted him, he would mend his ways."

THE MOTHER: "Humph! I haven't much faith in this repairing done while you wait."—*Brooklyn Life.*

"Raven Mad."—MISS DE BUTANTE: "Was Poe really crazy?"

MR. CHARLY HORSE: "Certainly; have you never heard of Poe's raven?"—*Harvard Lampoon.*

Plain Talk.—MISERLY TRAVELER: "Be careful with that trunk, you vagabond! I wouldn't have it fall for ten shillings."

PORTER: "I doubt not; but a shilling in time might save nine."—*Puck.*

Following His Advice.—"I want your advice, Mr. Prosie," said the churchwarden to the vicar.

"Yes, dear friend," replied the reverend gentleman; "and on what subject?"

"I've taken to playing golf," explained the other, "and I—er—I find it difficult to restrain—er——"

"Ah, I see what you mean," said the vicar; "bad language."

"Exactly," replied the pillar of the church.

"Well, how would it be to put a stone in your pocket every time you found yourself using a wrong word, just as a reminder, you know?"

"The very thing," exclaimed the churchwarden. "Thank you so much!" And so they parted.

A few days later the worthy cleric was passing along the road which led to the links, when he met an individual whose clothes stuck out all over with great knobby lumps.

"Gracious, me, Mr. Bagshawe," he cried, as the object approached nearer, "is that really you?"

"Yes, it's me," grunted the voice of his warden.

"Why, you don't mean—surely all those are not the result of my suggestion?" continued the horrified parson, gazing at the tell-tale bulges.

"These!" snorted the other, contemptuously; "why, these are only the 'dashits.' The others are coming along on a wheelbarrow."—London *Tit-Bits.*

A REMARKABLE BOOK

The Trail of the Grand Seigneur

By OLIN L. LYMAN

ILLUSTRATED IN COLORS

THE scenes of this fine story centre about Sacket's Harbor on Lake Ontario and Kingston in Canada, where some not well known but very stirring events occurred during the early part of the century. Nature had done so much to make the region romantic that it attracted the French Refugees of noble lineage who were driven from France by the Reign of Terror, and who dreamed of building on the beautiful shores of the inland sea a new and more beautiful Paris than the one they had left behind. Mr. Lyman, with rare genius, has woven these romantic conditions into a story which is at once historically valuable and replete with the sort of entertainment that novel readers seek.

Cloth, Richly Bound, $1.50

New Amsterdam Book Co.
156 Fifth Avenue NEW YORK

Six Per Cent. Guaranteed

The Coal River Coal and Land Co., Charleston, W. Va., offers a limited amount of its certificates for sale at $50.00 per share. This Company owns coal lands which are leased to operators who pay rentals based on production, the minimum amounting to more than nine per cent. on the capital stock ($100,000). A Trust Company guarantees at least six per cent. dividends to shareholders. For booklet and map, please write

IN YOUR HOME

This very day you need the Angle Lamp. You need it because it is more brilliant and more economical, and because it is easier to handle than the light you use now, no matter what it is. If that isn't strong enough we will take all the chance of shipping you a lamp and refund your money if you don't find it exactly as represented. If you could conceive of the beauty and grandeur of its lights, its simplicity, and the entire absence of the various faults that cause dissatisfaction in other systems, you would marvel at yourself for having been without it so long. Now that the days are getting longer it is just the time to have a light in your house that you wouldn't know was there, so far as care goes—that just went on and did its work quietly without making any fuss. If you let the matter lay over until Fall you will be out just four months of comfort. The comparatively little heat given by the Angle Lamp makes it a luxury during the warm weather. It is handled like gas, being lighted and extinguished in exactly the same way, and can be left turned low in the room for any length of time without odor or any danger of explosion. **In Equipping Your Home** don't fail to learn about the Angle Lamp. It is the ideal home light and is used by some of the most prominent millionaires and representative citizens of not only this country but of the whole world. They use it because it is good. Thousands of others use it because it is good and economical too.

Send for our Catalogue W, and trade off your trouble for an Angle Lamp. It is something you **need.**

NERVOUSNESS

Exhausted or Debilitated Nerve Force from any Cause

Cured by.... **WINCHESTER'S SPECIFIC PILL.**

It contains no Mercury, Iron, Cantharides, or any injurious ingredient whatever

This Pill is purely vegetable, has been tested and prescribed by physicians, and has proven to be the best, safest and most effective treatment known to medical science for restoring Vitality, no matter how originally caused. Our remedies are the best of their kind, and contain only the best and purest ingredients that money can buy and science produce: therefore we cannot offer free samples.

Price, ONE DOLLAR Per Box, by Sealed Mail.

No Humbug or Treatment Scheme.

PERSONAL OPINIONS: Dear Sirs: I have used a bottle of your Hypophosphites of Manganese for liver and kidney complaints in my own person and received much benefit, so I will enclose five dollars and will ask you to send me as much as you can by express prepaid for that amount, until we can get it through the regular channels. I am confident it is just what I have been in search of for many years. I am prescribing your Hypophosphites of Lime and Soda, and am pleased with the preparation. Yours sincerely, Dr. T. J. WEST.

I know of no remedy in the whole Materia Medica equal to your Specific Pill for Nervous Debility.—ADOLPH BEHRE, M.D., Professor of Organic Chemistry and Physiology, New York.

Send for free Treatise, securely sealed Winchester & Co., Chemists, E 609 Beekman Bldg., New York.

FOR WEAK LUNGS USE WINCHESTER'S HYPOPHOSPHITES. Est. 1858.

ASTHMA TAKEN FROM THE SYSTEM

Nothing remains which can produce an attack. You can eat, sleep and stand exposure without slightest return of symptoms. Appetite improved; blood enriched; nerves strengthened; whole system built up; health permanently restored; life made enjoyable.

Kt 3 is alluring"—W. T. St. A.; "Wonderful for variety; but more so that the variations should be so uniformly difficult and beautiful"—C. N. F.; "Highly ingenious and interesting"—E. B. K.

These problems are both unusually difficult, and bothered our solvers not a little.

In addition to those reported, C. N. F. and the Rev. P. D. Thompson, East Newmarket, Md., got 817 and 818.

From the Monte Carlo Tourney.

PILLSBURY AND TARRASCH.

"The first game between Pillsbury and Tarrasch was something to dwell over—a battle of the giants. Pillsbury tried the Center-counter, a rather flippant defense against so great a master, and on the tenth move Dr. Tarrasch started one of his wonderful fifty-move combinations, which the American irreverently nipped in the bud by sacrificing a piece for three Pawns."

27 R—R 3	R—K 2		

Notes by Reichhelm in The North American, Philadelphia.

(a) Occasionally adopted by masters.

(b) K Kt—B 3 would introduce a safe gambit as White cannot afford to hold the Pawn.

(c) Anderssen played Q—Q R 4 against Morphy.

(d) The big doctor keeps on with his correct elephantine analysis.

(e) But Pillsbury has vitality enough for two, and purposes to give up a piece for three Pawns.

(f) Has come down to the interesting proposition of piece *versus* three Pawns.

(g) To hinder Kt—Kt 5.

(h) If K—B 2, Tarrasch plays Kt—B 7.

(i) Couldn't move R—Q 6 on account of Kt—B 2.

(k) With Pillsbury at least sure of a Draw.

(l) Tarrasch's purpose being R—Q 6 and B—B 3, this move is essential.

(m) Had R—Kt 5 checked again, K—B 5 would have secured the draw, this being the third time the position would have occurred.

HOW PILLSBURY BEAT TEICHMANN.

16 B x Kt P	B x P ch	33 P x R	Q x P
17 Kt x B	R x B	34 R—Q 4 wins.	

This is a fine game well conducted by both players; but the American outgeneraled the Englishman on White's 27th move. While Teichmann should have refused to take the R, any other play would have refused disastrously. There doesn't seem to be anything better than to give up his Q for two pieces.

CHAMPION TARRASCH'S STYLE.

"Now that Dr. Tarrasch is, at least, Tournament Champion for the year, his style and methods of play have acquired a new interest. Among his lighter efforts, if anything can be esteemed light in such a wonderful man, is his game with Frank

BUFFALO LITHIA WATER

A Powerful Nerve Tonic and Restorative. Does it Contain Hypophosphites of Lime and Soda? An Invaluable Remedy in Neurasthenia.

Hunter McGuire, M. D., LL. D, *ex-President of American Medical Association and of Medical Society of Virginia, Late President and Professor of Clinical Surgery, University College of Medicine, Richmond, Va., etc.:* "It has never failed me as a **powerful nerve tonic** when I have prescribed it as such, **producing a decided calming effect** in men and women whose broken-down **nervous system had kept them in perpetual motion,** who could not sleep, and who could not rest. I sometimes think it must contain **hypophosphites** of lime and soda. It acts as that compound does—as a tonic and alterative. I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science, or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

Dr. E. C. Laird, *Resident Physician, Hot Springs, N. C.:* "No intelligent observer can fail to note the **BUFFALO LITHIA WATER** as a **Nervous** extraordinary power of the **Tonic.** In view, then, of the fact that a healthy condition of **Nervous Endowment** is essential to all vital process, it is readily understood that it is a remedy of great potency and wide adaptation in morbid conditions of the human system. In the condition known as **Nervous Dyspepsia Neurasthenia,** and broken-down conditions generally of the **Nervous System,** it is often a wonderful restorative."

Dr. J. T. Menistrina, *St. Louis, Member of the St. Louis Medical Society, Visiting Surgeon City Hospital, etc.:* "I have been prescribing **BUFFALO LITHIA WATER** for the past twelve years in Uric Acid Diathesis, in Nephro-Lithiasis, in Chronic Paryncheematous Nephritis and Interstitial Nephritis with marked improvement in my patients. I may add also that in **Neurasthenia** we have in **BUFFALO LITHIA WATER** Spring No. 2, an **invaluable remedy.** A trial will satisfy the most skeptical."

Voluminous medical testimony, attesting the value of this water in **Bright's Disease, Albuminuria, Inflammation of the Bladder, Gout, Rheumatism and all Uric Acid Troubles,** mailed to any address.

BUFFALO LITHIA WATER is for sale by druggists and grocers generally.

Hotel at Springs opens June 15th.

PROPRIETOR BUFFALO LITHIA SPRINGS, VIRGINIA.

Comment by Reichhelm.

(a) B—B 4 or Kt 5 is oftener played.

(b) Mr. Marshall, as usual, has put all his eggs in one basket, and is now playing with might and main for a King's side attack.

(c) A fine maneuver, which diverts the attack.

(d) Q x Kt P would be only bidding for trouble, as Black would castle Queen's Rook and start up a fierce counter attack on the K Kt file.

(e) If B x P now, White would exchange Bishops and go on with Pawn, gaining effect.

(f) The saving clause, altho White must give up his Queen.

(g) Black has a very difficult game to play; but this move facilitates Tarrasch's win.

(h) Must have been a surprise to Marshall.

FINAL SCORE, MONTE CARLO INTERNATIONAL TOURNAMENT, 1903.

Fill Up With Vitality

And Live More Fully

WOMEN and men often write to me and state that they do not believe their bodies can be increased in weight and strength because neither they nor their parents have ever been stout. That they have inherited an emaciated body and must ever remain so. This is all a fallacy. If it is an indication of anything at all, it simply means that they as well as their parents have never been properly fed, for as soon as I take these people in charge and properly feed, water, ventilate, exercise and rest them, they develop into full grown human beings and have well nourished and symmetrical bodies.

There is as much difference between live food (food which I advise) and dead food (cooked food) as there is between a live man and a dead man!

Fortunately, all foods are composed of many elements. Some of these elements are readily destroyed by cooking and others resist the evil influences of high temperature. If you cook your food so thoroughly that all of the vital or organic elements are destroyed by heat, and you attempt to live upon such food, you will soon die. The more thoroughly you cook the food, the more surely you will kill each component cell, thus rendering it less and less nutritious, while at the same time you effect other changes in the food that render it actually poisonous. (See adv. in THE LITERARY DIGEST of March 14.)

How much better it would be to take the food as Nature has prepared it, that it may supply every requirement of the human organism, thus filling you with mental, physical and genital vigor, prolonging your days and making your life happy and useful.

I am often asked if the wonderful results attained by my method are permanent. I am pleased to say that they are, because I not only teach my patients how to increase their muscle and nerve, but I teach them how to take care of their bodies and keep their extra pounds.

The person who does not possess a good body and has not the desire to work for it, may give up the idea of successfully competing in any line with men and women who are mental and physical athletes. If you have not a good body I can help you to make one, provided you have the will power to carry out my instructions.

If I did not possess physical as well as mental power, it would be utterly impossible for me to attend to the enormous practice that I have built in the last few years. If you have any important undertaking, it would be wise to get your physical body in ideal condition. If your body is seriously out of order, you need scientific attention, and I will be pleased to write you regarding your condition if you will fill out one of my blanks and send it to me for my opinion. (Copyright applied for.) Let me diagnose your case. Send for measurement blank and I will diagnose and give my opinion of your case *free*.

DR. THOMAS' UNCOOKED BREAD cures Constipation, Obesity, Lack of Vitality, and Indigestion. Send in coin or money order **10 Cts.** for sample, or **50 Cts.** for 24 cakes. Wholesale rates on application.

If you have written me and have not received a reply, your letter has not been received. Try again.

JULIAN P. THOMAS, M.D., DEPT. K 26 W. 94th St., New York

Rheumatism Cured

A Free Trial Treatment of **The Jebb Discovery** for the prompt relief and permanent cure of rheumatism in any form. A home treatment which succeeds. Leaders of the best banks in the State of Michigan vouch for the reliability of this Company.

Mrs. MARY SPENCER, Chesaning, Mich., writes under date of Feb. 8th, 1902: "Gentlemen: After having the rheumatism for 6 years, I can now say I am entirely free from it through the use of your valuable remedies. You may use this letter as a testimonial if you wish, or use my name for reference. I will gladly answer all letters that enclose stamp for reply."

The Jebb Discovery is entirely different from any other treatment for the cure of rheumatism. It is practical, rational and certain. A postal card with your address will bring you a **free trial treatment** and book which tells the cause of Rheumatism, and the details of our method.

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

A RAILROAD MERGER DISRUPTED.

MONOPOLY is "stabbed vitally," declares the Pittsburg *Post*, by the decision of the United States Circuit Court of the Eighth District, in St. Paul, on April 9, against the legality of the merger of the Great Northern and Northern Pacific railroads in the Northern Securities Company. "This disrupting decree reaches logically the most remote and hidden corners of modern industry," exclaims the New York *Sun;* and the Philadelphia *Inquirer* says that it "is as drastic as any Populist could desire." It gave "a bad shock to Wall Street," says *Bradstreet's*. Ex-Attorney-General Griggs, counsel for the defendant companies, declared in his argument that such a decision as this would overthrow the basis of nearly all existing railroad systems, and force a radical reorganization of railway transportation; and James J. Hill, president of the Northern Securities Company, says: "If the decision is good law, eighty per cent. of the railroad mileage of the country will be up in the air. If it is correct, I don't see how a man can own shares of stock in competing lines. From seventy-five to eighty per cent. of all the railway mileage in the United States is consolidated either by lease, ownership, or in some other way more direct than the properties embraced in the Northern Securities Company." Mr. Hill expresses a hope that the United States Supreme Court will reverse the decision, but such conservative papers as the New York *Tribune*, *Evening Post*, and *Journal of Commerce* fully expect that the decision will be confirmed. Says *The Journal of Commerce:*

"The unanimous judgment of the four circuit judges is so closely in line with the construction already put upon the Sherman anti-trust law by the Supreme Court in the Trans-Missouri Traffic Association and the Trunk Line agreement cases, and withal is so clear and well reasoned that there is little likelihood of its being reversed or set aside."

The Washington correspondents say that Attorney-General Knox intends to proceed next against the coal-mining railroads.

The merger of the Great Northern and Northern Pacific railroads was accomplished, it will be remembered, by the formation of the Northern Securities Company, which took over the shares of the two roads and gave its own shares in return. This merger is adjudged by the court to be "a combination among the defendants in restraint of trade and commerce among the several States, such as the anti-trust act denounces as illegal." The court says of the scheme:

"First—It placed the control of the two roads in the hands of a single person, to wit, the Securities Company, by virtue of its ownership of a large majority of the stock of both companies.

"Second—It destroyed every motive for competition between the roads engaged in interstate traffic which were natural competitors for business, by pooling the earnings of the two roads for the common benefit of the stockholders of both companies."

As to the effect of the merger on interstate commerce the court says:

"It affects it, we think, by giving to a single corporate entity, or, more accurately, to a few men acting in concert, and in its name and under cover of the charter, the power to control all the means of transportation that are owned by two competing and parallel railroads engaged in interstate commerce; in other words, the power to dictate every important act which the two companies may do; to compel them to act in harmony in establishing interstate rates for the carriage of freight and passengers, and generally to prescribe the policy which they shall pursue."

The scheme, therefore, is held by the court to be in violation of the Sherman anti-trust law, which declares that "every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States or with foreign nations, is hereby declared illegal." The Securities Company is accordingly so restrained by the court's order from carrying out the purposes for which it was formed that it is practically dissolved, and permission is given to it by the court to return the Great Northern and Northern Pacific stock to the holders of Northern Securities stock.

The great majority of the newspapers approve this decision heartily. *The Wall Street Journal* says:

"Unquestionably this decision is just in its law and beneficent in its effect. If the Northern Securities Company had been upheld, there would have been nothing to prevent the organization of one immense company to own a majority of the stocks of all the railroads in the country, thus creating a gigantic trust under the control of a handful of men. That would have been the natural, and it may be added, the inevitable evolution of the holding company plan. How long the country would stand such a state of things may be left to the imagination. The people would never permit the existence of such power within the Government and yet superior to the Government in power. The result would have been a condition worse than that which the railroad managers have tried, by one expedient after another, to avoid. Great as is the evil of uncontrolled competition, the competition which results in rate wars, the unsettlement of business, the wrecking of properties, and the destruction of values, and finally in panic, there is something still worse. A decision in favor of the Northern Securities would have paved the way for further agitation of government ownership. It would have been a step toward Socialism. Therefore, the decision, while its temporary effect may be unfavorable, is taking a long look ahead

MAYOR TOM L. JOHNSON (DEM.),
Of Cleveland; a Bryan Democrat, whom the best efforts of Senator Hanna failed to defeat.

most beneficial to the country, and Wall Street will ultimately take that view of the case, whatever may be its judgment now.

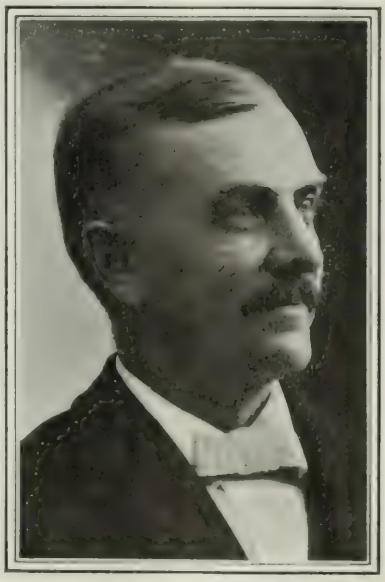
"The decision is a magnificent vindication of the action of President Roosevelt in directing Attorney-General Knox to begin this suit on the part of the Government. The President has been savagely criticized for that action, and it has cost him the support of powerful interests, but the outcome completely justifies his conduct. His critics are silenced. He is shown to have simply performed his sworn duty, regardless of personal consequences. It would be wise now if the President and Congress would unite in the enactment of some law to permit the railroads to pool their traffic, reserving to the Government itself the ratemaking power."

The New York *Times* thinks the time has come for a little plain talk to the trust magnates. It remarks:

"It would seem that the corporations and their legal advisers might with propriety and profit now recognize certain evident facts. The people of the country have reached the conclusion that through the control of money and the exercise of corporate privilege too much power has been lodged in a few strong hands. Accordingly, Congress, representing public opinion, has put these strong men and corporations under the restraint of law. The law is new and inconvenient; it was, therefore, strenuously contested. The courts have affirmed its validity and defined its scope. Three times the Supreme Court of the United States has in its reasoning and conclusions affirmed the principles now enunciated in the Northern Securities case, leaving no room for reasonable doubt that this latest decision will be sustained on appeal. In seeking to evade the law and fool the courts the strong men and the corporations will almost certainly fail of their object. Meanwhile, by provoking continual litigation, they perpetuate conditions of uncertainty and financial disturbance which they themselves loudly deplore. Would it not be the part of wisdom to admit frankly that the sovereign people are after all greater and stronger than the corporations their sovereignty creates?"

An adverse view of the decision may be seen in the following comment by the Brooklyn *Eagle*:

"At bottom the war against the trend of harmony and unity in the operation of property is a war against property itself. We believe that it will be within the resources of the genius of business to maintain the existing principles which underlie the acquisition and the operation of property in the world, and that neither Congresses nor courts can defeat it. But we expect a great deal of agitation and of passion before that discovery will be acknowledged. For that, this generation and the next should be ready, but for it they will have to thank the contemporary tendency of both political parties to extend the domain of politics, the action of law, the policy of Presidents, and the decisions of the judiciary into an area and over a class of questions with which they should have nothing to do."

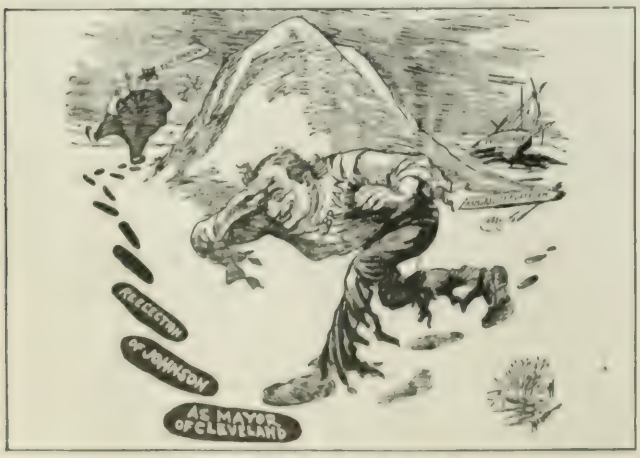


MAYOR SAMUEL M. JONES,
Of Toledo, who ran independently and beat both the old party candidates.

ELECTIONS IN FIVE WESTERN CITIES.

CONSIDERABLE personal interest is shown in the results of the city elections held in the Middle West last week. In Chicago, Carter Harrison is chosen mayor for the fourth consecutive time, rivaling the record of his father, who was elected five times, altho not in succession; in Cleveland, Mayor Tom L. Johnson is elected again, despite the most determined and vigorous efforts of Senator Hanna and the Republican State organization; in Cincinnati, Melville E. Ingalls, the Democratic candidate for mayor, who was supposed to be looking upon the mayoralty as a stepping-stone to the governorship and the Presidency, was badly beaten by Julius Fleischmann, the Republican candidate; in Toledo, Mayor Samuel M. Jones, ignored by the newspapers and running as an independent candidate, defeated the old party nominees, and, indeed, came near polling as many votes as both of them put together; and in St. Louis the election showed that the corrupt element still has a pretty firm grip on the city's government.

Mayor Harrison calls his election "a victory for the believers in municipal ownership, in the referendum, and in settlement of the traction question in the interests of the people of Chicago." The charters of some of the most important of the street-



"I [illegible] that perhaps another,
[illegible] o'er life's [illegible] main,
A forlorn and shipwrecked brother,
[illegible] shall take heart again."—LONGFELLOW
—*The Brooklyn Eagle.*

MAYOR CARTER H. HARRISON (DEM.),
Of Chicago; elected for the fourth time, but by a greatly reduced plurality.

PRESIDENTIAL ORATORY IN PORTRAIT AND CARTOON.

railways of Chicago will expire this year, and the question of renewing them on terms favorable to the city was the most important issue in the campaign. Both parties made lavish promises, and it is now "up to" the winning party to redeem them. Another feature of the election which the Chicago papers speak of with pride is the election of twenty-nine aldermanic candidates who were indorsed by the Municipal Voters' League, increasing the number of "dependable men" in the council to fifty-six in a total of seventy, a safe majority. Of nineteen candidates whose defeat was urged by the league, only five were elected.

In Toledo Mayor Jones received 10,000 votes in a total of less than 23,000. The Republican candidate received about 7,500, and the Democrat about 4,200. The mayor's friends attribute his popularity more to his bluff, hearty, and genial personality than to his administration of city affairs. He is absent from the city much of the time. The Toledo *Blade* (Rep.) says:

"*The Blade* believed, and still believes, that the welfare of

Toledo, morally and materially, demanded a change. While we appreciate full well that with our heterogeneous population, there must be more or less liberty, we are not ready to subscribe to the looseness and license that prevails, and that has advertised Toledo far and wide as an asylum for hoboes and crooks. Moreover, we are firmly of the opinion that Toledo is growing in spite of the mayor, not because Jones is mayor.

"And lastly, we believe that in the interests of good government, there should be homogeneity in all departments. Inasmuch as the legislative and judiciary are in the hands of Republicans, it would have been fortunate for the city, just entering on its first trial of the new code, had she elected a mayor who could work in harmony with the rest of the municipal machinery."

Mayor Johnson's victory in Cleveland has started again the talk of his nomination for the governorship, or the Presidency. The victory was won in the face of an opposition by Senator Hanna and the Republican state "machine" that went so far as to secure state legislation changing the form of municipal government in Ohio. Here is what the Cleveland *Leader* (Rep.) says of Mayor Johnson's triumph:

"The emphatic indorsement won by Mayor Johnson yesterday is a very remarkable triumph. It came in the face of a most formidable attack upon the man and his party. It astonished many of his warmest supporters. It proved that the judgment of men experienced and shrewd in politics was far astray.

"The Republicans of Cleveland were united, active, and confident. Their candidate suited them. Their factional differences were forgotten for the campaign. They attacked the enemy with spirit. The enthusiasm for Goulder was genuine and widespread. The ticket behind him was strong and well-balanced.

"Industrial and business conditions favored the party of prosperity. Higher taxes hurt the party in power in this city. Lax administration of the municipal government in respect to public morals offended many good citizens. Old-line Democratic leaders were active and conspicuous in the assault upon the Johnson strongholds.

"Naturally, Republican hopes ran high. Confidence abounded. It smothered the Johnson men in the betting. It made the estimates of the vote which were given out by the Democratic managers uncommonly modest. To the hour of closing the polls the tide seemed to be running against the Democrats. The best-informed Republicans in Cleveland believed that they had routed their antagonists utterly.

"Under these circumstances the reelection of Mayor Johnson, by an ample margin, is a great personal victory. It proves that the majority of people of Cleveland have confidence in the mayor. They know he is rich, but they do not object to him as a plutocrat. They see that he lives in luxury, but they do not call him an aristocrat. They have been waiting in vain for his most conspicuous promises to be made effective, but they are willing to give him two years more to do what he has agreed to accomplish.

"In the light of yesterday's vote it is idle to deny that the larger part of the people of this city evidently like Mayor Johnson's policy in regard to the public service corporations. The repeated promise of his purpose to get three-cent fare on the street railroads has been accepted in good faith and is really the issue on which he won yesterday's election."

In St. Louis a new house of delegates was elected. Every candidate indorsed by Circuit Attorney Folk, who has been carrying on the fight against corruption, was defeated. The St. Louis *Republic* (Dem.), however, thinks the new house better than the last one, remarks that "several" of the new members are men of force and character, and expresses a hope that these men, "by exercising their aggressiveness to the utmost," may keep the house "near the line of sound government." The election is characterized thus by the St. Louis *Globe-Democrat* (Rep.):

"The election in St. Louis yesterday was held under the Nesbit law, the election statute the State Supreme Court has decided to be without a constitutional penalty clause. None of the innumerable frauds and outrages perpetrated at the polls in St. Louis can be punished under that law, which purposely left a loophole through which every offender could escape. The registration was again padded in many precincts and printed lists held back so that the names could not be verified. At the opening of the polls it was seen that the infamies of the previous three Nesbit law elections would be repeated. In various precincts the Republican judges and clerks were not permitted to serve. They were told to go home, and, if they objected, policemen bristled up and ordered them peremptorily to shut up and get out. The returns in these precincts show that the ballot-box stuffing was prearranged and that it went on without limit. In no respect was the last Nesbit law election any better than the three that preceded it. Yesterday's proceedings at the polls were another horrible travesty upon free government, a sure-thing game, a manipulation of ballots, under partizan force laws, that leave nothing to chance."

RHODE ISLAND CORRUPTION.

A NOTABLE feature of our political history during the past ten or twelve months has been a series of exposures of political corruption in various States and cities, sufficiently startling to command national attention. Minneapolis, St. Louis, Seattle, Delaware, and Rhode Island have been described and discussed in the public prints as the abodes of political depravity. The Rhode Island revelations are peculiar in the fact that the reform crusade is headed by the governor, Lucius F. C. Garvin, who sent a special message to the legislature on the subject on March 10 (see THE LITERARY DIGEST of March 21). The Springfield *Republican*, the New York *Evening Post*, and the New York *Tribune* have sent special correspondents into the State, who have made some very informing reports of their investigations, and the local papers have admitted, editorially, that the charges are all true. A remarkable feature of the Rhode Island situation, indeed, is the fact that everybody concerned owns up to the most frank and cheerful manner. Gen. Charles R. Brayton, the recognized "boss" of the Republican "machine," who has established himself in a room in the State capitol, talks freely with a reporter about his methods and power, tells how much the campaign fund usually is, says he is "retained" by various corporations to "look after their interests" "where legislation is necessary," and sneers at the helplessness of the governor, who "can't do anything but sign notaries' commissions." Here are a few paragraphs from this remarkable interview, which appeared in the New York *Evening Post* on March 25:

"What is your share in the forming of legislation and the passage of bills?"

"I am an attorney for certain clients and look out for their interests before the legislature. I am retained annually by the New York, New Haven, and Hartford Railroad Company, and am usually spoken of as 'of counsel' for that road. Of course, I don't have anything to do with damage suits or matters like that, but look after their interests in relation to grade crossings and other questions where legislation is necessary. As every one knows, I act for the Rhode Island Company [street-railway interests], and I have been retained in certain cases by the Providence Telephone Company. In addition to these, I have had connections, not permanent, with various companies desiring franchises, charters, and things of that sort from the legislature.

"I never solicit any business," added General Brayton without a smile, "it all comes to me unsought, and if I can handle it I accept the retainer."

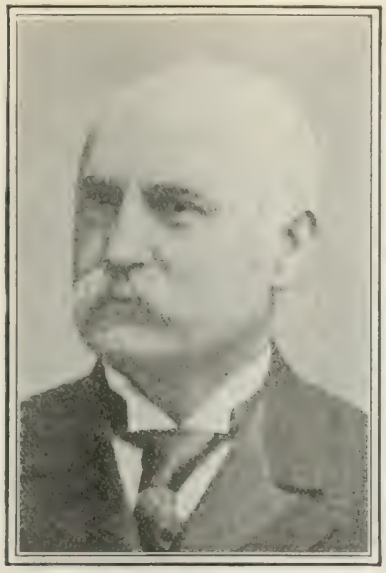
"What is your power in the legislature that enables you to serve your clients?"

"Well, you see, in managing the campaign every year I am in a position to be of service to men all over the State. I help them to get elected, and naturally many warm friendships results, then when they are in a position to repay me they are glad to do it."

"Do you think the Democrats will ever be able to carry the Senate and change the present system of representation?"

"Of course, it's possible; there's nothing that can't be done, but I don't believe it ever will be done. The countrymen realize that the cities would rule the State on a basis of population, and

GOV. LUCIUS F. C. GARVIN (DEM.), Of Rhode Island, who is leading the crusade against political corruption in his State.



SENATOR NELSON W. ALDRICH (REP.), Who is considered the leader of the Republican party in Rhode Island.

GEN. CHARLES R. BRAYTON (REP.), The blind manager of the Republican organization in Rhode Island.

LEADERS IN THE RHODE ISLAND FIGHT.

they certainly aren't going to vote to give up their power. They're going to hold on to what they have got just as long as they can."

"What did you think of Governor Garvin's special message on the prevalence of bribery in the State?"

"It seems a pretty fair presentation of the case. He said both sides did it, and I guess that's right. Garvin is a man of clean morals, but I sometimes think his attitude on certain questions is rather demagogic; that he is not acting on principle. Tho he talks about this so-called 'rotten borough' system, the convention that nominated him was made on the same basis of representation; if it hadn't been, Garvin wouldn't have got the nomination."

"Does Senator Aldrich take any active part in the affairs of the party?"

"Not until about a year or so before it comes time for him to be elected again; then he gets active. He doesn't pay much attention to details. Of course, in Presidential years he suggests certain planks, on the tariff and similar questions, that he would like put in the platform, or he might make suggestions about certain nominations, but that's about all he does."

The "rotten borough" system referred to by General Brayton resembles the system by which the United States Senate is chosen. Each city or town has one representative in the Rhode Island State senate; and by this simple system twenty small towns can control that body. The result is, as the governor says in a recent message to the legislature, that "one-twelfth of the inhabitants of the State dwelling in small towns controlled politically by petty considerations or corrupt influences, possesses more power in legislation than the remaining eleven-twelfths." As the governor does not have the veto power in Rhode Island, and as the Senate can disregard his appointments and fill offices to suit itself, it will be seen that a "boss" who can carry the necessary number of small towns has a fairly good grip on State politics. The corporations that have "retained" General Brayton as "counsel" seem to have been very successful in securing favorable legislation, and have, moreover, secured the insertion of clauses in these laws making them contracts between the State and the corporations, so that they can not be terminated without the consent of both parties—in other words, they are unrepealable. When the legislature, in deference to public sentiment, passed a street-railway free-transfer law, a provision was inserted that the law should not become operative until accepted by the street railways, and that the railways must file their acceptances within six days after the law went into effect. It is said that there was no great rush of street-railway managers to file "acceptances" before the six-day limit should bar them from the privilege.

Rhode Island is said to be so permeated with political corruption that the rural clergy dare not raise their voices against it, a fact that is regretfully admitted by Bishop McVickar, of that diocese of the Protestant Episcopal Church. The farmers and workingmen accept money for their votes, while the manufacturers and capitalists supply the money for the campaign fund, so that "the pastor, unless he wishes to terminate abruptly his career of usefulness, is bound to defer to the sentiment of the community." So the *Evening Post* correspondent was informed.

Denunciations of this state of affairs, which might be quoted by the column, are of the usual sort. It is not so often that we have the opportunity of reading a defense of buying and selling votes. Such an opportunity is afforded by a letter from M. L. Williams to the Providence *Journal*. This namesake of the founder of Rhode Island says, in the course of a long, dignified, and almost scholarly letter:

"As for the buying of votes in a few of the country towns, that has never been looked upon by Rhode Islanders who understand the spirit of the State as anything on the order of a crime. It is simply a custom that may be evil in theory, but quite harmless, usually, in practise. A farmer naturally feels that he should not be compelled to lose a day, or even half a day, several times a year by going a long distance to vote, simply to cast a ballot that will probably have no appreciable effect upon the result anyway. Even in a city this feeling is so strong that thousands of voters stay at home every election day. If some one is willing to pay the farmer for his time, that he may exercise the prerogative of citizenship, why, he will gladly go to the polls, voting there as he chooses. If it usually happens that he marks his ballot as the man who pays him for his time would like to have him, it is not a purchase, for the farmer lives up to his strictest obligations if he simply performs his duty of voting as an independent American citizen. He is not bribed.

"Moreover, so long as our country towns are to have the chief place in our system of state government, it is well that their voters should frequent the polls. And as for their control over our legislation, there is considerable wisdom in it. Our cities, with their larger number of citizens of foreign extraction and socialistic tendencies, are wisely kept in hand by the party leaders, who are governing the State in the interests of the native Rhode Islanders and the higher classes of men and corporate interests that are attracted here because of the direct methods of securing much that is for their welfare. For many years, for instance, it has been possible for men of high social position and of a wide reputation for moral character to become governor

without first taking part in the lower forms of politics, which, whatever the theorists may say, do smirch one's name and should be left entirely in the hands of men who combine great executive ability and an indifference to slander.

"Powerful corporations do not have to maintain expensive lobbies here, and to get what is needed to advance the interest of their stockholders they are not forced to bribe members in the legislature. Thank God we are saved this disgrace which is so common in almost all the other States. Here a company has simply to go to an astute gentleman who has carried the State safely through many years of prosperity and contentment and tell him their needs, and if it is wise to grant their request he will grant it. The rest of the people are saved all the trouble the arrangement may involve, and are at perfect liberty to devote their full time to their manufacturing and their private life secure from public annoyance. And there is with them always the cheerful thought that if they should ever need anything up at the State House they will not have to submit to irritating delays before they can secure it. Their only fear is that there may some day come a change in this excellent system. Let every good Rhode Islander now come boldly out in defense of his unrivaled little commonwealth."

GEN. LEONARD WOOD.

Whose critics are trying to make it appear that his high reputation was manufactured by an ex-convict and swindler.

EARNINGS OF THE STEEL TRUST.

THE United States Steel Corporation is commended by the press for voluntarily revealing so completely the financial condition of the company, its receipts and expenditures, in its first annual report, which was made public last week. The corporation "has been sharply criticized on the score of overcapitalization," remarks the New York *Herald*, "and simple justice demands that it should be commended for the emphatic and widespread publicity it takes pains to give to its affairs." The report shows that during the year 1902 the gross sales and earnings amounted to more than $560,000,000; that the number of shareholders was nearly 60,000, and that about 168,000 persons were employed. The total net earnings last year, after deducting for ordinary repairs, new property, maintenance, taxation, and incidental charges, amounted to $133,300,000. Deducting from this sum interest on corporation bonds, deposits in special funds, and the amount disbursed in dividends, there was left a surplus of $34,200,000. This amount, added to the surplus accumulated between April 1, 1901, and January 1, 1902, gives a total surplus, at the close of 1902, of $77,800,000. On April 1 the company had on hand unfilled orders for 5,410,719 tons of manufactured product. The figures are "certainly stupendous" and show that this "is an unprecedented and prodigious corporation," continues *The Herald*. We quote further:

"In voluntarily and immediately disseminating through the press the fullest information as to its affairs the United States Steel Corporation pleases its sixty thousand shareholders, interests the public, and sets a shining example to the lesser 'industrials' that shroud their doings in secrecy. By frankly inviting attention to its production and sales, its balance-sheet, its income and outgo, the corporation adopts the best possible method to remove sinister suspicions and to establish public confidence in the property and its management. This is a fact that will one day become patent to all corporate managements, and in particular to those in control of the 'blind pool' industrial corporations—the veritable 'trusts'—which seem determined to lurk in the darkness until the arm of the law shall drag them into the sunlight of publicity."

The report shows, further, a production of iron ore from the mines of about 16,000,000 tons; of coke from the coal-fields, 9,500,000 tons; of pig iron, 8,000,000 tons; of steel ingots, 9,750,000 tons, and manufactured articles amounting to 8,000,000 tons.

On top of this excellent showing for 1902 comes the report of the first quarter of the present year, which shows that the net earnings were $24,600,000, or a decrease of nearly $2,000,000 over the corresponding period of last year. This decrease is attributed to inability to make prompt delivery because of freight congestion.

GENERAL LEONARD WOOD UNDER FIRE.

SEVERAL newspapers which have regarded the rise of Gen. Leonard Wood as more rapid than his merits warrant have seized with every evidence of relish upon the disclosure that the Associated Press correspondent at Havana, during General Wood's term as military governor, was an ex-convict and swindler, who passed under the name of Capt. Edgar G. Bellairs. Bellairs was the correspondent of the Associated Press in Cuba in 1898–1900, in China in 1900–01, and in the Philippines in 1901–02, and since his return from the Philippines he has produced a book entitled "As It Is in the Philippines." A prominent feature of his work as correspondent has been his praise of General Wood; and the latter's critics seem to think that if it had not been for Bellairs and his admiring despatches and reports, the General would not have reached his present high position. The New York *Sun* has been printing editorials in this vein nearly every day, and the New York *Evening Post* has been outspoken in expressing the same view. According to the Memphis *Commercial Appeal*, General Wood's "rapid advance in the army is due to no military achievements or any other kind of achievements, but to favoritism pure and simple." Wood's part in the fight at Santiago, we learn from this authority, was "simply nil," the credit for cleaning up Santiago belongs to Major George M. Barber, the credit for cleaning up Havana to General Ludlow, and Wood's record as governor, "instead of being creditable, was highly scandalous." But Bellairs, all this time, was sending out his favorable reports, the American people and the Administration were grossly deceived, and in a few years this general will be the ranking officer of our army, on a reputation manufactured by an ex-member of a chain-gang! So these journals argue. "Only recently," remarks *The Evening Post*, "has the public begun to realize, little by little, what an absurdly mistaken idea it has had of Wood as an administrator—since Palma has governed Cuba far better and for much less money; since it has appeared that Wood had Gomez and others in his pay; that he distributed insular funds to Mr. Thurber and others to bring about the passage of the reciprocity treaty; that he left the island with a nominal surplus and an actual deficit; that he fastened the *jai alai* gambling establishment on Havana for ten years."

Not many papers, however, join in this anti-Wood crusade. Some, indeed, show a disposition to criticize his critics, and intimate that the general's foes are not actuated purely by devotion to justice. Thus the Detroit *Free Press* says:

"The situation forces some plain talk. The old army ring is bent on downing Wood if such a thing be possible. They have the intense anger of jealousy because he has been advanced so rapidly, because he does not belong to their close corporation, and because in every position he has proved the man for the place. Being invulnerable in his official record there is no way to attack him unless by some such devious method as that

adopted. It will be mighty entertaining to watch for the appearance in the open of those now firing from ambush."

And the Boston *Transcript* remarks, similarly:

"Now Ballentine ["Bellairs"] did not 'make' General Wood. President McKinley had formed a high estimate of General, then Captain Wood of the Medical Department, when he appointed him colonel of the Rough Riders. Theodore Roosevelt also had formed an equally high estimate of General Wood, who, we have understood, has also from his earliest days been esteemed by General Miles.

"So there are others than Ballentine, alias Bellairs, who 'made' General Wood. These gave General Wood the opportunity to show the stuff that was in him, and he himself did the rest. It should also be remembered that there are two elements particularly hostile to General Wood who secretly supply a great deal of aid and comfort to his enemies. One of these is made up of army officers who think it sufficient to speak of him as the 'doctor-general,' and who can not forgive him for beginning his military career as a surgeon; and the other is composed of politicians who never forget that he hewed to the line in the Neely and Rathbone affairs. General Wood is now on his way to the Philippines, and can not speak in his own defense as promptly as he would. Should he see fit to enter the lists he might give some of those who are making the Bellairs exposure the basis of attacks on him many a bad quarter of an hour."

SUING STRIKERS FOR DAMAGES.

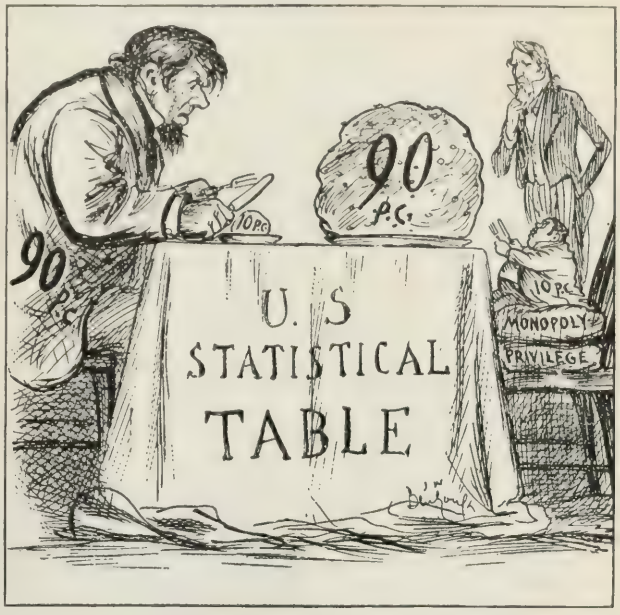
LABOR troubles have been productive of notable litigations of late, and what "is the most far-reaching decision or verdict yet found in this country in restraint of organized labor," in the opinion of the Springfield *Republican*, was rendered, on April 4, in the county court of Rutland, Vt. The F. R. Patch Manufacturing Company sued the members of Protection Lodge, No. 215, Independent Association of Machinists, for $10,000 damages alleged to have been suffered as the result of a strike of the machinists some time ago. The jury awarded $2,500.

NOT A GOOD TIME TO QUARREL.

—*Harper's Weekly.*

The verdict resembles the Taff-Vale decision, rendered in England a short time ago, which held a British labor-union liable for financial loss caused by a strike. In the Vermont case the machinists demanded a nine-hour day and recognition of their union. This was refused, and on May 12 last the strike began. The company declares that it secured enough non-union men, but that disorder, boycott, and attempts to keep the men from the company's shops, which followed the effort to fill the places of the strikers, caused them financial loss. As a result of the boycott, the business of the company is said to have fallen from $169,000 during the first five months of 1902, before the strike was declared, to $41,000 for the last seven months of the year.

When the suit was brought against the union in January more than 100 writs were served on the members. The real estate of



THE PIGMY GORGED; THE GIANT STARVED.

Ninety per cent. of the wealth of the United States is held by ten per cent. of the people.

—*The Public, Chicago.*

every member of the lodge was attached, and from this the company expects to collect the amount of the verdict. The action of the jury is thought to have been influenced by the charge of Judge Haselton, who laid great stress on the fact that a large number of union officials, who were wanted in the suit, disappeared from the city, and also on the fact that all of the books of every union in the city were hidden during the trial. The union has taken an appeal and will carry the case into the Supreme Court of the State.

If the higher court sustains the verdict, says the New York *Evening Post*, "such organizations in Vermont will no longer be able to engage in boycotts, intimidation, and violence regardless of legal consequences"; and the Hartford *Courant* declares that while the verdict will not ruin the union, it will "constrain them to consider the general subject of strikes and boycotts from a new and personal point of view." The Springfield *Republican*, however, thinks the verdict will have a decidedly different effect. It says:

"If the Vermont case holds good and stands as a precedent, union labor will be as free to organize strikes as ever; and the officials and members of a union concerned in a strike will be no more liable for damages resulting from the strike, or from any disorder, or intimidation, or boycotting attending the strike, unless it is proved that they or any number of them have instigated or committed such acts. . . . The effect of such a verdict as this in the Vermont case will be to impress upon labor and strike leaders a deeper sense of responsibility than is commonly manifested. It will not do that they merely, in a public way, disclaim all relationship with unlawful acts or counsel peaceful methods among their followers; they should become earnestly active agents for law and order, and such a verdict must prove a powerful influence to that end. If a strike can never be made effective on any other terms, it can not and will not be tolerated at all."

The Chicago *Tribune* recalls, in this connection, the similar suit of the Waterbury street-railroad company against the

strikers there, which has not yet been decided, and expresses the opinion that it would be better if the strikers were sued collectively, and not individually, as in these two cases. *The Tribune* remarks:

"If the verdict is sustained by the higher courts there will be enough property to pay the $2,500. The members of the union who have houses and lots will have to foot the whole bill, while the propertyless members will go unscathed, unless they feel themselves in honor bound to contribute to help out their associates. . . . If the course pursued by the Vermont and Connecticut companies is followed often when employers and unions are at odds, the property-owning members of such unions will be at a peculiar disadvantage. They will be sued and their property attached even tho they may not be the ones who should be sued, if anybody should be. It is fairer that there should be collective responsibility than that a few men should stand the brunt of litigation. On the whole it is not likely that many suits will be brought against individual strikers. Where damages are recovered, the amount usually will be too small to do more than pay the lawyer bills."

VARIOUS CARTOON RAPS.

LETTERS AND ART.

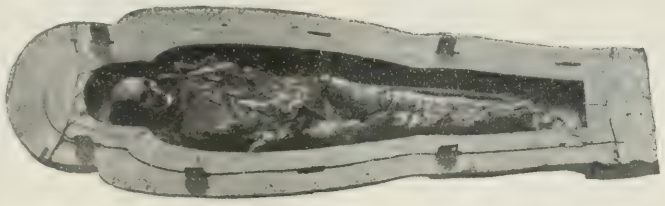
A REMARKABLE LITERARY DISCOVERY.

A MOST interesting archeological discovery was recently made at Abusir, Egypt, by a German scholar named Ludwig Borchardt. In an ancient mummy case dating back to the age of Alexander or earlier, Herr Borchardt has found a papyrus roll containing an ode by Timotheus, the Greek poet and musician. *The Independent* chronicles the details of the discovery as follows:

"By the head of the buried man lay the remains of a small leather purse, a sponge, a rusted piece of iron, a bit of wood, and a thin roll of papyrus. With infinite pains this roll was opened and, where broken, pieced together. It proved to be 43 inches long and contained five columns of Greek writing. The first column was in a ruinous state, the second was not complete, but the three last were intact and gave the concluding verses of a poem, in which by good luck the poet speaks of himself by name. It was at once clear from the theme that we had here a portion of 'The Persians,' a famous *nome* of Timotheus, of which two or three brief fragments were already in our anthologies."

The Independent is much impressed by the importance of this literary find. It observes:

"Only the Greek scholar can taste to the full the sweetness of such a discovery, but it must possess no slight interest even for 'the man of one tongue.' First of all it is the oldest manuscript Greek book yet known to exist, dating as it does from the fourth century before Christ. . . . It is the only fragment of any considerable length of the Greek *nome*, a form of ode or hymn which was originally employed in the worship of Apollo, but which had become gradually secularized until Timotheus completely altered its nature by making it a choral song. And it is furthermore the only fragment of any magnitude from the works of a great and much debated poet and musician."



MUMMY CASE IN WHICH THE PAPYRUS OF "THE PERSIANS" WAS FOUND.

Courtesy of *The Independent*.

The poem itself is a description of the Battle of Salamis, which Æschylus had already made the theme of his tragedy, "The Persians." We are told:

"The style is highly condensed and metaphorical, not unlike the chorus of the Athenian tragedy. Here for the first time, so far as known, the sea, which to Homer was 'dark' or 'purple' or 'wine-colored,' is called 'emerald.' The poem is brilliantly executed, but can scarcely be ranked among the greatest treasures of Greek poetry—indeed it is not likely that Timotheus would hold the same rank in our estimation as was given him in his own day. Historically, however, the poem is of immense interest, and its discovery gives greater warrant to our hopes that some day a comedy of Menander or the works of Sappho or another much-desired treasure may be found lying in a mummy case, where it was placed thousands of years ago to give entertainment to the departed soul on his long and perilous journey."

Of Timotheus himself but little is known. He was born at Miletus in 442 B.C. and lived to be ninety years old. Furthermore:

"He was during his long life famous for his skill in music and verse, and wandered much from city to city, as was the custom of public writers in those days, reaping the rewards of glory. His name in after-times became almost a synonym for musician, and it is thus, by a pardonable anachronism, that Dryden in his Ode 'In Honor of Cecilia's Day' introduces him into the court of Alexander:

> Timotheus, placed on high
> Amid the tuneful quire,
> With flying fingers touched the lyre:
> The trembling notes ascend the sky,
> And heavenly joys inspire.

"At Sparta, however, tradition maintained—and the present discovery confirms the story—he suffered some hardship and was driven from the city in disgrace. The incident is connected with the development of Greek music, a subject of impenetrable obscurity. Timotheus, it was believed and is not certainly known, enlarged the lyre, which was employed in accompanying the *nome*, by the addition of an eleventh chord. Apparently also he introduced a new strain of emotionalism into song and attempted all sorts of descriptive music. Thus at Sparta, to the infinite disgust of the staid and conservative folk of that town, he presented a dithyramb on the birth pangs of Semele, which must have been shockingly realistic. At least so it appeared to the senate of Sparta, for they gave orders that he should be reprimanded, and the offending chord or chords which he added to his lyre were publicly destroyed. Such is the tradition, and it is confirmed, in part at least, by the complaint which he makes in this *nome* of 'The Persians.'"

The Greek text of the newly found poem has just been published in Berlin by the German scholar, Professor Wilamowitz-Möllendorff. It is reprinted in *The Independent* (April 9), with an English translation by Paul Elmer More. From this translation we quote the following extracts (the numerals referring to the stanzas of the poem):

". . . (4) And for the oars they threw out a great structure like a cornice, set with holes like teeth, strong to smite. And the heads of the stay-beams, projecting a little, swept away the enemy's oars. Now, if without warning so great a blow were given with these as to break the thwarts, then all the seamen would try to leap upon the hostile vessel; and if the shock threatened to fall like a thunderbolt on the ship's side, then with strong rowing they would pull the ship back. And as many of the oars as were broken and borne hither and thither, leaving bare the ship's flanks and the surrounding outworks, into these they dashed with the ram and struck them down so that they turned and sank headlong—but first all their beauty was destroyed by the iron head of the ram. . . . .

"(22) And like thunderbolts the murderous shafts were sent whirling from their hands, and on the bodies of the foe fell still quivering from their flight through the air. Masses of compact lead also were hurled, and flaming balls set on rods such as are used for lashing beasts of burden. And many were slaughtered by serpents having well-feathered wings and brazen heads and drawn tight by cords [that is, by arrows]. And the emerald sea in the depths of the waves turned crimson where fire spurted from the ships. And unceasingly arose the cries for help and groanings. . . . . .

"(174) And when the barbarians hastened their flight back, then straightway they drew from their hands the two-edged javelins and tore their faces with their nails. The fair-woven garments of Persia they rent about their breasts, and shrill rose the lamentation of the Asiatics. And all the multitude gathered together by the king, gave themselves up to much groaning because of their terror, beholding the sorrow to be. And when the king saw the mingled host turning to wild flight, he fell upon his knees and did violence to his body, and cried out in the tempest of his calamities: 'Alas for the ruin of my home! Alas for the deadly fire of the Greek ships! for ye have caused to perish all the young men of my army. The ships that were ours are lost and shall not bear us hence; the devouring might of fire with its fierce flame will burn them, and there shall be sorrow making moan for the land of Persia. Alas for the heavy fate that brought me into Greece.—But come, delay not; yoke the four-horse chariot, and others of you pile unreckoned wealth on the wagons, and set fire to the tents, lest there be any profit to them from our riches.' . . . .

"(210) And the Greeks, having set up a trophy, that most holy of the shrines of Zeus, raised a song of pæan to the protecting god, dancing in harmony with the rhythm and beating the ground with their feet."

A CRUSADE AGAINST "THE STAGE IRISHMAN."

THE concerted attacks made by Irishmen in New York and Philadelphia upon the stage production of a musical farce entitled "McFadden's Row of Flats" raises an issue which at first sight seems frivolous enough, but which has its deeper significance. As a correspondent of the New York *Sun* remarks:

"This protest of the Irish people against the degrading of themselves and their race on the stage is not a mushroom growth of to-day or yesterday. At home in Ireland this movement has long since matured, and there the people have already driven from the public stage the disgusting and degrading caricatures imported from England and elsewhere; and the movement of the Irish here is but the continuation and spreading of that movement to end once for all what they consider a grave injustice."

The farce complained of is a caricature upon Irish life and character. Its most offensive feature is the portrayal of an Irishman "with the face of a gorilla, wearing green whiskers," who shares his home with a pig. The comedy has been hissed in several cities. In New York and Philadelphia it was "rotten-egged" by large bodies of Irishmen, many of whom were subsequently arrested. This crusade against "the stage Irishman" has attracted attention all over the country, and is the subject of columns of correspondence in the New York press. The New York *Irish World* is enthusiastic in support of this movement of protest. It says:

"The stage Irishman has been a standing insult to the Irish race for a generation and more. And it is to the discredit of the race that he has been permitted to go so long in his brutal caricature.

"But to-day, thanks to the Gaelic League and the United Irish League and the Ancient Order of Hibernians, a spirit of self-respect has been infused into the young men of Irish blood which asserts its life in action and which, if only persisted in, is bound to sweep into the cesspool of contempt those filthy wretches who are doing England's work in the caricature guise in which our common enemy would have all Irishmen appear to the world as their true selves.

"The men who are engaged in this work of driving the stage Irishman off the boards are not rowdies. They are gentlemen. They are good citizens. They are impelled to enter upon this work in the spirit of crusaders. They feel that the outrage has gone on long enough, and they are resolved to put an end to it.

"God speed them!"

The Kansas City *Journal*, on the other hand, is full of regret at the thought that the stage Irishman may be banished from the boards. It comments:

"The Irish are caricatured oftener, perhaps, than any other race, but if they would stop to think, they would see that people always like and never despise the stage and cartoon Irishman. Does anybody imagine that the world has less regard for the Irish since Mr. Dunne created 'Mr. Dooley'? Nobody ever despised Dooley and nobody ever disliked him, except, possibly, the interesting old Chicago saloonkeeper after whom he was patterned.

"The stage Irishman has done much good in the world. He has caused many melancholy folks to laugh and lightened many overloaded people's burdens. When well-played, he is a tonic to the mind, and no medicine can beat him for liver complaint. He contributes largely to the gaiety of nations, as well as to receipts of the box-office. Long may be wave."

The New York *Sun* says:

"The members of the Clan-na-Gael and the Ancient Order of Hibernians who egged the actors appearing in 'McFadden's Row of Flats' in characters that caricatured the Irish race have set a precedent of deep concern to all playgoers. The Irish are by no means the only folks whose distinctive features have been utilized for fun-making on the stage in the exaggerated shapes required for dramatic effect.

"The German dialect of the theater world is at least as old as the Irish brogue. The Swedish dialect put into the mouths of serving-maids and sailor men makes a long chapter of stage lingo. Italian hand-organ men are famous butts. Who has not seen the overdrawn stage Frenchman—the 'frog-eater'? In how many plays have the Yankees been held up to ridicule? What of the thick and drawling Englishman who stalks as the chief form of humor on many histrionic boards? The Southern brigadiers? The negro minstrels? The Jews? The types which have suffered in this manner at the hands of the comedy writers almost fill the catalog of humanity.

"With the Irish precedent to guide them, the caricatured races may be expected to rise in rebellion. The hired men of a hundred New England hills may be looked to for an excursion to the town hall or the op'ry house and an assault upon their mimic. The pushcart peddlers of all the East Side will invade Dave Warfield's playhouse and rush him from the scene. Visiting Britons will league themselves to mob the local stage lord. We expect to read that all the police detectives in the community have egged that remarkable stage representation of one of their number who appears nightly in Mr. Augustus Thomas's current play. Weber and Fields will be swept from the boards by the German legions who marched before Prince Henry. Will the wealthy of the nation neglect this cue from the Irish and refuse to egg Jerome Sykes, who holds them nightly up to ridicule? And will the Bowery toughs and rounders see themselves made game of without dissent? . . . . . .

"We think we can understand the objections to the stage Irishman; but it is curious to see them raised now, long after the stoppage of the great flood of Irish immigration. Long ago, when the Irish were pouring in here in thousands, fresh from their emerald home, and felt the clannishness of strangers instead of the assurance of prosperous full-blown citizens, they laughed at the stage Irishman with the rest, and never a sound of criticism was heard in the land."

THE PERSONAL ELEMENT IN DANTE'S WORK.

ALTHO Dante's spiritual experience has become the heritage of the world, the authentic detail in regard to his material life is exceedingly scant. In a new book on "Dante and His Time," Dr. Karl Federn, of Vienna, endeavors to reveal the poet's personality through the medium of his own literary expression. He writes:

"Dante is the hero of all his works, not a creature of the brain which he may have modeled after his own likeness, as so many poets have done, but he himself: Dante Alighieri of St. Peter's Gate in Florence. He loved Beatrice. He was in hell, in purgatory, and in paradise. He himself. He tells us so. We can not doubt it. The word 'I' may be encountered on every page of his poems. All his works are 'Truth and Fiction' ['Dichtung und Wahrheit'] out of his life. Dante's whole poetry is nothing but a poetical autobiography. This is the feature which makes them so vivid, which forces us to such deep participation in his feelings. He is a poet of an unheard-of spiritual egoism, he expresses his opinion on every question, on every personage, on every event. For his own time he must have been modern and actual to the highest degree. For does he not mention himself and all his acquaintances by name? His readers could hear what their late cousin had spoken in the flames of hell, or what occupied their sister in paradise.

"And for this reason he tells us so much more of his time than his time had to tell of him. There is but one soul in these distant days whose inmost thoughts are laid before us and may be glanced over: the soul of Dante.

"And it is for this reason that I said we know him so well. Of course we do. We may hear speak incessantly and all his words are weighty. But here again one must be able to hear. And it almost makes one despair to see how silly clever men become when they read a poet like Dante, what pedantic methods they adopt, what quibblings, instead of silent enjoyment, are the fruits of reading Dante."

Dr. Federn protests against that species of commentary on the work of a great poet which, instead of taking an author's work as a whole, extracts hidden meanings from isolated words and sentences. "Writers on Dante," he says, "occupy them-

"THE BOY WITH THE ARROW"
(By Douglas Volk).

"OLIVE"
(By Louise Cox).

PRIZE WINNERS AT THE EXHIBITION OF AMERICAN ARTISTS.

selves with his opinions instead of inquiring into the state of his soul." We quote further:

"Scholars have written very clever and erudite treatises on the connection of Dante's three chief works—on his 'Geistesgang'; but in every one the question is only one of Dante's religious and philosophical opinions; and nowhere, with the single exception of a slight allusion in Carlyle's lecture, is a word said or a thought spent on the deeper question: what a terrible revolution must have taken place in the soul of a man who from such a tender, childlike idyll of innocent love as the 'New Life' came to write such a poem of indignation and wrath as the 'Divine Comedy.'

"Most men even say that the time when Dante wrote the 'Divine Comedy' was a time of peace and of quietude of soul. People who say so have not the slightest notion of what passes in a poet's soul. For tho the man who could write such a work must have been firm and sure of his mission, yet toward the world he was filled with trembling rage and indignation; an unquenchable ire against men burned within the same man who once, to designate his feeling for all men, had found but the one word 'love.' Scartazzini in his last book calls Dante a man of one casting—'a nature of granite.' Not so. He only became so gradually and in his later years; the casting had once been soft and plastic, which by the most tragic fate became so hard and granite-like."

And so in all Dante's work this personal element, based on actual spiritual experience, may be traced. Dr. Federn concludes:

"He ends his first work when he is still almost a boy in Florence, hardly ripened to manhood, with words of a strange and wonderful vision and the resolution to work steadfastly, until he shall have told of Beatrice what has never been told of any woman on earth.

"We can trace how in the first period of his life all these great dreams dawn on him, how in the second he tries in vain to enter life, to do as others do, to be active and work like ordinary men; how he is thrown back and repulsed, understood by nobody and left alone with his dreams and the world within him, until after unheard-of toils he expresses all this in that ever-sacred song which will appear holy to men of all times and races and eras; and, his task being thus accomplished, dies."

EXHIBITION OF THE SOCIETY OF AMERICAN ARTISTS.

THE twenty-fifth annual exhibition of the Society of American Artists was opened in New York a few days ago. More than three hundred and fifty pictures are shown this year, and their character is such as to lead *Harper's Weekly* to three generalizations, namely:

"The average of achievement is, on the whole, a grade higher than usual; the number of canvases painted by Americans in Paris is increasing year by year; despite the great names in the catalog, the list of painters who do not exhibit with the society is growing so long as to suggest the condition that resulted in the formation of the society itself by seceders from the Academy."

The Carnegie prize of $500 for the best painting entered in competition is awarded to Douglas Volk's "The Boy with the Arrow." Says the New York *Sun*:

"It represents a lad in white sweater, corduroy breeches, and woolen stockings seated on a rock beneath a tree, holding an arrow. One may wish that the landscape setting had been more closely studied, since a truly out-of-door feeling would have been more in tune with the sentiment expressed in the young face—

> A boy's will is the wind's will,
> And the thoughts of youth are long, long thoughts.

These lines come into my mind in presence of this strong, sweet, poignant picture."

The Julia A. Shaw prize of $300 for the best work of art exhibited by a woman is awarded to Louise Cox, wife of the artist Kenyon Cox, for "Olive," a portrait of a little girl in pink.

Louis Loeb's "The Dawn" wins the landscape prize of $300, offered by Dr. W. Seward Webb. The last-named picture is highly praised by *The Sun*:

"It is an imaginative conception based upon nature study, such a scene as Corot might have dreamed: a tree-sheltered pool with figures preparing to bathe, and others descending the slope of dewy grass, while all the place is radiant with the soft, virginal purity and tender refreshment of the young day. It is an idyl of the world's perennial youth. . . . Here is a young painter, heir to knowledge and resources of painting that Corot missed, working, however, in the same beautiful vein of delicate imagination. His future very largely must depend upon the appreciation of his fellow countrymen."

Other prominent features of the exhibition are Mr. Abbott Thayer's "Winged Figure," dedicated to Robert Louis Stevenson; Mr. Samuel Isham's "The Coming of Spring"; Mr. John S. Sargent's portrait of William M. Chase; Mr. John W. Alexander's "The Flower"; and Mr. William M. Chase's portraits of George Inness, Jr. and of Edward J. Steichen.

THE NOVELS OF MRS. HUMPHRY WARD.

IN any consideration of the literary work of Mrs. Humphry Ward, we can hardly fail to be brought face to face with the oft-debated problem involved in the relation of art to ethics. How far has a novelist the right to use fiction as the vehicle of a moral or religious or social message? Mr. Hamilton W. Mabie, who contributes a critique on "The Work of Mrs. Humphry Ward" to *The North American Review* (April), thinks that the feeling of uncertainty which has existed in regard to the rank of Mrs. Ward as a novelist, and the permanent value and charm of her work as literature, is due to the fact that readers have reserved their judgment of the quality of her fiction until it should be made clear that she was writing fiction for its own sake, and not using it as an instrument of religious reform or social amelioration. Mr. Mabie says:

"It is fifteen years since the publication of 'Robert Elsmere' brought Mrs. Ward into sudden prominence. A very unpretentious story for children, 'Milly and Olly,' and a love-story, 'Miss Bretherton,' had attracted no attention and gave slight indication of the remarkable energy and intensity which Mrs. Ward was on the point of revealing. . . . The appearance of 'Robert Elsmere' in 1888 was happily timed with a notable and deeply interesting stage of spiritual experience through which many men and women of religious temper were passing. That there was a note of spiritual autobiography in it is beyond question. That note had a vibratory quality, and in all parts of the English-speaking world its echoes were audible. Rarely has a book dealing with a purely spiritual crisis found so many readers. Such books often produce profound effects, but they usually attract the few and repel the many. 'Robert Elsmere' became in a few months the most popular novel of its day. Probably no novel of recent times has been so widely and seriously discussed. The secret of its popularity was not far to seek: it translated a crisis of the mind and spirit into dramatic terms; it was a moving and deeply interesting story. To the few it was a study of a phase of contemporary thought; to the many it was a novel whose intensity of feeling laid a spell on the imagination. That intensity gave it momentary compulsion, but limited its value as a work of art. Full of sincere feeling and revealing ability of a very high order, this striking study of the psychology of the close of the nineteenth century is likely to be forgotten because it was too close to the experience it described to give that experience breadth and finality of expression; it was the very able book of an hour."

Passing on to a consideration of Mrs. Ward's later novels, Mr. Mabie says:

"'David Grieve' opened with a charming picture of childhood, contained some admirably drawn portraits and was full of interesting incident; but there were two distinct stories in it and they were not perfectly blended; they betrayed a tendency to run their separate courses independently of one another. In 'Marcella' there was a deeper unity and a marked advance in dramatic power. The story had a noble lift of spirit; it lacked neither structural order nor distinction of style; but it did lack humor and lightness of touch. 'Sir George Tressady,' in which the fortunes of Marcella were still further related, was distinctly below the level of its predecessor in interest and power. 'The Story of Bessie Costrell,' which soon followed, was less ambitious and elaborate, but, up to the time of its publication, was the most successful piece of fiction Mrs. Ward had written. It was full of ease, naturalness, simplicity. It was not however, a pleasant story, and it has not received the attention it deserves. It stands alone among Mrs. Ward's earlier novels as a piece of pure fiction; it states no problem; it simply tells a story.

"In 'Helbeck of Bannisdale' Mrs. Ward took up the religious problem from another side and, by a striking contrast of temperaments, brought its tremendous significance as a factor in human experience into clear light. The novel was not, however, convincing; it was full of thought and there were dramatic passages of great power in it, but it left the reader cold.

"With the publication of 'Eleanor' Mrs. Ward entered upon another stage in her growth as an artist. In that firmly constructed and finely written novel the didactic element is dissolved, so to speak, in a richer and more penetrating artistic impulse. The power of moral portraiture in the story is of a very high order, but it is not more subtle or convincing than the power of investing the movement of the plot and the personality of the actors with moving and compelling human interest; while the background of the story is sketched with an art which makes the exquisite Italian landscape a distinct and essential element in the story. Nowhere else has Mrs. Ward more clearly revealed the sensitiveness of her imagination and the opulence of her style; opulence in the sense of richness of resource rather than richness of diction; for the specific qualities of the descriptive passages in 'Eleanor' are delicacy of shading, subtle uses of words of color and form, true and sensitive perceptions of light and shadow."

Mrs. Ward's latest novel, "Lady Rose's Daughter," strikes new ground. It is "a study of temperament, but by no means a problem novel." We quote further:

"The old and ever-present problem of the reaction of the individual against the over-pressure of organized social traditions, standards, and laws is stated afresh; but that problem, in some form, is the substance of all drama and fiction that have any claim to be accepted as art. In ceasing to deal directly with ethical and social questions Mrs. Ward has not ceased to use her art for high purposes and in a profoundly serious spirit; she has simply brought the teacher and the artist in her own nature into true relations. . . . In no other story has she approached the brilliancy and vivacity of 'Lady Rose's Daughter'; the easy touch-and-go of familiar talk, the delicate but sharply defined contrasts of character in appearance, bearing, and speech; the interplay and modification of character by character. In lightness of touch, variety of mood and temperament, and in ease of mood this story marks Mrs. Ward's highest achievement. In no other novel has she given so many evidences of the possession of the original qualities of the novelist: knowledge of life, dramatic power, sympathy of imagination, humor, and the gift of pathos."

In the following paragraph Mr. Mabie sums up what he deems the strong qualities in Mrs. Ward's work:

"Mrs. Humphry Ward was predestined to seriousness of mood by the traditions and temper of her family; she has become an artist by resolute achievement. In ability of the most substantial English quality she is preeminent among the women of her generation who are dealing with the arts of expression; she has a high degree of concentration, that faculty which focuses all the forces of the nature on one line of endeavor; and she has the pertinacity of mind which turns these forces to the highest account and evokes their finest qualities. Her work is saturated with character in its thoroughness of structure, its firm knitting together of all the threads of story, its scrupulous care for detail, its delicate precision of diction. In all these things the Arnold ethical energy is worked out and its ethical passion expressed. The restraint and moderation of statement, the occasional elaboration for qualifying phrases, the range of allusion, the ease with which the social side of a ripe and highly developed society is

conveyed: these qualities suggest without intruding the wide and generous culture which lies behind Mrs. Ward's work and gives it breadth of outlook and a quality of largeness."

AN ENGLISH VIEW OF AMERICAN FICTION.

ANTHONY HOPE, the English novelist, who is at present on a visit to this country, is disposed to take a decidedly cheerful view of the prospects of American fiction. He observes that our novelists are at last beginning to really "discover" the latent possibilities of American literary material, and he goes on to say: "Many British authors still receive, and I do not doubt will continue to receive, ready welcome and appreciation on this side of the Atlantic. . . . . But novels which are either the work of foreigners or, tho written by Americans, are derived from an inspiration sought abroad, have lost their relative prominence; and to-day for the great bulk of American readers the American novel stands first and foremost." Mr. Hope continues (in *Collier's Weekly*):

A NEW PORTRAIT OF ANTHONY HOPE.

"To the sons of a small island (and the smaller we realize it to be, the prouder we feel entitled to be of it) the United States of America—to leave the rest of the Western continent out of the question—seem properly described not as a country but as a world—a world marvelously rich in varieties of climate, of natural features, of human types, and of social environment. As the English writer of novels must envy the Frenchman his language, so he might be pardoned for grudging to the American this extraordinary wealth of material. There have been eminent English writers who have made various parts of the countryside their own—I need instance only Richard Blackmore and Mr. Thomas Hardy—but Great Britain offers no such salient contrasts and no such striking variations as may be found within the boundaries of the Union. From this springs the first line of development of the American novel—the novel of a locality, of a State, or of some district marked by distinctive characteristics.

"The function of this class of book is to interpret one part of the land to the dwellers in another part—to picture the West for the East, the South for the North, to make Kentucky understood of New York, to speak in the voice of California to the cities of the Atlantic seaboard. The interest of such work is obvious; if a stranger may express an opinion on such a matter, its national value must also be very great. And just as present-day conditions vary so enormously in different parts of the country, so tradition and history vary also.

"Hence comes another line of development which has been followed with marked success of recent years and is, I think, very far from having reached its limit yet. The charm and romance of American history seem of late to have dawned with a new—at least with a much fuller—revelation on American readers. The past of their own country, the story of their own struggles and wars, the figures of the heroes of bygone days—the men their fathers followed—have come by their own in story. Henri IV. yields place (not before he has done a good day's work!) to Washington, and if the days of the Stuarts are treated of, it is the days of the Stuarts in Virginia. The great men of the Civil War pay toll to legend and begin to be the center of romance. The work of Scott and of Thackeray is being done—or begun—for America by her own writers. And lastly the present hour—the latest and most urgent expression of the national character—finds its voice in fiction. The novel of trade, of commerce, of competition and the struggle of life, the novel of the great busy city, makes its appearance, written with a zest and welcomed with an interest to which it would be hard to find a parallel in any other country of the world. Its tragedies, its struggles, the sense of effort, of fight, of a satisfaction won only by constant activity and held only at the cost of unresting vigilance, reflect as truly one side of the nation's life as the quiet of a New-England village or the spacious freedom of the plains show forth and interpret others. The three lines of development go on side by side, cooperating in the interpretation of the national history and character—the life of the past and the life of to-day."

To ask whether such an interpretation of a nation to itself will be permanent, says Mr. Hope, is much the same as to ask the question about the national life itself. There is too much doubting and fearing, he thinks, about these new developments. "American literature, or its American critics, could afford to borrow some of the robust confidence of American business." He concludes:

"Unmerited successes are to be expected—the great public is not an exacting, or at any rate not a quick-judging, critic—and they need disturb us very little. They are especially likely to occur, I think, under the conditions which I have indicated. The charm of the subjects, of the newly awakened interest and the freshly quickened realization, is itself enough to carry readers away. Delight in the story disarms criticism of the way in which it is told. People want to read about these things, and they will read poor books about them rather than none. That they want to read about them at all seems to me such a great national gain that we may possess our souls in patience in face of some aberrations of taste. Time will go far to correct these. Pioneers reap crops with little trouble and with small skill in agriculture; later generations of workers need a better equipment if they are to command the same success. It is not as if the good work did not find appreciation; it does, and in ample measure, and there is very much of it. A certain degree of indiscrimination is generally one of the marks of enthusiasm; it will be a happy thing if the enthusiasm can survive the rise of a severer judgment.

"Meanwhile there is this at least to say, that never in the history of the world have authors had a finer audience ready to welcome them, or the public a body of authors more eager to interest it. And there is that splendid wealth of material—a mine of wealth, really hardly more than opened. If I were an American, I should have a good confidence—and I should not be distressed at the fact that readers have, here and there, been too ready to believe—well, what accredited critics have not always been guiltless of telling them. The same phenomenon may, after all, be observed sometimes on my side of the ocean."

NOTES.

A FRENCH dramatization of Mark Twain's story, "The Stolen White Elephant," is being presented at the Odéon Theater, Paris. The authors of the play are Alex. and Max Fischer. On the opening night Mark Twain sent the management the following telegram: "Best compliments to the dramatists. I hope the detectives will shed glory on a cruelly slandered profession."

MUCH interest is evinced in the announcement that Mr. Conried, the successor of Maurice Grau, intends to produce Wagner's "Parsifal" at the Metropolitan Opera-House next winter. In his will Wagner stipulated that "Parsifal" should be produced in Baireuth only, and since his death his widow has enjoyed what amounts to a monopoly in this famous musical work. It is said that Mr. Conried has offered Mme. Wagner $25,000 for the privilege of producing the opera; but that he will give it with or without her consent.

SCIENCE AND INVENTION.

UNDERGROUND OBSERVATORIES.

A PROPOSAL to install several hundred subterranean observatories at depths of anywhere from a few hundred yards to a mile or so, may appear sufficiently startling. It ceases to be so, however, when we learn that the observers themselves are to be on the earth's surface; it is only their instruments that it is proposed to place so far under ground, and these may be lowered into borings such as are now made for artesian wells. The principal measurements would be of temperature; but it is claimed by M. A. Laisant, who advocates the plan, that its results would add greatly to our knowledge of the earth's crust and its phenomena, both normal and abnormal. M. Laisant sets forth his plan in *La Raison*, in an article quoted in the *Revue Scientifique* (February 7). He says:

"While astronomical instruments involve considerable expense on account of their high precision, the apparatus in use for meteorological observations cost much less, and this would also be true for those that would be employed in subterranean observation. . . . . .

"It would be sufficient to sink at a certain number of properly chosen points holes in the same manner as artesian wells, or, still better, in the way that is used in America to bore for petroleum. The depth would be more or less considerable according to the region and the nature of the geological strata; it should be governed by data known to science but should in general be as great as possible. It would probably not be chimerical to think of reaching a depth of several kilometers in some places, while in others a few hundred meters might suffice.

"As to the locations of the borings and their number, here too the geologists can furnish the necessary indications. We should note here that deep borings, while in course of making, will give interesting geological information, since they will furnish continuously specimens of the strata traversed, which may be studied and analyzed.

"When the boring has once been finished, it will be easy to introduce into it measuring-apparatus, and especially thermometers. The study of the pressure at these great depths, that of the composition of the gases that are encountered, the electric and magnetic state of the medium, and other elements, will possess equally great interest. With the registering-apparatus now at our disposal, most of the indications mentioned will be easy to obtain, when the installation has once been made, without the necessity of displacing the instruments. . . . . .

"When a large part of the surface of the globe has thus been covered with subterranean observatories properly located, the systematic centralization of the observations and daily exchanges of them will soon furnish an important contribution to terrestrial physics, and we shall see that there is a necessary correlation between the variations of temperature, pressure, etc., at the different spots and also between these variations and certain exterior phenomena.

"Such an organization should involve no weighty sacrifice, in comparison with the expense, for instance, of astronomical observations. Nevertheless, that it may be truly useful, an international understanding would be necessary, and that perhaps would not be without difficulty. . . . . .

"Meanwhile, before any international agreement has been made, the countries that begin the organization of underground observation will make a useful preparation for such an agreement and for the development of the new science of which we have been speaking. They will be doing in this matter what the United States has done for meteorology. It seems to us that France ought to take the initiative. Either on the soil of continental France or in some of its colonies, she might well begin by the installation of a few observatories, whose number could be increased later.

"We have said that it would be the task of the geologists to indicate the proper localities for the borings. But it is evident that it will be specially important to place these in regions where the soil exhibits peculiar phenomena. Thus, for instance, the neighborhood of Vichy and, in general, places that contain hot springs, should receive attention. It is the same with old volcanic regions, like the mountains of Auvergne and certain parts of the Cevennes."

Commenting on M. Laisant's proposition, the *Revue Scientifique* says:

"This proposal to install subterranean observatories is original and should be fertile. It responds to precise indications; its realization will give valuable results without any doubt; and, finally, its material execution will be relatively easy.

"There seems to be no reason why it should not be carried out, at the initiative either of governments or learned societies.

"But it is so difficult to make the first step outside of the beaten paths, both for individuals and for bodies of persons, that we are not astonished to find that this happy idea of M. Laisant has not yet met with a response. We are waiting for it to come back to us from our neighbors of the East or the West, systematized and on the way to application. Then every one will find that it is as simple as it is excellent."—*Translations made for* THE LITERARY DIGEST.

IMPROVEMENTS IN AUTOMOBILES.

THE automobile is coming into its own. In the last year or so it has been so greatly improved that it is a different machine, and so much reduced in price that it is no longer to be considered the rich man's toy. So we are told by Henry Norman, who writes in *The World's Work* (April) on what he calls "The Coming of the Automobile." Says Mr. Norman:

"Not much more than a year ago the motor-car was a noisy, ill-smelling, costly, and unreliable machine—a public nuisance. To-day it is silent; if it smells, the driver is to blame; it is within the reach of a man of modest means; and it is as little likely to break down as any other fine product of human ingenuity. . . . A car of twenty horse-power, capable of carrying four passengers at forty miles an hour, can hardly be heard by those on board; in fact, its extreme silence is a new element of danger, as the only notice of its approach is the horn of its driver. It is on land, in that respect, what the canoe is on water. These most silent cars are for the moment expensive, but even moderately priced cars can be had as silent as anybody ought to desire them. This, for the benefit of the non-expert reader, is due chiefly to two factors: the balanced and slower revolution of the engine by the increased number of cylinders, and the introduction of the valve which is opened and closed mechanically in place of the valve held shut by a spring and opened by the suction of the piston. Opinions differ yet upon the advantages of the new method, but in my humble and amateur judgment the motor with automatic spring valves will be as obsolete a year hence as the bicycle without free-wheel action is to-day. There are, moreover, to-day one or two makes of car with the older valve which are almost as silent as need be.

"Improved methods of combustion and lubrication have practically abolished offensive odors. Pneumatic tires, once the bane of the motorist's life—for he never dared be confident that he would not have to spend an hour in tedious and dirty repair of a puncture by the roadside—now with luck will run a thousand miles without mishap, and several thousands before they need be recovered or replaced. And it is by no means certain that the inflated rubber tire is destined to remain an essential part of a motor-car. In the vehicle of the future, concussion due to inequalities of road surface may be absorbed by springs, either in the wheel or in the body. This would be a more scientific method. Side-slip, too, the one and only real danger of motoring, both to the motorist and the public, is on the eve of being, if it is not already, overcome. Gasoline costs twenty-five cents a gallon, and a gallon will take an average car twenty miles, and each new car put on the market runs farther on less—one make of car has just run fifty miles on a gallon."

As for price, Mr. Norman sums up the whole matter somewhat as follows: For about $7,500 one may buy the best car in the world, and for $3,500 one nearly as good—all except unnecessary speed, luxurious fittings, and fine workmanship. For $2,500 a good high-speed heavy car can be bought. The sum of $1,500 will procure a light car that will make eighteen miles an hour on

country roads, and $1,000 will buy a machine with which one may start from New York for Chicago without fear. The lowest priced car, Mr. Norman says, will cost less a year than a pony and trap and do five times the work. Indeed, every one who keeps a horse may keep a car for less money, and thousands of people who can not afford a horse will soon discover that they can keep a small car. The effect of all this on our civilization, according to Mr. Norman, is destined to be startling. It will give the ordinary man an area of activity of nearly 3,000 square miles instead of the 500 possessed by the horse-owner and the very few enjoyed by the pedestrian. Says the writer:

"It is a revolution in daily life. With an automobile one lives three times as much in the same span of years, and one's life, therefore, becomes to that extent wider and more interesting.

"The influence upon the community will be no less than upon the individual. Our country districts will revive. The old coaching roads and coaching inns will once more be thronged with travelers. . . . . .

"To the car-owner it is virtually the same thing whether his home is one mile or a dozen miles from his nearest railway. This will bring into the market at good prices a great number of country places unletable and unsalable to-day. There will soon arise, in consequence, an irresistible demand for better roads—in all probability for a division of road-control similar to that of France."

Mr. Norman is convinced that ten years hence there will not be a horse left in London or New York except those kept purely for pleasure. Finally, to cap the climax, he believes that the motor will avenge the old stage-coach by killing off the railway. This, it will be remembered by readers of H. G. Wells's books, is also the opinion of that prophet of the better day to come. All this is, of course, the somewhat one-sided view of a partizan of the automobile; but it is certainly suggestive and interesting.

SCIENCE AND THE SEA-SERPENT.

THE number of persons who treat sea-serpent stories seriously is small. Yet, in spite of the comic paragraphers, there are zoologists who believe that there may exist one or more species of huge marine animals whose long necks or tails, seen at a distance, have been mistaken for swimming serpents. A few years ago a Dutch naturalist, M. Oudemans, in a book on the subject, asserted that it is possible, from the fragmentary accounts of those who say that they have seen the creature, to construct a description of it that will enable us to classify it more or less exactly. At a recent meeting of the Zoological Society of France, M. Racovitza, the naturalist of the *Belgica* expedition, declared frankly that he believed in the existence of the "Great Sea-Serpent," and recapitulated M. Oudemans's arguments, which have received additional force from the experience of a French naval officer in Chinese waters. Says the *Revue Scientifique*, in a report of Racovitza's paper:

"We must not conclude too precipitately that all the persons who affirm that they have seen this marine creature have been the playthings of optical illusion or have been abusing the credulity of the public. The number of animals whose existence has been long denied or unknown, and which have recently taken legitimate rank in science, is now so considerable that the most skeptical naturalists should show great reserve in such matters.

"It is sufficient to recall the history of the giant octopi which not many years ago were ranked with the sea-serpent as fabulous. . . . Among land animals, notwithstanding their greater ease of discovery, we have the very recent case of the okapi, the ruminant of the size of a horse, a near relative of the fossil Helladotherium, which, inhabiting the most remote regions of Central Africa, remained completely unknown to naturalists until the first years of the twentieth century. Must we be surprised then, if the vast oceans yet conceal little-known monsters, which flee before our ships, appearing only rarely and then to persons who have too slight a knowledge of zoology to observe them properly?

"To return to the sea-serpent, M. Oudemans's opinion regarding its nature is as follows:

"In the first place, it is not a serpent, nor even a reptile, but a mammal, belonging probably to the order of Pinnipeds, which includes the seals. Its general form is that of the Plesiosauri of prehistoric seas, but with a much longer tail, which takes up half the total length of the body. The neck is also very long, bearing a relatively small head, with short snout, and truncated like that of a seal. The body is spindle-shaped and furnished with two pairs of flippers like those of other pinnipeds. This elongated form and long flexible tail, which is the chief organ of propulsion, together with the appearance of the thin, long neck, have contributed to give the creature the aspect of a serpent when it swims on the surface, showing only a small part of its back, the rest of its body being hidden under water. . . . In short, this animal must be to other marine mammals what the giraffe is to land animals. The total length would be about 80 meters [262 feet], of which the head and the neck would occupy one-fourth, the trunk one-fourth, and the tail one-half; the head would be 2 to 3 meters [about 7 to 10 feet] long. . . . . .

"This great pinniped has exclusively pelagic habits, its great speed and huge dimensions enabling it to cover a vast extent of sea without appreciable fatigue. It never comes to land, but rests easily on the surface in parts of the ocean where great depth makes the sea more calm. It travels always in pairs—male and female—and probably approaches the coast only when in pursuit of the fish on which it feeds. Its presence has been reported in all oceans, and it must therefore be cosmopolitan.

"Among fossil mammals we know none that resembles this closely. The Zeuglodonts had a longer head and a shorter body. On the contrary we know several reptiles that had, like the so-called sea-serpent, a very long neck. We have already mentioned the Plesiosaurus; we might also cite the Brontosaurus of the Jurassic era, which was a land animal, or at least a dweller by shores and streams like the modern crocodile.

"Since the appearance of M. Oudemans's book, new observations of the 'Great Sea-Serpent' in various parts of the ocean have been added to those already recorded. M. Racovitza cites particularly the serious and circumstantial report of one of our naval officers who, when in command of a torpedo-boat in the China seas, chased a pair of these creatures and tried unsuccessfully to stop them by firing several shells at them. The elongated form and rapid movements of the animal enabled it to avoid the projectiles easily. Nevertheless, the admiral commanding the station has become interested in this question, which is of so much moment to zoologists. In a circular letter addressed to his officers he has given instructions that no opportunity shall be neglected to get possession of the whole or part of one of these great animals. The head alone . . . would be a magnificent trophy. Nowadays, when apparatus for instantaneous photography is in all hands, it would be easy to take a snapshot of the creature while resting on the surface, which would convince the most incredulous. We may justly hope that in a few years the great sea-serpent, if it really exists, will be no longer a myth."
—*Translation made for* THE LITERARY DIGEST.

Fatigue due to Other People's Waste Products.

—Accumulation of waste products is the undoubted cause of tissue fatigue. It is suggested by a correspondent of *The Lancet* that it probably does not much matter whether these waste products are our own or other people's. The material giving rise to the sensation of fatigue may be derived from our own tissues by internal respiration, or it may be breathed in with foul air from the tissues of others. Says this writer:

"It is possible that the school child may be quite as readily fatigued by inspiring the waste products of his fellows as by carrying on his own not often too pronounced mental effects; and that the business man is more liable than the agricultural laborer to become run down, not so much because he works harder or more monotonously, and therefore personally manufactures more waste products, but because his tissues are more liable to become saturated with the waste products of himself and others derived from the confined atmosphere which he

habitually breathes. We all know how tiring to most of us is a long railway journey, more especially if the compartment is crowded and the windows are closed. Our correspondent remarks that it seems unlikely that such fatigue should be caused by the muscular exertion of sitting on the fairly comfortable seat usually provided or even by the mental effort of reading the usual magazine, and considers that the effect is due to the saturation of the tissues with waste products taken in through the lungs."

MAGNETS FOR LIFTING HEAVY WEIGHTS.

THE lifting and sustaining power of magnets has been used for years in lecture experiments, but it has only recently been put to practical use. Such uses were at first somewhat fanciful, and even when they had ceased to come under this head, it was long before the really great strength of powerful magnets was utilized in industry. Says an editorial writer in *Cassier's Magazine* (April):

"One of the practical uses of a magnet, but to those immediately concerned a highly important use, is that in which it is sometimes employed to withdraw small pieces of iron from such out-of-the-way places as the human eye. Another use of the tractive force of magnetism on a much larger scale was that to which it was put by Edison in his magnetic ore separator, in which the ore, previously crushed to a fine powder, is dropped down a chute past the poles of powerful electromagnets, in passing which the iron particles of the ore are deflected to one side while the non-magnetic stone dust continues undeflected down the chute. Still another instance of the employment of magnetism in a small way is that in which a magnetized tack hammer is used in the manufacture of strawberry baskets on a large scale in conjunction with a mechanical device which presents the tacks, one at a time and head up, to the operative, thereby greatly facilitating his work.

"It is a far cry from lifting a tack by means of magnetism to the lifting of massive iron and steel plates weighing four, six, and twelve tons by this same force, which is now done every work-day in a number of large steel-works. Electromagnetism, of course, is utilized, the form of the magnet being usually rectangular for this work and presenting a flat surface to the plates lifted. The magnets are suspended by chains from cranes, and pick up the plates by simple contact and without the loss of time consequent to the adjustment of chain and hooks in the older method. It is also found that the metal plates can be lifted by the magnets while still so hot that it would be impossible for the men to handle them. The ratio of weight lifted varies with the machine; in some cases this ratio is 30. Thus, a magnet weighing 300 pounds will lift 4.5 tons. The magnet is operated by current from a dynamo, controlled by switches and rheostats. . . . These magnets also have the advantage for this class of work that a number of them can be applied jointly to lift a heavier weight than one machine could lift singly.

"If one stops to think of it, however, there is nothing remarkable or novel in the foregoing applications of magnetism directly to lifting purposes. There is not a trolley-car running the streets that is not, so to speak, being lifted along by magnetism, *per se*, as much as are the iron and steel plates in the case just mentioned. We speak of electric traction in the case of the trolley car, but we might as well speak of electric lifting in the previous case, for it is not until the electric current develops magnetism that the car moves or the iron plate is lifted. The electric current, *per se*, lights arc and incandescent lamps, heats electric furnaces, decomposes electrolytes, but does not directly propel a car or lift a weight. The rotation of the electric motor on the car is secured by the attraction or pull of one magnetic field upon another, the brushes of the motor being placed at such a point on the commutator that the magnetism set up by the current around certain armature-coils of the motor does not correspond with the magnetism of the field-magnet. The tendency, therefore, is for the armature to be pulled into a position where the respective magnetic lines of force of the two fields will coincide, and the armature being movable, while the field magnets of the motor are fixed, the armature turns; but the moment it does so, the armature coils which were carrying the current from the brushes slip past those brushes, and another set of coils, whose magnetism is not in correspondence with the field-magnetism, is brought into action, while the current and magnetism die out of the first set of coils. Hence the armature is again pulled around, with the result that still another set of coils is called into play, and so on—a sort of treadmill arrangement, as it were—and in this way, by exceedingly short distances at a time, the car is pulled or lifted by magnetism along levels and uphill."

How Plants Climb.—The devices adopted by climbing plants to gain light and air are thus described by R. Lloyd Praeger in *Knowledge*:

"It is in the twining plants, such as bryony and hop, and the tendril-bearers, like the vetches, that we find the highest development of the climbing habit. These plants live under unusual conditions. In order to gain the light, they must seek, rather than avoid, overhanging foliage; and so we find the vetches, instead of turning away from the shadow toward the light like most of their neighbors, boldly pushing up into the center of a bush, to burst into blossom amid its upper branches, far above their less daring neighbors. . . . But it is in the leaves of these plants that we find the most remarkable modifications adapting them to a climbing habit. The leaves of the vetches and vetchlings are pinnate—they bear a number of opposite ovate leaflets. The tip of the leaf-stalk and the uppermost pair of pinnæ are in the climbing species changed into tendrils—sensitive, twining, whip-like structures, which exhibit remarkable features. If the slightly curved, extended tendril of a young leaf of pea or vetch be watched carefully, it will be found that it is slowly but incessantly moving round and round in a circle. If the tendril comes into contact with a twig, it bends toward it, and eventually takes several turns round it. Even a slight temporary irritation is sufficient to cause a bending toward any side. Finally the tendril becomes woody and strong, and forms a secure anchor-cable for the plant. Not only does the young tendril rotate; the whole leaf on which it is borne is in continual motion. The shoot to which the leaf belongs is rotating also, so that the tendril is sweeping the air with a complicated motion, in the course of which it is almost sure to strike against some stem or twig of the surrounding vegetation."

SCIENCE BREVITIES.

"In Germany, electricity, among other curious results, has rehabilitated the discarded windmill," says *The Electrical Review*. "At Neresheim a windmill supplies power for thirty-six incandescent lamps that light a large paint factory. Another in Schleswig-Holstein keeps up a steady current of thirty volts. At Düsseldorf a windmill winds up a heavy weight, the descent of which works a powerful dynamo."

Recent press despatches announce the discovery by a professor in Prague of a lamp lighted by means of bacteria. Of this report *The Lancet* (London) remarks: "We suppose that the discovery amounts to an improved method of feeding photogenic bacteria, the existence of which has been known for some years. . . . The experiment is quite simple and easily succeeds. All that is necessary is to place the flesh of fresh haddocks or herring in a two- or three-per-cent. solution of common salt, keeping the mixture at a temperature of about 7° C. above freezing-point. After a few days it will be found that not merely the flesh of the fish but also the whole of the liquid in which it is immersed gives off a pale greenish light which becomes much more brilliant if a little sugar is added. . . . Doubtless by paying attention to the needs of these specific bacteria—by employing, for example, highly stimulating food—more intense light than was hitherto the case has been obtained. It is even suggested that the bacterial light might afford a safety-lamp for the miner."

"A considerable amount of interest has been aroused," says *The Scientific American*, "by the announcement, as the result of a prolonged series of experiments, of a method of so treating timber as to secure even from soft wood a largely increased toughness and hardness. The process is described as one of vulcanizing, comparable in some respects with Bessemer's process of converting iron into steel, and is the invention of Mr. Powell, a Liverpool merchant. The treatment to which the timber is subjected is, roughly speaking, that of saturation at boiling-point with a solution of sugar, the water being afterward evaporated at a high temperature. The result is to leave the pores and interstices of the wood filled in with solid matter, and the timber vulcanized, preserved, and seasoned. The nature of moderately soft wood, it is claimed, is in this way changed to a tough and hard substance, without brittleness, and also without any tendency to split or crack. It is also rendered remarkably impervious to water. Hard wood similarly derives similar benefits. Moreover, it is claimed that the process may be completed and timber turned out ready for use in a few days."

THE RELIGIOUS WORLD.

THE CREDIBILITY OF RESURRECTION.

THE Easter season lends special timeliness to an article in *The Independent* (April 9) in which the Rev. Dr. Teunis S. Hamlin, of Washington, D. C., discusses the problem of the "resurrection of the body." When we use this phrase, in reciting the Apostle's Creed, do we say it with mental reservation? Or do we in our hearts regard resurrection as incredible, tho we lack the courage to put just this into words? Asking these questions, Dr. Hamlin goes on to say:

"As to that of which we most think at this Easter time, the resurrection of Jesus, we have a problem quite by itself. Whether or not he rose is a matter of history, to be determined by competent testimony. Was he really dead? Was he afterward alive? Precisely the same sort of evidence is needed to enable us to answer these two questions affirmatively as proves that such a man as Jesus once lived in Galilee, taught, had a band of disciples, traveled to Jerusalem, and the like. And this is the same evidence as establishes the facts that a dynasty of Pharaohs ruled Egypt; that Washington led the American armies during the Revolution; that Lincoln was President of the United States from 1861 to 1865. That Jesus thus lived, died, and was afterward alive is established by such competent and adequate testimony as has satisfied countless millions of men for nineteen centuries. It may, of course, be questioned, as may any historic fact; but Christendom believes it to be true.

"This fact about Jesus, however, has at most only a presumptive bearing upon resurrection in general, which is not past, but future, and so can not be the subject of testimony. Is our own resurrection credible—the resurrection of our dear ones, who long ago vanished out of our sight and of whom we could find no trace, should we search their graves ever so carefully?"

Dr. Hamlin thinks that "the very science that is popularly supposed to have rendered resurrection incredible may furnish at least some hints of its credibility." He continues:

"For example, death is not only that one event which terminates earthly life and which must be quickly followed by burial or some other disposition of the lifeless flesh. Death is forever taking place within us. The fire that we call life is all the while consuming our tissues. As often as we eat we cast fuel on that fire. Every moment it is reducing some atoms to ashes, which must be constantly eliminated, or the fire will be choked and go out in final death.

"So persistent and effective is this insensible process that our bodies to-day contain no particle of the matter that constituted them ten, twenty, or thirty years ago. The man of seventy has again and again changed his garment of flesh. That he has done it so very gradually as to be unconscious of the process does not in the least impair the fact or its significance. . . . . .

"By and by, however, the ashes smother the fire; the flesh all dies at once, and its final combustion begins, which means its total disappearance. What of the body now? The vehicle of identity? The seat of personality, in which has dwelt the recognizable, unmistakable spirit that is the real man? The body has vanished with the disappearance of the flesh. But is it destroyed? Having persisted for seventy years through continuous gradual death, has it been obliterated by the accumulated death that we call sudden? Is it not reasonable to believe that it still persists, and that, when circumstances all favor, it will reappear? Not indeed in form the same, since the flesh which it once wore and used has gone irrecoverably; but in fact the same, since still the vehicle of the same immortal personality, as recognizable because as individual as ever."

Science is drawn upon to furnish another argument in favor of bodily resurrection:

"Here is the kernel to be placed in the soil. All that is visible of it soon disappears. It is chemically disintegrated and distributed. It is consumed and its ashes form new chemical combinations. But within this flesh of the wheat kernel was an indestructible body. No microscope could see it. No test-tube could disclose it. But it possessed the marvelous power not only of persisting, but of gathering from soil and atmosphere and rain and sun all that is needed to perpetuate itself in other kernels, no one of which could ever be mistaken for oats or corn or barley, but is incontestably wheat. This is literal and exact resurrection of the body and is going on in millions of instances and phases throughout nature in these vernal days. Stand beside the newly sowed field. Not a sign of life appears. All is brown and dry and silent. Were we not so familiar with it this field would seem as hopeless of resurrection as yonder cemetery. But the energy that last year made the wheat now lying apparently inert beneath this soil has persisted throughout the violence of reaping, threshing, winnowing, as it did throughout the struggles of growth. It has survived the dormant winter. Within a few days it will begin to disclose its power. Within a few weeks the resurrection of its body will be gloriously complete. Because we have never seen this wonder in the cemetery; because its winter is longer and its springtime has not yet come, are we forbidden to believe that it will ever come?"

Dr. Hamlin concludes that, while nowhere in the New Testament is resurrection—immortality—affirmed of the flesh, the resurrection and immortality of the body as the vehicle of personality and identity is rendered increasingly credible by increasing knowledge.

AN EXAMINATION OF MODERN SPIRITUALISM.

UNDER the title "Modern Spiritualism," Mr. Frank Podmore, a clerk in the General Post-Office, London, has written a noteworthy history of the Spiritualist movement and allied phenomena, which, as *The Spectator* remarks, "have yet survived, unexplained, the attack of every form of evidentiary analysis." Both the advocates of Spiritualism and its opponents are united in finding this book an important one. The conclusion which Mr. Podmore reaches, after his long account (covering 700 pages and presented in two large volumes) of animal magnetism, witchcraft, clairvoyance, somnambulism, etc., is that "whether the belief in the intercourse with spirits is well founded or not, it is certain that no critic has yet succeeded in demonstrating the inadequacy of the evidence upon which the Spiritualists rely." The conclusive test of such intercourse has not, however, in his opinion, been met. "It is only if information should be furnished," he says, "on matters familiar to the dead, but unknown to the medium, her interlocutor, or any living mind, that we are entitled to look for the explanation elsewhere" than in telepathic or other similar forms of communion of mind with mind. The evidence is also unsatisfactory, in his opinion, both of telepathy and of Professor Myers's theory of psychic faculties "as yet unexercised and unbreathed" which on extraordinary occasions make their power and presence felt. In his introduction Mr. Podmore discriminates as follows between two kinds of evidence relied upon by Spiritualists:

"That evidence groups itself into two distinct categories; and in some cases those who accept the one category reject wholly or in part facts coming under the other. In the first place we have to consider certain subconscious activities manifesting themselves in trance-speaking, automatic writing, seeing visions which tho they may be readily counterfeited, are not necessarily, or in typical cases, associated with imposture. In the second place, second in the historical as in the logical order, there are certain physical manifestations, unquestionably, in their later developments, bearing strong resemblance to conjuring tricks, but as unquestionably appearing in the first instance in the presence and through the agency of uneducated and unskilled persons, mostly young children, and in circumstances where the hypothesis of trickery presents formidable moral as well as physical difficulties.

"At the outset of our inquiry we must note a significant distinction between the two classes of phenomena. With the exception of one well-defined type of cases . . . there is, broadly

speaking, no parallel to be found in civilized countries during the last three or four centuries at least, for the physical phenomena alleged to occur in the presence of certain Spiritualistic mediums. On the other hand, the annals of Spiritualism contribute nothing new as regards the first class. There is no manifestation of inspired writing and speaking, of spiritual healing, of telepathy, or clairvoyance occurring since 1848, which can not be matched amongst the records of animal magnetism, and again, before Mesmer, we meet with similar phenomena in the chronicles of ecstasy, obsession, magic, and witchcraft."

The history of the Spiritualistic movement can not be followed here. It may be observed, however, that America is assigned as the real home of modern Spiritualism, which dates from 1848, and the most important investigations yet held anywhere on the subject are regarded as those conducted by Dr. Hodgson and his colleagues in connection with Mrs. Piper and Mrs. Thompson. These came just as the faith "seemed to be tottering to its final fall"; and, as a result of these, that faith "now stands to the eye more firmly established than ever before." But "if in the course of the next two or three decades attempts to obtain information which is outside the knowledge of any terrestrial intelligence meet with as little success as they have met with up to the present time, it will seem a reasonable conclusion that the soi-disant spirits are only, in the last analysis, creatures of the medium's imagination." In his final chapter, Mr. Podmore sums up his review and his conclusions, so far as he has been able to draw definite conclusions. He writes:

"If we turn to the evidence, we find that it is not primarily on the discredited physical phenomena . . . that the belief in spirit influence or occult force is founded, but on manifestations of another order, of which these feats of legerdemain form an incidental and dubious accompaniment. Ecstasy, possession, somnambulism, the magnetic, mediumistic, or hypnotic trance are conditions exhibiting certain common characteristics, the most marked being that the subject loses, more or less completely, control over his actions and consciousness of his identity. When the hand acts without the knowledge of the owner, when the mouth speaks words foreign to the thoughts and character of the speaker, the inference, in an age of faith, is inevitable that the utterance and action are to be attributed to alien spiritual powers. The nature of the influence, whether diabolic or divine, thus supposed to act through the intermediary of the ecstatic, reflects accurately current traditions and beliefs. . . .

"Modern psychology has learned something of the nature of these departures from normal consciousness, and has found their analogs, on the one hand, in reverie, sleep, and automatism; on the other, in delirium, hysteria, and other morbid conditions. Further, it has explained and justified the belief in an alien influence held by the patient himself and those around him. For together with the division or restriction of conscience, which is the common characteristic of these states, there is, as we have already seen, a concomitant alteration of the physical basis of consciousness. Even in automatic writing the automatist is frequently unconscious of the movement of his hand, and, learning what has been written in the same manner and at the same time as the other spectators, by the eye alone, he tends to regard the movements of his hand as extra-personal. In cases of trance and other states where the division of consciousness is more complete, the corresponding physiological changes are unquestionably more far-reaching. Probably, as Ribot has suggested, there is some alteration in that complex of organic sensibilities, on which the feeling of personal identity may be presumed largely to depend. The subject is conscious that he is no longer the same man. . . . . .

"In these obscure physiological changes, then, aided by suggestion, which is rarely lacking, from the spectators, is to be found a sufficient explanation of the constant assumption by the entranced subject of alien personalities, and of the claim put forward on his behalf for external inspiration. The mere fact of the claim being made, and made obviously in good faith, is no evidence for its authenticity. Nor, again, does the realistic character of the impersonation and its fidelity to the facts in itself furnish any better guaranty of the claim. The hypnotized subject will in like manner, at a hint from the operator, assume any required rôle, and carry it out with dramatic power and consistency."

Of the theory put forth by the late Prof. Frederic Myers, Mr. Podmore speaks as follows:

"Whilst admitting that many, perhaps most, of the trance personalities are but dream-figures, created out of the subject's own fantasy, he [Professor Myers] finds in certain cases proof of communion with spirits of the dead. But if his main contention is well-founded, Spiritualists can afford to dispense with these dubious revelations. Whether or not the conditions of another world permit its denizens to hold halting communication with those here is a question of slight and transitory import, if we have it in our power to demonstrate, from its own inherent properties, that the life of the soul is not bound up with the life of the body. If in states of trance or ecstasy the soul has knowledge of things distant and things hidden, can foretell the future and read the past as an open book, it seems a lawful inference that, as such faculties have assuredly not been acquired in the process of terrestrial evolution, and find but little employment of justification here, they must testify to a world of higher uses, and an evolution not conditioned by our material environment. In a word, such faculties must be regarded not as vestigial, but as rudimentary; a promise for the future, not an idle inheritance from the past. . . . But the evidence seems at present far from sufficient to establish, hardly sufficient perhaps to justify the speculation."

Mr. Podmore's final word, however, is one of warning against too great incredulity:

"There is a superstition of incredulity; and the memory of that discreditable episode in the history of science in these islands [Great Britain], the contemptuous rejection for nearly two generations of the accumulating evidence for hypnotic anesthesia and kindred phenomena, should suffice to teach us that even the extravagances of mysticism may contain a residuum of unacknowledged and serviceable fact. We must not, for the second time, throw away the baby with the water from the bath."

Mr. Podmore's book has aroused much discussion both here and in England. Andrew Lang devotes considerable space in *The Pilot* to a consideration of the book. He concludes that "the moral, at least the moral which I would enforce, is to have nothing to do with Spiritualism 'falsely so called.'"

The Academy and Literature says:

"There can be no doubt that the sudden growth of Spiritualism is one of the most startling facts in the modern history of religion. Starting, as it apparently did, from the tricks of a few mischievous girls, and having no firmer basis than a series of utterly trivial 'phenomena' which its stanchest adherents now admit to be tainted with fraud, it has spread until it seems to satisfy the religious needs of, at any rate, a large proportion of the Anglo-Saxon race. As it has done this, moreover, without producing a single leader of marked personality, and in the teeth of repeated exposures, it is evident that its roots must lie hid in some peculiarities of human nature which have not yet received full investigation, and a rational, well-documented, and, so far as may be, impartial study of its rise and progress was much to be desired. It seems likely that the book of Mr. Podmore, who will be remembered as having been engaged with the late Frederic Myers in earlier investigations of the subject, has come just in the nick of time to gratify this desire."

This exposition of the various phenomena of Spiritualism, which has seemed so unbiased and even so tolerant to critics without the pale of the Spiritualistic belief, is very unwelcome to its partizans. *Light* (London), the leading English Spiritualist organ, comments on Mr. Podmore's work as follows:

"He is 'the devil's advocate' pure and simple; and so entirely and resolutely that, that we could almost imagine him playing the part of the old Romish official, with the understanding that he sufficiently discharged his duty if he exhausted his ingenuity in *inventing* sins for the saint.

"Mr. Podmore's new book, of nearly 700 large pages, has for its leading characteristic a steady, resolute, monotonous, and,

we must say, often comic, raking up of every imaginable depreciation of the evidence in favor of Spiritualism. Fairly enough, he sets forth strong cases in point, and, at considerable length, but only to follow them with the inevitable wave of the hand; and lo! like Sancho Panza's dinner, dishes, one after another, disappeared, and, like Sancho Panza, we are moved to ask: 'Is this dinner arranged to show off your sleight-of-hand?' . . . . . .

"We very readily admit that Mr. Podmore has compiled, in some respects, a useful book, but it is ruined by his grossly obvious bias which sticks at nothing in his determination to follow his careful building-up by a dismal knocking-down. And yet, after all, the knocking-down is so overdone that probably not much harm will come of it."

DR. RAINSFORD'S "HERESY."

IT is only a few weeks ago since we had occasion to notice a vigorous attack made by evangelicals upon Dr. Lyman Abbott, on the ground of his religious "heresies." Later, the "sacrilegious" Dr. Edward Everett Hale, who participated in an Episcopal communion service, was made the subject of indignant press comment. Now it is Dr. Rainsford, of New York, who is pilloried. Dr. Rainsford's offense was committed during the course of a Lenten sermon delivered under the auspices of the Brotherhood of St. Andrew in St. Stephen's Church, Philadelphia. One of his auditors has declared in a public statement:

"The service was intended to be devotional. Dr. Rainsford belittled the sinfulness of sin. He denied the mediatorial work of Jesus, and emphatically stated that the Bible is erroneous in the Old Testament, and that the New-Testament writers made many mistakes. The virgin birth of Jesus was dismissed as tho it were so much nonsense. Deny as much as he may, hundreds there were ready to confirm my synopsis."

THE REV. W. S. RAINSFORD, D.D.,
Whose alleged "heresies" are just now the subject of heated discussion in the religious press.

Against this statement, however, must be set that of the rector in whose church Dr. Rainsford spoke, and who declares that, according to the best of his recollection, "no article of Christian faith was impugned."

The only reply that Dr. Rainsford has made to his accusers is contained in a letter to a friend, which has been published by Bishop-Coadjutor Mackay-Smith, of Pennsylvania, and in which the New York minister says:

"I accept *ex animo* (*i.e.*, from my soul) all the articles of the Christian faith as contained in the Apostles' Creed, and I hold to the Mediatorship of our Lord, Jesus Christ, with my whole heart, and have made it, in fact, one of the cardinal points of my teaching. Whether in the method of expressing my beliefs I depart from established usage further than is wise, is a question for my ecclesiastical superiors."

This controversy has aroused deep interest in both the religious and secular world. A manifesto was promptly issued in Philadelphia by eleven leading clergymen who, without mentioning Dr. Rainsford's name, protested against certain reported "statements subversive of the Gospel and of the Christian faith," and reaffirmed their belief in the fundamental doctrines of Christianity. The document was subsequently signed by 108 more clergymen of the Protestant Episcopal Church in Pennsylvania.

The Church Standard, the Protestant Episcopal organ in Philadelphia, is unwilling to commit itself to a definite conclusion until the facts of the case are better known. It comments, in part:

"It seems to be merely incredible that a man should compress into a discourse of little over twenty minutes so formidable an array of heretical teachings. Credible and intelligent persons deny that he gave utterance to *any* heresy. For our own part we have no knowledge on the subject; but this we say, that, if any of the signers of the statement above given were to be charged with heresy on no better ground than that of reports and general conversation, we should hold ourselves bound in common sense and Christian charity to ask him to tell, plainly and distinctly, what he did say, and what he meant when he said it, before we should arraign him before the bar of public opinion."

The Milwaukee *Living Church*, the High-Church organ, is much more severe. It assumes the guilt of Dr. Rainsford, and calls upon the Brotherhood of St. Andrew to repudiate his utterance. It says further:

"As for the unfortunate priest himself, he presents one of those unhappy difficulties which have frequently arisen in the history of the church. We do not call for an ecclesiastical trial. We have little confidence in those unwieldy proceedings, except where doctrinal grounds can be kept wholly out of the issue. But we do urge the extension toward him of that which, quoting another, we once before referred to as the 'cold-storage process.' Let orthodox churchmen, who hold to and revere the faith once delivered to the saints, simply drop him from the list of men available for public gatherings, until, at least, he is ready to atone for what he has done. That has been done before in New York, and it is the most successful plan for dealing, with a minimum of loss of souls, with those similarly afflicted.

"It grieves us bitterly thus to write of a priest whose early work in his ministry in this country was among the noblest successes the American church has known. Dr. Rainsford's raising of St. George's Church from the slough of failure is among the grandest chapters in our church history. Hand in hand we worked with him in the early days of the Brotherhood of St. Andrew, when he would have given his right arm rather than speak words which would drive young men away from the religion he worked with all his might and with large success to extend. Slowly, year by year, then rapidly, we have marked the increase of this tendency on his part to speak unfaithfully of the religion he had sworn to maintain. Finally it has come to the pass that he almost never appears in public without violent abuse of orthodox Christianity. It is a sad, sad story, of the rise and fall of a Christian priest, unto whom much was given."

The national and local officers of the Brotherhood of St. Andrew have published a statement disclaiming responsibility for Dr. Rainsford's utterance. "The Brotherhood as a body," it says, "refuses to hold itself responsible for everything said by every priest of the church, who is invited to preach at such services. We have ourselves known unfortunate things to be said at official conferences of the church, but we were not so foolish as to blame the whole church for such unwise utterances."

The New York *Outlook* comes to Dr. Rainsford's defense in no uncertain terms. It says:

"For twenty years Dr. Rainsford has been preaching the Gospel in this city, with a fruitage which it is given to very few ministers of Christ in any church to enjoy. Measured by this very modern creed he may be a heretic; we do not know. But of his candor and courage no one who knows him has ever entertained a doubt, and we venture to say, from personal and somewhat intimate acquaintance with him, that, whatever he may think of the new creed so extemporaneously framed and so suddenly issued by this self-constituted council, there is no article in the accepted creeds of the Episcopal Church that he does not heartily and sincerely accept, and that the mediatorial work of Christ,

which some of his critics have said he denies, is at once the foundation and the inspiration of his ministry."

The sympathies of the secular newspapers seem to be largely with Dr. Rainsford. The New York *Sun* declares:

"The accusation made against Dr. Rainsford, so far as we can make it out, is that he explained away the doctrine of the Atonement, and denied inferentially 'the mediatorial work of Jesus,' and, incidentally, took the view of the Bible of the so-called higher criticism. But the accusation lies against the whole distinguished school of theology to which he belongs, a school which now is prominent, if not predominant in every church of Christendom. Even the Pope has instituted a commission to weigh the evidences and conclusions its scholars have to present. We have seen no exact report of the remarks of Dr. Rainsford at Philadelphia, but there is no reason to believe that he swerved in the least from the position held by many of the most illustrious churchmen of this time or said anything which would have provoked surprise in any one familiar with theological teachings of men of the highest and most approved standing in the Anglican Church and the Episcopal Church."

The Boston *Transcript* adds:

"His raising St. George's Church from the slough of failure, as the editor of *The Living Church* admits, is one of the grandest chapters in the recent history of the Protestant Episcopal Church in New York city, but it has not been due to his greatness as a thinker, but as a lover of humanity, as an administrator and as a forthright, sincere preacher of a gospel of muscular, vital Christianity. His passion for reality, his irritation at all that is conventional merely for the sake of conventionality, his boldness in calling an ace an ace and a spade a spade, all make him disliked and distrusted by the traditionalists of his own church, and it is quite impossible for them to do him justice either when he errs or only seems to."

THE CHURCH CRISIS IN ENGLAND.

THE growth of ritualistic practise in the Church of England, which came into special public prominence at the time of John Kensit's death in October last, is again a leading topic of discussion in religious circles. A bill has passed its second reading in the House of Commons, and seems likely to become law, which proposes to give the civil courts the right to recognize protests made by laymen against extreme ritualism, abolishes the bishop's right of veto, and provides that offending clergymen may be deprived of their livings. During the course of the parliamentary debate on this "Church Discipline Bill," it developed that incense is used in 393 English churches, and that various forms of extreme ritualism are practised in 71 more. Sir William Vernon Harcourt, in supporting the bill, argued that the doors of the law in ecclesiastical matters should be opened to every subject of the realm, adding: "If you do not like interference in this matter, disestablish the church." Mr. Balfour, who opposed the measure on the ground that time should be given to the new Archbishop of Canterbury to carry out his plans for reform, sounded the ominous warning: "I do not know what the future of the church will be. I look upon it with the gravest anxiety."

Early in March a deputation of about a hundred and twenty members of Parliament waited on the archbishops of Canterbury and York at Lambeth Palace with a view to impressing upon the ecclesiastical authorities the necessity of prompt and decisive action. The Primate said, during the course of his reply to their appeal:

"There are some few men defiant of the episcopal authority and really reckless of the true Church of England spirit. I say to you deliberately to-day that in my view of such cases tolerance has reached—has even passed—its limit. The sands are running out. Stern and drastic acts are, in my judgment, quite essential. I desire that we should act, and act vigorously."

The English church papers are highly indignant at what they regard as an attempt of Parliament to "interfere" in ecclesiastical affairs. *The Guardian* says that the motive behind the bill is "anti-religious rather than Protestant." *The Church Times* declares that "the men who concocted the Discipline Bill" are "tyrants of the worst kind—religious tyrants, or, rather, men who indulge their lust for power in the sacred name of religion." It says further:

"The church is perfectly competent, and alone competent, to regulate her own internal discipline, and it is not for an assembly composed largely of unbelievers, sectaries, and avowed enemies of the church to dragoon the clergy. . . . The church has her constitutional rights obscured, it is true, by long neglect of them and by her supinely submitting to parliamentary infringement on her liberty. But the rights are there, and could be exercised again if churchmen were constrained by outward influences to rally together in their defense. Nothing perhaps will better serve that purpose than the determined effort of otherwise ill-advised meddlers to bring the doctrine and practise of the church absolutely under state control. When that is clearly perceived to be the real meaning of the assault upon our advanced guard, the main body will close up its ranks."

The whole matter is naturally regarded in a very different light by the non-conformist press. *The Christian Commonwealth*, in an editorial bearing the title "Church Anarchy," takes the view that the present agitation can only have the effect of bringing the English people one step nearer to church disestablishment. It says:

"The time will probably soon arrive when the nation will refuse any longer to allow Parliament to degrade the Christian religion. The number of those called churchmen who chafe under the yoke of the state alliance is increasing, and when it reaches a certain point the demand for liberty must become irresistible. . . . The Church of England is dependent on the will of the state, and is often derided by worldly men as being the mere creature of the state, while the clergy are frequently reminded that they are civil servants. In order to remedy this appalling humiliation many priests have lawlessly assumed independence on their own part, and the bishops have seldom attempted to repress such mutineers. What has now to be faced is an angry determination on the part of the Protestant party to prosecute the Romanizers. But it will once more be found, as during the deplorable scenes after the passing of the Public Worship Regulation Act, that prosecution will be interpreted as persecution. The same old vicious circle is being described by the geometers of Erastian reform. The way of peace and order for the church has never been through the doors of any Parliament. It may be that before long Englishmen generally will be constrained to consider the philosophy of Cavour's famous formula, of 'A free church in a free state.'"

RELIGIOUS NOTES.

DR. DANIEL C. GILMAN, president of the Carnegie Institution in Washington, has been elected president of the American Bible Society.

BISHOP ROUXEL, who is in charge of the archiepiscopal see of New Orleans during the absence of Archbishop Chapelle, says that he is flooded with applications from the refugee religious orders in France, which are desirous of establishing themselves in Louisiana.

THE task of securing a successor to John Willis Baer as general secretary of the United Society of Christian Endeavor has been accomplished after nearly six months deliberation. The choice has fallen upon Mr. Von Ogden Vogt, of Beloit, Wis. Says the Boston *Congregationalist*: "Of Swiss antecedents, a Western born and bred man, a Presbyterian but trained in a college identified with Congregationalism, he has already, tho not yet twenty-five years old, evinced unusual capacity as a public speaker and a skilful leader and worker along practical lines. Since his graduation from Beloit in 1901, he has assisted President Eaton as financial agent of the college. His Christianity is of that modest, earnest virile type which is in evidence to-day at so many of our American colleges."

THE REV. WILLIAM BURT, head of the American Methodist work among the Italians, was received in private audience by King Victor Emmanuel a few days ago, and received the decoration of the order of St. Maurice and St. Lazarus, as a token of his Majesty's appreciation of Mr. Burt's labors, extending over seventeen years. During this period he has founded thirty-three churches, a girls' industrial school with fifty pupils, a girls finishing school, having 275 pupils; a boys' Methodist college and a theological school under the direction of Dr. Clark, all in Rome, and an industrial school for boys in Venice. The Methodist building in Rome, one of the largest in Europe, which was built to commemorate the twenty-fifth anniversary of the fall of the Pope's temporal power, contains two churches, a publishing house, and a home for ex-priests.

FOREIGN TOPICS.

THE STRUGGLE IN FRANCE.

A POLITICAL storm of marked severity seems destined to burst over France. Separation of church and state, if not actually in sight, is within measurable distance, if we are to accept the views of those most competent to form an opinion. The Vatican and the Government at Paris are now confronting each other in a duel which, as one authority puts it, rivets the attention of the cultivated world and brings into action intellectual and moral forces of decisive importance to mankind. The recent victory of Premier Combes over the religious orders in the Chamber of Deputies is pronounced by an English observer "a greater event than the Czar's manifesto."

The facts in the case, which indicate that French anti-Clericalism has entered a totally new phase, were made the subject of a speech by Premier Combes. The Senate is having this speech placarded throughout France. It seems that two years ago the authorities in Paris had seven unsatisfactory papal bulls on their hands. These bulls, contemplating the canonical institution of seven Roman Catholic prelates, were so worded that the Pope was made by implication the absolute appointing power. But this power of absolute appointment is claimed by the French Government for itself under its interpretation of the Concordat, or treaty with the Vatican. All that was needed to correct the bulls in official French opinion was the erasure of a Latin pronoun—"nobis." The sixty or seventy bulls immediately following the ratification of the Concordat, with two or three exceptions, did not contain the pronoun. Subsequently, and up to 1870, the unfortunate pronoun showed a marked tendency to appear, while during the thirty years ending in 1901 it had become part of the natural order of things. Then it met the eye of M. Combes, who resolved to be rid of it. The seven unsatisfactory bulls were accepted under protest, and the Vatican was admonished to amend its Latin. But when M. Combes, who had meanwhile become Premier, picked up the last batch of bulls from Rome, the pronoun was there to beard him. The speech in which the head of the ministry laid these particulars before the senate is a proof, says the London *Times*, that the struggle against the religious orders "is but an incident in the policy which the Republican majority have adopted toward the church":

"What the final issue of that policy may be, what effects it may have upon the position of the Roman Catholic Church within and without the borders of France on the one hand, and what upon the internal affairs and the social life of that country upon the other, are subjects on which it would be rash indeed to form precise and positive judgments at present. All that seems certain is that the struggle will go on, and that, as it goes on, it must assume wider proportions and greater bitterness. The denunciation of the Concordat and the complete separation of church and state, so long desired by the extreme Radical and Socialist groups, may not be at hand, but these events, big with far-reaching consequences to both parties in the contest, seem distinctly nearer after the speech of the Prime Minister."

The struggle that is impending was opened by the Premier with what is considered an impressive display of anti-Clerical power. An entire group of religious orders—those devoting themselves to teaching—were suppressed in one roll-call of the Chamber of Deputies. This happened just before the Premier's great speech on the Latin pronoun.

Immediately after that event M. Combes returned to the fray and the preaching orders were voted down, after which was sounded the doom of the industrial orders. The Socialist *Lanterne* (Paris) thus expressed the gratification of the more radical political groups:

"The religious orders have received a preliminary blow. Others must be dealt. After the religious orders of males come the religious orders of females, by no means the least pernicious. After the religious orders, the church. After the friar, the priest. After the fulfilment of the law against the religious orders, the termination of the Concordat and separation."

POLITICAL MAP OF FRANCE.

The districts in black are clerical; those in white are anti-clerical; shaded portions are doubtful. —*L'Illustration* (Paris).

The Government is winning a great victory in the anti-Clerical battle, says the *Aurore* (Paris), organ of one of the political groups forming the dominant Republican "combine." The *Petite République* (Paris), organ of the eminent Socialist Jaurès, says the vote in the chamber suppressing the teaching orders as such was a historic act, marking the emancipation of the human intellect from superstition and error. The victory won on this great day will put new enthusiasm into the majority for the struggle that is coming. The Clerical papers revert to Robespierre and the Reign of Terror for comparisons appropriate to the state of their feelings. "Infamy is perpetrated," declares the *Gaulois* (Paris), a paper said to be under Jesuit influence. The *Libre Parole* (Paris), under Vatican influence, is of the opinion that the Free Masons, aided by the Jews, are overcoming the Roman Catholics. The *Autorité* (Paris) says the world is scandalized. Referring more particularly to the new difficulty that has arisen over the bishops and the Latin pronoun, the anti-ministerial *Journal des Débats* (Paris) remarks:

"M. Combes has spoken concerning the appointment of bishops. There may be differences of opinion on this point. Nevertheless, if one may judge the method of appointing bishops by the results obtained, it must be confessed that never were

bishops more submissive to the laws than now nor more deferential to the authorities. One must have a skin as sensitive as the Premier's to complain as he does of a few cries of protest uttered by an insignificant number of prelates in the course of the abominable crisis we are passing through. No other clergy in any other country in the world would have carried submission to such lengths. The mode of nominating bishops, as it has prevailed for thirty years past, has certainly not created a hierarchy in revolt against the rights of the state."

In reply to criticism of this kind, the ministerial papers publish statements on behalf of Premier Combes, according to which the Vatican has repeatedly rejected for appointment to bishoprics the names of priests of the highest character and attainments. According to a statement in the *Petit Temps* (Paris), these priests were rejected as too liberal in their ideas, altho the Vatican refused to give reasons in any individual case. Among them were Father Pujol, "unquestionably one of the priests who most honor the French clergy by their character and talent"; Father Hennion, "the distinguished Hebraist"; Father Blampignon, "author of numerous valued works and worthy in every way of the high position the Government asked for him." Other priests, all pronounced "worthy and eminent," are mentioned by name as having been rejected in accordance with what the *Petite République* styles the purpose of the Vatican to force as bishops upon the French people the agents of its own political ultramontanism. The policy of arriving at a preliminary agreement before appointing bishops, we are further assured, was thus made impossible. The only remedy is complete separation of church and state. This, the *Rappel* says, presents a question which the Republican majority should settle without delay.

Meanwhile the Vatican is displaying firmness. The *Politische Correspondenz* (Vienna) says the objectionable Latin pronoun has an ancestry that goes back to the time of King Francis I., as the papal secretary proposes to remind the French Government. But the *Tribuna* (Rome) thinks the Vatican may find a way out of the difficulty, and it rather anticipates such a result. The Vatican's own organ, the *Osservatore Romano*, is non-committal as yet, but great significance is attached to what seems to be a semi-official utterance in the London *Tablet*, a Roman Catholic organ, which says that in the interests of peace the Holy See has yielded a good deal to the demands and importunities of France, but it is quite resolved not to yield upon this point of the pronoun.—*Translations made for* THE LITERARY DIGEST.

FAILURE OF THE MACEDONIAN REFORM SCHEME.

WITH somewhat unexpected promptness the widely heralded scheme of Macedonian reform has turned out a failure. The verdict of the unofficial European press is unanimous on that point. The two Powers responsible for the scheme intend, nevertheless, to see the affair through. Hilmi Pasha has been appointed inspector-general "for the purpose of supervising the reforms." He has held important posts under the Turkish Government, and is described as "a man under fifty, who looks older." He spends fourteen hours daily in trying to reform Macedonia, a task pronounced hopeless (under the Austro-Russian scheme) by Victor Bérard, writing in the *Revue de Paris*:

"The people have ceased to believe in the oaths of the Sultan and the pledges of Europe. Educated in schools of every tongue and all religions, enlightened by trips of business or for study to the universities of the small adjacent countries—Servia, Bulgaria, and Greece—or to the great cities of Liberal Europe, a generation has grown up with a clear sense of its needs and of its rights. Seeing that for a century past all reform measures have proved illusory, discovering each year that promises in Constantinople are false and the utterances of European diplomacy hypocritical, this new generation places its faith only in revolution, in the annihilation of Turkish rule. This is not a thing to censure. During the past six years, from 1896 to 1902, the Sultan has promulgated and the Powers have approved four reform plans, and the general misery has only increased."

Now that the reforms have failed to command Macedonian support or to end existing evils, the question of what is to be done next presents itself. No very definite plan is forthcoming. The *Mouvement Macédonien*, an anti-Turkish organ published in Paris, urges a patriot uprising and prints sensational lists of robberies, murders, and crimes against women perpetrated by those Turkish troops styled bashi-bazouks. *The Spectator* (London) thus dwells upon the ominous aspects of the situation:

"The danger in Macedonia is admitted to be extreme, and it is a horrible one. According to one account, the Macedonians, driven mad by local oppression—part of which, it is due to justice to say, is not so much the fault of the Sultan, or even of the Pashas, as of the dread felt by local Mussulmans that they may lose their supremacy—intend this spring to rise in insurrection. If they do, the Porte must put that down, and it can only be done by letting the Albanians and the troops from Asia loose upon the refractory population. The horrors that may follow may shock all Europe, and may create an emotion fatal to Turkey, the Russian people in particular insisting that whatever the consequences their coreligionists shall be saved. According to another account, the coming insurrection is not self-generated, but is promoted by Bulgarian leaders in the hope that it may provoke the Turks into outrages which will bring the Russians, and indeed all Europe, upon them, as happened in 1887 in Bulgaria. Granting the existence of this extraordinarily wicked design, still the fact remains that there can be no security for life, honor, or property in Macedonia unless the province is placed, like the Lebanon, under the government of a competent administrator guaranteed by the great Powers against dismissal or interference. Opinion, we can scarcely doubt, would enforce this solution but for the concert, which paralyzes it by suggesting a compromise so weak that every Power which adheres to it doubts its success even for the immediate time. Britain and France hint that doubt pretty clearly in despatches, and Russia and Austria mobilize great bodies of troops, and, it is asserted, arrange far-reaching plans with a view to a 'possible, if improbable,' contingency, viz., the failure of the 'reforms.'"—*Translation made for* THE LITERARY DIGEST.

THE CZAR'S POLITICAL IDEAS.

NICHOLAS II., mightiest of earthly monarchs nominally, has a personality that easily yields to any pressure. So says a well-informed Russian. To this M. Jaurès, the famous Socialist leader in France, adds that the Czar should summon a national convention of his people and by that means put an end to a situation growing more perilous all the time. M. Jaurès actually says that events are impending in Russia calculated to test severely the rhetorical effectiveness of some future Carlyle. Nicholas II. may tread the path that ended so abruptly for Louis XVI. But another authority reminds M. Jaurès that he applies "half-truths" to "a situation which he very imperfectly apprehends." We must not let our knowledge of the French Revolution mislead us into superficial judgments of the Czar's position, perilous as that position is.

It is impossible to read the mass of comment on the Czar, inspired in the European press by his reform manifesto, without coming to the conclusion that those who know the man are keeping their information to themselves. Easy as it is to pick up items of information here and there, it is difficult to put those items together consistently. But most authorities agree with the *Viedomosti* (Moscow) when it says that the Czar is devoted to the principle of autocracy. He would thus appear willing enough to do good, but it must be along the lines of benevolent despotism. And the *Tribuna* (Rome) says he is a striking contrast to Emperor William, in that he is not voluble to the public, but carries out his purposes unimpulsively and without show. From the same paper we extract this information:

"Nicholas II. was educated in accordance with the innovating

ADMIRAL SKRYDLOFF. He is an important factor in the creation of a great Russian navy.

GENERAL KOUROPATKIN. As Minister of War he is suppressing liberalism in the army.

GENERAL DRAGOMIROFF. His ambition is to make Russia's army the finest in the world.

GENERAL SAHAROFF. Able upholder of the bureaucratic system of Russian rule.

GENERAL PUSHKIN. Bearer of a name honored in Russia's literary and military history.

MEN WHO WIELD THE CZAR'S POWER.

traditions of the Romanoff dynasty, traditions that have in view a constructive regeneration of Russia on despotic principles. Three Russian generals were detailed to educate him and he had a French preceptor. His days of study were marked out for him, hour by hour, with great care. He was given little time for recreation by day, and his evenings were spent in drawing, music, and fencing. He was taught no Greek or Latin, but living languages instead. His room was a small one. It contained an iron bed and a small table. By way of ornament, its walls were covered with pictures cut from illustrated newspapers and pasted by the young man himself."

When he came to the throne the young Czar was thoroughly imbued with the autocratic and religious spirit of his father, whose aims he wishes to realize. The Czar's father was no friend to constitutional rule and democratic ideas. Nicholas II. has even maintained his father's habits and characteristics. Like him he works hard, conscientiously, persistently. Physically he is small, but not weak. He has never had a serious illness. A very striking development of the Czar's character is his tendency to occultism, mysticism, and certain practises of the orthodox religion. He is said to have seen the spirit of his grandfather, the Czar Alexander II., who told him, from the other side of the grave, that the emancipation of the serfs was not such a great benefit to Russia, after all. Tales equally strange are told of the Czar's personal environment, which seems to react upon his political activity. Upon one aspect of his political activity, the influence of his advisers, valuable light is thrown by Mr. F. Volkhovsky, the Russian libertarian, writing in the London *News*:

"In Russia there is no homogeneous cabinet. Every minister is not only not bound to support the others, but, as a matter of fact, some of them are always at war with each other. Having no direct responsibility to the nation, being appointed and discharged exactly in the same manner as a landlord appoints or discharges a steward who looks after his personal interests, the Russian ministers, with few exceptions, vie with each other in the first place to get hold of the person of the Czar, as a means of obtaining supremacy in power. When the personality of the Czar easily yields to any pressure, as is the case at present, this contest for supremacy becomes fierce, and has a palpable influence on the policy of this or that minister."

Hence all the men about the Czar, army officers, ecclesiastical functionaries, civilian dignitaries, are engaged in a ceaseless struggle for favor and power at court. Various men come into prominence and importance, and some remain. But there are few who, like M. Pobiedonostseff, retain a moral hold for any length of time. The long and difficult name of this old gentleman comes into prominence from time to time as the evil genius of the Czar. M. Pobiedonostseff, as Procurator of the Holy Synod, greatly influenced the Czar's father, and he seems to have retained a hold over the Czar that speaks volumes in itself. When the Procurator announced his wish to retire last year Nicholas was much perturbed. "Among the falsest of political principles," wrote M. Pobiedonostseff not long prior to this time, "is the principle of the sovereignty of the people." Says the London *News* editorially:

"A despotism like that of Russia is the only type of government under which such a character as that of the Procurator could have political possibilities. Alike in his qualities and his defects he belongs rather to medievalism than to the twentieth century. He is as merciless as Alva, as bigoted as Laud, as unteachable as Philip II., as patrician as Lord Salisbury. The divinity that doth hedge a king is as unquestionable as holy writ. To his far-off vision the people are a rabble of ants who have nothing to do with the law except to obey it. Freedom either spiritual or civil is in his view the dangerous dream of revolutionists, and he crushed the dissenter as mercilessly as he crushed the nihilist. 'Resolute government' was the one remedy which he applied to all the ills of the state, and he would destroy the liberty of a people like that of Finland as readily as he would suppress a newspaper, crush a sect or ostracize a Tolstoy. With all his cold, calculating bigotry, M. Pobiedonostseff is a man of great sincerity, singular penetration within certain narrow limits, and unquestioned piety."

It was thought, remarks our contemporary, that when Nicholas II. came to the throne M. Pobiedonostseff would be one of the first to disappear. "That prediction was entirely falsified."—*Translations made for* THE LITERARY DIGEST.

ONE LANDLORD FOR ALL IRELAND.

IT will be easier to understand the great Irish land bill now before the House of Commons if we consider what must happen in individual cases should the measure become law. Suppose a landlord and a tenant agree that $80 a year is a fair rent for a particular piece of land. That would make the property worth, at the rate of interest allowed in the bill, a little over $2,500. Landlord and tenant at once go before the commissioners appointed for this purpose, who look into the bargain. If they approve of it, the landlord receives $2,500 in cash—not in government bonds—and goes about his business. The tenant alone remains to be dealt with. For the next sixty-eight years, more or less, he must pay $80 annually to the Government. At the end of that long period his annual payment will drop to $10, but that sum of $10 must be paid yearly to the Government forever.

The Chief Secretary for Ireland, who brought in this measure, thinks there will be about 400,000 individual cases of this kind. But many of the landlords will find themselves unable to sell at a fair price. Irish estates are apt to be held subject to old annuities and family claims which put an artificial premium upon the land. This artificial premium the tenant would not want to pay. Neither would the landlord like to go without it. So it is

to be saddled upon the British taxpayer. The Chief Secretary for Ireland says the sum to be provided by the British taxpayer will be small—about $60,000,000 stretched over a long term of years. The Irish tenants think the Chief Secretary is mistaken. The British taxpayer should put up more money than that. So here we have one of the grand problems of the Irish land bill, and this is what *The Speaker* (London) says of it:

"It is doubtless necessary to offer the landlord some inducement which will make it practically certain that he will sell. Toward this bonus the state finds twelve millions [$60,000,000], but the tenant in his turn will contribute something like thirty millions [$150,000,000]. It is probable that Ireland will accept these terms to-day. The tenant is not likely to take a long view. He will pay under the bill in purchase instalments on an average 20 per cent. less than he is paying to-day in judicial rents. The immediate advantage is great; the moral atmosphere is for the moment favorable to concession and moderation. But we can have no security that this temper will endure. The bill fixes the rent which Irish farmers and cotters shall pay for a period of no less than sixty-eight years. The rent which is welcomed as an alleviation to-day may well become oppressive in half a century. A fall in agricultural values, an increase in foreign competition, the cheapening of ocean freights—any one of these causes would tempt the Irish peasant to regret his bargain. The leaders of this generation can not pledge their descendants; the excessive price which this bill awards to the landlords may seriously damage our security."

The enormous amounts of money involved in the bill are not to be handled in lump sums. It will take fifteen years to get the scheme fully started, and about a hundred years, perhaps, to wind it all up. During that long period there will be slowly evolving, if the principle of the bill be carried to its logical conclusion, one landlord for all Ireland—the state. Who and what will be that state, the British Government with headquarters in London, or an Irish executive responsible only to Dublin? That brings up another grand problem of the bill: its influence upon the Home Rule movement. The Conservative attitude on this matter is set forth by the London *Standard* in the following veiled language:

"One cardinal fact must be borne in mind if the bill is to have a successful course and to prove of real benefit to Ireland. Something more is necessary than the consent of the people of Great Britain to grant money, or engage their credit. The Irish must assist, and they must do so by treating Mr. Wyndham's bill as what in fact it is—an attempt to remove the causes of agrarian disturbance—and must not try to turn it into a stepping-stone toward something else of a wholly different character. In spite of the burden of taxation, we are ready and anxious to come to the help of Ireland in the task of removing the ancient incubus of an artificial system of land tenure. But we assume new responsibilities on the understanding that we are to reach a final settlement by means of them. If the bill is to be only an incident in a wider conflict with other and less innocent aims, the case will be materially altered. There will not be wanting politicians eager to distort the discussion on the bill into a debate of a purely political character, and who will invent pretexts for making the reform of land tenure an excuse for the establishment of political and administrative institutions of a more revolutionary kind than is required for the purpose of putting an end to double ownership. We look to Mr. Redmond to avert any maneuvers intended to pervert the bill into something which it was never meant to be. The imperial Parliament, by the confession of Irish members themselves, whether representatives of the tenants or not, is endeavoring to apply Irish ideas, and is doing so at some cost to the people of Great Britain. In return, we ask for a frank acceptance of good-will in Ireland. Whatever political aspirations the Nationalists may still cherish, they must not seek to promote them by means of a scheme which aims only at social reform."

This is an obscure mode of intimating that no Home Rule can be extracted from the land settlement. The national convention of the Irish party just held in Dublin and the tone of the Irish press indicate and even foreshadow a tendency to regard the land question and the Home Rule question as distinct and separate for the present. This attitude is particularly characteristic of *The Weekly Freeman* (Dublin), which announces that it must suspend judgment for the moment on the new land bill and at the same time prints a strong Home Rule editorial, in the course of which it says:

"The result of the next general election is almost certain to make the Irish party the absolute arbiter of the English House of Commons. Such a position will bring the Home Rule question to the front whoever is Prime Minister, and Home Rule will have fewer prejudices and vastly weaker influences to combat when next it becomes a live political issue."

The English press generally refrains from mixing the Home Rule and land questions. But *The Morning Advertiser* (London), a Conservative sheet, says "the British taxpayer may nevertheless look a little askance" at the money to be required of him. *The Scotsman* (Edinburgh) thinks otherwise. "The taxpayer," says this Unionist organ, "will be well inclined to take the most cheerful view of the moderate demand made on his pocket." The potent and authoritative London *Times*, however, is one of the papers which look at the subject in a spirit hostile to Home Rule. It says:

"There is a general desire to act liberally in promoting a settlement of the Irish land question, but only on the condition that it holds out a reasonably assured promise of security and peace. If whatever is granted is to be made only the starting-point of new claims, the British taxpayer will hesitate to commit himself to the enormous responsibilities involved in a general scheme for buying out the Irish landlords. That a class who have been so hardly treated by imperial legislation have a claim to be bought out we do not deny, but the operation—in any case a costly one—can not be undertaken unless there is substantially a certainty that it will produce the effect desired, that the reconciliation of classes in Ireland will be brought about, and that most of the difficulties of Irish government will disappear."

POINTS OF VIEW.

WOMAN IN AUSTRALIAN POLITICS.—"Every adult woman in Victoria will be entitled and invited to give a vote in the choosing of the second Commonwealth Parliament," says *The Argus* (Melbourne), in the course of a pessimistic editorial. "Nature has turned woman's curiosity and sympathy in non-political directions. They will vote—the matrons to please their male relations; the maids because also it is 'fun.' But they will not study politics."

THE NEXT PRESIDENT IN FRANCE.—Speaking of President Loubet, a writer in *The Fortnightly Review* (London) thus broaches the subject of his successor: "When his time expires in 1906 will Waldeck-Rousseau, an unsuccessful candidate in 1895, be the fortunate man, or will an outsider again carry off the prize? The Republic has yet to stand the ordeal of a contested Presidential election. Hitherto it has had the good fortune of having sudden vacancies which have left no time for electioneering, for MacMahon, Grévy, and Casimir-Périer resigned, Carnot was assassinated six months before the expiration of his term, and Faure died in office."

OLD AGE IN DENMARK.—"In Denmark no respectable old man or woman need ever become a pauper; no respectable old man or woman ever crosses the threshold of a workhouse," writes Miss Edith Sellers in *The Nineteenth Century and After* (London). "Should a man or a woman who has completed his sixtieth year, find himself without the wherewithal on which to live, he applies to the local authorities not for pauper relief, but for old-age relief; and this, by the law of 1891, they are bound to grant him, providing he can prove not only that his destitution is owing to no fault of his own, but that he has led a decent life, has worked hard and been thrifty; and that, during the ten previous years, he has neither received a single penny as poor-relief, nor been guilty of vagrancy, nor of begging."

GREATNESS OF MUTSUHITO.—During the thirty-six years of his reign, the Emperor Mutsuhito of Japan, who is now fifty, has shown "insight and faith," says *The Japan Weekly Mail* (Yokohama), adding: "It was His Majesty's great good fortune, and the great good fortune of his country, that he succeeded to the throne at the very dawn of the 'era of enlightenment.' Had it been necessary for his father Komei to cross the bridge between the old and the new, the effort of breaking away from the traditions of the past, which had received the sanction of His Majesty's own practise, might have proved too great and would certainly have shocked the sense of congruity in some sections of his subjects. But Komei passed away from the scene of storm, struggle, and confusion just as the country had to choose between remaining in the shadow of the old or passing into the light of the new, and it was comparatively easy for his successor, then (1866) in his fourteenth year, to identify himself intimately with the changes of the time."

NOTABLE BOOKS OF THE DAY.

DOWN AMONG THE GEORGIANS.

THE SUBSTITUTE. By Will N. Harben. Cloth, 5 x 7 in., 330 pp. Price $1.50. Harper Brothers.

A WHOLESOME, well-told story, altho one may question whether the hero, George Buckley, is not an almost impossible product of his early influences and surroundings. The ostensible interest centres in the love that grows up between young Buckley and Lydia Cranston, daughter of the proud Virginia family whose lot is temporarily cast among ordinary Georgians.

WILL N. HARBEN.

The soul-interest of the story, and its most unique feature, clusters around the character of a plain and prosperous Georgian, named Hillyer, who in a moment of rage and accident kills a man, escapes the penalty through the evidence of another man who risks perjury to save him, suffers tortures of conscience, and seeks atonement through doing all the good he can. He voluntarily educates young Buckley, the son of a disgraced father, in the hope of making his young manhood the substitute for all that he himself had lost.

The plot is somewhat fresh, many of the events unfolded come upon the reader as surprises, and throughout the story is the racy vigor that results from a true, deep knowledge of the region depicted and the mental grasp to project it. The local points of view of the people are effectually touched off. There is humor, not a little wit, and all those quaint turns of speech and reality of atmosphere that first brought Mr. Harben's work into notice.

The story is of value as another contribution to that line of fiction which helps to bring forward the sectional traits of our large and complex country.

A STRONG MAN IN A LONELY LAND.

CONJUROR'S HOUSE. By Stewart Edward White. Cloth, 5¼ x 7 in., 260 pp. Price, $1.50. McClure, Phillips & Co.

MR. WHITE makes his appearance with a new tale before an audience favorably inclined to him on account of his first work, "The Blazed Trail." In "Conjuror's House," he takes us to that region of the Hudson Bay Company, so vast, so wedded to snow and ice and cold, so inhuman, which Parker familiarized us with in several of his earlier stories. Mr. White feels its fascination no less and depicts it with remarkable vigor. In this novelette, however, tho the character of those snowy reaches of desolation is an important factor in the *motifs* of the story, it is employed, in in the main, only as a setting, which lends peculiar enhancement to an intense and romantic love story, with few complications, but alive from start to finish.

Galen Albert is the Head Factor of the post on the Moose River, almost as absolute an autocrat over those snowy solitudes as the Czar of all the Russias is over his countless leagues. His fair-haired daughter, Virginia, had been with him at "Conjuror's House" ever since she had come there, a little girl from Quebec. Into that strange life bursts a splendid specimen of young manhood, Ned Trent, a woods runner, who has coursed through that pathless region "to the uttermost ends of the North, even beyond the Hills of Silence." It is love at first sight with them both.

STEWART EDWARD WHITE.

But Trent's appearance at "Conjuror's House" is an enforced one. He has been brought in by the employees and traders of the Hudson Bay Company for poaching on its mighty preserves. The law that forbids this is an unwritten one of the company's own making, but the measures taken for its enforcement are terrible and effective. When a Free Trader had been caught once or twice, the Hudson Bay Company sent him forth into the gaunt waste and took care that he should never come out! For the company controls the food and the Indians. This journey has come to be called *la Longue Traverse*, and to it Ned Trent was doomed.

The invention is good in this work of Mr. White's and the romance very engrossing. But the character of Ned Trent and of Virginia and of her old Scotch father, the factor, are the most fascinating elements in it. The dauntless energy and strength, the magnetic way with a maid which Ned Trent understood tho Solomon confessed that he did not, the fearless and gay spirit of the man make the strange *coureur du bois* a striking personality.

Tho Mr. White does not indulge in very detailed presentation of the past of "Conjuror's House," and dwells but little on the life of the gaunt region, the "color" of it invests the whole story and is conveyed with vivid veraciousness. Parker introduced the reading world of today to it, but this does not detract from the charm and interest of "Conjuror's House." In fact, if Sir Gilbert has really turned his literary back on this snowy North, where he gathered so many laurels that he could bestow an occasional one, it is only a pleasure to feel that there are enough left for Mr. White to make good harvest from.

A HEROINE WHO EFFACES HERSELF.

MARTY. By John Strange Winter. Cloth, 5 x 7½ in., 338 pp. Price, $1.25. J. B. Lippincott Company.

MRS. STANNARD (John Strange Winter) long ago gave proof that she is mistress of a most respectable talent in the art of story-telling. She knows her world and all its little ways down to the very finger-tips, yet each successive novel only tends to emphasize the more certainly that her world is a small and confined one and that her desire to sound its depths seldom carries her beneath the conventional line. Marty, her latest heroine, is the daughter of an honest, resourceful woman, a lady's-maid who married a bank clerk and was soon left a widow with three little girls. Availing herself of her early knowledge of the "gentry," she establishes a business for the sale of their cast-off clothing to classes below who desire to cut a figure in their respective London circles. Her success enables her to give her children an education far above their social rank.

"JOHN STRANGE WINTER."

Marty, the eldest, a sound-natured, engaging little body of distinctly every-day limitations, captivates George Etherington, a "gentleman," whose people try to make the best of the situation. This is the basis; the outcome forms the whole substance of the tale. One feels that the author is sound regarding the minor life ethics she depicts, and that her point of view is true regarding the small chance of happiness in marriage for persons whose social habits and class traditions do not tally, and whose respective families can not blend.

As to the workmanship of Marty, it bears the general family likeness, not only in outline and plot, but in special features. Etherington reminds us in ways of Morgathroyd in "The Price of a Wife," while Marty emulates, in a way, the heroine of that same story by disappearing, hiding herself from the knowledge of a loving and distracted husband, by way of bettering a situation she does not know how to cope with.

When will novelists, especially women novelists, weary of playing with this time-worn, pet situation, and where do they find warrant for its use? Surely not in every-day life, where the women least able to conquer marital perplexities are prone to make the most noise about them and are the least willing to efface themselves from the world's eye.

A NOVEL OF QUIET FORCE.

THE LIGHT BEHIND. By Mrs. Wilfrid Ward. Cloth, 5 x 7½ in., 303 pp. Price, $1.50. John Lane.

THIS charming story is from the pen of a Roman Catholic of England, and the spirit of Catholicism breathes through it delicately and logically, but not in the way of dogmatism. It is a novel by a Roman Catholic rather than a Roman Catholic novel. The quality in it that merits most praise is the suavity with which the writer blends into artistic unity human instincts, the conventions of London society, and psychological interest. That its effect is not more vitally felt by the reader is due to the perfect harmony of its elements—something akin to the admirable poise of a great lady whose serenity may not be duly appreciated as an expression of strength.

A second perusal leaves the reader more convinced of its grace and power. It is quite removed from the drastic and conscious assurance of Mrs. Humphry Ward. It is a study of soft grays suffused with a

couleur de rose. The theme, morally tragic, is not emphasized by any violent gesticulation.

Mrs. Ward takes as her text these verses of "E. B. B.":

"Dear God," she cried, "and must we see
All this sin, this woe, this death, ere we go to Thee?
We cannot guess Thy ways, be we wind or leaf, dust in the Wind?
Oh! let us trust full fast, as ere we see *the light beyond!*"

Lady Muriel Cheriton is unhappily married to a sensual, neglectful husband. Soon after the beautiful young woman of twenty has made what the world would call a brilliant marriage, the desolating ignominy of her position is enforced upon her. She has a friend, a worthy adviser, in Mr. Biddulph, permanent under-secretary in the Colonial Office, a widower. Almost following this exquisite young wife's realization of what she had drawn in the matrimonial lottery, she "had had opened to her a vision of joy and love, forbidden only by a vow already despoiled and desecrated by her husband." She found in Biddulph, at this crisis, stanch refuge, "in a tenderness that had the divine characteristic of never sparing her present suffering, any more than he could spare himself in her service. . . ." "He had saved her from the mirage, had bade her fix her eyes on a higher point, on the horizon between two worlds."

Lady Cheriton fights her fight and wins. "Instead of a beautiful, childless, forsaken, much-to-be-pitied woman, left on one side by the great man who had married her, she had reversed the positions." She had made herself the important person in his world, on his estates, till he feared her "with the impotence of a weak, sensual nature that struggled helplessly with one stronger than itself."

At the end of ten years, she "discovers" a young man, Henry Dacre. She takes up the youth, gets him placed and socially introduced, and then has him run as the Conservative candidate from Cheriton. Through the machinations of Horace Colquhon, who has mercenary interest in her separation from her husband, ugly rumors are set afloat among the constituency of Cheriton as to the relations between the Lady of the Abbey and this eloquent young Apollo. As usual, Lady Cheriton is the last to hear of this. After her years of struggle and fidelity, she finds herself appraised by her world as a faithless wife. Her noble spirit copes with the situation masterfully, but her heart is broken. The final act in the moral tragedy her life has been is splendidly conceived. She dies in a villa near Lake Como, and the part that Henry Dacre and her own husband play in that final scene is full of emotional intensity, and is most cleverly devised.

MRS. WILFRID WARD.

Mrs. Ward shows full knowledge of the world of London life and of the great book of human nature. Her characters are very definite and true, her observations acute and searching. If a subtle something which seems to muffle her voice in this work were removed, her power as a novelist would be wonderfully enhanced.

FROM INDIAN TRAIL TO NATIONAL HIGHWAY.

WASHINGTON'S ROAD (NEMACOLIN'S PATH): THE FIRST CHAPTER OF THE OLD FRENCH WAR. By Archer Butler Hulbert. Cloth, 5¼ x 7½ in., 215 pp. Price, $2.50. The Arthur H. Clark Company, Cleveland, O.

HERE we have the third of that important and admirable series of historical monographs with which Mr. Hulbert is so notably enriching our national garner of research, along the lines of the great Historic Highways. The pages before us are devoted to an impressive study of Washington and his times, as observed from the road he opened across the Alleghanies in 1754; and on the threshold he addresses himself to one whom he imagines embarking to-day upon a journey from Cumberland, on the Potomac, across the mountains to Pittsburg on the Ohio—"the most historic highway of America, through scenes as memorable as any on our continent."

There are three thoroughfares from which to choose: first, the Cumberland Road, with its memorials of the gay coaching days; next, Braddock's Road, which was used until the Cumberland Road was opened in 1818; and lastly, Washington's Road, built over the famous Indian trail known during the first half of the eighteenth century as Nemacolin's Path. Between these three streams of human history "you may read the record of two centuries."

"Washington," says Mr. Hulbert, "was the original expansionist." Who knew the West as he did? Who discovered its possibilities; who so discerned, afar off, the part the West was yet to play in the commercial development of the seaboard States? Who else had traversed Nemacolin's little path before 1753? "Early in the eighties, Washington's correspondence shows that his attention was devoted, as never before, to the commercial promise of the Central West. We know how the great transportation companies struggle to-day to seize and hold certain strategic acres, only wide enough, it may be, for a single railway track. But who can believe that any portion of this Central West, covered with swamps and primeval forests, could have been so greatly prized a century and a quarter ago? Yet this was true." It was not the river-front at Cincinnati, nor the lake shore at Cleveland or Chicago; these could have been bought for a song. And what was, in that day, esteemed of priceless value could now be had for thirty dollars an acre. These were the portages between the Cayuhoga and the Muskingum, the Scioto and the Sandusky, the Maumee and the Wabash, and others. So important were these strips of land in the judgment of Washington that, by the famous ordinance of 1787, they were voted by Congress "common highways forever, and free."

ARCHER BUTLER HULBERT.

On one of the days near the end of October, 1753, Major Washington was commissioned by the Governor of Virginia (Dinwiddie) an envoy to deliver a letter to the commandant of the French forces on the Ohio; and that same day he set out on his journey, having engaged as his guide Christopher Gist, who knew well that "road of iron" through the mountains, and was perhaps the first white man to leave a record of it.

It was the main trail to the Ohio over which Gist now led the young Virginian envoy—a path that had no name until it took that of a Delaware Indian, Nemacolin, who "blazed" its course under the direction of Captain Thomas Gresap for the Ohio Company. Gist and Gresap! famous names on the roll of frontier braves in the annals of Revolutionary Maryland; "and in every act of the great world-drama now on the boards, this thin trail, with its blazed trees, shows in the foreground."

The building of the Washington Road was the crowning act of all that had gone before; it proved that a republic of loyal people could scorn the outworn theory that mountains are the imperative boundaries of empire.

A MINING TOWN AND ITS BARROOM.

THE BLUE GOOSE. By Frank Lewis Nason. Cloth, 5¼ x 7½ in., 295 pp. Price, $1.50. McClure, Phillips & Co.

MR. NASON has secured a striking name for his novel, and the impression it makes on the mind is not misleading. Chromatic freaks are, as a rule, "off" in their moral as well as their physical complexion, and Mr. Nason's azure bird is no excepti n. On the plate-glass window of Pierre La Martine's barroom in a Western mining-camp, "for the benefit of those who could not read, was a huge blue goose floating aimlessly in a sheet of bluer water." This popular retreat was a malevolent enough influence in that rough community with its lure of drink and the equally disastrous one of roulette and faro. But the wicked Frenchman added a third curse to these by running a furnace in his cellar and there refining gold which miners in the Rainbow Mill stole and brought to him.

One thing he had in his possession which rose superior to the vile surroundings, "Beneath the shadow of the wings of the Blue Goose dwelt a very plain woman, who looked chronically frightened, and a very beautiful girl who did not. The scared woman was Madame La Martine; the unscared girl passed for their daughter, but about the daughter no one asked questions of Pierre."

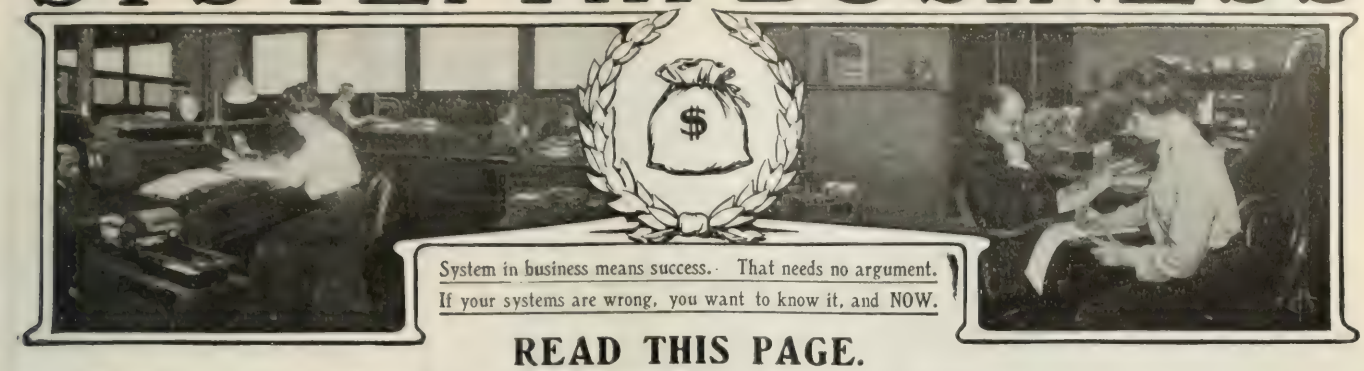
This girl, Elise, is the heroine of Mr. Nason's story. The Rainbow Milling Company is in a pretty bad way, and a strong fellow of twenty-eight, Richard Firmstone (*nomen et omen*) has been made superintendent with a view to rectify the abuses and slipshod ways that have crept in. There is a workman at the Rainbow, Morrison, who is a labor agitator, and in due time there is a strike. Mr. Nason has views on capital and labor, and is optimistic as to the present and the future of these opposing forces. These views are sane enough, but can not be regarded as very luminous aids to a practical solution of the struggle.

FRANK LEWIS NASON.

"The Blue Goose" is interesting as a picture of the phase of life it portrays, but there is not much originality in the story. Mr. Nason has a good, clean-cut way of writing, but some of his characters are rather overwrought and despite their pronounced individuality they do not ring quite true. Zephyr, for instance, a satirical miner with fine traits, has a fluency of speech and a font of metaphor perennially on tap which the reader feels is Mr. Nason's, not Zephyr's.

Elise and the strenuous young superintendent fall in love as a matter of course. The failure here to duly work up the theme is felt. The growth and processes of the passion are too slightly brought out. Yet this is what counts in a love-story. How this particular Jack wins his particular Jill constitutes the whole interest. Altho there is vivid enough "color," this lack of definiteness is felt by the reader almost as a grievance at times.

SYSTEM *in* BUSINESS



System in business means success. That needs no argument.
If your systems are wrong, you want to know it, and NOW.

READ THIS PAGE.

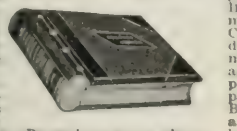
We tell you here of methods that are new—practical methods proven so by actual test.

These systems have helped other bright business and professional men. They will just so surely help you.

To get the most work from yourself or from your employees you must have the proper tools for every purpose.

There are desks that save time, and chairs that save backache. They are all a part of system.

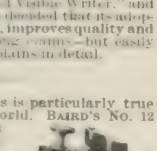
Old-fashioned bound books for accounts are impractical and expensive. Loose leaf books allow of arrangement, rearrangement and expansion.



They save time, for the yearly or semi-yearly opening of new books is done away with. They are self-indexing. No outside index is required. The JONES LOOSE LEAF BOOKS have every advantage of any loose leaf book and; more—assemble a alignment of the leaves—a strong binder in which the leaves can not move a hair's breadth. Read Catalog 1. It explains JONES LOOSE LEAF LEDGERS and how you can use them in your business.

Every man who conducts correspondence is interested in the question "Which is the best typewriter?" There are twenty-five substantial reasons why the OLIVER TYPEWRITER is the best machine the world has produced. So phenomenally successful has this machine become that it has proven its unqualified right to the title "The Standard Visible Writer," and the business world has decided that its adoption increases quantity, improves quality and reduces expense. Strong claims—but easily proven. Catalog 2 explains in detail.

Time is money. This is particularly true in the commercial world. BAIRD'S NO. 12 TIME SAVER makes an absolutely accurate record for every purpose—time accounts. The receipt of correspondence, job time, the arrival and departure of employees and in countless other cases time is measured to the minute by this—the only durable time stamp. The clock movement, being in an entirely separate compartment from the stamping mechanism, is unaffected by the hammer action. Catalog 3 describes and illustrates the Baird Time Stamp.

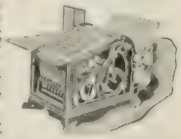


AN ERICSSON INTERIOR TELEPHONE SYSTEM shortens office work, saves actual time, saves confusion. To some men such a system seems a luxury. All who have installed the system *know* it is an economy. Cheap interior 'phones soon get out of order. That's worse than no system at all. But the Ericsson is built to last—the same quality and style used on long distance lines. The Ericsson system contains all the best features of other 'phones and some features found in no other 'phones. Ask now for Catalog 4.

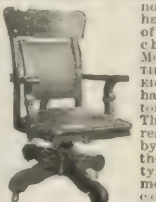
Some business men are prejudiced against fountain pens. And that same prejudice has kept them from knowing how great a saving WATERMAN'S IDEAL FOUNTAIN PENS would make in their office work. Continuous writing without dipping and blotting saves so much of a man's own time—and the time of his stenographers and clerks—that a pen pays for itself in a short time. But the fountain pen must be a "Waterman," else the bother and leaks and breaks might offset the saving. Catalog 5 tells all about Waterman's Ideal Fountain Pens, and of special pens made for modern office work.

The ADDRESSOGRAPH is as necessary to the modern office as steam is to an engine. With it an office boy can do in one hour what it formerly took ten clerks two hours to do. It not only addresses envelopes in exact imitation of typewriting, but also fills in names on duplicate letters, prints names and addresses on shipping tags, pay envelopes, time tickets, monthly statements and loose leaf systems. Thousands of business houses now have their lists of names arranged for the Addressograph and kept by States or Territories so that printed matter can be speedily sent to any special list. Catalog 7 describes it, and illustrates its many uses. Write for it to-day.

For many years methods of accounting did not change materially, but when the BURROUGHS ADDING MACHINE was placed on the market this branch of office work was revolutionized. To-day there are 12,500 of these great time savers in banks, mercantile houses, factories, wholesale and retail stores, etc. The Burroughs Adding Machine bears the same relation to figures that the typewriter does to correspondence. It adds figures with ten times the speed of the quickest clerk and it is mechanically impossible for it to make a mistake. Described in Catalog 13.



There was a time when any old chair would do for the office. Business and comfort were not partners. But times have changed and ideas of business comfort have changed with them. MCCLOUD'S NEW TWENTIETH CENTURY ADJUSTED SPRING BACK CHAIRS have been important factors in the improvement. They give complete back rest while at work, thereby enabling the man at the desk or woman at the typewriter to accomplish more work with greater comfort. Catalog 14 describes the McCloud Chairs and shows the adjustment which fits the back.

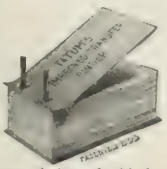


THE PROTECTOGRAPH will absolutely secure the integrity of your checks. It impresses a line like this:

NOT OVER FIVE DOLLARS 5

in strictly indelible ink upon any preferred part of the check so deeply as to make the line a part of the document itself. It is used by the U. S. Treasury and more than 10,000 financial and industrial institutions. Write for Catalog 15, which tells some things about check-raising and check-protection that you may not know.

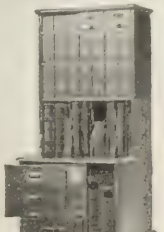
Modern business methods presuppose a convenient and orderly arrangement of papers. By the most approved system all orders, forms and records are spread on punched loose sheets, which are filed and classified according to the varying needs of each business. While in active use these loose sheets are kept in holders if there be few, and in binders if there be many; and when old the sheets are consecutively filed away in transfer binders as permanent records. Ask for Catalog No. 16.



A postal scale is not a luxury—it is a necessity. The owner of a FELOUZE "MAIL & EXPRESS" SCALE will save its cost in a short time, and the heavier and larger his mail is the shorter the time will be. It tells the exact cost of postage on all mail matter. It weighs express packages up to 16 lbs. Whether your mail list is large or small, it will help you to cut down your stamp bill. Catalog 10 will give you useful information about Reliable Postal Scales.

"Goods well bought are half sold." Retailer, wholesaler or manufacturer, you must buy close. All catalogs, circulars, and samples must be arranged so they can be found instantly. They must be together. And there is no way to keep them together that is half so simple as the Shaw-Walker Catalog System—no other way so inexpensive.

Write now for Catalog 20 and learn all about it. If your business is small, a small system will do. It costs little. For a large business you can afford a larger outfit. for the saving will be more. Ask *now* for Catalog 20.



The little things in an office sometimes save the most time, labor and money. RUBBER STAMPS, NUMBERING MACHINES, ETC., suited to your business, will aid you in a countless number of ways, and at little cost considering the valuable service they can render. There is system in using stamps, too, that you ought to know about. An ingenious little holder called "Rex" keeps them in order, clean and handy. The best ideas on Rubber Stamps and kindred articles are described in Catalog 12. If you send for this catalog you will receive not only the latest ideas, but will be kept informed of new schemes that are being constantly originated in the leading houses.

No office is considered complete without an EDISON MIMEOGRAPH. In these days of commercial competition there is no surer, quicker or cheaper way of quickening business than by employing the many means offered by this valuable machine. Perhaps you see no use for it in *your* office. You probably will after you read Catalog 6 and understand what a Mimeograph will do. Simply cut out and sign the coupon on the corner of this advertisement, or better still write us a letter stating your business, and we can suggest methods to meet your requirements.

No matter what you want to file—information, papers, samples, documents—there is a Shaw-Walker way to do it. Shaw-Walker card systems are better than books. Shaw-Walker vertical letter files better than flat sheet cabinets—Shaw-Walker sectional book cases better than solid ones. All are built in sections so they will grow as your business grows. Send to-day for Catalog 19. It tells all about SHAW-WALKER SYSTEMS. The book is concise, terse, yet complete. Costs the Shaw-Walker Company 38c. to send it but they will do so gladly if you simply sign the coupon on the corner of this advertisement.

Tear off this coupon or simply write us a lette

CURRENT POETRY.

A Song of Speed.

(TO ALFRED HARMSWORTH)

By W. E. HENLEY.*

In the Eye of the Lord,
By the Will of the Lord,
Out of the infinite
Bounty dissembled,
Since Time began,
In the Hand of the Lord,
Speed!

Speed as a chattel:
Speed in your daily
Account and economy;
One with your wines,
And your books, and your bath—
Speed!
Speed as a rapture,
An integral element
In the new science of Life
Which the good Lord, the Master,
Wills well you should frame
In the light of His mercy,
And His great, His long-studying,
His reasoned benevolence—
Speed!
Speed, and the range of God's skies,
Distances, changes, surprises;
Speed, and the hug of God's winds
And the play of God's airs,
Beautiful, whimsical, wonderful;

THE WAGEMAKER FURNITURE CO., E. St., GRAND RAPIDS, MICH., U. S. A.

Clean, fierce, and clean,
With a thrust in the throat
And a rush at the nostrils:
Keen, with a far-away
Taste of minimum,
Unscalable vast-itudes,
Where the Stars of the Morning
Go singing together
For joy in the naked,
Dazzling, unvisited
Emperies of Space!
And the heart in your breast
Sings, as the World
Slips past like a dream
Of Speed—
Speed on the Knees of the Lord.

. . . . . .

Trim, naked Speed!
Speed, and a victory
Snatched in the teeth
Of the Masters of Darkness.
For the antient, invincible
Spirit of Man,
Stern-set, adventurous,
Dreaming things, doing things;
Strong with a strength
Won from tremendous
And desperate vicissitudes,
Out of unnumbered,
Unstoried experiences;
Fighting the one fight,
The last and the best fight,
Hard, and by inchmeal
Winning it steadily,
Corner by corner,
Here a snatch, there a bit,
Over the black, irresistible
Legions of Death,
The impassive, unfaltering
Captains and Companies
Of the primordial
Powers of the Princedoms
And Thrones of the Grave—
Fair in the Eye of the Lord.

For the Heart of Man
Tears at Man's destiny
Ever; and ever
Makes what it may
Of his wretched occasions,
His infinitesimal
Portion in Time,
His merely incomputable
Shred of Eternity,
His ninety-ninth part,
If you count by God's clock,
Of a second on Earth
In the lust and the pride
Of God's garment, the Flesh.
So Woman and War,
And the Child (the unspeakable
Promise and proof
Of a right immortality),
Learning and Drink,
And Money and Song,
Ships, Folios, and Horses,
The craft of the Healer,
The worship of God
The things done to the instant
Delight of the Devil,
And all, all that tends
To his swift-to-come, swift-to-go
Glory, are tested,
Gutted, exhausted,
Chucked down the draft;
And the quest, the pursuit,
The attack, and the conquest,
Of the Unknown goes on—
Goes on in the Joy of the Lord.

. . . . . .

The Locomotive Stops

every 125 miles for coal and every 90 miles for water, but the 20 horse-power

Winton Touring Car

travels 150 miles with one filling of gasoline and lubricating oil. With the improved cooling system the only loss of water is by natural evaporation, consequently one filling of the water tank will suffice for several days.

The Winton is a practical, symmetrical and handsomely appointed touring car, with greater enduring qualities than the railroad locomotive, greater than any other automobile manufactured or sold in America.

Every mile in a Winton is a mile of comfort. Body of carriage is suspended on long and elastic springs—there is a long wheel base—tires are large and resilient—upholstery of seats the most luxurious ever made part of automobile equipment—backs of seats are high—tonneau accommodates three persons comfortably—front seat is divided, giving a snug and secure position to the driver. These, and many other features which combine to insure the greatest possible degree of comfort in riding, make you think rough roads do not exist.

Lubrication is automatic; there being no oil cups or gauges to call the operator's attention from the road ahead. Transmission gears are secured within a dust-proof case and run in an oil bath. The motor, differential, water-pump, etc., are similarly encased and protected. Price of WINTON TOURING CAR, complete with two full brass side lamps, detachable tonneau, etc., $2,500.

Visit any of our branch or agency depots in two score leading cities, and the many features of Winton excellence will be fully demonstrated.

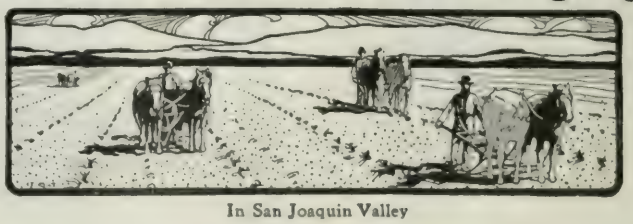
Book 25 A Free. DR. HAYES, Buffalo, N. Y.

Hence the Mercédes!
[illegible]
Of seventy-five horses:
Seventy-five puissant,
Superb fellow creatures;
Is summed and contained
In her pipes and her cylinders.
Mind after mind,
On fire with discovery,
Filled full with the fruits
Of a hundred fat years,
And mad with the dreams
And desires of To-Day
Hath toiled itself dull
To achieve her components.
She can stop in a foot's length;
She steers, as it were
With a hair you might pluck
From your Mistress's nape;
She crawls, if you please
So to lightly her virtue,
At your Mistress's pace
When she goes for a stroll,
Which is partly on Earth
And partly, She dreaming
Of You, in broad Heaven.
Yet ask but a sign,
But a proof of her quality,
Handle her valves,
Her essentials, her secrets,
And she runs down the birds
(You can catch them like flies
As, poor wretches, they race from you!);
Ay, and becomes,
As the Spirit and Mind
Of God's nearest approach
To Himself hath so willed it,
The Angel of Speed—
Speed in the Laugh of the Lord.

There be good things,
Good things innumerable,
Clutched like an alms
In the hand of the Master;
And at times, when He feels
That His creatures are doing
Their best to assert
Their part in His dream,
He loosens His fist,
And a miracle slips from it
Into the hands
Of His adepts and servants.
Thus, in late years,
Smiling as *Lord*,
Smiling as *Lister*,
And *Tolstoy* and *Rodin*,
And *Pasteur* and *Strauss*
(That with his microbes,
This with his fiddles!),
Tugged at His fingers
And worked at His meanings,
Thus has He slackened
His grasp, and this Thing
This marvelous Mercédes,
This triumphing contrivance,
Came to make other
Man's life than she found it:
The Earth for her tyres
As the Sea for his keels;
Alike in the old lands,
Enseamed and with wheel-ways
Of thousands of dusty
And dim generations,
And in the new countries,
Whose Winds blow unbreathed,
And their Lights come first-hand
From our Father, the Sun.
[illegible] Mercédes
Came, O, she came,
This astonishing device,
This amazing Mercédes,
With Speed—
Speed in the Grace of the Lord

Speed in the Love of the Lord
Under the Feet of the Lord
Out of the [illegible]
[illegible]

California Cheaply



In San Joaquin Valley

—In *Harper's Weekly* (reprinted by special permission).

PERSONALS.

The Page's Answer. Rear-Admiral Farquhar, says the New York *World*, told the following story of an incident of Lord Beresford's visit to this country at the Army and Navy Club the other evening:

"When Lord Beresford went to Newport he was a guest of a distinguished American woman who is a stickler for form. Among her retinue of servants she had a number of pages constantly to attend to the wants of her guests. She had just engaged a new page a short time before Lord Beresford's visit, and she was very careful to impress upon him the proper ceremonial of his duties.

"'Now,' she said to the boy one day, 'when you go to Lord Beresford's room and he asks who it is, you must say, 'The boy, my lord.' Well, the boy did his best to burn this injunction into his developing gray matter, and after a while he could repeat his little lesson backward.

"When he first knocked on the distinguished guest's door, however, he was suddenly taken all a-tremble, and when Beresford called out 'Who is it?' he replied in a high-pitched voice that rang through the house, 'The Lord, my boy.'"

The Uncommercial Liszt.—Artistic folk frequently have vague notions about business. Some of them, says *Collier's Weekly*, are quite ignorant of it, others utterly indifferent to it, and others yet hate the very name of it.

One of the last-named category was Liszt. He had returned from a successful tour, and Princess Metternich, the wife of the celebrated statesman and diplomatist, was questioning him regarding the concerts he had been given abroad.

"I hear," she said, "that you did good business in Paris?"

To which Liszt gave the tart reply: "I only played some music there. Business—that I leave to bankers and diplomatists."

To another lady the musical cleric gave a still more sarcastic answer. "Ah, Abbé," she sighed, "what a great fortune you would make if only you could be induced to go to America to play!"

"Madame," returned Liszt, "if you stood in need of that fortune, believe me, I would go at once."

Josef Hoffman Starves at Dinner.—Josef Hoffman, the pianist, is the most democratic chap in the public eye, says Charles Bloomingdale, Jr., in his "Little Stories of the Stage" in *The Saturday Evening Post*. Mr. Bloomingdale tells this story of the pianist:

One evening about half-past five he sat and chatted in the corridor of the hotel. He had a dinner engagement and he did not relish the prospect.

"I hate course dinners," he said. "Down you sit in front of the oysters, toy with one, get it on your fork, eat it. Then the woman to your right asks your views of Italian music. You start in to chat, and before you know it some waiter has whisked your oysters away, and put a plate of soup in front of you. One mouthful of that, and the lady to your left speaks of the time she was in Berlin two years ago. Has there been much change in the city in two years? You're interested, and begin to talk Berlin to her. Just as you're growing enthusiastic along comes the waiter, takes your soup and deposits the fish. At the same time your *vis-à-vis* queries to you concerning Strauss—what is Strauss's standing in Vi-

LET'S TALK IT OVER

OF course you want to know which piano player is really and truly THE BEST before you buy one. If you will give us the opportunity we will prove to your satisfaction that the musical performance of the **CECILIAN** *surpasses* anything of which any other instrument of the kind is capable, and *equals* in every respect the work of the most finished human pianist. New features peculiar to the Cecilian make it in truth THE PERFECT PIANO PLAYER. Its cost is $250.00, and it can be bought on monthly payments. We will gladly give you full particulars.

Great Sacrifice Fire Sale with Sweeping Reductions on Standard Works

The most Extraordinary Book Offering of the Season! Almost Imperceptibly Injured Works on Approval at Exceptional Reductions.

A Disastrous Fire!

Early on Sunday morning, January 18th, a Great Fire started in the seven-story structure directly in the rear of our building. Bales of excelsior stored in the first floor, caught in the blaze, caused one of the worst fires of recent years, and the flames were not under complete control until after almost three days of continuous fighting. In brief:

19 Engines (including 1 from Brooklyn), 4 Hook and Ladder Companies, and 1 Water Tower unitedly fought the conflagration.

21 Lines of Hose Played on the Flames.

1 Fireman was Killed; 3 were Injured.

The Building was Completely Gutted.

Damage to Our Stock

As the rear walls of the burned building closely adjoined the rear of our building, the fire-fighters quickly smashed in our doors and windows, and ran lines of hose through all our floors but one.

The Floor of our Basement and Stock Room was Flooded.

Smoke Poured into Our Entire Building.

$15,000 Damage was done to our Stock.

Scene of the Fire Showing Ice Formations on the Burned Building.

Genuine and Tempting Bargains Offering Invaluable Additions to your Library Shelves at the Lowest Cost.

Much Stock Slightly Damaged

The insurance companies have settled for the loss, and we offer you a number of rare bargains. A considerable number of our books were badly damaged by water and are utterly unsalable, but many were only slightly, hardly noticeably, injured, and these are now put on sale at such sweeping reductions that they will be quickly snapped up by those who appreciate choice works at prices less than they are ever regularly sold for.

A Limited Number of Valuable Reference Works, in very fair condition.

Two Standard Bible Commentaries at Just Half Price.

A variety of Novels, Books of Description, Biography and History with Prices Cut to the Bone.

A Large Assortment of Valuable Religious Works.

All Sent on Approval

While we shall ship no badly damaged works, we leave you to be the judge of whether you wish to keep any book on the following list. Return them if unsatisfactory and we will refund your money.

We send each work on approval, carriage prepaid.

We Assume All Risk and Loss.

We will fill orders according to the time of receipt.

SELECT NOW ONE OR MORE OF THESE RARE BARGAINS

SCIENTIFIC SIDE LIGHTS

A Cyclopedia of 4,000 illustrations from the whole realm of science, for the use of writers and public speakers. Many thousands of topics in science, morals, social progress, politics, history, etc. Compiled by JAMES C. FERNALD. *The Minneapolis Times* says: "Here the public speaker will find at his command a book of reference where the thought of the leaders of science is pigeonholed, so to say, for his immediate use. 8vo, cloth, 925 pages.

Only 13 copies—Regular $5.00; Special $3.50

THE CYCLOPEDIA OF PRACTICAL QUOTATIONS

Over 30,000 choice quotations, with 86,000 lines of concordance, and an appendix containing foreign proverbs, Latin law terms, etc. This is the most complete and comprehensive book of quotations published. Compiled by J. K. HOYT. *Hon. Joseph H. Choate* says: "I have always found it the most useful book of the kind published." 8vo, 1,305 pages. These sets bound in tan and law sheep.

Only 11 copies—Regular $8.00; Special $5.00

THE PREACHER'S HOMILETIC COMMENTARY ON THE OLD TESTAMENT

With Critical and Exegetical Notes. This commentary, consisting of thirty-two royal octavo volumes (Old Testament 21 volumes, New Testament 11 volumes), and having over eighteen thousand pages, contains an exposition, wholly in English, on every paragraph or verse of the entire Bible that can be used to advantage in the preparation of sermons. With copious indexes to each volume and an index volume to the entire series. By twenty distinguished homilists. *Bishop John F. Hurst* says: "It is singularly luminous." 20 volumes. 8vo, cloth. Including Index Volume. In prime condition.

Only 37 sets—Regular, $60.00; Special, $30.00

THE PREACHER'S HOMILETIC COMMENTARY ON THE NEW TESTAMENT

Uniform with the Commentary on the Old Testament. "It is an acre of diamonds."—*J. W. Harsha.* Ten volumes, 8vo, cloth. Including Index Volume. In first-class condition.

Only 18 sets—Regular, $30.00; Special, $15.00

BERTRAM'S HOMILETIC CYCLOPEDIA

It contains 5,000 useful illustrations and extracts relating to over a thousand religious and theological topics. The quotations are taken from the best authorities in the United States, England and Europe. The work also embraces the features of a homiletic commentary, throwing light on more than 4,000 texts of Scripture. Large 8vo, cloth, 896 pp. *The Literary World* says: "No book of illustrations, for fulness and suggestiveness, is worthy to be compared with this."

Only 7 copies—Regular, $3.50; Special, $2.00

THE WORK OF THE HOLY SPIRIT

This work practically constitutes an encyclopedia of inspiration and discussion on the Holy Spirit. It embraces a comprehensive survey of the entire system of Christian faith and teaching. By ABRAHAM KUYPER, D.D., LL.D., M.P. 8vo, cloth, 703 pp. *Pres. Henry A. Butts, D.D., LL.D.:* "Its fulness, deep insight make it invaluable in the promotion of Christian life."

Only 16 copies—Regular, $3.00; Special, $1.75

THE ENCYCLOPEDIA OF SOCIAL REFORMS

This work supplies facts and expert opinions on sociology and all topics directly or indirectly allied or involved. The most eminent authorities in the various schools of economy and social thought have set forth their pleas, enabling the reader to compare, weigh and judge their respective claims. *Colonel Albert Shaw* says: "It is an epitome of social and economic conditions." "I am struck with its excellence and completeness. The plan adopted of setting forth the case from both sides has been admirably carried out."—*Benjamin Kidd.* 8vo. 1,447 pp. Three sets cloth bound.

Only 7 copies—Regular, $7.50; Special, $3.75

ENGLISH SYNONYMS, ANTONYMS AND PREPOSITIONS

Over 7,000 classified and discriminated synonyms with nearly 4,000 antonyms. The correct use of prepositions is indicated by illustrative examples. Compiled by JAMES C. FERNALD. *New York Times* says: "Invaluable to teacher, student and speaker." 12mo, buckram. 574 pp.

Only 10 copies—Regular, $1.50; Special, 90c

THE CYCLOPEDIA OF CLASSIFIED DATES

This Cyclopedia gives the notable events of universal history from the earliest times down to the present. All the dates and events are entered in chronological order under classified subjects. Compiled by Rev. CHARLES E. LITTLE. 8vo, cloth. 1,462 pp. Hon. Carroll D. Wright: "One of the most valuable books of dates published."

Only 5 Copies—Sheep, Regular, $9.00; Special, $4.50
Only 12 Copies—Cloth, Regular, $10.00; Special, $5.50

BLAINE'S TWENTY YEARS OF CONGRESS

From Lincoln to Garfield, with a review of the events which led to the political revolution of 1880. In two royal octavo volumes. Vol. I., 660 pp.; Vol. II., 739 pp. By Hon. JAMES G. BLAINE. These sets are bound in handsome seal Russia.

Only 7 Sets—Regular, $12.50; Special, $6.25

THE JEFFERSONIAN CYCLOPEDIA

Including the important writings and utterances of Thomas Jefferson, conveniently arranged under many topics in alphabetical order and thoroughly indexed. Edited by JOHN F. FOLEY. 8vo, cloth. 1,031 pp., illustrated. *The Sun* (Baltimore): "It is a model of selection and classification."

Only 21 copies—Regular, $7.50; Special, $3.75

THE COLUMBIAN HISTORICAL NOVELS

A complete history of our country, from the time of Columbus down to the present in the form of thirteen complete stories. Uniform size and style; with historical index, chronology, and maps of the periods. By JOHN R. MUSICK. 13 vols., illustrated. "Breathe with life and fascinating interest."—*Methodist Review* (Pittsburg).

Only 4 Sets—½ Morocco, Regular, $32.50; Special, $19.50
Only 1 Set—Cloth, Regular, $21.75; Special, $12.50

YOUNG'S ANALYTICAL CONCORDANCE

Seventh edition, thoroughly revised and containing 8,000 changes. It includes 311,000 references, making 30,000 New Testament readings. By ROBERT YOUNG, LL.D. 4to, 1,108 pp. "It is unquestionably the best and most complete work of the kind ever published."—*The Episcopal Recorder* (Philadelphia).

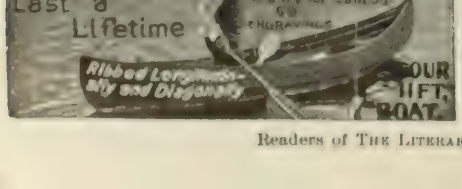
L. H. Stafford & Bros. Chicago



"ena!' You try to tell her. The conversation veers to waltz music against meyerbeer and Sousa creeps into the talk and away goes your fish untasted.

"And so it goes through the entire dinner—and I never get a thing to eat. Give me a little German restaurant, a good fat steak, and half an hour; then I'll come away feeling that the course dinner is a delusion and a snare, made for birds to peck at and not for healthy mortals to enjoy. Well, I must go upstairs, put on my dress-suit—and look forward to a hungry evening."

Lorenz's Account of a White House Scene—Dr. Lorenz, famous "bloodless surgeon," recently told a Vienna club of his experiences in America. According to a despatch to the New York *World*, he said that while returning to his hotel late one evening, in Chicago, he noticed a big policeman following him. The doctor continued:

"I turned and said, 'Good evening, sir.' 'Are you the famous doctor, of Vienna?' he asked, roughly. I could not add perjury to my other crimes, so I replied, 'Certainly.' The next instant the policeman seized my hand in a grip of steel, as if he wanted to crush it. I yelled with pain and tried to pull my hand away. Furious at this assault, I began to growl in German about the outrageous treatment I received in this country. The policeman drew back abashed and said, as politely as he could: 'I would only like to shake hands with you.'"

Some time later the doctor was waiting in the White House to be received by the President. Of this he said:

"I shall never forget the moment when a door opened suddenly and there appeared in the doorway, clad in a long, plain frock-coat, a tall and broad figure that bore an unmistakable resemblance to my Chicago policeman. The smiling mouth displayed a threatening row of dazzlingly white teeth, a formidable pair of jaws, and was shaded by a short moustache. The resemblance to my gigantic Chicago policeman was really startling. Only the helmet was lacking. But I knew whom I had before me.

"Mr. Roosevelt walked quickly toward me, and said: 'Are you the famous doctor of Vienna? Let me shake hands with you. Just this morning Mrs. Roosevelt spoke of you.' And the President shook my hand heartily.

"It was rude, but I could not help laughing in the President's face. Mr. Roosevelt not only looked like my Chicago policeman, but he employed exactly the same mode of greeting. The conversation was unconventional, without the slightest formality. One of the gentleman present, a high dignitary, kept his hand in his trousers pockets and another rested his knee on a chair and rocked it back and forth. All this seemed strange to me."

AMERICAN DEPENDENCIES.

April 10. *Philippines.* Captain Pershing's force, on the island of Mindanao, captures the fort at Bacalod.

How to Paint a House Cheap

And Have it Guaranteed to Look Better, Wear Longer and Cost Less Than the Best White Lead Paints.

Never Fades, Cracks, Chalks, Peels or Blisters and is Not Affected by Gases. Fifty Sample Colors and Illustrated Booklet Prepaid to Any Address Absolutely Free.

The cost of painting the house and barn, outbuildings and fences is a heavy burden. Cheap paints soon fade, peel or scrape off and white lead and oil costs so much and has to be replaced so often that it is a constant expense to keep the bright, clean appearance so desirable in the cozy cottage home or the elegant mansion. The following are a few of the large users of Carrara Paint:

Pennsylvania R. R. Co.; Pullman Palace Car Co.; Chicago Telephone Co.; Central Union Telephone Co.; Field Museum, Chicago; Kenwood Club, Chicago; Cincinnati Southern; C. & E. I. R. R. Co.; Denver & Rio Grande R. R.; Wellington Hotel, Chicago.

Carrara is used because it lasts longer, never fades, never cracks, never blisters, never peels, covers more surface than the highest priced paints and costs less than the cheap mixed paints that injure instead of protect. There is but one Carrara. It is made by the Carrara Paint Agency, General Offices, 897 Carrara Bldg., Cincinnati, Ohio, and anyone having a house to paint should send for 50 free sample colors and our handsome booklet, showing many buildings reproduced in all the colors just as they are painted from this great paint that has stood the most rigid tests for 25 years and, bear in mind, that it is the only paint ever manufactured that is backed by a positive guarantee in every case. Distributing depots in all principal cities. Write to-day and save half your paint bills in the future.

The Waldorf-Astoria, New York, One of the Most Magnificent Hotels in the World, Has Used Tons and Tons of the World-Famous Carrara Paint.

Lavender and Old Lace

By MYRTLE REED

Author of "Love Letters of a Musician," "The Spinster Book."

Dainty and full of delicate fancy, this latest work of a favorite writer charms by its manner, pleases by its cleverness, and interests by its tale of true love, which sentiment is treated as the most exalting of emotions, but without the slightest touch of materialism.

A Book to be Enjoyed

"With exquisite skill quite her own, the author individualizes in this gracefully told story, the heart's devotion as the most exalted and exalting emotion. Miss Reed has the rare genius of attuning love to thrilling heights without a touch of coarse materialism. Withal she builds on a practical plane, since her characterization is human."—*Chicago Journal.*

Answers to Correspondents.

P. D. T.—Solution of problems is given two weeks after problems are published. If you do not find your name in the solvers' list you either did not send solution, or it was received too late.

D. H. W.—The editor of *The American Chess Weekly*, Mr. Emil Kemeny, attended the late Monte Carlo Tourney. We do not know whether or not he intends to resume the publication of *The Weekly*.

J. A. W.—*The British Chess Magazine*, Leeds, England; and *Checkmate*, Prescott, Ont., Can.

R. S. H.—The German notation is as follows: the Files are designated by letter (beginning at left hand) a. b. c. d. e. f. g. h. The rows are designated by numbers (beginning at left hand), 1, 2, 3, 4, 5, 6, 7, 8. For instance:

1. P—K 4	P K 4
2. Kt—K B 3	Kt Q B 3
3. B—Kt 5	Kt B 3

the English notation, reads:

1 e 4	e 5
2 Kt f 3	Kt f 6
3 B b 5	Kt f 6

This is, probably, the easiest and most correct method of notation ever devised.

H. D. S.—For book on the King's Gambit, write to Secretary of Manhattan Chess-Club, Charities Building, New York City.

FUNK & WAGNALLS COMPANY, Pubs., New York

The Literary Digest

VOL. XXVI., NO. 17 NEW YORK, APRIL 25, 1903. WHOLE NUMBER, 679

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

"BOODLE" INVESTIGATION IN MISSOURI.

THE Missouri legislature, which at its recent session made chicken-stealing a felony, is now being investigated by two grand juries, one in St. Louis and one in Jefferson City, the State capital, on charges of wholesale "boodling"; and "enough has been revealed," says the Kansas City *Times* (Ind.), "to show a state of venality that should put the State of Missouri to shame." Seven men, four of them State Senators, have been indicted for bribery, and several men under suspicion have fled the State. The investigations are under the direction of Attorney-General Crow and Circuit Attorney Folk (who prosecuted the corrupt municipal officials in St. Louis), and there seems to be every expectation that the inquiry will be of a searching sort. The St. Louis *Republic* (Dem.) says: "This State reposes a full confidence in the uprightness, force, and determination of the men now engaged in the boodle investigations. Upon them primarily rests the heavy task of ridding Missouri of a class of crime and a brand of criminals which are worse than the municipal boodlers of St. Louis."

UNITED STATES SENATOR W. J. STONE (DEM.).

Who opposed the manufacture and sale of alum baking powders in Missouri. He is not suspected of having any part in the alleged "boodling." Mr. Bryan is said to favor the nomination of Senator Stone for President on the Democratic ticket.

The rise and progress of the scandal is related in the following paragraphs from the St. Louis *Globe-Democrat*, which, it should be kept in mind, is of the Republican faith, while the legislature is Democratic:

Copyright, 1903, by S. S. McClure.

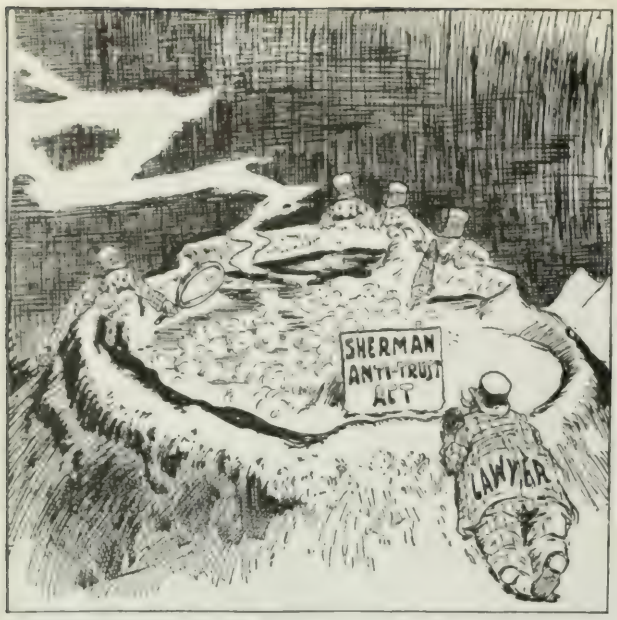
CIRCUIT ATTORNEY FOLK,

Who prosecuted the corrupt city officials in St. Louis, and who is now conducting an investigation of the charges of bribery in the Missouri legislature.

"For four years the baking-powder trust has held a monopoly in Missouri. Three successive legislatures, including the present one, have been manipulated by trust lobbyists to secure this result. Now the story of bribery is coming out and it is likely to drag forth many dark secrets. The baking-powder trust got its first grip on Missouri in the legislative session of 1899. In that year a law was passed forbidding the sale or manufacture in this State of baking powder containing what was claimed to be deleterious substances, one being alum. This law excluded, and was intended to exclude, all baking powder not made and sold by the trust. The monopoly granted was absolute. In lobbying through the law of 1899 the trust covered its tracks well, but the total exclusion of the independent baking powders from the State soon revealed the real scheme. A movement for repeal sprang up in the next legislature, but the trust was ready with new agents and weapons. William J. Stone, recently elected as Senator Vest's successor, delivered an address before the legislature of 1901 to prevent the repeal of the law giving the trust its monopoly. 'I appear before you,' said Stone, in opening that address, 'at the request of the Health Society of Missouri. This association is composed of a number of Missouri people—good people, both men and women, living in different parts of the State, with headquarters at St. Louis.'

"It seems that the so-called headquarters were in Stone's law office in St. Louis, and that the society itself was chiefly mythical, tho it served its purpose for the trust. Stone represented the society to be an association of philanthropists seeking to protect Missourians from food adulterated with deleterious things. 'Can greed,' asked Stone, 'put on a more ghastly aspect than that?' Stone's arguments, assisted by the disappearance of a State senator whose committee had charge of the repeal bill, carried the point in the legislature. The monopoly stood intact. In the recent session of the present legislature another repeal bill stuck fast, Lieutenant-Governor Lee's vote settling a tie vote. But for a decision of the State Supreme Court that the law of 1899 is defective by reason of prohibiting both sale and manufacture, the monopoly would still be in full force. As matters stand, only the trust may manufacture baking powder in the State, but other makers are permitted to sell their products, a ridiculous arrangement that drives an industry, outside of one favored trust, from Missouri.

"Testimony is coming out, through the work of the Jefferson



NOT QUITE EXTINCT.

—*The Boston Herald.*

SNAP-SHOTS

City grand jury, assisted by Circuit Attorney Folk, of St. Louis, showing that the baking powder's 'legislative agent,' Mr. Kelley, alias Brown (but not the Brown of the Cardwell case), was actively engaged during the recent session of the legislature in handing out $1,000 bills and checks to prevent the repeal of the baking-powder monopoly law. Mr. Kelley resides in New York and edits a publication in that city representing a shadowy health association like that championed by W. J. Stone, with the baking-powder trust in the backgound. One check for $1,000, signed by Kelley, and handed to Lieutenant-Governor Lee's brother three weeks ago, but not cashed, has been offered in evidence. The $1,000 and $500 bills traced to the possession of a Democratic editor and a Democratic employee of the State senate are supposed to have come from the same source, and it is reported that the trust disbursements to the present legislature amount to at least $20,000. How far the alum scandal will spread, and what other trusts will be developed to keep company with the baking-powder monopoly, is too big a problem for conjecture. Some of the State boodlers are now under the searchlight, and this is but the beginning. Even *The Republic* is forced to acknowledge that 'within a few days other evidence will be at hand which will make the present case shrink in the public eye, officials of high reputation being involved.'"

FINANCIAL JOURNALS ON THE MERGER DECISION.

THE idea entertained by many of the daily papers that the financial interests would be discomfited by the decision against the Northern Securities Company (considered in these columns last week) does not appear to be entirely fulfilled. Some of them, on the contrary, seem to be well pleased. Maj. John Skelton Williams, president of the Seaboard Air Line system, declares that "the decision is sound law, good sense, and for the advantage of all legitimate interests and for the country's welfare." And he goes on to make these interesting assertions:

"Public policy, public sentiment, and established principles and precedents of law combine to sustain the circuit court. From a commercial and practical railroad standpoint, the soundness of the court's position is indisputable. It voices the judgment of probably nine-tenths of the most conservative business men of the country. . . . . .

"Speaking for the independent systems, I welcome the promise of continued fair competition. There is plenty of business to give good profits to all roads and systems properly established and wisely managed, and there will be demand for extension and for new lines to carry the steadily increasing traffic and travel.

"As for the general public, it is idle to talk of a political republic; with a financial tyranny there is no more safety in having commerce at the mercy of an absolute ruler than there would be in having our Government controlled by a czar who might be a benevolent or a cruel despot, a wise or a ruinous one, according to his whim or abilities, or the circumstances.

"Instead of disturbing our prosperity, this decision, if sustained, as I believe it will be, will establish, secure, and protect the commercial situation, will encourage and foster legitimate extension and growth and expansion, and stimulate enterprise

"AM I A WRECKER?"

OF MONEY KINGS

and industry and local effort by guaranteeing them against oppression and forced absorption."

The New York *Financier* takes this optimistic view of the decision:

"It does not mean destruction of property interest. The opinion of the court does not destroy one blade of wheat along the line of the Northern Pacific or the other railroads involved; it does not hold up traffic, nor does it put mercantile interests out of business. The roads affected ought to be worth intrinsically as much as they were before. It is evident, therefore, that the effects of the decision are to be looked for in the domain of speculative values. Now, speculative values usually take their range from the stability of industry, and from real forces that make or unmake prosperity. Does the Northern Securities decision upset these conditions? We think not."

Bradstreet's considers it a matter of "more or less benefit at the present juncture" that "a check has been placed upon the creation of new combinations and the issue of additional securities in connection with the same," and *The Railway World* (Philadelphia) thinks that the decision "may prove to have been a blessing in disguise." The latter journal does not look for a ruinous revival of competition, but thinks that "some form of pooling agreement" can be devised that will prove legal and unobjectionable. It says:

"A large body of public opinion is at present opposed to actual merger. The pool, however, has never aroused an equal degree of hostility. Indeed, the Interstate Commerce Commission is outspoken in favor of the pool as an effective device for the maintenance of rates and the protection of the small shipper. So far from the pool being a monopolistic institution, it would prove a powerful aid to that system of equal rights to all and special privileges to none under which the small manufacturer and dealer can meet his powerful rivals on more equal terms than

where unrestrained competition is permitted. Railway competition, as recent discussions have shown, is a strong aid to the development of manufacturing monopoly. More than one large corporation has been able to severely injure its smaller competitors by means of the special rates which it was able to secure from competing railroads on account of the large volume of freight which it controlled. The people are beginning to realize the dangers to railroads and shippers alike which are inherent in competition, and they will not, in our judgment, oppose a proposition to legalize pooling agreements."

"Some method of public regulation," however, is expected by *The Railway World* in connection with any pooling measure that may be passed, and it thinks the railroads would not oppose such control:

"The railroads are not opposed to a reasonable degree of regulation by public authority. Indeed, the last pooling bill which was supported by important railway interests provided for a considerable measure of control by the commission over such agreements as might be legalized. There is every reason to expect that a pooling measure which was really demanded by considerations of safety to railway investments, and which should provide for some such measure of public regulation as that suggested, would be passed with little opposition and with general approval from radicals and conservatives alike. The operation of such a form of pooling agreement, which, unlike the old-style pool, could be enforcible at law against any of its members who violated its provisions, would be sufficient to maintain rates fully as well as community of interest has maintained them. As above remarked, we do not anticipate that the scope of the recent decision will be extended so as to prevent a continuance of the present form of controlling competition, but it should be a cause of general satisfaction that, even should the Sherman law be pushed to the uttermost extreme, some other form of regulation, equally efficient with the present method, will in all probability be immediately available. There is no reason for railroad investors to fear the consequences of the Northern Securities decision. On the contrary, because it may show the necessity of a pooling law, that decision may prove to have been a blessing in disguise."

SUSPENDED IN THE AIR; OR, THE GREAT "LEVITATION" MYSTERY.
—*The Brooklyn Eagle.*

IN INTERESTING POSES.

The United States Investor finds the chief importance of the decision in the discovery "that the people are still in control of this republic, that they still have power to mold the affairs of the nation in accordance with their wishes." And it goes on to develop the idea as follows:

"The power of the great financiers in controlling administrations, in shaping the treasury policy of the United States, in dictating the character of the laws enacted by Congress, has been so marked in the past that many had begun to predict the extinction of real democratic government among the American people. The centralization of capital and the rise of the industrial trust and community-of-interests movements in recent years have done much to accentuate these fears. Now, however, a high court of justice waves aside all technicalities and legal quibbles raised by the monopolists in pursuance of their schemes, and summarily brings these enemies of the public peace and prosperity within the scope of a broad law, under which the people of the United States assert their right to regulate commercial intercourse. The fact has been promulgated anew, and in terms which can not be mistaken, that all who set out artificially to obstruct the course of trade, to erect barriers never intended by nature for the purpose of reducing free competition in industry to a minimum, have now to make an accounting to eighty million people, and to pay the penalty which the latter see fit to visit upon them by constituted means—namely, the courts. The courts display an increasing tendency to rule in accordance with common sense—to be bound by a recognition of the fact that this is a Government under which all men are born free and equal, and that the law should always be interpreted in the light of that fact. In short, the chief importance of the Northern Securities decision is in the fact that it makes it quite clear that Mr. Morgan is not an Alexander nor a Napoleon, but, in the eye of the law, just exactly such a one as the rest of us; that he has no rights over and above the rest of us; that he can not tamper with the laws of the nation with impunity; that when, in his pride and self-conceit, he disregards the legal restrictions by which the rest of us are bound, he must pay the full penalty. It is something to have that fact asserted in unmistakable terms, for there has been an appalling tendency in recent years on the part of our great men of affairs to override the law, to mold the lawmakers, and to treat the courts in a cavalier fashion."

The Iron Age (New York), on the other hand, believes that the decision will "tend to impede progress," and it notes that "the mere language of the anti-trust law, indeed, seems to brand every contract, combination, or agreement, however harmless or reasonable in itself, as contrary to law and public policy." It advocates, therefore, such a modification of the anti-trust law as will recognize "the distinction between destructive and constructive competition." It adds:

"It is the opinion of those who have given the subject most thought that the Northern Securities Company is the outgrowth of the highest economic intelligence in the country, and it seems probable that the country as a whole would be benefited eventu-

"UNDIGESTED SECURITIES."

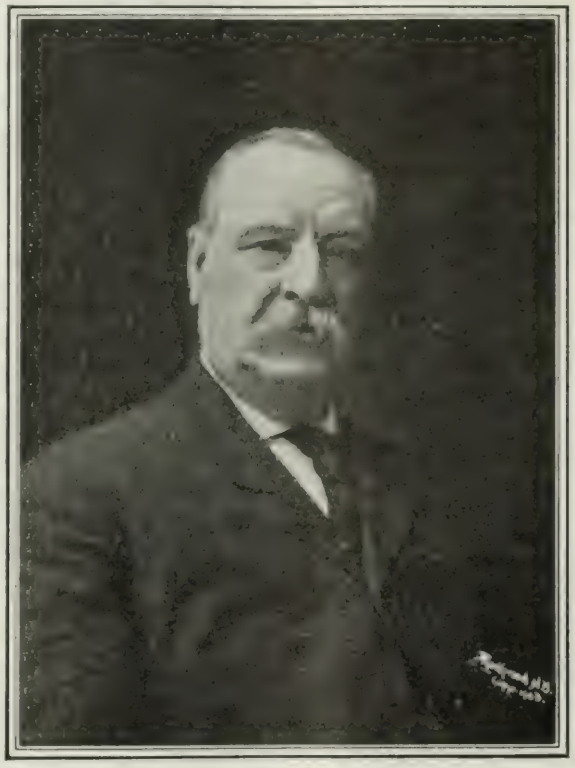
ally by the operation of the plan upon which the merger was based. Certainly the results thus far have been good, and it would seem that the motives actuating the promoters were sound in that they desired to eliminate destructive competition and to bring about economy in operation, as well as to render a better service to the public, upon whom they are directly dependent for success."

MR. CLEVELAND ON THE "WHITE MAN'S BURDEN" IN THE SOUTH.

IT is not, perhaps, remarkable that the Tennessee senate should indorse by a special resolution and the Southern newspapers should approve editorially the sentiments expressed by ex-President Cleveland in his speech at the Tuskegee Institute meeting in New York on Tuesday evening of last week; but it is more noteworthy that the Northern press either approve his remarks or dissent only mildly. In this meeting of the friends of the Southern negro Mr. Cleveland declared that the race still has "a grievous amount of ignorance, a sad amount of viciousness, and a tremendous amount of laziness and thriftlessness." He excused the South for its denial of social equality to the blacks, described that section as being "deluged by a perilous flood of indiscriminate, unintelligent, and blighting negro suffrage," said that the Southern people are the ones who must solve the problem, and asserted that nothing can be gained "by gratuitously running counter to firmly fixed and tenaciously held Southern ideas, or even prejudices." The Northern approval of these sentiments, as the approval of Secretary Root's speech before the Union League Club on February 6 (see THE LITERARY DIGEST for February 14), indicates a change of feeling that has grown up in the North in recent years.



MR. CLEVELAND'S LATEST PHOTOGRAPH.
Taken March 28, 1903.

Mr. Cleveland said, in part:

"I believe that neither the decree that made the slaves free nor the enactment that suddenly invested them with the rights of citizenship any more purged them of the imperfections and deficiencies their racial slavery had bred than that it changed the color of their skin.

"I believe that among the nearly nine millions of negroes who have been intermixed with our citizenship, there is still a grievous amount of ignorance, a sad amount of viciousness, and a tremendous amount of laziness and thriftlessness. I believe that these conditions inexorably present to the white people of the United States, to each in his environment and under the mandate of good citizenship, a problem which neither enlightened self-interest nor the higher motive of human sympathy will permit them to put aside. I believe our fellow countrymen in the Southern and late slave-holding States, surrounded by about nine-tenths, or nearly 8,000,000 of this entire negro population, and who regard their material prosperity, their peace, and even the safety of their civilization, interwoven with the negro problem, are entitled to our utmost consideration and sympathetic fellowship. I am thoroughly convinced that the efforts of Booker Washington and the methods of Tuskegee Institute point the way to a safe and beneficent solution of the vexatious negro problem at the South; and I know that the good people at the North who have aided these efforts and methods have illustrated the highest and best citizenship and the most Christian and enlightened philanthropy.

"I can not, however, keep out of my mind to-night the thought that, with all we of the North may do, the realization of our hopes for the negro must, after all, mainly depend—except so far as it rests with the negroes themselves—upon the sentiment and conduct of the leading and responsible white men of the South and upon the maintenance of a kindly and helpful feeling on their part toward those in their midst who so much need their aid and encouragement. . . . . .

"I do not know how it may be with other Northern friends of the negro, but I have faith in the honor and sincerity of the respectable white people of the South in their relations with the negro and his improvement and well-being. They do not believe in the social equality of the race, and they make no false pretense in regard to it. That this does not grow out of hatred of the negro is plain. It seems to me that there is abundant sentiment and abundant behavior among the Southern whites toward the negroes to make us doubt the justice of charging this denial of social equality to prejudice, as we usually understand the word. Perhaps it is born of something so much deeper and more imperious than prejudice as to amount to a racial instinct. Whatever it is, let us remember that it has condoned the negro's share in the humiliation and spoliation of the white men of the South during the saturnalia of reconstruction days, and has allowed a kindly feeling for the negro to survive the time when the South was deluged by a perilous flood of indiscriminate, unintelligent, and blighting negro suffrage. Whatever it is, let us try to be tolerant and considerate of the feelings and even the prejudice or racial instinct of our white fellow countrymen of the South, who, in the solution of the negro problem, must, amid their own surroundings, bear the heat of the day and stagger under the weight of the white man's burden."

"No previous utterances of any statesman or philanthropist on this immensely important problem have gone nearer to the heart of the question," thinks the New York *Sun*, and it believes further that Mr. Cleveland's words "represent a public opinion in the North that is growing fast, and is bound to become prevalent, without regard to party lines." The Philadelphia *Ledger* hopes that "so just and impressive an utterance will do much to induce a kindlier feeling into Northern sentiment, in so far as its friendship for the negro has predisposed it against the sincerity of the Southern whites."

Clark Howell, editor of the Altanta *Constitution*, declares that "Mr. Cleveland has proved himself both a friend of the negro and a friend of the South," and says that if the Northern people will act on Mr. Cleveland's advice, it "will do more to solve the negro problem than anything else that might be done in a hundred years." The Charlotte *Observer* says:

"In thought and language this speech is entirely great; in the breadth of vision it betrays, it is marvelous; in its spirit of forgiveness, superb. What must those Southern white men who have aspersed this man and who continued to malign him as long as it was popular, the only friend their section has had in the Presidential office in fifty years—what must they think of themselves when they come to read this speech?"

The New York *Commercial Advertiser* remarks that it is unfortunate for Mr. Cleveland's kindly view of the Southern white

man that the current despatches should report so many cases of violence toward the blacks; and the New York *World* and Detroit *Free Press* rise to inquire if the plan contemplates the continued disfranchisement of Southern blacks without a corresponding reduction of Southern representation in the House of Representatives and the Electoral College. And the New York *Tribune* says:

"We may think Southern objection to an illiterate electorate not unnatural, and believe that the negro may wisely put up with the denial of suffrage, even by unjust discrimination, and devote himself along the lines laid down by General Armstrong and Booker Washington to making himself a prosperous and respected citizen. But we can not forget that patience has a goal. Endurance of discrimination, a sympathetic attitude toward the South while it is dealing with the negro in its own way, is founded on the distinct understanding that the ultimate solution is the giving to every negro as he shall become worthy of it the full measure of his civil and political rights. We should have been glad if Mr. Cleveland, while so frankly and properly avowing sympathy with the South and telling the negroes that their only hope was to make themselves worthy of Southern respect, had with equal distinctness declared for the great principle of equal right and privilege as citizens, regardless of race, for all those whose character and achievement fit them to discharge the duties of good citizens."

ACCIDENTS TO OUR BATTLE-SHIPS.

"IT is to be hoped that in our next war our battle-ships will do more damage to the enemy than they do to themselves," remarks a paragrapher in one of the daily papers, commenting on the series of accidents, some of them very serious, that have recently happened to our battle-ships while engaged in target practise. In one of the big guns of the *Massachusetts* last fall, a shell prematurely exploded, blew out the breech and killed several men. This is brought to mind by the explosion of a 12-inch gun on board the *Iowa*, which killed three men and wounded many more, week before last, during target practise off the coast of Florida. A few days after that, the new battle-ship *Maine* was reported to have sustained considerable damage while at target practise. In the case of the *Iowa*, the board of inquiry, appointed by Admiral Higginson, has not yet reached any conclusion. The first explanation was that the projectile had burst in the gun; but observers who testified before the board of inquiry declared that they saw it fall near the target. Another theory is that there was an accumulation of smokeless-powder gases at the point where the gun burst. The gun did not burst in the turret, but some distance outside it. The explosion "must be welcomed as the shortest road to indispensable knowledge of smokeless powder," says the New York *Sun*. Other papers remark that the gun had been fired too many times. The Philadelphia *Press* says:

"Nothing can be concluded until the court of inquiry has reported upon the fragments of the 12-inch gun which burst on the *Iowa* at its 125th round. But no one who has watched the progress of heavy ordnance will be surprised if it is finally found that the life of one of these monsters of ordnance is about half what was originally hoped.

"If this proves to be the case, it will be necessary to replace every large gun on all the earlier battle-ships of the United States forthwith, and the practical difficulty will be presented that it is impossible to secure accurate target practise without the occasional use of service charge, and that every such use to secure the efficiency of the crew has perceptibly reduced the life and therefore the efficiency of the gun."

The trouble with the *Maine* is that the fastenings and rivets have broken beneath the rollers and paths that support the turrets carrying the big guns. Secretary Moody, through Rear-Admiral Bowles, gave out a frank statement of the matter. He acquits the contractors of all blame for the defects and declares that no general structural weakness has developed. The mishap was caused by the greater strain resulting from the use of smokeless powder in high-pressure guns, with a shorter recoil. When the *Maine* was designed, guns of lower pressure were intended in her turrets, and black powder was to be used. Instead, high-pressure guns firing smokeless powder were mounted, and the turret supporters and fastenings were subjected to a strain which they were not intended to endure. Another serious problem is presented by faults that have been found in the ship's boilers.

Most of the papers accept the explanations offered. "The explanation carries little consolation," says the New York *Mail and Express*, "but, costly as it is, the lesson has been learned. The dear school of experience may now be applied to the construction of the other battle-ships." But the Philadelphia *North American* remarks in a different vein:

"The bursting of a big gun on the *Iowa* during target practise and the disablement of the *Maine* by the recoil of her batteries

"THAT BEATS ME!"
The New York World.

"SUCH A HEADACHE!"
—*The St. Paul Pioneer Press.*

ORATORICAL BEATS.

indicate that the practical limit of the weight of armament has been reached, if not passed, and that the theories of naval constructors need readjustment.

"It is idle for navy officers to protest that the *Maine* is not structurally weak and explain in the same breath that the supports of her six-inch batteries are insufficient and the structures of her turrets 'entirely inadequate to bear the strain of firing the big guns.' If the admitted want of strength is not 'structural weakness,' the term has no rational meaning."

CLARA BARTON AND HER CRITICS.

CONSIDERABLE hesitancy is shown by the newspapers in their handling of the dissension in the Red Cross Society, evidently in the fear that the airing of the recriminations may impair confidence in the society and mar its usefulness; and all concerned are careful to explain that nobody has the slightest thought that a single dollar of the great sums handled by the society's officers has been misappropriated. What the critics of the society object to is the so-called autocratic rule of Miss Clara Barton, and the alleged lack of system in the handling of relief moneys. They sent memorials to the President and to Congress, early in the year, setting forth these complaints, and were conducting an aggressive campaign, when they suddenly found themselves suspended from membership by the executive committee, on April 6, on the ground that they were attempting "to disrupt the organization of the American National Red Cross," and that in their memorial to Congress each of them "assumed an attitude unbecoming a member of the American National Red Cross and hostile to the interests of that organization."

MISS CLARA BARTON.
President of the American National Red Cross Society.
From a photograph taken in St. Petersburg last year, showing the decoration conferred on Miss Barton by the Czar and the Empress Dowager.

This edict of suspension was launched against the twenty-two signers of the memorial to Congress, including such prominent persons as Gen. John M. Wilson, who was vice-president of the Red Cross last year, ex-Secretary of State John W. Foster, ex-Secretary of the Navy Hilary A. Herbert, Rear Admirals Van Reypen and Ramsay, retired, Mrs. Anna Roosevelt Cowles, sister of the President, Mrs. J. Ellen Foster, and Miss Mabel T. Boardman. A statement given out by Miss Barton's friends says that the attitude of the suspended members has been "hostile to the interests of the organization," and that their opposition "has been maintained solely for the purpose of driving Clara Barton from the presidency and handing the control of the organization over to a minority clique." This opposition, we are told further, "is largely composed of new members located in Washington, who have contributed to the work of the society a mere pittance—less than $200," while "the society has the unqualified support of the majority, composed of the oldest Red Cross workers living in different parts of the country, who have personally contributed several hundred thousand dollars to its work." In regard to the charge of loose business methods another statement says: "Each year the Red Cross has appointed an auditing committee to pass on the accounts and finances, and these reports have come before the annual meeting, where they may be criticized or inquired into. The insinuations of the Washington members have been general and not tangible. They have been asked for specific charges and they have not furnished them."

Some of the methods objected to are instanced by the Washington correspondent of the New York *Evening Post* in the following paragraphs:

"Checks have been drawn payable to Miss Barton, and sent to her, designed to be used for emergency relief, and intended by their donors to be handled by the Red Cross Society as such; but Miss Barton has not put them through the machinery of the society at all. No one has accused her of misappropriation; it was their own fault that they drew and sent the checks as they did, and her word has been taken for the fact that the money was used by her for good purposes; but such incidents have left a feeling of dissatisfaction which could not be alleviated by any explanation that Miss Barton was a philanthropist and not a business woman, and that her apparent derelictions should therefore be treated as mere errors of judgment.

"Then, the practise pursued in handling funds generally has been very galling to persons accustomed to the practise usual in the world. For example, a prominent citizen of Washington, who at the time of the Johnstown disaster was living in the West, says that he was instrumental in raising a fund of $10,000 to be spent by the Red Cross in relieving the sufferers from that calamity. He supposes that the money reached its destination and was spent as directed; but to this day he and his fellow donors went without so much as a line of acknowledgment.

"In other cases, it is stated by persons who have had access to the papers of the society, vouchers for considerable amounts have been passed with simply rubber-stamp signatures and counter-signatures. Where large sums have been subscribed and sent to the front for relief work only a fraction of the money has passed through the treasurer's hands. These are a few of the complaints, typical of a multitude."

The one thing upon which the newspapers seem to agree is the conclusion that such a dissension in the Red Cross Society is deeply deplorable, and many think that Miss Barton and her friends, in their suspension of the opposing faction from membership, did not follow the wisest course. Miss Barton herself, however, is treated by the press with universal regard and respect. The Cleveland *Leader* says of her:

"Ever since the organization of the American Red Cross she has stood for the whole movement. No name but hers has been conspicuously associated with it. During that time its agencies have been invoked nearly a score of times to alleviate the sufferings of victims of disasters, and the sum of $1,900,000 has been contributed by the American people and distributed by Miss Barton. Not once has her integrity been questioned. Not only has she used these public contributions to the best advantage, but she has paid out of her private fortune nearly $4,000 a year for the maintenance of the organization of the society, the actual sum thus devoted by her being $76,000. Never until 1901, it is charged, was anybody paid a salary for work in connection with the Red Cross. During that year more than $2,000 was drawn from the treasury by some of those who have tried to

take the control of the organization out of the hands of Miss Barton.

"It is to be regretted that there should be an effort, whether concerted or not, to discredit in her old age a woman whose name has been so closely associated with self-sacrificing effort in behalf of humanity as has that of Miss Barton. The attempt to shake the public confidence in her integrity must fail, as it should. Unaided and alone, practically, she brought the Red Cross into existence in the United States, and to her the credit belongs. It can not be taken from her."

MANUFACTURERS ORGANIZING AGAINST LABOR-UNIONISM.

THE National Association of Manufacturers, which met last week in New Orleans, attracted national attention by a remarkable speech delivered by its president against labor-unionism, and by the adoption of a resolution providing for the organization of employers in kindred crafts "in order to meet in collective, scientific, and effectual manner the present industrial conditions arising from the organization of labor." The resolution provided for a committee of seven to begin the work of organizing, and for "a permanent central organization" to unify and strengthen the whole.

More may be heard later of this committee and its organizations of employers in the various crafts, when occasion may arise; but at present the newspapers are devoting their attention chiefly to the speech of Mr. David M. Parry, president of the association. The speech was devoted mainly to an attack on labor-unionism and its methods, the remarks on that topic being lengthy enough to fill something like three pages of this journal. Here are two sample paragraphs:

"Organized labor knows but one law, and that is the law of physical force—the law of the Huns and Vandals, the law of the savage. All its purposes are accomplished either by actual force or by the threat of force. It does not place its reliance in reason and justice, but in strikes, boycotts, and coercion. It is, in all essential features, a mob power, knowing no master except its own will, and is continually condemning or defying the constituted authorities. The stronger it grows the greater a menace it becomes to the continuance of free government, in which all the people have a voice. It is, in fact, a despotism springing into being in the midst of a liberty-loving people.

"It has not, in times past, hesitated to resort to violence and the destruction of property to compel the acceptance of its demands. Its history is stained with blood and ruin. Many a man whose only fault was that he stood upon his rights has been made to suffer outrage, and even death, and many an employer has been brought face to face with financial ruin. These wrongs cry unto heaven, and yet an unaroused public sentiment too often permits them to go unheeded and unpunished."

It need scarcely be said that most of the newspapers fail to coincide with these sentiments. "This can hardly be called an attitude which makes for industrial peace," says the New York *Journal of Commerce;* and the Philadelphia *Ledger* suggests that such language "does not befit the president of a sober and intelligent organization." So, too, think the Philadelphia *Record*, the Chicago *Tribune*, the Cleveland *Leader*, and many other papers, and the New York *American* declares that Parry and his like "are the worst of strike breeders." Senator Hanna, in a newspaper interview, also severely criticises Mr. Parry. Samuel Gompers, president of the American Federation of Labor, is quoted as saying:

"If the American manufacturer can stand Parry, organized labor certainly can stand him. He is dangerous only to his friends and his associates; to those he chooses to treat as enemies he is perfectly harmless. He can not open his mouth without injuring his own cause. He is a ranter, intemperate, and bigoted; ignorant of the history of labor and the emancipation of industry. Even the element he represents in a measure recognizes the inexpediency of his methods, and gently admonishes him that he is too radical.

"Capitalists are now organizing on the basis suggested by their more rational confrères. In Chicago a secret association of employers has been formed to protect the interests of employers and to resist aggressive demands on the part of organized labor. If these organizations mean to treat labor fairly, to 'recognize it,' abjure obsolete notions and accept accomplished facts, we expect to have no difficulty with them. But the first thing for the organization of employers to do is to send the 'capitalistic agitator,' to use the expression of the Chicago *Tribune*, about his business, and to secure reasonable, broad-minded, sagacious men to manage its affairs.

"Progressive employers should read Mr. Parry's utterances in order to know what to avoid—'how not to do it.'"

The New York *Sun*, however, hopes that the labor-unions will heed Mr. Parry's arraignment, and reform, a feeling that is shared by the New York *Evening Post*, which "can not say that the arraignment was too severe." *American Industries* (New York) publishes regularly editorials and contributed articles similar in tone to Mr. Parry's speech. It says editorially in its last issue:

DAVID McLEAN PARRY,
Of Indianapolis, who compares the labor unionists with Huns, Vandals, and savages.

"The entire program of organized labor is comprised in the two words, 'get more.' . . . . "The program of getting more, however, involves the strike and the violence attendant upon it; the boycott and the intolerable cowardice attendant upon it; the picket, and the marauding and murder about the mill which are attendant upon it. The peaceful strike, which might be called the walkout pure and simple, is purely a misnomer. If the men simply walked out and did no more, their places could be filled, and doubtless would be filled; sometimes, possibly, by a considerable proportion, perhaps seventy per cent., of the union men themselves who had walked out, because of the belief on the part of that majority that as well as they could do under the circumstances was well enough for the present. The strike can not be made effective without the picket or the boycott. The strike can not help breeding violence; the boycott can not help becoming a conspiracy."

COMMERCIAL WAR WITH GERMANY.

THE extent of German apprehension over the invasion of German markets by American products seems to be little realized by the newspapers in this country. The latest manifestation of this alarm was the serious proposal urged last week by the German delegates to the International Agricultural Congress in Rome that the European nations form a customs union, or *Zollverein*, against American products—a scheme that our newspapers have long derided as impracticable. It was brought forward in all seriousness, however, by Count von Schwerin Loewitz, and was supported by the German delegates and a few others. Signor Luzzatti, who has been three times minister of the Italian treasury, and M. Méline, formerly premier of France, pointed out that any such attempt would hurt Europe more than it would the United States, and the proposition was "laid on the table."

This recurring *Zollverein* proposition, the new German tariff, and the tremendous trust developments in Germany are due, according to well-informed European correspondents, to German fright at the "American invasion," and may be looked upon as

frantic and threatening signals to us to beware; the only trouble with the signals being that the Americans are so busy that they do not see them. Our newspapers print the news of these German movements, but regard them, editorially, with supreme indifference. In Germany, however, so we are told by the Berlin correspondent of the New York *Journal of Commerce*, the greatest excitement prevails in business circles. He says:

"It is remarkable what feeling exists in Germany against American products. United States shipments of grain, including wheat and corn, are steadily decreasing, while the imports from Austria and Rumania are increasing at a remarkable pace. The imports of American agricultural machinery have been dropping off at a dangerous rate. While it is true, as set forth in an article in *The Journal of Commerce and Commercial Bulletin*, which has been extensively reproduced in all large German journals, that Germany must depend upon the United States for certain food supplies and products, it is to be qualified to the extent that a strong prejudice exists in favor of according contracts to European countries, as for example Russia and Rumania, in the matter of wheat and grain imports. So much has been heard here of the 'American invasion' that the average German business man or manufacturer, when approached by an agent of an American concern with goods, becomes cautious and frequently says: 'I'm sorry, but I can get the same article from this country or from some other European country.'"

It appears that we are giving the German trusts as much worry as the Administration is giving our trusts at home—perhaps more—while Germany returns the favor by acting as "trust-buster" for some of our big combinations:

"Aside from the enactment of a special system of discrimination against American imports contained in the new Reichstag tariff bill, the German Government has armed itself with means to fight the Standard Oil trust, the American Sugar Company, the American Tobacco Company, and other American monopolies which have gained a strong footing in German territory. To fight the sugar trust the Reichstag passed a resolution giving the administration power to levy a discriminatory tariff against refined sugar imports and a low tariff on raw sugar, with the avowed purpose of nourishing the home sugar-refining industry. But this is a knife which cuts two ways. The precedent in the United States shows German legislators that this discrimination places German sugar consumers absolutely at the mercy of a distinctly German sugar-refining trust protected by the Government. The same is true of the discrimination against American beef and meats, and apples. To ninety per cent. of the home consumers such discrimination will work disadvantageously owing to the debarment of cheap importations of these supplies."

And worse is yet to come—unless we arrange a reciprocity treaty with Germany; and the Senate record on such treaties makes such an event extremely unlikely. The correspondent says:

"That a number of American industries now thriving in Germany will be utterly crushed out of existence by the operation of the new tariff is a foregone conclusion, unless the Washington Administration consents to arrange reciprocity treaties with Germany. With American wheat imports already declining, it is only a matter of time for Russia to take the lead under a special treaty with Germany when the price of duty on American wheat is raised from 23 to 49 cents per bushel. American corn will be succeeded by Russian and Rumanian corn if those governments make half-way satisfactory tariff treaties, while American corn duty is raised from 10 to 24 cents per bushel. American bacon will be a rarity when forced to pay a duty of 3.90 cents per pound against the present duty of 1.84. American apples will be entirely barred when compelled to pay a duty of $2.40 on each 220 pounds, as against their free admission at present. The resourceful steel manufacturing, electrical, and other kindred interests of Germany will be able to outbid United States competitors successfully with the added duties on these American imports. I personally know of four leading American firms in Berlin which will have to go out of business if the new tariff goes into operation unmodified. At the present time the Berlin chamber of commerce is being organized, composed of Americans in business in Germany, which proposes to draw up an appeal to the United States Government to take steps to prevent such a break by modifying the Dingley rates on German imports. The German Government, despite the kindly assurances of the Kaiser, is determined to offer warfare against the United States tariff system. It will use not only the tariff as a cudgel, but also the power to cancel the existing most-favored-nation clause treaty with the United States, the special rates on American sugar, meats, and other products, and also the differential tariff on the Prussian Imperial Railway, as well as the system of classifying tariff schedules on different kinds of material at the ports of entry. It is a powerful armor, and there are many who predict that Germany will be able to make a hard fight for better tariff concessions from the United States than have been extended heretofore."

LETTERS AND ART.

AMERICAN LITERATURE AND THE HIGH SCHOOLS.

THE old saying that a stream can rise no higher than its source is transmuted into literary terms by a recent writer, Mr. John M. Berdan, of Toledo, Ohio, who takes the view that literature normally follows the public demand, and that the publisher and bookseller are likely, in the long run, to supply what the people will buy. That we as Americans have not yet developed a great literature he thinks is "a self-evident fact." That the great mass of our people to-day do not know or demand great literature, he holds to be equally apparent. Therefore, he reasons, the first step in literary improvement is to "create a demand" for such literature. He continues (in *The Arena*, April):

"This demand must arise from the people themselves, not as in former ages from any single coterie that leads the people. This is being done in a variety of ways, especially in such work as the university extension courses. The limitation of that, however, is the fact that they deal only with adults whose taste is already formed and on whom at best only a veneer of culture can be laid. To accomplish widespread results we must begin when the mind is as yet untrained—we must begin with the high schools. The vast proportion of future readers can not go to college, but can and do pass one or more years in the high schools; it is here that the demand must be created—the future of American literature rests in the hands of the English teachers of the high school."

Mr. Berdan urges, first of all, that the English teacher should be more carefully chosen and adequately paid. He says on this point:

"Unfortunately, it is here that the average school board determines to economize. There is the hampering conviction that anybody who can teach at all can teach English. A text-book is put into the hands of a raw girl graduate from the normal school, and she proceeds to shove indigestible facts down the throats of her unwilling class. Secretly she herself really prefers the works of Laura Jean Libbey, or Marie Corelli, or Bertha Runkle to those of Shakespeare, or Spenser, or any other passé author. But she realizes that she is paid to teach the reverse of this, and so from the beginning an element of falsehood is introduced. Our class-rooms have too long been the training-ground for literary hypocrisy. The class quickly learns the important distinction between those authors who are 'great' and modern writers who are 'interesting'—to talk about the first but to *read* the second. This they never forget. The idea that Shakespeare can be read for pleasure without being studied for an examination is so foreign to them that for the future they carefully avoid ever disturbing the dust on his leaves. It is good to have read Shakespeare once—it is a bore to read him!"

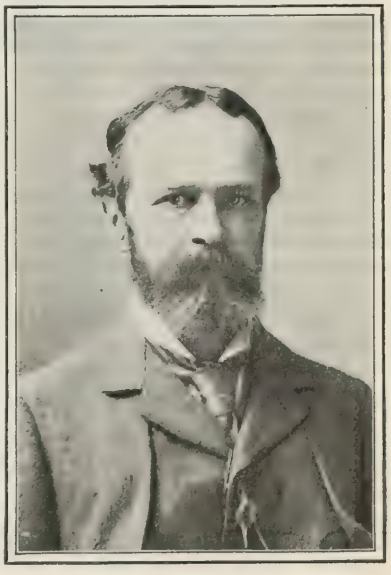
The present high-school course, Mr. Berdan argues, is totally inadequate. Selecting an up-to-date high school in the Middle West, he finds the following system in vogue: The first two years are spent in a drill in rhetoric supplemented by a reading of two of Shakespeare's plays and of certain selected books; the third year is passed in a superficial review of the history of English literature; the fourth year makes no demand on the pupil beyond the production of a single "oration" written out of school hours. Moreover, the pupils who expect to go to college and those who do not are given exactly the same training in English, despite the fact that the high school affords the only opportunity the great majority of the pupils ever have to acquire a love and appreciation for the good in literature. Mr. Berdan concludes:

"This condition is double-edged. If the English teacher in the high school does not rise to the occasion, he sins not only negatively but positively; he has not only failed to give the love that he should, but he has given a distaste for the beautiful—which is harmful. It is far better for the boy never to have read any given author than to have read him in such a manner that a dislike is created. A boy's unperverted taste is healthy; it is only in school that he learns to hate what is good. The teacher must feel the very serious problem that confronts him. It is a grave moral responsibility; he may be robbing the lad of something that can never be replaced, and that is none the less valuable from the fact that it can never figure in a law case. It would have been far better for the boy to have spent the time in playing ball and thus improving the body, rather than, cooped up in badly smelling and unventilated rooms, in desecrating and destroying his taste for the great masters.

"The English teacher in the high school has thus a double responsibility—a duty due not only to the class under him but also to the nation at large. The individual pupil should at any cost be led to appreciate what is fine in literature, and by so doing he becomes a factor in the great society for national improvement. The average teacher does not appreciate this. The men on the average school board, themselves the product of the old conditions, do not appreciate this. The pupil grows up with a hearty, altho concealed, dislike for the great writers. He naturally will never appreciate what he has missed except vaguely; his son will go to college. But the popular novel of the day satisfies his literary craving—and *voilà!* our American literature."

THE PH.D. CRAZE.

EMERSON, who did not take his bachelor's degree, because he did not think it worth five dollars, would be regarded with fine scorn to-day if he should venture to apply for a chair in some of our American colleges, to judge from an article by Prof. William James in *The Harvard Monthly*. If an applicant for such a position can not display a Ph.D., we are given to understand, he may as well go back to the farm; these three magical letters outweigh all other considerations. In illustration of this, Professor James (who leads the Harvard faculty in the number and variety of his degrees, being a Doctor of Medicine, Philosophy, Letters, and Laws) relates the case of a brilliant Harvard man who received an appointment to teach English literature in another college before the awful discovery was made by the governors of the institution that he had not the Ph.D. degree. Like the guest without the wedding-garment, he was about to be cast into outer darkness; but he was given a year's respite by the offended governors, at the earnest solicitation of his friends on the Harvard faculty, "on condition that one year later at the furthest his miserably naked name should be prolonged by the sacred appendage," as Professor James puts it. So the candidate divided the time during the next year between teaching English literature and preparing a thesis on a philosophical subject. He received the degree, which signified nothing in regard to his knowledge of English literature, and the stain was wiped out.



WILLIAM JAMES, M.D., PH.D., LITT.D., LL.D.
Who enters protest against the growing homage paid to the degree.

Now the aim of such a college, as Professor James explains, is to dazzle the readers of its catalog with a bewildering galaxy of titles. The parent or student will say to himself: "This must

be a terribly distinguished crowd—their titles shine like the stars in the firmament; Ph.D.'s, S.D.'s, and Litt.D.'s bespangle the page as if they were sprinkled over it from a pepper caster." This spirit is pure sham, declares Professor James. He continues:

"Will any one pretend for a moment that the doctor's degree is a guaranty that its possessor will be successful as a teacher? Notoriously his moral, social, and personal characteristics may utterly disqualify him for success in the class-room; and of these characteristics his doctor's examination is unable to take any account whatever. Certain bare human beings will always be better candidates for a given place than all the doctor-applicants on hand; and to exclude the former by a rigid rule, and in the end to have to sift the latter by private inquiry into their personal peculiarities among those who know them, just as if they were not doctors at all, is to stultify one's own procedure. You may say that at least you guard against ignorance of the subject by considering only the candidates who are doctors; but how then about making doctors in one subject teach a different subject? This happened in the instance by which I introduced this article, and it happens daily and hourly in all our colleges. The truth is that the Doctor-Monopoly in teaching, which is becoming so rooted an American custom, can show no serious grounds whatsoever for itself in reason. As it actually prevails and grows in vogue among us, it is due to childish motives exclusively. In reality it is but a sham, a bauble, a dodge whereby to decorate the catalogs of schools and colleges."

Then, too, there is a certain class of individuals whose ambition outruns their ability, who feel that their lives can never be happy without the Ph.D.:

"We dangle our three magic letters before the eyes of these predestined victims, and they swarm to us like moths to an electric light. They come at a time of life when failure can no longer be repaired easily and when the wounds it leaves are permanent; and we say deliberately that mere work faithfully performed, as they perform it, will not by itself save them—they must in addition put in evidence the one thing they have not got, namely, this quality of intellectual distinction. Occasionally, out of sheer human pity, we ignore our high and mighty standard and pass them. Usually, however, the standard, and not the candidate, commands our fidelity. The result is caprice, majorities of one on the jury, and on the whole a confession that our pretensions about the degree can not be lived up to consistently. Thus, partiality in the favored cases; in the unfavored, blood on our hands; and in both a bad conscience—are the results of our administration."

The time has come to check this "Ph.D. octopus," as Professor James calls it. He suggests three ways to do it:

"The first way lies with the universities. They can lower their fantastic standards (which here at Harvard we are so proud of) and give the doctorate as a matter of course, just as they give the bachelor's degree, for a due amount of time spent in patient labor in a special department of learning, whether the man be a brilliantly gifted individual or not. Surely native distinction needs no official stamp, and should disdain to ask for one. On the other hand, faithful labor, however commonplace, and years devoted to a subject always deserve to be acknowledged and requited.

"The second way lies with both the universities and colleges. Let them give up their unspeakably silly ambition to bespangle their lists of officers with these doctorial titles. Let them look more to substance and less to vanity and sham.

"The third way lies with the individual student, and with his personal advisers in the faculties. Every man of native power, who might take a higher degree, and refuses to do so, because examinations interfere with the free following out of his more immediate intellectual aims, deserves well of his country, and in a rightly organized community would not be made to suffer for his independence. With many men the passing of these extraneous tests is a very grievous interference indeed. Private letters of recommendation from their instructors, which in any event are ultimately needful, ought, in these cases, completely to offset the lack of the bread-winning degree; and instructors ought to be ready to advise students against it upon occasion, and to pledge themselves to back them later personally, in the market-struggle which they have to face."

The Boston *Transcript* agrees that "America should be the last to welcome any badge of intellectual snobbery," and says:

"We should like to add in support of Professor James's attack on the 'doctor monopoly' two cases which have come to our notice. A young man recently back from a German university with a degree in Sanscrit was offered a position as teacher of French. He knew nothing of French beyond a fair reading knowledge, but he was—save the mark!—a doctor of philosophy.

"President Thomas, of Bryn Mawr, said not long ago to a teacher of English at Harvard that she would have no man on the faculty who was not a doctor. His reply should have been a cure for the degree plague which has smitten this otherwise excellent and independent school. He pointed out that she would exclude Professor Kittredge, of Harvard, one of the greatest scholars in the world, who is a sort of Warwick, making doctors of philosophy, but is not a doctor of philosophy himself, and Professor Wendell, who has had more good influence on the teaching of English composition than any one else in America, and Prof. Lewis Gates, a noteworthy modern critic, and Mr. C. T. Copeland, who is the most original and interesting lecturer on English literature at Harvard."

SARGENT AND THE OLD MASTERS.

IN a recent book on "American Masters of Painting," Charles H. Caffin, the art critic of the New York *Sun*, devotes a chapter to John Singer Sargent, and incidentally draws a comparison between Sargent's portraits and those by some of the old masters.

In a brief sketch of Sargent's early life, Mr. Caffin tells us that he has been a favored child of the Muses: he had never anything to unlearn. He was born and spent his youth in Florence, where all around him were the dignity and tender beauty of a city which, perhaps more than any other city in the world, is stimulating to the intellect and refining to the senses. His home life was penetrated with refinement, and he early reached a maturity for which others have to labor long. He was taught in the studio of Carolus-Duran, and at the age of twenty-three painted a portrait of his teacher showing that he had "absorbed his master so thoroughly as to be unconscious of the incidentals of his method and to have grasped only the essentials with such complete assimilation that what he produces is already his own."

A NEW PORTRAIT OF JOHN S. SARGENT.

The proximity of Mr. Sargent's portrait of Mr. Marquand, in the Metropolitan Museum (New York), to portraits by Titian, Franz Hals, and Velasquez, calls forth the following comparison:

"Among the masters we may feel certain that Sargent will be reckoned as having been one of the most conspicuous figures of his age; but his vogue will rise and dwindle according to the amount of interest felt for the time being in the age which he represented; it will scarcely have that inevitableness of conviction which, when once recognized, must abide. If this forecast is correct, the reason is that Sargent, tho raised above his time, scarcely reveals in his portraits elevation of mind; he has the

TWO CELEBRATED EXAMPLES OF MR. SARGENT'S WORK.

clear eye of the philosopher without his depth and breadth of vision; he has possessed himself of his age and the age has taken possession of him. He swims on its sea with strokes of magnificent assurance, but with a vision bounded by the little surface waves around him; he has not sat upon the cliffs quietly pondering its wider and grander movements.

"So the intimacy revealed in the great majority of Sargent's portraits is of that degree and quality which passes for intimacy in the polite society of to-day—a conformability to certain types of manner and feeling, with interesting little accents of individuality that shall distinguish without too keenly differentiating; traits of style rather than of personality. Sometimes there is even less than this. The subject would seem to have got upon the artist's nerves, interfering with the usual poise of his study, so that he seems to have allowed himself to be sidetracked on to some loopline of the temperament. Occasionally he touches a deeper level of intimacy, as in the portraits of Henschel, Mr. Penrose, and Mr. Marquand, and oftentimes in children's portraits, notably in that of Homer Saint-Gaudens. But, for the most part, I believe, it is not the personality of the sitter that attracts us so much as that of the artist, which he has seized upon the occasion to present to us; a personality of inexhaustible facets and of a variety of expression that, for the time being at least, creates an illusion of being all-sufficient.

"What a contrast he presents to Whistler, with whom he shares the honor of being among the very few distinctly notable painters of the present day. Sargent with his grip upon the actual, Whistler in his search for the supersensitive significance, are the direct antipodes in motive. Each started with a justifiable consciousness of superiority to the average taste of his times; but while Whistler, on one side of his character a man of the world, has in his art withdrawn himself into a secluded region of poetry, Sargent, almost a recluse, has delighted his imagination with the seemings and shows of things and with their material significance.

"Is the reason for this merely that success claimed him early and that he has not been able to extricate himself from the golden entanglement, or that deeper one, noticeable in many artists, that their artistic personality is the direct antithesis of that personality by which they are commonly known to the world? Otherwise, this man, with his gift of seeing pictures, with his power of a brush that seems loaded with light rather than with pigment, with his smiting force or tender suggestiveness of expression—what might he not have done had he followed the bent of his mind, a mind stored with culture, serene and reflective? Something, doubtless, less dazzling than his portraits, but more poetical, more mysteriously suggestive, more distinctly creative. As it is, some little studies of Venice, such as 'Venetian Bead Stringers,' come nearer probably to the true spirit of Sargent; to that exquisiteness of fancy which he developed more completely in the study of children lighting lanterns in a garden, 'Carnation Lily, Lily Rose.'"

Mr. Caffin concludes by saying that it is along the line of Sargent's decorations for the Boston Public Library (see THE LITERARY DIGEST, March 28) and the "Carnation Lily, Lily Rose" pictures that the true Sargent may be discerned. "In them he is giving utterance to himself; in his portraits responding with a certain hauteur to the allurements of his day."

A Maeterlinck Play in Philadelphia.—The statement made in our columns (March 28), that the first Maeterlinck drama seen on the stage in this country was "Pelleas and Melisande," produced last year by Mrs. Patrick Campbell, is called in question by Dr. Matthew Woods, of Philadelphia, who writes to us as follows of a prior presentation of a Maeterlinck play:

"The first time a play of Maeterlinck was given in this country was when the Browning Society of Philadelphia, in May of

1894, gave the Francis Howard Williams translation of Maeterlinck's 'L'Intruse' with such realistic interpretation that many in the great audience became uncontrollably hysterical and had to be taken out, and the effect produced upon almost the entire audience was so intensely gruesome that even now many can only recall it with shudders. The impression made by that company of non-professional Philadelphia players, through the instrumentality of certain awe-inspiring preliminaries, was that Death—the Intruder—had actually *in propria persona* entered the house and had carried off his victim, while the audience, riveted to their seats, incapable of applause or remonstrance, did not see, but felt him do it. The effect was produced after the manner of the morality plays, with gesture, symbol, and suggestion, but with fewer words. The presentation was a dramatic triumph.

"The Browning Society, which gives a play, always a literary play, by its own members at the close of its season every year on the anniversary of Browning's birth, has produced many notable things in an admirable manner, as, for example, 'The Masque of Comus,' by John Milton; Tennyson's 'Falcon'; 'Gringoire,' with prolog written and spoken by W. Alexander Stout; Ibsen's 'A Doll's House,' with Miss Helen Baldwin in the leading rôle; Molière's 'Les Precieuses Ridicules,' with Mr. Ziegler in the leading rôle; Henry Hanly Hay's 'Night of the Duchess'; 'The Woman's Battle'; Browning's 'Columbus's Birthday'; Rostand's 'Les Romanesques'; and has in preparation for this month G. Bernard Shaw's 'Candida.' Yet in its long list of successful presentations, it has done nothing that was a better representation of the meaning of its author than Maeterlinck's 'L'Intruse,' and which preceded Mrs. Patrick Campbell's performance in America of a Maeterlinck play by some seven years."

BOOKS THAT INFLUENCE CHILDHOOD.

A NUMBER of well-known English writers were recently asked by the editor of *T. P.'s Weekly* (London) to tell the story of the books of their childhood, that is; of the books which impressed them during childhood and remained most vividly in their memories. Appended are a few of the answers received:

Mr. St. Loe Strachey, editor of *The Spectator*:

"I am afraid I can not honestly say that any child's book laid any sort of hold on me in childhood, tho many have done so since. It sounds dreadfully priggish, but the books I remember affecting my mind in childhood, besides the Bible, are Shakespeare, Scott, Milton, and the 'Pilgrim's Progress,' all of which were read to me both by my nurse and my father. I can distinctly remember the effect on my mind of 'Macbeth,' 'Lear,' 'Guy Mannering,' 'Waverley,' 'Paradise Lost,' and the first and second parts of the 'Pilgrim's Progress.'"

Mr. G. Lewis Hind, editor of *The Academy and Literature*:

"The stories of my childhood that I remember best are those that were told to me. 1. The stories of Shakespeare's plays told me by my mother in walks through muddy lanes, which always seemed to lead back to Highgate Cemetery. 2. Stories about one-eyed ghosts told me by my father walking home from church on Sunday evenings. Each lighted lamp-post was a new one-eyed ghost. 3. Two fairy tales told me many times by an elder sister. One was called 'The Light Princess,' the other was about another princess who felt a pea through fourteen mattresses. I think it gave her a sleepless night."

Sir Leslie Stephen:

"The only books (other than 'Robinson Crusoe,' etc.) which I remember to have impressed me in early childhood are: 'A Story Without End,' translated by Mrs. Austin from Carové, and 'Grimm's Fairy Tales,' with Cruikshank's illustrations; but I remember the general impression rather than details. I loved them both. I also remember a book called, I think, the 'Excitement' (*i.e.*, I presume, to reading), mainly on account of an edifying narrative telling how a profane person was at last found dead by the roadside, with his hair standing on end, and also with his breeches on and his drawers off, to show who had done it."

Mr. Justin McCarthy:

"I was never, even in my days of childhood, much given to the reading of books especially intended for children. My favorite reading in those far-off years was found in 'The Arabian Nights,' in 'Gulliver's Travels,' in 'Robinson Crusoe,' and, I must add, in Pope's 'Homer's Iliad.' My delight in these books is with me a living memory still."

Mr. Andrew Lang:

Mr. Lang fears that his child's books were grown-up books. He read in childhood "The Arabian Nights," Scott's poems, and Shakespeare.

Sir Arthur Conan Doyle:

"I think the 'Pilgrim's Progress' was the book which left most impression upon me. 'Robinson Crusoe,' and, later, 'Alice's Adventures,' stand out also."

A noteworthy feature of the "confessions" printed in the London paper is found in the fact that so many books are mentioned which are utterly unknown to the child-readers of to-day. It is evident that the fashions in child's literature change as in everything else. Mrs. W. E. Holmes, of Aurora, Ill., who contributes to the New York *Book-Lover* (March–April), a remarkable article on the children's books of two or three generations ago, has found that "in a collection of fifty books published for children, from the years 1830 to 1850, most of the stories were written for the purpose of producing in the child's mind a *fear of death!*" She continues:

"In one book is an account of the happy death of William Green, age eleven, in which the intense suffering of death from pneumonia is graphically depicted. In a long dialog, he is asked if he thinks he will get better. 'Oh, no,' he replied. 'I do not *wish* to be better.' In a book of 'Anecdotes,' 1838, a child of five is a 'monitor in the infant school.' 'He sings himself to sleep with a hymn. In the morning he wakes with a hymn, and last night he was at it while asleep; for in his *sleep* he was repeating the ten commandments.' In the same book, a child (who died before he was three years old) gives to his father's glazier a New Testament. 'He directed him to *consider* that striking passage: "When thou prayest, enter into thy closet," quoting the long verse correctly to the end.' No wonder the child died young—most children do in these books. . . . . .

"In 1839, a magazine for children published in New York gave its readers a long story, entitled 'The Churchyard Prattler':

'Bessie Sawyer was between five and six years old, and lived with her mother in a little cottage near the village church. Susan Sawyer, her mother, brought up little Bessie very nicely. She taught her to sew, to knit, and to read. She often read a chapter to Susan while she was washing, ironing, or mending. Susan wanted to convince Bessie that life was uncertain, so she gave her a piece of string, that she might go into the churchyard and measure the little graves!'

"Four pages are devoted to Bessie's prattle to herself, as she goes from mound to mound, and finds what she was sent for.

'Mother says that a great many children die before they are as old as *I* am, and I see that she is right. My *string* tells me that.

'*How odd that I never brought a string here before!*

'Oh, here is another little stone with verses on it. I must read these:

Two little babes this death-bed share;
However young, prepare, prepare.'

"Instead of running home to her mother in a fit of nervous fright, this unnatural little saint goes to visit a little friend who had *wickedly* declared '*she* was going to be an old woman and walk with a stick and wear a mob-cap.' She repeats to her friend the gruesome lines, and exultantly informs her that she can not be sure of living to be an old woman to walk with a stick and wear a mob-cap! It was not uncommon for children to advise children in 1830, at least not in magazines."

Mrs. Holmes concludes:

"We rejoice that Louisa Alcott and Longfellow and hosts of the best writers have devoted their talents to the entertainment and instruction of the children. As all growing things in nature need the sunshine and dew and gentle spring rains, so do these treasures in our homes, our little children, need to be surrounded by the tenderest, most loving care. Of the greatest importance will their first books be to them. A taste for good books will make life a joy, through all the years to come."

SCIENCE AND INVENTION.

UNDERGROUND WATER ON THE EARTH AND OTHER PLANETS.

ATTENTION has already been directed in these columns to the gradual withdrawal of the earth's surface water to underground channels. In an article in *Cosmos* (March 14), M. Paul Combes calls attention to the fact that the present state of things is only a passing phase of what he calls the earth's "hydrologic evolution," and that this must end in the substitution of an underground for a surface system of drainage. Some of the planets and the moon, he says, are much further advanced than we in this evolution, and their surfaces are practically dry. He notes that our information about our own subterranean watercourses comes largely from the work of the "speleologists" or students of caves, whose investigations were until recently scarcely regarded seriously by scientific men. Says M. Combes:

"The principal service that it [speleology] has rendered to the general science of the globe is certainly that of having directed attention to subterranean hydrology.

"Owing to the explorations and labors of the speleologists, phenomena hitherto unsuspected or imperfectly known have been clearly revealed. We have realized that the general and important fact of the continuous alteration of the face of the earth by the circulation of water holds good not alone for the surface of continents. Underground streams do as much work as surface waters and perhaps more. They act mechanically and chemically; they erode, dissolve, hydrate, and favor a thousand chemical combinations or decompositions; they participate chemically or thermally in a host of geophysical phenomena.

"Caverns, whatever may be their form or extent, are in great part the work of water; and as this work is not one of yesterday, caverns tell us certain interesting details of the hydrologic history of the globe.

"Now one of the most important facts of this history—because it has never ceased to exercise its influence since the cooling of the earth's atmosphere below 100° C. [the boiling-point] allowed the water to pass from the vaporous to the liquid form, and also because it appears to be present in other planets—is that the solid core of the globe is absorbing its surface waters slowly into its depths.

"The fact is general, and it was well established before the birth of speleology.

"Long ago, geologists were struck with the importance of the fact that the oxidized rocks that constitute the outer crust of the globe are not impermeable to the fluids above them. The air traverses them probably in very small quantities only, but the water resulting from infiltration penetrates into the depths of the earth.

"Speleology, while confirming these facts, has also extended them. It shows us the superficial layers absorbing not only the waters of infiltration, but also the running water, so that for a surface network of torrents, rills, and rivers, there tends to be substituted, little by little, a network of underground watercourses and consequently a subterranean hydrologic system.

"Here it will be interesting to note attentively what is going on outside of our own planet, and to ask whether the hydrologic evolution proved to exist here does not also present identical phases elsewhere. . . . . .

"On the planet Mars, which seems to have reached a phase of hydrologic evolution much more advanced than that through which our earth is now passing, the surface waters are now represented only by the polar ice-caps—the sole points favorable to the condensation of the vapors that form snow, glaciers, and ice. In summer, the meeting of the polar ice fills the curious canals used by the Martians (here we are dealing with pure hypothesis) to conduct over the surface of their planet a liquid whose extreme rarity makes it precious. The greater part of the waters of Mars have become subterranean, and consequently they evaporate little, at least insufficiently to form clouds that are perceptible through our best optical instruments.

"The moon, owing to its small size, has gone through its hydrologic evolution in much less time. All its surface waters have now been absorbed into its depths, and at the most its vapors may be able sometimes, on arrival at the surface, to give rise to a light snow-fall. On the other hand, the solar heat must often melt this snow, and to these phenomena are doubtless due the observations that have been made of variations of appearance on the moon's surface.

"If it is so, the hydrologic evolution of our planet tends to pass sooner or later through the successive phases that have brought the planet Mars and the moon to their present state.

"Of course man can delay to a certain point the progress of these phenomena by striving to prevent the underground channels from capturing the surface water.

"For this purpose we may employ reforestation, as has been proposed with reason by M. Martel in a recent communication to the Geological Society of Paris, or any of the other means that technical science has placed at our disposal."—*Translation made for* THE LITERARY DIGEST.

THE HARMONY OF THE HUMAN FORM.

THAT the different parts of the human body possess mutually such harmonic relations that one may be regarded as the counterpart or mold of another is asserted by M. C. Weyher in the *Revue Générale des Sciences*. What he means by this will be seen from the following paragraphs:

"Everybody knows that whenever any limb changes position, certain muscles contract while others extend; to each position corresponds a different exterior form. Now, bearing this fact in mind, cross the arms on the breast or put them behind your back; or stretch them out along the body, seated or upright; or cross the legs, or place one hand on or in the other, or on the head or face; place one finger along another or take hold of any portion of your body; you will always find that the following statement holds true:

"Whatever the position taken may be, provided it be natural, whenever you have placed a protuberance of one limb in a hollow of another, all the other protuberances will find their proper positions and will exactly fill all the hollows of the other limb, and *vice versa;* this is true along the whole length of the limbs and without any deformation or flattening of any part, except in the case of grave defects of form. This is even a method of verifying perfection of form.

"As one limb is placed in contact with another, the muscles by which this act is effected change form progressively and, wonderful to say, when the actual contact takes place, all the protuberances on one limb have assumed the exact form necessary to fill the hollows of the other, and *vice versa.*

"One of the limbs is always and everywhere, as it were, the counterpart or mold of the other, along its whole length and over a greater or less breadth, reducing sometimes to a simple line of contact, but a line that allows no light to pass except the insignificant amount due to wrinkles of the skin or to slight folds under the joints. Thus is explained, in statuary, the well-known superiority of the hand and fingers to other molding-tools.

"That I may be better understood, suppose that you make a plaster mold of your arm in the position that it takes, for instance, when you place your hand on your heart. Then with this mold you make a plaster cast, an exact reproduction, in relief, of your arm in this position. Suppose that you have made separately, in the same manner, a relief of your breast at the point covered by your arm. If then you place the two rigid and indeformable pieces one on the other, in the position indicated, you will see that they exactly coincide, that they touch along their entire lengths without allowing the least light to pass at any point.

"This is true even of the child, whose exact counterpart is found in the arms of its mother, and we may say that if the latter has a beautiful figure, she will contribute largely to the physical perfection of her child; and the more tender she is as a mother, the more this will be the case, for she will turn the child about constantly in all directions to embrace it and press it in her arms, against her breast and on her lap, thus molding it in the purity of her own lines.

"If, in fact, the child has abnormal protuberances or exaggerated hollows, these defects will constantly tend to be corrected and to disappear under the pressure of the mother's figure,

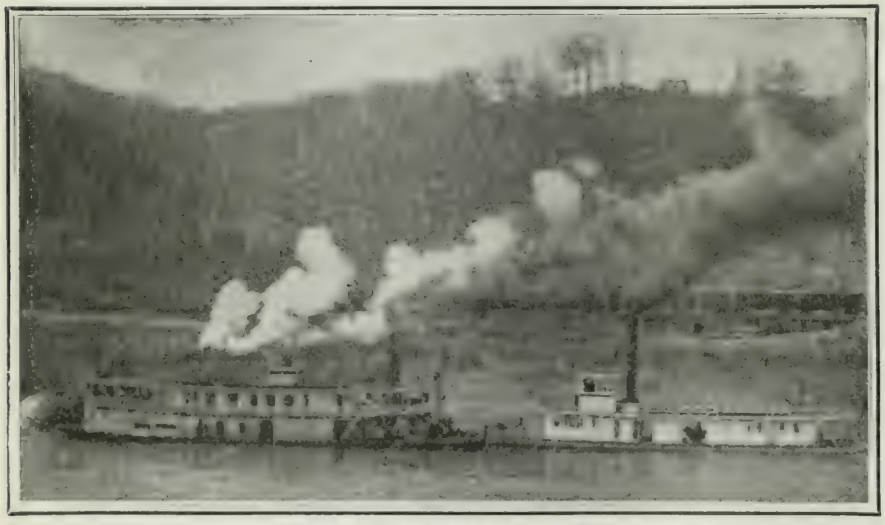
whose flesh possesses much greater solidity than the tender flesh and frame of the young infant."—*Translation made for* THE LITERARY DIGEST.

A UNIQUE TEST OF TWO STEAMBOATS.

HOW two river-boats of different types were recently tested by a sort of inverted tug-of-war—the boats pushing against each other bow to bow—is told in *Marine Engineering* (April). Says the writer:

"There are many ways of making tests of steam-vessels with steam-engine indicators, thermometers, water-meters, pyrometers, patent logs, etc., but the most unique and practical test of towboats that has come to our notice is that of the stern-wheel steamer *D. T. Lane* and the twin-screw towboat *James Rumsey*, which was made in the Kanawha River, opposite Charleston, W. Va., on March 7.

"The Ward Engineering Company, Charleston, has just completed for the Government a new type of towboat, christened the *James Rumsey*. The vessel is so entirely different from all other craft on the river that steamboat men felt confident that she would be a failure. The stern-wheel has been the feature of Western river steamboats ever since steam was first used on these waters, and very little change has been made. So, when the *Rumsey* appeared with a new type of engines and without the stern-wheel, her ultimate failure was confidently predicted. She had two sets of quadruple-expansion engines with cylinders 7, 10, 14, and 20 inches in diameter by 12 inches stroke, and is supplied with steam by a Ward boiler.



PUSHING TEST OF TWO KANAWHA RIVER STEAMBOATS
The new type against the old
Courtesy of *Marine Engineering* (New York).

"The hull is 120 feet long, 22 feet beam, 4 feet 6 inches deep, and has a mean draft of 28 inches. She was found to give most excellent results in towing and swinging barges on the river, but her superiority to the old type was not recognized until the test above mentioned.

"The *Lane* stopped on her way down the river with a large tow, moored the barges to the shore, and stood out in midstream to await her small antagonist. The latter came out to meet her and the bows of the two vessels were lashed together as shown in the engraving, as it had been previously decided to make a pushing and pulling contest.

"In the first contest the *Lane* was on the upstream side and had the current and wind in her favor. The engines on both vessels were started at the same moment and run at full speed ahead. Gradually the larger boat pushed her small, impudent foe downstream a few hundred feet, but at a speed not as fast as the current. Then the relative position of the two contesting vessels was changed, the *Rumsey* being on the upstream side, and the test was repeated, this time the *Rumsey* driving her antagonist before her at a greater speed than she had herself been pushed downstream. It was, however, in the pulling contest that the smaller craft demonstrated her superiority in a still greater manner. When the engines of the two vessels were reversed, the *Rumsey* pulled the larger vessel at a fair speed."

The picture brings out strikingly the difference between the old type of boat with its large hull, ponderous stern-wheel, and general appearance of strain and exertion, and the new type with its twin screws, water-tube boilers, and noiseless running. It takes no prophet, says the paper from which we have just quoted, to foresee that the old type will be eventually displaced by the new.

A PHOTOGRAPHIC MYSTERY.

THE photographic plate is making a name for itself as a revealer of things and forces hitherto unknown. By its means, it will be remembered, Professor Roentgen discovered his now celebrated rays, and it has also brought to light several other forms of radiation, some accepted by the scientific world, others regarded still as more or less apocryphal. Now a German physicist describes a curious action that he is not yet able to explain, by which chemical changes, alterations of temperature, etc., can be clearly registered on the sensitive plate. In a note "on a remarkable phenomenon of radiation," the *Revue Scientifique* (February 7) describes this as follows:

"It has often been observed that photographic plates show, in darkness, under the action of certain metals or organic bodies, a very sensible darkening, attributed by Russell to the chemical effect of peroxid of hydrogen. . . . Altho this experimenter shows that the effect is capable of traversing a number of solid and liquid bodies, he does not admit the existence of a true radiation, but asserts that the phenomenon depends on the progressive formation of peroxid, due to water or camphor contained in these bodies.

"Nevertheless, many facts seem to contradict this interpretation. In the first place, a transmission is observed in the case of very thin layers of metal. Again, the effect in question is not diminished when the surrounding vapors are removed as much as possible, by means of a current of air. So M. L. Graetz, in an article published in the *Physikalische Zeitschrift*, makes the hypothesis that this blackening is due to an emission of particles of unknown nature.

"The author notes a similar phenomenon which is very striking. When, in absolute darkness, a photographic plate is exposed to the action of hydrogen peroxid, by placing the sensitized face several centimeters above the liquid, and there is placed on the opposite side of the plate a metallic object of some marked form, such as a copper cross, the plate will present, after development, the image of the metal object, altho this is not in the path of the rays—a bright image on a dark ground. This 'retrograde' image is observed even when we interpose certain other bodies between the metal and the plate. Liquids, for example, instead of preventing these phenomena, sometimes strengthen them; we must thus attribute to them a specific action, characteristic of each. In a general way, these phenomena are accentuated when a chemical reaction occurs between the metal and the interposed liquid. The author has succeeded in this way in registering automatically chemical reactions by means of a photographic process.

"The smallest differences of temperature would seem to affect these images, the warmest part of the plate taking a lighter tint than those where the temperature is lower. These images therefore furnish an extremely sensitive indication of the thermal state of the plate.

"The author is not able to point out the seat of these pheno-

mena. All that he can say is that they are not due to the direct action of the vapors of hydrogen peroxid, oxygen, or ozone, not to the effect of negative ions."—*Translation made for* THE LITERARY DIGEST.

DO FORESTS REGULATE THE FLOW OF RIVERS?

IT has long been a favorite argument with those who are trying to prevent the total destruction of our forests that the floods on our great rivers are chiefly or largely due to the removal of trees in swampy regions where the streams rise. The idea has been that spongy or swampy land shaded by trees holds the water and prevents it from running off too quickly. This idea is now pronounced a fallacy by *Engineering News*. Says this paper, editorially:

"We heartily favor the extension of forest culture and forest preservation, but every claim that such work can solve the problem of flood prevention does harm, since it creates opposition to plans for treating the broad subject of river regulation on sound engineering lines.

"Briefly stated, the fact is that forests do not increase rainfall, and while they distribute the run-off from a given area over a somewhat longer period than would be occupied if the same area were clear land, this conservation of the flow is chiefly of importance in increasing the low-water flow and not in diminishing flood heights. Further, this effect is of practical importance only on small streams. In the case of large rivers it is too trivial to be noticeable. This is not mere theory, but actual fact, established by multitudes of observations. The floods of the Ohio and the Mississippi appear from historical records to have been as great when the forests on their head-waters were practically untouched by the ax as they are at the present day. It is true that the recorded flood heights of the lower Mississippi have increased with each great flood for several years; but this is due to the fact that the river is now confined to its channel by levees instead of being permitted to spread over the entire width of the bottom lands.

"In New York, recently, a movement has been started to establish a scientific system of river regulation under control of the State. In the report of the State Water-Storage and Flood-Prevention Commission, made up of eminent engineers, it was stated that no work which the State could undertake would be productive of such enormous benefits. Yet the movement in the present legislature to continue the work of the commission has met with great opposition from men whose chief plea has been that the proper remedy for flood prevention was restoration of the forests. It is fortunate, indeed, that this is not the case, for, if it were, the floods in our watercourses would have to continue their annual devastation unchecked. It would be out of the question to take great areas of land from productive agriculture and devote it to forestry.

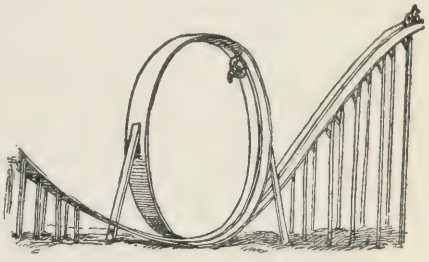
"The fact is that the work of river regulation, while it is a field of which the public knows nothing, is no new field to the engineer. In the thickly settled countries of Europe, where every scrap of land has a value, it was long ago found necessary to protect the lands along the water-courses from injury by floods or erosion, and this not merely through towns and cities, but along the entire course of the stream. In this country only a small beginning has been made in this direction; but it is certain to become an important field of work for the engineer."

The Images that Precede Sleep.—The images that sometimes appear before the eyes at the moment when one is going to sleep have recently been studied by M. Delage, a French psychologist, who names them "hypnagogic images." Says *La Nature* in describing his observations:

"These images are seen to form themselves very clearly at the moment before sleep when the consciousness of perceptions is still distinct. They appear with perfect definition, isolated on a dark background. They must be distinguished from hallucination, for the subject is conscious of the subjective character of the image. M. Delage observes that hypnagogic images have not been studied by the philosophers, whence have arisen contradictory ideas of their nature. Some have regarded them as formed on the retina, others as formed in the mind. Now, as M. Delage observes, retinal images are characterized by the fact that they move when the eye is displaced. He has observed hypnagogic images and has proved that they follow the movement of the eyes; therefore they must be retinal. When they have disappeared, they have a retinal substratum called the autoptric glimmer. This glimmer appears when one shuts the eyes in darkness; it forms colored patches that change place and are of indefinite form. At the moment of sleep the nervous images susceptible of appearance in dreams have their seat in the cerebrum; then the glimmers pass away. They blend with the brain images and serve to exteriorize them."—*Translation made for* THE LITERARY DIGEST.

"LOOPING THE LOOP."

THAT this practical illustration of centrifugal force is by no means new is shown by a writer in *Cosmos* (Paris, March 28). The feat, as performed on a bicycle by an American, has been making quite a sensation in Paris, and the author of the article above mentioned calls attention to the fact that America is responsible only for the cycling part of the feat; as performed in a car running on rails it is more than half a century old. Says the writer:

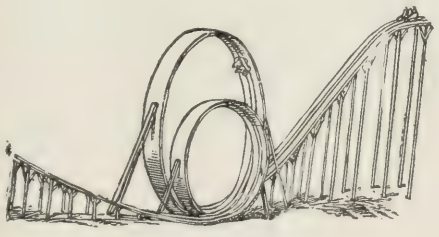


LOOPING THE LOOP ON A BICYCLE.

"The only thing specially new is the use of the bicycle in this sport, which makes it, to be sure, a very reckless one; but the same thing in a small wagon has been done numerous times during the last half-century—about 1850, at the Paris Hippodrome, and then at the Barrière de l'Étoile, near the Arch of Triumph, to the great joy of the children, and also of their parents.

"At this period the game was also in the fashion, and it seems impossible that it should have been so completely forgotten; it had sufficient popularity to serve as the model for a toy that was to be found on the shelves of all self-respecting dealers.

"We are told that this sport originated even earlier, about 1846, at Havre, with a M. Clavière, who had calculated all its elements. The inclined plane, starting from a high platform, forming a loop at the bottom of its course, and then rising to a second platform less elevated than the starting-point, was provided with side-pieces to guide the wheels of a small car, which, left to itself, made the journey, obeying the laws of gravity and of centrifugal force. At first it carried only bags of sand. Later an amateur was found, and at Havre, as at Paris, the traveler was seen to go over the course head downward.



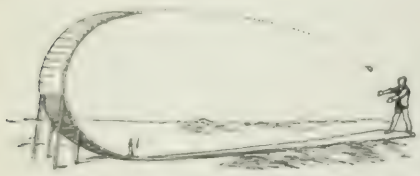
A TOY LOOP THE LOOP.

"The sport has been resuscitated in the United States, and has had great success: not only professionals made the trip, but also the public, even women, who are always on the lookout for new sensations. As a matter of fact, nothing is less dangerous than this exercise; if things are arranged so that the car can not be derailed, it would be impossible to fall even if one wished to do so. At the critical moment, the centrifugal force fixes the passengers to their seats with more energy than gravity usually does.

"In fact, the sport finally became apparently somewhat monotonous and to give it more spice another loop was added to the first.

It is asserted that there are now courses containing three of them in succession. In this case the loops must be smaller and smaller as the car goes on.

"It must be seen that nothing is easier than to make a trip on a track of this kind—but some hardihood is required to make one on a bicycle. Then there is no guide possible . . . a simple black mark in the middle of the path indicates the road, and it is the rider's business not to swerve from it, no matter what his speed and what his position — inclined or completely reversed. . . . To amateurs before indulging in this sport a word of caution may be given; they should not forget that it is necessary to have an average speed of 60 kilometers [37 miles] an hour, and perhaps of 100 [62 miles] at the critical point of the descent.



RETURN BALL BOWLING.

"For timid folk there is a less brilliant but more reasonable method of utilizing centrifugal force—the game of return-ball bowling.

"The extremity of the alley in this game is turned back in an appropriate curve. Only one pin is used. If the bowler overturns it, the movement of the ball is checked; if he misses it, the ball keeps on, follows the terminal semi-loop, leaves it at a tangent, describes a parabola, and falls at the feet of the player or into his hands. Or it may hit him in the face if he shows as much lack of skill at the return of his projectile as in its delivery." —*Translation made for* THE LITERARY DIGEST.

HARMFUL DRUGS IN PROPRIETARY MEDICINES.

THAT many widely advertised and generally used medicines depend largely for their action on morphin and similar drugs is charged by Dr. J. B. Mattison, of Brooklyn, N. Y., in *The Medical News* (April 4). Dr. Mattison warns us against what he asserts is "the danger involved in the lawless sale—lawless because not safeguarded by law—of the many nostrums in which morphin and cocain play the largest part for harm." He goes on to say:

"As a nation largely neurotic—both ancestral and acquired—we offer an inviting field to venders of such wares, who ply their trade with a vigor worthy a better cause, and with result of which we must make note if we would conserve the best interest of many whose well-being is given to our care. It goes without saying that the larger, by far, number of the many nostrums—nervines, antineuralgic pills, powders, tablets, and liquids—so much heralded and lauded for relief of pain and nervous unrest, have morphin as their active part. And this 'part' in some is not small. In one, largely advertised, there is one-eighth grain in each teaspoonful. The risk of morphinism, in certain persons, from that amount is large; in fact, a smaller, in a highly nervous patient, on whom it acts kindly, will create the disease. A ten-years' case of morphinism, under my care, seven years ago, had its rise in a one-sixteenth grain daily dose.

"Even larger risk of inebriety obtains in using the various nostrums containing cocain, so much lauded for the relief of coryza and other nasal ills. In the form of catarrh snuffs and solutions, its power for harm is far greater than when taken by mouth; in fact it ranks almost—or quite—with its subdermic effect, by virtue of the highly absorptive nasal mucous membrane, and its nearness to the brain, making its seductive power and ill effect on mental health specially prompt and pernicious. One of these nostrums contains 1⅞ per cent. cocain—two per cent. is the strength often used for anesthesia—and any 'cure' having that amount is dangerous. Insanity is certain, if its use be continued."

Dr. Mattison tells us that the abuse of cocain arising from its use in colds or catarrh is very common, and that many wrecks are the result. He concludes:

"Such the situation. What the need? This:

"An act making it illegal to sell morphin or cocain except per prescription, and the prescription not to be refilled, save by order of attending physician.

"A law compelling the maker of every nostrum to print the formula on wrapper, and those containing morphin or cocain, the amount of the drug in each dose. America is behind the times as to what could and should be done to avert this ill. The American Association for the Cure of Inebriety can, and it is to be hoped will, make earnest effort along this line, and so effectively safeguard one phase of the public weal."

HOW DOES ELECTRICITY KILL?

THAT electric currents of high and low tension cause death in a different manner would appear from a recent report made by Dr. F. Battelli, of the University of Geneva, upon the nature of the effects which cause death from electric shock. Says *The Electrical Review*, in an abstract of an article from *The Mechanical Engineer* (London):

"Currents at a pressure of about 12,000 volts or more kill by inhibition of the nerve-centers and arrested respiration. The heart continues to beat with energy, and is only arrested by asphyxia, causing great arterial pressure. In such cases the animal may, in general, be restored by artificial respiration. On the other hand, currents of low tension, not exceeding 120 volts, and passing from the head to the feet, kill by producing paralysis of the heart, and the animal continues to breathe for some time after becoming unconscious. These low-tension currents apparently stop the heart by causing irregular contractions, thus disturbing its rhythm. Dr. Battelli and Professor Prevost have made the discovery that high-tension currents are capable of restoring the action of a heart that has been arrested by a low-tension current; but as the application, to be successful, must be made not more than fifteen or twenty seconds after the arrest of the heart's action, it is hardly likely to prove valuable as a practical restorative. The path traversed by the current in passing through the body is a matter of great importance. The most dangerous is from one hand to the other, because the resistance of this path is low, and because the current passes near the heart. Hence it is a good rule for workmen and others handling live conductors to use but one hand. An important rule to observe in rescuing a person in contact with a live wire, and when it is impossible to cut off the current, is to push the victim off with one foot. Even should the current pass from one foot to the other through the rescuer, the resistance of the path is considerable, and as the current does not pass near the heart serious injury is not likely to result."

SCIENCE BREVITIES.

"IT has been suggested," says *Engineering*, "that the energy evolved by radium is merely picked up by it from the space surrounding the salt, and transformed into the heat observed. This, however, does not seem probable, tho we note that it has the support of Sir William Crookes, since such a transformation would appear to involve a contradiction of the well-established principle of the degradation of energy. So far as is known, the only stores of energy available for such a purpose are of the low-grade type, which would have to be converted into high-grade energy to give rise to the observed phenomenon; and, so far as is known, every transformation of energy naturally occurring takes place in the opposite direction to this."

"THERE has never been a time," says an editorial writer in *The Medical News*, "when the overproduction of the masses did not threaten to overwhelm the classes, and when the philosophers did not grieve that those who were most competent to lead the race were not the foremost to reproduce their own kind. And yet, in spite of ominous predictions, society has risen to successive heights of civilization. The law that governs the rise of nations is like the law of convection currents. As new molecules are constantly carried up to the energized point of steam, so are the ranks of climbers in the world of men continually rising to positions of power. Those who have reached the top do more than merely reproduce their kind. They transmit their energy, and it is thus that they truly reproduce themselves. What tho college graduates do not replace themselves in their universities by their own sons! They have filled their places a hundred times by their influence, their teaching, and their vitalized energy."

THE RELIGIOUS WORLD.

SOME ASPECTS OF MORMONISM.

IN cases where prejudices are involved, it is difficult to justly estimate the qualities of an alien people. The contact of the average Gentile with the Mormons is such as to emphasize the dark side of their influence, and to depreciate the remarkable character of their achievements. So at least thinks Prof. Richard T. Ely, of the University of Wisconsin, who contributes to *Harper's Monthly* (April) an account of some social and religious aspects of Mormonism. He points out that this despised religion already claims the allegiance of upward of four hundred thousand people, and that in seventy years the Mormons have transformed what was apparently a desert waste into a fertile and fruitful country. He says further:

"We find in Mormonism, to a larger degree than I have ever seen in any other body of people, an illustration of the individual who is willing to sacrifice himself for the whole, and it is a religious sanction which impels him to do so. On the other hand, the interests of the future are ever held in mind, and to them the present is subordinated, the final goal being the millennium, and the setting up of the kingdom of the Lord in Jackson County, Missouri; for it is there that the great restoration is to take place.

"So far as I can judge from what I have seen, the organization of the Mormons is the most nearly perfect piece of social mechanism with which I have ever, in any way, come in contact, excepting alone the German army. The Mormons, indeed, speak of their whole social organization as an army, the reserve being those at home, and the fighting force being the missionaries in the field. We have faith, authority, obedience, operating through this marvelous social mechanism and touching life at all points, inasmuch as the Mormon creed recognizes no interest as external to the church, and regards church and state as actually one."

So closely bound together, indeed, is the religious and economic life of the Mormons that work under the guidance of the church is considered a religious act, and Mormon leaders have never hesitated to summon their followers to purely social duties. Says Professor Ely:

"Brigham Young, acting always under the guidance of the Lord, as he claimed, directed in detail works calculated to convey a common benefit. On Sunday, preaching in any settlement, such as Provo, for example, he might say, 'To-morrow I want one hundred men and fifty teams to meet and work on the irrigating-ditch.' Or the forces might be rallied for the construction of a road into a canyon of the mountains. Generally, but not always, an account was kept of the work of each one, and if it was for an irrigating-ditch he was given a corresponding interest in the ditch. But the water was connected with the land, and the ditches were owned by the farmers. They were cooperative undertakings which were part and parcel of agriculture."

Even to-day the Mormon Church dominates commercial life in Utah. One of the largest concerns in Salt Lake City is entitled "Zion's Cooperative Mercantile Institution," and its motto is: "Holiness unto the Lord." The church has many financial interests, and the president of the church is, as such, president of many important corporations, which serve to a greater or less extent the interest of the general cause. Professor Ely continues:

"It is also true that, even at the present time, industry and thrift are inculcated as cardinal duties. This holds generally. A Wyoming teacher says: 'I have never seen either a lazy Mormon or one who is considered a pauper. To be engaged in productive industry, however humble, is a cardinal principle of Mormonism. Since early marriages and large families are the rule in that locality [Wyoming], the majority of Mormon families are poor. In many cases the mother, or mothers, and older children help earn the living, while still smaller children attend to the household duties and care for the babies. The church makes it the duty of parents to see that the children learn a trade. Tho habits of industry are instilled by precept and example, the wise admonition of the church is often neglected.'

"What is asserted by this teacher finds confirmation in their hymns—and it may be observed that in studying any strange people it is always well to examine their songs as self-revealing expressions of the inner life. In the Latter-Day Saints' Sunday-school hymn-book we find, for example, the hymn 'The Bees of Deseret,' in which diligence is praised, the chorus reading as follows:

> Workers are we: no idlers here
> Shall live among our busy, happy band;
> We gather honey all the year,
> And plenty can be found on every hand.

"Nevertheless, the experience of the teacher quoted was exceptional, and can not be regarded as a safe generalization based on wide observation."

Professor Ely takes an optimistic view of the solution of the Mormon marriage problem. He writes on this point:

"Every one who has been in Utah and the surrounding country knows that polygamy is still practised, and that practically no effort is made to conceal it. On the other hand, it is certain that very few new polygamous marriages are contracted in the larger centers. It is asserted, however, by the Gentiles, that in Mormon settlements thirty or forty miles away from the railway, plural marriages are still contracted. Moreover, no Mormon claims that the views of the church respecting the righteousness of polygamy have changed. It would seem probable, however, that as time goes on, and as a generation of people grow up under the influences of monogamy, the actual forces in the church against plural marriages will be so strong as in themselves to prevent their reintroduction."

AN ORGANIZATION DEVOTED TO "PRACTICAL" CHRISTIANITY.

THE Young Men's Christian Association is pronounced by a recent observer "the strongest, largest manifestation of enlightened, practical, strenuous Christianity in the United States, and probably in the world." An organization whose sole business is to make men better, and which has, according to its last report, property worth $30,000,000 and a membership of 300,000 young men and boys, certainly deserves investigation. Mr. Raymond Stevens, a writer in *The World's Work* (April), gives a most interesting account of the activities of the Young Men's Christian Association in a single city, Greater New York. We summarize as follows:

The West Side branch has one of the best equipped buildings in the city, and a membership of more than 3,500. About 1,500 are not church-members, and of the rest one-half are Roman Catholics. Twelve hundred men belong to the physical department and take regular exercise. Besides the usual class-work, boxing, wrestling, and fencing are taught. Last year 111 entertainments and lectures were given with a total attendance of 21,000, also 210 religious meetings with an attendance of 30,000. Such eminent churchmen and laymen as Dr. Lyman Abbott, Dr. Rainsford, Jacob Riis, and Col. Leonard Wood were among the speakers. Some of the Sunday meetings in Carnegie Hall were the largest meetings for men alone ever held in New York city. The Association runs a free employment bureau. The West Side, the Bowery, and the Twenty-third Street branches last year secured 3,766 situations.

The Twenty-third Street branch not long ago opened a successful day-school which will probably be imitated in other branches. It has nearly one hundred students, and is really a thorough business college open to members at a merely nominal cost—for $3.50 is about the average fee for all Association courses.

The Brooklyn Naval Building, opened last May through the generosity of Miss Helen Gould, is probably the finest inexpensive club in the world. Besides the usual facilities, it has a rifle range, pool- and billiard-tables, a barber-shop, a camera-room,

and a large number of storage-lockers. The sailors pay a large part of the running expenses themselves, and they do not have religion thrust upon them. The men seen about the Naval Building are older, hardier, and, if rougher, also more virile than the usual Young Men's Christian Association man. They look as if they could fight better than they could pray. The religious work is mostly done by individual efforts, rather than by general exhortation. Any sailor may become a member, irrespective of religion or lack of it. Moreover, the building with all its advantages is open to any enlisted man, whether a member or not.

"The railroad branches in New York do little educational and religious work, as the members are practically all transients. The men who drop into the buildings for a few minutes' loaf, or a dinner, or for a bath and a sleep, represent the rank and file of railroad men, and not the few religiously inclined. From sixty to seventy-five per cent. of the men available join. More than half are Roman Catholics. "We don't preach men away," said a railroad branch secretary. "There have been Young Men's Christian Associations that ran their religious work so far into the ground that not only the Catholics but every self-respecting man got out. But here I never knew a man to keep away on account of the religious part. Two left because we were 'too worldly.' We have many earnest Christians, and we do our best work quietly and by personal touch."

Recently the Young Men's Christian Association has begun to establish what are known as industrial branches. Says Mr. Stevens:

"There are five industrial branches now actually running: one in the iron mills at Lorain, Ohio; one at Stamps, Ark., in a lumber-mill; one at Atlanta, Ga., also in a lumber-mill; one at Wilmerding, Pa., in the Westinghouse Electric Works, and one at Proctor, Vt., for the marble-workers. Here 217 men joined the first week without solicitation; and a night-class contains forty Hungarians. Since January 1 the committee in charge of the industrial department has received applications either from the men or the employers in fourteen plants, some the largest in the country, representing eight industries. The Association secretary or agent goes directly to the men, and if he can get enough to agree to form a branch to insure its success from the point of view of numbers, he raises what money he can from the men before he calls on the company to subscribe. In this field lies perhaps the greatest opportunity of the Young Men's Christian Association, and it has begun vigorously to cultivate it."

The Outlook chronicles in a recent issue the growth and present prosperity of the Chicago Young Men's Christian Association:

"The Chicago Association has nearly 4,900 members, who paid for their dues and privileges last year over $72,000—certainly an important sum. Less than one-third of the entire membership represents Protestant Church affiliation. The Chicago Association occupies a thirteen-story building valued at $1,600,000, the rental from which helps to support the organization. Over two thousand young men go to the building daily, seven hundred of these visiting the gymnasium and natatorium. Over seventeen hundred students were taught last year in the evening-school. In the summer one of the finest athletic fields about Chicago is conducted by the Association; its athletes take rank with the best in the country, and stand for honorable amateur athletics. The noon prayer-meeting, established by the late D. L. Moody when president of the Chicago Association, averages over fifty men throughout the year, and has not omitted its daily service for over forty years. Last year, out of over twenty-five hundred men applying for employment, nearly a thousand situations were found through the Association bureau. While the Chicago Association is the largest in the world, it does not limit its influence to its membership. Fully twice the number of its members attend its social gatherings, thus being influenced in a practical and helpful way toward proper manhood and citizenship."

The same paper goes on to comment:

"Whether in Mexico or Chicago or Shanghai, the work of the Young Men's Christian Association has changed in character from its somewhat pietistic attitude of three and four decades ago to a broader, wiser, more practical and rational plan. The work of the Young Men's Christian Association as its exists to-day inculcates a spirit of manly Christianity in all departments of life."

WHAT ASSYRIOLOGY HAS DONE FOR THE BIBLE.

THE views of the radical wing of the modern school of Assyriology, as voiced by Delitzsch, have such a revolutionary appearance to all who hold the traditional views of the Scriptures, that it is something of a surprise to be assured by so excellent an authority as Professor Kittel, of Leipsic, the present occupant of the chair held by the elder Delitzsch, that the Biblical basis has been vastly strengthened, not weakened, by the excavations in the Tigris and Euphrates valleys. This he does in a pamphlet entitled "Die Babylonischen Ausgrabungen und die Biblische Urgeschichte," which, in the great flood of literature on the Babel-Bibel problem, is one of the few contributions to the discussion that has attracted the marked attention of both sides, and promises to have permanent value. We quote from this pamphlet the following views and statements of fact:

In the light of the lessons of history, there need be no fear but that the eventual outcome of the Assyriological and Babylonian finds will add to the dignity and claims of the Scriptures. A little more than a generation ago it was regarded as the essence of critical and historical wisdom to discredit the story of the siege and even of the existence of Troy. When a plain layman, Schliemann, undertook with spade and pick to hunt for the evidence of the historical character of Homer's epic, he was ridiculed most thoroughly by the official representatives of classical lore. But the overwhelming evidence unearthed by Schliemann turned this ridicule into warm commendation.

Again, it was at that time almost an axiom among philologists that there was no such historical character as Minos. Now the palace and throne of that great king have been unearthed in Crete. Even King Midas, of Phrygia, was declared to be a myth; now the Assyrian inscriptions have told us that he was one of the great kings of the eighth pre-Christian century. Everywhere and in every direction the darkness of earliest Greek history has been lifted, and the same is becoming true of the Orient.

The evidences that the excavations in Bible lands have brought forth already justify the expectation that the skilfully reconstructed subjective history of Israel, as taught by the modern school, will have to be in all of its essentials unlearned again. Some years ago the great Ewald uttered the pronunciamento that the names of the patriarchs were not those of historical characters, but of certain tribes, and that the story of the patriarchs was the later history of later generations projected into the earlier ages. Indeed, none of the earlier records of the Old Testament were regarded as historically reliable, since the evidence for the existence of writing at so early an age could not be furnished. The fact that in the days of the Judges and of Saul (which were regarded as the earliest "historical" period in Israel) the civilization and religion of Israel were at a low ebb, was regarded as conclusive evidence that before that period there could not have been a higher state of culture. These are substantially the views of the advanced school at the present day. Now comes the spade of the Assyriologist and brings to the light of day data that stand in bold contrast to these conclusions. The search for evidence of a low state of culture in the earliest period has been in vain; the very opposite was the case. Whatever the excavator finds shows a higher and higher condition in this respect. From the earliest pre-Semitic period of Babylon we possess Sumarian finds of exceptional beauty, dating back to the fourth pre-Christian millennium. Hilprecht has found two bronze gazelle heads from this time that will compare favorably with the best productions of modern art. The later period of Babylonian civilization never attained to the state of the earliest in this regard.

All this shows that the hypothesis as to the crude civilization of earliest Israel can not be maintained in the light of historical parallels. The age of the Judges was evidently a period of decay and was preceded by one of higher and deeper culture, as is depicted in the Old Testament. This is further evidenced by

the Tel-el-Amarna tablets, that prove the existence of literature and a high degree of culture in Palestine and the surrounding countries as early as 1400 B.C. In the light of these facts, it would be remarkable, not if Israel had a literature as early as the days of Moses, but if it had not had.

Even in smaller details, the cuneiform finds confirm the older statements of the Scriptures. The wedging in of smaller nomadic tribes into old civilized districts is now known to have been of frequent occurrence, and the story of the patriarchs to whom these things are ascribed is accordingly in harmony with historical parallels. Indeed, in so far as actual facts have been gleaned from these diggings, these have only helped and not harmed genuine Biblical research.—*Translation made for* THE LITERARY DIGEST.

ROMAN CATHOLIC TENDENCIES IN THE AMERICAN EPISCOPAL CHURCH.

THE ritualistic crisis in England, which we chronicled in these pages last week, is mirrored in several significant tendencies in this country. A few days ago it was announced from Boston that the Rev. Samuel Macpherson, a ritualist rector in that city, had left the Protestant ministry and received conditional baptism into the Roman Catholic Church. During the Lenten season the "Fathers of the Holy Cross," with the Rev. J. O. S. Huntington, son of the bishop of Central New York, as superior, have been conducting a mission in New York city on lines similar to those followed by the Roman Catholic Paulist and Jesuit missionaries. A new "Roman" party in the Episcopal Church is also making its influence felt, and publishes a monthly organ, *The Lamp*, at Garrison-on-Hudson, N. Y. This last-named paper is edited by the Rev. Spencer Jones, author of "England and the Holy See," and is frankly committed to a policy of "reunion" with Rome. Mr. Jones takes the view that there are four parties in the Anglican Church, viz., "An Anglo-Catholic party, a school of Protestant Evangelicalism, a school of Rationalism, and, in more recent times, a Roman school." This "Roman" school is the one to which *The Lamp* gives allegiance, and its position is stated in an editorial entitled "Who is the Author of Division?" We quote as follows

REV. W. L. ROBBINS, OF ALBANY,
The new Dean of the Episcopal General Theological Seminary.
Courtesy of *The Churchman*.

"Protestants who glory in their sectarian divisions, yes, and Anglicans who glory in their separation from the Apostolic See, glory in their shame! . . . Wherein lies the remedy save to acknowledge the error our fathers made four hundred years ago and by concerted action to take the necessary measures which will in due time heal our schisms and make us Catholics indeed by reconciling us to the Universal Father of Christendom and reuniting us with the Holy Roman Church, the Mother and Mistress of all churches, in which resides the seat of supreme authority, the center of Catholic unity, the Chair of the Blessed Apostle Peter, to whom our Lord said: 'Thou art Peter, and on this rock I will build my church, and the gates of hell shall not prevail against it.' . . . . . .

"The *Terminus ad Quem* of the Oxford Movement seems to us to be by logical and divine necessity the resubmission of the English church to the supreme authority of the Holy See, and God's way of accomplishing this is to multiply the Catholics within the Anglican fold until they fully 'possess the sanctuary' and are able to redeliver the keys of the kingdom wrested by force from him into the hands of St. Peter, to whom our Lord originally gave them."

With the same issue of *The Lamp* is given a "Rosary League Leaflet," telling "how to say the rosary," and suggesting the following prayers:

"I salute thee, Holy Mary, Daughter of God the Father, and entreat thee to obtain for us a devotion like thine own to the most sweet Will of God.

"Holy Mary, Mother of God, pray for us sinners now and at the hour of our death. Amen.

"I salute thee, Virgin Mother of God the Son, and entreat thee to obtain for us such union with the Sacred Heart of Jesus that our own hearts may burn with love of God and an ardent zeal for the conversion of souls. Hail Mary, etc.

"I salute thee, Immaculate Spouse of God the Holy Ghost, and entreat thee to obtain for us such yielding of ourselves to the Blessed Spirit that we may never grieve Him in thought, word, or deed, but in all things He may direct and rule our hearts. Hail Mary, etc."

A correspondent of the New York *Sun* writes of the new movement:

"This Roman party is no insignificant or negligible quantity, but is fast growing in adherents all over the world. The previous number of *The Lamp* had contributions not only from this country but from well-known Anglican clergy in England and even in Japan. The Rev. Arthur Lloyd, of Tokyo, tells us that to emphasize his belief in the necessity of a return to union with the Holy See he has begun to pay Peter's Pence, sending his annual contribution to Rome like a good Catholic." [Since this statement was made, a cable has been sent by the Protestant Episcopal Board of Missions in this country to the bishop of Tokyo, demanding an "immediate investigation" of Mr. Lloyd's case. The result is that the clergyman in question has resigned his position as president of St. Paul's College, Tokyo.—Editor of THE LITERARY DIGEST.]

The New York *Sun* says editorially:

"Undoubtedly, this revolution, so openly proceeding with a view to 'resubmission to the Holy See,' engages the outspoken support of only a very small part of the ritualists, but, probably, of secret favor it has more. . . . . .

"The end the 'Roman' party is working for is nothing short of the destruction of the Anglican church as a separate organization and its complete absorption in the Church of Rome."

The Milwaukee *Living Church*, the recognized High-Church organ, has recently shown, by a comparison of the growth of the church in the Middle West with that in Virginia, Maryland, and Pennsylvania, that "where the Oxford Movement has been most in evidence, the gain is largest." Taking up a statement made by Dr. McConnell, of New York, that the alleged decadence of the church must be attributed in part to the Oxford Movement, it says:

"As a matter of fact, the extreme school humorously calling itself 'Broad,' is continually repelling weak people from the church. To our certain knowledge the most recent instance of perversion of one of our clergy to Rome was directly caused by the state of apparent anarchy in the church, wherein the Fremantle incident, the Hale incident, and the Rainsford episode followed each other in quick succession. It was the feeling that all this showed the Anglican communion to have no settled basis of faith that would certainly be maintained, that had its disastrous effect on one mind. The perversion by reason of all that was a weak act; it was a cowardly act, for where the fight is fiercest, there the good soldier remains, and from it only the coward flees; it was an illogical act, for the whole church has repeatedly been overrun with heresy in her past history and has recovered; but for all that, it was an act for which gentlemen of

the school defended by Dr. McConnell, who has never yet met the moral issue that was shown to be involved in the writings and actions of the school he defended, are responsible. Contrast with that the item printed under the diocesan head of Fond du Lac in this issue, wherein a whole community of Romanists is shown to have been received into the American church, and to have been placed by Bishop Grafton under the charge of a priest he had recently received from Rome, and one can easily see whether the charge against the Oxford Movement made by Dr. McConnell is true."

In view of the controversies dividing the Episcopal camp, more than usual significance has been attached to the election of the new dean of the Episcopal General Theological Seminary, New York. This important position was made vacant by the death of Dean Hoffman, and it was expected that the ritualists would endeavor to name his successor. The choice has fallen, however, on the Rev. Wilford Lash Robbins, dean of All Saints Cathedral, Albany, and his election is regarded as "a victory for stanch churchmanship, and not a victory for the radicals of either side."

DEARTH IN GERMANY OF STUDENTS FOR THE MINISTRY.

DURING the last year or so, the decreased attendance in the leading theological seminaries of this country has caused considerable perturbation in church circles over what was termed a coming dearth of ministers. Now the same cry of apprehension, only more emphatic, comes from "the land of authors and thinkers." In Germany, the decrease in the theological departments has been so marked that it is now most seriously discussed. Dr. E. Petersilie, one of the most famous statisticians of the country, has published in the *Statistisches Bureau*, of Prussia (p. 53 *seq.*), statistics and comments on the problems that are of special interest. We quote from this source:

A survey of the enrolment of theological students in the various German universities from the year 1831 to 1901 shows not only that relatively the contingent is smaller now than it has been for seventy years, but also that there has been almost an absolute decrease. In 1830 the total was 4,267; in 1850 it had decreased to 1,614; in 1866 it rose again to 2,550; ten years later still it diminished to 1,827; and in 1876 reached the lowest water-mark, namely, 1,503. Then there followed a rapid increase, and in 1888 the number was 4,793, which was followed by a decrease to 3,562 in 1893, and this decrease has continued steadily to the present time, when it is 2,149. In reality this decrease has been greater than surface indications would suggest, for the population of the country has rapidly grown and nearly doubled since 1830. The actual proportions can probably be seen by remembering that in 1830 the theological students constituted 30 per cent. of the whole student body; in 1885 it was 16.4 per cent.; in 1899 it was 7.2 per cent.; and at present it is only 5.9 per cent. Or, to express these facts in another form, the thirty million Germans in 1830 sent 4,267 students to study theology; the forty-one millions of 1870 sent 1,827; the forty-eight millions of 1888 sent 4,793; and the fifty-five millions of to-day send only 2,352.

The rôle played by the various universities in this phenomenal change is another interesting matter. Halle, which with a contingent of 337 still leads in attendance of theological students, was also at the head of the list in 1830 with 826, or 70 per cent. of the whole student body. Berlin through all these years has kept about the same number proportionally, some 9 per cent. of all the enrolment. The most marked progress is reported from Greifswald, which until the present term enrolled 22 per cent. of its students in theology. Similarly the two universities of Tübingen and Erlangen have retained a good percentage of men in the theological departments. All of these have conservative faculties. The heaviest losses have been in the liberal faculties, notably Heidelberg, Giessen, and Jena. Heidelberg for a period of three semesters had only nine theologians, and in Jena there has been a decrease from 297 in 1830 to 37 in the present term.

What has caused these remarkable changes? The first decrease, in 1831, was no doubt owing to the emancipation of the teaching profession from theology, and that which set in about 1848 is to be attributed to the growth of liberal and advanced theological thought at that time. The sudden advance in 1880 is no doubt to be attributed to the increase in salary that the Government granted the pastors, and also to the reaction against materialism and Social-Democracy, and the growth of positive views on religious matters. This conservative reaction was not, however, deep or continuous, and accordingly a third retrogression set in, which continues to the present day. Doubtless this is largely owing to the estrangement of the thinking classes from the church and Christianity. Then, too, there is no longer so great a need of pastors: the population is adjusting itself to new commercial and industrial conditions and is flocking to the centers of population, and can be served by fewer spiritual leaders. Not to be forgotten is the further fact that modern Germany offers so many more remunerative positions in callings other than the ministry, that young men who under other circumstances would study theology now enter upon other pursuits. Professor Baumgarten, in an article in the *Chronik*, emphasizes the fact that the intellectual demands now made on the ministry are so great that many otherwise inclined shrink from entering upon the long course of preparation. The quality of the modern theologian is seemingly superior to that found in other faculties. Fully 38.55 per cent. are sons of university men, which is a larger per cent. than in any other faculty.—*Translation made for* THE LITERARY DIGEST.

The Growth of Islam.—Correspondence from India that appears in the London *Spectator* furnishes surprising information on the growth of Mohammedanism. The figures given are as follows.

Between the years 1891 and 1901 the number of Mohammedans in British India increased from 57⅓ millions to 62½ millions. In the same period the Buddhists have grown from 7,131,000 to 9,476,000. A decrease is reported in the heathen population from 207,731,000 to 207,146,000. It must be remembered that Islam is not a native, but a foreign religion in India. During this same decade the Christian population has grown to 2,923,241, an increase of 638,861, which is proportionally a good showing; but it must not be forgotten that much money and vast energies are enlisted in the propagation of Christianity, while Mohammedanism lacks these auxiliaries. The Christian population in India is quite fluctuating, but it is within bounds to say that in British India, including Europeans, it does not yet number three millions, while the Moslem contingent has increased in twenty years by twelve million souls.

The *Christliche Welt* (Leipsic, No. 10), in commenting on these facts, says that the comparatively small demands made on converts by the Mohammedans will go a great way to explain why Christianity has not kept equal pace with its Moslem competitor.

These figures do not altogether agree with those furnished by Mission Director H. Zeller, a good authority, in the *Allgemeine Missionszeitschrift*. After stating that the world's population is now 1,544,510,000, of whom 534,140,000 are Christians, 10,860,000 are Jews, 175,290,000 are Mohammedans, and 823,420,000 heathens (among whom he includes 300,000,000 adherents of Confucius), he adds: "It can be stated as a certainty that Christianity is growing much more rapidly than any other religion."—*Translation made for* THE LITERARY DIGEST.

RELIGIOUS NOTES.

REV. WILLIAM H. MILBURN, D.D., chaplain of the United States Senate since 1871, died at Santa Barbara, Cal., on April 10. He was known as the "blind chaplain," having met with an accident in boyhood which completely destroyed his sight.

At the Palm Sunday service in the Cathedral at Havana an Encyclical from the Pope was read bearing on religious conditions in Cuba. According to the provisions of the Encyclical, Cuba is to be divided into four instead of two dioceses, the new ones to be known as the dioceses of Pinar del Rio and Cienfuegos. Santiago will remain the principal see, to which will be subject the dioceses of Havana, Pinar del Rio, and Cienfuegos. Porto Rico is severed from the see of Santiago and becomes immediately subject to Rome for the present. The Encyclical concludes: "Let everybody in sacred orders wholly abstain from interference in political matters. No man being a soldier of God entangleth himself in secular business."

FOREIGN TOPICS.

PROGRESS OF THE ELECTORAL CAMPAIGN IN GERMANY.

QUITE a flurry was occasioned among German party leaders by rumors that the coming Reichstag elections would be held in May. However, the date has now officially been fixed for June 16 next. An important announcement is to the effect that government measures may be taken to safeguard the secrecy of the ballot. This step is attributed to the initiative of Emperor William, who is of opinion that the Social-Democratic vote owes its growth to terrorism by party leaders. The Socialist organs profess amusement at this. They retort that Conservative and agrarian magnates conduct their tenants in droves to the polls and look on while the voting-papers are deposited in the ballot-boxes. A voting-paper is distinguishable by its color, and any observer can tell, therefore, how a German subject votes. Employers of labor are charged with taking every advantage of this fact. Under the proposed reform, the voter will enter a booth and put his ballot in an envelope. The use of distinguishing colors will likewise be abandoned. The Socialist *Vorwärts* (Berlin) welcomes these changes and predicts an increased vote for its following in consequence. The Conservative *Hamburger Nachrichten* objects to a secret ballot on general principles, but more particularly as being in conflict with Bismarckian traditions. As to the election itself, its issues, according to the Democratic *Frankfurter Zeitung*, will be afforded by a Clerical-Conservative combination on the one hand and a union of progressive elements on the other. But it does not conclude from this that the Socialists will necessarily be the gainers. It simply refrains from making predictions.

PAN-GERMANISM IN BISMARCKIAN BOOTS.

Professor Hasse, the Pan-German leader, has taken the Bismarck heirloom as his own.

—*Kladderadatsch* (Berlin).

Liberal papers like the *Vossische Zeitung* (Berlin) think there may be a Clerical setback. The Roman Catholic Center party, it says, has been injured by the affair at Treves, where the bishop forbade Roman Catholic parents to send their daughters to the public high school. True, the bishop withdrew his prohibition, but only after the Government had gone over his head to the Vatican. The fact that the Government went to the Vatican at all in such a case affronts, it says, patriotic sentiment. The Clerical *Germania* (Berlin) thinks the Government will win a great victory by modifying the anti-Jesuit law. It is proposed to repeal a section of that law forbidding individual residence in Germany to Jesuits. But the Government should repeal all the legal disabilities of the Jesuits as a matter of simple justice. The *Kölnische Zeitung* says the more stringent clauses of the anti-Jesuit law will be repealed as a bid for Clerical support in the future.

Meantime the progress of the political campaign tends to accentuate the mutual antagonism of the Roman Catholic Center and the Social-Democrats. The Paris *Correspondant*, a Roman Catholic magazine, devotes an article to a review of the position of the German Center, and its conclusion is that the party is in a very strong situation. It observes:

"The German Center triumphs because it is well organized, because its forces are regularly constituted, because its chiefs lead their battalions to combat according to a plan of battle long matured. It controls the universities, but it also controls the masses. It directs all its societies, all its associations, impressing upon them one and the same direction. By that means it is all-powerful. 'Whoever controls the masses, reigns,' affirmed Mgr. Ireland quite recently, and the zealous partizans of the Center have made these words of the American prelate their motto. The Center party has its devoted friends not only in the parliamentary world; it has the support of the episcopate, the sympathies of a majority of the clergy, the confidence of the people. Finally, it enjoys the imperial favor. Its chiefs in the Reichstag are the supports of the Government, the firm and unshakable pillars of its majority. Count von Bülow knows well enough that those chiefs are at times exacting, that they extort concessions bit by bit, that they now wish a break with the traditional Bismarckian policy and the negation of the Kulturkampf. But he appreciates the treasures of strength and loyalty that he can draw upon in this party of which Malinkrot, Monfang, Windthorst, Lieber, and others have built the solid foundations and which its present chiefs direct with a thoroughly military discipline. The Catholics, soldiers of Christ, are excellent soldiers of the empire. They have faith and they carry patriotism to the point of Jingoism. The imperial Government needs the Center and uses it. William II. wishes to make Germany greater than she is. He cherishes his idea of a world-wide Pan-Germanism. Altho he has at times strange accesses of deism, altho the conception forged by his brain is half-way between the two confessions, it is none the less true—and if the case be curious to note, the example should be remembered—that the Hohenzollern chief of a reformed Germany wishes to realize imperialism by means of Catholicism."

POLITICAL PORTRAIT.

Count von Bülow's dancing policy is all a matter of trifling.

—*Ulk* (Berlin).

The Socialist organs, of course, regard the Roman Catholic Center party from a point of view opposed to this and in the heat of the campaign they express themselves freely. Thus the *Neue Zeit* (Stuttgart), official organ of the Social-Democratic party, declares that "perhaps in no other one circumstance does the reactionary character of German official imperial policy reflect itself with such symptomatic clearness as in the fact that the very party which at the foundation of the empire formed itself out of the most reactionary elements to hang as a dead weight to its development, should now speak the decisive word in the Reichstag." The Center, we are told by this organ, was originally not so much a religious as a separatist party. "Religion was but a standard about which gathered all who opposed national unity. . . . Ultramontanism being the most cohesive and most powerful of these elements, it attained the leadership of this new party":

"Bismarck had only to adopt a half-way modern and rational policy in order to overcome this opposition. As is known, he did not do this, but with diplomatic shortsightedness took the appearance for the reality. He began that war of brute force against the Roman Catholic Church that Virchow so fortunately styled the Kulturkampf. . . . The more foolish this Kulturkampf was the greater was the gain it brought the Center. What better could befall this separatist and reactionary party than the privilege of playing the part of champion of popular rights not only with an appearance of truth but to a certain extent in actual fact? Supported by the still potent organization of the Roman Catholic Church it fought the battle forced upon it with a strength and a success hitherto unprecedented in the case of a bourgeois party in Germany. Now nothing so assures a party the steadfast adherence of the masses as fidelity to principle, as ability to crown its cause with its victims to that cause. The Center could long thrive on such capital. But if it could thus boast of being a tower of strength in the battle, none the less has the current of time eaten into the foundation-stones of this tower. With its victory, the Center necessarily lays bare its own antediluvian character. The whole fruit of its victory over a reactionary government was simply to become the footstool of that very government, to do it more abjectly helot service than has ever been rendered by any other bourgeois party. This is not the fault of anybody, but grows out of the nature of the case. The policy peculiar to the Center can not be carried out. The great industrial land of Germany can neither relapse into the long outgrown stage of a German confederation nor can it place itself under the lordship of the Pope. The Center must content itself with supporting every reactionary tendency, no matter whence it emanates. It is not even the soul of reaction, but merely its lackey. So contemptibly little a part has never before been played by a ruling party in a parliament."—*Translations made for* THE LITERARY DIGEST.

BULGARIA.

WHAT the world knows as the Macedonian crisis is in reality a series of crises, one opening into another, and known collectively as the problem of the Balkans. Bulgaria, the turbulent principality created by the Treaty of Berlin in 1878, has just aggravated the Macedonian crisis by having a crisis on her own account. It grew out of the attitude of General Paprikoff, a Bulgarian soldier and statesman of the Balkan type. This person is the champion of the great Bulgarian idea, which is that Bulgaria should expand. By absorbing Macedonia, Bulgaria would expand considerably. As General Paprikoff happened to be Bulgarian Minister of War when the Macedonian "reforms" were promulgated recently, he was able to put forth a policy of his own. He suggested large appropriations for the army and a massing of Bulgarian troops. This course would be a highly popular one, but it was resisted by the Bulgarian Premier, Dr. Daneff, who is under Russian influence and who said that measures of the kind would be "provocative." Unable to carry his point, General Paprikoff resigned. The ministry could not find a successor to him and resigned in a body.

The Russian Government now intervened. A message of some sort was sent to Prince Ferdinand, as a result of which the Daneff ministry resumed office minus General Paprikoff, whose place as Minister of War has been taken by Colonel Savoff. He is not exactly a champion of Russia. In fact he refused to take office at first because the Russophile party in Bulgaria wanted to force upon him as his chief of staff one of themselves. However, the net result is believed in the European press to mean a strengthening of the Russian hand in the settlement of the Macedonian question. The *Journal des Débats* (Paris) says:

"It is to be hoped now that the Government at Sofia will continue to hold matters in hand so that the Macedonian effervescence may receive no encouragement from Bulgaria. This is the more imperative because it appears from a series of Russian consular reports, published officially in St. Petersburg, that the revolutionary committees are continuing their unhappy work in Macedonia, where, in consequence of their activity and in spite of the reforms, the situation is still far from satisfactory."

Bulgaria, in fact, is regarded by the European press of the Continent as the obstacle to Macedonian reform. The Bulgarian Government has, it is true, dissolved the Macedonian committees within its jurisdiction, notes the *Figaro* (Paris). "It has refused to ask the sobranje for new military appropriations. It has heeded the advice of European diplomacy. That is very good. But it is not enough." European diplomacy must step in and accomplish something. "It can not be pretended that European diplomacy has yet achieved any noteworthy results." But European diplomacy has at least eliminated Bulgaria from the Macedonian problem, according to the *Vecherna* (Sofia), which says that Russia secured the settlement of the Bulgarian cabinet crisis. Prince Ferdinand was informed from St. Petersburg that he would be held responsible for Bulgaria's action in all that related to Macedonia.—*Translations made for* THE LITERARY DIGEST.

THE UNITED STATES AND GERMANY.

SOME evil spirit, as mischievous as Puck, must preside over the relations which the gods have decreed shall subsist between the realm of the Hohenzollerns and the republic of Washington, Hamilton, Jefferson, and Lincoln. Such is the conclusion arrived at by an influential newspaper in Paris, after a long editorial analysis beginning with the dispute as to the particular brand of champagne spattered by Miss Roosevelt over a certain yacht and ending with a series of confidential remarks by Admiral Dewey. The German newspapers do not pay any attention to the theory of a mischievous Puck. They are referring, instead, to "American insolence" and to "the power of the United States at sea," which they deem insignificant just now, notwithstanding the heroic "mouthing" of "Mr." Dewey, as they call him. The *Hamburger Nachrichten*, sworn foe of the Monroe Doctrine, is unable to agree that the Dewey incident indicates "a childish spirit." It says the Berlin Government takes the matter calmly in order to avoid conflict. "After all the experience we have already had with Admiral Dewey," it says further, "we can attach little weight to his attempt to talk himself out of his indiscretion"—the Hamburg organ referring here to the Admiral's explanation to the President. "The other considerations affecting the matter may be gaged by recalling what would happen to a German admiral who referred to the American navy in such contemptuous terms. But really . . ." and the German paper interrupts itself with three dots instead of concluding its sentence. The Berlin organs do not think the Admiral knew what he was talking about when he instituted his comparisons between the United States navy and that of William II. German comparisons on this point result in a very different showing. The distinguished German naval expert, Count Reventlow, writing in the *Berliner Tageblatt*, says:

"Admiral Dewey feels called upon to say that his recent

remarks concerning the German navy were not inspired by unfriendliness for Germany, and at the same time he admits the accuracy of the version of his remarks that appeared in the German press. He said, therefore, among other things: 'The late maneuvers in West Indian waters were an impressive lesson [!] to the Emperor, who could not send an equal number against my fifty-four ships.' Thus spoke the most famous admiral of the United States, the highest authority in its navy, to an interviewer. Had these words been used by the reporter of a yellow newspaper they would have been thought only natural and in conformity with the prevailing tone of a press that addicts itself to stirring up the masses by means of misrepresentation. The war-tried admiral, who destroyed Spanish ships with vastly superior forces, adopts the tone of the yellow press and has evidently not thought of the element whose torch-bearer he thus becomes. He threatens with his fifty-four ships the German blockading squadron, which, in conjunction with the English cruisers, succeeded in blockading Venezuela, impotent at sea, and he thus lends the authority of his reputation to the absurd fable that only because of the presence of the American maneuvering squadron was Germany restrained from violating the assumed rights of America with the aid of inferior cruisers and antiquated school-ships."

LORD OF THE NEW WORLD.

ROOSEVELT: "Take that statue of Frederick the Great away, until a statue of Monroe has been set up in Berlin."
—*Der Floh* (Vienna).

The respected German count, who is a well-informed student of naval affairs, next takes up the subject of the comparative strength of Germany and the United States at sea, in so far as that subject has any bearing upon Admiral Dewey's observations. "If Admiral Dewey meant," he says, "that Germany is not in a position to send against his fifty-four ships a fleet of equal strength, he flew in the face of common sense, for a man of his knowledge and experience must or ought to know the strength of the German navy. The very mention of fifty-four ships is calculated to mislead the unknowing, for it implies nothing as to fighting strength." In proof of this, the German expert enters into the following analysis of the American force lately in the Caribbean:

"The republic's fleet included but six battle-ships of various and partly antiquated types. The United States navy, moreover, does not include one genuinely modern armored cruiser. Our first squadron, kept constantly in service, which is homogeneous and in a high state of efficiency, would be incontestably superior to this improvised maneuvering combination of Dewey's. The 'lesson' is therefore 'impressive,' but in a sense contrary to that which Admiral Dewey would have accepted. The naval evolutions of the American ships are still of the kindergarten kind throughout. They usually end in victory for the American side and in the annihilation of the wicked enemy, the object being to win encomiums for the American armada and its commanders from the newspapers. I am convinced that the United States navy has a great future before it, but meanwhile there is no occasion to regard it as a superior and awe-inspiring force."

The personal aspect of the problem is glanced at by the count in a manner equally unflattering to American self-esteem. He finds that crews of United States war-ships are apt to desert in a body. "When the food fails to please one of these free men or the service is unsatisfactory he takes leave, never to be seen again."

The "extraordinary inferiority" of marksmanship is also a characteristic of our gunnery. "If it sufficed to annihilate the Spanish fleet, that merely showed the striking inferiority of the latter and the prodigal use of ammunition aboard the American ships." To-day the United States can not find officers and men enough for its navy. And this is the summing up:

"Nobody will seriously deny that America commands the first place in the field of brag, and that Admiral Dewey does not belie this distinction. Whether his standing as a commanding officer of the first rank will be enhanced by giving publicity to opinions that do not correspond to the facts may be doubted. At any rate he has acquired a new standing by this means. Let us hope that one result will be the ending of presents and invitations for the future. It occurs to me, finally, that a despatch-boat in the German navy bears the name of the daughter of the President of the United States!"

The utterances of Admiral Dewey simply express the sentiment of a jingo element in the United States, in the opinion of the *Berliner Lokalanzeiger*. "He belongs to the highest class socially, in the great republic, and behind him stands the imperial jingodom of the Union, which is never weary of rousing hatred of Germany." The same paper also denies that Emperor William sent any invitation to President Roosevelt for the United States squadron to visit Kiel. The *Tägliche Rundschau* (Berlin) says Emperor William notified President Roosevelt that "if an American squadron came to Europe it would be made welcome in Kiel too." President Roosevelt "received this notification from the Emperor with great delight and satisfaction." Furthermore, "there is no connection between Emperor William's notification to the President of the United States and the abandonment of the European trip of the North Atlantic squadron." The London *Times*, however, insists that an invitation was sent, and that "as a matter of fact" two communications were sent to President Roosevelt on the subject. "Some annoyance is felt in [German] official circles at the issue of the affair," it says, "and especially at its having become public." The London *News* adds that when "the Kaiser invited a wandering American squadron to call at Kiel, its peregrinations were promptly curtailed on the flimsiest of pretexts":

"All this must have been sufficiently annoying, without the oil poured upon the flames by Admiral Dewey, who is not the most discreet of personages. . . . . Taking all things into consideration, there has never been a more deliciously provocative expression of opinion on the part of an admiral to the head of a friendly state. If there is one thing the Kaiser wishes to avoid it is the appearance of friction between Germany and America. Yet the admiral said not a word of the British navy, but visited his criticisms solely upon the would-be hosts at Kiel. Really it does seem as if Germany and the United States had better leave one another alone for a while till their heads cool again. Too persistent attempts at unwelcome flattery offend the most good-humored of nations."

Indignant outbursts from the German press are only natural, in the opinion of the London *Standard*. "Such observations [as Admiral Dewey's] might certainly be thought to bear a very direct and pointed application, and the German press has accord-

ingly taken them up with some heat. But Admiral Dewey had never thought of pointing the scornful finger at any one nation":

"Admiral Dewey was, in short, talking at his ease to his own domestic circle and without any after-thought that his words would carry further. He is, however, much too considerable a man not to attract attention far beyond the spacious confines of the United States whenever he opens his lips on matters connected with his profession. Justly admired in his own country for directness of speech, he may become a public embarrassment when, by way of illustrating his argument, he reverts to comparisons with a power which is intensely touchy about its maritime dignity. Such utterances, when telegraphed across the Atlantic in brief summary, are sometimes subjected to a copious process of expansion by comment."

"Every one is aware," observes the Paris *Temps*, in the course of an exhaustive study of Germany's relations with the United States, "that nothing is so painful, in public life perhaps even more than in private life, as advances that are repelled. A friendship offered with a certain exuberance is transformed when refused into downright enmity. Now, Emperor William, with a perseverance forming a striking element in his originality, has for some time heaped upon the republican Yankees proposals for a cordial intimacy and concert. Not without a certain ostentation he did American boat-builders the honor of ordering a yacht from them. When this masterpiece of naval architecture was completed, he was pleased to treat President Roosevelt's daughter—a young person whose charm is valued highly by the world, but whom the ungallant Constitution of the United States does not recognize at all—like a princess of the blood and a daughter of America in the royal sense. He got her to christen his boat and to break over it the traditional bottle of champagne. This extra-constitutional politeness did not have quite the effect its imperial author intended."

The Parisian daily adds that this was not all. "Once again, Emperor William called upon his brother, Prince Henry of Prussia, to represent His Majesty in person, this time upon democratic soil, as he had recently charged him to be his representative—in a quite different capacity—in China. Whether it be that this naval prince is better fitted to obey an order to make the Son of Heaven feel the weight of the mailed fist of the chief of the German legions than to stretch out to the American people the velvet-covered mailed fist of Europe's first crowned diplomatist, or whether the democracy beyond the sea has a congenital and insuperable incompatibility of disposition as regards scions of ancient dynasties, it can not be said that Prince Henry's mission succeeded." Our authority proceeds:

"As if to accentuate the unfortunate impression produced by this princely junket, William II., who certainly has a mania for making embarrassing gifts and who observed with a jealous eye the reception given the French mission at the time the Rochambeau statue was unveiled, thought it opportune to offer President Roosevelt, who could not help it, and to the American people, who did not want it, the statue of Frederick II. No one had anticipated the appearance in such an aspect of the King of the Seven Years' War and the author of the Anti-Machiavelli. And the American people, embarrassed by the gift, weary of receiving tributes that mean nothing to them and which seem to bind them to something or other, have not expanded toward this monarch in stone and have not as yet made a move toward making ready his site. Under such auspices was ushered in the complication of the Venezuelan blockade. Instantly every Yankee suspicion was aroused. A formidable current of irritation set in. Sentence of death was desired against the British cabinet for lending itself to the German enterprise. The Monroe Doctrine, that last resort of American policy, was brought forth from the archives of the Department of State at Washington and brandished like a menace about the heads of the rash."

The curious circumstance is, says the French semi-ministerial organ, that of the three Powers cooperating in Venezuela, Germany was the one singled out for opprobrium by the Americans. "If Emperor William thought he would improve this state of mind by overpowering a recalcitrant nation with new offers of friendship and loading, in Molière's phrase, the fury of his embraces with protestations, he deceived himself once again." His cordial invitation for the North Atlantic squadron to visit Kiel was not accepted. "Like a well-bred man, a courteous statesman, a prudent chief of state, the first magistrate of the great republic enveloped his refusal in the politest forms. Mr. Hay, his Secretary of State, is undoubtedly a diplomatist of a good school, well able to sugar-coat all pills. But this was none the less a bitter pill. It was in vain that the Berlin official press—probably at an order from the Foreign Office—asserted, against all truth and probability, that no official invitation had been extended." On top of all this, Admiral Dewey "pours oil on the flames," which, concludes our authority, "is an additional link in a chain of misunderstandings." Such was the tone of European press comment when an additional misunderstanding arose in Germany. The presence of the United States European squadron at Marseilles, to do honor to President Loubet, was criticized in Berlin papers, which confused that American naval force with the North Atlantic squadron. All saw an aggravation of the "snub to Germany." This criticism, it seems, led to the order just issued in Washington directing the presence at Kiel during regatta week of the United States European squadron. — *Translations made for* THE LITERARY DIGEST.

MARQUIS ITO'S DOUBTFUL VICTORY.

MARQUIS ITO has emerged from the recent general election in Japan with a larger following than that of any other individual or group in the lower house. The Seiyu-Kai, as the party of the marquis is called, has shown symptoms of a disposition to break away from the leadership of this grand old man, and trouble is anticipated when efforts are made to increase the taxes for the sake of the navy. The result of the election, in Russian opinion, means that the voters are dissatisfied with the Anglo-Japanese alliance. Too much money is going for battleships and guns. The land tax must be reduced instead of being increased. This Russian interpretation of the event has been disputed in England. The Kobe *Herald*, a British paper published in Japan, says:

"Marquis Ito's party have a working majority. Viscount Katsura's appeal to the electorate, it is plain, has not helped to improve his position; rather has it made it more difficult. The question that now awaits solution is what course will the Government adopt. They deliberately appealed to the country for support against a House of Representatives which refused to approve and indorse their land-tax program, and have been signally defeated. Will they now, notwithstanding the emphatic verdict given by the electors in response to a clear and definite appeal, insist upon the adoption of their plan and again endeavor to force the enhanced land-tax bill through the Diet; or gracefully recognize that upon this subject the opposition are the real interpreters of the voice of the country, and place their resignations in the hands of his Imperial Majesty? The latter would appear to be the only logical course open to them."

Native press opinion deems it probable or at least possible that the Marquis Ito may arrive at some arrangement with the ministerial minority by means of which the cabinet can be saved. The *Nichi Nichi Shimbun* shares this opinion. But whatever happens, the anti-imperialists appear to be gaining control of the popular branch of the Japanese legislature. The *Jiji Shimpo* is unable to concede any importance to a rumored split in Marquis Ito's party. The *Asahi* has a different opinion, and it intimates that "bolters" will destroy the majority of the marquis. It should be remembered that parliamentary institutions in Japan are conceived in a German spirit rather than in a British constitutional one. Ministries and majorities do not necessarily go together.

NOTABLE BOOKS OF THE DAY.

AN INTERPRETER OF THE OBSCURE.

THE BETTER SORT. By Henry James. Cloth, 5¼ x 8 in., 420 pp. Price, $1.50. Charles Scribner's Sons.

IN Mr. Henry James's latest book, consisting of eleven short stories, his admirers will find those qualities which they most care for, and his detractors, those whom Mr. James has the power of irritating and angering, will find much to enrage them.

Mr. James has summarized his stories and his attitude toward life in a word which he has put in the mouth of one of his characters: "It is not my fault if I am so put together as often to find more life in situations obscure and subject to interpretation, than in the gross rattle of the foreground."

HENRY JAMES.

In these stories he deals entirely with obscure situations. He has expressed obscure emotions which other writers have never dared attempt. Occasionally he goes too far, and the "obscure situation" becomes so shadowy that one wonders if there really is any situation.

"The Beast in the Jungle" is one of these latter sort of stories. But most of these tales are up to his very highest standard, faultless in workmanship, original in motive. They belong to that rare and precious kind of writing which enlarges the reader's knowledge of human nature, and open new vistas of what a writer, if only he is great enough, can express on paper. One is impressed with the fact that while other authors are ringing the changes on the same old plots, all around them lies life, full of situations that have never been "written up"; an earth peopled with men and women whose emotions have only been touched upon in the most superficial way.

He has the defects of his virtues undoubtedly. He has written long stories which contain only the material for a short one. His passion for the obscure situation has often run away with him so that he has not stopped to consider whether it was significant or not, if only it was difficult to interpret. But how far he can make one see when he is at his best! "The Papers," for instance, the last story in the volume under consideration, is the story of the desire for publicity which the daily press has aroused in the world. Certain facts known to all newspaper people, of the way people talk for publication about their private affairs, have been described with an insight that is little short of uncanny. "The Birthplace," "The Beldonald Holbein," "The Tone of Time," are all stories which deserve the highest place among the short stories of the last fifty years.

THE WOMAN AND THE BALLOT.

THE HISTORY OF WOMAN-SUFFRAGE. Edited by Susan B. Anthony and Ida Husted Harper. Illustrated. Cloth, 6¾ x 9½ in., 1,144 pp. Published by Susan B. Anthony.

AFTER an interval of fifteen years, this volume comes to complete the history (in four volumes) of the earnest struggle of half a century. It is of advantage to the opponents as to the advocates of woman-suffrage that the history of the movement should have been prepared by those who have been its chief promoters and champions.

SUSAN B. ANTHONY.

In the preface, Mrs. Harper relates how in 1876 Miss Susan B. Anthony and Mrs. Elizabeth Cady Stanton undertook the work:

> "So little did they foresee the magnitude which the labor would assume that they made a mutual agreement to accept no engagements for four months, expecting to finish it within that time."

It was not till 1881 that the first volume appeared, the second following in 1882, and the third in 1885. Mrs. Stanton's name does not appear in the final volume, and many of the collaborators have passed away; but Miss Anthony has given the work her close personal attention to the end.

The history of the general movement for woman-suffrage is of necessity largely a history of conventions, arguments, addresses, petitions, and resolutions. As always in a woman's record, the personal element is made especially prominent, and feminine emphasis is given to receptions, banquets, fairs, greetings, and farewells. Yet these personal touches add piquancy and vividness to what might else be rather a dry record.

At the same time every man must respect the strength and keenness of argument, the indomitable persistence, the courage, self-sacrifice, and quenchless enthusiasm with which the reform has been advocated and brought into prominence.

IDA HUSTED HARPER.

The most valuable part of the volume as a record of *res gestæ*, and that which will give it deservedly high place as a work of reference, is the detailed account by localities of what has been attained in behalf of woman in the various States of the Union, in Great Britain, in the British colonies, and in other lands. To this itemized record no less than fifty chapters (xxv. to lxxiv. inclusive) are devoted.

Incidentally are brought out the results attained in the long conflict for the now unquestioned "rights" of woman, "to have personal freedom, to acquire an education, to earn a living, to claim her wages, to own property, to make contracts, to bring suit, to testify in court, to obtain a divorce for just cause, to possess her children, to claim a share of the accumulations during marriage." Testimony to show the favorable effects of woman-suffrage in the four States where it prevails,—Colorado, Idaho, Utah, and Wyoming—is accumulated.

IRISH TYPES.

THE SQUIREEN. By Shan Bullock. Cloth, 5 x 7½ in., 288 pp. Price, $1.25. McClure, Phillips & Co.

WHO can read one of Shan Bullock's pastoral tales without being conscious of an atmosphere that carries one altogether out of the ruts and requirements of every-day practical life? It is not perhaps an atmosphere of which one would care to inhale a great deal; but an occasional steep in it refreshes, uplifts, and gives a sense of variety.

The Squireen is far from an admirable character, we would not care to have him for a near relative, nor be obliged to dine and sup with him daily; nevertheless we feel the fascination of his untamed, primitive soul, his brute strength, overflowing life, and uncurbed masterfulness, that knew no law save its own desires. He makes us feel that we know what our remote ancestors were at their best—those Norman raiders and buccaneers from whom our "best people" to-day try to claim descent. It is a type that the older English writers used to present with variations in the Yorkshire squires; that Charlotte Brontë drew in Rochester. Just now, however, we see him at his best only when manipulated by the newer group of Irish writers, and when placed within Irish environment.

SHAN BULLOCK.

And this, too, is as it should be, for it is doubtless in Ireland, not in England, that the type in its pristine glory may be found still flourishing, just as Shakespearian English may be daily heard from the lips of an Irish peasant, but never from that of an English cockney. The history of the peerage shows that while old Norman titles still exist in plenty in England, neither name nor blood of their founders can be claimed by those holding them to-day; but a dozen or more of the titles founded by Strongbow and his followers in Ireland are held to-day by direct descendants of the men who built them; while the Norman names among the peasantry are almost as numerous as are the O's and Mac's of the Celts.

So much in support of Shan Bullock's well-depicted type, Martin Hynes, the Squireen, or petty squire; bullying, persuasive, sordid, lavish, mean, reckless, and beloved,—a type that clings to memory.

The women of the story are as distinct in their way as the men. Kate Trant, the woman whom Martin loves, and Jane Fallon, she whom he marries, have in their totally different ways more strength than the man—the chaste, self-controlling strength of womanly poise. All the characters are of the Protestant, Orange cult.

Contrasting them with their Catholic neighbors, the author remarks: "They are better clothed and better fed, bolder of eye and bearing, bigger, harder, coarser, tighter of lip, stronger of hand and body; more prosaic, also narrower of mind and less variously gifted."

Bullock knows his land too well not to intimate that while it is from these the thrifty traders spring, it is not from them spring the poets, the artists, orators, scholars, or statesmen of Ireland.

MR. CARRYL'S PERPLEXING QUESTION.

THE LIEUTENANT-GOVERNOR. By Guy Wetmore Carryl. Cloth, 5 x 8 in., 259 pp. Price, $1.50. Houghton, Mifflin & Co.

MR. GUY WETMORE CARRYL has the reputation of being a man of wit in his private life, and, in his writing, a semiprofessional humorist. We know him through the many humorous rimes which he has written, some of them very funny. He has also written many acceptable short stories, usually in a gay and amusing vein.

Here in his first novel we find ourselves sometimes in darkest politics, sometimes in softest sentiment, and in neither the slate-making nor the love-making does a ray of humor ever penetrate. Such a book from the pen of Mr. Carryl seems explicable only on the ground that the author, understanding that both sentiment and politics pay in literature, had gone to work and laid on the love interest and the political interest with a trowel instead of a mere pen. The ending makes one feel that Mr. Carryl has written with malice aforethought. In closing, he leaves an ethical problem for the reader to grapple with—one of these, "Should-she-kill-her-child-or-let-it-starve?" sort of questions. The situation briefly is this: The State of Allegheny is afflicted with a rascally governor and a pure and virtuous lieutenant-governor. A strike is pending, which, for political reasons, the governor refuses to avert, nor will he protect the property of the mill-owner, to whose daughter the lieutenant-governor is engaged. Meantime the lieutenant-governor has saved from the gutter an old friend. The friend falls victim again to the demon rum, and only partially sober comes to the state house to warn the lieutenant-governor that his life is to be attempted. He finds the governor attempting to throw the onus of the strike on the lieutenant-governor, and he shoots the former, to save the latter, the peace of the capital city of Alleghenia, and the property of the mill-owner. The odious governor now happily dead, all goes well. Everybody in Alleghenia signs a petition for the release of the murderer. Nothing is wanting but the signature of the new governor. But the latter says, in effect: "I am here to uphold the *justitia*, *lex*, *integritas* of my State. To the gallows with my poor old college chum." And the curtain falls with his fiancée shedding tears of sorrow and admiration on his bosom.

GUY WETMORE CARRYL.

Now if all goes well, and this book makes a hit, we may have a lively discussion as to whether the governor did right in hanging his friend.

SOME SIMPLES AND A STAR.

THE STAR DREAMER. By Agnes and Egerton Castle. Cloth, 5¼ x 7½ in., 375 pp. Price, $1.50. Frederick A. Stokes Company.

THE key in which this story is written is clearly indicated by a passage in the "Introductory—Concerning Bindon Cheveral." It is told the reader that there "stands, in the midst of the nurtured pleasances of Bindon Cheveral, the curvetting iron gate leading to the close known on the estate as the Garden of Herbs—a place of mystery, always, as reported by tradition, and by the legend touching certain events in the life of one of its owners, a place of somewhat sinister repute." It is of this romantic Physick-Garden, with its mystery and melancholy, and closed gate, that Mr. Castle confesses he fain would write.

Sir David Cheveral and a kinsman of his, Master Simon Rickart, lived at the old place a hundred years ago when the third of the quartet of Georges lay dying,—the one on the lofty tower, as far from earth as the castle would let him get; the other almost buried in the earth, in a laboratory at the foot of the keep.

Ten years before the story begins, young Sir David Cheveral was a courtly, dashing university man, and he and his sister and his aunt and his cousin Elinor and her father, Master Simon, all dwelt at Bindon Cheveral, and things were gay. Then his Aunt Sophia married the rector, Elinor married young Mervel, and a strange misadventure in love fell to the young lord and master. The pain of this was intensified by his sister's marriage to Lord Lochore, the very one who had diverted David's young woman from him. Then, through disgust of this world, David went to other worlds, as far as he could; for he became literally a star-gazer, and lived, with his telescope, apart from everybody. He consorted with those bright orbs where passion had no play.

When the story opens, Elinor returns to the old home, as her husband has died, much to her joy. On that very evening David has experienced the rarest joy an astronomer can know. He has discovered a new star. He wants witnesses to the fact, and without delay rushes down to Master Simon (who is as keen in his quest for life-giving herbs as his melancholy kinsman is for stars), that he may introduce him to the celestial stranger, and there finds this beautiful cousin. She and the star have inevitable association.

This is the beginning of a romance that is romantic indeed. Elinor awakens David to new love and life. Of course, there are complications, thanks especially to David's sister, Lady Lochore, who comes to Bindon when she hears of the presence there of a comely young woman who looms as the one through whom the ancestral place may be wrested from Lady Lochore's son. The weird little closed Herb Garden plays an important part in events, and so does David's new star. Master Simon has discovered the precious herb Euphrosyne, Star-of-Comfort, a wondrous herb brought to Europe by the Crusaders, but lost in the destruction of monastery gardens in England. It was a marvelous tonic, and plays its part, too, very tragically, in this most unctuous and brain-mad romance. How, the reader may discover for himself. It is enough to say that the story ends happily.

EGERTON CASTLE.

"The Star Dreamer" is not a great book, but it is full of interest and the peculiar charm the public has learned to associate with all that comes from the pen of its wedded authors. It was a happily ingenious stroke "to move heaven and earth" to make the story a success, as they did by having one character a searcher of the heavens and another a seeker after the souls of herbs and flowers, that, from the essences of these lowly creatures of the earth, he might make life more of a heaven by banishing the ills that flesh is heir to.

There is a deaf and dumb boy and a Poe-like grimalkin, Belphegor, who haunts the laboratory of Master Simon and imparts a sort of diabolical air to his intrusions into alchemy. Aunt Sophia, after she marries the sleek, classic, loving rector, supplies a comedy element by misquoting Scripture on all and every occasion.

A WOMAN OF THE OLD SCHOOL.

ROBIN BRILLIANT. By Mrs. Henry Dudeney. Cloth, 5¼ x 7¼ in., 398 pp. Price, $1.50. Dodd, Mead & Co.

MRS. HENRY DUDENEY has always occupied herself with the consideration of one central character and that a woman. Robin Brilliant is no exception to this rule; but Mrs. Dudeney this time has tried her hand at the delineation of a woman of the old school, a conservative, an aristocrat, with whom family pride is a virtue and the love of her own land a religion. The author has not been as successful as in her drawing of Harriot Wicken, or Silecia, the heroine of "Spindle and Plow."

"The Maternity of Harriot Wicken" was a morbid book, but a strong one. It was decidedly a problem novel, one that set a grim riddle to its readers and gave no key to any solution. In "Spindle and Plow" there were a few unnecessarily disagreeable people as a background to Silecia; but it is a picture of her, strong and supple, doing a man's work in a garden, that remains with the readers.

MRS. HENRY DUDENEY.

From "Spindle and Plow" to "Robin Brilliant" is a descent. This latest book gives a picture of a little English village, its trades-people, farmers, gentry, and while much of the conversation is well done, Mrs. Dudeney has not welded the two parts of the story together. Then, too, she has not the same interest in Robin or the same comprehension of her as she had of her other two heroines. Robin's constant talks about "us Brilliants" or "a Brilliant does not sell his lands," has no convincing touch.

Nowhere does Mrs. Dudeney succeed in awakening a spark of enthusiasm for her heroines or her heroine's principles. She has tried to present Robin as the tragic champion of a lost cause, bravely sticking to her aristocratic principles; she has made her only an opinionated and stupid young person whose aristocratic pretensions do not seem noble or praiseworthy, but merely tiresome. The best feature is Robin's attitude toward her lover. She cares for him, she wishes to marry him—some time. But her intuition tells her that his love for her will be of a more flattering character while he is not sure of her. All the parts that treat of Robin's vacillations are interesting and subtly done; they give life to a character which would otherwise be only a book heroine.

BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books :

"The New International Encyclopedia."—Vol. III. (Dodd, Mead & Co.)

"Twenty Original Piano Compositions by Franz Liszt." Edited by August Spanuth. (Oliver Ditson Company, Boston, $1.25.)

"Fifty Songs by Robert Franz."—Edited by William Foster Apthorp. (Oliver Ditson Company, Boston, $2.25.)

"More Letters of Charles Darwin." (D. Appleton & Co., in 2 volumes, $5 net.)

CURRENT POETRY.

Poems.

By ISRAEL ZANGWILL.

[Mr. Zangwill's new volume of verse, "Blind-Children" (Funk & Wagnalls Company) contains an undertone of sadness that often borders on despair. There is a cynicism about many of the poems that one would resent, if Mr. Zangwill had not given us also poems of deep sentiment. We quote the following :]

PASTORAL.

A rich-toned landscape, touched with darkling gold
Of misty, throbbing cornfields, and with haze
Of softly tinted hills and dreamy wold,
Lies warm with raiment of soft summer rays,
And in the magic air there lives a free
And subtle feeling of the distant sea.

WINSLOW & BIGELOW, Architects, Boston.

Shingled Houses

are warmer, prettier, cosier than clapboarded—not so pr.m ; and shingles stained with

Cabot's Shingle Stains

Have a soft depth and richness of color impossible in paints. They wear as long as the b st paint, preserve the wood better,* and are fifty per cent. cheaper to buy and to apply. All the merits of paint (and more), twice the beauty and half the cost.

Stained Wood Samples and Colored Sketches sent free

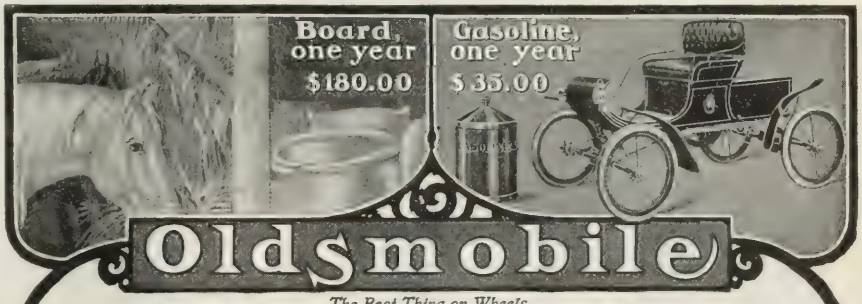
Boston : 74, 76 Stanhope St. Chicago : 1421 Michigan Ave.



Oldsmobile

The Best Thing on Wheels.

This graceful and practical Automobile does the work of six horses at an average cost for gasoline of $35.00 a year, (10,000 miles.) Board alone for one horse costs $180.00 a year, so the economy is very evident.

Price $650.00

Our practical experience in motor building and the perfect mechanical construction of the Oldsmobile make it possible to obtain more power for its weight than any other machine. Any desired speed is obtained by the simple yet very efficient foot control—there is *"Nothing to watch but the road."*

There are Oldsmobile agencies in all the larger cities. Call on your nearest agent or write for illustrated book to Dept. H.

Olds Motor Works, Detroit, Mich.

POPULAR EDITION, $2. A TIMELY BOOK

Self-Propelled Vehicles

(J. E. HOMANS, A.M.)

(A Complete Practical Handbook on the Automobile.)

Be Discontented

You owe it as a duty to your family and yourself to banish from your living rooms the ashes, dirt and coal gases brought there by stoves or hot air furnace.

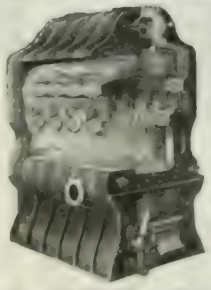
Be discontented with the old-fashioned, faulty heating methods. Why continue to buy this trouble at a very high price—paying a premium for it—when you consider that

Hot Water Heating

saves in fuel sufficient to pay in time the whole cost of the apparatus. Why therefore continue to pay extra for the bother, drudgery and fuel expense of stoves and hot air furnaces? Why lose in addition all the comfort, convenience and healthfulness of our way?

Now put in any kind of a building at any time, without inconvenience to occupants. Requires far less care than does a parlor stove. Need not be connected to street water supply. Buy now at summer prices. Send for valuable information.

AMERICAN RADIATOR COMPANY



Makers of IDEAL Boilers and AMERICAN Radiators

Dept. 32
CHICAGO

IDEAL IDEAL IDEAL IDEAL IDEAL IDEAL IDEAL

The perfect day slips softly by its end,
The sunset paints the tender evening sky,
The shadows shroud the hills with awe, and lend
A softened touch of ancient mystery;
And o'er the silent change of heaven's light
I feel the coming glory of the night.

Oh, for the sacred, sweet response we gaze
Of eyes divine with strange and yearning tears
To feel with me the beauty of our days,
The glorious sadness of our mortal years,
The noble misery of the spirit's strife,
The joy and splendor of the body's life!

FOREVER YOUNG.

Forever young, forever young!
Lo, Death hath stolen thee from Time,
And Love hath stolen thee from Death.

Forever thoughts of thee have clung
Round Nature—woodland air thy breath,
Thy voice the planetary chime.

Forever loved, seen everywhere,
In flowers thy lips, in stars thine eyes,
My soul grows royal by such grief.

Forever young and loved and fair,
With sunbeams, brooks, and soft blue skies,
With bud and blossom, bird and leaf.

A POLITICAL CHARACTER.

In him the elements are strangely blent—
Two consciences he hath, two hearts, two souls,
On double wrongs and errors he is bent,
And ne'er appears except in dual rôles.

He hears both sides, but 'tis with different ears;
Sees both sides of the shield—with different eyes;
Between two Rights with nice precision steers,
This double-headed King of Compromise.

Not his to hold the scales of Life and Death—
Not his, this nebulous invertebrate,
Who heeds and scorns at once the vulgar breath,
Nor knows the fixity which stamps the great.

The kingly souls with instinct for the Right,
Vibrant to conscience and her trumpet-call,
With clarity of vision, inward light,
And strength to follow out their thought through all.

THE SIGN-POST.

"To Heaven," "To Hell" so said the guiding fingers
I looked to right, to left, around, above:
The self-same path it was to which both pointed;
Then saw I that the road was Sexual Love.

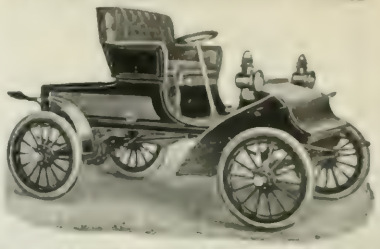
LOVE'S PRAYER.

Tho thy starlike spirit shine
O'er the earthliness of mine,
Let Love only be my plea,
Love me but for loving thee.

NIGHT MOODS.

My mind is as a sea of shudd'ring pines
At thick o'night when all's asleep but wind—
Wind blindly groping in the heavy darkness—
And formless shapes crowd round their mother Night,
And all the moonless, starless horror seems
Of old and changeless, hopeless, everlasting.

THE PHYSICIAN'S TRUSTY STEED



The "HARDY" (Flint Roadster) $850.00

Combines strength, power, beauty, speed, smooth running and other desirable features of both the touring car and the successful runabout. Built of best material throughout; handsomely finished; one or two seats, with or without top, large locker giving ample room for medicines, instruments, etc.; fitted with S. B. H.-P., 4 cycle gasoline engines; simple, safe and durable. Tank holds 8 gals. gasoline which carries full 175 miles, with speed of 6 to 30 miles per hour through mud or sand, up hills, over roughest roads, or in any kind of weather. Fully controlled from seat *by one lever*, no uncertainty about its going just when and where you want it to. Better, surer and safer than a horse and carriage, costs less to maintain and operate, requires but little stable room, enables the physician to cover his ground in less time and with greater ease, and to do more business annually. Write to us for our Catalogue "H" and the address of your local agency.

THE TERRY MFG. COMPANY, - 137 Michigan Street, TOLEDO, O., U. S. A.

TO THE BLESSÉD CHRIST.

O blessèd Christ, that foundest death
When life was fire and tears,
Not drawing on a sluggish breath
Through apathetic years!

Still, still about Thy forehead gleams
The light we know Thee by.
O blessèd Christ, to die for dreams,
Nor know that dreams would die!

DREAMS.

I craved for flash of eye and sword,
I dreamt of love and glory,
And Fate—who sends dreams their award—
Unfolds like changeless coils of cord
Life's long, slow, sordid story.

"NON OMNIS MORIAR."

"Immortal as the Gods!" But they
Half grudge the boon they share and give.
"I shall not wholly die," you say,
But neither did I wholly live.

PERSONALS.

Query that Stunned Tillman.—Senator Tillman was once sent out by the Democratic Congressional committee to Kentucky to orate for the ticket, says the Baltimore *News*. In one of his speeches he spoke of the necessity of electing incorruptible men to Congress, "such as the Democracy of this district has chosen to represent the people at Washington."

Just at this moment some one in the crowd interrupted with:

"Would Dr. Claherty sell out?"

"What's that?" asked Tillman, somewhat riled at this break in his train of thoughts.

"Would Dr. Claherty sell out?" repeated the questioner.

"And who the blazes is Dr. Claherty?" asked Tillman.

"He's the man you're asking us to vote for," came the prompt response.

The Senator was stunned, and could only blurt out: "I never heard of him before."

Edison's Anger and its Consequences.—Thomas A. Edison is of the opinion that it was anger that first turned him toward inventing the incandescent light. How it happened is related by the Brooklyn *Eagle*:

That was, of course, in the early days, and Edison was then quite the inventor that one reads of—poor, enthusiastic, never sleeping. He lived in a small house, innocent of anything approaching a laboratory; scientific apparatuses were in every room, and all the money went for experiments. Then, one day, came the crisis in the guise of the collector for the gas company. He had been to the house often, but Edison, hardly heeding his calls, had waved him away, saying, "Don't bother me."

On this last call, the collector's instructions were peremptory. He must turn off the gas.

"But, man," protested Mr. Edison, "I can't stop

this experiment to-night. I'll pay the bill, of course. I didn't know about it. I must finish this work with no interruption."

But the man was a gas collector and the lights went out.

"That night, as I sat helpless in the darkness," says the great inventor, "I swore a deep, solemn, and far-reaching oath that I would put all the gas companies in the world out of business. I haven't done quite that, but I did the best I could."

It was W. D. Howells. "Your average detective is about as fat-witted a citizen as exists," says Mr. George K. Rinthman, of Boston, in the Washington *Post*, "He may be clever in his line, but outside of that his mind is a howling wilderness. His point of view is narrow and his judgment contracted as a result of his calling." To illustrate this, Mr. Rinthman tells this incident:

"A friend of mine who is fond of showing up the defects of his fellow man had a lot of fun lately with a pair of Boston's leading detectives. He called the sleuths into his office in the most serious way and exhibited to them the picture of a tough-looking individual, about whose identity he was crazy for information. He flattered his visitors into the notion that if they could unravel the puzzle he would regard them as world-beaters. Each gazed at the photo long and earnestly. Both were positive that it was in the rogues' gallery. One of them identified it as being the counterfeit presentment of a notorious bank-robber; his mate thought it the likeness of an equally noted forger.

"When they got through, my friend turned the likeness over and on the back thereof they read the name of the original—William Dean Howells. Mr. Howells isn't handsome, but he was never accused before of being an ornament of the rogues' galleries. But Mr. Howells laughed when the incident was narrated in his presence."

McCLURE, PHILLIPS & Co., New York

Work With Us Five Years And You'll Be Independent

A Business Proposition from a Business Firm Well-Known to Literary Digest Readers

For the past two years we have been placing our properties before you in these columns and many hundreds have verified our claims and purchased lots

The headline of this advertisement sounds extravagant, but it comes to you from the largest real estate firm in the world—a firm whose financial standing is respected and appreciated by the largest banks and financial institutions of this country—a firm whose sales of New York property throughout the United States amounted to over four and a half million dollars during the past fourteen months.

The offer which will make you independent is the selling of our New York City lots in your community. Ours is a proposition which stands absolutely alone. As an investment it simply has no equal in the country, and every one who has ever taken hold of it with the energy required to successfully carry on any business has made for himself thousands of dollars. A representative, way down in Alabama, whose name will be furnished on application, made over $10,000 in less than six months; another distant one made over $5,000 in a little town of 3,500 inhabitants, and we have dozens who are now earning at the rate of $2,000 a year without interfering with their regular business.

This offer should interest any man of ability and character. **Our Alabama agent is one of the most prominent lawyers in his State** and he did not undertake the selling of our properties until he had been to New York and satisfied himself beyond peradventure that all we claimed for our proposition was true and more than true. **Several very successful agents are clergymen.** We want high-class, capable and energetic representatives in every community—we do not want canvassers. Our business is conducted on a high plane so that it appeals to the very best class of investors. An opportunity such as this is rare indeed. It enables you to associate yourself with a growing business—a business that is sure to develop into practically a national institution—just as large, just as strong, and just as desirable as the great insurance companies.

Your name and address will bring further particulars. References will be required.

ONE OF THE GREAT GAMES.

The second Pillsbury-Tarrasch game was one of the very greatest encounters ever known over the Chess-board; and altho the American was forced to resign, yet at his 23d move it looked as if the German Doctor would force a speedy win. Pillsbury's escape from immediate defeat at this juncture is one of the finest things in actual play, and his stubborn fight for so many moves takes the edge off the Doctor's victory.

Ruy Lopez.

RHEUMATISM Cured Without Medicine

External Remedy so Successful that the Makers Send it ON APPROVAL to Anybody.

Magic Foot Drafts, the new cure for rheumatism which has created such a furore throughout Michigan by curing all kinds of rheumatism, no matter how severe or chronic, are now being sent all over the world on approval without a cent in advance. The sufferer is put upon honor to pay one dollar for the drafts if satisfied with the relief they give, otherwise no money is asked. This plan is a novel one and would result in enormous loss if the drafts did not afford immediate and permanent relief. The remarkable success of the plan proves not only this, but also is a glowing tribute to the honesty of the American people.

The drafts are worn on the soles of the feet because the circulatory and nervous systems are most susceptible at this point, but they cure rheumatism in any part of the body.

MAGIC FOOT DRAFT CO., Jackson, Mich.

Gentlemen: I received the trial pair of Drafts and will not forget their virtue, for I am free from all my suffering by their use. They are worth their weight in gold and I am recommending them to my friends.

Respectfully yours,
R. H. DEVAN, 154 Taylor St., Grand Rapids, Mich.

Write to the Magic Foot Draft Co., R U 25 Oliver Building, Jackson, Mich., for a free trial pair of Drafts and their new booklet "To One With Rheumatism."

FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

RUSSIA'S DEMAND FOR MANCHURIA.

THE man who walked up and down the street saying "all those houses are mine," and explained that he was "trying to create a general impression" that they belonged to him, did not have the success that has attended Russia in her claims of China's northeastern provinces. The impression has been created in many minds that Manchuria, for all practical purposes, belongs to Russia; and altho Japan and England may object, and Russia withdraw her demands for the time being, there seems to be a general expectation that the Russian troops will never leave. A year ago Russia made an agreement with China to withdraw from the three zones of Manchuria at six-months intervals. The first evacuation was made last fall, and the second was due April 8. Instead of evacuating the second zone on that date, however, Russia presented a set of conditions precedent to withdrawal that amount to a demand for control of the province, so the American papers think. The demands are outlined and commented upon as follows by the Washington *Star*:

"Russia's new demands on China relative to Manchuria amount to a declaration of sovereignty. She declines to fulfil her previous promise to evacuate the province until certain new conditions are granted to her. These conditions, if granted, will give Russia virtual dominion over the entire territory as against not only all other Powers, but China herself. It is impossible to foresee any liberty of administration for China in Manchuria under the terms of this new proposition. The customs revenues at New-Chwang, the only port which Russia will permit to be opened, are to be paid into the Russo-Chinese bank and not into the Chinese customs bank; this gives Russia control of the provincial income. No portion of Manchuria is to be alienated to any other Power; this gives Russia command of the territorial future of Manchuria. None but Russians are to be employed in an administrative capacity in Manchuria, military or civil; this gives Russia absolute control of the provincial government. Russia is to have the right to string her own telegraph wires on all Chinese lines; this gives her equality of means of communication with China.

"These are the important features of the new demands, save the first item, that no new treaty ports be opened and no new consuls admitted. This slaps directly at the United States, which had proposed the opening of treaty ports at Mukden and Taku-Shan. Of course, the United States will be inclined to take a hand in the affair, as it has more than once in the past, and remind both China and Russia that certain obligations exist which can not be waved aside by the Russian claim that this is a bargain entirely between the two. . . . . .

"To yield now to Russia in this matter is to give her absolute dominion not only over Manchuria, but over China as well. If Russia can bulldoze China in the matter of the province she will acquire such a prestige at Peking that no amount of diplomatic persuasion later will restore the other Powers to their rightful status with the Chinese court. So impudent are the Russian demands and so grave their import that a joint note from the Powers is to be expected forthwith, else good-by to all hope for the rescue of China from the thraldom of a combination of Chinese reaction and Russian selfishness."

The possibility of war is being widely considered, but war does not seem to be really expected. The New York *Commercial Advertiser* thinks the British and Japanese protests will not go beyond the paper stage:

"It is most unlikely that anything more than paper protests will be made by the governments of Great Britain, Japan, and the United States, which are the three Powers most directly interested in holding Russia to the pledges which she has now broken. In Japan, of course, popular indignation will run high, and the Japanese alliance with Great Britain might conceivably be invoked were it not for the fact that Russia has the means of appeasing Japanese resentment. A concession of authority in Korea, which is vitally important to Japan, would surely keep the Mikado's Government from any act which might threaten war; and without Japan Great Britain would not stir. As for the United States, while its commercial interests in China will be injured by Russia's absorption of Manchuria, the matter is not with us so serious as to lead to anything beyond a diplomatic remonstrance. Therefore, in spite of the fact that Japan has despatched a squadron to New-Chwang, there is no doubt that from this time forth the map of Russia's Asiatic possessions will show a new and valuable province on the south bank of the great Amur River."

The New York *Evening Post*, too, thinks the Russian policy will succeed:

"Nothing but divine power or an internal revolution of her own can prevent Russia from absorbing Manchuria eventually. She has the position and the forces to carry out her purpose whatever it may be, but her policy in the past has been to accomplish her ends by diplomacy. In Korea she avoided trouble with Japan by allowing France and Germany to intervene in an advisory capacity. In the later troubles at Peking she got her standing at New-Chwang recognized by promising to restore its Government to China at a definite time. She now says that its revenues must be paid into the Russo-Chinese bank instead of the Chinese customs bank. Where the revenues are, there the Government is also. But who is going to dispute this point with Russia? A despatch from Yokohama says that three Japanese war-ships have been ordered to New-Chwang, and that Japanese feeling is much excited by the Russian demands. We do not look for war in that quarter, however. The trouble will be smoothed over for the time, and meanwhile Russia will take

another step which will make her dislodgment harder than before."

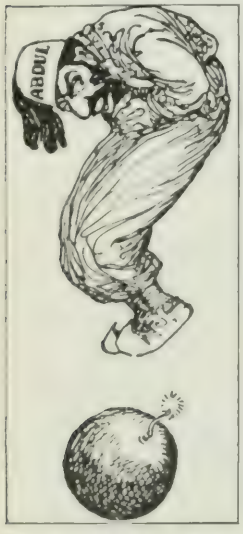
Count Cassini, the Russian ambassador at Washington, says in an interview:

"I have not received official news, and, in consequence, can not discuss the points mentioned in the despatches. I can say, generally speaking, however, that it is only natural that Russia, before evacuating Manchuria, should take measures to prevent a repetition of the troubles of 1900, as well as to insure in that country her political influence, which was never contested, owing to its geographical position.

"The assurances which Russia has given on different occasions relative to the security of American trade interests in Manchuria continue in full force, and could not be otherwise construed."

A CASE IN POINT IN THE BALKANS.

HOW much better off Macedonia might be without Turkish rule is illustrated by William E. Curtis, the newspaper correspondent, in his new book on "The Turk and His Lost Provinces." One of these lost provinces is Bosnia, which, thirty years ago, was the most barbarous spot in the empire, but which is now peaceful and prosperous. Here is a picture of Bosnia drawn by a German writer shortly before the Russo-Turkish war:



THE EASTERN QUESTION.
—*The Chicago Tribune*

"The misrule existing in the whole of the Turkish empire is so great and so universal that it can be best characterized as a stateof chronic and chaotic anarchy. One province, however, and that perhaps the least known of all, has in this respect a sad preeminence. It is a province where one can travel only with the greatest difficulty, and with not less danger than in the wilds of Kurdistan, where the intolerance and hate against the Christians is more living and active than around fanatical Damascus, and where the condition of the people is more abject and hopeless than that of any fellaheen upon the Nile. That province is Bosnia."

In 1878 the Berlin Conference placed Bosnia under the protection of Austria. A little over a year ago Mr. Curtis visited the province. Here is what he says of it:

"One who visits that country to-day can scarcely believe that such conditions could have existed only a short time ago—the people are so peaceful, contented, and prosperous. Crime is almost unknown. Railroads reach every corner of the province, and the freight-houses are fed by long caravans of carts hauled over excellent highways. The towns are filled with new and handsome houses, factories have been built to utilize the water-power, a university, colleges, academies, training-schools, and other institutions have been established to qualify the people to make the most excellent use of their opportunities. Members of the different religious faiths mix with each other on amicable terms and show mutual respect and mutual toleration; the courts are wisely and honestly administered, justice is awarded to every citizen regardless of his religion or social position, taxes are low and honestly collected and disbursed. There has been little corruption in office, and whenever it has been discovered it has been severely punished. The people have learned for the first time in their history that honest complaints will be patiently listened to and that wrongs will be redressed. The introduction of free education has enabled them to appreciate the value of such a government, and, altho the older peasants are still ignorant, backward, and distrustful, the younger generation show ambition and enterprise, and are conducting their affairs with intelligence and order.

"The most convincing proof of the change in the condition of affairs is furnished by the statistics of crime and violence and the increase in population. Thirty years ago brigandage was a recognized profession. There were no railways and few wagon roads. When people were compelled to travel they went in large parties, fully armed, or were accompanied by an escort of soldiers. Murder was not considered a crime, and the number of people killed by the soldiers or by each other was not recorded. Robbery was as common as lying. To-day human life is as safe in Bosnia as in Illinois. Travel is safer there because there has never been a train robbery in that country. During the last ten years, out of a population of nearly 2,000,000, the homicides have averaged six a year, and in 1900 there were only two. There has been no case of highway robbery since 1895. Which of the States in the American Union can show a better record?"

EDUCATIONAL FAILURE IN THE PHILIPPINES?

"WE are making a failure of this scheme, a monstrous, mortifying failure; not irremediable, perhaps, but fast becoming chronic, and requiring instant attention from those who are competent to modify the situation." This rather startling statement in regard to our attempt to set up an American educational system in the Philippines is made in an article in *Gunton's Magazine* by Theodore de Laguna, Ph.D., a Cornell man who went to the Philippines as a teacher. There is "widespread disgust" among the Filipinos for the American educational scheme, he tells us, and the chief desire of the teachers is to get back to America. All this is in strange contrast with the high hope that so many had in the civilizing influence of that shipload of teachers that crossed the Pacific a year and a half ago.

Dr. de Laguna attributes the failure to two principal causes—the quality of the teachers, and the attempt to impose the English language on the natives. In regard to the teachers he says:

"The teachers were a regiment of carpet-baggers, come to exploit the country in their small way, and then, after a few years, would sail happily home without a regret to spare. Had everything gone smoothly with the work here, the carpet-baggers' interests might have been sufficient to keep them at their task; but with the first breath of failure, it would be hard to find any class of men more liable to hopeless discouragement. Then, indeed, it became a mere question of living out one's time somehow and getting home again.

"Few of the teachers had any considerable knowledge of Spanish; scarcely any could speak it grammatically and fluently. This was a serious handicap, not so much in the class-room as out of it. For tho in these islands only a small percentage of the inhabitants can speak Spanish, it is none the less the established idiom of culture. Every gentleman speaks it, almost without exception. Thus it happens that the American teacher in his ignorance of Spanish, and still more in his picturesque attempts to express himself in broken, ungrammatical phrases, puts himself upon the level of the boor and unavoidably exposes himself to contempt."

The teacher, in time, may learn Spanish; but the native does not care to learn English:

"The scheme is to teach the Filipinos something for which they feel no immediate need, and in which they take no direct interest, namely, the English language. Other subjects have a place in the program, but the English language is practically the sole subject of instruction.

"Why, then, do not the children learn it? Some do learn it, namely, the few that have a daily opportunity of using what they learn. In a few cities, where there are hosts of Americans, soldiers and citizens, English is a living tongue; but for the great multitude of Filipinos it is practically a dead language.

"Why should a Filipino care to learn English? Not many reasons are conceivable. In a few cities it might help many a boy to get employment, and in these cities English can be successfully taught. Elsewhere it is important only for the governing class, affecting, as it does, their commercial and political interests.

"But for the Filipino peasantry there is no motive for learning

English, and accordingly they will not and can not learn it. A new language can only come to them with a new life; schooling can not give it to them. Americans commonly suppose that these dialects are very simple affairs, consisting at most of a few hundred words, and with no very elaborate grammatical structure. This is far from being true. To speak of the Visayan language, to which I have given some study, the richness of its vocabulary has been an ever-recurrent occasion of wonder to me, and the beauty and consistency of its grammatical structure are obvious enough to charm even a very imperfectly trained philologist."

Simultaneously with this declaration that our Philippine educational scheme is a failure in practise, comes a declaration by Dr. A. F. Chamberlain in *The Pedagogical Seminary* that it is wrong in principle. He says:

"Education, no more than a nation, can exist half-slave and half-free—its motto, too, is liberty or death. To educate the Filipinos, without using to the full their language and their literature, the thousandfold stimuli of their environment, their racial temperament and ideals, their past history and natural ambitions for the future, is to stunt them in body, mind, and soul. We have let loose upon them the soldier, the trader, the school-teacher, and the missionary—and we talk about education! The brain-cure we are treating them to at the hands of our teachers is worse than the 'water-cure' our soldiers gave them. In education, as in everything else connected with the 'new colonialism,' we began wrong. We can change, if we will, for it is not altogether too late yet. But it must be a complete change and an honest admission of error. To educate the Filipinos as Filipinos, and not as Americans, is the right ideal. Let 10,000,000 Malays as such develop along the lines of their native genius and some day the world will rejoice that they have been. Educate them through themselves and they will become strong, as their kinsmen the Japanese have done, adding a new star to the constellation of civilized races."

THE HANNA-PARRY CONTROVERSY.

IT is only a few years since Senator Hanna was cartooned all over the country with dollar-marks sprinkled profusely over his garments, and his heel planted firmly on a skull labeled "labor." On Tuesday of last week the same man was the guest of honor at the annual banquet of the Amalgamated Association of Iron, Steel, and Tin Workers in Columbus, and was referred to by the toastmaster of the evening as "the greatest captain of all defenders of organized labor and its rights," amid the tumultuous cheers of the delegates. Mr. Hanna's speech, which dealt mainly with the work of the National Civic Federation, wound up with what the Columbus *Dispatch* calls "a convincing reply and a stinging rebuke to the reckless, groundless, and inflammatory speech" delivered in New Orleans by President Parry, and considered in this column last week. Senator Hanna intimated that Mr. Parry did not know what he was talking about, and went on to say, in part:

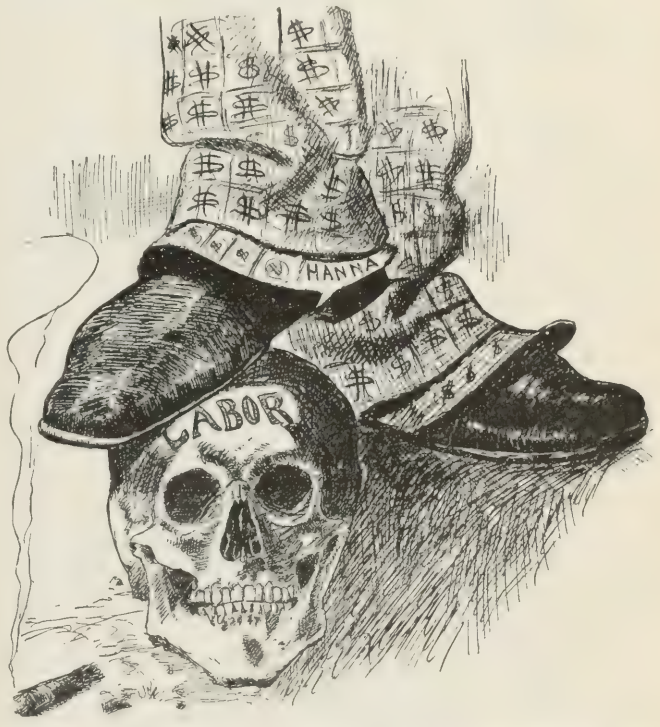
"I say, shame upon the man or men, in the face of the spirit of our institutions, in the face of our high educational opportunities, in the face of the spirit of this Government and its people, to rise up and say, 'I am better than thou,' and condemn those who, not having in their early environments those opportunities of education and enlightenment, and who go astray in the pursuit of their own interests, to condemn all their fellow men who are honestly and earnestly working for the benefit of themselves and their families, whether in organized labor or outside of it.

"On the other hand, is it not more Christian-like, more civilized-like, seeing the faults and mistakes of others, knowing what our opportunities can be made if we will, to extend the hand of fellowship and brotherhood and say, 'You have done wrong, but we will help you to do right'?

"It is no part of those who represent capital from the standpoint of better advantages, recognizing their duty that they owe to the body politic, to condemn a principle, to condemn a policy, because mistakes have been made. Therefore I say shame to a man who would teach the public and misrepresent the facts."

As between Hanna and Parry, the country will "overwhelmingly" indorse the former, declares the Pittsburg *Dispatch*; and *The Wall Street Journal* thinks "it is safe to say that if the labor problem is ever solved it will be by following the lead of Senator Hanna rather than that of Mr. Parry." Most of the newspapers take this view. The Brooklyn *Standard-Union* says:

"Messrs. Parry and Baer represent the extremists on one side, as the professional labor agitator represents the extremists on the other, while Mr. Hanna represents the spirit of reasonableness, of readiness to consider both sides, of conciliation and arbitration, of twentieth-century civilization. Parry's 'senseless



THIS CARTOON, ENTITLED "WHERE MR. HANNA STANDS ON THE LABOR QUESTION," APPEARED IN THE NEW YORK "JOURNAL" DURING THE CAMPAIGN OF 1896, AND WAS WIDELY COPIED AND CIRCULATED.

criticisms,' declares Senator Hanna, 'are chiefly remarkable for their one-sided views of things about which Mr. Parry evidently knows very little,' and 'are calculated to produce endless discord.' The truth of the latter affirmation is exemplified in the project started at New Orleans, rapidly followed up by the business men of Omaha and also of Vermont, and likely soon to become general, to organize a gigantic federation of employers 'to fight labor-union to the death.' This simply means disastrous industrial war. It is the defiant reply of capital to the Federation of Labor—the natural result of undue aggression on the part of many labor-unions during the past year—the ripe fruit of extremism. Yet it is hard to believe the saner counsels of Senator Hanna, the spirit of conservatism and conciliation and mutual justice he preaches and the Civic Federation appeals to, will not, in this glorious twentieth century, finally prevail among civilized men."

Mr. Parry has given out a reply to the Senator's speech, charging Mr. Hanna with "encouraging chaos in wage relations" to further his own political ambitions. He says:

"The transformation of Mr. Hanna from an energetic business man, with a labor record not particularly distinguished for leniency, into a political leader, and finally a United States Senator, who is the leading spirit, if not the founder of the Civic Federation, is a remarkable instance of what the political bee will make a man do when it gets to buzzing in his bonnet. Who

knows where the metamorphosis of Mr. Hanna will end? Is it possible that he has become a convert to all the leading tenets of trades-unionism? It appears that he actually joined the Amalgamated Union, or whatever it was which he addressed, and his speech would certainly pass as an excellent one to mark an initiation into the order. As a good union man, he may yet think it incumbent upon him to look with an indulgent eye upon Bryanism, and I am almost inclined to believe it an opportune time to make the suggestion that he be made the next running mate for Mr. Bryan. Bryan and Hanna—how is that for a ticket? . . . .

"Mr. Hanna corraled the manufacturers of the country in the first McKinley campaign because of the fear of Bryanism, but if he thinks he can ring the noses of the manufacturers of this country on the labor issue and lead them into the camp of Gompers and his aggregation, I think he overestimates his strength and influence very much.

"The National Association of Manufacturers is not a political organization and will not be led by any politician. As long as I am president of the association it shall not be used as a kite to advance the fortunes of any politician or political party."

OMAHA'S ANTI-UNION ORGANIZATION.

HOW far the movement to organize employers against labor-union aggression will spread, and what the consequences will be, are becoming topics of considerable comment and concern. Omaha, says a press despatch from that city, has been chosen by the National Association of Manufacturers as the spot "to fight the labor-unions to a finish," and 800 business men in that city have "banded themselves together to fight the different labor organizations, each pledging himself to assist any member who has trouble with his employees." A similar movement is on foot in Vermont. The Omaha organization declares for "freedom to employ union or non-union labor without discrimination," and declares against "limitation or restriction to output," and against the sympathetic strike. It says, in a public statement:

"The Business Men's Association in its purpose is purely defensive, and made necessary, as has been thought by the various business interests identified with it, by the apparent determination upon the part of the labor organizations of the city to either control or ruin every business enterprise. . . . . .

"The organization seeks no fight with organized labor in any form, so long as its own rights are not interfered with. Its position is that, while organized labor has the undoubted right to become associated together for any lawful purpose, yet, when it becomes a breaker of the law, by resorting to intimidation, threats, or personal violence, the picketing and boycotting of persons and firms who are unwilling to submit to their dictation, when it becomes an obstruction to commerce by interfering with the lawful pursuits of the individuals or firms, or when it takes upon itself the duty of chastising persons who are seeking to make an honest living in such manner as seems best, that it then becomes an unlawful, illegal, and unpatriotic combination of men, who must be met with whatever organization and force is necessary, in order that the principles of this Government may be maintained, which guarantee to all individuals life, liberty, and an opportunity to secure the means of subsistence in such manner as they may elect."

The Brooklyn *Eagle* says approvingly:

"This is plain talk. It can not possibly be misunderstood. It is an elaboration of the old motto on the Rattlesnake flag, which used to be freely translated into 'Don't tread on me.' It is the 'live and let live' principle with an application that is bound to make to the advantage of law and decorum, to promote industry by discouraging interference with it. We do not believe the employers' union, of Omaha, will offer to the other unions one solitary cause for quarrel. The labor people can not find a warrant for attack in the announced purposes of the organization. Those purposes are their purposes, slightly modified to fit the other aspect of the case, and the right to advance those purposes on the one side must logically imply the right to advance them on the other. Organization is the tool of the employer as well as of the employed, of the general public as well as of the labor-union. And it is a tool that cuts both ways. It should be used with care and discretion."

The Omaha labor-unionists are not slow to accept the challenge. W. H. Bell, president of the Omaha Central Labor Union, thinks that a contest might be beneficial to both sides, and predicts it "would probably result in a compromise on middle ground." He says, in an interview:

"On two of the main issues, recognition of the union and sympathetic strikes, there can be no yielding on the part of the labor organizations.

"To recede now from the stand that employers shall employ only union men would mean the ultimate destruction of the unions. This is a basic principle of unionism, and when it is swept away unionism is wrecked.

"Sympathetic strikes are natural and desirable where real grievances exist. Nowadays, however, many union men are striking without reason, and just because they are strong. They should be taught not to misuse their strength, and that is why I say that a contest of this kind might teach both sides their true positions and help to adjust the present evil relations existing between capital and labor.

"As to the control of a man's business or its destruction, the union men should learn to respect an employer's right to conduct his own business. At present there are some men at the head of labor-unions who submit all sorts of petty conditions to employers. On this point the labor unions will have to seek the middle ground on which the employers will be glad to meet them."

Says the New York *Times*:

"There is room for employers' associations, and they are capa-

TWO IDEAS OF WHO IS RUNNING THE COUNTRY.

ble of great usefulness if wisely planned and conservatively managed. It would in every instance be a mistake, however, to model them on trades-union lines or to launch them with proclamations open to criticism on the score of insincerity. That some initial mistakes will be made in these respects is probable. Indeed, some have been made already. Diplomacy will serve the purposes of employers much better than fighting; to do what is right and just and generous is a much more useful reputation than that of desiring to conquer peace by fighting for it."

BRITISH AND AMERICAN WORKMEN.

THE fact that the Moseley commission, sent from Great Britain to investigate our manufacturing methods, have reported that there is practically nothing for the British manufacturer or his workmen to learn here, has produced in the minds of our newspaper editors a poor opinion, not of American industrial methods, but of the British commissioners. We are beating the British in the competition for the markets of the world, our papers argue, and if they can't see how we do it, why so much the worse for them. The "inferior" American workman, notes the Baltimore *Sun*, "turns out products which find ready sale in all parts of the world, and are bought in England by patriotic Britons in preference to products of native workmen," and "the fact that the European demand for our manufactured products is unabated is conclusive evidence that the American artisan not only 'knows his business,' but knows it more thoroughly than his foreign rivals." Some of our newspapers, indeed, are glad the commission's report is adverse; for, as the Cleveland *Leader* remarks, "if Englishmen are not willing to admit that they can learn anything from Americans, it will be better for this country, for that will make it easier to maintain the industrial supremacy which has enabled the United States to fight its way into foreign markets."

Mr. Moseley's commission, which visited this country last year, was composed almost exclusively of the secretaries of the principal British trade-unions—a fact that may have affected the tenor of their report, so some of our papers think. The commissioners "all agree that the British workman has nothing to learn from the American workman, while British employers are not as far advanced as the Americans in their treatment of their employees." They admit, however, that "a hankering for the latest machinery and the best methods" characterize our industry, and perceive that "the Americans, employer and employed, realize more fully than the Britishers that brains and not brawn count." Mr. Moseley, who is a retired capitalist, says that the American workman has a far better education than his British cousin, "is infinitely better paid, housed, fed, and clothed, and, moreover, much more sober," and declares: "If we are to hold our own in the commerce of the world, the old methods must be dropped and the old machinery abandoned."

Most of the commissioners, however, seem bent on doing us the service of telling us where we can improve, so that the report saves us the trouble and expense of sending a commission to England, as would seem to be called for by their adverse verdict. James Cox, delegate for the iron and steel-workers, found that in Chicago "the almighty dollar is the unquestioned king," and he says of the new Chicago post-office that "any third-rate corporation in Great Britain would have accomplished the work in four years instead of eight," and adds that this delay "is illustrative of government work in general." Delegate Taylor, of the operative bricklayers, would be sorry to see American methods of building adopted in England; and Delegate Deller, of the plasterers' union, found our plastering bad, "even in the room of the White House where the delegates were received by President Roosevelt." Referring to the steel town of Homestead, Mr. Dellar remarks: "The principal shareholder might here find a good place to expend his millions in improving the conditions of the working-people. I would for this purpose forego the pleasure of donating libraries to towns in Great Britain." Delegate Steadman declares the British workman can not be beaten in the world for solid and well-finished work, and makes the prediction that "unless something is done to conciliate labor in America, the trust system will bring such an uprising as has not been witnessed for forty years." "The workmen who have built up American industries," we are told in the report, "are largely British," while "most of the inventions in American workshops come from men hailing from the old country." "Let us adopt modern methods," the delegates say in conclusion, "and England will hold her own in the commercial rivalry of the world."

Delegate Cummings holds this country up before his people as a "horrible example" in the following picture:

"Gambling and pleasure-seeking appear to be characteristic of the American's life. These, taken in conjunction with his ordi-

DIDN'T LEARN ANYTHING.
—*The Pittsburg Gazette.*

nary restless spirit, seem to shorten life, make men prematurely old, and increase insanity. Climatic conditions may be to some extent the cause of the generally unhealthy look of the American people, but the opinion generally expressed, to enjoy life while it lasts, has also some effect. There is, however, less regard for human life in America than in our own country. Life altogether is held cheaper, and that may be inherited from earlier times, when firearms were used on the slightest provocation. Altogether I am of the opinion that a halting time will have to take place in the States. The rush for enjoyment, the disregard of human life, the corruption of local politics and other immoralities, and the almost continental Sunday, added to which is the disinclination to walk or make any exertion after business hours if it can be avoided, all tend toward the moral and physical deterioration of the people, and must be arrested if disaster is to be averted."

Our papers are not yet ready to yield the laurel, however. Says the Philadelphia *Record*:

"The British iron and steel delegate says that 'any third-rate corporation in Great Britain would have built the Chicago post-office in four years instead of eight'; but the fact is that the Westinghouse works in Manchester were built in a year instead of the four or five the English builders said it would take, and the American contractor who, with American assistants and some American bricklayers to set the pace, accomplished this, received from the King a commission to build a hospital on the Isle of Wight, because the English builders wanted too much time. The bricklayers' delegate says he would be sorry to see American methods of bricklaying adopted in England, but the contractor in question got the number of bricks laid in a day on

those works in Manchester raised from 400 to 1,800, and possibly this is the method the British delegate does not wish to see adopted."

And the Baltimore *American* says, similarly:

"In fact, the recent history of our export manufactures clearly demonstrates that American labor is without a peer in the industrial world. If a bridge is to span the Nile and its construction is limited to a few weeks, England has to turn to America with an acknowledgment of her own incompetency. The same thing occurs when locomotives have to be rushed to India or South Africa. The American way is to do a thing just a little more rapidly than any one else, and with the added speed there is no lack of thoroughness, for the American manufacturer understands well the advantage of building for the future.

"The progress of the United States to the front rank of nations, a progress so rapid as to be a continual cause of continental jealousy, is due, in its ultimate analysis, to the superiority of the American mechanic and artisan over every other laborer. There is a deftness observed among all classes of our people that is lacking in so many nationalities, an almost intuitive perception of the adaptation of means to end and the ability to accomplish it. To this quality, perhaps, above all others is due our superiority, and as long as the American mechanic is more quick-witted and more nimble-fingered than his English competitor American superiority will be maintained."

A delegation of forty-six German agriculturists are coming over soon to study American methods of farming and stock-raising. They will stay two months and travel ten thousand miles.

WHY WOMEN'S WAGES ARE LOW.

MRS. JOHN VAN VORST, whose description of the factory girl's life brought out President Roosevelt's letter on "race suicide," makes some interesting observations in the same book ("The Woman Who Toils") on the comparative wages of women and men. Women's wages are lower, Mrs. Van Vorst thinks, because many of the girls, living at home and paying no board, work merely to obtain money for luxuries, and their satisfaction with small pay drags down the wage level for all the rest. The men, on the contrary, are all working for one end, their living; they demand more pay, therefore, and unite, when necessary, to get it. This wage theory is the result of Mrs. Van Vorst's experience as a working-girl in the factories of Pittsburg, Perry, N. Y., and Chicago, where she studied the problem at first hand. She also offers a plan to remedy the low-wage situation, which we quote below. First, however, she gives the reason for the small pay of women:

"In the factory where I worked men and women were employed for ten-hour days. The women's highest wages were lower than the men's lowest. Both were working as hard as they possibly could. The women were doing menial work, such as scrubbing, which the men refused to do. The men were properly fed at noon; the women satisfied themselves with cake and pickles. Why was this? It is of course impossible to generalize on a single factory. I can only relate the conclusions I drew from what I saw myself. The wages paid by employers, economists tell us, are fixed at the level of bare subsistence. This level and its accompanying conditions are determined by competition, by the nature and number of laborers taking part in the competition. In the masculine category I met but one class of competitor: the bread-winner. In the feminine category I found a variety of classes: the bread-winner, the semi-bread winner, the woman who works for luxuries. This inevitably drags the wage level. The self-supporting girl is in competition with the child, with the girl who lives at home and makes a small contribution to the household expenses, and with the girl who is supported and who spends all her money on her clothes. It is this division of purpose which takes the 'spirit' out of them as a class. There will be no strikes among them so long as the question of wages is not equally vital to them all."

Now for the remedy:

"What occurred to me as a possible remedy both for the oppression of the woman bread-winner and also as a betterment for the girl who wants to work, tho she does not need the money, was this: the establishment of schools where the esthetic branches of industrial art might be taught to the girls who, by their material independence, could give some leisure to acquiring a profession useful to themselves and to society in general. The whole country would be benefited by the opening of such schools as the Empress of Russia has patronized for the maintenance of the *petites industries*, or those which Queen Margherita has established for the revival of lace-making in Italy. If there was such a counter-attraction to machine labor, the bread-winner would have a freer field and the non-bread-winner might still work for luxury and at the same time better herself morally, mentally, and esthetically. She could aid in forming an intermediate class of laborers which as yet does not exist in America: the hand-workers, the *main d'œuvre* who produce the luxurious objects of industrial art for which we are obliged to send to Europe when we wish to beautify our homes.

"The American people are lively, intelligent, capable of learning anything. The schools of which I speak, founded, not for the manufacturing of the useful but of the beautiful, could be started informally as classes and by individual effort. Such labor would be paid more than the mechanical factory work; the immense importation from abroad of objects of industrial art sufficiently proves the demand for them in this country; there would be no material disadvantage for the girl who gave up her job in a pickle factory. Her faculties would be well employed, and she could, without leaving her home, do work which would be of esthetic and, indirectly, of moral value."

Mrs. Van Vorst adds a word of advice to those who are trying to help the working-girl. She says:

"On Saturday the owner of the factory comes at lunch time with several friends and talks to us with an amazing *camaraderie*. He is kindly, humorous, and tactful. One or two missionaries speak after him, but their conversation is too abstract for us. We want something dramatic, imaginative, to hold our attention, or something wholly natural. Tell us about the bees, the beavers, or the toilers of the sea. The longing for flowers has often come to me as I work, and a rose seems of all things the most desirable. In my present condition I do not hark back to civilized wants, but repeatedly my mind travels toward the country places I have seen in the fields and forests. If I had a holiday I would spend it seeing not what man but what God has made. These are the things to be remembered in addressing or trying to amuse or instruct girls who are no more prepared than I felt myself to be for any preconceived ideal of art or ethics. The omnipresence of dirt and ugliness, of machines and 'stock,' leave the mind in a state of lassitude which should be roused by something natural. As an initial remedy for the ills I voluntarily assume I would propose amusement. Of all the people who spoke to us that Saturday, we liked best the one who made us laugh. It was a relief to hear something funny. In working as an outsider in a factory girls' club I had always held that nothing was so important as to give the poor something beautiful to look at and think about—a photograph or copy of some *chef d'œuvre*, an *objet d'art*, lessons in literature and art which would uplift their souls from the dreariness of their surroundings. Three weeks as a factory girl had changed my beliefs. If the young society women who sacrifice one evening every week to talk to the poor in the slums about Shakespeare and Italian art would instead offer diversion first—a play, a farce, a humorous recitation—they would make much more rapid progress in winning the confidence of those whom they want to help. The working woman who has had a good laugh is more ready to tell what she needs and feels and fears than the woman who has been forced to listen silently to an abstract lesson. In society when we wish to make friends with people we begin by entertaining them. It should be the same way with the poor. Next to amusement as a means of giving temporary relief and bring about relations which will be helpful to all, I put instruction, in the form of narrative, about the people of other countries, our fellow man, how he lives and works; and, third, under this same head, primitive lessons about animals and plants, the industries of the bees, the habits of ants, the natural phenomena which require no reasoning power to understand and which open the thoughts upon a delightful unknown vista."

THE SOUTH A COUNTRY W THOUT STRIKES.

"THERE is no section of country in the world embracing so large an amount of territory, employing in proportion to the population so many wage-earners, and where such extensive money interests are involved, which has been so free from labor strikes." Thus *The Tradesman* (Chattanooga) remarks in an editorial in which it shows that labor and capital are working harmoniously in the South. We learn from the same paper that with the exception of four minor disagreements during last year, the South has been practically exempt from strikes, boycotts, lockouts, and other labor disturbances. What brings about this harmony between labor and capital in the South? The most important factor, we learn, is the presence of the negro. Next in importance is the gathering in, in the ranks of labor, of thousands of white women and children of once wealthy families, mountaineers and "piney-woods and sand-hill people" known as "Crackers," to work in the textile plants. In the third place, wage-earners are generally well satisfied with their wages, because a dollar in the South will buy as much of the necessities of life as $1.50 will in the North. The land is cheaper and more fertile, and many work their own farms. In the fourth place, labor-unions have made little headway in the mining portions of West Virginia, Kentucky, Tennessee, and Alabama: and an additional fact is that most of the Southern laborers work on farms. Just how these conditions affect the labor problem is shown by *The Tradesman*. In regard to the presence of the negro:

"There are more than 2,000,000 negro laborers tilling the cotton, corn, sugar-cane, and rice-fields, in the timber-forests and lumber-mills, in the cotton-seed oil factories, in the iron and coal-mines, in the brick and coke-making establishments, and in all vocations requiring muscular strength and physical endurance.

"In all of the above-named kinds of work they are far superior to white labor, and possibly superior to any other labor in the world. Racial antipathy and social ostracism prevent admission of the negro to white labor organizations. Unsystematic, and not being an organizer himself, the negro is a free lance in the labor field, and stands as what the labor-unions designate a 'scab,' an irreconcilable and constant menace to the trade-unions.

"The negro wage-earner is a strenuous believer in the doctrine of the survival of the fittest. He is for number one against the world, and when, by his labor, he is earning from $1 to $5 per day, according to his skill and industry, with that labor always in demand, he can not understand why he should voluntarily tax himself for the benefit of a less thrifty workman. Improvidence is his greatest weakness, and the rainy day has no terrors for him until it arrives, and then the clouds are soon dispelled through the medium of sated hunger. Amiability is a prominent characteristic when he is in his normal state, and when he is at peace with himself and with the world, the blandishments of the walking-delegate can not propagate in his breast seeds of dissatisfaction toward his employer."

Speaking of the workers in the textile-plants, *The Tradesman* declares that "they have found their employment in the cotton-mills far more satisfactory and superior to the conditions that confronted them in their impoverished and isolated homes." Under previous conditions they barely managed to live and "were without educational advantages, refining or sanitary enjoyments, religious or civilizing influences." Happy and contented in their new surroundings, "they are loath to antagonize their employers, and show scant courtesy to labor agitators who would engender strife between them." That the labor organizations have been unable to make any progress among the agricultural element is attributed to the size of the plantations and to the fact that the farm hands are too widely scattered for cooperation. Besides, these laborers have little education and are satisfied with their present lot.

But how is the South to guard against the labor agitators and maintain the present peaceful understanding between labor and capital? *The Tradesman* says on this point:

"It is to meet these new and inevitable conditions that the Southern employer must show wisdom, tact, and justice, meeting the pending aggressiveness of the labor-unions in a spirit of kindliness and concession. . . . Instead of inciting enmity and passing laws for the destruction of corporations, let the Southern people take heed lest they destroy themselves and retard the progress of their unexampled prosperity. Let labor and capital grasp hands and reconcile their constantly conflicting interests by amalgamating their interests. Both sides, capital and labor, must be content to make concessions—to give and to take. Capital should be satisfied with a reasonable annual return, and labor should be satisfied with such a reasonable compensation for its services as is justified by its intrinsic productive value to the employer, and by the great law of supply and demand."

"GET THEM ALL, GENERAL."

POSTAL INVESTIGATION IN CARTOON.

HIGH TIDE OF IMMIGRATION.

ENOUGH immigrants to repeople Colorado, Florida, New Hampshire, Oregon, Rhode Island, Washington, or any one of half a dozen smaller States have entered this country since July 1 of last year (1902), and enough came in on April 10 (10,300) to found a small city of their own. These figures lead some of the newspapers to predict that the total for the fiscal year, ending June 30, will surpass all previous records, except that of the phenomenal year of 1882, when 788,992 immigrants came in. Within four years the increase has been 100 per cent., the figures being: for the year ending June 30, 1899, 311,000; 1900, 448,000; 1901, 487,000; 1902, 648,000. "As there is nothing to indicate that our prosperity is not to continue for some time," says the Chicago *Post*, "we may look for immigration statistics for a year or so at least fully as remarkable as those for the last few months." The Boston *Globe* speaks of these accessions to the population of the country as follows:

"Within a single generation this country has absorbed, from Europe mainly, a population more than equal to that of Norway, Sweden, Denmark, and Servia combined, twice as many as now live in Persia, once the world's mistress; or nearly as many as the total peopling to-day of Ireland, Scotland, Wales, and all Canada.

"We need not be afraid of these astounding accessions, nor are we liable to be swamped by them. The problem is not how to exclude them, but how to get these hundreds of thousands of newcomers away from the coast cities to the farms of the Middle West, where the need of labor is very keen, where wages are good, and social conditions as hopeful as the sunny skies.

"Immigration reached its lowest ebb in 1897 and 1898. Since then a regular tidal-wave has been sweeping this way."

Of the number which arrived during the first quarter of this year, nearly 48,000, or about one-third, are Italians, and the next largest contingent consists of Poles. It is stated by many newspapers that the immigrants now arriving are above the average in education and many of them have gone to Western and Northwestern points to take up farming; but Commissioner Williams is quoted as saying that a "considerable portion" of them are positively undesirable, are "unintelligent, of low vitality, of poor physique, able to perform only the cheapest kind of manual labor," and "unfitted mentally and morally for good citizenship." He thinks that they will be "of no benefit to the country," and believes that their presence "tends to drag down its standards." He calls for "proper regulation" that will keep out this undesirable element. *The Journal of Commerce*, in commenting on these statements, takes issue with Commissioner Williams. It declares:

"It is the demand for labor in this country and the higher rewards offered for it that set the current of immigration going, and it is the cheapest kind of manual labor that is most in demand. Those who are willing to do that kind of work, or who have to do it to live, are naturally attracted in considerable numbers, and not those who could not be induced to do it and for whose labor there is not the same demand. In prosperous times our native people and the 'better class' of immigrants, those who are comfortably off where they are, will not do much of the digging and delving, the hewing and carrying that have to be done. So far as the effect upon 'good citizenship' is concerned, there is an easier and more effectual safeguard in defending our citizenship by stricter naturalization laws than by trying to keep out the raw material. We are not obliged to make citizens, with all the rights and privileges of natives, out of all that we may need as laborers, while they are 'unfitted mentally and morally.' It will be hard for us to pick and choose of those who will leave Europe for our shores, but when they get here we can pick and choose those whom we will clothe with all the privileges and immunities of citizenship."

Norway, it appears, is finding the emigration of her people to this country a serious and growing danger. The Philadelphia [illegible]

"It is announced that the Norwegian Government will probably adopt measures to check emigration to the United States. So great has become the outflow that there is danger that Norway will lose the best class of its working population. The Norwegians and Swedes are among the most desirable immigrants into the United States. They are industrious, frugal, and law-abiding. Very much of the prosperity of the Northwest is due to them. Sweden sent 30,894 of her population to the United States in 1902, and Norway 17,484. The population of Norway in 1900 was 2,239,880. The drift of emigration from that country is plainly shown by the statement that in 1900 10,655 Norwegians settled in the United States and only 276 in all other foreign countries. The drift of the Swedish population to the United States has not been so decided, but many more Swedes emigrate to this country than to any other."

LETTERS AND ART.

A PLEA FOR OLD-FASHIONED READING.

AGNES REPPLIER, the well-known Philadelphia authoress, enters a spirited protest, in the current issue of *The Era* (Philadelphia), against what she terms the "oppression" of books. "Of all the many heresies which afflict the world," she says, "not one is more unreasonable nor more mischievous than the notion now current among intelligent people that reading is in itself, and apart from the matter read, a useful, desirable, and, in some sort, meritorious occupation." She continues:

"The habit of rapid and indiscriminate reading does not stimulate mental growth; the quick replacing of one book by another lessens the value of all. I have seen a girl, too young to lose the fresh, keen, priceless memory of youth, standing before a long row of battered novels, and striving to recollect which of them she had or had not read. To say that she would have been better employed in working ridiculous samplers in wool like her great grandmother, is not too strong a statement. It would have been an equal waste of eyesight perhaps, but a real saving of her mental fiber."

MISS AGNES REPPLIER,
Who urges the modern reader to throw off the "oppressive" yoke of ephemeral books.

As for the race to "keep up" with current literature, Miss Repplier takes the view that it is something more serious than mere waste of time. It "means the sapping of our physical and mental powers, the frittering away of whatever intellect we possess in an attempt to do something which, in the first place, can not be done, and, in the second place, would not be worth the doing if it could be done." Furthermore:

"'Current literature,' as it is called, has now gotten far beyond the pursuit of the most industrious reader. We can not, even with the help of magazines and reviews, pretend to keep pace with it; and the time has come when we must now and then confess that we have not read, that we have not seen, that we have not even heard of the book about which our friends are talking. This ought not to be such a humiliating experience. Because people are talking about a book is seldom a good reason for reading it; and they talk about it for such a very little while that our humiliation is at least short-lived."

It is a melancholy truth, continues Miss Repplier, to which we might as well make up our minds first as last, that many of the most delightful and valuable books ever written are very lengthy, and they can not be shortened "without mortal hurt." We quote again:

"Not one famous work in a hundred can bear abridgment. Boswell took his time to write the 'Life of Johnson,' and we've got to take our time to read it, unless we are content to lose the best biography and one of the most entertaining books in all literature. Mr. Birrell, urging upon us the Journal of John Wesley, makes the touching suggestion that we should, if need be, abandon our 'annual reading' of Boswell in order to make Wesley's acquaintance. We should like to know to what race of men Mr. Birrell addresses himself. If there dwell in Great Britain mortals so richly endowed with leisure, wit, and judgment that they read their Boswell every year, we have no need to hunt further for the Happy Islands. They lie where we would least expect to find them, between the North Sea and the great Atlantic.

"Yet perhaps there is more real gain, as there is undoubtedly more real pleasure, in a friendly and thorough intimacy with one masterpiece of biography than in scampering through a whole shelf of 'English Worthies,' or 'English Men of Letters,' or 'English Statesmen,' each skimpy little volume telling us just enough to be quickly forgotten, and telling it in just the way which is warranted to make the least possible impression upon heart and brain. It is better to know one great man thoroughly than to have a bowing acquaintance with half a hundred. It is better to read all of Charles Lamb's letters—there are only two volumes—and then reread them, thanking heaven for the privilege, than acquire a superficial and joyless knowledge of all the letter-writers of the centuries. 'Specimen' reading seems at best but dreary work. ''Tis like feeding a child with chopped hay from a spoon'—dry diet, and of doubtful nourishment. The curious claim put forward for abridged editions—Froissart in two little books, Pepys in one, and a volume of selections from Horace Walpole—is that these meager substitutes give people a 'working nowkledge' of the literature of the world. What a working knowledge of literature may imply it is difficult to divine, unless it means that the reader so equipped is ready to practise authorship, and blithely impart his ignorance to the world."

In view of the "ever-increasing number of books we do not want" and the "ever-decreasing chances of tranquilly perusing those we do want," Miss Repplier thinks it is time to call a halt. We are losing "the friendship of books," and we can afford to lose any friendship rather than that.

SARAH BERNHARDT AS "WERTHER."

ONE of the most notable theatrical events of the past month in Paris was the production, in the Théâtre Sarah Bernhardt, of an adaptation of Goethe's "Werther," the great actress playing the title rôle. The play has provoked much comment, on the whole unfavorable. The correspondent of the New York *Tribune* writes as follows:

"Sarah Bernhardt delights in male parts, especially when they contain emotional death scenes, and Pierre Decourcelle, a clever dramatist whose reputation was earned by startling melodramas for the Ambigu Theater, and of which 'Les Deux Gosses,' or 'Two Vagabonds,' is a striking example, has in his free and ruthless adaptation of Goethe's 'Werther' provided the French actress with a fatal dénouement quite as harrowing as those supplied by 'Hamlet,' 'Lorenzaccio,' or 'L'Aiglon.' Massenet may be pardoned for transforming the sentimental reverie of Werther into an opera which was produced in Paris some ten years ago with moderate success, but the selection of a literary and purely psychological study, described by Goethe himself as 'a painful discord between a young man's heart and reality,' and in which action is restricted to one situation, seems almost inexplicable.

"It was, nevertheless, upon the initiative of Sarah Bernhardt that the Parisian dramatist set to work to make a play out of 'Werther.' It was a quixotic venture, and the success is decidedly qualified. Sarah indeed gives a new presentation of death, she waltzes with juvenile grace, and there are delightful living pictures of Teutonic bliss; but there is a continuous thread of monotonous melancholy throughout the five long acts of 'Werther,' and the movement of the piece keeps revolving upon itself in tedious circles. The 'Werther' of Sarah Bernhardt and of Pierre Decourcelle is surrounded by personages and incidents that would have astonished Goethe, who probably never dreamed that his idyl would be developed into a melodrama for a Parisian public. It would have been theatrically impossible for Sarah Bernhardt to occupy the stage for five acts soliloquizing with her own heart."

M. Doumic is inclined to make fun of the play in the *Revue des Deux Mondes*. He says:

"The story is very simple. A young man by the name of Werther meets a young girl, Charlotte, who is already promised to another man. He loves her, and on their next meeting finds her married to a certain Albert Schmidt. Unable to endure the

thought that she is happy with any one but himself, he commits suicide. To this bare plot what ornaments are added! . . . . .

"There can be no good melodrama without a character that evokes our sympathy. Now it is quite impossible to feel any sympathy whatever for Werther. This melancholy youth, this lachrymose dreamer, this declaimer of phrases, is insupportable. Because a man has dragged you from the water, it does not give him the right to impose on you the sight of his sad face and the weight of his tiresome presence. What right has this busybody to trouble the peace of a family which did not seek him out, and which never did him any harm? It is too obvious that his disappearance can only be a blessing to everybody. This fact diminishes our regrets from the beginning, and dries up the sources of sympathy. We should say, Alas! We say, instead, Ouf!

"'Werther' is a compromise between a melodrama and a sentimental comedy. The sentimental parts drag and hurt the play as a whole. There is no comparison whatever to be established between the work of M. Decourcelle and that of Goethe. Mme. Bernhardt has expressed all that the rôle would yield, without being able to give to M. Decourcelle's creation any species of consistency."

The *Journal des Débats* dismisses the play with a few words, which we quote, in part:

"To tell the truth, M. P. Decourcelle, a clever man, has written a clever play, in which are some agreeable enough scenes—secondary scenes especially—and some more which are quite touching. All the same, this good Werther is somewhat irritating. . . . There came a moment when one had a strong desire that the too excellent Albert would kick him out of doors.

"But, after all, the piece is one to see. It is mounted with extreme care, and Mme. Bernhardt is not an indifferent actress in any rôle."

It remained for M. Immanuel Aréne, of the *Figaro*, to write an enthusiastic appreciation of "Werther." We quote from his article:

"M. Decourcelle has followed the novel amply on broad lines. His literary conception is admirable, and he has used it like a practical manager of a theater, or, if you choose, like a business man. He has materialized the thought of the poet very prettily. He was able—and this was essential—to make of a subject undoubtedly sublime, but monotonous, five acts, or rather five pictures full of color, grace, and emotion, that touched and charmed the audience and which they applauded warmly . . . . .

"The play was captivating and made a success, but M. Pierre Decourcelle would be the first to be angry with me if I failed to say that a large part of that success was due to the puissant collaboration of Mme. Sarah Bernhardt as directress and actress. The deliciously poetical touches were the greatest aid to the play, and its interpretation could not but elevate it further, since it was Mme. Sarah Bernhardt who played 'Werther.' The great artist employed all the admirable and infinite resources of her marvelous dramatic genius. She was a magnificent incarnation of those three sacred things, youth, love, and sorrow. And it was with good reason that at the end of each act the enthusiastic public gave one of those ovations and awarded one of those triumphs which it reserves for its greatest and most idolized artists."—*Translations made for* THE LITERARY DIGEST.

CHARLES GODFREY LELAND,
The Creator of "Hans Breitmann"

AN ENGLISH APPRECIATION OF "HANS BREITMANN."

THE death of Charles Godfrey Leland illustrates anew the fact that the work done by a man in play may often outlive his serious achievement. Lewis Carroll's mathematical treatises have been completely eclipsed in public fame by "Alice in Wonderland"; Thomas Dunn English grieved on his death-bed because he was known only as the author of "Ben Bolt"; and now "Hans Breitmann's Ballads" are being exalted over all the long line of scholarly works that came from Mr. Leland's pen. To Mr. John Masefield, a writer in the London *Academy and Literature* (April 4), "Hans Breitmann's" place is fairly won. He writes:

"In reading American books, in studying that eager American life so unlike anything to be found in sober Europe, one learns why it is that, even with all Europe's culture ready to its hand like an ax to the pioneer, the republic has not yet produced its poet or its cunning artist, to give voice or form to the emotions and the beauty pulsing so hotly among its citizens. The land is too cosmopolitan. It says, as its one great mind said:

I am large. I contain multitudes.

and it is perhaps not unfair to liken its literati, as they are at this day, to four and twenty blackbirds baking in a pie. So many ingredients will have to combine, and resolve, and crystallize; so many 'grounds' will have to settle, so many bubbles to arise and burst, before the dish can be dainty and fit for the President's table, that it is likely to be a great while before the artists have a medium with which to work, let alone a skill in the shaping and molding of the material.

"They are a great people, these Americans, and a new people, and a people struggling to make something new from an old speech and a set of old traditions. Their impetuous hearts are even now changing that old speech into something quaint and strange (I can not say 'rich' and strange) which is quicker, as it seems, and snappier, and which reminds one of an electric lamp set within an old horn lantern. Everywhere one sees the ingredients in the caldron, bubbling and seething, and imparting, each one of them, some flavor or smack to the great pie they help to make. Here is Mr. Dooley with his Irishman's ways of speech that stick in the popular mind, and that thousands use daily. There is Uncle Remus—a tenth of the population speaks the 'English' of Uncle Remus. There is John Chinaman and Jhonna Dago, but they are not vocal, I believe, as yet; and there is the most potent of all the alien influences, that of the late Mr. Leland's Hans Breitmann and the fine class he represents."

"Hans Breitmann," continues the writer, is not "a mere caricature with a fine thirst and the heroic manner." He is rather a type. We quote further:

"He represents a class—a wise, kindly, laughter-moving class—which is not common now, and which we seldom see in England, but which exists, and is delightful, in many parts of Germany and in the States. The laughter is always *with* and not *at* this old hero. He loves the pleasures of the table, and he will drink, it seems, as long as he has passage in his throat, yet he has an eye for beauty, the wisdom of a man, and a most ripe talent for events. He is that old Germany, as I feel, that died, or became changed, with the rise of the shop-class after the French war. He is of the blunt Luther type, with,

perhaps, the 'Wein, Weib, und Gesang' elements set up in caps.

"Hans's prototype, Mr. Trübner tells us, was 'a German serving during the war (of Secession) in the 15th Pennsylvanian Cavalry, and who—we have it on good authority—was a man of desperate courage whenever a cent could be made, and one who *never* fought unless something *could* be made.' Many of the ballads tell of his merry battles, and of the great spoils, chiefly liquid, that his battles brought him, but it is hardly as a fighter that Hans makes his appeal to us. We like him when he is at peace, well primed with the schnapps, or the lager, or the sauerkraut so dear to him. And then, by the fireside, puffing the meerschaum of content, the warm reminiscences come gently to the soothed brain, and the story comes, between tobacco puffs, ripely and well considered from a seasoned and mellowed personality."

Mr. Masefield goes on to pay tribute to the "wonderful speech" in which the ballads are written:

"Fully to appreciate the cleverness of it one must have lived in Germany and in, say, Hoboken. Old Hans uses the American idioms with such aptness, and sandwiches them between such deft and apposite quotations from the literature of his Fatherland, that an outsider misses half of the abundant points he makes. How happy the blend is may be seen from the two quotations I have culled at haphazard:

> Du bist ein Musikant
> Top-sawyer on der counter-point
> Und buster in discânt,

and

> Und knock dem out de shpots
> Come pack to eart', O Schnitzerlein,
> Und pring id down to dots.

It is not dialect. It has not the fixity of a dialect. We feel that in a year's time old Hans would be using a very different speech with quite different effects upon his hearers. In the ballads he is at 'the top of happy hours.' He is precise in his use of the snappy, effective idiom of the States. And his German—the German, always, of a cultured and deep-thinking man—saves him, and his rimes, from any taint or accusation of commonness."

The only accusation that might be brought against the ballads, we are told, is one of "over-insistence upon certain traits in Hans's character." Mr. Masefield confesses that he is not entirely edified by "the details of his swillings." He concludes:

"One can pardon him for taking so jolly a delight in the good things of the world, for we know that (after the 'morgen-hetache') he will be up and about, playing the man like a master. I must own, however, that he touches me more nearly when he is in his serious vein. When he is dreaming over the beautiful things that have touched him in the past, or at music, or giving advice to the young. In his moods he says things which place him with the poets. 'Breitmann in Leyden,' tho perhaps the quaint Breitmann lingo rather mars its gentleness, is a thing that none but a true poet could have made:

> 'Tis shveet to valk in Holland towns
> Apout de twilicht tide,
> Vhen all ish shdill on proad canals,
> Safe vhere a poat may clide.
> Shdrange light on darkenin' vater falls
> In long soft lines afar,
> Der Abenddroth on Dunkelheit
> Vitch shows—or hides—a star.

The end comes to one with a grace and a softness that is like 'rare 'Gene Field' at his rarest:

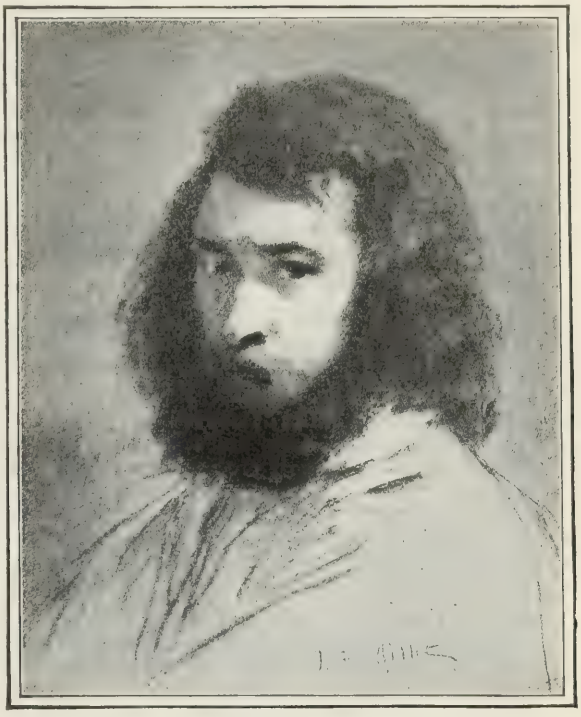
> O if you live in Leyden town
> You'll meet, if troot be told,
> De forms of all de freunds who tied
> Vhen du werst six years old.

Lovers of Hans will wish him a peaceful old age in Leyden, with lager of the best, and Rhein-wein, and a seat in the Bier-Garten looking over the old town; and twilight and death coming to him very gently at the last, almost obsequiously, like a grave waiter announcing closing time."

THE SADNESS OF JEAN-FRANÇOIS MILLET.

THE spirit that we are least wont to associate with France is that of brooding melancholy, and the last place to which we should turn for an expression of that spirit would be to French art. It is probably because of this that the personality of Millet stands out in such marked relief. "He seems to be a man belonging to another time, another race, a different form of thought," observes M. Romain Rolland, a Paris art professor, in a recent study of the great French painter contributed to the "Popular Library of Art" published in London. The professor goes on to emphasize the "extraordinary power of pessimism," the "extraordinary intensity of sadness," manifest in almost all Millet's work:

"Everybody has seen it; everybody has been struck by it. But everybody has misinterpreted it; everybody has read into it



JEAN-FRANÇOIS MILLET.
From a Crayon Portrait by Himself.

a sort of bitter criticism, a sort of condemnation of society. The mind of no single French writer or artist has succeeded in perceiving that this pessimism, this sadness, were not the agitated state of a rebel, but the natural, normal state of a man who had received their impress so deeply that he could scarcely conceive of any person's being different. All French art for nearly a century has been so remote from Christianity—it may even be said, as a whole, so antichristian—that the Christian point of view, which sees suffering as a law and as a good, has become almost incomprehensible. Some people look suffering in the face, but only to fight and curse it. Others turn their eyes from it as an ugly, unpleasing spectacle, which they try to forget; and they devote themselves to the pursuit, the attainment, or the imagination of joy. None among them could understand that a Millet might find an austere and religious joy in pain. None of them guessed when they looked at 'The Gleaners' or 'The Man with the Hoe,' oppressed by fatigue, bowed over the earth like beasts beneath a yoke, that the artist who painted them thought their pains natural, good because moral, and beautiful because good."

Millet's "serious and peaceful melancholy," continues M. Rolland, was of the kind that "has its secret sweetness for souls of his stamp—'the dark pleasure of a melancholy heart,' of which La Fontaine speaks." He was not an artist observing poverty from afar. He knew poverty in his own person and

accepted it without surprise and without rebellion. Nor was he alone in this respect. We quote again:

"The lives of the principal French painters of his day and of the great landscape painters in particular constitute a sad martyrology. Except in very few instances, such as those of Corot and Jules Dupré, almost all suffered cruelly from want, indigence, hunger, illness, and ill-luck of every kind. The great Theodore Rousseau lived for the greater part of his days in terrible poverty and loneliness, and died, struck down by general paralysis, with a mad wife beside him. Troyon died insane. Marilhat died insane. Decamps tormented himself his life long, lived without friends, and died in a tragic way. Paul Huet literally nearly died of hunger, and lost his health owing to privations. Even Diaz was acquainted with black poverty and bodily sufferings. It can not therefore be said that Millet was exceptionally treated by fortune, and he himself refuses to think so. 'I do not pretend to be unhappier than many others' (1859); 'I feel no resentment against any one, not thinking myself more of a victim than are many others' (1857). He shared the common fate; he suffered like others from poverty, loneliness, and indifference. But that which is exceptional in him and distinguishes him from others is the tranquillity with which he accepts his ill-fortune, as a matter of necessity, a superior and beneficent fate."

Prof. Charles Sprague Smith, director of the People's Institute, New York, is the author of a new book entitled "Barbizon Days," in which the sadness of Millet is interpreted in the same way. Says Professor Smith:

"His spirit knew not such a thing as protest against the ordering of God and nature. Turning backward over the centuries, he heard the curse spoken. He felt its shadow brooding over all the earth, darkening the tilled field, bending the back of the laborer. It was a mystery, but to a Millet human toil and pain are but the discipline of divine justice, love, and wisdom. His canvases present life as he saw it, reveal profound sympathy with toiling humanity, but breathe neither lament nor protestation. . . .

"The peasant patiently bearing his burden from the cradle to the grave, in the hot fields of summer and the cold, desolate woods of winter, was to Millet the earth poem, and grander far than royal sunset or voice of wind in the forest. There was the battle of life out there in the fields. There was the world's true hero, sowing, reaping, gleaning. He was redeeming the earth from its curse and making atonement, by a life of self-renunciation, for the vast, primal sin; waiting too patiently the revealing of the world of peace and joy beyond. The scintillation of the stars whispered to him thereof as he watched by the sheepfold at night. When as evening fell the Angelus sounded forth from the bells of the village church tower, he bowed his head and drank in for a moment a holy, quiet peace, presage of that beyond.

"Such was the poem that formed itself in Millet's mind; every action of the peasant life, indoors and outdoors, takes on a religious aspect in his canvases. It is humanity performing the old necessary patriarchal services, man working with nature, both under the shadow, under the burden, uncomplaining, waiting for the morning.

"There is without doubt a deep truth in all this. That peasant and son of peasants in coarse blouse and *sabots* who roamed these woods so many years was one of the prophets. The forests of the Bas Bréau and the gorges of Apremont are holy places to-day, because Jean-François Millet walked there. And yet it is only a part of the whole truth. Neither nature nor human life rests all under the shadow. And he who, as Corot, finds and interprets the sun-sprent beauty of the woods, who sees bright-colored forms dancing in the glades, whose heart is sensitive, responsive to the joy, the carols that breathe everywhere in this world, is a prophet too."

An Artistic Sensation in Russia.—"All Russia"—as the phrase goes—is exercised over a painting exhibited at St. Petersburg, under the auspices of the Society of Art, by a painter unknown to fame named Bounin. It represents several eminent Russians, with Count Tolstoy among them, in what is denounced by many as a shocking and scandalous attitude. The picture has provoked a protest from the great novelist's son, and may by this time have been removed as the result of indignant comment in the press.

It is entitled "Catching Fish," and the fishermen are: Tolstoy, Chekhoff, the novelist, Repin, the celebrated painter, and Gorky. The alleged violation of artistic and moral propriety consists in too realistic copying of "nature," in that the fishermen (with the exception of Gorky) are painted in a trouserless state. Some three or four years ago Repin painted Tolstoy minus shoes and socks, and it is said that the famous author ironically thanked him in a private letter for leaving him his trousers. Bounin has bettered (?) the instructions of the brother-artist. Some writers declare that there is nothing revolting or reprehensible in the conceit. They even see symbolism in the painting, the fishermen catching fish being the allegorical way of expressing the power and influence of the great men over their readers and disciples!

A. C. Souvorin, the publisher and author, ridicules this defense, and writes as follows in the *Novoye Vremya:*

"There is no doubt that Bounin deliberately imitated Repin. There is no cause for excitement. It is probably the new way in art. We must wait for the advent of artists who will represent all our great men in the act of bathing—some with and some without a coat of soap, some in a sitting, some in an erect position. This will be new. It will attract attention and be a success. What more is there to be wished?"

The St. Petersburg *Gazette* says that the artists are indignant at the action of the directors of the exhibition, and regard the picture as merely an attempt of the painter to advertise himself. H. Rok writes in the *Novosti:* "The poor artist simply had no typical figure in his imagination, and, hardly realizing what he was doing, he gave his fishermen the faces and figures of living types. Actors frequently do the same thing in creating parts."

NOTES.

SIGNORA MATILDA SERAO, the Italian authoress, intends to visit this country next year. She will deliver a series of lectures on artistic and literary subjects.

EMERSON'S "First Visit to England" has been reprinted in a dainty little brochure by the new English press "At the Sign of the Hop-pole, Edenbridge, Kent."

THE farewell concert tour in this country of Mme. Adelina Patti (the Baroness Cederström) is under the management of Robert Grau. Mme. Patti will leave England on October 24 and will not return until February. She will sing in most of the principal cities of the United States and of Canada, and may also visit Mexico.

The Bookman's May list of the six best-selling books of the past month is as follows:

1. Lovey Mary.—Hegan.
2. Lady Rose's Daughter.—Ward.
3. The Pit.—Norris.
4. Letters of a Self-Made Merchant to His Son.—Lorimer.
5. Under the Rose.—Isham.
6. The Circle.—Thurston.

ELLEN TERRY'S revival of Ibsen's early drama, "The Vikings," is greeted with great interest in London. The stage setting and lighting effects were planned by Miss Terry's son, Gordon Craig, and are of an unusual character. Says the London correspondent of the New York *Tribune*: "The play is a weird and realistic presentation of an Icelandic saga of courage, love, and vengeance, with Ellen Terry in a part resembling Lady Macbeth, and playing it with sustained force, fiery energy, and metallic heartlessness. . . . The last act, with a rising storm, supernatural effects, mocking voices in the air, and a tragic catastrophe, was most weird, poetic, and impressive."

THE amount of money Mrs. Ward received from *Harper's Magazine* for the serial rights of "Lady Rose's Daughter" is an interesting subject of current comment. Miss Jeannette L. Gilder, an experienced literary agent, surmises that, as the book rights of the novel also went to the Harpers, in accordance with an inflexible rule of the house, Mrs. Ward could have received no less than $25,000 for the serial rights. Adding to this her royalties on the sales of the book, which, she says, promise to be enormous, it is estimated that Mrs. Ward will reap a tidy profit of over $150,000 on "Lady Rose's Daughter." No living author has ever received as much. Miss Gilder asserts that "there is no doubt that Mrs. Humphry Ward is the best-paid of living novelists." The Harpers, following their custom, are reticent as to the figures in the case.

SCIENCE AND INVENTION.

THE HARMLESSNESS OF WIRELESS TELEGRAPHY.

WE noticed a few weeks ago an article in one of the electrical papers in which it was suggested that the presence of a Marconi sending-station in a great city might be a menace to public safety, owing to the great steel structures through which induced currents would course at every throb of the "thunder-factory," with the production of sparks at all gaps and consequent danger of fire. *The Scientific American* dissents strongly from all this. It says editorially (April 18):

"The absurdity of the whole matter is apparent when one stops to consider that the electric surgings set up in the receiving-antenna by the Hertzian waves, tho of very high voltage, are, on the other hand, of such an infinitesimal quantity that the most delicate of instruments is required to detect them. . . . . .

"The whole discussion illustrates the recklessness with which some writers launch forth on an elaborate argument not based on facts or figures. The writer in question evidently overlooked the quantity of current set up at a transatlantic or even a local receiving-station, overlooked the power generated at a Marconi receiving-station, and above all overlooked the laws governing the radiation of Hertzian waves. According to his argument, Hertzian waves radiate in all directions, filling an imaginary sphere. Their energy would, therefore, vary inversely as the square of the distance, or, in other words, the energy at a distance of three miles would be one million times that at a distance of three thousand miles. As a matter of fact, Hertzian waves as set up by an oscillator travel out in a plane at right angles to the antenna, so that, roughly, their intensity is inversely proportional to the actual distance, and the efficiency at the three-mile station would be only one thousand times greater than that at the three-thousand-mile station. His deductions lead to the supposition that Mr. Marconi's 'powerful thunder-stations,' as he calls them, must generate a quantity of electricity equivalent to that of lightning in order to cause visible sparking at a distance of three miles. Now, as a matter of fact, only 7 kilowatts were used in transmitting President Roosevelt's message to King Edward across the Atlantic. Furthermore, we are informed that Mr. Marconi's experiments are constantly leading toward a reduction rather than an increase of power. The writer of the article certainly overestimates the quantity of current generated in the receiving-antenna, for, even within the three-mile limit, the quantity is immeasurably small. Even at the sending-station the current must be reduced to an infinitely small fraction of an ampere in order to obtain the best results. In fact, we have held a piece of paper in a spark which was capable of affecting a coherer 50 miles distant. The paper was punctured, but not ignited, because, tho the heat was very intense, the quantity generated in the spark was very small. What dangers of fire could ever arise from such cold sparks as these, to say nothing of the minute sparks set up in surrounding air gaps, which represent so small a fraction of the energy in the transmitting spark? As for the danger of grounding a circuit by means of open-space lightning arresters, we can safely say that no spark of sufficient length to accomplish such a result can be generated within a short distance of the most powerful transmitter in use, even with the circuits perfectly in tune with the sending-antenna."

The "Poison-Eaters" in Washington.—The American public takes kindly to nicknames, the more startling the better; and the subjects of Dr. Wiley's experiments on food preservatives will doubtless be known as "poison-eaters" to the end of time, altho, as *The Evening Post* remarks, the matter to be decided is whether they "are really eating poison or only harmless food preservatives unjustly suspected of being injurious." The experiments go on, however, tho the funny men and the yellow journals have grown tired of discussing them—at least until recently, when a dubious report that the subjects were all turning bright pink seemed to promise a revival of interest. *The Evening Post*, in the note above referred to, thinks that the experiments are unduly prolonged. It says:

"It needed no elaborate experiments to prove that drugged food may be eaten without serious harm. Many of us are probably eating more or less of drugged food all the time without actually having to be taken to the hospital; but many others do suffer in health, vitality, and capacity for work from eating it. In regard to salicylic acid and formaldehyd, Dr. Wiley himself wrote in *Leslie's Weekly* two years ago that there is no doubt of the pernicious influence of these preservatives in some cases. He also said, truly, that 'the public supervision should look after the weak and diseased digestive systems rather than the strong and vigorous.' Why, nevertheless, he chose to make his Washington experiments on the strongest young men he could find, is a mystery he has not explained. In *The Lancet* of November 30, 1901, an account was given of a series of experiments with boric acid made by Dr. Rinehart, in which the symptoms of poisoning disappeared as soon as the use of the drug was given up. Further evidence is furnished in the *Münchener medicinische Wochenschrift* of January 26. Dr. G. Merkel, of Nuremberg, experimented with boric acid on eleven patients, seven of whom promptly showed disturbance of the gastro-intestinal tract. The inevitable inference from such facts is either that the use of boric acid as a preservative of food should be prohibited by law, or, at least, that the law should require mention of its use on the label of canned goods, and in butter, cream, milk, and meat, in order that those whose digestion is not as robust as that of Dr. Wiley's select boarders may take warning."

PELEE'S INDIRECT WORK—REAL AND IMAGINARY.

WHEN there is a great catastrophe such as an earthquake or a volcanic eruption, many people are fond of trying to connect it with all sorts of phenomena, terrestrial and celestial. In some cases these attempts have been successful, sometimes quite unexpectedly, and so they can scarcely be condemned as useless, if conducted in the spirit of scientific investigation. In *La Science Illustrée* (Paris, April 4) M. Louis Contard tells of some speculations of this kind connected with last year's great outbreak in the West Indies. Says this writer:

"From a purely geologic point of view the Martinique catastrophe is perhaps insignificant, in so far as it has modified the relief of the earth's surface very little. It is not from this standpoint comparable to the explosion of Krakatau, which almost annihilated a whole island and which, by the resulting tidal wave, modified the configuration of the coast for considerable distances. In spite of this, certain meteorologists have attributed to it the most unheard-of consequences. The wrath of Pelee has served to explain the persistent rains that have inundated one region and the continued dryness that has prevailed in another; it has blown both hot and cold and has brought on wind or early frost.

"Its influence on the twilight glows observed in Europe last autumn admits of discussion. On the 28th, 29th, and 30th of October these glows were so brilliant in Paris that many people thought that they were caused by a conflagration. Now in 1883, following the Krakatau explosion, which took place on August 25, there were observed at Paris the same blood-red glows on November 26 and 27. In both cases these phenomena were attributed to the existence of fine dust in suspension at great altitudes. The diffraction of the solar rays by an atmosphere charged with fine particles explains the observed effects perfectly.

"Despite this coincidence of beautiful sunsets with great volcanic eruptions, M. Perrotin, the learned director of the Bischoffsheim Observatory at Nice, has his doubts. According to him, the cause of the red twilights may be a simple meteorological phenomenon, for in 1902 as in 1883 they also appeared in the same month of the year. . . . . .

"It is well known that the sardine did not appear this year on the coast of Brittany, and that the result was general suffering among the fishing population and the workers in the canning factories, who are poor enough even when the fish are abundant. To what do you think this absence has been attributed? To

many causes, of which perhaps none is the true one, and hosts of reasons have been given in the daily papers. Old fishermen have been found to affirm that this desertion by the sardines was due to the Martinique eruption.

"You may laugh at this, but nevertheless in a communication made on January 26 last to the Academy of Sciences, on the results of his last expedition in the Atlantic, Prince Albert of Monaco said:

"'It has been found that the rocky bank discovered last year near the Azores extends over an area of 215 square kilometers [83 square miles]. This region, which was at first found to abound richly in fish, seems to have been deserted by its aquatic population. Besides this it has been shown that, in the vicinity, one of the telegraph cables that pass near the Azores was melted in two. Perhaps there exists some kind of correlation between these facts and the Martinique eruptions.'

"Great eruptions hurl into the air porous stone that floats on the surface of the sea and is often carried by currents to great distances. This has not taken place in the Antilles as on our own coasts, but notwithstanding this a large number of people believe that they have found floating stone coming from Mont Pelee."—*Translations made for* THE LITERARY DIGEST.

PRESERVATION OF TIMBER WITH SALT.

THAT common salt will preserve timber is announced by a correspondent of a Southern paper as an important discovery. "It is well known," he says, "that salt is used to preserve meats, and why not timber?" That the preservative qualities of salt are not limited to meats, however, is no new discovery, as we are reminded editorially by *The Railway and Engineering Review*. Says this paper:

"It has been well known for a long time that any metallic salt injected into timber will preserve it from decay as long as it remains in the timber in considerable quantity. Common salt is the chlorid of sodium, and chlorid of zinc is the salt used in the Burnett process of timber treatment, which engineers have applied to structural timber and railroad ties for a long time. In many respects, including those of general appearance, and deliquescence in the presence of moisture, these two materials are very similar. This latter property gives rise to one of the difficulties in the use of metallic salts as a timber preservative. In desert countries, where the atmosphere is very dry almost all the year round, railroad ties and other timbers retain the salt and resist decay for a long time, but in ordinary climates the moisture in the atmosphere, the rains, and the moisture in the ballast will cause the salt to leach out of the timber in a few years, and the antiseptic is thereby removed. Other salts which have been used for timber treatment to a considerable extent are the sulfate of copper (blue vitriol) and the bichlorid of mercury (corrosive sublimate). These also disappear from the timber in the presence of moisture. The problem with engineers has been to devise means to retain the antiseptic in the timber in sufficient quantity to protect it from germs of decay.

"The tendency of the salt to leach out of the timber seems also to have been 'discovered' by the correspondent referred to, for he recommends that the salt be renewed annually, and thinks that if this were done the timber would last indefinitely. He has had experience in applying salt to telegraph-poles. This he has done by boring a hole diagonally downward into the heart of the timber, starting about three inches above the ground line and going three or four inches below the surface. The hole is filled with salt and then plugged. He states that after many years of observation this method of treatment has shown good results, and such is about what would be expected by experts in timber treatment. What this man has found out about timber treatment has been well known to engineers who have worked in that line, for a long time. What engineers have been looking for in the way of cheap substances for timber treatment is not so much a cheap material with preservative properties as one which will remain in the timber when once applied, or means to hold it in the timber. One means which has been extensively applied is to force in a solution of glue by hydraulic pressure, after the preservative has been injected. In order to properly impregnate the timber and to protect it from loss of the preservative it has been found necessary to steam the timber, place it in a vacuum, and finally use pressure to secure the desired penetration of the solution, and these various processes are what figure largely in the expense of the treatment. Should it be found advantageous to substitute common salt for other metallic salts used in timber preserving, the treatment would still be expensive, owing to the cost of handling the timber and the various processes necessary to get the material into the timber in the desired quantity, and hold it there."

A NEW DEFINITION OF LIFE.

SPENCER, in his "Principles of Biology," defines life as "the continuous adjustment of internal relations to external relations." This vital interplay between the organism and its surroundings has been interpreted somewhat mechanically by modern biology, which looks upon the body as a machine that transforms and evolves energy, very much after the manner of a steam-engine. Prof. Justus Gaule, of Zurich, writing in *The American Journal of Psychology* (January), asserts that the living organism is more than a machine, because it does not create energy directly from combustible materials only after building up its own tissues. A machine does work; but it does not create and repair itself. A second direction in which Professor Gaule would modify the current definitions of life is in emphasizing the fact that life is as much an interaction between various parts of the organism as between the organism and the world. One organ or one group of cells draws the materials that it needs for its work and for its own structure from other organs or other groups of cells. "The whole organism," he says, "resembles a chemical laboratory with as many apartments as there are organs or glands. The substances produced in each apartment are those needed in others either for the construction or for their work." Life consists partly in a continual process of interchange and of reconstruction at times sufficiently violent to tear muscles, to mutilate nerves, and to cause stoppage of blood—a process that goes on "in the interior of the organism without external excitement." One phase of this process the writer has studied experimentally in the frog. He says:

"The method by means of which I made these observations was to weigh the single organs, and, in order to be independent of the varying size of the frogs, I estimated in each case the relative weight of the organ to the weight of the body. The organism of the frog is especially adapted for these observations because of the hunger period during the winter months. During this time no food is taken and a minimum of work is done. Thus, if during this period the relative weights of the organs to one another vary, this can only happen by one organ losing while another gains, that is, one organ is reconstructed at the expense of another or from the material stored in another."

The results of the research showed that such variation takes place, one organ losing in bulk while others increase, so that at one time, for instance, the organs of sex grow at the expense of the muscles and the liver while at other periods the reverse change takes place. Gaule's general conclusion is that life is essentially a continuous process of reconstruction within the organism.

Does Water Ever Feed a Fire?—A correspondent of *The Scientific American* protests against the use of water to extinguish great fires, on the ground that in many cases the water "feeds" instead of putting out the conflagration. To this the editor replies as follows:

"We are aware that there is a popular impression that water thrown upon a fire assists the conflagration under certain conditions. We, however, are also aware that chemists do not consider this to be a fact. Water can not feed a flame unless it is separated into its constituent gases, oxygen and hydrogen. Water is the most destructive to fire of any liquid which can be

commanded in sufficient quantities for such a use, since it contains all the oxygen it can hold. The question, then, resolves itself into this: can water discharged upon a fire be separated into gases so as to feed the flame? The probabilities are decidedly against this. Water is every day separated into its constituent gases in all our cities in the making of water-gas, as it is called, so that the problem of accomplishing this is well understood. For the beginning of dissociation a temperature of 2,200° F. is required. The dissociation is complete at 4,500° F. It is very safe to say that these temperatures are not possible in the open air. The blast-furnace will give a temperature of 3,300° F. In a confined space, as in a water-gas plant, anthracite coal under a blast of air will pass the temperature required for dissociation; but with nothing to prevent the escape of the steam there is no reason to suppose that it can be made hot enough to dissociate it, and so there is no reason to believe that any open-air conflagration was ever fed by playing water upon it."

INACCURACY OF THERMOMETERS.

PROBABLY no instrument claiming to register with precision is so inaccurate as the average thermometer. This being so, it is somewhat amusing to notice the blind faith with which the average citizen depends on these devices for indicating temperature. As a "scientific instrument" each is apparently entitled to a respect approaching reverence, and its dicta are not to be questioned. The fact is that the variations among a dozen ordinary thermometers will often amount to five or six degrees—as any one can see who will glance at a druggist's window. With thermometers used for scientific work there is of course less variation, but their inaccuracy is often considerable, and in clinical instruments it may easily be so great as to affect a physician's diagnosis. Says *The Medical News* (February 28), in an editorial on "The Vice of Cheap Thermometers":

"A prominent hospital in this city has scarcely recovered from the shock of a recent discovery made by the members of its house staff, namely, that the thermometers in regular use in its wards vary so much as to render valueless the temperature charts which well-trained nurses have been taught to regard as one of their chief responsibilities. It is a rude awakening, indeed, for a physician suddenly to be made to realize that he has been treating for fever patients who have no fever, and that patients have been discharged as 'cured' whose temperatures were far from normal. Think of the wasted energy of sponge baths and tubbings; of antipyretics used without due warrant; of fluid diets forced upon half-starved convalescents who longed for solid food and would have been all the better for it; of patients kept in bed and in the hospital when they might have benefited by freedom out of doors. These are no imaginary evils; they are errors actually committed, and errors which we have no doubt are being repeated to-day in many of our best hospitals, where every possible care is supposed to be lavished on patients. Is this the hospital management of which Americans are so proud?

"In the hospital whose experience has been made known to us, actual tests of groups of thermometers used in the same wards and on the same patients, revealed differences too striking and too serious to be lightly passed over. In some cases these differences were as great as 2.5° F.—variations wide enough to prove embarrassing in diagnosis and misleading in treatment. This intolerable state of affairs has existed apparently for a long time—the inevitable fruit of a policy which seeks to divorce economy and efficiency. . . . Good thermometers are costly; cheap ones flood the market, and the tide rises even unto the sacred precincts of hospital wards, where it drowns all decent regard for the patient's welfare.

"It is not in hospitals alone that the vice of cheap thermometers has taken root. In the stock of the average drug-store in this city will be found a small number of clinical thermometers reliably certificated, and a much larger number bearing certificates of doubtful authenticity or having no certificate at all. These latter represent the practise of private physicians and the public in the taking of temperature at home. Most of these thermometers are cheap, many of them are old, and all of them are unreliable, because even when they happen to be accurate we can not feel sure of them, and we are bound to question and perhaps to discount their evidence. We have been accorded the privilege of testing selections from retail stocks, but we have found that variations of two degrees are not uncommon.

"Here is a matter of vital concern to the profession and the public. The voluntary testing and certification of thermometers by recognized experts is a safeguard within the reach of those who are willing to pay for it. Inasmuch as this protection is so commonly neglected, however, the question may well be raised whether compulsory certification is not desirable."

NEW VEGETATION ON A VOLCANIC ISLAND.

NEARLY twenty years ago, a great volcanic eruption absolutely killed all life in the volcanic island of Krakatau, near Java. An interesting account of the way in which this island has again become covered with verdure, without the agency of man, is given by Dr. O. Penzig in a recent scientific memoir noticed in *Nature* (March 26) by W. Botting Hemsley. The beginnings of the new vegetation were observed, it appears, by a Dr. Treub, who visited the island in 1887, three years after the eruption. Says Mr. Hemsley:

"He found that the first vegetable settlers on the covering of pumice-stone, lava, and ash were microscopic algæ. These organisms covered the surface with a slimy layer, which acted as a decomposing agent and created a suitable substratum for ferns, of which about a dozen species were already abundant in 1886. Dr. Treub also observed a few individuals of fifteen species of flowering plants, most of which had sprung from drift-seeds. In the spring of 1897 a party of botanists visited the island, and . . . sixty-two species of vascular plants were observed on Krakatau and the neighboring islets, Lang and Verlaten. Fifty of these colonists are flowering plants, representing twenty-one natural orders, and it seems highly probable that they all reached the islands independently of man. Classifying these fifty-three species according to the assumed means by which their seeds were conveyed to the islands, 7.54 per cent. were possibly carried by birds, 32.07 per cent. were probably wind-borne, and 60.39 per cent. were almost certainly cast up by the waves of the sea. No additional species of fern appears to have established itself in the islands between 1886 and 1897. This is inexplicable, because the region is rich in ferns, the spores of which, one would suppose, would be brought by winds in abundance. Apart from ferns, the probable 'eolophilous' element consists of eight Compositæ, six grasses, and four orchids. After passing the strand belt of vegetation, which is by far the most numerous in species, dense thickets were encountered. The interior and higher part of Krakatau is still much less covered with vegetation, ferns largely preponderating."

Amongst the flowering plants were several species of orchids. Krakatau, says Mr. Hemsley, is about twenty miles distant from both Java and Sumatra, and the most interesting question suggested by the new vegetation is, "How far does it afford a solution of the problem of the origin of the vegetation of much more remote islands which have more than a littoral or coral island flora?"

How Mosquitoes Pass the Winter.—That adult mosquitoes live through the winter is quite evident to all who have seen and felt them on the first warm days of early spring. Now we are told in addition that the larvæ and even the egg of the insect may survive great cold. Says a writer in the *Revue Scientifique* (April 4):

"It is well known that mosquitoes hibernate in the adult state; a certain number of these unpleasing insects pass the winter in various retreats—in slaughter-houses, granaries, cellars, etc., and in the spring they resume active life and multiply their kind. Hibernation, however, does not always take place in the adult form only; the larva can also pass the winter with safety. This has been shown by the observations of Mr. John B. Smith made during the winter of 1901–2 and at the end of 1902. The winter cold does not regularly destroy aquatic larvæ. They will bear a considerable degree of it; they have been seen surrounded with ice, the water having frozen around them, and after the

melting of the solid envelope they still lived. The same larva may be alternately frozen up and melted several times in the course of the winter. This is true of the *Culex pungens* and of several other species both of Culex and of Anopheles, etc. Certain species hibernate in the adult state; others in the larval state also; others still hibernate only in the larval state, and some hibernate in the egg. But many have hibernating larvæ; with many the larvæ pass the winter under the ice, or in the ice, without the least injury. It may easily be seen that cold will not kill mosquitoes, for numbers of polar explorers have noted the abundance of the insects in the regions of ice; and it is well known that the mosquitoes are one of the plagues of the summer in the moist parts of Alaska.—*Translation made for* THE LITERARY DIGEST.

INDUSTRIAL CONDITIONS CHANGED BY THE SMALL ELECTRIC MOTOR.

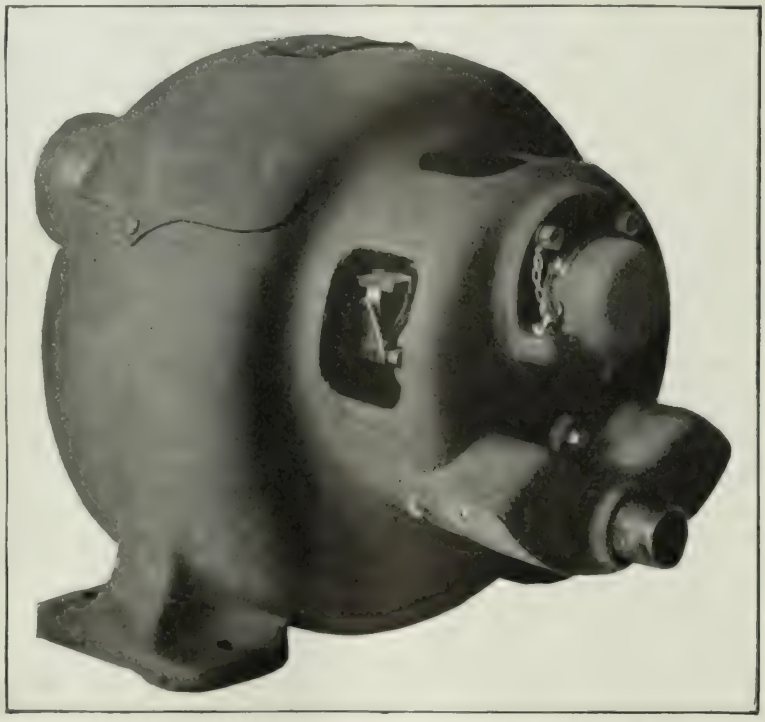
TWENTY years ago the electric motor was hardly more than a toy, or at best a bit of laboratory apparatus. Since then, and especially in the past ten years, it has almost revolutionized methods of producing, transmitting, and distributing power. Some interesting facts are given in an article on the subject contributed to *The Engineering Magazine* (April) by F. M. Kimball. An attempt to indicate all the principal lines of industry in which small motors are now successfully employed, says Mr. Kimball, would require volumes. He continues:

"As motors have improved in quality and have been purchasable at lower prices, and central stations have multiplied over the country, distribution systems have been extended, and the cost of operating motors lessened, until they have come into such common use that the small steam-engine is seriously threatened, and various oil and gas engines as well.

"When one considers the enormous amount of power generated and distributed for manufacturing purposes in the United States, and then remembers that probably less than seven per cent. of all this power is distributed electrically, he can begin to form some idea of the vast possibilities yet unrealized in the use of electrical motors. It is estimated that there are at the present time not less that 60,000 motors in daily operation in America, exclusive of those used for railways, automobiles, fans, and elevators, and these 60,000 motors—which represent an investment of about $12,000,000—are supplying something like 1,000,000 horse-power. Among the more urgent reasons for the adoption of electrical distribution of power and motor drive are: Increased production due to possibility of almost perfect maintenance and regulation of speed; saving in power supply; saving in floor space required for producing a given output; flexibility of machine location with regard to light, sequence of operations carried on, and ease of supplying the raw material and removing the finished product; elimination of dust and dirt; safety to operatives; ease and facility of adding to the existing equipment; ability to work individual machines overtime without wasting more power in operating line shafts than is consumed by the machine operated; independence of operation in each machine, *i.e.*, freedom from a complete shut-down if a main shaft or belt gives out; possibility of lighter roof structures—no heavy shafts and belts having to be supported—and consequent decrease in cost of building. . . . . .

"There is no problem of more vital interest to the small manufacturer, repair-shop man, or user of light machinery, than that of obtaining a cheap, reliable, simple, and continuous source of power. This question is often the dominating factor in determining the location of a shop or manufactory. Nearly everything else is subservient to it. There are throughout the United States thousands of mechanics and manufacturers using light machinery, who are quartered in out-of-the-way, low-studded, badly ventilated and badly lighted shops, for the reason that it is only in such locations that they can find shafting to which they can attach their machines and from which they can obtain the necessary power to operate them at a reasonable cost.

"Aside from the prejudicial effects to health and eyesight arising from working in such unhygienic surroundings, they are a positive and serious detriment to a man's business success. People do not like to enter gloomy, out-of-the-way, ill-ventilated, and dirty shops to place their orders or to look for such articles as they may be in search of. A pleasant, well-lighted, and well-ventilated, easily accessible store or factory is an absolute necessity to any man desirous of making the most of his business. Even if a room be clean, light, and well ventilated at the start, it soon becomes gloomy and dirty if power is supplied to its occupant from the time-honored line shaft with its attendant heavy belts, frictional electricity, constant dust, and dropping oil."



A MODERN DIRECT-CURRENT ONE-HORSE-POWER MOTOR WITH TERMINAL COVERS.

Courtesy of *The Engineering Magazine* (New York).

With the advent of the electric motor, the writer reminds us, the necessity of putting up with these conditions is largely eliminated. In most towns there are stations from which a supply of electricity may be obtained, and also attractive and accessible locations for small shops or factories which want only power-supply to make them available. The electric motor is the connecting-link between these two, and the user has at once at his disposal a wonderfully flexible supply of power at a reasonable price. Says Mr. Kimball in closing:

"The flexibility of a motor system is of the greatest advantage. There is hardly a shop where frequent changes are not made either by putting in additional machinery, or changing the location of the existing machines. When such machines are driven by motors, it is far easier to change the wire circuits supplying them than to change a line of shafting with its attendant pulleys and belts. Furthermore, in engine-driven factories the entire location and layout has to be dependent upon the relative accessibility to, and location of, the driving-shafting. This often results in the necessity of arranging the machines most disadvantageously, so far as strict regard to the sequence of operations to be carried on is concerned. Motor-driven machines, on the contrary, may be located to the utmost advantage in relation to the general layout of the factory and without regard to a line shaft. As motors may be attached to the wall or ceiling, the belts may be short and the pulleys light, causing a material saving in floor and ceiling space.

"The final results of all these desirable features of electric-driving and the use of motors are increased output, lower cost, higher quality of product, and larger profits."

THE RELIGIOUS WORLD.

A BISHOP'S PLEA FOR RITUALISM.

THE pending discussion of the question of ritualism in the religious circles both of England and of this country gives timeliness to an article in *Munsey's Magazine* (April), written by one of the most pronounced of American ritualists, Bishop Grafton, of Fond-du-Lac. In this article, the bishop makes a frank popular appeal for ritualism, urging that it is (1) based on divine sanction; (2) justified by the good works of its supporters; and (3) adapted to human needs. His opening argument is one based upon the natural beauty of the world:

"God is a ritualist. Nature is only God thinking out loud. He speaks in the truthful precision of mathematics, as, according to the inverse square of their distances, the stellar bodies curtsey and bow to one another. He, who is not only Beautiful, but Beauty Itself, can but join in marriage together the useful and the beautiful. The same laws which make for health and life paint the sky in its sunset colors and clothe the bending grain in ripples of light.

"As the Almighty, He loves to hide His power. Verily said the prophet: 'Thou art a God that hidest Thyself.' The material universe is but a *velamen Domini*. As Power hidden as Love, He makes Himself known. So all Nature is but a symbol of Himself. If we could understand its inner meaning, the universe would be seen to be an expression of the Christian creed. He who is the Eternal and the Ancient of Days is yet also Eternal Youth; and so all Nature is full of the song of an ever-enduring life. 'Red in tooth and claw,' her pessimistic poetic interpreter may see no sign of love in the blood-stains that rest upon her; but Nature cries out: 'Only by pain and death do all things enter into higher life.' Truth, beauty, symbolism—these are the elements of ritualism, and so God is a ritualist."

To those who make the objection that "this dressing up of the ministers, and waving candles to and fro, and marching ceremonial, is entirely puerile and un-American," Bishop Grafton replies: "American men like ritual very much. A large number of our best business men, lawyers, and statesmen belong to secret orders in which vestments and lights and ceremonial prevail. The fact is that ritual is what keeps these orders alive." Proceeding to a justification of ritualism by the good works of its advocates, the bishop says:

"It was the ritualists who started special work in England among the poor. Before the Salvation Army was in existence, men like Fathers Lowder and Mackonochie and others had begun this work. Since then other ritualists, some in the garb of the Cowley Fathers, some as Sisters of Charity, have gone forth from England into every foreign mission-field. Persons among the highest ranks of society, both men and women, have given themselves up to this evangelizing work."

The "dark and dour aspect" of the Puritans' religion, we are told, is "passing away." Christians are "again learning how to make their places of worship glorious temples of praise." We quote further:

"Our old Puritan forefathers built their meeting-houses, and so did the early Methodists and Scottish Covenanters, with studied plainness. Steeples were forbidden. Organs were regarded with displeasure. Interior decoration was out of place, as savoring of vanity. The senses were not to be gratified, that the spirit might be the more free to worship God.

"But the Divine Goodness has given man a dual nature. We have bodies as well as souls. Both come from His hand who pronounced all good that He made, and we shall not worship less with the spirit in worshiping with the body also.

"Those who have not studied the condition of the church in England have scarcely any idea of the condition into which the services and church buildings had sunk in the Georgian period. No better object-lesson of the wonderful transformation can be found than in the restoration of the great cathedral of St. Paul, in London, with its glorious mosaics and great altar, with its cross, its lights, and its magnificent reredos, whereon is displayed our Lord in His triumphant offering of Himself for us on Calvary's Cross."

The bishop deals, in conclusion, with the objection that "if we emphasize the outward too much we may lose the inward," that "the soul may be so occupied with the form of worship as to forget the Blessed Being to whom it is due." On this point he says:

"There is this danger. There is danger in everything, for that matter; no Garden of Eden but has somewhere its serpent of temptation lurking beneath its flowers. But the answer that Gladstone made is, we think, the right one. So long as the ritual does not come in between the soul and its Maker, detain it in itself, it is not harmful, but performs its true office in aiding the soul in its communion with God."

PROFESSOR HILPRECHT'S EXCAVATIONS AT NIPPUR.

IT may be doubted if any publication in recent years has excited interest among Biblical scholars equal to that which has been manifested in the volume recently put forth entitled "Explorations in Bible Lands in the Nineteenth Century," edited by Prof. Herman V. Hilprecht, who occupies the chair of Assyriology in the University of Pennsylvania. In the preparation of this large volume, Professor Hilprecht has had the assistance of four distinguished German scholars. Professor Hommel, of the University of Munich, writes on "Arabia"; Dr. Benzinger, of Berlin, on "Palestine"; Professor Steindorff, of Leipsic, on "Egypt"; and Professor Jensen, of Marburg, on "The Hittites." The chief interest of the books, however, centers about the four "campaigns" conducted under the auspices of the University of Pennsylvania for the purpose of making a systematic exploration of the ruins of Nippur. The fourth of these campaigns closed in May, 1900, and a fifth is being planned for the coming September. Professor Hilprecht's account is devoted entirely to the discoveries made, and occupies about two-thirds of the work.

PROF. HERMAN V. HILPRECHT,

Who is credited with some of the most important archeological discoveries of recent times.

Courtesy of A. J. Holman & Co., Philadelphia.

Nippur, the scene of the explorations, is situated between the Euphrates and Tigris in Babylonia. It is one of the oldest towns spoken of in the Scriptures, being mentioned under the name of "Calneh," in Gen. x. 10. The location and partial excavation of the famous temple library and priest school of Nippur have been pronounced "one of the most far-reaching archeological discoveries of the whole last century."

The professor tells us that the mound covering the library rises on an average of twenty-five feet above the plain, and covers an area of some thirteen acres. Only about the twelfth part of the library has thus far been uncovered, out of which over twenty thousand cuneiform tablets and fragments, mostly belonging to the third millennium B.C., prior to Abraham, were

taken. This is, consequently, "the oldest library in the world." Says Professor Hilprecht:

"More than four thousand cuneiform tablets had been discovered in the upper twenty feet of accumulated débris . . . during our excavations of 1889-90. They included several hundred contract tablets and temple lists written at the time of the Assyrian, Chaldean and Persian rulers (about 700–400 B.C.), a few fragments of Neo-Babylonian hymns, letters, and syllabaries, a considerable number of business documents, dated in the reigns of the kings of the first dynasty of Babylon (about 2300–2100 B.C.) and more than twenty-five hundred literary fragments of the third pre-Christian millennium, generally half effaced or otherwise damaged. I consequently had reached the conclusion that either there were two distinct libraries buried—an earlier and more important, and a later comparatively insignificant one lying on the top of the former—or the mound concealed the remains of but one library continuously occupied and repeatedly restored, which contained documents of many periods in the same room."

THE EXCAVATIONS AT THE TEMPLE COURT IN NIPPUR.
From "Explorations in Bible Lands during the Nineteenth Century."

This discovery has an important bearing upon some of the critical disputes as to the authorship of the books of the Pentateuch, and other of the Scriptural narratives. The traditional views as to this authorship have been denied on the ground (partly) that no such degree of culture as was implied by the writing and preservation of these books existed in the days of Moses, in that part of the world. Professor Hilprecht has unearthed multiplication-tables, grammars, and textbooks used five thousand years ago. He finds evidences that free-hand drawing, clay-modeling, and sculpture were taught. He produces works of reference, scientific treatises, and various technical volumes on astronomical and religious subjects.

Another important result achieved may be said to be the determination of the character of the Babylonian temple and its storied tower, or *ziggurat*. Professor Hilprecht's understanding of the Temple of Bêl, in Nippur, offers the first reasonable explanation of the passage in Genesis concerning the erection of the Tower of Babel: "Let us build us a city, and a tower, whose top may reach unto heaven." The professor writes on this point:

"Most of the names of Babylonian temples express a cosmic idea. According to the old Babylonian conception of the gods and their relation to the world's edifice, En-lil, or Bêl of Nippur, is 'the king of heaven and earth,' or 'the father' and 'king of the gods' and 'the king of the lands,' *i.e.*, the earth. Bêl's sphere of influence, therefore, is what we generally style 'the world.' It extends from the upper or heavenly ocean (the seat of Anu) to the lower or terrestrial ocean (the seat of Ea), which was regarded as the continuation of the former around and below the earth. In other words, Bêl rules an empire which includes the whole world with the exclusion of the upper and lower oceans, or an empire confined on the one hand by the starry firmament which keeps back the waters of the upper ocean (Gen. i. 6-8) and is called heaven (*an*), and on the other hand by that lower 'firmament' which keeps the waters of the lower ocean in their place (Gen. i. 9-10) and is called earth (*ki*)."

It is most interesting to note that Professor Hilprecht's investigations have led him to conclusions the very reverse, in important respects, of those set forth by the younger Delitzsch. In this connection we quote the following tribute from a German periodical, *Der Alte Glaube* (The Old Faith). It has reference to Professor Hilprecht's recent lecture in Leipsic, and is translated by Dr. Adolph Spaeth in the Philadelphia *Lutheran*:

"High as our expectations were, they have been surpassed by Hilprecht. Tho he had obtained such great results in this field, Hilprecht spoke with a modest objectivity, a dignified reserve, free from all self-complacency and conceit, and, what we would particularly emphasize, with the fervent enthusiasm of the believer, which at once gained the hearts of his audience. It was no small venture to speak in the language of an Isaiah and Jeremiah before a society which recognizes no religious foundation whatever. But Hilprecht did this very thing. He introduced his remarks with the confession that in spite of all the masters in Old-Testament interpretation, he had never seen such a powerful demonstration of the full and unshaken truth of its prophecies as on the ruins of that great 'Island of the Dead,' as we must call to-day the most ancient civilized country of the earth, situated between the rivers Euphrates and Tigris. Not only his introduction, however, but his whole presentation, was full of the light of scriptural prophecy. The curse of the prophet, 'How art thou fallen from heaven, O day star, son of the morning! how art thou cut down to the ground, which didst lay low the nations!' resounded from those chaotic heaps of ruins which were presented to the hearer in word and picture. But it was even more daring to testify against the windy speculations of a Dr. Friedrich Delitzsch, and thereby to challenge the fury of all the critical spirits of Germany. But here also Hilprecht did not hesitate, in the presence of this vast assembly, to express his firm and unshaken conviction. 'As the attempt has recently been made to trace the pure monotheism of Israel to Babylonian sources, I am bound to declare this an absolute impossibility, on the basis of my fourteen years' researches in Babylonian cuneiform inscriptions. The faith of God's chosen people is: "Hear, O Israel: the Lord our God is one Lord." And the faith could never proceed from the Babylonian mountain of gods, that charnel-house full of corruption and dead men's bones!'"

The Philadelphia *Sunday-School Times* adds:

"As for Professor Hilprecht's personal views concerning the Bible, readers of *The Sunday-School Times* have had ample opportunity to judge during the sixteen years in which he has been writing for this paper as a member of its editorial staff. And those who know him intimately know, as the public can not, of the simple-hearted, reverent faith of this scholarly man, of his trust in his personal Savior, and of his unshaken confidence in the Bible as containing the Word of God."

Fifteen Churches a Day.—People who are pessimistic about religious conditions in the United States may well take heart from the figures supplied by the Rev. Dr. Erskine N. White, secretary of the Presbyterian Board of Church Erection. Dr. White is responsible for the statement that in the United States, every day in the year, fifteen church buildings are built

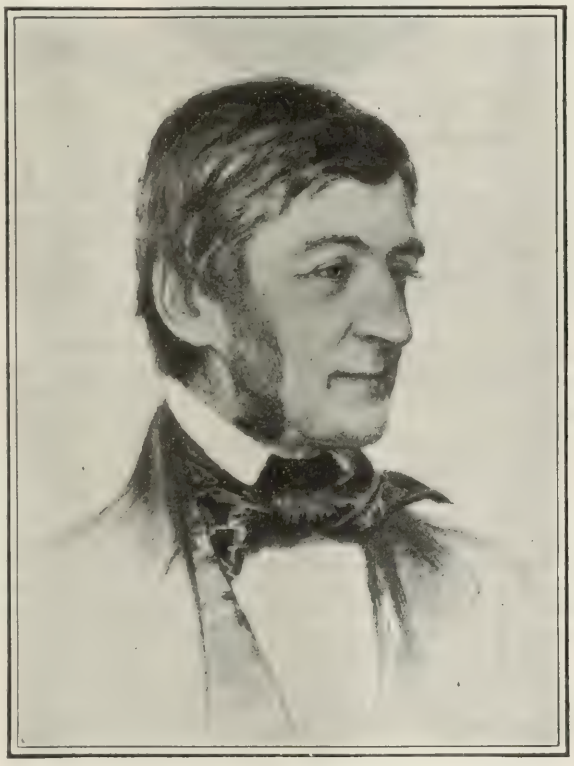
and dedicated. *The Church Economist* (New York) prints his calculation, with the following additional information:

"Other men say the number per day will not exceed twelve, but the consensus of opinion places the number between twelve and fifteen. As to the part played by each denomination in the result, authorities agree that the following figures, based on the smaller total, are substantially correct: Methodists build three churches a day, Baptists two, Lutherans one and one-half, Roman Catholics one and one-half, Presbyterians one, Episcopal one, Congregationalists three-quarters, and miscellaneous, which would include the Reformed, United Presbyterian, Disciples of Christ, United Brethren and Southern Presbyterian, Baptist and Methodist bodies, one and one-half.

"The same ratio, according to Dr. White, is not maintained in the cost of the buildings erected, altho he admits that average costs are harder to determine than are the number of buildings. His opinion, agreed to by the authorities, is that Episcopal and Roman Catholic churches will average in cost slightly higher than those of other bodies. Presbyterian and Congregational, and perhaps Lutheran, rank next, while Methodist and Baptist will average lower cost than others. The average cost per church building, including all bodies, based on the best obtainable statistics, is $7,000. The average daily expenditure for church buildings is, therefore, from $85,000 to $105,000."

AN ENGLISH VIEW OF EMERSON'S RELIGION.

THE revival of interest in Emerson, occasioned by the plans for the celebration of the hundredth anniversary of his birth, is reflected in a searching estimate of Emerson's philosophy which appears in *The North American Review* (May) from the pen of Dr. W. Robertson Nicoll. It is evident that Dr. Nicoll, who is himself a leader of evangelical Christianity in England, is far from accepting Emerson's religious beliefs *in toto*; but he pays a remarkable tribute to one who, as he admits, has become "the spiritual guide of thousands." He writes:



RALPH WALDO EMERSON.
From a Crayon Drawing by Samuel Rowse.

"It was recorded lately that the most reactionary and powerful of Russian statesmen kept always on the table beside him the essays of Emerson, and referred to them as an oracle. I can testify to the mighty force with which he acted on the minds of young men in Scotland early in the sixties. The absence of a copyright convention between America and Great Britain had some good effects. Many in the old country who could not afford to buy the new books of Carlyle and Tennyson were able to purchase the innumerable cheap reprints of Lowell, Longfellow, Emerson, Hawthorne, Harriet Beecher Stowe, and others. Young men, now in middle life, knew these authors from cover to cover, and lived by them. Very recently, a shilling edition of Emerson's essays was published in England, and twenty thousand copies were sold at once."

Proceeding to an analysis of Emerson's religious faith, Dr. Nicoll calls attention to the fact that "his ancestors were not only Puritan, but clerical." The Rev. Peter Bulkeley, rector of Odell on the Ouse, in the time of Laud, had Emerson as his direct descendant. He was "driven out of the country by Laud for his non-conformist practises, and in middle life sold all his property and crossed the seas to New England, and founded the town of Concord." Yet Emerson, with all his affection for the past, was a man of the new time and the new world; his philosophy was a peculiarly American philosophy. Says Dr. Nicoll:

"The principles of Transcendentalism are to be felt as religious emotions, or grasped by the imagination as a poetic whole. They are not to be proved, neither are they to be set down in proportion as the articles of a creed. The truth comes to us not when we are critical, not when we are working, but when we are receptive and passive. The knowledge thus conveyed does not require to be defined. Its foundation need not be strengthened. If we enter the innermost temple of the Absolute, as Emerson says we can, we shall know that we have been there. To affirm the experience is our business. To affirm it in words that adorn it, was the task to which Emerson triumphantly addressed himself.

"Bearing in mind Emerson's intense dislike of creeds in this age of the world, we may state his ruling intuitions. He affirmed the doctrine of the Over-Soul—that under the changing phenomena and below the jarring strife of atoms and men there lies a single First Cause; an infinite, eternal and perfect Substance; a divine noumenon of which earthly phenomena are manifestations. Nature and the soul alike are informed by it, and they are governed by the same laws. These laws are Progress and Righteousness. The whole world is an omen of good. If humanity places itself in right relations with God and nature, it must be purified and elevated. The more complete the surrender, the more perfect will be the peace. So long as man remains out of harmony with the Over-Soul, all things are hostile and incomprehensible. Emerson declined to affirm the personality of the Divine Substance, but he had no doubt that the nature of things was kind and righteous. Every soul was independent and self-determined, but bound to submit its selfish instincts to the universal law and thus become divine. When the soul opened itself to the Ideal, and admitted the inflowing of the Over-Soul, there was a tide of ecstasy—the human and the divine were merged. Optimism was but the direct inference from these propositions. Accepted frankly, they would result in a serene belief in the nature of things and the hopefulness of man's estate, and in a complete refusal to believe in the indifference and cruelty of the sum of things."

Transcendentalism obviously has much in common with Christianity on the ethical side. But from the Christianity of the Apostles and the Church it is sharply separated by its denial of the supernatural. Dr. Nicoll writes on this point:

"The special claim of the Christian religion is the claim to finality. 'God . . . . hath in these last days spoken to us by his Son.' 'Once in the end of the world He appeared.' These days are the last days. Christ is the last word of God. But Emerson denies miracle and denies also the finality of any book or any Redeemer.

That the administration of eternity is final, that the God of revelation has seen cause to repent and botch up the ordinances of the God of nature, I hold it not only irreverent but impious in us to assume.

"To him all religions were alike imperfect and useful, and the wise man keeps his mind open and receptive to everything of good that floats by him from whatever source. It is degrading to depend wholly on the past.

If a man claims to speak and know all God and carries you backward to the phraseology of some old moldered nation in another country, in another world, believe him not.

"The fountain of inspiration was still flowing. The soul that

kept itself quiet and expectant would receive light. So better books than the Bible would be written, higher characters than the Christ would appear. 'We, too, must write bibles to unite the heavenly and the earthly worlds.' There can be no blind teacher.

[illegible] lived with God feel as ever. The human mind can not be enshrined in a [illegible] barrier on one side to this unbounded, unboundable empire."

Dr. Nicoll thinks that special stress ought to be laid on Emerson's "expectation of a Messiah."

"His attitude was almost Jewish. A Messiah was due from God. He would probably be an American Messiah. Americans must not miss him. Where would the Messiah be found? Emerson's study had convinced him that the Messiah would appear among the 'cranks,' so-called. '*None of the princes of this world knew.*' So he was amazingly tolerant to men like Bronson Alcott and Thoreau, women like Margaret Fuller and experiments like Brook Farm. He viewed them with an open and hopeful mind. The regeneration of the world, in his judgment, would come from some modern seer. And tho he was keenly alive to the occasional absurdities in *The Dial* and its contributors, he was tolerant and more than tolerant . . . . He never weakened in his optimism, neither was he discouraged by the appearance of many false Messiahs. He looked upon them as the inevitable precursors of the true Christ."

Emerson's great shortcoming, according to Dr. Nicoll's view, was his failure to meet the problems involved in the darker aspects of life. We quote, in conclusion:

"He did not face the problem of sin. He has little to say of sorrow, and is far poorer in pathos than his friend Carlyle. Christians may still claim that theirs is the only religion that has effectually measured its strength with sin, sorrow, and death. Emerson would have replied to this criticism that he was not a system builder, and that he was not called on to deal with every subject. Perhaps something more may be said. The great griefs of his own life were those of bereavement. His cries after the loss of wife and child, coming from a nature so controlled and calm, are strangely memorable. Other troubles he did not seem to fear. Drudgery, calamity, and want, he said, were instructors in eloquence and wisdom; but he never forgot the loss of his little son, and almost his last words were, 'Oh, that beautiful boy!' He deeply pondered bereavement as the antagonist to happiness; and, if I am not altogether mistaken, the inner meaning of his poetry is, that human beings should not too deeply engage their affections in a world like this."

A LEADER OF PROGRESSIVE JUDAISM.

A RELIGIOUS ministry covering nearly fifty years, thirty of which were spent at Temple Emanu-El, New York, closed with the death of the Rev. Dr. Gustav Gottheil. Rabbi Gottheil, observes *The American Hebrew* (New York), has been for long the most prominent official figure in metropolitan Judaism, and "a striking and dominating figure, by consequence, in American Judaism at large." The same paper says further:

"Two excellencies and merits stand out clearly in all Dr. Gottheil's career, marking him out over and above many of his peers. The first was the desire, always dominant in his mind, to compel the recognition for Judaism of the Christian world. He was frequently accused of ogling with Christianity, of servilely fawning upon it. How much those accusers erred in knowledge of the man! He was not of the kind to fawn upon any one; his strong will and self-reliance laughed the suggestion to scorn. It was not that he thought more than he should of the dominant church; he earnestly strove that the church should think better and learn more of the synagog. He felt that if he could but familiarize church leaders with the glorious teaching of his paternal faith, that an end might come to the prejudice and bigotry which persisted in viewing askant the teachings in which a Jesus was reared and a Paul gave early instruction. Whatever opinion may be held by less enthusiastic souls as to the feasibility of thus overturning prejudice by more intimate knowledge, the fact remains that Dr. Gottheil made many friends for Judaism by his propaganda among our Christian brethren.

THE LATE GUSTAV GOTTHEIL,
Rabbi-Emeritus of Temple Emanu-El, New York.

"Another feature was his strong Americanism. If the writer of these lines be not mistaken, he was one of the first to insist that the sermon and the service in German must give way to the English vernacular, the language of the country. Himself a German, he understood that patriotism demanded the surrender of the mother-tongue in public functions. The philosophy of thus subordinating old attachment to modern and growing requirements in the rising generation needs only to be mentioned to be appreciated and approved.

"But Dr. Gottheil's chief fame will always rest upon a third accomplishment—the practical utilization by means of the sisterhood of all the vast capacity for good and noble work reposing in the women of Israel. He was the first to organize a sisterhood, the first to systematize and foster woman's innate tendency to be loving and helpful. Easily the guiding genius of the sisterhood of his own temple, he also became the model and inspiration of many more."

The Outlook says:

"There was a national interest attached to the life and work of Rabbi Gustav Gottheil, who died in this city last week, not merely because he was at the head of the largest and richest synagog in the United States, but because he was a man of eminent scholarly attainments, of liberal ideas, and of broad human sympathies. He was a Prussian by birth, and was educated to be a rabbi from his earliest childhood. In his university days he first came under the influence of the famous Rabbi Plessner, and later listened to several of the progressive leaders among the Jews in what was then beginning to be called Reformed Judaism. Dr. Gottheil held pastorates in Berlin and in Manchester, England, and was a delegate from the English Jews to the famous Leipsic Synod, which adopted strong resolutions in favor of reform ideas. He had been pastor of the Temple Emanu-El for twenty-five [thirty] years, and the congregation over which he presided was noteworthy for its intellectual and social character. Dr. Gottheil was a really extraordinary linguist, and his scholarship in this direction has been repeated by his son, who now holds the chair of Semitic languages in Columbia University. Among other services in connection with which Dr. Gottheil's name will be remembered was that of arranging the first Jewish hymn-book with music which was printed in this country, and of representing his people at the Congress of Religions held in connection with the Chicago World's Fair. He was an interesting speaker, and has often held in close attention audiences composed of men of all creeds. At the funeral services Dr. Silverman paid an eloquent tribute to Dr. Gottheil's memory when he said:

"'Dr. Gottheil was a reformer in every sense of the word—a reformer of creed, of ritual, of ceremonies, but preeminently of men. His religion was subordinated to the needs of men. He loved men better in their working clothes than in holiday attire, and preferred a religion that smelled of the shop, the counting-room, the factory; a faith that could be used as a working tool wherewith to smooth off the rough edges of human nature, to curb the impassioned spirit, to check the turbulent lust, to reverse the whole trend of men's evil ways. Dr. Gottheil believed in a progressive Judaism. He believed and taught a Judaism that vibrated with the life of the present day, that was abreast of modern science and philosophy. Dr. Gottheil was a Zionist, an ardent lover of Palestine, with all its cherished memorials. He voiced the sentiments of many thousands who believed like himself that Israel must prove its strength before the world and demonstrate its ability to govern itself. He was a Zionist, but still an American. He was a fervent Jew, yet cosmopolitan. He was an ardent defender of his faith, yet ever ready to recognize the good in other faiths.'"

FOREIGN TOPICS.

EUROPE ON THE ROOSEVELT TOUR.

KING EDWARD VII. and the President of the United States happened to set out on a grand tour at about the same time, and their respective journeys will be of equal duration. But the British monarch in Portugal, Italy, and France inspires less animated comment throughout the European press than does the American Executive in the Western States of the Union. Mr. Roosevelt's speeches have elicited column after column of editorial opinion in leading official and semi-official organs abroad. Times have indeed changed since Henry Ward Beecher complained that he hungered in vain for American news during his trips to continental Europe. The tone of foreign comment on all that Mr. Roosevelt has said so far is friendly in England, dubious in Latin Europe, and hostile in Germany. The President has undoubtedly created a sensation by what is considered his "extension" of the Monroe Doctrine. This extension is deemed to be embodied in his assertion that the United States will not tolerate any such control of the affairs of a South American republic as would be equivalent to a territorial acquisition. A veritable sensation has been created in Germany by this Presidential pronouncement. The *Hamburger Nachrichten*, that stalwart champion of the Bismarckian tradition, enters a vehement protest. President Roosevelt's latest exposition of American foreign policy it considers "a spirited challenge of the whole non-American world." It says:

"According to Mr. Roosevelt, the duty of the United States to itself and to its weaker sister republics requires it to see that none of the great military Powers on the other side of the ocean violates the rights of those republics. This duty forbids not only acquiescence in territorial acquisition, but also compels the United States to resist any control that would be tantamount to territorial acquisition. This actually exceeds the limits of the Monroe Doctrine. That Doctrine only says that European Powers have no right to meddle with the internal affairs of America, and that the further establishment of European colonies in America is not permissible because the whole American continent is already under the sway of civilized governments. A child can see that the conclusions of President Roosevelt can not logically be drawn from Monroe's thesis, to say nothing of the circumstance that the Monroe Doctrine was originally nothing more than the personal opinion of the Chief Executive of the United States in the year 1823, that it has always remained his mere personal opinion, and has never received binding legal recognition. Hence there can not be so much as a pretense that it has received the binding force of international law for European nations. Not only does Mr. Roosevelt know this very well, but he frankly acknowledges it."

The Bismarckian organ further asserts that "American conceit" has grown "immeasurably," as any one can see from these Roosevelt speeches. "This is the very natural outcome of the handling the United States is receiving even from Germany," and it "must vividly recall" Bismarck's familiar assertion that the Monroe Doctrine is "an incredible impertinence." The German daily thus concludes:

"The Monroe Doctrine, as interpreted by Mr. Roosevelt, is a bare assumption, justified by nothing whatever. European international law, which the United States has formally recognized as fully binding upon itself, emphatically forbids any one nation's exclusive domination in a particular continent. If the United States, as a sort of suzerain, vindicates a right to prevent European Powers from concluding any arrangements with South American Powers, no matter what those arrangements may be, it will amount to a naked proclamation of the view that might makes right. The question arises whether might is really on the side of America, and if this matter could not be decided against the United States. As yet its might has not been preeminent even in warlike deeds. Little Spain counts for no more than the prattle of Mr. Dewey."

These sentiments find hearty indorsement in the German press. The United States has been spoiled by the "abject fawning" for its "favor" of which Germany has been "guilty." Such is the opinion of the *Rheinisch-Westfalische Zeitung*, among many others, which roundly scores Baron Speck von Sternburg, the representative of William II. in Washington. "How in all the world," asks this organ, "can it concern the ambassador of the German empire if Mr. Roosevelt undertakes a trip to the West? And since no other ambassador or minister turned out, why must Herr Speck von Sternburg be the one to push in? Why this running after a man who, like his whole nation, is unable to comprehend such spectacular politics?" The organ we are quoting expresses contempt for "Herr Speck von Sternburg," who pronounces "the treasured Bismarckian principles antiquated" and went to the railway station to "abstract a shakehand" from the President. What Germany must do, in the opinion of this and other journals in the fatherland, is stop "servilities of attitude" toward the United States, which is "an upstart Power" and "not to be put on a level with the great historical states." The United States, "like every upstart," misunderstands any "consideration" accorded it. And so forth and so forth. The *Kreuz Zeitung* (Berlin) says Roosevelt is really looking forward to the day when every European Power will be driven from the American continent. The whole tone of Roosevelt's ideas, it says, is ultimately menacing to Great Britain, the possessor of Canada. Nothing of this sort has, apparently, occurred to the British press. The London *Times* thinks the President's utterances regarding South America and a great navy are due to the fact that the United States has a vast inland population which necessarily fails to appreciate fully the significance of sea power. We read:

"Away from the two great seaboards of the republic the vast inland population of the United States is yet only imperfectly educated to the inexorable necessity of naval power for the practical maintenance of the very doctrine to which every State in the Union is doubtless ready to yield hearty assent in theory. One is apt to forget that, tho the American republic is watered by two oceans, there are vast numbers of Americans in the heart of that great continent who have probably never seen the sea, or who at least have never realized what the sea means in the life and mutual relations of nations."

The idea that President Roosevelt has any ultimate reference to Canada is not tolerated by the Birmingham *Daily Post*, which puts the matter thus:

"The Dominion of Canada, to which not only British, but United States emigrants are flocking in rapidly increasing numbers, is by every voluntary tie of love and loyalty bound up in the British empire. Our West Indian islands are valuable possessions not lightly to be surrendered; while British Honduras, in Central America, and British Guiana, in South America, are footholds on the Western continents which would make us jealous of outside interference likely to disturb the international equilibrium in that part of the world. So far, then, our interest in the Monroe Doctrine is identical with that of the United States, and President Roosevelt's statement on the subject need cause us no concern."

The President's remarks regarding the efficiency of armies and navies should be deeply pondered, thinks *The Daily Telegraph* (London), because the British army and navy are none too efficient. *The Standard* (London) declares that Great Britain does not want financial control of any of the states in the New World. As regards the isthmian canal it adds:

"There was a time when his reference to the projected canal through the isthmus of Panama would have been considered to contain elements of offense. Mr. Roosevelt was very explicit in asserting that it must be under the entire control of the United States, in peace and war, and must never be used to that coun-

try's detriment. In other words, it must be, for all practical purposes, a part of the territory of the republic. It is largely in order to secure the canal from foreign interference that he pleads for a stronger navy. The Clayton-Bulwer treaty was expressly designed to guard against this construction of a waterway under the hand of the States. But we have now withdrawn from the position taken up when that instrument was framed, and we understand the conditions of sea-power too well not to know that America can never rely on being able to use the canal unless she commands the waters at both ends. For that purpose a numerous and efficient navy is indispensable."

Mr. Roosevelt has certainly enlarged the scope of the Monroe Doctrine by what he has said on his Western tour thus far, says the *Journal des Débats* (Paris):

"It has been admitted hitherto—and the inference was justified by the messages even of the present President—that the Doctrine could not be used as a shield by Spanish-American republics which violated the rights of European nations, provided always that the latter, in obtaining satisfaction, did not go to the length of territorial acquisition. Now, the novelty of these Roosevelt utterances is that the stipulation 'no acquisition of territory' has been supplemented by the additional stipulation 'no acquisition of a control that would be equivalent to territorial acquisition.' The English word 'control' has no very defined meaning, and this lack of definiteness has already led to surprises in diplomacy. . . . The second characteristic feature of the Roosevelt utterances is the emphasis laid by the President upon the necessity of building a powerful United States navy. It would be ridiculous, he said in substance, to brandish the Monroe Doctrine and threaten foreign Powers with it. But it would be still more ridiculous to assume such an attitude without being in a position to back words up with deeds. For, he says, it is only through a powerful navy that the United States can command respect for the famous Doctrine. Judging from the present state of mind of Americans, we may rest assured that Mr. Roosevelt will have no trouble in getting them to follow his advice on this point."—*Translation made for* THE LITERARY DIGEST.

THE SECLUSION OF PORTUGAL.

WE must not be surprised by any sudden news from Portugal, even if revolution be hinted at, concludes the *Indépendance Belge* (Brussels), after a pessimistic study of conditions in the land of Camoens. The Portuguese Government, we read, "takes every precaution to conceal from the rest of Europe the very critical situation in which the little country finds itself." "Nowhere," it is added, "does the Government act in greater disregard of the nation, more particularly since the parliamentary system in Portugal is a mere comedy by which nobody is fooled any more." At the same time the Belgian paper repeats its familiar admonition not to be misled by the comments of the Madrid press on the situation, for the Spaniards always try to discredit Portugal in the eyes of the rest of Europe.

According to recent despatches, the working classes, the students, and the unemployed have been rioting in the streets of Coimbra and elsewhere. The immediate cause of the disturbance was the imposition of alleged inequitable increases of taxation upon holders of stalls in the market-places. The authorities promised a redress of these grievances, whereupon, for some unstated reason, the rioting was renewed and "many people have been killed in the streets." The strict censorship, according to the London *Standard*, "makes it impossible to ascertain what is passing." The cabinet reconstructed last February because of the financial situation, is violently denounced, and the Madrid *Liberal* thinks revolution may not be far off. The Lisbon *Secolo* does not seem to be aware of any very serious state of affairs.

One of the most striking features of European comment on the affairs of Portugal is the sedulous care with which that section of the British press supporting the Balfour ministry refrains from remarks on the internal affairs of Dom Carlos's kingdom. The tempting opportunity afforded by the recent visit of Edward VII. to Lisbon, for instance, drew from the London *Times* two or three columns of editorial enthusiasm over King Diniz, who ruled Portugal in the thirteenth century, over Don Juan de Castro, "the conqueror of Diu," and over Alfonso Sanchez, who "was carried to America by a storm six years before Columbus crossed the ocean." But not a word could the great London daily bring itself to say concerning the internal affairs of the land which, it ventures to think, "is but remotely concerned with European politics, thanks to a geographical position which gives her, in more than the geographical sense, a peninsular character." This reticence is explained in the German press on the basis of alleged British designs on the Portuguese possessions in Africa, those possessions having, according to the Berlin *Post*, strategic importance of the first magnitude to Great Britain.

DISAPPEARANCE AND REAPPEARANCE OF THE SERVIAN CONSTITUTION.

IN the comparatively brief period of about a quarter of an hour, Alexander I., King of Servia, wiped the constitution of his country out of existence, became an absolute despot, and subsequently reverted to the character of a limited monarch with a fresh constitution in his hand. All this happened so quickly that the European press has not yet had time to agree how it happened. The idea is a hereditary one in the Servian royal family, and the King's recent success with it is attributed to the experience he has had in applying it before. The constitution that was wiped out had existed for two consecutive years. The King had three objections to it. An uncensored press was tolerated by it. The secret ballot enacted under it led to the election of Radicals. Finally, Queen Draga did not like it. The King declares that the new constitution is not a new constitution at all, but simply the old one restored. A suspicion prevails, however, that Alexander is mistaken on this point. But he has been enabled to start with a clean slate and to rid himself of his opponents in every department of the Government. The *Pester Lloyd* (Budapest) observes:

"It would appear that the untractableness of the senate did not, as alleged, afford the prevailing motive for the upheaval of the Servian constitution. The motive seems to have been that the Radical element had an absolute majority in senate and Skupshtina. It was felt in Belgrade that the predominance of this party was not to be borne, and should be got rid of by dictatorial treatment of the constitution. No doubt, too, the constitution of 1901 contains other provisions—secret ballot, for instance—which did not leave it very pliable or susceptible of amendment in legal form, in consequence of this very predominance of the Radical party. . . . It may be doubted if the proclamation of a new constitution can be to the best interest of Servia. It seems, on the contrary, as if the measure—apart from its lack of legal sanction—must prove a shock to the public conscience and lead to new party struggles."

Austrian opinion, to which Alexander is compelled by the peculiarities of his position to be deferential, does not quite approve of his proceedings. The *Fremdenblatt* (Vienna), a semi-official organ, says the King of Servia has committed a blunder. A Radical constitution may have in the end a Conservative effect, but no such influence can result from a series of constitutional upheavals. And "One Who Knows Servia" thus writes to the London *News*:

"Some of us have long expected what has now happened. King Alexander I. is an uncompromising young autocrat. Parliament, constitution, national wishes—all count for naught when weighed against his will. He was a mere boy when his father—in consequence, some persons believe, of hypnotic influence—abdicated. Later there came the time when his Majesty

was to have wedded a European princess—a splendid match for Servia, and one in which two emperors and an empress were interesting themselves. But the wilful youngster insisted upon marrying the widow of a commoner, thereby alienating the friendship of all the courts of Europe. There was also the incident of the young King instructing the army to shoot his father should he return to Servia. The abdicated King pleaded with his son for reconciliation, but pleaded in vain. Then came a pathetic sequel, the father dying, and, as many persons believe, dying of a broken heart. The visit to the parental tomb, to insure recognition at the Austrian court, is matter of recent history. And now we have this latest act of youthful majesty—the constitution temporarily 'suspended,' and a people's freedom obliterated. It all has a very ugly look."—*Translation made for* THE LITERARY DIGEST.

ALBANIA'S RELATION TO THE MACEDONIAN CRISIS.

ABDUL HAMID, the Sultan, recruits his personal bodyguard mainly from among the Albanians. His individual safety depends upon them to an extent which recalls the hold of the Pretorians upon some of the ancient Roman emperors. Now, the natives of Albania, having maturely considered the Macedonian reform scheme, assert that they can never tolerate it. Their opposition has taken the form of attacks upon towns within the area of "reform." The list of killed is considerable, and actually includes a Russian consul who had come upon the Macedonian scene as a reformer. The dilemma of the Sultan is cruel. Action against the Albanians has a tendency to seem in Moslem eyes an abdication of his cherished position as Commander of the Faithful. To side openly with the Albanians means a defiance of Russia, which spells ruin. The Sultan is now suspected of using Germany as a buffer between himself and the rest of Europe, somewhat in the spirit of the proverbial drowning man. Germany's alleged secret support of Abdul Hamid in

BARBARITY?
The Sultan wants a lock of her hair in loving remembrance.
—*Fischietto* (Turin).

his extremity is denounced in the London *Times*, the Paris *Siècle*, and other organs, British and French.

The ability of these Albanians thus to hold Europe in check has concentrated the world's attention upon them. They number a million and a half, and altho there is a Roman Catholic as well as a Greek Catholic element among them, they are mostly Mohammedans. Their frontier marches with that of Macedonia for miles, and their rooted aversion to the reform scheme is based upon the precepts of the Koran. That sacred volume, as authoritatively expounded, regards the right to bear arms as divine, and participation in it by those outside the fold as a fatal error. The religion of the prophet being the one true faith, all others are necessarily false, and the arming of the Christians is,

THE WAITING POLICY.
The saw will speedily resume its movements.
—*Le Rire* (Paris).

therefore, not to be endured upon any such specious plea of toleration as is made for the Macedonian reform scheme. All this appeals with embarrassing force to the piety of the Sultan's bodyguard. The feelings of the Sultan himself are well brought out by a writer in *The Fortnightly Review* (London):

"The Sultan is a deeply and intensely religious man in the highest sense of the word, a man convinced that as Calif he is the representative and servant of Allah, and that in the long run he, or another Calif, must restore all the might and all the dominions of his great predecessors. . . . He is the actual, autocratic, and irresponsible Calif, as long as he obeys the laws of the Prophet and the orthodox Mohammedan traditions of the Prophet's sayings and opinions, known as the Multeka. It is said by the Ulema, the most exacting and conservative of all religious bodies under the sun, that the Sultan has never diverged a hair's breadth from any of these laws and, precepts. Consequently, in the Mohammedan world he has grown to be looked on as a person of almost divine sanctity, and with this type of a true believer before them, the Mohammedans throughout their world have come to regard Mohammedanism as something infinitely more important than the mere possession of territory. If Turkey loses a province it is only part of Allah's scheme. The time must come to right all things. And no one seems to believe in this more than the Sultan himself."

The only channel by which the faith, proceeds this authority, "can be transmitted to mankind is through the Calif—the successor of him to whom it was revealed." The difficulty of the Sultan's position toward the Albanians is apparent. But the *Fremdenblatt* (Vienna) says Abdul Hamid means to put down the Albanians with all necessary force. "This is not the first occasion," it remarks, "upon which Turkey has had to deal with her self-willed Albanian subjects. She has always succeeded in bringing those tribesmen to their obedience, altho the effort at times was considerable. The Albanians may have thought that the Sultan's recent proceedings against them were not undertaken in earnest. They will soon perceive how much they deceive themselves." This utterance is discounted in Europe

as emanating from an Austrian source. An utterance from an Italian source, the ministerial *Tribuna* (Rome), is significant in view of Italian claims to Albania in the event of a "rectification" of Balkan frontiers. The Italian paper says:

"The Albanians have had recourse to open war after protesting against the intention of the Powers to establish equality of rights between themselves and the Christians, against what they consider the culpable yielding of the Sultan and against the prospect of seeing their position as a privileged race diminished. The Porte has made clandestine intimations that the Austro-Russian scheme of reforms faces obstacles of a nature calculated to bring about that Balkan conflagration which it is so much desired to avoid. This sort of talk has been echoed by more than one journal from the first manifestation of Albanian resistance; but it does not seem to us that it can withstand dispassionate examination. For Turkey is certainly an expert in dilatoriness. Every promise of reform, solemnly made under pressure of external or internal events, suddenly encounters some serious obstacle justifying a reactionary move."

The situation, therefore, says the Italian daily, requires that "the antiquated methods of antiquated diplomacy" be done away with, and that the Powers unite in the face of Turkey and bid her reform or disappear. It hopes for some such action as this, which alone will suppress the Albanians. These hopes are borne out by what appears in the *Vecherna Poshta* (Sofia), which says the French, German, Italian, and British governments have instructed their consuls in the Albania-Macedonia region to report fully the state of affairs, and it infers some concerted action in consequence. The killing of the Russian consul by the Albanians—who hate the Russians—is undoubtedly the most serious aspect of the affair to the Czar's Government. It led to the statement in the *Novoye Vremya* (St. Petersburg) that Turkey must not try Russia's patience too far. Finally, we extract the following characterization of the Albanians from an editorial in the London *Tablet*:

"The Albanians, Arnauts, or Skipetar, as they call themselves, are one of the most truly primitive races in Europe. Aboriginal to the soil, untainted by any foreign immigration within historic times, and speaking a language which resembles Basque in being without traceable affinities, they are an insoluble problem to ethnology. Their customs are those of the Homeric Greeks, their vices and virtues those of the mountaineer in all lands. Their system of jurisprudence is based on the hereditary blood feud, enforced by public opinion, so that the assassin is in a certain sense the mandatory of the community."—*Translations made for* THE LITERARY DIGEST.

DENMARK AND INTERNATIONAL DIPLOMACY.

DENMARK'S policy is just now a matter of far-reaching importance to two Powers—the United States and Germany. For this reason, among others, great significance is attached in the European press to a series of recent events at the court of Copenhagen. King Christian IX. celebrated his eighty-fifth birthday amid the rejoicings of his people, and Emperor William, of Germany, honored the Danish capital with his presence for seventy-two hours. The cordiality of Copenhagen comment indicates that the head of the house of Hohenzollern flourished neither a mailed fist nor a veiled fist, but a frank and friendly fist. Even the Socialist press of Denmark speaks glowingly of William II., the ruler who has denounced the Socialist movement and Socialists generally in unsparing terms. The anomaly is attributed to the Emperor's cordiality of attitude toward the recently elected Socialist burgomaster of Copenhagen, with whom he discussed architecture affably. English newspapers assure the Emperor that all this will never get him the Danish West Indies. The United States, as the London *Times* disinterestedly suggests, will see to that.

But the most anti-German British dailies admit that the Hohenzollern has made a hit in Denmark. This is indeed a triumph, for North Schleswig was wrested by German valor from the Danes about forty years ago. The Danes of the conquered region clung to their mother tongue and their traditions, inspiring thus a policy of Germanization that has not been without its reward in open wounds. And now the world beholds the German Emperor quitting Copenhagen followed by the blessings of the Danish newspapers. The following comment from the *Politiken* (Copenhagen) is only characteristic:

"We Danes are vitally interested in seeing to it that our relations with Germany are placed upon a footing of intimate friendship. We have much to learn and much to gain from Germany, whose civilization impresses and attracts us, without any occasion for us to stultify our own material and spiritual character. It is earnestly to be hoped that the Emperor William will derive the best possible impression from his sojourn amongst us. His trip was of great importance to our little nation. He honors himself who honors the guest that arrives in friendship as neighbor and relative."

Numerous personal references to William II., all of an effusive tendency, characterize this utterance. The *Danebrog* (Copenhagen), organ of a ministerial political group, is equally enthusiastic. "We are anxious," it adds, "that in our mighty neighbor to the south a correct sense of our friendliness should prevail." The *Kjobenhavn* says Emperor William won all hearts in Denmark by his noble courtesy, while the *Socialdemokraten*, the affiliations of which are sufficiently denoted by its name, says Danish Socialists greet him not as the enemy of their cause but as the ruler of a kindred nation. All this has a somewhat stunning effect, as already noted, upon London organs, which refer to the Danish West Indies and the suspicious United States. In Germany the newspapers make no such disenchanting allusions. They print, instead, delectable extracts from the Danish organs, flavored with the sweetness of their own comment. "Copenhagen is a hospitable city," declares the *Vossische Zeitung* (Berlin), "where the German has long been warmly welcomed." "The whole German people love Denmark," says the *Lokalanzeiger* (Berlin). And so it goes.—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

HEROD, PILATE, AND JUDAS.—A priest in France, says the *Eclair* (Paris), has gone "too far" in comparing the President to Herod, the Premier to Judas, and a former Premier to Pilate.

THE REASON WHY.—"To-day there is something in the nature of a Unionist *débâcle* in the constituencies," says *The National Review* (London), "and experts in electioneering will tell you that one of the causes of this collapse is the fear of the average Englishman that a vote given to the Government may be a vote given to the German Emperor."

AN UNMADE ALLIANCE.—The fact that no alliance exists between the United States and Russia seems odd to *The Weekly Freeman* (Dublin), which referred to the subject as follows in its St. Patrick's Day number, printed on green paper: "Since the days of Franklin, the relations between these two great countries have been remarkably amicable. Yet one never hears of a 'Russo-American Alliance.' Why is that? Is it that the friendship between Russia and the republic is so genuine that there is no need for any such artificial arrangement?"

A JACOBIN.—Anti-clerical circles in France are agitated by the appearance of a newly founded daily in Paris called the *Action*. This organ, which has leaped into a sudden popularity, thanks to the active support of a group in the chamber, announces itself an "Anti-clerical-Republican-Socialist." It has adopted the famous calender of the French Revolution, and its first number was dated "9 Germinal, Year 111," which corresponds to March 29, 1903. The *Action* announces in black type that "it will particularly denounce, excoriate, baffle, the enemy of all truth, of all right, of all life the church," and one of its "great features" is to be an anti-clerical serial story.

WILLIAM II.'S IDEA OF HIMSELF.—That able and well-edited Roman Catholic magazine, the Paris *Correspondant*, has lately printed a selection from the utterances of the German Emperor which afford some notion of that potentate's estimate of himself. "I am your Emperor," said William II., once to the Germans, "by an immutable decree of God." Again: "What I require of my people is a fidelity that never wavers." Two years ago he declared: "The assertion of an Emperor must not be disputed." Last June he remarked: "Frightful was the time, bitter were the years, before Germany had an Emperor." To a gathering of German bishops he said: "Regard me as the intermediary between you and Germany's ancient God."

CURRENT POETRY.

The Garden of the Sepulcher.

By EDWIN MARKHAM.

Now in the place where he was crucified there was a garden; and in the garden a new sepulcher, hewn out of the rock. . . . There laid they Jesus therefore, and rolled a stone unto the door of the sepulcher.

It was a night of calls and far replies,
A night of trembling for that Serpent head
In gulfs that were before the oldest dead—
A night of whispering haste along the skies,
Prayer, and a wondering down of seraph eyes;
While stilled Jerusalem, washed in the moon's light,
Lay like a brood of sepulchers, ghost-white.

The dark was dying silverly, that strange,
Still hour when Earth is falling toward the day—
That hour of spacious silence and delay
When all things poise upon the hinge of change.
The guardsmen had grown silent on their round,
Their file was sinking, when a crash of sound—
Darkness—a reel of Earth—a rush of light—
Cleft rocks—then scent of aloes on the night!

Their faces turned to faces of the dead,
Their spears fell clamoring terribly as they fled.
And He stood risen in the guarded place,
With empire in His gesture—on His face
The hush of muted music and the might
That drew the stars down on the ancient night.

Tall in the first-light, mystical and pale,
He stood as one who dares and can not fail,
As some high conscript of the Bright Abodes,
As one still called to travel on wild roads
In Love's divine adventure—His white face
Hushed with heroic purpose for the race;
Yet wistful of the men who should deny Him,
And wistful of the years that should belie Him.

With peace of heart the blind world could not break,
He took a path the young leaves keep awake.
Glad of the day come back and loving all,
He passed across the morning, felt the cool,
Sweet, kindling air blown upward from the pool.
A burning bush was reddening by the wall;
An oleander bough was full of stirs,
Struck by the robes of unseen messengers.

The hills broke purpling, as the sun's bright edge
Pushed slowly up behind a rocky ledge;
The hovering dome of the Temple, gray and cold,
Burned out with sudden, unexpected gold;
A light wind silvered up the olive slope,
And all the world was wonder and wild hope.
It was life's crowned, supreme, victorious hour;
The wintry world was trembling into flower.

And now the King! and rumors ran of Him.
Upon the quick lips of the Cherubim,
Leaning from Heaven and counting all the tears,
Yet hearing through the grief of ages dim
The mighty song that binds our mortal years.

—In New York *Herald*.

The Child in the Garden.

By Henry van Dyke.

When to the garden of untroubled thought
I came of late, and saw the open door,
And wished again to enter, and explore
The sweet, wild ways with stainless bloom inwrought,
And bowers of innocence with beauty fraught,
It seemed some purer voice must speak before
I dared to tread that garden loved of yore,
That Eden lost unknown and found unsought.

Then just within the gate I saw a child,—
A stranger-child, yet to my heart most dear,—
He held his hands to me, and softly smiled
With eyes that knew no shade of sin or fear:
"Come in," he said, "and play awhile with me;
I am the little child you used to be."

—In April *Atlantic Monthly.*

The City at Night.

By Louise Morgan Sill.

Night has a thousand mysteries, not least
This of a mighty City as it lies
With thought self-centered, introspective eyes
That view it own mirage of work or feast,
Its pain and crime, its love and hope and truth,
Its holy joy and its unhappy ruth.
It sees no outer beauty of the night,
No royal stars that tread a stately dance,
No glory of the heavens spread about.
Turned ever inward is the city's sight,
Like men tense-spoken at a game of chance
Unconscious of eternity without.

—In April *New Metropolitan.*

Song.

By Gouverneur Morris.

Your kiss, beloved, was to me
As if all flowers of Araby,
And every fresh and fragrant rose
That ever blew, shall blow, or blows
Had all her sweetness taken up
And poured into one perfect cup
For me to drain. . . .
Kiss me again!

—In April *McClure's Magazine.*

Ideals.

By E. H. Sothern.

I sat beneath the roses on a day . . .
And I was lonely, for the day was fair,
So made myself a God . . . a God of clay,
And sculptured every grace I thought most rare
Into the senseless mud, then knelt in prayer;

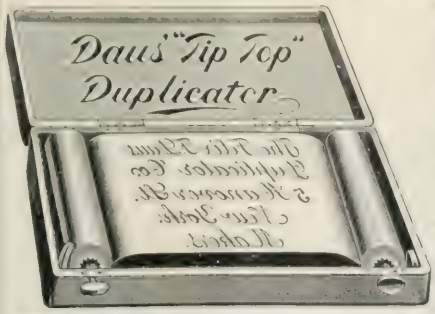
Crying, "I want! I want!" Vaguely, untaught,
Seeking the noble, beautiful, and good,
As from the earth my nimble fingers wrought,
Not lips that spake, nor eyes that understood,
But eyes and lips that answered as I would!

The image mirrored all the best in me,
All things I craved to worship and adore:
Beauty and youth, hope, love and chastity,
Honor and truth . . . all these and something more
That men cry out, and kill, and hunger for;

That dearer self, that sweet companionship,
Which gaining, gladly from all Edens hurled,
Man sees a thousand beauties eye nor lip
Hath ever spoken, ever seen unfurled,
Lending a new-found glory to the world

Kneeling I prayed, "Give me from all the earth
One woman, but one woman, who shall be
All that my starving soul would bring to birth
From this dead loam!" As tho to answer me
The leaves fell wide, and one said, "I am she!"

'Twas thus she came, and morrows waxed and waned,
And for a moon I dreamed all dreams were true;
Then saw I both what I had lost and gained:
The one I prayed for, and the one I knew . . .
And my soul died within me at the view!



What is Daus' "TIP-TOP"?

TO PROVE that Daus' "Tip-Top" Duplicator is the best, simplest, and cheapest device for making

100 copies from Pen-written and 50 copies from Type-written original

we are willing to send a complete Duplicator, **without deposit, on 10 days' trial.**

No mechanism to get out of order, no washing, no press, no printer's ink. The product of 23 years' experience in Duplicators. Price for complete apparatus, size No. 1, $7.50, subject to the trade discount of 33⅓%, or **$5.00 net.**

I sat beneath the cypress on a day . . .
And I was weary, for I knew was there.
Sacred, "Urging me back my God-given
Whereon my fancy sculptured all things fair!"
Then spake a voice that said, "Behold it there!"

There lay my broken image neath the yew,
Shattered past mending, all its beauties flown,
And my numbed fingers can not build anew
As on that day when youth's bright summer
shone.
Over the poor fragments now I weep alone.

—In *Collier's Weekly*.

The Sleepy Song.

By Josephine Dodge Daskam.

As soon as the fire burns red and low,
And the house up-stairs is still,
She sings me a queer little sleepy song,
Of sheep that go over the hill.

The good little sheep run quick and soft,
Their colors are gray and white:
They follow their leader nose to tail,
For they must be home by night.

And one slips over and one comes next,
And one runs after behind,
The gray one's nose at the white one's tail,
The top of the hill they find.

And when they get to the top of the hill
They quietly slip away,
But one runs over and one comes next—
Their colors are white and gray.

And over they go, and over they go,
And over the top of the hill,
The good little sheep run thick and fast,
And the house up-stairs is still.

And one slips over and one comes next,
The good little, gray little sheep!
I watched how the fire burns red and low,
And she says that I fall asleep.

—In April *McClure's Magazine*.

PERSONALS.

Took Him at His Word. Charles T. Yerkes, the street-railway magnate, was in Philadelphia recently visiting relatives. He told there one evening an amusing story about an uncle of his, which we take from the New York *Tribune*:

"My good old uncle," he said, "was getting short of hoop-poles. He was afraid that in a month, unless he replenished his stock, he would have to shut down his plant. But hoop-poles were scarce. There were none on the market. Turn where he would he could find no sellers of these articles that are so necessary to the cooper's trade. One morning he was stopped on the road by a colored man who asked for alms.

"'Sam,' he said to the colored man, 'you go get me some hoop-poles. I'll pay you a fine price for them. And then you won't have to beg.'

"'Where can I get hoop-poles?' Sam inquired.

"'I don't care where you get them, only get them,' said my uncle.

"All right, sir,' Sam replied, and, lo and behold, the next day he appeared bright and early at the factory with a big load of poles.

"'Some good ones, sah,' said Uncle and he said the old man on the nail. Then curiosity got the better of him, and he asked where the poles had come from.

"'I stole 'em,' Sam answered, moving off a little.

"'Where did you steal them?'

"'Up in your woods, sir, behind your ten-acre

pasture.' Sam out in the road by this time called, and then we made off at a good round trot."

Rockefeller's Shower of Gold.—The peons of southern Mexico are singing the praises of John D. Rockefeller, Jr., while they are in the enjoyment of such golden wealth as they never dreamed could come to them, says a despatch to the New York *Sun*. The cause of this jubilation is described as follows:

When Mr. Rockefeller arrived at Juarez on the Rio Grande border nearly a month ago and started on his trip through the country he distributed alms with a prodigal hand among the crowds of beggars and peons who were gathered at every station. This lasted until the City of Mexico was reached. It was in that city that Mr. and Mrs. Rockefeller became impressed with the actual suffering that existed among the thousands of poor people. In their little side trips to points of interest about the city they gave alms amounting to hundreds of dollars to the supplicants. They decided to give the mendicants a real treat on their trip to this city and the ruins of Mitla. Mr. Rockefeller obtained from banks in the City of Mexico a number of sacks of gold coin of the denomination of $5 and $10, with a few of higher denominations which were to be given in exceptional cases to needy persons.

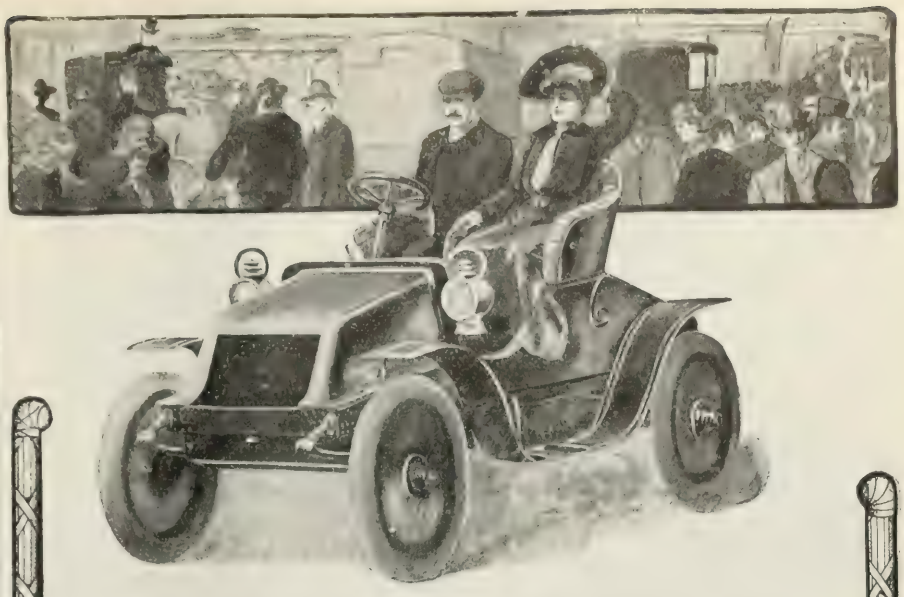
It was one of the most marvelous tours ever made in this part of Mexico by an American tourist. From the time the party left the City of Mexico until they reached here throngs of peons and beggars at the stations were treated to the welcome sensation of receiving a shower of gold.

They went into the huts of the poor Indians and bestowed alms with a tenderness that called upon their heads showers of blessings from the devout Mexicans. Never before in the history of Mexico has there been so much gold in circulation in this part of the country.

An American Title.—While John Hays Hammond, the eminent mining engineer who has been identified with much of the development of the Transvaal, says *The Saturday Evening Post*, was addressing the American Society for the Advancement of Science, comment was made on his youthful appearance. One of his South African colleagues then remarked:

"The fact is, that, altho Mr. Hammond has long held an enviable place at the head of his profession, he is still in his forties. His record is typical of American alertness. His entrance into the busy gold-fields of Johannesburg was marked by a characteristic incident.

"As is well known, the remarkable character and extent of the gold-diggings in the South African Republic attracted thither many men of high standing. On the steamer from Southampton to Cape Town Mr. Hammond's fellow passengers included many titled Britishers, all bound for the same destination, the Rand. Upon arrival there Mr. Hammond found himself waiting his turn in a noble line to sign his plain, democratic name to the hotel register. In front of him were a Knight Commander of the Honorable Order of the Bath, a Knight of the Exalted Order of the Star of India, two members of the Order of St. Michael and St. George, two barons, and one duke. The letters necessary to distinguish these great personages were imposing, and in one case consumed three lines of the hotel register. With much interest Mr. Hammond watched the registration of nobility. He realized that tho ability



Through all the Crush with Perfect Ease

An accomplishment possible only in an automobile so simple and sensitive, in its control and steering mechanism, that it responds like a living thing to the driver's wishes. That automobile is the

Winton

Absolute control of the car is assured by the Winton method of motor government which is simplicity itself. A little spring button under the driver's right foot operates the air governor, which controls the speed of the motor. When the pressure upon this button is increased the motor speeds up and the car forges ahead. Release the pressure, the motor slows down and the car speed diminishes. You get any desired variation by the use of this throttle button. The method is so simple and effective that the driver increases or decreases speed of car without conscious effort. There is no automobile manufactured or sold in America which combines so many features of real excellence. The Winton is a practical result of long experience thoroughly tried out. It is of clever design, beautifully finished, and the entire correctness of our horizontal, double opposed cylinder motor is being demonstrated daily to the complete satisfaction of the very best mechanical minds.

The price of this superb 20 horse-power car complete with detachable tonneau, full brass side lamps, tools, etc., is $2,500.00.

Visit any of our branch or agency depots in all leading cities, and the features of Winton excellence will be demonstrated.

"By long odds the best book of quotations in existence."—*New York Herald.*

FUNK & WAGNALLS COMPANY, Pubs., NEW YORK

would count in the long run. The possession of a commanding title would give the possessor a considerable start over his untitled rivals.

"When Mr. Hammond's turn came to write his name, he registered:

"'John Hays Hammond, A.R.A.'

"His companion was greatly interested and at the first opportunity asked:

"'John, what made you sign "A.R.A." after your name?'

"'Well, you see, one needs a title in this country.'

"'But what do those letters stand for?'

"'"All-Round Athlete,"' replied the mining engineer.

"Within three months from that time Mr. Hammond's genius had landed him in the position of consulting engineer and general-manager for the consolidated gold-fields; and serving under the directions of this resourceful American were half a dozen lords and other gentlemen of illustrious pedigree."

Herreshoff and the Camera. Nat Herreshoff had an experience with a photographer recently which the New York *Mail and Express* relates:

The cradle of the *Reliance*, *Constitution*, *Columbia*, *Defender*, and *Vigilant* is the south shop, facing Narragansett Bay. The home of the designer and builder of these cup defenders is about a hundred yards away and faces the shop. It is not uncommon for photographers to perch on Herreshoff's front fence waiting for something to turn up. There was one there the other morning when the designer came out of his house to go to the works, and Herreshoff heard the snap of the shutter as he passed the man. Herreshoff seldom grows angry, but he was like an infuriated bull the moment he realized that he was caught in the camera which he had for so many years avoided. He fairly ran at the photographer and demanded:

"Give me that plate. I want that negative. If you do not give it to me at once I'll smash your whole outfit."

The photographer turned over the plate and the designer made a thousand pieces of it on his own fence. To make sure that there was no mistake, he smashed all the other plates also.

The Climate Did It.—When Mr. Bowen first went out to Caracas as the United States minister, says *The Saturday Evening Post*, President Castro called on him one afternoon. The two strolled into the garden and Mr. Bowen expressed his amazement at the rapidity of all vegetable growth in that climate.

"A seed planted overnight would result in forty trees the next day," was his laughing remark. Just then an American photographer passed, and asked to take a picture of the two distinguished men as they stood among the flowers. As he snapped the camera he made some laughing, disparaging remark about the picture being the long and the short of it. Mr. Bowen is six feet four inches, and President Castro reaches about to his shoulder. The President did not like the unkindly comparison, and looked up quickly at the new American Minister with a frown.

"Ah, Mr. President," said Mr. Bowen, "I was very small when I got here, but I shot up overnight in this marvelous climate of yours."

After the Wedding.—ETHEL: "How did you think the bride looked?"

GRACE: "Oh, remarkably well-groomed."—*Harvard Lampoon*

MORE OR LESS PUNGENT.

Grip.—FIRST SPORT: "Why didn't you take her satchel to the station?"

SECOND DITTO: "I had the grip." *Harvard Lampoon.*

Not Self-Supporting.—The little boy was doing his home lessons, and was asked if he knew who Atlas was.

"A giant who was supposed to support the world," answered the child.

"Oh, he supported the world, did he?"

"Yes, sir."

"Well, who supported Atlas?"

The little fellow was nonplussed for a moment, but after some thought said:

"I expect he must have married a rich wife."—*Tit-Bits.*

Puck's Philosophy.—Praise from people that we despise generally convinces us that they have good points after all.—*Puck.*

Government by Majority.—"What's the matter, old boy?" asked his friend.

"Why, the fact is," said Paterfamilias, "I've just vetoed an Easter appropriation, but the family has passed it unanimously over my head!"—*Puck.*

A Hard Contract.—"I don't see why you should say they treat their chauffeur shabbily, when they pay four hundred dollars a month wages."

"But you forget that the poor chap has to pay all the fines out of that." *Brooklyn Life.*

Her Objections. "My dear," whispered the husband who had accompanied his better half to the shop where she expected to purchase a spring gown, "I think that dress with the black lace fixings on it is nobby. Why don't you get it?"

"Oh, it would never do," answered the wife. "Everybody is wearing that style."

"Then, here's another good-looking one—this one with the separate jacket and the strap fixings on the skirt."

"Mercy, no! Why nobody is wearing that!"—*Life.*

The Way of It.—TIRED THOMPSON: "Weary's got a nerve! He rushed right inter de Hoffman House an' ordered whisky!"

[illegible] FAGIN: "Ge' out?"

TIRED THOMPSON: "Sure! Dey thought he wuz some [illegible] guy just off an automobile run!"—*Puck.*

The Proposal. JOHN (sheepishly): "I-I s'pose you'll be gittin' married some time?"

BETTY (with a frightened air): "Oh, I dare say I shall some time."

JOHN: "I dare say I'll git married, too."

BETTY: "Oh."

JOHN: "P'r'aps we might both git married at the same time."

BETTY: "Wouldn't it be awful, John, if the parson should make a mistake and marry us to each other?"

JOHN: "I—I shouldn't mind."

BETTY: "No—neither should I, to tell you the truth, John."—*Tit-Bits.*

How to Make Money

IN THE CATTLE AND SHEEP BUSINESS.

The Montana Co-Operative Ranch Company of Great Falls, Montana, is a co-operative company organized under the laws of the State of Montana with a capital stock of $100,000. It now owns 16,000 acres of rich land with the finest range in Northern Montana.

The principal business of the Company is to take care of sheep, cattle, hogs and Angora goats belonging to its shareholders. There are now over 400 shareholders, scattered over the country, over 88 of whom are ladies, while many are doctors, bankers, merchants, etc. Every shareholder who had sheep on the ranch last year, received 61 cents per sheep for their share of the wool, and 64 cents for their share of the lambs, making fully 40 per cent. interest on their investm . The Company issues an illustrated paper called The Montana Co-Operative Colonist, containing pictures of the ranch and telling all about the Company. This paper is sent free to all who address

Save Half Your Cigar Money

and Get a Better Smoke. Our proposition is a simple one. We save you 50 per cent. of ordinary retail cigar prices, not by price-cutting, but by **cutting out** the profits and expenses of the Jobbers, Salesmen and Retailers who successfully sold the output of our factory for years, and who each made a profit **out of you, not out of us.** We are now selling exclusively to the smoker direct by the box the same identical time-tested popular brands of cigars that we formerly made for the wholesale trade in case lots, at precisely the same factory prices we formerly charged jobbers, shipping your choice of these same brands

Direct from Our Factory to You. **All charges prepaid** We get the same profit you get the same cigars; you also get the profits of the other fellows. Every box, and each cigar in every box, is covered by our perpetual guarantee to suit you, or to replace the cigars with others until you are suited, or to **CHEERFULLY REFUND YOUR MONEY.** We have a simple method of finding and suiting your individual taste as easy as going through a retailer's show case. For **$1** we will send a trial package of 25 assorted sizes and blends; for **75c**, twelve 10c and two-for-a-quarter cigars, for **50c**, twelve 5c, and 10c. values. Each cigar separately wrapped and described. In any case, write for our FREE illustrated booklet, ROLLED REVERIES, showing how two-for-a-quarter and 10c. cigars can be bought in boxes of 25 and 50 for from 4c to 6c each, others from 2c to 3c. **Transportation always prepaid** anywhere you say. Do not delay; you will always be glad you made the trial.

K.; "A high type"—A. K.

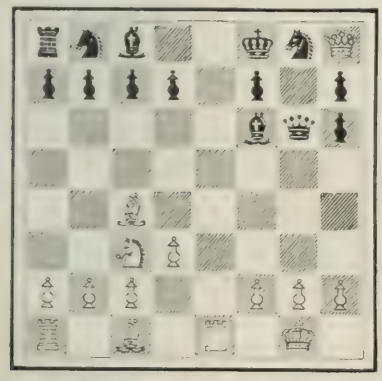
Twenty states represented by our solvers this week.

A number of solvers went astray on 825 by trying Q—R 6, answered by B x B. Kt x P is not mate, for K x P.

Very many solvers could not get 826, on account of not being able to provide against a stalemate, after White's second move. Others tried the R on B 3, 7 and 8, none of which will do, for in preventing K from going to K 4, after K x R, you stalemate.

Remarkable End-Game.

Mr. A. J. Hamilton, Portland, Ore., sent us the following ending, and asks the question, "I wonder if any of the Masters would have seen the fatal consequences of Black's last move, B—B 3, and refrained from making it."



Black has just played B—B 3, and it looks as if his wins White's Queen, when the fact is that White forces mate in seven moves.

From the Monte Carlo Tourney.

SPLENDID PLAY SPOILED BY ONE POOR MOVE.

Queen's Gambit Declined.

		27 Resigns.	

Notes (abridged) from The Daily News, London.

(a) Teichmann has misapplied this move. If you play this move and nothing else, as Black did in his case, Black's game will always remain in a cramped, undeveloped state.

(b) He should have played B—K 2, which is not only the best place for the Bishop, but also the best reply to White's B—K Kt 5. It will be noticed that after losing time with this B, he is obliged to play on his 11th move, B—K 2.

(c) He is afraid to Castle for fear of a strong King's side attack; but in making a retiring move, he gives White his chance, and this the latter seizes and exploits with remarkable ability.

(d) If 13.., P x B; 14 Kt—Q 6 ch, K—B sq; 15 Kt

Doctor

We want you to know what a great convenience—what a great advantage—we have for you in

B & B Aseptic Handy Package Absorbent Cotton

B & B Absorbent Cotton, in addition to being clean—pure—sterile—and absorbent—has still another advantage. It is the only cotton packed in convenient, aseptic containers, and sealed in air-tight wrappers, insuring absolute protection from dust, moisture and germs.

The package is so constructed that the cotton necessary for immediate use—either a large or small piece—can be extracted by taking hold of the evenly cut edge, which is always on top, unrolling the quantity desired, cutting it off, leaving the balance of the cotton unexposed and protected.

With all old-style cartons opening on the end, the entire roll must necessarily be taken out, when desiring only a small quantity, in this manner handling and contaminating all of the cotton.

The inconvenience and handling necessary to replace the unused portion of the roll, make all old-style cartons undesirable to the surgeon or physician who governs himself by the unvarying rules of surgical cleanliness.

Uncontaminated absorbent cotton without B & B Aseptic Handy Package is practically an impossibility.

For Sale By Druggists.

Insist upon B & B. Always worthy of your preference. Write for free illustrated descriptive circular, giving complete information.

Bauer & Black, 267 Twenty-fifth St., Chicago, U.S.A.

FREE CAREFUL MICROSCOPICAL EXAMINATION OF YOUR **HAIR**

By the great specialist, ***MADAME M. HESSLER.***

By this means I will give you scientific advice as to what to do to make your hair beautiful and your scalp healthy.

I guarantee to stop falling hair, and cure all diseases of the scalp, and to grow hair on bald heads where the follicles are not extremely torpid. My free microscopical examination will show this, and I will write you frankly whether or not there is any hope for your hair.

Send for my Free Booklet No. 3

It tells an interesting and scientific story about the hair and scalp. It contains the references of many prominent men and women all over the country whom I have treated satisfactorily. **No two scalps require the same treatment.** Send me fresh combings to-day, and I will tell you your trouble. For twenty-five years I studied hair and scalp diseases with one of the most eminent hair and scalp specialists in Paris, and I have continued this work in Chicago nine years with the leading people of the city as my patrons. Address, enclosing 4 cts. in stamps.

TO INVESTORS

A VERY UNUSUAL OPPORTUNITY

Mr. John Brisben Walker is taking the Presidency of a Company which offers unusual features for safe and highly profitable investment; namely, First Mortgage, 6-per-cent., Real Estate bonds, accompanied by a 60-per-cent. bonus in the Company's Preferred Stock. This Company takes over more than 900 acres of land within 3½ miles of center of Denver. Berkeley Heights is the most beautiful plateau around this rapidly growing metropolis of the Rocky Mountain region—the most prosperous city on the continent to-day. The property is to be immediately developed upon an extensive scale as a residential quarter upon modern plans, with reservations. Mr. Walker will hold a controlling interest in the stock, and personally recommends the investment as absolutely safe and likely to be extremely profitable. For further particulars address James Randolph Walker, Secretary, The Berkeley Heights Investment Co., Irvington-on-the-Hudson, New York.

NATHAN HALE

FUNK & WAGNALLS COMPANY, Pubs., N. Y.

x E P; K x Kt; 28 Kt x P ch, K—Kt sq; 29 B—B 4 ch, Kt—Q 4; 30 Q—K 2, R—R 3; 31 B x Kt ch, P x B; 32 Q—B 7 ch, K—R sq, 33 R x B, Q—B sq; 34 R—K 8, R—K B 3; 35 R x Q ch, K x R; 36 Q—R 5 ch, K—Kt sq, and White should win. It seems that Black's moves are more or less forced; the combination, it seems enough to Mr. Marshall, is certainly one of the finest conceived over the board in tournament play, and its originator ought to secure the fullest credit for giving such special evidence of the possession of combinative genius of the very highest order.

(e) The fortunes of the game are wrecked by this move. If White had played a simple move such as P—K R 3, or if he had played Q—B sq, there is no doubt he would have maintained his advantage.

(f) If 23 B x Kt, B x B; 24 R x B, R x Kt; 25 R x R, Q x R; then, again, if 23 B x Kt, B x B; 24 R x R P, Q x Kt would follow with advantage.

(g) A mistake which was, no doubt, committed under great time-pressure; but even without the mistake, White's chances were gone; for, in reply to either B—B 7 or R—Kt 6, Black could play Q x P.

From the International Cable-Match.

MARSHALL'S MASTERPIECE.

The most brilliant game of the recent Cable-match is probably Mr. Marshall's win from Mr. Atkins, one of the strongest players in England, and whom Dr. Lasker ranks with the greatest eight living Masters.

MARSHALL. *White.*	ATKINS. *Black.*	MARSHALL. *White.*	ATKINS. *Black.*

15 B—Kt 3	P—B 4	31 P—B 3 wins	
16 P x P en pas	B x P	(k)	

Comments by Reichhelm in The North American, Philadelphia.

(a) A new serious try in the realm of analysis. It is not considered to be of par value

(c) B—Kt 5 ch is still valid on Kt—Kt 5, *e.g.*, 9 Kt—Kt 5, B—Kt 5 ch; 10 K—K 2, B—R 4, etc.

(d) Marshall's trademark. For further particulars inquire of Amos Burn and others who have been beaten through it in past tourneys. The idea is to open the King's Rook's file.

(e) To hinder, at all events, the open file scheme. Black, at some cost to his King's side, has changed the scene of combination to the Queen's wing.

(f) The first move of the grand finale.

(g) Suppose R x Kt; 26 R x R, B x R; 27 R x B, Q x R; 28 Q—K 2 and wins, for if Q—B 3 now P—R 6, etc. A very remarkable combination.

(h) Brilliancy to burn, so to speak. Marshall's grand combination must lead to a win

(i) Atkins' "faux pas," that the English cry about. Of course, he could have lasted longer through Q—B 3, to which Marshall would have replied with Kt—K 4, and ultimately won.

(k) On which Black resigns. On P—Kt 5, P—K 4 ch, —Kt 4, KQ—K 7 ch, etc.

"Openings" at Monte Carlo Tourney.

The "openings" most used in the late Tourney are:

	Games played.	*Games won.*	*Games drawn.*	*Games lost.*	*Percentage of victories.*
Ruy Lopez	49	20	13	16	51 o/o
Queen's Gambit	34	11	5	8	42.35
Sicilian	13	6	1	15	27.54
Petroff	11	2	7	3	45.45
French	12	5	5	2	62.50
Queen's Pawn	6	3	3	3	50.00

REICHHELM calls attention to the fact that if only the seven leading players had completed in Monte Carlo Tourney, Pillsbury would have won. The score would have been Pillsbury, 8½ to 3½; Maroczy, 7 to 5; Schlechter, 6½ to 6; Tarrasch, 6 to 6; Teichmann, 6 to 6; Marco, 4½ to 8; Wolf, 3½ to 8. "In other words Tarrasch and Maroczy made their big scores chiefly against the minor players."

What a jolly good time she has had!

My name on every one.

If you'll send your address, I'll send you the Index to Lamps and their Chimneys, to tell you what number to get for your lamp.

MACBETH, Pittsburgh.

every man needs an O-P-C suspensory

Some men do not realize it, but they need it just the same.

If you can stop a drain upon your vitality—your nerve energy—which is being wasted, you will gain just that much.

An O-P-C suspensory will stop one strain which every man experiences, and which is a constant drain upon his entire system.

Not a big one in itself, but when multiplied by the number of seconds in a day, means an enormous loss of strength and vitality.

Write for our free booklet, "The Struggle for Supremacy." It tells why, under the rush and grind of modern life, every healthy, normal man should wear an O-P-C suspensory.

No. 2 O-P-C lisle, $1.00.
No. 3 O-P-C silk, $1.50.

Every druggist is authorized to refund money if purchaser is not entirely satisfied. "Get the right brand."

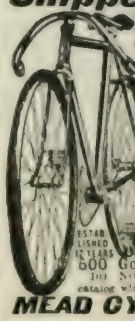
Your druggist sells the O-P-C and can give you a copy of our booklet, or send us his name and we will mail the booklet to you free.

MADE BY

Bauer & Black,

267 Twenty-fifth St., Chicago, U. S. A.

Shipped On Approval



We will ship any bicycle C.O.D. on approval *without a cent deposit* and if accepted allow **10 DAYS FREE TRIAL** before purchaser is binding.

New 1903 Models

"Bellise,"	completo	**$8.75**
"Cossack,"	Guaranteed High Grade	**$10.75**
"Siberian,"	a beauty	**$12.75**
"Neudorf,"	Road Racer	**$14.75**

no better bicycles at any price

Any other make or model you want at one-third usual price. Choice of any standard tires and best equipment on all our bicycles. *Strongest guarantee.*

RIDER AGENTS WANTED in every town to buy a sample wheel at *special price* and take orders for our improved 1903 models. *There's big money in it.*

500 Good 2nd-hand Wheels $3 to $8.

DO NOT BUY a bicycle until you have written for our free catalog with large photographic engravings and full descriptions.

MEAD CYCLE CO. Dept. 626, Chicago.

GRAY HAIR RESTORED

"WALNUTTA" HAIR STAIN

is prepared from the juice of the Philippine Islands walnut, and restores Gray, Streaked, Faded or Bleached Hair. Eyebrows, Beard or Moustache to its original color. **Instantaneously.** Gives any shade from **Light Brown to Black. Does not wash off or rub off.** Contains no poisons, and is not sticky or greasy. **"Walnutta" Hair Stain** will give more satisfactory results in one minute than all the hair restorers and hair dyes will in a life time. **Price 60 cents a bottle,** postpaid. To convince you of its merits we will send a **sample bottle postpaid for 20c.**

PACIFIC TRADING CO., Dist. Office 78, St. Louis, Mo.

The Literary Digest

VOL. XXVI., NO. 19 NEW YORK, MAY 9, 1903. WHOLE NUMBER, 681

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

HOME VIEWS OF MISSOURI CORRUPTION.

MORE than one "Purchase Exhibition" is going on in Missouri, so a newspaper paragrapher notes. One is devoted to the Louisiana Purchase, the other to the purchase of Missouri legislators; and the latter seems to be attracting about as much attention as the former. Two grand juries, one in St. Louis and the other in Jefferson City, have been investigating charges of bribery in the state legislature, and the results to date lead the St. Louis *Globe-Democrat* (Rep.) to remark that "a worse despotism of fraudulent force and gross corruption has never been known anywhere under what is called constitutional government." The investigations are under the direction of Attorney-General Crow and Circuit Attorney Folk, who prosecuted the corrupt members of the St. Louis house of delegates last year. Several men, including four state senators, have been indicted; Lieutenant-Governor Lee has resigned his office and turned state's evidence, and W. J. Stone, who recently succeeded George G. Vest as United States Senator from Missouri, is made prominent in the investigations for the alleged part he played in securing the passage of the "Alum bill" in 1899. There is no direct charge that the senator took any part in the affair beyond his action as attorney for the trust.

The present scandal, it is said, began when the "Alum bill" was introduced in the Assembly in 1899. This bill prohibited the sale or manufacture of baking-powder containing what were claimed to be deleterious substances, one of these being alum; and as the baking-powder made by the baking-powder "trust" was the only one free from alum, the result of this bill was to give the trust a monopoly in Missouri. Its sales in that State are said to have amounted to $3,500,000 a year. Senator W. J. Stone is alleged to have acted as the trust's attorney, and as the agent of a "health association" secured the passage of the bill. Two attempts were made to repeal the law, but it is declared that the trust thwarted the efforts by bribery. Another effort was made during the recent session of the legislature, and then came a display of $1,000 bills which led to the investigation and the indictment of the baking-powder trust's "legislative agent," Daniel J. Kelley. Mr. Kelley, it is alleged, was engaged in handing out $1,000 bills to legislators to prevent the repeal of the "Alum law." Lieutenant-Governor Lee received a check for $1,000 to influence his vote. This he kept for a short time and then turned it over to Circuit Attorney Folk as evidence. The lieutenant-governor has since resigned, but a few days before handing in his resignation he appeared before the grand jury in St. Louis, and told that on March 20, 1901, he received, in the presence of five state senators, $10,000 from Mr. Kelley for distribution; becoming alarmed, he gave the money to Frank Farris, one of the five state senators, who gave $1,000 to each Senator present. The rest of the money was divided between Lee and Farris. Regarding Lee's course, the Holden *Enterprise* says:

"The actions of Lieut.-Gov. John A. Lee in the baking-powder scandal are hard to understand. He has tried to make a virtue of necessity. His possession of the $1,000 check, received indirectly from the baking-powder trust, was concealed for several weeks after the investigating committee of the House of Representatives and the Cole County grand jury had questioned him about legislative boodling. It has developed since that he knew all about the dishonest transactions of two years ago, and there is no doubt remaining that he was deep in the conspiracy to prevent the repeal of the baking-powder law at that time. Those facts assume a still greater share of ignominy in view of his pharisaical letter protesting that he opposed legislation in favor of alum because it was deleterious."

Senator Stone, on April 20, addressed the annual convention of the Missouri Democratic Press Association, in Kansas City, and made an explanation of his connection with the baking-powder legislation. He denounced the daily papers of the State and declared his own innocence of any part in the "boodle" scandal, or of any part in the passage of the anti-alum law, asserting that he did not know for nearly a year that it was enacted. As private attorney, he said, he had assisted in the enforcement of the state pure food laws. In closing his address the Senator said: "I hope God will wither my hand, palsy my tongue, and burn my heart in the flames of hell before I will intentionally dishonor any position to which the people of Missouri assign me." Many of the papers, Democratic as well as Republican, receive Senator Stone's disavowal with incredulity. "Senator Stone seems to be as deep in alum boodle iniquity as any of them," remarks the Marion County *Herald*. The only difference is that "he has probably refrained from the commission of any act that might land him in jail. The others haven't. He was not more honest than they—just more cautious." Other Missouri papers are requesting the resignation of Senator Stone, and of members of the legislature who are under suspicion. The Kansas City *Star* (Ind.) says:

"In the Missouri state senate John A. Lee, its presiding

officer, has confessed to the crime of bribery. Yet there are senators, his associates, of whose equal guilt there is no more doubt than if they had confessed to the public as he has. But if the senate were to be called in extra session to-morrow, either to impeach John Lee or to consider any other matters of state, those same 'boodlers' would sit brazenly to purge the commonwealth of corruption or to appropriate the public moneys.

"There should be more resignations. Or, if senators protest their innocence in spite of moral certainty of guilt, the laws should be so amended that the governor could suspend from active participation in the State's affairs officers who have been indicted by a grand jury. If they were innocent, they could demand a speedy trial for reinstatement. Every man is presumed to be innocent until he is proved guilty, but a suspicion of guilt sufficient to rest an indictment upon should deprive the person of his official prerogative until his real character had been determined by a trial jury. The public has some rights as well as the individual."

The St. Louis *Republic* (Dem.) and *Post-Dispatch* (Dem.) declare that the State of Missouri is not dishonored, because these scandals have been exposed, and they remark that the "house-cleaning" sets a good example for other cities and States.

IS MR. CLEVELAND A PRESIDENTIAL POSSIBILITY?

A FEW Democratic newspapers have recently come out strongly for Grover Cleveland as the best candidate for the Democratic Presidential nomination in 1904. The New York *World*, during the past two or three months, has been publishing editorials favoring Mr. Cleveland's nomination; and the Brooklyn *Eagle*, in a column and a half editorial, declares that he is the "only man who could beat Theodore Roosevelt." Dr. St. Clair McKelway, who is the editor of *The Eagle*, recently returned from a trip to the South, and he remarks that the inspiration for this editorial came from the conversation of men of all classes in the South who attended the recent educational conference in Richmond, Va. He believes that the nomination of Mr. Cleveland is demanded by the influential public sentiment of the South as well as by the conservative interests and the rank and file of the party in the North. The editorial in the Brooklyn *Eagle*, mentioned above, contains the following paragraph:

"What! Are you coming back?"
—*Mr. Bryan's Commoner.*

"Mr. Cleveland's fitness for the Presidency can not be questioned. His paramount superiority as a candidate to any other Democrat has been made by no arts of politics, by no devices of machines, by no agreement among managing politicians, but by the simple fact of his consistency, his civic courage, his practical sense, his elevated patriotism, and his unique ability to see, to sense, and to say what the people need, what they would have, what they should do, and what should be done, for them and with them, in pursuance of their order, by those to whom they intrust the political action which will express their political will. . . . The gravitation toward him now is unmistakable. It is growing hourly and daily. The East attests it. The North recognizes it. The West is stirred by it. The South is alive with it. The Democracy of the whole nation is not only conscious of it, but is vivified by it, and sends its hopes and its prayers forward in its behalf.

PLAY BALL!

The players are ready, but the umpires insist on discussing the last game.
—*The Minneapolis Journal.*

"Moreover, he is far stronger than his party. And his party, with him and with the Independents, whose pillar and bulwark he is, would prove to be far stronger than its Republican adversary. There could be no Democratic errors charged up against him. For them his responsibility ceased when he laid down the Presidency. . . . In short, Grover Cleveland is to-day the only Democratic alternative to Theodore Roosevelt, as the assured Republican Presidential candidate in 1904, and those who do not appreciate the fact will appreciate it the moment they give their thought to the situation as it exactly is, and as it is daily becoming more and more apparent.

"In our opinion Grover Cleveland can and should be nominated for President in 1904, by the Democratic national convention, as the only man who can assuredly lead the party to victory then."

Mr. Bryan in *The Commoner* and Henry Watterson in the Louisville *Courier-Journal* have been attacking Mr. Cleveland bitterly for the past few months; and it is likely that they will strongly oppose his nomination. There is no question that Mr. Cleveland "occupies a warm place in the hearts of a very large number of American people," comments the Boston *Herald* (Ind.), but "we have not brought ourselves to look upon him as an available man for another Presidential nomination, and we greatly doubt whether he would care for such an honor, even if it were tendered to him." The New York *Commercial Advertiser* and *Mail and Express*, both Republican, believe that Mr. Cleveland, if nominated, would surely be defeated. That Mr. Cleveland could be elected next year is "scarcely within the realm of probability," says *The Commercial Advertiser*, for "if the Bryan influence were not strong enough to prevent his nomi-

nation, it would be strong enough to prevent his election." *The Mail and Express* says:

"He [Mr. Cleveland] enjoys the unusual distinction of seeming stronger with the people when out of power and responsibility than when clothed with those attributes of popular confidence. He was weak in 1888, after his first term; and weaker in 1896, after his second term. Those who regard him as strong to-day ignore the fact that he holds that position in the national mind where forgetfulness of the past is regarded as a duty to the one living man who has passed the goal of every American's highest ambition, and who is therefore presumed to look out upon his country and its interests from a place that harbors neither the conflict of individual ambition nor the prejudice of partizan creed.

"Mr. Cleveland with Presidencies and Presidential candidacies forever behind him is one man; Mr. Cleveland with Presidencies and Presidential candidacies still in his mind and view is quite another. All hats are off to the former. If the country has to express its opinion of the latter through the ballot-box, those who force it will invite the most humiliating experience that any ex-President of our country ever suffered."

GENERAL MILES'S REPORT ON CRUELTY IN THE PHILIPPINES.

MANY, if not most, of the American newspapers have formed such well-defined and firm convictions in regard to our Philippine policy that an incident like the Miles report, which was given out last week, does not affect their views in the slightest degree. The anti-imperialist papers commend the general and condemn, for the thousandth time, the war on the Filipinos; some of the expansionist papers assure the general that he is mistaken, and inform him that he is a disgrace to the uniform he wears. Thus the Pittsburg *Post* declares that "there has been nothing more odious or disgraceful in our history, whether of wars with whites or savages," than "the inhumanity and cruelty of the Americans in the conduct of the war"; while the Baltimore *Herald*, on the other hand, says that "it will be hard to convince the American people that our soldiers are not as humane and as honest as any on earth."

The paragraphs in the general's report that are made the principal subject of comment are the ones dealing with the charges of cruelty by the soldiers to the natives. His treatment of this subject is summarized as follows in the despatches from Washington:

"On the subject of cruelty shown to natives General Miles says that in going from Calamba to Batangas in November last he noticed that the country appeared devastated and that the people were very much depressed. At Lipa a party of citizens headed by the acting presidente met him and stated that they desired to make complaint of harsh treatment of the people of that community, saying they had been concentrated in towns and had suffered great indignities.

"They declared that fifteen of their people had been tortured by what is known as the water-torture, and that one man, a highly respected citizen, aged sixty-five years, named Vicente Luna, while suffering from the effects of the torture and unconscious, was dragged into his house, which had been set on fire, and was burned to death.

"They stated that these atrocities were committed by a company of scouts under command of Lieutenant Hennessey, and that their people had been crowded into towns, 600 being confined in one building. A doctor of the party said he was ready to testify that some of the 600 died from suffocation.

"General Miles looked at the building, which was one story in height, 18 or 20 feet wide, and possibly 60 or 70 feet long. He asked for a written statement to be forwarded him at Manila, but says he never received it, and adds:

"'I have no reason to disbelieve their statements; in fact, the instances of torture and the case of the man Luna having been tortured and burned to death are confirmed by other reports.' Concerning the failure to receive the statement, he says:

"'Whether any influence was brought to bear to prevent their statement, either by persuasion or coercion, I am not prepared to say at the present time.'

"He then refers to other cases. On the island of Cebu it was reported and published in November, 1902, that two officers, Captain Samuels, Forty-fourth Infantry, United States Volunteers, and Lieutenant Fester, Nineteenth Infantry, had committed similar atrocities against the people of that island. It is also reported that at Laoag, on the island of Luzon, two natives were whipped to death.

"'At Tacloban, Leyte, it was reported that Major Glenn ordered Lieutenant Caulfield, Philippine Scouts, to take eight prisoners out into the country, and that if they did not guide him to the camp of the insurgent Ouison he was not to bring them back. It was stated that the men were taken out, and that they either did not or could not do as directed.

"'One of the men, who had a son among the scouts, was spared, but the others were separated into two parties, numbering three or four, respectively, and while tied together were all murdered by being shot or bayoneted to death, some being in a kneeling position at that time. The pretense was made that they were killed while attempting to escape, but, so far as I know, no official report was ever made of the circumstance. These facts have been reported by Major Watts, who investigated the case. Besides Lieutenant Caulfield, Civilian Scouts Ramos, Preston, Corn, and McKeen were participants.'"

After relating several other similar instances, General Miles says that he addressed an order to the commanding general of the Philippines calling attention to the reports of atrocities, and directing that any orders that would encourage any act of cruelty be annulled. General Miles also declares that the acts of reconcentration by General Bell were in direct violation of the law, and condemns similarly the sale of rice at a profit to the reconcentrados by the army officers.

Along with this report of General Miles, the War Department issues several statements by bureau chiefs which are in the nature of replies. Judge Advocate Davis, who deals with the charges of cruelty, says that the instances set forth by General Miles have been investigated by court-martial, or are now under investigation. In regard to the sale of rice to reconcentrados, he says that the profits on the sale of rice were turned over the the insular treasury and used for the relief of cholera and famine victims.

The Miles report "is all a matter of hearsay," declares the Pittsburg *Chronicle Telegraph*, while "the good intent of the Government and its agents in the Philippines, civil and military, has been amply vindicated, notwithstanding Miles." And the New York *Mail and Express* says that "General Miles has provided a disgraceful finish for a military career which might have been an honorable one but for his own jealousy, perversity, and littleness." A defense of the army that is more calm and temperate than most appears in the following editorial in the Washington *Star*:

"It is inconceivable that there should be any continued reign of terror in the islands on account of the persistent misconduct of American officers. The opportunities for disclosing the truth are too many and too open to permit any length of period marked by such detestable conduct. The American army standards are not lower than they used to be. Indeed, it is to be believed that those standards are higher while the army is confronted with this exceptionally difficult and novel task. The checks upon the wanton cruelty of officers and men are severe. It is a matter for congratulation that after a supposedly thorough inspection tour of the islands the general commanding the forces should have been enabled to find only this series of old cases which have been so carefully winnowed by the prosecuting officers of the War Office."

Turning now to the anti-imperialist comment, we are told by the Hartford *Times* that the Miles report "is a dark and shameful chapter in the history of 'benevolent assimilation.'" The Baltimore *News* can "almost hear the sardonic laugh of the Spaniard" as he compares our Philippine record with his, while

the New York *World* believes that Weyler "would find himself a congenial guest" at many a mess-dinner party in the Philippines. Our rule there has been a long, black record of brutality, torture, and murder," says the Springfield *Republican*, and "the real odium, despite our imperialist contemporaries," remarks the New York *Evening Post*, "rests, not with those who expose our misdeeds, but with those who commit them."

FRANCHISE TAX LAW SUSTAINED IN NEW YORK.

SOMETHING like fifteen million dollars in back taxes and twenty-two millions in added borrowing capacity, so the newspapers reckon, is granted to New York city by the unanimous decision of the State Court of Appeals, on Tuesday of last week, affirming the validity of the state franchise tax law. The rest of the State will gain about one-fifth as much. The millions that the other States of the Union may gain, as the movement for taxing franchises spreads, has not been estimated. The New York law was passed in 1899, under the urgent insistence of Governor Roosevelt, and has been in litigation ever since, the picturesque feature of the litigation being the fact that ex-Senator David B. Hill, chief counsel for the corporations, has been fighting the law on the ground that one feature that was inserted in it at his special request is unconstitutional. In the original form proposed, the assessment of the franchises was to be made by local assessors. No sooner was this form adopted by the legislature than Senator Hill, as counsel for the corporations, induced Governor Roosevelt to call the legislature together in extraordinary session and have the law amended so as to provide for assessment by a State board of tax commissioners, on the plea that so large a task could not be well performed by the many disconnected and inharmonious local assessors. When this change was made, Mr. Hill took the position that assessment by a state board was unconstitutional, and he has been fighting the case in the courts on that ground for four years. Now the highest court in the State decides against him. He is contemplating an appeal to the United States Supreme Court, but it is the unanimous opinion of the press that to fight the case further will be a waste of time. Says the New York *Tribune*:

"The lawyers will wiggle to the end, but, we feel sure, without avail. Perhaps David B. Hill will recover from the slight of a unanimous decision against him, made by the vote of the judges whose fortunes he has sometimes presumed to hint he held in the hollow of his hand, and go to Washington to tell the justices of the Supreme Court what an inexperienced blunderer and demagog he thinks the President of the United States to be. If so, it will be an interesting occasion."

Senator Hill argued that the power to assess has always been in the hands of officers elected by the people, and as the state constitution says that officers hitherto elective by the people shall continue to be elected, he held that the grant of the power of assessing franchises to a state board contravened that clause of the constitution. The court, however, says:

"The statute should be considered in the light of the circumstances existing when it was passed, which were extraordinary and unprecedented. The system thus created had never been known before, and as its main subject the act dealt with special franchises which had never been taxed before. Property unknown as the subject of taxation to the framers of any of our constitutions was brought into the system, which required new methods of valuation and the exercise of functions which had never belonged to local assessors.

"The property was *sui generis*, and from its nature could not be valued by local officers. Unless it escaped taxation in the future as it had in the past, it was necessary to commit the power to officers with new functions, wider experience, and greater opportunities for observation, who would be able to grasp the new scheme of taxation as a whole. . . . . .

"What greater calamity in the shape of taxation could threaten the vast interests involved than to intrust this important subject to unskilled and incompetent men, some of them willing, it may be, not only to protect their own localities at the expense of others, but to oppose corporations and favor individuals? The burden could not be distributed equally, for each local board would have its own method and theory. Uniform action would be impossible and conflict and confusion would result.

"A wider view, a different kind of judgment, a balancing of localities and figures, an adjustment and equalization of burdens, and an exercise of functions not local in nature were required to meet the situation. . . . . .

"Property created by the legislature and never intrusted by it to the local assessors can not with propriety be said to have been taken away from them."

Mr. Hill argued, further, that this taxation by the State violated the contract between the corporation and the municipality granting the franchise. It is on this ground that the appeal may be taken to the United States Supreme Court. The Court of Appeals says on this point:

"There is no provision that the special franchise, or the property created by the grant, shall be exempt from taxation. Such a stipulation would be void, for no municipality has power to withdraw property from the taxing power of the State, or to provide by ordinance or contract that it shall be free for all time from the common burden which property generally has to bear. Taxation is the rule with every presumption to support, while exemption is an exception with every presumption against it.

"The condition upon which a franchise is granted is the purchase price of the grant, the payment of which in money, or by an agreement to bear some burden, brought the property into existence, which thereupon became taxable at the will of the legislature, the same as land granted or leased by the State.

"There is no implied covenant that property sold by the State can not be taxed by the State, which can even tax its own bonds, given to borrow money for its own use, unless they contain an express stipulation of exemption."

The newspapers are almost a unit in their approval of this decision. The New York *Journal of Commerce* says:

"This conclusion is of great public importance and widespread interest because it establishes the status of a new class of taxable property, of great and growing value in every large city, and in many towns and rural districts. Why should this property not be taxed like any other owned by corporations and used by them as a means of making profit upon their capital? Have they not in fact capitalized it in the amounts upon which their profit is distributed? The capitalization of local transit and lighting companies, and in some measure of telegraph and telephone companies, has been based, not upon the capital actually invested in their various appliances or the cost or value of these as tangible property, but upon an earning capacity dependent upon the privilege of occupying the public streets and highways with them. It is largely the value of this 'special franchise' that has been capitalized and made to carry a volume of stock and bonds greatly in excess of the actual investment of capital. In that process it has been treated as property, whose representatives in the form of securities have a market value and are bought and sold, and yet the corporations have protested that it is not property upon which taxes should be paid.

Objection is made, however, by the New York *Sun*, which thinks that "the tendency of this decision, as that of some other recent decisions by federal and state courts, is to enhance the legislative power at the expense of the judicial power, and to make the Executive, when backed by the legislature, almost a supreme dictator." And the New York *Times* and *Commercial Advertiser* believe that the plan of assessment by a state board is open to criticism. Assessment by a state board, says the latter paper, "leaves too much, not only to the judgment of the tax officers, but also to their integrity," for "a partisan or dishonest board would have the corporations and investors in their secutiries completely at its mercy."

SUPREME COURT DECISION ON NEGRO SUFFRAGE.

"WHAT would the fifteenth amendment bring at a dead-letter sale?" asks the Washington *Post*, in its comment on the Supreme Court decision in the Alabama suffrage case; and the Springfield *Republican* thinks the amendment is as good as hung up in the national museum as a relic. The decision of the court, in the case thus commented on, is a refusal to grant relief to Jackson W. Giles, of Montgomery County, Ala., who claims that he and other negroes in that county are wrongfully excluded from the franchise by the new Alabama constitution. The Alabama constitution, ratified in November, 1901, is so framed as to admit to the franchise men having education and regular employment, or property worth $300, or a war record (personal or ancestral), or a good character and an understanding of the duties of citizenship. Three registrars appointed in each county pass on the characters of the applicants, and it is not denied that the whites succeed in gaining the board's approval, and the blacks fail to gain it, with great regularity. Giles claims that the constitution is a fraud and that in its effect it violates the fifteenth amendment to the Constitution of the United States, which forbids the abridgment or denial of the right to vote by any State "on account of race, color, or previous condition of servitude." The court decides against this claim, on the ground that Giles asks the court to grant him the right to vote under a constitution which he himself alleges to be fraudulent, and on the further ground that the situation is a political one, and relief must be looked for from the political, not from the judicial, branch of the Government. The majority opinion is written by Justice Oliver Wendell Holmes, who fought for the freedom of the negro in the Civil War, and is concurred in by Justices Fuller, McKenna, White, and Peckham. Justices Harlan, Brewer, and Brown dissent.

The majority opinion says, in part:

"The plaintiff alleges that the whole registration scheme of the Alabama constitution is a fraud upon the Constitution of the United States, and asks us to declare it void. But, of course, he could not maintain a bill for a mere declaration in the air. He does not try to do so, but asks to be registered as a party under the void instrument. If then we accept the conclusion, which it is the chief purpose of the bill to maintain, how can we make the court a party to the unlawful scheme by accepting it and adding another vote to its fraudulent lists? If a white man came here on the same general allegations, admitting his sympathy with the plan, but alleging some special prejudice that had kept him off the list, we hardly should think it necessary to meet him with a reasoned answer. But the relief can not be varied because we think that in the future the particular plaintiff is likely to try to overthrow the scheme. If we accept the plaintiff's allegations for the purpose of his case, he can not complain. It seems to us that unless we are prepared to say that it is wrong, that all its principal allegations are immaterial, and that the registration plan of the Alabama constitution is valid, we can not order the plaintiff's name to be registered.

"It is not an answer to say that if all the blacks who are qualified according to the letter of the instrument were registered the fraud would be cured. In the first place, there is no probability that any way now is open in which more than a few could be registered; but if all could be the difficulty could not be overcome. If the sections of the constitution concerning registration were illegal in their inception, it would be a new doctrine in constitutional law that the original invalidity could be cured by an administration which defeated their intent. We express no opinion as to the alleged fact of their unconstitutionality beyond saying that we are not willing to assume that they are valid in the face of the allegations and main object of the bill for the purpose of granting the relief which it was necessary to pray in order that the object should be secured.

"The other difficulty is of a different sort, and strikingly reinforces the argument that equity can not undertake now, any more than it has in the past, to enforce political rights, and also the suggestion that state constitutions were not left unmentioned in paragraph 1,979 by accident. In determining whether a court of equity can take jurisdiction, one of the first questions is what it can do to enforce any order that it may make. This is alleged to be the conspiracy of the State, altho the State is not and could not be made a party to the bill. The Circuit Court has no constitutional power to control its action by any direct means, and if we leave the State out of consideration the court has as little practical power to deal with the people of the State in a body.

"The bill imports that the great mass of the population intended to keep the blacks from voting. To meet such intent something more than ordering the plaintiff's name inscribed on the lists of 1902 will be needed. If the conspiracy and the intent exist, a name on a piece of paper will not defeat them. Unless we are prepared to supervise the voting in that State by officers of the court, it seems to us that all that the plaintiff could get from equity would be an empty form. Apart from damages to the individual, relief from a great political wrong, if done as alleged by the people of a State and the State itself, must be given by them or by the legislative and political department of the Government of the United States."

The dissenting opinions are thus outlined in a Washington despatch to the New York *Sun*:

"The dissenting justices concur in declaring that the Circuit Court, in which the suit was originally brought, had jurisdiction over the case and it should have been sent back there for trial. Justice Harlan, however, considers that question of less importance than the overturning of a long line of the court's precedents by absolutely passing by the only question it was asked to pass upon and going out of its way to decide the case on its merits. His opinion is nearly twice as long as that of Justice Holmes, and all of it except two lines is devoted to a discussion of the new and startling doctrines of procedure by the court and citations from prior decisions to the contrary.

"And Justice Brewer, for himself and Justice Brown, shows by numerous decisions of the Supreme Court that the Constitution of the United States expressly gives the Circuit Court jurisdiction over just such cases. The plaintiff's bill, he holds, should entitle him to a judicial hearing and decision. It showed that he was a citizen of Alabama, and registration and qualification to vote was wrongfully denied him. That many others were similarly treated did not destroy his rights or deprive him of relief in the courts. 'That such relief will be given,' he declares, 'has been again and again affirmed in both national and state courts.'"

The newspapers that disagree with the majority opinion express the hope that this matter will come up before the court again, and will receive different treatment. Thus the Springfield *Republican* says:

"Plainly the fifteenth amendment has been violated in the practical effect of the Alabama constitution, which denies the right to vote on account of race and color. But that question awaits official determination, and the United States Supreme Court alone, and not Congress, can decide it. Congress is powerless in the matter, and if all attempts to bring about an official determination of the question are to be put down on various technical grounds, as in the present case, then the fifteenth amendment will have to be considered as having been hung up in the national museum for people to look at as one of the curiosities of the reconstruction age."

The New York *Tribune* also looks to the court for further action. It says:

"Somewhere, somehow, there must be a way of passing on the constitutionality of state laws which plainly nullify the spirit of the federal Constitution, and it is no more an assumption of the administrative functions of a state government for the court to declare that state authorities can not deprive negroes of a ballot on pretexts which do not exclude white men than it is for the court to overrule any other action of a State or its officers."

Other papers, however, think that negro suffrage has proved a failure, and are well satisfied with the refusal of the Supreme

Court to stop the campaign of disfranchisement. Says the Philadelphia *Record:*

"Back of the legal questions there is the fundamental fact that white men will not submit to the government of black, red, yellow, or brown men. That is a racial axiom and is not limited to the United States. But the colored people are secure in their personal rights, and not all of them are disfranchised. They can obtain education and property, cultivate the soil, practise the mechanic arts and the professions. The majority of them are notoriously unfit for political privileges. Their relations with the white people are friendly, as they recently testified in Richmond. With the growth of intelligence and character, the acquisition of property and the development of civic spirit, they will fit themselves for political privileges, and will then acquire them. The best men among themselves deprecate the political activity of the colored people."

The Charleston *News and Courier* takes the view that no amount of education can make the negro fit to vote:

"The original purpose of those who strove so heroically for the abolition of slavery did not contemplate the conversion of the slave into the voter, but only to make his lot in life easier, to relieve him from the sacrifice of his life and labors to others, and to encompass him by such provisions of the law as would protect him from violence and oppression. Education does not change the racial character of the negro. Read he ever so readily, and speak he ever so eloquently, at the last he is the negro still. He can not get rid of his inheritance. For some purpose he was made a negro, and such he will remain. We do not believe he can be safely injected into the body of American citizenship anywhere, and this view of the question ought to be, and must be, considered seriously now or hereafter."

THE LOUISIANA PURCHASE CELEBRATION.

THE President, ex-President Cleveland, governors too numerous to mention, ambassadors from foreign lands, editorial and magazine writers, and orators of varying degrees of eloquence brought before the public mind last week the importance of the vast transaction concluded on April 30, 1803, when Napoleon, for $15,000,000, transferred to the United States a million acres of wilderness, which doubled the area of our country and has added fourteen stars to the national flag. The wheat crop raised every year in this former wilderness, to say nothing of other products, would pay the $15,000,000 a hundred times over, we are told; and the exposition that celebrates the transfer will cost three or four times as much as the territory itself cost. To-day the "Louisiana Purchase" contains 15,000,000 people and has an assessed valuation of over $6,500,000,000. Its political value has been even more important. Twice, says the New York *Sun*, this purchase has saved the Union from disruption. Had the mouth of the Mississippi River remained in the hands of a foreign Power, the States west of the Alleghanies would have parted company with the Atlantic-coast States to obtain commercial privileges from that Power, either by treaty or annexation. Again, when the South tried to set up a separate government that would control the mouth of the Mississippi, the men of the West crowded to the front, not only to preserve the nation, but to preserve their free outlet to the Gulf. "Nor can it be doubted," adds *The Sun*, "that if Lee had conquered at Gettysburg and the cause of secession had been made triumphant, all the States adjoining the Mississippi River would soon have found themselves drawn to the Confederacy that they could not have withstood."

Nowhere has the importance of the purchase been handled in a more masterly manner than in the speeches of President Roosevelt and ex-President Cleveland at the dedication of the exposition at St. Louis. President Roosevelt dwelt upon the unprecedented character of this expansion of our territory. "The Grecian states," he recalled, "performed 'remarkable feats of colonization, but each colony, as soon as created, became entirely independent of the mother state and in after-years was almost as apt to prove its enemy as its friend." With Rome, however, "the exact opposite occurred," and the imperial city "expanded her rule over the entire civilized world by a process which kept the nation strong and united, but gave no room whatever for local liberty and self-government," a process which "let an over-centralization eat out the vitals of their empire until it became an empty shell; so that when the barbarians came they destroyed only what had already become worthless to the world." Our expansion over the Louisiana purchase not only avoided these errors of Greece and Rome, but gave the world a new idea. The nations of Europe, up to that time, had treated their colonists, not as self-governing equals, but as subjects; the United States divided its new territory into States and admitted them on complete equality with the old. "The process which we began," the President added, "has since been followed by all the great peoples who were capable both of expansion and of self-government, and now the world accepts it as the natural process, as the rule; but a century and a quarter ago it was not merely exceptional; it was unknown." He went on to say:

"The history of the land comprised within the limits of the Purchase is an epitome of the entire history of our people. Within these limits we have gradually built up State after State until now they many times over surpass in wealth, in population, and in many-sided development the original thirteen States as they were when their delegates met in the Continental Congress. The people of these States have shown themselves mighty in war with their fellow man, and mighty in strength to tame the rugged wilderness. They could not thus have conquered the forest and the prairie, the mountain and the desert, had they not possessed the great fighting virtues, the qualities which enable a people to overcome the forces of hostile men and hostile nature. On the other hand, they could not have used aright their conquest had they not, in addition, possessed the qualities of self-mastery and self-restraint, the power of acting in combination with their fellows, the power of yielding obedience to the law and of building up an orderly civilization. Courage and hardihood are indispensable virtues in a people; but the people which possesses no others can never rise high in the scale either of power or of culture. Great peoples must have in addition the governmental capacity which

"COURT OF HONOR" AND PRINCIPAL BUILDINGS OF THE ST. LOUIS FAIR, AS THEY WILL APPEAR IN 1904.

comes only when individuals fully recognize their duties to one another and to the whole body politic, and are able to join together in feats of constructive statesmanship and of honest and effective administration."

Ex-President Cleveland's address was a scholarly and illuminating review of the events that led up to the transfer of the territory. Many have wondered how Napoleon ever came to make such a losing trade; Mr. Cleveland thinks it was due to the interposition of divine Providence. He said:

"In the midst of our rejoicing to-day it is peculiarly fitting that we recall with soberness and meekness some of the happenings in connection with the great event we celebrate which impressively illustrate the interposition of divine Providence in our behalf. We sought from a nation ruled by one whose ambition was boundless and whose scheme for aggrandizement knew neither the obligations of public morality nor the restraints of good faith the free navigation of the Mississippi River and such insignificant territory as would make such navigation useful. While our efforts toward the accomplishment of this slight result languished and we were fast assuming a hopeless condition, the autocrat of France suddenly commanded one of his ministers to enter into negotiations with our waiting and dispirited representatives, and exclaimed: 'I renounce Louisiana. It is not only New Orleans I cede. It is the whole colony, without reserve.'

"It was only nineteen days thereafter that the treaty transferring to us the magnificent domain comprised within the Louisiana Purchase was concluded.

"This astonishing change in our prospects, which dissipated the fears and apprehensions of our Government and revived the promise of our perpetuity and happy destiny, came at the moment that Bonaparte was organizing a force to occupy the Louisiana Territory in the prosecution of colonial occupation and development which, if consummated, would probably have closed the door even to the slight acquisition which we originally sought. The French colony of San Domingo was, however, a prime factor in this scheme of occupation, and it was essential to its success that this colony and Louisiana should both be included and should supplement each other. A serious revolt then raging in San Domingo delaying proceedings, the occupation of Louisiana was postponed until this revolt should be overcome. The troops sent from France to accomplish this apparently easy task were so stubbornly resisted by hundreds of thousands of freed blacks, fighting against their reenslavement, and they suffered so terribly from climate conditions and deadly fever that after the sacrifice of twenty-five thousand soldiers, many of whom were intended for the subsequent occupation of Louisiana, Bonaparte's plan for the occupation of both colonies miscarried. This disappointment and the conception of new schemes of war and conquest by the restless dictator of France, and his need of money to carry out these schemes, were controlling circumstances in leading him to throw in our lap the entire Louisiana Territory. None of these circumstances were within our procurement or knowledge; but who shall say that God was not accomplishing His designs in our behalf amid the turmoil and distressing scenes of San Domingo's revolt? And how can it be said that there was no Providence in the unexpected, unyielding, and successful fight for continued freedom on the part of the negroes of San Domingo, or in the fatal pestilence that vied with bloody warfare in the destruction of the army of subjugation, or in the fever of war and aggression which heated the blood of Bonaparte, all combining to turn him away from the occupation of the Louisiana Territory? All these things, so remote and so far out of our sight, pointed with the coercion that belongs to the decree of God to a consummation which restored to our people peace and contentment, and secured to our nation extension and development beyond the dreams of our fathers.

"Thus we may well recall in these surroundings the wonderful measure of prophecy's fulfilment within the span of a short century, the spirit, the patriotism, and the civic virtue of Americans who lived a hundred years ago, and God's overruling of the wrath of man and his devious ways for the blessing of our nation."

Considerable complaint is heard in regard to the treatment the visitors received in St. Louis. Governors of States which had made large appropriations found themselves practically ignored,

UNCLE SAM: "That century plant was worth buying!"
—*The Philadelphia Press.*

it is said, and had to hunt up their own hotel accommodations, not always with the best results. Governor Durbin and staff, of Indiana, left on Friday, refusing to remain for "State day," in which they were scheduled to take part. President Roosevelt and his party, after the dedication exercises, had to hustle with the rest of the crowd for coffee and sandwiches at a near-by lunch-counter. The President was lucky enough to get in front of a pile of sandwiches, but was kept busy passing them to his neighbors. When his train reached Kansas City he is represented as saying to a New York *Sun* reporter: "You can print for me that my party had nothing fit to eat while in St. Louis and were not accorded decent treatment."

THE POST-OFFICE SCANDALS.

"IT can no longer be doubted that there is a deplorable amount of mismanagement, dickering, and malfeasance in the Post-Office Department; facts are coming out which are causing the public to lose much of the confidence it has had in this great business department of the Government." So says the Minneapolis *Journal* (Rep.), and so, in effect, say many other papers which have been watching the progress of the investigation. The Chicago *Tribune* (Rep.), the Philadelphia *Ledger* (Ind.), the New York *Evening Post* (Ind.), and other papers are calling on the Postmaster-General to lift the veil of secrecy that has shrouded the investigation thus far, and to give the public the facts. "The constant publication of uncorroborated charges," says *The Tribune*, "demoralizes the department and confuses the public." The only important incident of the investigation that has been given complete publicity was Mrs. Tyner's removal of papers from a government safe in the office formerly occupied by her husband, James N. Tyner, Assistant Attorney-General for the Post-Office Department. General and Mrs. Tyner are both advanced in years, the former is in broken health, and Mrs. Tyner declares that she took from the safe only some private papers of her husband's and a package of government papers of slight importance, which were promptly returned. General Tyner had sent in his resignation in March, to take effect May 1, and his wife says she was merely removing his papers from the office in view of his retirement. It is stated on the other side, however, that General Tyner was suspected of dealings with firms who wished to make illegal use of the mails, that his resignation was sent in "by request," and that he had agreed not to continue to discharge the duties of his office while his resignation was pending. It is suspected that incriminating papers may have been among those removed from the safe by Mrs. Tyner, and the case has been turned over to the criminal authorities; but as there is no way of proving that the papers were not what Mrs. Tyner says they were, the prosecution may experience some difficulty. General Tyner was summarily dismissed from the service by the Postmaster-General on April 22, as soon as he heard of the safe incident.

The charge was made last week by Seymour L. Tulloch, for twenty years cashier of the Washington Post-Office, that a postal investigation was started during the term of Charles Emory Smith as Postmaster-General, and that Mr. Smith stopped the investigation. Mr. Smith denies the charge. He says:

"It is only necessary to say that the investigation was made by the Controller of the Treasury, who is an independent officer and the highest auditing officer of the Government, and that I could not have stopped it if I had wanted to.

"As a matter of fact, my knowledge of the subject came from his inquiry. The Controller had the vouchers in question before him for months, and after as thorough an examination as he could give he concluded that there were irregularities, which consisted largely, not altogether, of charging to one account what ought to be charged to another, and others of that character. He finally allowed and passed all of the accounts except a few, with the understanding that the things criticized should be changed."

The stories of the postal scandals have reached the public largely in the form of rumors reported by the Washington correspondents. The New Orleans *Picayune* (Dem.) summarizes these reports in the following paragraphs:

"The most guilty of the high officials after Assistant Attorney-General for the Post-Office Department James N. Tyner, who some time ago resigned, are declared to be General Superintendent George W. Beavers, of the Division of Salaries and Allowances in the office of the First Assistant Postmaster-General, and General Superintendent A. W. Machen, of the Division of Free Delivery, in the same office. Beavers has also resigned.

"George W. Beavers is charged with being the paid representative of the Postal Clerks' Association, and it is claimed that he used his official position to lobby to secure increased appropriations for the clerks. Congress frequently has authorized an increase of the pay of the clerks. It also is charged that Beavers antagonized the legislation increasing the pay of the letter-carriers, whose association Beavers did not represent.

"Beavers also is charged with being a member of a promotion syndicate, which sold promotions for $25 each and a monthly percentage. As a result of these charges the promotions of 1,776 clerks in the New York Post-Office were ordered held up until an investigation could be made.

"Beavers, it also is claimed, violated the law by authorizing a larger number of appointments of high-salaried postal clerks than is allowed by the law, and of reducing the number of lower salaried clerks. Orders to correct this abuse have been given by the officials.

"Definite charges are made that A. W. Machen was instrumental in spending $500,000 for equipping the country with mail-boxes of flimsy construction in place of the more substantial ones. It is charged that there was no excuse nor reason for wasting this half-million dollars, especially as the new boxes are not as good as the old ones.

"In the matter of painting the letter-boxes it is claimed that there has been gross extravagance, the Government paying 97 cents for the painting of each box as well as the hotel bills and the railroad fares of the inspectors to look after the work, whereas in one instance a private contractor did the same work for 38 cents.

"A. W. Machen is charged with making a contract with a New York clock company for four years instead of one. The contract has disappeared from the files of the Department, and the Postmaster-General has called on the company to furnish a copy of the contract at once or it will be revoked. Mr. Machen is charged with furnishing information to a company which sells wagons to the rural free-delivery carriers which enabled that company to dispose of its goods to the exclusion of other contractors.

"There are also serious accusations against M. A. W. Louis, chief of the Division of Supplies in the office of the First Assistant Postmaster-General, to the effect that he has, in collusion with a rubber-stamp manufacturer, practised extensive extortions upon the Government. Louis is also charged with purchasing typewriters at a cost of from $15 to $30 above the retail price. Another one of the charges is that 5,000 cash registers were purchased at a price $25 higher than the retail figure. These charges are specific and in many instances are backed by the evidence of reputable persons. General charges have been made that enormous quantities of typewriters, registering time-clocks, safes, mail-boxes, mail-bags, penholders, rubber stamps, stationery, and other supplies have been purchased and forced upon the postmasters throughout the country.

"It is reported that much evidence has been gathered which shows that many, if not all, of the post-office contracts are tainted with corruption, collusion, and a division of the profits with the contractors. The ablest inspectors in the government employ are engaged in collecting this evidence. Members of the ring are reported to have secured great favor with Senators and Representatives by their readiness to grant their requests in regard to appointments, promotion, and contracts, so that it was customary for those asking favors to ignore the Postmaster-General, and go directly to his subordinates.

"Unfortunately for justice, the worst thing that can happen to these dishonest jobbers is to lose their places. They are not likely to be prosecuted for their crimes. It is extremely difficult to punish politicians for any offense."

LETTERS AND ART.

WHITMAN'S INFLUENCE IN GERMANY.

HERR WILHELM VON POLENZ, an eminent German writer, who recently made a tour of the United States, expressed during his stay here his surprise that there is no sign in the present intellectual life of this country that the message of Walt Whitman has been "grasped or even duly appreciated." His attention was thereupon called to the impress of Whitman's influence upon several of the younger American poets; to the "Whitman Fellowship," organized in many cities; to *The Conservator*, a monthly journal of the Whitman spirit published in Philadelphia by Horace Traubel; and to numerous other proofs of the quiet working of the Whitman leaven—among these "a little liberal congregation in New York, where passages from Whitman's writings used as responsive readings form a most interesting feature of the unique and inspiring Sunday service." Herr von Polenz was much interested. He had heard nothing of the kind, altho he had been in the country several months and had associated largely with Americans of high intellectual standing.

This incident is related in the pages of *The Conservator* (April) by Mrs. A. von Ende, a German lady now resident in this country, who goes on to say:

"The attitude of this German author, whose story of peasant life, 'Der Buettnerbauer,' was recently translated into French and preceded by a highly laudatory preface by Tolstoy, is significant of the esteem in which Whitman is held in Germany. As far back as the year 1868 the poet Freiligrath had hailed the author of 'Leaves of Grass' as a wonderful phenomenon and had offered a warm and just estimate of his personality as it is portrayed in his verse. But the great events of the seventies so completely engrossed the attention of the nation and turned it from everything foreign to national topics that the interest Freiligrath had barely awakened passed away, leaving little more than a memory. Almost twenty years elapsed before Whitman was once more presented to German readers. Prof. Karl Knortz, of Evansville, Ind., then wrote a pamphlet, in which he attempted to limn the portrait of the 'poet of democracy,' as the title-page read, and soon after T. W. Rolleston published some translations. These two little works were probably instrumental in bringing Whitman before the new generation of German writers, then strenuously striving to revolutionize the literature of their country by the introduction of new spiritual and esthetic ideals. These young men were not deluded by the political greatness of their fatherland and the romantic charm of a new revived medievalism. They protested against the alienation of literature and life, and plunged headlong into the wave of naturalism which had come from the defeated arch-enemy beyond the Rhine. They were susceptible to any foreign influence that promised to rescue the intellectual life of the country from the fatuous self-complacency of patriotic pride.

"Upon minds eager to escape from stagnating conventionalities and from the popular prettiness, which so becomingly concealed intellectual and emotional impotence and a threadbare tho blustering idealism, the rugged spontaneity and primeval saneness of Whitman, 'teaching the average man the glory of his daily walk and toil,' burst like a revelation. Whitman became a subject of study to the creative and the critical minds of Young Germany. When he died in 1892 one of the most significant tributes to his genius came from the pen of Johannes Schlaf, a pioneer of the new school in fiction and drama."

It is hard to find a work on modern German literature to-day, continues the writer, which does not in some way—"approvingly or regretfully, according to the author's personal convictions"—acknowledge the indebtedness of Germany's younger lyrical poets to Walt Whitman. Kuno Francke's "History of German Literature" is cited, as is also Dr. James Taft Hatfield's collection of "German Lyrics and Ballads." We quote, in conclusion:

"A glance at certain volumes of verse published in Germany in the last decade is sure to reveal passages reminiscent of Whitman. He not only helped the poets of Young Germany to revolutionize form, but he opened the negative and skeptical minds of these embryonic Fausts to a more hopeful view of life. It is doubtful whether their schismatic partizan tendencies enabled them to grasp the meaning of his message in its full breadth; for the humor of Whitman's invasion of the poetry of Germany lies in the seriousness with which all sorts of schools and systems began to claim him. The realists found reason to revere him as a patron saint of their cult of the commonplace. The symbolists, in attempting to imitate the sonorous sweep of his prophetic strains, rushed into inarticulate rhapsodies of orphic depth. Others merely borrowed the form and used it as vehicle for their individual ism or egoism of the Nietzsche or the Stirner mold; and no doubt animated discussions, whether he was an anarchist, a communist, or a socialist, are still as plentiful among his readers and imitators in Germany as they are here.

"But the main fact to be considered is that this American virtually did become a power, the influence of which can be distinctly traced; and tho much of the poetry of this latest period of German storm and stress, conceived in the evident ambition to be Whitmanesque, was sadly abortive and need not be taken seriously, in the saner and maturer minds of the generation the Whitman leaven blended harmoniously with the most cherished longings of its noblest individuals, and the results are well worthy of notice. It seems natural that of the poets who so eloquently eulogized Whitman, Johannes Schlaf should be the one whose verse suggests the most interesting parallelisms of thought and form. Yet it must be said to his credit that both in the prose poem Fruehling published in 1896, and in the volume of verse entitled 'Helldunkel,' and published in 1899, there is a strong individual coloring and a delicious personal flavor, and tho the influence of Whitman is instinctively felt it is not easily defined. I doubt whether 'The Kingdom of Children,' 'The One,' 'The Word,' 'Ecstasy,' 'On the Beach,' 'In the Depth,' and 'Song of Death,' could have been written without the inspiration received from Whitman. The 'barbaric yawp' of the American poet undeniably reverberates in the hypersensitive minds of young Germany and is reflected in their verse."

"UNCLE TOM'S CABIN" AND THE NEW YORK PUBLIC SCHOOLS.

THE decision of the New York public-school superintendents to exclude "Uncle Tom's Cabin" from the school libraries, on the ground that the book is calculated to keep alive sectional feeling, evokes surprised comment from several of the newspapers. The New York *Times* points out that this action "is sure to excite much more discussion than the book itself would now do if left to win the attention of the scholars on its intrinsic merits as a story." The New York *Tribune* comments:

"The argument brought in favor of the action was that the book treated of the days of slavery in the South, and, inasmuch as slavery existed no longer, the book should be barred from circulation among the children. The men who voted to exclude the book probably had in mind also the fact that 'Uncle Tom's Cabin' contained much pertaining to the South as it was before the war which was exaggerated and distorted, and they saw no reason why these misrepresentations should be handed down to the rising generation.

"There is unquestionably some force in these arguments, but we agree with those who think that the book should have been allowed to remain where the children could read it. 'Uncle Tom's Cabin,' whatever its faults, enormously stimulated the agitation against slavery from which it sprang, and, almost universally translated, created a deep impression throughout the civilized world. The institution which it described has been uprooted. . A new, vigorous, healthy South has sprung up where the South in which Uncle Tom lived and where a Legree was possible existed. But those who ascribe to the book a place among the forces which obliterated slavery think that taking it off the school catalogs is like destroying the utterances of Garrison, Greeley, Phillips, and Beecher, or like depriving the children of the stories of the heroes who fell on the battle-fields where the slavery question was finally settled."

The Southern papers seem inclined to treat the whole matter

in a flippant spirit. "So 'Uncle Tom's Cabin' is to be ruled out of the New York school libraries?" observes the Macon *Telegraph*; "the millennium must be on the way." And the Atlanta *Constitution* adds: "Now that 'Uncle Tom's Cabin' is to be no longer taught in the New York public schools, the time may yet come when the people of that section will be able to sit down to a banquet without having the 'race problem' served hot."

The strangest thing about this book, says the Brooklyn *Eagle*, is the vitality with which it holds people to this day, people entirely ignorant of the conditions out of which it sprang. Translated to the stage it has been "probably the most acted play ever written."

FORM VS. SUBSTANCE IN GREAT LITERATURE.

CAN a creation of genius or of first-class talent be immortal without "perfection of form"? A Russian critic of note, M. Engelhardt, in discussing in the *Novosti* the style and manner of Tolstoy and Turgeneff, is led to challenge the general assumption that form and substance must correspond in a work of art, and to undertake to show that the facts of literature (whatever may be said of other arts) are at war with it. Not only, according to him, is form not essential to universal acceptance and permanent fame of a work, but there seems to be a sort of natural antagonism between greatness of matter and high refinement and beauty of manner. He says (to translate rather freely):

"The history of art is a never-ending conflict between form and matter, a constant subordination or sacrifice of the former in the interest of the latter. The great writer, as a rule, writes badly; the great painter paints crudely. Perfection of manner is, on the other hand, almost invariably the gift of mediocrity or of second-rate ability. The genius does not achieve it; or, if he does, if he strives to attain thereto at any cost of effort, he succeeds at the expense of the content of his work. In great works, in a word, form is far below substance; the *technique* is lame and rough, and the want of external beauty is compensated by a beauty purely internal. . . . Indeed, we do not perceive the form of a truly great work, for its content takes complete possession of us. Owing to this inattention to the external side, we are ready to pronounce it perfect, and this doubtless accounts for the popular notion regarding absolute harmony between form and matter."

The critic first refers to Tolstoy by way of illustrating his proposition. Very short of perfection are the forms of his immortal novels. There are in them disorder of exposition, absence of architectural symmetry, clumsy, awkward expression, and crudity of style. There are endless periods with confusing qualifying clauses and intractable "thats," "whiches," etc. But we hardly notice these defects in reading Tolstoy. The richness of the substance, the fulness of the life revealed, monopolizes our attention. We are looking through a window into reality, and we do not inspect the window itself to see whether it is finished and artistic. Indeed, critics have said that Tolstoy had no style at all. The writer continues:

"Far from perfection is the technique of Shakespeare himself. And his language! Exuberant it is, but often stilted to the degree of impossibility, artificial, strained, unnatural. We should laugh at these mannerisms did not the secrets of the spiritual world, of the human mind, disclosed by Shakespeare so engross us that we do not perceive the incongruities of form.

"The verses of Homer, technically speaking, are not only inferior, but immeasurably inferior, to those of Vergil or Ovid. Perfection of form we must seek in second-rate authors—the Roman poets, for example."

That cultivation or deliberate striving after elegance, polish, and refinement of form is almost fatal to greatness in art, Engelhardt contends, is demonstrated by the fate of Turgeneff and Flaubert. The former's natural gifts were equal to those of Tolstoy or Dostoievsky, but his passion for external beauty, his love of form, considerably weakened his power. Flaubert, it is known, spent weeks and months on the elaboration and decoration of his style, seeking the appropriate word, the neat turn, the attractive flourish. He was successful, but at what cost! He became the slave, the victim, of his style, and his later works are petty, fragmentary, lifeless, pitifully trivial. The artist who has imagination and thought, who has a message to deliver, will inevitably disregard the limitations of form. In all ages and with all nations, in a word, writers of genius have sacrificed form for substance, and the nature of things seems to impose this sacrifice.—*Translation made for* THE LITERARY DIGEST.

FÉLIX VALLOTTON: A "BLACK-AND-WHITE" ARTIST.

A NOTABLE figure in the contemporary art circles of France is Félix Vallotton. He has evolved methods that are all his own, and his pictures, while often of a most grotesque character, are prominently displayed by the Parisian journals, and have won a certain artistic standing. M. Vallotton and his work are interestingly described by Christian Brinton in *The Critic* (April). We quote:

"Some twenty years back there came to Paris from lake-washed Lausanne a boy with clear eye and steady hand. He had convictions and held to them. He looked at life not through the monocle of a Frenchman, but with primitives, with knife in hand, he cut his own blocks. Through predilection and not through pose he returned to the simplicity of forgotten things, to the candor of earlier, more sturdy days. Félix Vallotton had a vague predecessor in Lepère and was followed in England by Nicholson, in Bavaria by Sattler, and in Holland by the haunting fantasy of Jan Aarts, yet it is he who personifies the current revival of wood-engraving. Scores of lesser men came limping after, but he it was who took the first step. In breadth and in penetration, in the adaptation of an old medium to modern conditions, and in sheer productiveness, Vallotton far excels his fellow craftsmen. More than all the others, even Munch, he has achieved individual expression, has made the woodcut embody his personal conception of life's beauty and life's bit-

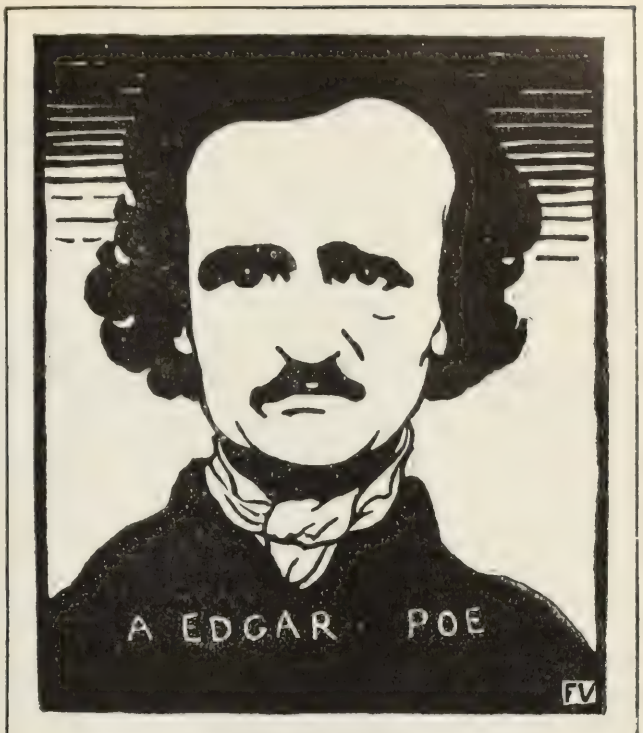
THE ARTIST'S PORTRAIT OF HIMSELF.



EDGAR ALLAN POE.

PORTRAITS BY FÉLIX VALLOTTON.

terness. In the sober blacks and whites of this modest, observant man's art are outlined with pitiless precision the silhouettes of latter-day society, the sum of that which to-day makes for laughter or for tears.

Vallotton's initial efforts were in oil, but neither painting nor etching gave him the needed outlet for his talent. In 1891 he turned to wood-engraving. His first attempts in this art date from 1891, and include a "Head of an Old Woman" and a "Paul Verlaine" already defiant in their originality. Mr. Brinton continues:

"The series which followed, from poor, repentant Gaspard to the tortured Messianic mask of Dostoievsky, show portraiture reduced to its slenderest terms. By means of an incomparable system of elimination, of simplification, Vallotton brings one face to face with his subject, not as he looked at a given, accidental moment, but as his countenance is stamped upon the consciousness of mankind. Vallotton saw but a few interior portraits of the pallid, sinister poet, yet his Poe is transfixing in its penetrant accuracy. There is no need here for aigrettes, yards of satin, indolent cushions, vases, and floral accompaniments. The atrocious paraphernalia of mundane portraiture find scant favor with Félix Vallotton. The bravura of Carolus-Duran and Sargent are not what he seeks. A few incisive lines and the savant apposition of black and white tell his story. One does not need, after all, to be modiste or upholsterer in order to probe the souls of men. Tho there is nothing here which suggests the golden yellow of Rembrandt or the silver-gray of Van Dyck, there is something in each of these heads which recalls the greatest of masters, one who, in the dim chambers of the Alcazar, posed his figures against a neutral ground and painted them with matchless unity of effect. It is only the immature who crave externals; the disdainful Velasquez was content with essentials."

The same qualities which render Vallotton's portraits so effective were next employed in transcribing street or landscape effects. We quote further:

"In the early engravings, such as 'The Patriotic Song' and 'The Bon Marché,' faces as well as attitudes are consistently individualized. Later this disappears, and each scene conveys the impression of life through its inherent spirit. The man who could reduce the multiple play of the human countenance to its mere denominator found that he could do the same for crowded shop, café, or the jostle of the boulevards. Moreover, the puppets who bobbed hither and thither were alike; their passions and ambitions were identical. They were only important as being part of the general pattern. Contemporary with 'Verlaine,' 'Wagner,' 'Berlioz,' and his own thoughtful profile silhouetted against the roofs and crowning summits of Lausanne, came 'The Burial,' notable alike for characterization and for that note of satire which is the salt of Vallotton's art. . . . In 'The Manifestation,' 'The Shadower,' 'Little Angels,' and kindred themes, he consummates that power of stimulating life and motion which remains his cardinal achievement. These swift glimpses of fluttering forms are exact, but are in no sense realistic. They reproduce not reality, but the illusion of reality. They are not a street fight, a sudden downfall, or a group of gamins capering about a drunkard, as such things actually occur, but as they are registered on vision. They form a series of optical impressions more convincing than the cinematograph because they embody a deeper, more subjective truth."

MR. MABIE'S ESTIMATE OF EMERSON.

ONE of the important events in American history was the delivery of Emerson's address on "The American Scholar" at Cambridge on the last day of August, 1837. To Mr. Hamilton Wright Mabie, who writes on "Raiph Waldo Emerson in 1903" in *Harper's Magazine* (May), this address seems "a declaration of intellectual independence"—"the second great formal document in the history of the emancipation of the American people." It announced the moment when "the sluggard intellect of this continent will look from under its iron lids and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of independence, our long apprenticeship to the learning of other lands, draws to a close. . . . We will walk on our own feet; we will work with our own hands; we will speak our own minds. . . . . A nation of men will for the first time exist, because each believes himself inspired by the divine Soul which also inspires all souls." Mr. Mabie comments further:

"When these words were spoken the spirit of the new nation was already stirring and striving. Irving had written 'Knickerbocker's History of New York,' and other more characteristic

books; Cooper had published 'The Spy' and several of the Leatherstocking Tales; Poe had touched a new chord in prose and verse; Bryant had given the world 'Thanatopsis' and a group of nature lyrics; Hawthorne had written 'Twice-Told Tales'; but it was Emerson, in this memorable address, who not only laid bare the tap-root of the democratic order in society —its recognition of the divine in every human soul—but who saw and said that new men had arrived, with new thoughts and a new need to express them.

"Emerson's active life fell within the period of sectional development and feeling. Provincial America, with its hands at work in the New but its thoughts still centered in the Old World, slowly gave place to sectional America, with its fresh and crude sense of strength, its emphasis of interest on local growth and power, its sharp definition of local interests. Emerson's sympathies and personal associations were inevitably colored by the conditions of time; but this thought escaped their limitation. A man of the purest and highest New England blood and breeding, at a time when men were New-Englanders, New-Yorkers, Virginians, or South-Carolinians, Emerson was an American in the range and freedom of his thought, a man of national instincts and outlook in an epoch of sectional divisions and antagonisms. The depth and fulness of national feeling he could not compass, because no man can adequately express that which does not exist; but he discerned the coming unity of the sections and predicted the nation in almost every characteristic utterance."

In attempting to measure Emerson's relation to the wider horizon of the twentieth century, continues Mr. Mabie, it is fortunate that his own life was so entirely detached from the working life of his people; that he "lived and died in an atmosphere of such serenity that it is possible to realize not only his thought, but his complete expression of it, with entire distinctness." We quote further:

"No man of letters has ever left a cleaner record; in his case there are no moral problems to distract attention from his thought and his art; no contradictions between aim and action to confuse the judgment. A more harmonious nature has rarely appeared, and, perhaps, in literature at least, no man has so happily unified his vision and his task. It is not difficult to point out his limitations of thought and experience; but the man was all of one piece, to quote a pithy colloquialism. At the end of a century from his birth he stands, in the clear air of Concord, as distinct from base to summit as Monadnock or Wachusett, which stood always in his view.

"And altho he spoke freely of the matters that were uppermost in the mind of his own time, he was so bent on finding the unity of power and purpose behind the urgencies of spirit and the diversities of thought that there is no need in his case, as there is in Carlyle's, to separate what was universal and permanent in his work from what was shaped and colored by the emotion or interest of the hour. His serene detachment, his steady determination to feed the light rather than the heat of his age, cost him something of the powerful personal influence which Carlyle exerted on his contemporaries, but has made it easier for posterity to understand and estimate him. There is less of the accidental and more of the universal in his work than in the work of any other writer of his period; he used the language of his time, and drew upon it freely for illustration, but he was a purely spiritual force. In this fact lies the secret of his escape from the limitations of sectional America, and his immense and permanent service and significance of the nation in its full, if not its final, development. . . . .

"In the account of the nation with this beautiful and prophetic spirit it is clear there is still a great indebtedness to be discharged; for time has revealed with increasing distinctness the service of one of whom an eminent Frenchman has said: 'America has exalted him because she saw herself in him, and he was her conscience.' Concerning the quality and ranks of his work there is general agreement; he has survived the reaction which follows the death of a writer of original and individual force; the defects of his prose, the limitations of his verse, are clear enough; but the depth of his insight, the lift of his thought, the freshness of his spirit, the felicity of his speech and its penetration, the wholeness and symmetry of his life: these are far beyond the region of questioning. He explained America to herself in terms of the spiritual life, he set man in his true place in the New World, he has kept the conscience of the nation and established for all time the doctrine that the success or failure of the new society shall be measured by its service in the emancipation of the soul, the exaltation of man."

AMERICA'S MUSICAL POVERTY.

WHY is it that America, which has produced so much else, has been so barren of distinctively native music? Mr. Louis C. Elson, of the New England Conservatory, Boston, discusses this national delinquency in the pages of the current *International Quarterly* (Burlington, Vt.), and comes to the old conclusion that "commercialism" is chiefly to blame. "Like Russia," he says "our country is a world in itself, but many of its sections are necessarily destitute of true folk-music because commercial prosperity, by effacing original types of character and of life, by introducing a conventional mode of existence, tends to obliterate the folk-song. The banking-house, the flour-mill, the cloth-factory, can not inspire music." And yet, he continues, "our country can find some phases of existence that have brought forth popular music." We quote further:

"The plantation life of the South, for example, is romantic enough to give rise to expressive music, and has done so. There is a large repertory of the negro music which has not yet been collected, and is well worthy of preservation. . . .

"Few Americans have as yet used this material; no composer of eminence has hitherto employed Foster's themes in symphony or sonata; yet Mr. G. W. Chadwick has effectively developed some distinctly American themes in two of his symphonies, being the first eminent composer to elevate our folk-song into the symphonic domain; and the Bohemian, Dvorak, knowing well how much depends on nationality in music, taught our native composers a lesson, during his short sojourn in America, by using plantation themes in both symphony and in classical chamber music."

The Indian music in America, the aboriginal music of the country, has been seriously treated by American musicians; but Mr. Elson thinks that, on the whole, it has received more attention from the scientific investigator than from the composer. We quote again:

"Jesse Walter Fewkes, John Comfort Fillmore, Theodore Baker, Alice Fletcher, Frank H. Cushing, Henry E. Krehbiel, and a number of others have arranged, classified, and transcribed the Indian songs and chants, but only one prominent composer has founded a musical work upon the unpromising material; E. A. MacDowell has written an 'Indian Suite' of much merit, for orchestra, that not only portrays several phases of Indian life, but is largely founded on aboriginal themes. . . . .

"It is possible that some of these war-dances, snake-dances, or ghost-dances may yet be used in concert selections, but the music would be unfamiliar to American ears; the Russian, the Scot, the Welshman, the Bohemian, the Irishman, each is at home in his own folk-music; the American would not recognize the Indian tunes of his own country; they would come to him as a strange, a foreign product."

Mr. Elson takes the view that it is Utopian to look for a popular revival of the negro and Indian music, which has become "an exotic even in the land which gave it birth." He pins his faith on the West. We quote his concluding paragraph:

"It is possible that a newer school of folk-music may yet arise in the United States out of the free and unrestrained ranch-life of the West. There is much in such an existence to inspire music, but as yet this life has not been shared by a music-producing race. It may be that in the future the descendants of the miners, the cowboys, the farmers of this section of our country, will create a music that shall reflect the bold and untrammeled life of the West, and add it to our scant repertory. And it is not too much to hope that out of our own typical music there shall eventually grow a great symphony and a school of advanced composition that shall be known as definitely American."

SCIENCE AND INVENTION.

SOME HUMAN RODENTS.

THE number of our fellow creatures, young and old, who feel impelled to gnaw something is much larger than is generally supposed. The chronic nail-biter is well known, but there are others who either through depraved taste or psychic disease gnaw wood, fur, cloth, etc., to the great detriment of their health. From an article contributed to *Cosmos* (Paris), by M. A. Perès, we learn that the nail-biters have been dignified by Dr. Bérillon with a jaw-breaking name, that of "onychophages."* Says the author:

"In one school in Paris, of 265 pupils examined, there were found 63 nail-biters, or one in five. In a high-school the proportion was a little lower. Examination of 100 school children in a village in the department of the Yonne showed but three nail-biters, but in a mixed school of the same department, of 29 boys there were 6 biters (20 per cent.), and of 21 girls there were 11 (52 per cent.). In a secondary school for girls, of 207 pupils, 61 bit their nails. . . . About 25 per cent. of children of both sexes probably have this bad habit.

"Now this habit is not only unpleasant; it has the effect, says Dr. Bérillon, of constantly carrying to the mouth dusty material gathered in the hand. This ingestion of pathogenic microbes is a source of various ills. Besides, the horny material of the nail (keratin) is toxic, or at least emetic. This is why nail-biters are often attacked by intestinal troubles. . . . . .

"Various means have been proposed to cure children of this mania; many physicians advise the smearing of the fingers with a bitter substance like aloes or quinin, but this is not always effective. . . . . .

"The gnawers of penholders, whom it has not been thought necessary to decorate with a Greek name, are yet more numerous than the 'onychophages.'

"In one provincial school, 38 per cent. were found; in a girls' college, 59 out of 207 pupils, etc.

"Happily it is rare that those who are fond of penholders also bite their nails. These two habits exclude one another, the nail-eater being rarely a penholder-eater and *vice versa*.

"This practise not only increases the school expenses, but it also may become a cause of appendicitis. Dr. Placide advises that penholders be steeped in picric acid or made of quassia wood, so that their bitterness will discourage biting.

"A habit of gnawing hair has not been hitherto generally observed except with animals. . . . Men, however, have the same tastes as their lower brethren, for . . . cases have been reported from various quarters of the world in which tumors have been found in the stomach, consisting wholly of fragments of wood and hair collected in the gastric cavity. Thus Dr. Jacobson has published in *The Medical News* the case of a young girl of eleven years who was accustomed to bite off the ends of her hair, and whose stomach it was necessary to open to remove therefrom an enormous hairy ball weighing 500 grams [about a pound]. . . . . .

"To these divers varieties of biters, Dr. Talamon has added another, that of thread-eaters. Let us hear him:

"'I have just observed the following case of a young girl of eighteen, a dressmaker . . . who was under my care for a slight indisposition, when the nurse told me that the patient passed her time in gnawing at her woollen fichu. . . . In four or five days a third of the garment had been eaten. The patient told us that in the previous September, being in the country and at leisure, she had eaten a whole fichu in less than a month. . . . . .

"This observation is not isolated; the habit of gnawing cloth or thread is certainly very frequent among workers with the needle, but it has not yet received sufficient attention, altho it may have given rise to much graver troubles than nail-biting.

"The biting manias seem to be in the category of those in which the victims eat odd kinds of food, or substances more or less repulsive to the normal taste, and which are classed as neuroses of the digestion. Nevertheless, the specialists who have given them particular study believe that the stomach is not the cause and that they are rather due to psychic disorder, which may even be hereditary and contagious by example.

"'It is rare,' says Dr. Bérillon, 'not to find among the ancestors or friends of those who have these habits, others who are also addicted to them. We know that one of the most remarkable properties of the nervous system is its tendency to automatic activity. The accomplishment of an act and its repetition induce a tendency to execute it again, and soon this tendency will become irresistible, when consciousness does not watch over it and when the attention does not strive energetically against the habit.'

"When we have said that the biting habit is a neuropathic symptom, the remedy is at once indicated, namely, recourse to hypnotic suggestion; and, in fact, this has been used with great success in many cases. Unfortunately many parents instinctively dislike it. We are thus reduced to the employment of bitter substances where this is possible, and what is still better, in our opinion—to the attentive surveillance of the little rodent."—*Translation made for* THE LITERARY DIGEST.

MEDICAL TREATMENT BY MECHANICAL VIBRATION.

WHAT may be called the vibration cure, which was in vogue many years ago, and has since been experimented with by physicians at intervals, has recently been very successfully revived in this country, if we may credit the assertions of those who approve it, altho their claims, in the words of a critic in *The Hospital* (London), "are somewhat of that all-embracing nature which leads sober-minded people to shake their heads." In an article in *The Medical News* (New York), Dr. Maurice F. Pilgrim sets forth these claims at length. The vibration treatment, he says, is "the newest and one of the most valuable methods in advanced therapeutics." It has for its aim:

"The accomplishment of one primary condition, viz., stimulation of the nerve or nerve-centers concerned in and controlling the diseased organ, which are found principally in the spinal and sympathetic system. . . . This is attempted for the double purpose of (1) stimulating and equalizing blood currents; and (2) stimulating secretion and excretion, and the lymphatics. . . . [The] range of application is almost coextensive with the needs of the ailing physical organism, and is, in varying degree, applicable to almost every form of disease."

Says the editorial critic in *The Hospital*, quoted above:

"Such a claim as this is sufficient to make some of us very suspicious, and inclined to tread warily, especially since we are told that the list of diseases in which vibratory treatment has been attended with 'results more prompt and satisfactory than by any other recognized methods of treatment,' includes the various forms of nervous disorders—neurasthenia, melancholia, insomnia, hysteria, and the like—'in all of which beneficial effects were realized from the first treatments'—a thing quite in accordance with what is often seen in the treatment of such neuroses by other bizarre methods."

Dr. Pilgrim's catalog of the diseases that yield to this form of treatment embraces, besides those named above, the congestive forms of pelvic troubles, varicose conditions, all forms of neuralgia, and even pulmonary consumption. The critic concludes:

"After all this we welcome the modesty which leads Dr. Pilgrim to declare that 'too much must not, of course, be claimed for mechanical vibratory treatment.' That there is a good deal to be said in favor of 'stimulation' by means of mechanical vibration we quite believe. The immediate physical result is sufficiently striking to give much ground for hope that at least some permanent change in blood-supply, and perhaps in metabolism, may thereby be set up. We are quite clear, however, that the worst thing that could happen to such a form of treatment would be the formulation of extravagant claims by its professors. That it deserves full and scientific investigation goes without saying. It is, then, very desirable that a careful endeavor should be made to ascertain with some degree of exactitude what are the limits of its powers and utility, and all this should be done under

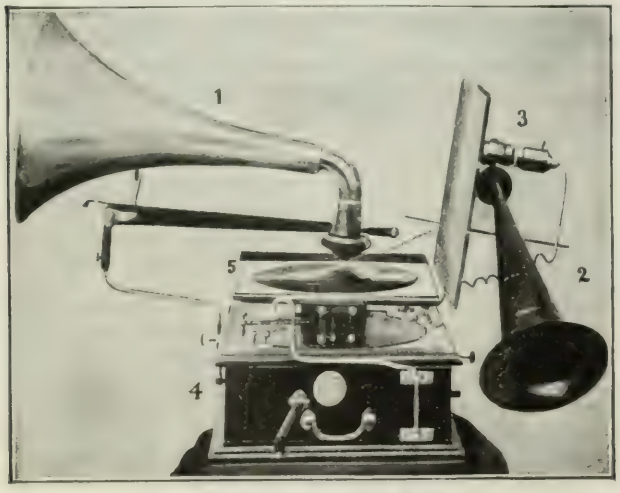
full professional sanction, and with all those guarantees which are given by our great hospitals. Otherwise a form of treatment which, according to Dr. Pilgrim and others, is one of considerable utility, may drift, as so many useful things have done, into the hands of the great unqualified, thereby getting soiled with a taint of quackery which it may be very difficult afterward to get rid of."

A NEW TYPE OF PHONOGRAPH.

THE "photophonograph" of the Bohemian inventor Emanuel Cervenka is the first apparatus of its kind that reproduces sounds perfectly. This is accomplished by avoiding the mechanical resistance which wax offers to the tracing-point of the receiving-diaphragm, and also by an ingenious modification of the speaker. The Cervenka speaker, indeed, can be adapted to any phonograph or gramophone. From an article in *Die Woche* (March 7) the following particulars are taken:

The receiver is a conical tube ending in an extremely delicate membrane of fish-bladder connected with a mirror one-twelfth of an inch in diameter.

This mirror, which turns on an axis, is inclined when at rest at an angle of 45° to the membrane and also to a pencil of electric



CERVENKA PHOTOPHONOGRAPH.
1, Speaker; 2, Receiver; 3, Lamp; 4, Motor; 5, Plate.

light only $\frac{1}{300}$ inch in diameter. The light, reflected by the mirror, falls on a rotating circular photographic plate which advances a hundredth of an inch at each revolution.

When the plate is developed, it is covered by a spiral line, the successive spires of which are a hundredth of an inch apart. If sound-waves have reached the diaphragm during the exposure, the mirror vibrates and the waves are recorded as undulations in the spiral line on the plate.

From this negative, by the gelatin bichromate process, positives may be made in which the wavy spiral appears as a groove. This is the method recommended for private use, but records to be sold in quantities are stamped from a metal plate made from the negative by a photo-etching process, and having a raised line instead of a groove.

The "record" made by either method contains a sinuous groove in which the steel or diamond point of the speaking-apparatus rests. In the Cervenka speaker the disk of glass or mica is replaced by strips of wax separated by a narrow slit. Both of these imitation vocal cords are connected by a fork and a lever with the tracing-point. They are enclosed in a box which is surrounded by a soft, plastic substance and opens into a cavity lined with soft rubber, ending in a papier-maché horn. In this way disagreeable noises are deadened or avoided by the use of soft materials, and the vibrations are conveyed to the horn from both sides of the vibrating-cords.

PART OF A CERVENKA RECORD.

In the usual speaker one side of the disk produces only disturbing noises. The Cervenka speaker, in fact, is a fairly close imitation of the human vocal organs.—*Translation made for* THE LITERARY DIGEST.

IS THE MISSISSIPPI LEVEE SYSTEM A FAILURE?

THAT the frequent breaks in the Mississippi levees is due to no fault of the system, but solely to its lack of completeness caused by insufficient funds, is maintained by *Engineering News* (April 16). It says:

"In the last report of the Mississippi River commission will be found statements which lead one to wonder, not that crevasses have occurred in the levees, but that the great volume of water now passing down to the Gulf has been held so well within bounds.

"On page 16 of that report is given a tabular summary of the levees in several districts as they stood on June 30, 1902. This shows that the total contents of the existing levees on the Mississippi below Cairo at that date was 167,238,000 cubic yards, and the amount required to complete these levees is given as 94,054,000 cubic yards. It thus appears that the existing levee system as a whole represents only sixty-four per cent. of a completed system, or, roughly, a little less than two-thirds as much earth has been placed in the levees as is required to give them the necessary height and strength to resist the known highest floods of the Mississippi. . . . . .

"In view of these conditions, the absurdity of calling the levee system a failure because the present year's flood has overtopped and breached these embankments at their weakest spots is self-evident. . . . . .

"The reason why the levees are not complete is simply lack of the necessary money. The work is paid for almost entirely by the localities benefited and the contribution of the United States Government toward the work cuts but a small figure. For example, in 1892 the local levee boards placed 6,227,000 cubic yards of earth in levees and the United States only 713,000, or little more than ten per cent. of the total construction."

THE WIDENING VISTA IN PHYSICAL RESEARCH.

NOT long ago we were assured that all existing physical phenomena had been discovered and observed, and that what remained to be done was only to measure and explain them. In other words, all the pioneer work, like that of Franklin in electricity, had been done. The observer was no longer needed in physics, for no new discoveries were likely, altho the trained expert in measurement had many years of work before him; and as for the philosopher who should correlate and explain the phenomena of nature—he had scarcely begun his work. We know now, however, that the field of discovery and observation had by no means been exhausted when such prophecies were the fashion. Since their time the most wonderful "finds" in experimental physics have been made—discoveries that may undermine and will certainly modify our ideas regarding fundamental physical laws. An editorial writer in *The Electrical Review* (April 25), who calls attention to this fact, says:

"The work of J. J. Thomson and others, in the study of atomic physics, indicates that it will be many years before that one line of work can be considered well covered. The discovery of the so-called radioactive bodies by Becquerel, Curie, and others points to a new line of investigation, and shows, in a way, how little we really know about matter and energy, the two fundamental conceptions upon which all physical laws are based.

"The action of electrical discharges in vacuum caused phenomena which were studied for many years, without many results. Then came the startling announcement of Roentgen, that rays were thrown off from these tubes which not only affected photographic plates, but were able to penetrate bodies which are opaque to ordinary light.

"Roentgen's discovery led many into that field of physics. The effect of these rays in producing fluorescence and phosphorescence of certain substances induced some to begin active study of these two well-known phenomena. In studying these, their effects upon photographic plates were carefully investigated. It was found in some cases that emanations of phosphorescent bodies would not only act upon the sensitive plate, but would act through opaque bodies as did Roentgen rays. Some suggested that this action might be due to vapors given off, which diffused through the separating body; but this was shown not to be the case. Working along these lines, Becquerel found that uranium, which was one of the most active of the phosphorescent bodies employed, could act upon the photographic plate without previous exposure to light, and, therefore, without becoming phosphorescent. The action seemed to be brought about by some inherent property of the material itself. Another property these salts possessed was the ability to discharge electrified bodies.

"While studying the radiations of uranium, the Curies found a specimen which seemed to be more active than the amount of uranium contained within it seemed to warrant. It occurred to them that these radiations might be due to some other material which appeared as an impurity in the uranium, and that this specimen contained that material somewhat in excess. Careful chemical work enabled them to concentrate the active element, producing a material which was far more active in these radiations than any which had previously been produced. This was called polonium, after Poland, the native land of Madame Curie. By further investigations the Curies were able to separate a second substance, differing from the other in having the characteristics of barium, and this they called radium.

"The question which is now confronting the physicists is to decide upon the nature of these radiations. Are they rays thrown off, similar to light, or are they minute particles of matter resembling Thomson's corpuscles? The most careful weighings have as yet shown no loss of weight; but assuming the particles thrown off to be of the nature of corpuscles, it has been shown that the loss in weight in many years would be far too small for detection with any means at present at our disposal. Another remarkable property of radium has recently been noticed by the Curies—that is, its power to maintain itself at a temperature higher than its surroundings. It was found that specimens of radium, when carefully protected from all external sources of heat, maintained indefinitely a temperature 1.5° C. above its surroundings. This, of course, means that there is a continuous radiation of heat, as well as of Becquerel rays, and this outpour of heat is difficult to account for by an internal or molecular change. This action has led the Curies to suggest tentatively that an external source of energy, of which we at present have no knowledge, might cause this phenomenon.

"The results of further work on the subject will be watched for with interest, as it promises to make a great advance in our knowledge of molecular physics, and may open up a new line of work from this one, which itself has as yet been slightly covered."

EFFECT OF THE WIND ON VEGETATION.

EVERY one has noticed that where the wind blows almost always from the same quarter it has a pronounced effect on the appearance of many trees, which are permanently bent or inclined. In a recent investigation, Prof. J. Früh has found that this effect is almost universally present in all parts of the world, and he also gives some other interesting facts showing the influence of the wind on the appearance and growth of vegetation. The report of his investigation, which was first read before the Society of Geography and Ethnography at Zurich, Switzerland, is reviewed as follows in *Cosmos* (Paris, April 11):

"Doubtless the wind constitutes an external factor acting powerfully on the development of all plants, and especially on trees. We may even say that the absence or existence of forests depends in great part on the situation of the region with reference to the wind. Divers factors, of which the following are the chief ones, influence the mechanical action that the wind exerts on plants:

"1. The position and topographical conditions of the country. Thus, the wind is more felt on plains than in valleys.

"2. The nature of the ground, on which the stability of the plants depends.

"3. The condition of the plants; size and quantity of leaves and branches; whether the foliage is persistent or deciduous.

"4. The wind may transport solid material that may injure plants. Its mechanical action may be increased by chemical action, as in the case of winds charged with sea-salt, which may corrode the leaves.

"The wind always acts in particular as a drying agent, and in this way it impresses a special aspect on plants in many cases.

"The slow but sustained action of the dominant winds on trees shows itself by the appearance of certain characteristic forms, which Früh classifies as follows:

"1. Trunk vertical but without branches on the side facing the wind.

"2. Top of trunk inclined in the direction of the dominant wind. Branch asymmetric; more developed where sheltered from the wind.

"3. Whole tree inclined. When growing in masses, these trees or shrubs are almost lying on one another. Their dimensions decrease as we go toward the side of the forest that is first struck by the wind.

"4. Trunk and branches may be inclined in different directions. In this case the inclination of the trunk may have been due to strong but temporary winds, while that of the foliage keeps the direction of the dominant wind.

"These deformations are especially frequent in countries near the sea or in flat regions. In equatorial regions where violent cyclones often rage, the influence of the dominant winds can not always be noted, for their effects are often hidden by that of the tornadoes."

Among the trees that are most sensitive to the action of the wind the following are noted by the author: the cherry, the plum, the walnut, the black poplar, the service-tree, the ash, and certain varieties of pine. Other pines, especially the mountain varieties, and also certain firs, are very resistant to wind and are therefore recommended by the author for the reforestation of regions exposed to gales. The reviewer goes on to say:

"The work of Früh concludes with the relation of observations made in different parts of the world on the bending of trees due

to the dominant winds. The comparison of the results with those furnished by anemometrical observations shows that deformation brought about by wind action is found quite generally among trees. This fact is well understood by some savage tribes, who, on occasion, use this indication to guide them in their wanderings.

"When we travel through the parts of Belgium bordering on the sea, we see a striking example of the influence on trees of strong and constant winds. The trees are, in general, bent toward the interior of the country. Their broken or twisted branches indicate sufficiently the injurious effect of the wind. We may also recollect that it was proved some time ago that the trunks of trees buried in the peat bogs of Holland all lie in a southwest to northeast direction."—*Translation made for* THE LITERARY DIGEST.

Increasing Speed of Automobiles.—The accompanying diagram from *Popular Mechanics* shows this increased speed very clearly. Says this journal:

"In 1895 the automobile which covered 15 miles an hour was a 'scorcher'; now 60 miles an hour is not uncommon. From 4 horse-power to 70 horse-power is the record of growth in the motive power. *The Motor Age* says:

"'Think of scooting across the street and back again in a second, and then you will have some idea of what fast riding in an automobile really means. That is about the rate traveled by M. Augieres when he made the world's record for a gasoline motor-car of over 2,000 pounds weight, at Paris on November 17, 1902.'

"A mile was made in 46 seconds, which means 114 feet per second. American machines have made 84 feet per second and are steadily gaining in speed."

American Games and American Civilization.—A minute and systematic examination of the games of the world has been made by Stewart Culin, of the University of Pennsylvania. These games he believes to be the fragments of ancient ritual observances, and a comparison of those found in America and Asia leads him to believe that the share of this continent in the establishment of civilization is much greater than is usually supposed. Says Mr. Culin:

"After a comprehensive examination of all the games of the American tribes, it appears that they may be classified in some four or five interdependent and related groups, in which the implements employed show progressive modification of form, suggesting a common source in specific ceremonies, as well as a geographic center in America from which they probably emanated. The ceremonies were divinatory, and this divination I would explain as an 'experimental sacrifice.' Tentatively I would assign the geographical center to the arid region of the Southwest, rather than to Mexico and the higher civilizations of Central America. The games of the Eastern Continent—and I speak now not so much of the present day, but from what we know of the remote past—are not only similar to, but practically identical with, those of America, and are not only alike in externals, but, if we may so apply the word, in their morphology as well. And, it may be added, they extend over into Asia and America as expressions of the same underlying culture. They belong to the *same* culture. Men evidently wandered far and wide over the world before history began. Shall we, with our American explanations in mind—and they hold good not alone for games, which are but the 'stalking-horse' of the student—shall we not assent to the claim that ancient America may have contributed, to an extent usually unimagined, her share of what is now the world's civilization?"

The Trackless Trolley.—This is the latest name for the trolley-stage or the electric vehicle that takes it power from an overhead wire. Such vehicles have already been experimented with, and the technical papers tell us that efforts are now to be made to introduce them as a commercial venture. Says *The Street Railway Journal* (New York, April 18):

"The trackless trolley-car will raise some interesting questions as to the speed limit. Is the trackless trolley-car an electric-car or an automobile? The devotees of the 'devil wagon' are continually wailing for more liberty in the way of speed, and would very likely accept a general permit for manslaughter as well. Suppose, now, that they succeed in lobbying through a given legislature a permit for 25 miles an hour over country roads. Does it follow that a trackless trolley-car has a similar degree of liberty, or is the fact that it runs on a route which is known to the public enough to classify it as a street-car, bound by whatever speed limit is enforced for that class of service? In route it is a street-car, in some other properties an automobile. Must it incur their combined limitations or claim their combined immunities?"

SCIENCE BREVITIES.

"THE windmill—that old and classic source of power which was the main dependence of our forefathers before the invention of the steam-engine—is again to be put to work, in Germany, furnishing the power to drive dynamos," says *The Electrical Review*.

"A NEW putty knife invented by a Philadelphian has a reservoir and force feed by means of which the putty is supplied as it is needed for use." Says *The American Inventor*: "The new blade has a short flange on one side, which is cut back from the point at such an angle that the tool slides on the edge of the flange while doing its work, the flange serving to confine the putty beneath the blade. The cap at the rear end of the reservoir is removable, and when the latter has been filled and the cap replaced, with the plunger extended, the tool is then ready for use."

IN a recent report on the heat produced by the new metal radium, Messrs. Curie and Laborde assert, according to the *Revue Scientifique* (April 4), that its quantity is too large to be explained by ordinary chemical change. "If we seek the origin of this heat in an internal transformation, this transformation must be of a more profound nature, and must be due to a modification in the atom itself. Nevertheless such a change, if it exist, takes place with great slowness. The properties of radium do not show noticeable variations in several years, and M. Demarçau has observed no difference in the spectrum of a specimen of radium chlorid at intervals of five months. . . . This, however, is not the only hypothesis compatible with the continuous emission of heat by radium. It may also be explained by supposing that the radium utilizes an exterior energy of unknown source."—*Translation made for* THE LITERARY DIGEST.

"READERS in the history of astronomy will remember," says Prof. W. W. Payne in *Popular Astronomy*, "that more than one hundred years ago Sir William Herschel thought, on account of his knowledge of the proper motions of the stars, that the sun and all the planets with it were moving in a straight line toward the constellation of Hercules. This wonderful conclusion has been spoken of by modern astronomers as 'one of the shrewd guesses for which Herschel was justly famous.' This was mainly so because he had really so few data from which to derive such a stupendous result. Since that time astronomers have been at work trying to measure the distances of some of the stars and the velocities with which they move in line of sight and in direction at right angles to it, so that information concerning the correctness of Herschel's guess has been much improved, and it all tends to show that he was not far wrong in this early conclusion; still, later solutions are not entirely satisfactory, for there is an outstanding uncertainty regarding the point toward which our solar system is moving of at least 10° or 15°." This point is to be settled, it is hoped, by the expedition sent to the southern hemisphere at the expense of Mr. D. O. Mills.

THE RELIGIOUS WORLD.

IS INFIDELITY INCREASING IN THE COLLEGES?

PRESIDENT WILLIAM R. HARPER, of the University of Chicago, ought certainly to be well qualified to answer this question, which he propounds in the first issue of the new religious weekly, *Christendom* (Chicago); and in view of the fact that he is himself associated with the more liberal school of theological teaching and belief, his answer possesses a special interest. At the very outset of his article, he is compelled to admit that the religious atmosphere of the modern college is such as to cause some disquietude. He writes:

"What is the situation to-day? Is it true that there has been a remarkable decrease in the actual teaching of Christian truth, while a large and growing emphasis has been placed upon the teaching of branches altogether devoid of religious character? Yes. Is it true that of the students who enter college very few indeed look forward to Christian service of any kind, the larger number having, as a matter of fact, only the slightest possible interest in religious matters? Yes. Is it also true that many college men who might otherwise enter the ministry turn aside to teaching, or to business, or perhaps to some other line of work because of the influence of the purely technical instruction given in the colleges? Yes. Is it certainly a fact that many men and women who entered college as Christian workers in their home churches take little or no active part in church life after they have completed their college work? Yes.

"If, now, all this is true, or even half of it, one need not be surprised to find the feeling frequently expressed throughout the religious world that college education is tending to decrease Christian faith, and that institutions founded and conducted for distinctly Christian ends are, in fact, educating their students away from the church. In a word, that religious infidelity is increasing in our colleges. Is this conclusion to be accepted? I answer: Yes, and no."

Two tendencies, continues President Harper, are constantly discernible. The first is that many men and women in their college life grow careless about religious matters and in some cases actually give up, or think that they give up, Christianity. To this class must be added those who, in the course of their college studies, are led to question the truth of the teaching received in early years from teacher, parent, or pastor. Says President Harper:

"The scientific attitude of mind cultivated in most colleges as well as universities distinctly opposes the acceptance of truth on the basis of another person's authority. The college student passes through an evolution both intellectual and moral. He is taught to question everything. He is brought into contact with men who are investigating problems in every line of thought supposed by the rank and file of humanity to be settled, or problems of the very existence of which the ordinary man is wholly ignorant.

"This same questioning attitude will inevitably include matters of religion. Difficulties are certain to arise, unless during this period the young man or woman is not brought under proper and appreciative influences; and unless the right kind of assistance is given, skepticism is very liable to pass over into infidelity. The question of miracles, which to many minds presents no difficulty, to the young man or woman under the influence of scientific study becomes a matter of very serious importance. Unless such students are helped to see the true relation of the Biblical narratives to Christianity, it is almost an invariable rule that they pass through a period of great religious depression and uncertainty, which in some cases results in either religious indifference or a half-cynical contempt for the teachings of the church."

The second tendency is bound up in the attitude of those college students who are endeavoring to discriminate between what they regard as the essential and the unessential elements of religion. President Harper writes on this point:

"In separating the two elements of religious faith, the college student is almost certain to include among those elements which he judges to be unessential matters which many persons deem essential. From the point of view, therefore, of such persons, these college men are infidels. But after all such a charge is too sweeping in most cases. That ebullition of omniscience which marks all college students at some time in their career hardly demands so severe a term. The influence of scientific study is on the whole not unsettling, but constructive. If men believe fewer things, they believe fundamental things more intensely. If they question, it is that they may find answers, and finding answers they go on to even larger truths."

President Harper grants that there are certain evils in the present situation, and he would meet them by special remedies, such as: (1) better training in the early years of school life; (2) stronger preaching during the college years; and (3) specific teaching of a definite character, adapted to individual needs and necessities. He thinks, however, that on the whole the outlook is full of encouragement. We quote, in conclusion:

"A comparison of the religious condition of the older colleges to-day with that of the same institutions fifty years ago will show indubitably that there is in them to-day far more sturdy belief in fundamentals of the Christian religion. Further than this, there is to be found to-day religious interest in our colleges which is absolutely unparalleled. It is not only that Young Men's Christian Associations and Young Women's Associations are more prosperous and more influential than ever before, but the colleges themselves are awakening to their responsibilities to care for the religious life of their students. Everywhere we see the establishment of chairs for Biblical instruction; the formation of Bible departments; the institution of preacherships especially adapted to the needs of the college mind; the outgoing of the earnest life of the students of college settlements; great conventions of college men and women under the direction of religious leaders. . . . Our colleges may be less determined to support some peculiar view of God and theology, but they are producing men and women who are not content to live in a universe in which there is no God. If education tends to lead college students to adopt the shorter form of every creed, it is teaching them at the same time that religion is an elemental fact in human life, and that no man can be a thoroughly educated man who does not know the fear of the Lord."

A JESUIT AGITATION IN GERMANY.

THE announcement made by the German Chancellor, that the Government has given its consent to the return of the Jesuits, who have been banished from the land practically ever since the establishment of the empire, has aroused the Protestant element to such a degree that the Chancellor's project may be defeated. The *Chronik* (Leipsic) gives the following survey of the situation from a Protestant point of view:

The Jesuits have not been permitted to return and in all probability will not be permitted, notwithstanding the fact that the Roman Catholic party has secured several signal victories in recent months, notably the establishment of a new theological faculty in connection with the University of Strassburg. The Jesuits can return only if both the Bundesrath and the Reichstag give consent. The latter has repeatedly done so, but the former, representing the various states of the German confederacy, has always refused and generally with considerable emphasis. This is not the first time that the Jesuit danger has become a *Hannibal ante portas* for the German Protestant church. The mere proposal to open the doors for the Jesuits has brought from all the corners of Germany protests loud and long. Especially has the Protestantische Bund, the great national organization established especially for the purpose of fighting Rome "with tongue and pen," been active in arousing the German Protestants. As a result, it now appears that the Chancellor counted his chickens before they were hatched, and that he will not command the votes in the Bundesrath which are absolutely necessary for the passage of this measure. Especially are the representatives of Saxony, notwithstanding the fact that its royal house belongs to the Roman Catholic Church, decided in their opposition to the

Jesuit measure, as also those of Baden, Würtemberg, and other smaller states. Only Prussia and Bavaria, the former for policy's sake and the latter as the chief Roman Catholic state in Germany, favor the proposal by which the Chancellor hopes to repay the political debt which he owes to the Center or Catholic party in the German parliament for having aided him in his agrarian and tariff measures.

The Roman Catholic journals are saying very little about the matter. Some leading papers, notably the Berlin *Germania* and the Cologne *Volkszeitung* endeavor to throw oil upon the angry waters by claiming that the Jesuits are not dangerous to state or church, but should be welcomed on account of their schools and learning.

In reply to this, Protestant journals claim that Catholic countries have repeatedly been compelled to banish the Jesuits. The *Lutherische Kirchenzeitung*, (Leipsic) furnishes a long list of dates when decrees of banishment went into force. Six of these were executed in the sixteenth century, nine in the seventeenth, seven in the eighteenth, and five in the nineteenth century, these last being: 1815, from St. Petersburg and Moscow; 1822, from all Russia; 1847 from Switzerland; 1872, from Germany; 1880, from France.—*Translations made for* THE LITERARY DIGEST.

NEW LIGHT ON THE RITUALISTIC CRISIS IN ENGLAND.

RITUALISM is still furnishing a burning topic for controversial discussion in England, and no less than four articles are devoted to the subject in the April issue of *The Nineteenth Century*. The first is by Lord Halifax, a prominent defender of the Ritualist position, who writes under the heading "The Crisis in the Church." He says, in part:

"The church exists to proclaim the Catholic religion and to bring all men into the obedience of the faith. Consider what the attitude of Englishmen generally, and of the great mass of the population amongst the English-speaking races, is toward the Catholic faith, and what a lesson that attitude teaches. What on the Anglican theory is the purest portion of Christendom, with every advantage of wealth, position, and privilege, has proved absolutely incapable of retaining within its fold not only the great masses of its population, but a very large proportion of those (I say nothing of the irreligious and the careless) who are really alive to their souls' needs and care for spiritual concerns. If one object of a church is to bring men to the obedience of the faith, why has the Church of England been so eminently unsuccessful? I should reply, amongst many and other obvious reasons, because she has been so little true to her own principles; because she has professed one thing and done another.

LORD HALIFAX,
A Leader in the English Ritualist Party

"The result has been, instead of the system of the Prayer Book, the practical establishment of a respectable form of Christianity with very little power to attract, very helpless in those cases where help is most needed, claiming little authority, insisting upon no practise as of obligation, making no appeal to the imagination, owning little connection with the past, and generally ignoring those counsels of perfection and those heroic virtues which really attract souls and convert the world."

Lord Halifax notes "a movement of unrest and expectation on all sides," and thinks that the Church of England is "on the eve of great changes." He concludes:

"The foundations are being shaken everywhere; the state of Biblical criticism both at home and abroad is alone sufficient to prove this. There is a movement toward reunion [with Rome] at home and abroad which must in the end bear fruit. It will be a fatal mistake if the rulers of the church despise it. They have to be brave about it: a price has to be paid, something has to be risked, for all things that are worth doing. There are defeats which are the necessary steps to victories, present failures which spell future success. It is not unlikely that the question of disestablishment may be brought forward at no very distant period. An accident might bring it within the range of practical politics. The present state of parties, much that has recently happened, and the general current of opinion on such matters throughout the world make such a contingency probable, certainly possible. The difficulties which such a conflict must involve are such as to inspire the gravest anxiety. No one could wish to precipitate such a conflict. Few but would desire to avert it, but should it prove unavoidable, it is hardly possible to doubt, whatever the troubles and dangers, whatever the heartrending anxiety, which those who fight that battle will have to go through, its ultimate end and result, as things are, will be for the ultimate good of the church."

LADY WIMBORNE,
Who thinks that "England will never accept an Italianized form of worship."

The second paper is by Lady Wimborne, who presents a forceful argument from the Protestant point of view, under the title "The Church's Last Chance." She declares:

"I think few, except those who have come in contact with what is called the aggrieved parishioner, have any conception of the depth of feeling which is being stirred throughout the length and breadth of the country by the ritualistic aggression, a feeling none the less strong because it is patiently enduring, and what is more, silently praying, but which, when the occasion arises, as arise it assuredly will, will be a mighty force to be reckoned with. . . . The church is growing out of touch with the mind and intellect of the rising generation; it is losing that old English character which bound both clergy and laity together, and made the church a truly national one. All this is due to the importation of the foreign element, which makes Italy and not England its ideal dream, which is seeking to force upon Englishmen a system from which their forefathers revolted, and which, no matter what apparent success it may achieve in certain directions, will never be accepted by the people of this country. England will never accept an Italianized form of worship, and the only result that will be achieved, if the influence of this party remains predominant in the church, is what we see already occurring, that the intellect of the country will be driven into non-conformity."

Lady Wimborne asserts that the eyes of all are turning at this crisis to the new Archbishop of Canterbury, and that it is upon his action, to a large extent, that the fate of the Anglican Church depends. Furthermore:

"He has a great opportunity; his statesmanlike qualities and his great experience fit him for the exalted post he occupies.

Both Parliament and the vast majority of the country are ready to support him in the exercise of his powers, or if need be to strengthen them, in maintaining the true Anglican teaching and ritual of our church. But it is absolutely necessary that he should recognize that this is no matter of noisy agitators, but one of life and death to the Church of England; that there is no exaggeration in the statements placed before the public, but that the deepest religious feelings of the most earnest, loyal, and devoted church-people are being daily and grievously injured; that a determined assault is being made by a well-disciplined and highly organized party on the fundamental position of the Church of England, and that this assault is being carried on not only in the most extreme churches, but by a systematic, insidious, and gradual advance from point to point, with one definite aim and object in view. All this requires what we feel sure the Archbishop will bring to bear on the case, a careful investigation of the inner working of the movement, which will lead him to see that a mere conformity to the letter of the law will do little to remedy the evil. What we need is an obedience to the spirit and not only to the law of the church."

CAPT. MANAN'S APPEAL FOR A REVIVAL OF "PERSONAL RELIGION."

AT a recent meeting of the Church Club, of New York, a paper on "The Apparent Decadence of the Church's Influence" was read by Captain Alfred T. Mahan, of the United States navy. His address, which proved to be a trenchant criticism of prevailing religious tendencies, has aroused unusual interest, and is reprinted in full in *The Churchman* (April 25).

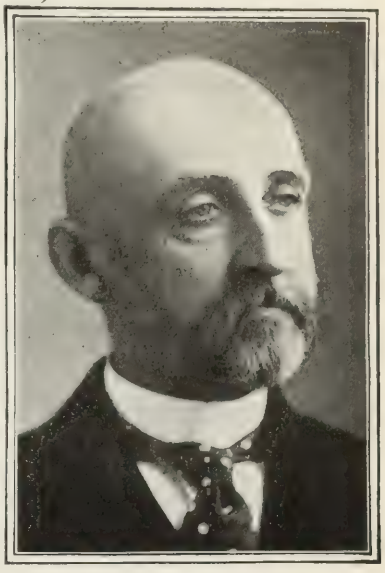
Why is it, he asks at the outset, that church-membership seems to be standing still; that there is a lack of candidates for the ministry; that the Christian influence, as a whole, is so "languid and defective"? His answer is:

"In my judgment, the church of to-day, laity and clergy, have made the capital mistake in generalship of reversing the two great commandments of the law; the two fundamental principles of her war, established by Christ himself. Practically, as I observe, the laity hold, and the clergy teach, that the first and great commandment is 'Thou shalt love thy neighbor as thyself.' Incidentally thereto, it is admitted, 'Thou shouldest love the Lord thy God.' It is of course too egregious an absurdity openly to call that the second commandment. It is simply quietly relegated to a secondary place.

"You may perhaps dispute this deduction as a matter of fact, or may remind me of St. John's words, 'He who loveth not his brother whom he hath seen, can not love God whom he hath not seen.' It is evident, however, on reflection, that St. John is in no sense inverting our Lord's order. He simply appeals to evidence. This man says that he loves God. Very well, where is the proof of it? Does he love his brother? If not, he certainly does not love God, for the love of the brethren is the sure, inevitable fruit of loving God. In fact the whole missionary spirit, and much that is not narrowly missionary, involves love for brethren whom we have no more seen than we have seen God. The love of God is the one sure motive and source of the love for man."

Is it not a fact, continues Captain Mahan, that within the last thirty years the church has been teaching that a "man's personal piety is of small consequence, alongside of his external benevolent activities"? Has not the church come to stand, consciously or unconsciously, for the idea that "external activities, outward benevolence, are not merely the fruit of Christian life, but the Christian life itself"? We quote further:

"Is not the judgment of the world expressed, and is it not a true judgment, in the words of indifferent contempt for a man who is trying to save his own soul—his miserable soul, as I have sometimes read? And yet what is a man's soul? It is the one thing inexpressibly dear to God, for which, if there had been but one, He was content to give His Son, and this He has intrusted to the man as his own particular charge; I do not say his only charge, but the one clearly and solely committed to him to make the most of. It is the talent which he is to multiply by diligent care; not that he may delight in it himself, but that he may present it to God through Jesus Christ. . . . Because care of one's own soul, by internal effort and discipline, seemed selfish, men have rushed to the extreme of finding in external action, in organized benevolence, in philanthropic effort, in the love of the neighbor—and particularly of the neighbor's body, for the neighbor's soul was naturally of not more account than one's own—not merely the fruit of Christian life, but the Christian life itself. That the kingdom of God is within you, an individual matter primarily and in essence, and only in consequence, and incidentally external, as all activity is but a manifestation of life, and not life itself—all this was forgotten. This I conceive to be the state of the church now. I mean as an organization; for I doubt not the multitudes of earnest cultivators of their own souls for the glory of God—perfecting holiness, as St. Paul says, in the fear of the Lord."



CAPTAIN A. T. MAHAN,
Whose recent address on "Personal Religion" has aroused unusual interest in church circles.

There is only one remedy, declares Captain Mahan, and that is the restoration of "personal religion"—"the direct relation of the individual soul to God—to that primary place in the Christian scheme which it has momentarily lost." We quote, in conclusion:

"Within this generation there has been given much vogue to a secular phrase, the prevalence of which seems so indicative of the temper of the day as to point just where the sagacious Christian warrior, crafty as St. Paul was to seize opportunity and capture men with guile for Jesus Christ, may lay hold upon men's hearts and minds. Self-culture, we have all heard much of it; sweetness and light, and all the rest of it. No new thing; the Stoics cultivated themselves, their personality, that they might reach self-sufficingness, which, being attained, could be presented to themselves in the form of self-contentment. Let this human conception receive consecration. What is self-culture, but deliverance from evil unto good—salvation from sin? And who shall thus save his people? Who but Jesus Christ? And what is Personal Religion but the cooperation of man's will with the power of Jesus Christ, that man's soul, man's whole being, may be saved; not for his own profit chiefly, but that he may lay it, thus redeemed, thus exalted, at the feet of him who loved him and gave himself for him."

Captain Mahan's address is warmly commended by several of the religious papers. The Chicago *Interior* (Presb.) says:

"The remarks of Captain A. T. Mahan, the famous authority on naval history, when speaking before the Church Club of New York to the topic 'Personal Religion,' appeal to *The Interior* as of very significant import by way of indexing these times. It means a great deal that an American citizen so typical of his contemporaries and so prominent among them, should consent to talk publicly of such a specific and soul-searching religious theme. There has been an enormous amount of 'glittering generality' in the religious utterances of our public men, and we like to see here a token that all this vague and airy nothingness must go from the lay sermons of the times as it has already been in large part expunged from the speeches of the political stump. We put still more meaning, however, into Captain Mahan's choice of a line of thought. The cue for years with laymen standing before what might by any turn of the phrase be called 'popular audiences,' has been to praise the religion of kindness and benevolence to fellow men. Such has

also been the stock of the religion taught so generously, tho spasmodically, by the secular press of the country. But Captain Mahan would not pursue that well-beaten precedent. He took occasion to declare instead that our popular religion of human brotherhood is, standing alone, no religion as all; that there must be some conscious rendering of obligation to God in order to bring into the life the essential religious element. Certainly the age needs scarcely any other teaching more than this. We have not in our modern ethics and our self-admiring altruism emphasized the second great commandment too forcefully, but we have ignored the patent fact that the second is second to the first. We have consented to call men moral, if not religious, on evidence only that they are honorable in all dealings with other men. Now it needs to be said strongly that a man's relation to his God is just as real as and more fundamental than his relation to another man, and his certificate of moral character is not filled out until it appears that he is honest and sincere in the divine relation. Captain Mahan's address marks, we trust, a return in the tide of common ethical thinking."

PROGRESS TOWARD CHURCH UNION.

WHAT is described as "a meeting of great historic importance in American church history" was held on April 22 and 23 in Pittsburg, when forty-three men, representing four religious denominations, came together for the purpose of consolidating the four bodies into one, if it were possible. They were only partially successful; but, as *The Independent* remarks, a "partial success is no failure, and is the promise of full success a little later." The meeting was held as the result of overtures made by the United Brethren (see THE LITERARY DIGEST of September 6 last), and the four denominations concerned are the Congregationalists, with over 650,000 communicants; the United Brethren, with over 250,000; the Methodist Protestants, with 200,000, and the Christian Connection, with 100,000. The United Brethren were represented by fifteen men, with Dr. Cornell, of Denver, Colo., as chairman; the Methodist Protestants by fifteen, with Hon. J. W. Hering, state controller of Maryland, as chairman; the Congregationalists by ten, with Dr. William Hayes Ward, editor of *The Independent*, as chairman, and with Dr. Washington Gladden, of Columbus, O., in attendance; and the Christian Connection by three men, with Dr. O. W. Powers as chairman. *The Independent* prints a detailed account, from the pen of Dr. Ward, of the two days' proceedings, and says editorially:

"What is it that produces all these 'subdichotomies of schisms,' as Milton calls them, in the church? It is nothing but insistence on points of difference, mere questions of philosophy or ways of doing things, which are perfectly indifferent to the kingdom of heaven. This may not have seemed so always. There was a time when men thought that if one did not hold a particular intellectual belief as to whether the Holy Spirit proceeded from the Father alone, or also from both the Father and the Son, he would without doubt perish everlastingly. We have all got over that cruel notion now. Then it was proper to separate on such a point as this; but now among Protestant Christians, at least, such a question has lost its importance. We have come to understand that religion has to do with the heart, and that its essence was correctly defined by our Lord as love supreme to God and equal love to man.

"In the present case there were four denominations which had more or less learned our Lord's way of looking at religion. They all believed, United Brethren, Congregationalists, Methodist Protestants, and Christian Connection, alike, that the present separation of Christians into sects is a great evil, and they wanted, so far as they could, to correct it. They were not quite sure how near alike they were; they did not know each other very well. They hoped they were near enough alike to unite into one body. But when they came together, and questioned each other sharply, they found that their ways were considerably different, and their ways are what now keeps Christians apart more than their beliefs. They are all very independent on certain points, and all have separated—separatists all—for the sake of some larger or smaller point of liberty or self-government; but the points differ, and one wants more liberty while another wants more government. The Congregationalists, with their dependence on influence rather than authority, were sure that theirs was the better way, while the Methodist Protestants and the United Brethren were equally sure that the welfare of their churches required a stricter rule.

"To harmonize the two views is not easy; and the representatives of these bodies felt that they could not separate without at least the attempt to unite. Their plan is not absolute union; it is not pure federation. They propose to establish for the three denominations—for the Christian Connection fell out—a single general council of the united churches, in which they shall get acquainted, and in which certain common interests shall be attended to, very likely their mission work; while all legislative or judicial machinery shall go on for the present as it has in their several conferences. It is hoped that this will result in entire union. Meanwhile the United Brethren and the Methodist Protestants will be able to unite in a single body.

"The meeting of official representatives of these four denominations is perhaps the most important ecclesiastial event of the new century. It may mean a great deal more than now appears. It gives the promise of the union in the same body of a number of other denominations, whose methods and sympathies are essentially the same. The spirit of union is in the air, and it is the spirit of the Master."

The Independent takes the view that this federation of denominations affords a basis for still further progress in the direction of church unity. It concludes:

"Diversity in unity is the way, not unity through conformity. This is the essential principle, not of mere tolerance, but of full acceptance of differences in belief and ways. Separations have always been made to suppress liberty of difference, and union must come by the reverse process of more liberty to differ. This is a hard lesson to learn, for it contradicts the essence of denominationalism. . . . The right way is for those to take their creeds who want them, and those to discard them who have no use for them; for they all hold substantially the same faith, hope, and love. It is not what we hold and do that keeps us apart, but what we want others to hold and do. Those who now could not unite will, we trust, see a new light before many moons, and other bodies will join in the same union, and some portion of the shame of our Protestant Christians be removed."

RELIGIOUS NOTES.

AT the seventy-third annual meeting of the Troy Conference of the Methodist Episcopal Church, which took place in Saratoga, N. Y., a few days ago, Bishop McCabe stated that the net increase of membership of the Methodist Church since 1884 was greater than the entire membership of any denomination except the Baptists.

ABOUT one hundred thousand dollars was collected at a meeting held in Carnegie Hall, New York, on April 22, under the auspices of the Presbyterian Church Extension Committee. With this amount as a nucleus, the Presbyterians of New York are planning to collect a fund of $750,000 for the purpose of wiping out church indebtedness and erecting new churches in the metropolis.

A COPY of Professor Salvatori's Italian translation of "Ben-Hur" has been presented to the Pope, who is said to have "graciously accepted it." In an official letter to the translator, Cardinal Rampolla declares that "only too rarely do romances come to the Holy Father's hands in which that which delights serves solely as a means to attract the reader to the possession of what is useful."

THE announcement that the Rev. Dr. Heber Newton has resigned the position of university preacher at Stanford University has created some surprise, in view of the fact that he only recently went to California to assume the duties of this position. It is said that his action is due to criticism of his efforts to show the essential harmony between Christianity, Buddhism, and the other great religions of the world. The New York *Sun* comments: "We are surprised that any criticism on the Pacific coast of his position as to the inherent harmony of religions should have disturbed him, and all the more because in New York for many years he was the target for violent attack on account of like views boldly and consistently proclaimed by him from his pulpit and in published writings and addresses as a vice-president of the Liberal Congress of Religions." A later report represents a difference of opinion in regard to the character of the chapel choir as the main reason for the resignation.

FOREIGN TOPICS.

THE FRENCH "MISTAKE" IN SIAM.

SIGNIFICANT of much, as a certain great Scot would say, is the news that ratification of the famous treaty concluded last October by France with Siam has been postponed until the end of this year. The republic is now faced with a series of colonial complications which, in the opinion of the *Dépêche de Toulouse*, will grow worse before they grow better. It should be explained that the head of the French Foreign Office, M. Delcassé, is not fully trusted by the anti-Clerical factions now in power. However, he is retained in the cabinet partly because of his mastery of world politics and partly because of his amiable capacity for accommodating himself to all parties in the religious disputes now prevailing. Yet he is accused by the *Intransigéant* (Paris) of a "sneaking affection" for the religious orders upon the "absurd plea" that they promote French interests in the Orient. And the *Dépêche Coloniale* (Paris) would have us believe that the foreign minister gave his enemies an opening when he negotiated the treaty which hung fire so long and is now somewhat ingloriously postponed.

PRINCESS WALDEMAR OF DENMARK,
Whose influence was peculiarly exerted in favor of Siam.

The much-abused compact recognized as Siamese a narrow strip of territory winding in serpentine fashion up and down the left bank of the Mekong. Siamese sovereignty was also acknowledged in an important area bordering on the Gulf of Siam and running inland along the northwest boundary of Cambodia. A third region, on Siam's northern frontier, went with this treaty. In exchange, France gained a considerable area along the Mekong, rounding out Cambodia very amply. The Paris *Temps* vainly essayed to convince French imperialists that the republic gained immensely by this bargain. It was attacked from all directions, a somewhat sensational opposition being set up by the *Petite Gironde* (Paris), under the inspiration of M. Gabriel Hanotaux, formerly Minister of Foreign Affairs. The treaty was pronounced a "mistake," and one which it were well to "candidly confess." The enemies of the treaty also made much of insinuations in the *Neue Freie Presse* (Vienna) that the Princess Waldemar, of Denmark, sister of the late Prince Henry of Orleans, was using her influence in Paris to have the treaty confirmed. This lady, "whose fame in diplomatic circles," says the London *Times*, "is so great," is "the bright star of the Danish court," and, as we learn on the same high authority, "has all the ready wit of her race, and it can not be denied that she never neglects the opportunity for a discreet reference to Alsace-Lorraine." Her references to the treaty with Siam, however, can scarcely have been discreet, for they are made the basis of an anonymous attack upon that instrument in the *Grande Revue* (Paris). The writer of the article calls our attention to this paragraph which he takes from the *Neue Freie Presse* (Vienna):

"Princess Waldemar has important reasons for being most energetic in her mission [to Paris in the interest of the treaty], for Prince Waldemar, her husband, and the entire Danish royal family have made large investments in this part of Asia and especially in the bank at Bangkok. As a French paper says, the views of a princess belonging to the royal house of France, and who has so often devoted herself to the French cause, can not be disregarded. They must be reckoned with when she advises the French Government, as she has done through its minister at Copenhagen, not to be too exacting with Siam."

With this as his text, our anonymous authority tells us to read "between the lines," when we will see that "the Princess Waldemar, having an interest in obliging the Siamese Government, seeks to bring about the confirmation of a treaty profitable to herself." The same writer says further:

"It is a fact that the Danes have large interests in Siam. Three enterprises in which Princess Waldemar is the largest stockholder are supported by their capital. First is the railroad from Bangkok to Paknam, parallel with the Menam, uniting the capital with the bend of that river. Second is the Bangkok electric street-railway. Third is the East Asiatic Company, a great import and export concern."

Such were the influences which, we are told, hurried France on to disaster. Other mysterious forces, tending to place the republic's Siamese interests at the mercy of the Anglo-Japanese alliance, were hinted at. The anti-Clerical press of Paris took the alarm and stories were put into circulation regarding the fantastic expenditures of the Siamese envoy who had visited Paris in the interest of the treaty. Finally some uneasy deputies brought about a request that the diplomatic correspondence relating to the treaty be laid before them. To this M. Delcassé replied that "it is a rule in all foreign offices that diplomatic despatches in which envoys report the confidences they have received and freely state their own opinions shall remain locked in the archives until the time when the facts to which they relate have entered the domain of history." And the ratification of the treaty, as was observed at the beginning, has been deferred until the end of the year, the Government promising in the mean time to wrest some railroad concessions from Siam.—*Translations made for* THE LITERARY DIGEST.

THE IRISH PRESS ON THE KING'S COMING TRIP TO DUBLIN.

KING EDWARD will visit Ireland this summer, whereat the Home Rule organs in Dublin announce editorially that he favors their cause. It is frankly admitted that the announcement is based on "rumor," yet such a rumor is sufficient to make him welcome. Therefore, it is argued, English statements that an Irish welcome to Edward VII. will mean an Irish abandonment of Home Rule are nonsense. We quote *The Freeman's Journal* (Dublin):

"There is not, we are certain, the faintest shadow of personal ill-feeling to his Majesty in Ireland. Personally, he is popular; far more popular than was Queen Victoria. The rumor that he is personally in favor of Home Rule for Ireland has enhanced that popularity. But it is not the man, but the King, whom Unionists call upon the Irish people to receive and honor as head of the constitution. The anticipations of the Unionist press prove how grossly such a reception would be misconstrued as a concession to Unionism. The honest policy is the best. Ireland is frankly disaffected to the constitution, and she will refuse to make false profession of loyalty. If rumor is to be trusted, his Majesty was himself deeply impressed with the disaffection in Ireland, and was convinced that it was by Home Rule alone it would be removed. It is not so long ago since Dublin was proclaimed under a coercion act, which is still in force, and which would not be tolerated in England. Yet the Queen's visit was to bring the millennium in its train. The sycophants will, of course, make the same prophecy about the King. Even the ill-conditioned comments of the Unionist press

will not induce the slightest discourtesy to the King in his proposed visit to Ireland. But his Majesty himself will be quick to appreciate the distinction between courtesy and loyalty, and to realize that Home Rule is the only remedy for Irish disaffection."

King Edward will be very welcome in Ireland, where the news of his coming visit affords pleasure according to the clerical *Daily Independent* (Dublin), which represents the views of the Roman Catholic hierarchy. *The Evening Telegraph* (Dublin), a Home-Rule paper, also utters its editorial edification at the news. But *The United Irishmen* (Dublin) will not stomach this sort of thing, saying, indeed, that "if the King of England comes to this country he will come uninvited and unwished for by three-fourths of the people":

"If his garrison here desire to hail him with hosannas, we do not contest its right to do so, tho the Home-Rule section of it will be acting stupidly in its own interests if it regards the advice Parnell gave in 1885 to refuse to tender any welcome to a British royal personage visiting this country until a Home-Rule bill had passed into law. But that is its own affair. If, however, Irish public elective bodies follow the example of the Cove of Cork sycophants, and seek to misrepresent the nation by tending him a welcome, then the Nationalists of Ireland will make it plain that the vast majority of the inhabitants of this country are unswervingly faithful to the ideal of Ireland a sovereign independent state."

MANCHURIA.

AMERICANS who are not in touch with the subject have no idea of the far-reaching importance of the Manchurian question to the United States. Nearly every implement and most of the structural shapes used in building the great railway came from this country. The locomotives were made in Pennsylvania, and every great manufacturing State in the Union derives some revenue from the disputed province in return for rock-drills, air-compressors, pumping machinery, cotton goods, tinned edibles, spades and locks. Our contractors are successfully bidding there in many directions, and one need but pick up a European newspaper to note how this fact feeds the dread of what is known abroad as the American peril. The news, therefore, that Russia contemplates a profound modification in the status of the rich and nominally Chinese Manchuria might be expected to inspire in the American mind, according to press opinion in Great Britain, emotions of the impulsive sort which fill a father who, having spent his money for a trousseau and a wedding-breakfast, grows slowly conscious that the youth who was to marry his daughter is detained elsewhere.

The European editorial mind, however, is affected by political rather than by economic considerations in this matter. For months the leading London organs have warned the world that Russia would make Manchuria her own. It is true that according to the Manchurian convention, signed in Peking last year, Russia must evacuate the rich province by next October. But this "evacuation," now taking place on the instalment plan, is subject to such vague conditions as "the event of there being no trouble whatever" and "if the conduct of other Powers should not interpose any obstacle thereto." Moreover, the Chinese are not to resume absolute possession of the "evacuated" region in any event, for Russia is to supervise China's forces there. The London *Times*, which has recently concluded a series of special articles on the Russian position in Manchuria, thus speaks of the "evacuation":

"Evacuation, then, of the provinces [of Manchuria] now in the military occupation of Russia means the withdrawal of the troops from the cities to her railway. But the railway passes by the gates of all the chief cities. The troops that guard the railway guard the cities. Ample provision has been made for them at the railway-stations adjoining all the chief cities. Evacuation of Mukden, the capital city of all Manchuria, means the withdrawal of the troops from inside the wall to outside the wall, where provision is being made for a permanent garrison that the Russians declare can not safely be less than 6,000. So with Káiyüan, Leao-yang, and the other towns now so strongly held. They will be equally well commanded after the evacuation. Evacuation of the two other capital cities discloses a similar condition of things. Tsitsihar is 16 miles from the railway; the troops holding the railway command the city. Kirin, the third capital, is at present 80 miles from the railway. Troops withdrawn from the city command the city from a powerful position only three marches distant. When the railway is built the evacuation will consist in moving the troops from inside the walls to the railway-station outside the walls."

Russia has sown the soil of Manchuria with roubles, if we may trust this suspicious observer. Her mighty weapon is the railway which she has built up and down and across the country:

"It is a military strategical railway, guarded as no other railway in the world is guarded, with blockhouses every three or four miles, with garrisons at every important point. Every vulnerable point is guarded, every bridge is doubly guarded. There is no limit to the number of troops that can be stationed along the line. Russia has been given a free hand in this matter. Russia, and Russia alone, is to determine what force will be adequate. Railway guards are no longer called 'railway guards.' They are 'frontier guards,' and their admitted number is 30,000. They are paid by the Minister of Finance, are enlisted for three years, and are paid more highly than the regular troops, from whom they have been recruited. But the whole army of occupation can be concentrated along the railway—cavalry, infantry, and artillery; and there is none to say them nay. They are there to protect the railway. A regular soldier becomes a frontier guard by the changing of the color of his shoulder-straps and collar patches into green. It is a lightning transformation."

We are solemnly warned by the London daily against attaching any importance to Russia's denial of the real intention of her policy in this part of the East. She is making sure of Manchuria only to close its open door in the face of the world. Yet "a single act of forethought on the part of Japan," we are asked to believe, "might have" changed the whole Far-Eastern question:

"It might have been changed if, at the time of the conjoint representation by the three Powers—Russia, France, and Germany—that the occupation by Japan of the ceded [Manchurian] peninsula of Liau-tung would be detrimental to the lasting peace of the Orient, Japan had obtained, as she easily could have obtained, a self-denying undertaking that no one of the three Powers would ever occupy the territory from which she was being ousted. But the undertaking was not asked for, and within less than three years Russia was in military occupation of the territory and fortress from which she had ejected Japan. And, more than that, she had, with unrivaled diplomatic dexterity, secured the right to join this fortress in the south with a Russian city that was being erected in the heart of Manchuria, which city was itself to be united by three different lines of railway with the Russian territory of Siberia. Thus Manchuria has been occupied and has become another great province of the Russian empire. Only armed force can now drive Russia out of Manchuria, the armed force of some other Power than China."

It is futile, says the London *Times* editorially, "to talk of the bad faith which Russia has shown in so flagrant a form" in her dealings with Manchuria. "Hard words, however richly deserved, will not dislodge her." It also points out that Russia has done much good in the land. The natives are experiencing a prosperity hitherto unknown to them. The Russians in authority do not ill-treat the population. Acts of cruelty and wrong, incident to purely military conditions, have long become things of the past:

"Permanent barracks are being built in the most important situations to accommodate thousands of soldiers. Cities, with electric light and water-supply, with parks and reading-rooms, have been built in the wilderness within the last five years by

the hands of Chinese coolies for their Russian masters. Thousands of Russian civil immigrants have been introduced and have brought their wives and children and made their homes in this integral portion of the Chinese Emperor's dominions. It is impossible to withhold a measure of admiration from the energy and the skill with which the work has been prosecuted. In less than five years the empire which was so solicitous lest the victories of Japan should loosen the grasp of China upon this region and thereby upset the balance of power in the Far East, has 'transformed Manchuria from a Chinese possession into a virtually Russian province,' and has so transformed it while uttering the most fervent protestations of friendship to the dynasty whose territories she is appropriating to her own use. The railway in her hands has been at once the pretext and the instrument of aggression, as it is the bulwark which makes her position secure. It was in order to build the railway—which she has often assured us will prove of immeasurable benefit to the commerce of the world—that she obtained the right from China of sending 'railway guards' into Chinese territory."

It will be observed that this comment, like all British comment on the subject, displays a freedom of expression for which we look in vain in most French and German organs. The reason, in the case of France, is soon told. In France all parties, Clerical and anti-Clerical, agree that the alliance with Russia is the pivot of French policy. Consequently nothing must be printed in Paris of a nature to wound the susceptibilities of the "ally and friend." This tendency is somewhat marked in nearly every French organ of which the opinion counts for anything in foreign affairs. This attitude was confirmed by recent complaints in the *Novoye Vremya* (St. Petersburg) that French papers were criticizing Russia. At any rate, the Paris press, with unimportant exceptions, contains no violent attacks on Russian bad faith. Rather does it express admiration of Russia's success. For instance, the *Temps* (Paris), organ of the French Foreign Office, observes that "news comes from all directions" of the "astonishing work of Russia in Asia." The "retreat from Manchuria" is "a conquering one" and "evacuation means occupation." But this "Russian method in Asia" may be the subject of "discussion" as to its "object," but "not as regards its constancy and success." Indeed, "less happier models could be chosen." We quote further:

"Instead of threatening the native Power she wishes to reduce, Russia overwhelms it with offers of her services and loads it with her favors. She makes herself useful. Instead of taking her stand upon treaties, and insisting upon their observance in a fury of real or feigned rage, she works with and for the native Government—that is, for herself. She announces quite openly that she will maintain its integrity and the integrity of its territory. All this time she is building roads, organizing regiments, establishing banks, offering loans, granting concessions, building harbors, while taking care not to seize a city by force, to openly wrest a slice of territory or to diminish or irritate its feeble power. Russia knows that all these things will come to her some day. She has an especial horror of descents in force that are followed by no effect, of imperious flourishes based on doubt. Knowing that she can not advantageously employ cannon, she refrains from placing herself in a position that might oblige her to resort to it. She has the triple advantage of remaining at peace, of seeming generous, and of deriving more benefit than a war of both words and swords would bring her."

The German press is not very different in tone. The Berlin Government, so the London *Spectator* (strongly anti-German) constantly assures us in explanation, dare not be openly unfriendly to Russia. This, it thinks, accounts for the fact that the tone of the German official and semi-official press is far from anti-Russian. According to the *Kreuz Zeitung* (Berlin), the Powers really concerned, outside of Russia and China, are Japan, Great Britain, and the United States. As regards opinion in the Orient, it follows national predispositions. Thus *The Japan Weekly Advertiser* (Yokohama), an English paper, says Russia has promised to evacuate Manchuria, but none of her "prettily worded assurances" carry conviction. This was written, of course, before Russia's position in Manchuria entered its recent acute phase. The *Echo de Chine* (Shanghai), a French paper, declares that "Russia agreed to evacuate Manchuria in the same way that Great Britain agreed to evacuate Egypt."—*Translations made for* THE LITERARY DIGEST.

AN ATTEMPT TO REOPEN THE DREYFUS CASE.

ALTHO an effort has been made on a somewhat ambitious scale to plunge all France anew into the turmoil of the Dreyfus case, it has not yet succeeded. Trained journalists in Paris say it will not succeed. But the *Neue Freie Presse* (Vienna) can not indorse that view. It seems to anticipate another upheaval. The factors in the present situation are a forged document to which somebody put Emperor William's name, a letter of resignation by a high army officer which was concealed from the Premier, and a pending investigation of secret government archives which may yield much or little. The attempt to prove that the last Dreyfus verdict was based on some mysterious evidence that never reached the public has been defeated. The net result of all this, according to European press opinion, is to deprive the French Clericals of the Dreyfus case as a weapon against the present Government. M. Jaurès, the Socialist leader, is credited with achieving this triumph by his brilliant speeches in the chamber, and his organ, the *Petite République* (Paris), says there will be a thorough investigation of everything. The *Radical* (Paris) says this is doubtful, and the *Siècle* (Paris) thinks there will be no investigation amounting to anything. The anti-ministerial *Journal des Débats* (Paris) observes:

M. JEAN JAURÉS,
Whose activity in the Dreyfus matter may reopen the "affair."

"M. Jaurès wanted tumult. He has created tumult. He succeeded for a moment in reviving former troubles, in refreshing former hatreds, and in adding to the confusion of minds. But M. Jaurès likewise wanted the substance of success. He wanted once more to derive some advantage from an agitation which, for years together, was a source of such profit to him and his friends. He wanted to open up a new path to Socialist ideas through divisions and alarms. M. Jaurès has failed."

What M. Jaurès aimed to show, in his effort to reopen the "affair," was that the last Dreyfus court-martial based its verdict upon the forged Emperor William letter. Thus the Paris *Temps*. In this alleged forgery—the very existence of which is questioned—"Dreyfus was bluntly named as a spy in Germany's service." It is beyond doubt, proceeds the organ of the Paris Foreign Office, "that this silly legend was, in spite of its absurdity and in spite of all denials, widely credited. Mr. Jaurès tracked this legend through opposition writings and speeches." But here the French paper and M. Jaurès part company. The Socialist leader is charged with attributing too great an influence

to the forgery. There is no evidence that the court-martial heeded it at all. Anyhow, concludes the important Paris organ, why not leave all these curious details to posterity?—*Translations made for* THE LITERARY DIGEST.

POLICY OF WILLIAM II. IN BRAZIL.

HAS Germany, or has she not, designs of a political nature in matters relating to South America? The question is put by that capable and accurate student of world politics, Roland de Marès, in the *Indépendance Belge* (Brussels), and he considers it a matter of immediate and great moment. "The Americans assert very emphatically," he observes, "that they will never tolerate Germany's establishment in any portion whatever of the new world. It is, moreover, well known that the maintenance of the Monroe Doctrine is the alpha and omega of United States (foreign) policy. But the problem is to determine whether one or other of the great European Powers will not succeed in overcoming this obstacle":

"It is with reference to Brazil that attention has been drawn to this subject. In the leading republic of South America there exists a German colony that is developing in the most alarming fashion. Instead of becoming absorbed in the population, like the Spanish, the Italians, and the English, the German immigrants concentrate in one locality, retaining intact their character and national sentiment, forming thus a dominant element whose influence must be reckoned with in certain states of the republic. Instead of acting like the mass of foreigners who settle in a new country and who think only of deriving profit from their own industrial capacity in places where European methods are still imperfectly known, the Germans aim particularly at furthering the commerce and industry of Germany in all they undertake over there, and they have succeeded in monopolizing some lines of Brazilian trade. If this procedure had but an exclusively commercial aim, it would afford no special ground for anxiety. But there is more than this involved. While flooding Brazil with products from over the Rhine, these thousands of immigrants keep up a political propaganda which represents Germany as the only European Power capable of protecting the states of Latin America from the ambitions of the United States."

Cost what it may, the design is that Germany shall secure a footing in South America, says this interpreter of the situation. "If certain rumors are trustworthy, the Government of Rio Janeiro has been sounded as to the possibility of carving a pan-German state out of Brazilian territory; but it goes without saying that this idea was most unfavorably received, a fact which explains the tortuous denials of official Germans." The authority we are quoting looks forward to a time when Emperor William will feel called upon to take measures with reference to his thousands of subjects in South America, "measures which may greatly provoke the Brazilian Government and lead to difficulties of which Germany will certainly take advantage to impair to an extent the integrity of the republic":

"It is somewhat foolish in the official press of Germany to repudiate these German intentions. To any one who studies events it is apparent that Germany is seeking by all possible and impossible means, to gain a footing in South America. She would like to accomplish this without provoking the hostility of the United States, without coming into conflict with the great republic of the north; but she has not succeeded yet, and it may be conjectured that she will not succeed soon. In the recent complications over Venezuela she did all that was humanly possible to embroil matters. It was owing to the absolutely peaceful dispositions of President Roosevelt that we did not see a tragic termination to the grotesque adventure into which the Berlin cabinet led the London cabinet with the sole purpose of involving the latter with the United States. The action that miscarried against Venezuela we shall now see Germany renew at every more or less favorable opportunity against no matter what other South American state until she surprises the careful watch the Americans maintain in regard to all that concerns the Monroe Doctrine or until the day arrives when these same Americans resolve to bring to a forcible end all European designs upon these nations of the new world."

What will be the outcome of that contest which our authority thinks he foresees? He tells us that the United States will be victorious and that "Germany is preparing for herself a humiliation from which her prestige will suffer immensely not only on the other side of the Atlantic but also in Europe." Yet it must be noted that competent and disinterested observers in Germany repudiate all official schemes for the creation of a German state in Brazil. The *Nation* (Berlin), a Liberal weekly, is emphatic on this point. The *Kölnische Zeitung* says also:

"German advocates of colonization in Brazil have taken pains to impress upon their countrymen in Rio Grande do Sul and Santa Catarina, as well as in the fatherland, that no political ends can be subserved by the exploitation of those territories. In the past the plan may have been favored by some Germans, but the situation is so well understood now that violent change is no longer contemplated."

The same paper says the United States has no intention of making conquests in Brazil, but American capital is beginning to flow into the South American republic and American commerce will probably become dominant there. The London *Times* has drawn down upon itself, however, the denunciation of the *Hamburger Nachrichten* by printing a series of communications from its correspondents on "German projects in Brazil." One of these communications ran, in part:

"Long before the Venezuela question arose, the action of certain German associations for promoting the interests of the fatherland beyond the seas had, to my knowledge, attracted the attention of more than one continental chancellery, and had certainly not escaped observation at the White House at Washington. The German embassy in that capital was known to be the chief center of Teutonic transoceanic efforts. Some curious revelations might be made on the subject."—*Translation made for* THE LITERARY DIGEST.

POINTS OF VIEW.

FARRAGUT ON SEA POWER.—"When Admiral Farragut was making his memorable tour round the world in the *Franklin* the King of Greece boarded his ship at Athens," says *The St. James's Gazette* (London), "and brought up the question of the relative merits of wooden vessels and ironclads. The admiral's view seems almost startling to-day. 'Give me,' said he, 'a wooden ship. If an iron plate is knocked away by a cannon-ball, where are you? Whereas if a hole is made in the hull of the *Franklin* it can be stopped up in no time.'"

CASTRO'S POLITICAL PHILOSOPHY.—"The terrible, sanguinary conflagration of men, things, and events has swept along, subduing everything except the majesty of the sovereignty which you represent and the opposed and always victorious authority which I exercise, which have risen from the conflict with their prestige brightened by the tremendous proofs to which they have been submitted." Thus President Castro in his latest message to the congress of Venezuela, published in *The Venezuelan Herald* (Caracas). The executive proceeds: "In the deep furrow opened by those extraordinary events, Providence must have sown the seed of something entirely new which must soon exercise a favorable influence on the destinies of the nation, something superior, the name and nature of which we do not even know. If it is painful that so much blood and so many tears should have been shed, it is consolatory to think that their bitter stream, by the law of compensation, will go to fecundate something which should correspond with the aspirations of the present time."

CHINA'S VIEW OF US.—"Now, of all the countries in the world to-day, Great Britain and Russia are the most powerful," says the *Shen Pao* (Shanghai), a Chinese native paper, quoted in *The Celestial Empire* (Shanghai), a British organ. "Then come France, Germany, and Japan. With regard to the United States of America, it is not inferior to Great Britain and Russia either in wealth or in strength, but it assumes a somewhat different attitude, inasmuch as it has been pursuing a more or less non-interfering policy ever since the time of Washington. Hitherto, the United States has had no ambition for territorial aggrandizement, and consequently it has been able to maintain most friendly relations with all the other countries, who have never for a single moment doubted its good intention or envied its greatness and prosperity. Recently, however, the United States has gradually commenced to meddle in the affairs of other countries, thereby showing that it, like all the other Powers, has also an anxiety to become a world power. Now, since the United States has such a motive, it will one day come into conflict with some other countries, tho, of course, such a day is still very far off from us."

NOTABLE BOOKS OF THE DAY.

IRISHMEN TOO GOOD TO BE TRUE.

A Lad of the O'Friels. By Seumas McManus. Cloth, 5¼ x 7¾ in., 296 pp. Price, $1.50. McClure, Phillips & Co.

"HEREIN I do not sound the depths nor trace the currents of Irish life, nor show its billows and surges. To abler hands I leave this task. Come, a summer idler, to this little tale." This is the way in which Mr. Seumas McManus begins the preface to his latest book, and it is from the point of view of an idler among books that this tale must be judged. The story wanders over hill and dale, there is a good deal of pleasant and irrelevant talk, quaint philosophizing, and stories about the "little people" told before a peat fire. A narrow thread of a love interest holds the book loosely together, and it is written in a reminiscent spirit which is very pleasant.

SEUMAS McMANUS.

Yet after one has given credit to certain genial qualities which may be found in almost all of the author's work, one feels that the story has tripped along a little too lightly on the surface of Irish life. It is too good to be true, too much of a Donegal fairy tale, to make the best of reading even for an idle summer afternoon. The book has the monotony of an eternally smiling face. One is safe in asserting that a town full of Irish people, so kindly, simple, tolerant, and peaceable, will never be found this side of the promised land. We are willing to have our novelists lead us to the peaceful and idyllic spots of earth; but the less interest of plot, the more human interest there must be. Nor does the kindly spirit need to be sacrificed to attain this end. There is a certain window in Thrums, for instance, through which readers may observe very real people passing up and down the crowded village street. It would, no doubt, be a fine thing for Ireland if there existed many hamlets like that described by Mr. McManus; but our New York police force would not in that case be the impressive body it is, for no Irishman would have emigrated. Idealized a little less, with a touch more of reality, the book would have been one of the most delightful of its kind. As it is, there are certain pictures in it that linger with you after you have finished, and it is a real out-of-door story.

A STUDY IN DRAB TONES.

Anna of the Five Towns. By Arnold Bennett. Cloth, 5 x 7½ in., 360 pp. Price, $1.50. McClure, Phillips & Co.

THE style in which this simple tale is told is so exactly suited to it that the author must be credited with that much artistic achievement. But "Anna of the Five Towns" is not an oppressively engaging girl. The merit of the tale is its veracity in portraying provincial English life in a community largely composed of Wesleyan Methodists. Five contiguous towns are united by a single winding thoroughfare, eight miles long, and Bursley, the mother of them, is "the ancient home of the potter," and "has an antiquity of a thousand years." Five Towns is the name of this aggregation, but all the actors in the story live in Bursley.

It is a very realistic story. Something of the simplicity and directness of Maxim Gorky breathe in it, and now and then a lurid touch comes into the gradation of drab tones which pervade the canvas. The author is severely impersonal, and narrates with strange aloofness from the beings he is evoking. Anna is almost unsympathetically analyzed. She is the daughter of a miserly old fellow, Ephraim Tellwright, and has a young half-sister, Agnes. Life in that household is shorn of nearly all that entitles it to the name.

You are led to expect things of Anna, however. A rocket goes hissing upward, with spasmodic jumps as it nears its altitude, and you wait for its bursting and—it doesn't burst. It just flickers out. The climax of Anna is somewhat similar, inasmuch as it comes so gently as to fail to convey the emotional value which, after all, it really possesses. A smart young man, a paradigm of conventional virtues, falls in love with her, and she thinks she does with him. He is thirty, nine years older than the girl. There is another youth, Willie Price, something of an oaf, with "a thin, honey-colored mustache." Anna's young sister liked him. "His simple, pale blue eyes had a wistfulness which made her feel toward him as she felt toward her doll when she happened to find it lying neglected on the floor."

Willie and his father get into business troubles; a forgery is committed, the elder man hangs himself, Willie sells out and is to start for Australia to begin life over. As Anna is saying good-by to Willie, the emotional crisis in the story arrives. She put a hand on his shoulder. "Yes," she said again, passionately: "I shall always remember you—always." The hand with which he touched her arm shook like an old man's hand. As their eyes met in an intense and painful gaze, to her, at least, it was revealed that they were lovers. What he had learnt in that instant can only be guessed from his next action."

Anna marries the correct and masterful young man, "whom, with all his excellences, she had never loved." The picture of Willie Price "getting on" in Australia was often in her mind. "This vision of him was her stay." It was good that this was so, but the author denies the reader any such solace. For she mercilessly reveals the "next action" so ominously alluded to shortly before, on Willie Price's part. It was to throw himself into an abandoned pitshaft. The naïveté with which the author imparts this distressing fact is too delicious not to be quoted.

"Neither she (Anna) nor any one in the Five Towns or elsewhere ever heard of Willie Price again. And well might none hear! The abandoned pitshaft does not deliver up its secret."

IMPROVING A HINT FROM ROUSSEAU.

Spinners of Life. By Vance Thompson. Cloth, 5 x 7¼ in., 294 pp. Price, $1.50. J. B. Lippincott Company.

THE mystic or the tragic seems to be the flame in which the moth of vivacious, youthful imagination loves to scorch the down from its wings. Mr. Robert Chambers made his literary début with "The King in Yellow," which was New York set to Poe-like, creepy fantasies. Mr. Vance Thompson is something of a pen-and-ink relative of Mr. Chambers's, for this novel of metropolitan life is uncanny. A quotation from Jean Jacques Rousseau sowed the seed of "Spinners of Life" in Mr. Thompson's extremely procreative brain: "If, in order that you might inherit a good fortune from a Mandarin, living in some far-away China, whom you had never seen nor heard of, it were necessary for you to merely touch a spot on your wall—would you touch it and kill the Mandarin?"

Jack Gaffney is an easy-going New Yorker of thirty who has "gone broke." He reads this passage from Rousseau by chance, and instantly decides that he, or any fellow, would most certainly "touch the spot." His candles go out and he sees a bright red spot on the wall of his room as he is starting to go to bed. "I'll kill that Mandarin any way," he said, and added, "I'll kill that one for luck." He stepped forward and touched the spot with his forefinger.

Within a short time he learns that an unknown man left him a million (later on, Mr. Thompson, on second thoughts about New York fortunes, makes it ten millions). Then Gaffney's girl comes back from Europe and tells about an episode of the voyage. An old gentleman sitting on deck had exclaimed, "He will!" and then promptly passed away with heart-disease. All this seems pulling the long-bow of grim fancy pretty taut, but there is a heavier strain on it. A red spot appeared on the forehead of the dead gentleman who had left Jack Gaffney his millions, and that young man, not inconsequently, concludes that he is a murderer.

VANCE THOMPSON.

Most readers will probably indulge in a sarcastic smile instead of a cold chill over Mr. Thompson's extravagant juggling. But it must be conceded that the author displays admirable invention in weaving things around this gruesome nucleus. He holds your interest, and that is nine-tenths of the game in imaginary outputs of every class. Mr. Thompson's brain is a wonderfully active one, and he has an acute and worldly knowledge of the world and of the livers of life. Moreover, he has a style that is pungent and virile, if at times straining after cynical epigrams and "strong" writing. There is a Gallic nib to his American pen.

RUSSIA IN ITS LITERATURE.

Anthology of Russian Literature. From the Earliest Period to the Present Time. By Leo Wiener, Assistant Professor of Slavic Languages at Harvard University. In two parts. Part II., The Nineteenth Century. Cloth, 6½ x 9 in., 449 pp. Price, $3 net. G. P. Putnam Sons.

THE first volume of this anthology of Russian literature dealt with the period beginning in the tenth century and ending with the eighteenth. The present volume deals almost wholly with the literature of the nineteenth century, starting with Karamzin (1766) and followed by examples from the work of forty-one poets and novelists, ending with Tolstoy and Gorki, and several contemporaries of lesser fame.

In a volume covering about one hundred and thirteen years the examples are necessarily limited, and in some instances may appear scrappy. The reader unversed in the Russian tongue has, of course, no alternative but to accept them as the best that could be selected for his enlightenment. Judged thus, the result in English dress may seem at

times disappointing, and especially so in the case of writers at the close of the eighteenth and the beginning of the nineteenth centuries.

In the poets especially there is often a mystic haziness of thought, a lack of direct force and of the clean-cut word that strikes the reader's consciousness. Sometimes, however, one of the earlier poets, as in the case of Lermontov, born 1814, seems more in touch with the feelings of to-day than do some of the men who succeeded him.

Indeed, the whole content of the book goes to show that Russian literature can not, any more than Russian life, be measured by the rules or precedents of Western civilization. At the beginning of the last century culture was confined practically to the upper class, and the sons of that class stood out against the knout-handed tyranny of their fathers. Before this state of things had time to produce wholesome results, the schools of the country were thrown open to the people at large, thus giving a knowledge of letters to many who had neither the background nor the traditions to properly equip them in the race, and who too often fell victims of poverty and persecution. As the author intimates, Russian society from top to bottom was democratized before it was prepared for it. The protest against the higher classes in general resulted in throwing the whole nation into a chaos of protest. This was followed by a negation of all established things, together with inability to found anything permanent. Turgeneff's fathers and sons give, perhaps, as good an example of this state of things as can be found in Russian literature.

LEO WIENER.

All the above-mentioned conditions are shadowed forth, if not always fully described, in the scraps of literature spread before us.

"It is a notable fact," says the author of this work, "that Russia has not produced a single philosopher worthy of the name. . . . Philosophy can have free sway only where there is calm reflection, and reflection lies at the basis of actions only where ideals are formed at a mature age. Unfortunately for Russia, young men have stood behind the cultured movements, and by 'young men' in Russia are understood those who have not yet reached the age of thirty. . . . The consequence has been disastrous."

Elsewhere the author intimates the early age at which Russian authors do their work, and how few of them have achieved anything after forty.

Another noticeable thing is that nearly all the literary men come from among the nobility, the gentry, or the well-to-do people. Two or three were sons of poor village priests, but none has come from the real peasantry, for even Gorky is not by descent a peasant.

THE SHADOWS OF A MINE.

A Daughter of the Pit. By Margaret Doyle Jackson. Cloth, 5¼ x 7¾ in., 351 pp. Houghton, Mifflin & Co.

THE title which Mrs. Jackson has given to this, her first novel, is somewhat sinister. It is only fair to say at the start that, tho the color throughout is that of the dreariest of mining regions in England, and the persons in the drama are connected with the workings of a coal-mine, the final outcome is written large in a happiness for the majority of them. It is a strong book, with fine, sympathetic feeling for the lowly, and certain passages of tragedy which just escape (if they *do* escape) pronounced melodrama.

MARGARET DOYLE JACKSON.

The literary note supplied by the publishers states that the author, daughter of an English army officer, was born in Bermuda, and in her young womanhood was a pupil teacher in the suburbs of Manchester, like Eliza Whitlake, the heroine of this novel. So she drank in, at her most impressionable age, the flavor and rude homeliness of a mining *milieu*, which she has diffused, with much literary skill, in "The Daughter of the Pit."

The love interest is strong and very human, but the chief charm for the readers of Mrs. Jackson's romance is the intimate knowledge of that subterranean life in the old Bunley pit. A fascinating little figure of that long-chambered underworld, where the "utter darkness is very soft, like velvet, and black," is the "trapper," ten-year-old Tommy. "He had nothing to do but to sit all day long beside a trap-door in the gallery and swing it open each time he heard a train approaching."

Tommy shows himself a hero in the crisis of the story, tho Eliza Whitlake certainly surpasses him in running her lover from the [illegible] At the mean time Eliza's father had lost his way in the dark [illegible] and strays into a perilous [illegible] called "The Cavern." It looks as if utter disaster had laid hold of everybody by the heels; but, with sane deftness, all but the villain are extricated, and he dies a perfectly horrible death that would make the Bowery "gods" howl themselves hoarse with approval.

Mrs. Jackson is realistic in her school, and gives to these drastic happenings no little awesomeness. In portraying the mine she invests it with almost personal qualities, something after the fashion of Victor Hugo. The simple tragedies, commonplace in character, but rendered pathetic by the sympathy and sincerity with which they are depicted, are very moving. There is not much wickedness, and that is all concentrated in one huge miner, a Hercules with club-feet.

It is an interesting book, simple and strong, written in a clean-cut style, with fine literary passages, and as wholesome as it is fascinating.

PSYCHIC PHENOMENA AND THEIR MEANING.

Human Personality and its Survival of Bodily Death. By Frederic W. H. Myers. In two volumes. Cloth, vol. i., xlvi.–700 pp., vol. ii., xx.–660 pp. Price, $12.00. Longmans, Green, & Co.

THIS is a remarkable book by a remarkable man, who left it as a solemn testament to the world. Frederic Myers was essentially a poet, but he lived nearly all his life in the scientific atmosphere of Cambridge, England. The book before us bears traces of the influence of both character and environment. It touches upon the ultimate mysteries of life with a wealth of imagination only to be expected from a poet, and yet attempts to apply the scientific principle of continuity to a series of phenomena which at first sight are the most discontinuous in human experience. Myers deals in this book with such topics as sleep, hypnotism, planchette, ghosts, and trances, and attempts to connect them together by a long series of reasoning which traces them all to manifestations of what he calls subliminal self. The argument is very complicated, but may perhaps be put shortly in the following series of propositions: The real essence of personality does not reside in the discontinuous stream of consciousness with which we are familiar in our working life. Certain abnormal conditions of the mind indicate that various fragmentary personalities can in case of "multiplex souls" occupy the stream of consciousness. The phenomena of genius, of dreams, and of that self-suggested form of dream known as hypnotism show that there is a deeper self underlying the more superficial stream of consciousness, tho it may at times project itself into the stream. This Myers calls Subliminal Self.

Myers brings a certain amount of evidence that this Subliminal Self can transfer its activity in space, and especially can by what is known as "telepathy" influence other selves by means seemingly different from the ordinary physical senses. So, too, in the case of what used to be known as "possession" other selves seem capable of entering into the body of a person and of communicating their thoughts and experiences to the new body. If this be so, argues Myers, is it not possible that personality when divorced from the body may make its influence felt on other souls? In short, may not ghosts be real, projections of discarnate spirits, and have we not here the required scientific and experimental proof of the continuance of human personality?

Put thus baldly, Myers' arguments may not appear very convincing. The very instances of multiplex personality which he adduces would seem to prove that human beings are what the African savages think them to be—syndicates of souls. His argument assumes the real existence of telepathy, which has been by no means scientifically established. The whole book is itself a sequel to his previous work, "Phantasms of the Living," which again was not over-conclusive to the scientific mind. But notwithstanding these superficial objections to the line of argument taken by Myers, there can be no doubt that his work will give pause to those who deny the possibility of any communication other than by the ordinary senses, and it brings into line a whole series of phenomena which are undoubtedly facts of certain abnormal states of consciousness, but the significance of which has utterly escaped previous inquirers. How far it will be convincing depends very much upon temperament.

FREDERIC W. H. MYERS.

Perhaps the most serious objection to it lies in the character of Myers himself. One may approach a problem of this kind on two methods, readiness to collect the facts impartially and to "follow the facts out of the window" if necessary, or one may search only for those facts which point in certain directions. There is no doubt that Myers was simply obsessed by the idea of a life after death, and in his search for facts it was scarcely possible for him to have avoided the tendency to observe and interpret facts in favor of his preconceived views. His wish, in short, was father to his thoughts. All this, however, makes the book the more interesting to read and to study, and by an ingenious method the main argument is kept within reasonable limits in the chapters of the book, while the elaborate evidence is relegated to the appendices which take up even greater space than the text. Whatever our judgment on the validity of the arguments contained in the book may be, there can be no doubt of its sincerity, its thoroughness of treatment, and the suggestive spirit in which some of the profoundest problems of life and theology are dealt with in its pages.

FRENCH, GERMAN, SPANISH

Language Study Simplicity

Far Superior and More Satisfactory than a Teacher

We can place in your possession the means by which you and any member of your family will quickly and easily acquire French, German or Spanish.

By our Method you speak **some of the language the first day, more the second,** and **still more the third,** and in a short time the **language is completely mastered.**

So little time is required that there is no interference with business or other studies or household or social duties.

We are not endeavoring to mislead you by a fictitious offer. Read this announcement through and you will see that we mean exactly what we state.

You, or any member of your family, might be able to-day to speak and read **French, German** or **Spanish,** or all three, if it had not been that you were deterred from acquiring a foreign language by the thought that it was **too big an undertaking.** The difficulty of committing to memory a strange vocabulary and then fitting the words into sentences as needed has **confronted thousands** of would-be **linguists like a bugaboo.**

It is all a mistake. You can learn **French** or **German** or **Spanish** in a **very simple way,** in a **very short time,** and **with very little effort.**

Modern methods for mastering the various branches of knowledge have very largely supplanted old methods in every grade from the kindergarten up. Children are not taught to read as of old, by the tedious process of spelling out the words syllable by syllable. They are taught to recognize at sight the combinations of letters which stand for the various sounds. It is ever so much easier and more direct for both child and teacher, and **it saves months of time.**

Very much the same principle can be applied with great advantage in the study of **French, German or Spanish languages.** Instead of attempting to learn a long, meaningless vocabulary of words, and then when the need comes endeavoring to remember the right ones with which to express an idea, **why not begin at once to associate the ideas with words, the practical, necessary ideas of every-day life? In this way you begin at once to use the language.** Then as the habit of associating certain words with certain ideas is formed, the words are unconsciously and **without effort fixed in the memory,** and can be used for any and **all purposes of conversation, correspondence,** and **general reading** of **whatever kind.**

This common-sense principle by which the terrors of learning a new language are done away with is the secret of the

View from our Property of Riverside Drive and Grant's Tomb, the Most Beautiful Section of New York City

NEW YORK'S MILLIONAIRES

have, in many cases, made their fortunes in **New York real estate.** Shrewd business men are embracing the same opportunity to-day of securing a share in the tremendous increase of values of desirable property being opened up in the suburbs of Greater New York.

Our properties are at New York's threshold—35 minutes from the great commercial and financial centers of the city.

GRANTWOOD-ON-HUDSON AND MORSEMERE

are directly opposite Grant's Tomb and Riverside Drive, the Geographical Center of Manhattan, and but 15 minutes distant. Macadam streets, flag walks, curb, water, gas, unexcelled sewerage system. Beautiful parks completed and others in construction. Handsome schools and churches. $7,000 new R. R. station. Trolleys in operation and more contracted for.

60 new homes built in **GRANTWOOD** in the last 2 years and 22 at **MORSEMERE** within last 12 months. Lots similar to those sold in 1899 for $450.00 now selling at $950.00. Values have doubled and should double again in another 3 years.

Lots at MORSEMERE, $850 to $700. At GRANTWOOD, $700 to $2,000 (all lots 25 x 100); as desirable for residential purposes as those sold for same price in Harlem or Bronx (in the upper part of New York City) ten years ago, which now bring from $1,000 to $20,000 each.

EASY PAYMENTS: $15 down and $5 monthly, for lots under $700.

These properties have already proven their profit possibilities; but to demonstrate our faith in their future increase, we will guarantee that if the actual increased value within two years from your purchase is not equal to 15 per cent. per annum on your cash investment (as determined by the price at which we are selling similar lots at that time) we will refund the entire cash paid us, with interest at 6 per cent.

If interested we will give you a

FREE TRIP TO NEW YORK

RESIDENCE ON PROPERTY.

paying your railroad fare both ways for the purpose of having you inspect our property. But don't delay. Reserve lots at once, and thereby secure them at present prices, as all lots advance 10 per cent. on or before July 1st. Write to-day for testimonials from **buyers who have already sold at a profit,** photographic views, etc.

The Best American Humor This Generation Has Seen

THE REAL DIARY OF A REAL BOY

By JUDGE HENRY A. SHUTE, of Exeter, N. H. (Harvard '79)

DO you know that in "The Real Diary of a Real Boy" we are offering you one of the merriest, sweetest, wholesomest books ever written? How far removed it is from the labored fun of the hard-working humorist by trade! Here is a book from which you would not spare a single line or word. Such inimitable humor, of the sort all the world hungers for, can nowhere else be found, if you search to the ends of the earth for it. You will laugh and cry and laugh and cry again and again, before you turn the last page of this incomparable record of boyhood life. Young and old, schooled and unschooled, will find the same infinite charm in its pages.

CURRENT POETRY.

A Torchbearer.

(J. B. M., NOVEMBER 29, 1902.)

By EDITH WHARTON.

Great cities rise and have their fall; the brass
That held their glories molders in its turn,
Hard granite rots like an uprooted weed,
And ever on the palimpsest of earth
Impatient Time rubs out the word he writ.
But one thing makes the years its pedestal,
Springs from the ashes of its pyre, and claps
A skyward wing above its epitaph—
The will of man willing immortal things.

The ages are but baubles hung upon
The thread of some strong lives—and one slight wrist
May lift a century above the dust;
For Time,
The Sisyphean load of little lives,
Becomes the globe and scepter of the great.
But who are these that, linking hand in hand,
Transmit across the twilight waste of years
The flying brightness of a kindled hour?

Not always, nor alone, the lives that search
How they may snatch a glory out of heaven
Or add a height to Babel; oftener they
That in the still fulfilment of each day's
Pacific order hold great deeds in leash,
That in the sober sheath of tranquil tasks
Hide the attempered blade of high emprise,
And leap like lightning to the clap of fate.

So greatly gave he, nurturing 'gainst the call
Of one rare moment all the daily store
Of joy distilled from the acquitted task,
And that deliberate rashness which bespeaks
The pondered action passed into the blood;
So swift to harden purpose into deed
That, with the wind of ruin in his hair,
Soul sprang full-statured from the broken flesh,
And at one stroke he lived the whole of life,
Poured all in one libation to the truth,
A brimming cup whose drops shall overflow
On deserts of the soul long beaten down
By the brute hoof of habit, till they spring
In manifold upheaval to the sun.
Call here no high artificer to raise
His wordy monument—such lives as these
Make death a dull misnomer and its pomp
An empty vesture. Let resounding lives
Reecho splendidly through high-piled vaults
And make the grave their spokesman—such as he
Are as the hidden streams that, underground,
Sweeten the pastures for the grazing kine,
Or as spring airs that bring through prison bars
The scent of freedom; or a light that burns
Immutably across the shaken seas,
Forevermore by nameless hands renewed,
Where else were darkness and a glutted shore.

Two Sonnets.

By James Whitehead.

I.

LOVE'S BLOSSOMING.

Belovèd, in the garden of my heart
There fell one night a solitary seed:
I knew not whence it came nor what its part,
Nor of what nourishment it might have need.
Wearied with wandering through the ether wide
It slept, and, when its weariness was gone,
Said, "In this pleasant spot will I abide,
And with the fairest claim comparison."
Startled, I watched with keen and constant eyes
The growth to bud and blossom of my guest,
Like one to whom 'tis very Paradise
To see her infant drain her ample breast;
And, lo! I found one happy evening hour,
My heart was harboring Love's immortal flower.

II.

LOVE'S DISDAIN.

Our love is not the prating world's concern:
What right have they thy worth to criticize?
How can they hope thy graces to discern,
Who only own unsympathetic eyes?
It may be that they think thou art not fair,
And thy great goodness merely commonplace,
When, all the while, it is my pen's despair
In living lines these very things to trace.
To me thou art a being bright as day,
Fairer than Truth, if such a thing could be,
Pure as the Maid who shames the stars away,
And to her bosom draws the restless sea.
Let no one seek these merits to disprove,
Who has not seen thee through the eyes of love.

—In April *Blackwood's Magazine* (London).

WATER MOTOR FAN

$1.50 Can be connected with any spigot or attached to wall. Any person can adjust it easily and without effort. **Diameter, 10 inches. Makes 2000 Revolutions a Minute.** Throws a current of air as strong as any $15 electric fan, without any noise or annoyance. It has no equal for the sick-room.

THE LITERARY DIGEST FIRST PROBLEM TOURNEY.

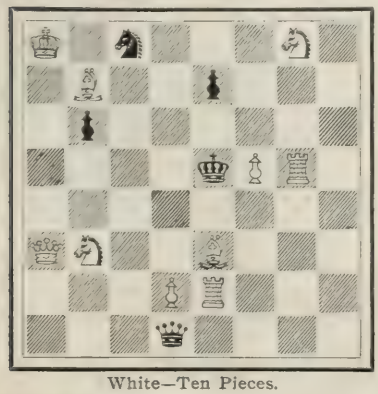
First-Prize Two-er.

Problem 732.

L. MOTTO: "Regina I."

By J. VAN DYK, Zuid-Holland.

Black—Five Pieces.



White—Ten Pieces.

White mates in two moves.

In everything pertaining to health the nearer we get to Nature and to Nature's ways the better we are. Perfect filtration is absolutely necessary to make water the true, wholesome solvent it is intended to be.

The National Filter

is patterned closely along natural lines and is based strictly upon Nature's methods. The finest quality of tripoli stone is the filtering medium used, and its construction and action are such as to positively remove every trace of bacterial and animal matter. Hence absolutely pure water is the result. The National Filter never needs taking apart for cleaning—there is no removal of the stone, and anybody can clean it thoroughly in three minutes.

Made in all sizes for the home, the office and large institutions. Installation is direct with the supply pipe and in no way interferes with water drawn direct from faucet. Write for illustrated booklet, "Pure Water in Nature's Own Way"—it's free.

NATIONAL FILTER CO., FISHER BLDG., CHICAGO.
1257 Broadway, New York. 1015 Pine St., St. Louis, Mo.
201½ St. Paul St., Baltimore, Md.

Perfect Food Means Perfect Health

Perfect health means bright, sparkling eyes, a clear complexion, a sweet breath, sound white teeth, an active brain and a symmetrical body.

Shredded Whole Wheat Biscuit

is a perfect food because it is complete in itself for the perfect nourishment of the whole body. (Read that statement again.) SHREDDED WHOLE WHEAT BISCUIT IS MADE IN THE MOST HYGIENIC FOOD LABORATORY IN THE WORLD.

The wheat is thoroughly cooked and spun out into porous shreds and is, therefore, naturally light and short without the use of yeast, baking powders, fats or chemicals of any kind. It is crisp and compels the teeth to perform their natural exercise. This means perfect digestion, perfect health and immediate relief from constipation. Sold by all Grocers. Send for "The Vital Question" (Cook Book, illustrated in colors) FREE. Address

The Natural Food Co., Niagara Falls, N.Y.

Easy To Carry

and strong enough to last a lifetime. Close fitting top makes it dust-tight and odor-proof

Witt's Corrugated Pail

is useful as an ordinary bucket, but better, safer, stronger and more economical for servants, janitors, stablemen, etc. Made of corrugated steel galvanized. Two sizes: 5 and 7 gallons.

Sold by house furnishing and hardware dealers.

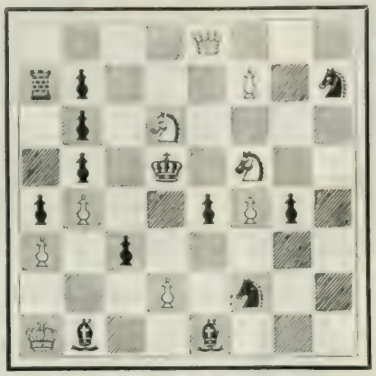
First-Prize Three-er.

Problem 754.

LXII. MOTTO: "Immortale Jecur"

By EMILE PRADIGNAT, Saujon, France.

Black - Thirteen Pieces.



White - Nine Pieces.

White mates in three moves.

The Judges' Award.

TWO-MOVERS.

First Prize, Problem 732 (l.) by J. Van Dyk, 89½ points.

Second Prize, Problem 711 (xxix.) by D. T. Broek, 88½ points.

Third Prize, Problem 688 (vi.) by K. Kondelik, 88 points.

Honorable Mention.

Problem 724 (xlii.) by J. Colpa, 87 points.
Problem 692 (x.) by K. Fiala, 86 points.

THREE-MOVERS.

First Prize, Problem 754 (lxii.) by E. Pradignat, 87 points.

Second Prize, Problem 718 (xxxvi.) by Dr. Th. Schaad, 86½ points.

Third Prize, Problem 742 (lx.) by K. Kondelik, 85½ points.

Honorable Mention.

Problem 698 (xvi.) by A. F. MacKenzie, 84½.

Of the two-ers, Mr. Reichhelm writes: "No. 732 is to my mind the most difficult two-er in your Tourney. There are many plausible 'trys,' and the real point of the mate is not discovered except by an exhaustive analysis. The subtle master *coup de repos* is decidedly *not* on the surface; but when found, the beautiful pose of the composition is revealed, with the dangerous black Queen on very active duty.

No. 711 is a most beautiful and striking composition. There is more *red paint* in this than in No. 732, and for that reason it may find more favor among solvers than its pale-faced sister. The key-move is a veritable *coup de théâtre!*

"No. 688 is a plain-looking edifice easy to enter. When you have examined its mechanism you find a marvelous N. S. E. W. arrangement of mates by Rooks, unique in problem-literature."

Concerning the three-ers, Mr. Carpenter writes: "In 754, the key is slow, sly, and slick. There are six fine variations in every one of which *all*

"That's Meat and Drink To Me." — SHAKESPEARE.

HORLICK'S MALTED MILK

as a luncheon

is delicious, invigoratiug, nutritious. Prepared instantly in the home, office, or study. Excellent for business and professional people, and those troubled with impaired digestion.

the white pieces concur. There are twelve mating-positions, with a close approximation to purity."

Mr. Reichhelm: "A problem as deep as a well and distressingly difficult. The key is a prelude to various fine second moves. A masterpiece of German style."

No. 788. Mr. Carpenter: "A charming stratagem. The key, far from easy to discover, comes as a surprise when found. The mates are very beautiful."

Mr. Reichhelm: "The toilet of the mate is light and airy,—a winsome dress for a beautiful form. The Queen-sacrifice is anything but apparent to even the careful observer; for White is so well placed that he appears to have several ways of pounding Black into a mate. When the author's poetic idea takes form in the mind of the solver the splendid solution is found."

No. 742. Mr. Carpenter: "Great attention has been paid to the active employment of all the white pieces, and to the cleanness of the mates. Three variations are of unusual elegance, viz.:

1. ..... P—K 1 2. Q—Q 4 ch ;

1. ..... P—K 3 2. Kt—Q R 6 ch ;

1. ..... R—Q 7 2. Kt—K 4 ch

Mr. Reichhelm: "A complex beauty with a very deft arrangement of only six men against a host of ten. The varriations in which the defensive Pawn-moves block the squares are very pretty, and all the construction is fine."

No. 698. Mr. Carpenter: "Eight good variations out of such a difficult position show constructive skill of the highest order."

Mr. Reichhelm, in his letter giving his award, says:

"I must compliment you on the magnificent array of problems in your recent Tournament. It has been within my experience to be more or less in touch with problem-competition of the past, but I do not recall any that has quite equaled yours in the quality of the problems as a whole. You have paid me the distinguished honor of selecting me as one of the Judges of your Tourney, associated with that Past-Master of Problem-craft, George E. Carpenter.

"I have given considerable thought and study to the subject of your problems; and it has not been without much thought and analysis that I have been able to reach a conclusion respecting the a prize-bearing mates. I have found your table of points an invaluable aid and gulde, enabling me to come to a more specific valuation of the various problems than I, otherwise, would have been able to get."

We received 216 problems, 115 from America and 101 from foreign countries. Ninety-two of these were so faulty, beginning with "check," "capture," etc., or were so very simple, that they were discarded as not worthy of publication. Of the 124 problems published, 27 were unsound, having two or more key-moves, and one had no solution. Of these 28 unsound problems, 10 were by Americans and 18 by foreigners. Thirty-six Americans, and 42 foreigners competed. We miss the names of several distinguished composers; but with these few exceptions, the list shows the names of the

ALL'S WELL

WHEN CARTER'S INK IS IN THE INK WELL

TO INVESTORS

A VERY UNUSUAL OPPORTUNITY

Mr. John Brisben Walker is taking the Presidency of a Company which offers unusual features for safe and highly profitable investment; namely, First Mortgage, 6-per-cent., Real Estate bonds, accompanied by a 60-per-cent. bonus in the Company's Preferred Stock. This Company takes over more than 900 acres of land within 3½ miles of center of Denver. Berkeley Heights is the most beautiful plateau around this rapidly growing metropolis of the Rocky Mountain region—the most prosperous city on the continent to-day. The property is to be immediately developed upon an extensive scale as a residential quarter upon modern plans, with reservations. Mr. Walker will hold a controlling interest in the stock, and personally recommends the investment as absolutely safe and likely to be extremely profitable. For further particulars address James Randolph Walker, Secretary, The Berkeley Heights Investment Co., Irvington-on-the-Hudson, New York.

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

DEMOCRATIC PRESS ON THE CLEVELAND BOOM.

THOSE who ridicule the talk of Mr. Cleveland's nomination for another Presidential term may be surprised to learn how many influential and conservative Democratic journals favor just that program. The Brooklyn *Eagle*, which started the "boom," declares that Mr. Cleveland is "the only man who could beat Theodore Roosevelt." The objections to a third term would not hold in his case, says *The Eagle*, as he has been out of office for two terms and would be too old for a fourth, while "his career and character would be the guaranty of the restoration of repose, of strength, of consistency, of dignity, of wisdom, and of trained experience to the chief magistracy." A few days after *The Eagle's* proposal, the Boston *Post*, a leading Democratic paper of New England, came out for the renomination of the ex-President, and the Hartford *Times*, an independent Democratic paper of wide influence, announced that it would give him its vigorous support. In New York city *The World* has been eulogizing Mr. Cleveland for some time, and *The Sun* has been treating him with more regard than it has been according to President Roosevelt; while "up the State" the Democratic Buffalo *Times*, Utica *Observer*, and Troy *Press* favor his candidacy. In the South, the Montgomery *Advertiser* predicts that unless Mr. Cleveland stops the movement, "there will before the convention meets in 1904 be a demand for his nomination that will be irresistible." The Charleston *News and Courier* has also given its support to the suggestion, and the Richmond *Times-Dispatch* says:

"Mr. Cleveland can be elected beyond doubt, if all Democrats will support him. Nominate Cleveland and a good old-fashioned platform, and he will get the enthusiastic support of hosts of business men outside the party who have implicit faith in his honesty and good judgment, and who are afraid of Roosevelt as they are afraid of dynamite. These men can not nominate Cleveland, but they could help the Democrats to elect him, and they would do so gladly.

"The situation is in the hands of the Democrats themselves. All that they have to do to regain their control of the Government is to nominate Grover Cleveland on a platform that he would be willing to stand upon. The country is ripe for such a movement."

It must be recorded, however, that while the Democratic papers quoted above are fanning the flame of enthusiasm for Mr. Cleveland, a larger number are throwing cold water on it. Foremost among these, of course, is Mr. Bryan's *Commoner*, which has been assailing the ex-President for months. But many other papers that do not sympathize with Bryan oppose the Cleveland boom. The Philadelphia *Record*, for instance, thinks that what are merely popular expressions of good-will for Mr. Cleveland are being confounded with a desire for a third term; and the New Orleans *Picayune*, while it thinks Mr. Cleveland is "the greatest living Democrat," believes, at the same time, that his nomination "seems impossible from the present outlook." "It would be as much of a mistake to nominate Mr. Cleveland as it would be to nominate Mr. Bryan," declares the Savannah *News*, for "neither could be elected"—an idea that is also entertained by the Mobile *Register*, the Charleston *Evening Post*, and the Columbia *State*. The Atlanta *Constitution* and the Louisville *Courier-Journal* regard the Cleveland movement with disfavor, and the New York *American* ignores it. The New Orleans *Times-Democrat* finds it difficult to take the Cleveland boom seriously, and the Pittsburg *Post* says that "this talk of Mr. Cleveland as the Democratic candidate is the veriest nonsense." The Norfolk *Virginian-Pilot* expresses plainly and bluntly an idea that seems to be in the background in a good many other Democratic editorials:

"If Mr. Cleveland's candidacy is pressed, it will mean such party turmoil as will make party success impossible, whoever is finally named. If Mr. Cleveland is named, it means that the party will be split wide open. The men who stood by the Democratic ship altho Wall Street's man, Grover Cleveland, did his dirty and dastardly best to scuttle it in 1896, are not going to stand for Grover Cleveland again. If the politicians imagine that they can whip the rank and file into line they are in grievous error.

"What, therefore, would follow Cleveland's nomination? The most crushing defeat in the history of the Democratic party. And after that defeat there would remain of the Democratic party only a disorganized, discredited, and disheartened remnant, tainted with Republicanism; nay more, saturated with Republicanism, and worthless even as a nucleus for the organization of an opposition party. The Republican party, with its already notoriously corrupt administration of the Government, with decided predilections for militarism, imperialism, and a high, protective, trust tariff, would come in for another quarter of a century's lease of power, by the end of which period George Washington and Thomas Jefferson would not be able to recog-

IT LOOKS AS IF ONE OF THEM WOULD HAVE TO GET DOWN.
The Chicago News.

nize the republic they knew in the government of the plutocratic oligarchy we should then have.

"Have not the dissidents, who quit the party in 1896, done it sufficient injury already to gratify their spleen at their failure to dictate its policies? Do they seriously suppose that the party or the country will accept Grover Cleveland at the idolatrous estimate they put upon him? Are they so blindly infatuated as to believe that he can be elected by a party he betrayed, after enjoying twice the highest honor in its gift, in the face of the unwritten law that no man shall be thrice President of this republic?

"Mr. Cleveland could not be elected if he could secure the enthusiastic support of his party, because he has already been twice President. What would happen, with a party behind him more hostile to him than to Roosevelt, can be in some measure conjectured by a reference to the slaughter of poor Horace Greeley.

"If Mr. Cleveland's admirers really desire harmony in the party they will drop the Cleveland propaganda. Every day that propaganda is kept up the chances of Democratic success are lessened, wholly regardless of who may be the nominee."

Mr. Cleveland, in reply to a letter from the editor of the Athens (Ga.) *Banner*, expresses his appreciation of the kindly expressions that reach him from all parts of the country, but says: "At no time since the close of my last administration have I been desirous of carrying the Democratic banner for the fourth time in a Presidential contest."

"THE DEMOCRATIC BED IS WIDE ENOUGH FOR ALL WHO WANT TO COME IN."—From W. J. Bryan's Kansas City Speech.
The Milwaukee Journal.

ARMY VIEWS OF THE MILES REPORT.

GENERAL MILES'S report on atrocities in the Philippines, which was considered in these columns last week, is severely criticised by *The Army and Navy Register* (Washington), which calls it a "sensational" document, founded on "idle rumor and unsustained report." For some years *The Register* has been a warm supporter of the general, but it finds itself unable to commend him in this instance. It says:

"It seems to us that General Miles has not contributed in any degree to the glory of the army by making a report of this kind, and it strikes us that he has gone out of his way in a merely verbal fling which invites the suspicion of 'persuasion and coercion' by army officers of witnesses valuable to Lieutenant-General Miles as giving support to the sensational and indefinite charges he has made. As the judge-advocate general says, the instances set forth in the Miles report have been made the subject of official investigation. The governmental authorities have done all within their power, apparently, to trace these charges to their source and to punish the culprits if there are any. We do not believe that General Miles wished to contribute to the ammunition of the critics of the army or that he realized he was aiding the cause of the so-called anti-imperialists, but the publicity which has attended his report has that unfortunate effect. We have believed that General Miles had just cause for complaint on account of some injustice of which he has been the object during the past few years, but his warmest friends and admirers, among whom *The Register* would class itself, must deeply deplore the state of mind and form of expression with which the lieutenant-general commanding has dealt with this subject.

"In considering the conditions in the Philippines, where some of the military acts were probably unmilitary, to say the least, it should be considered that we have had in the islands 139,000 men, and there have been on duty in various parts of the archipelago no less than

UPSETTING CALCULATIONS.
The Philadelphia North American.

MR. CLEVELAND IN CARICATURE.

The bee unbidden hums his soft refrain;
Then, tired of egoistic surfeiting,
Sinks to innocuous desuetude again.
The Washington Post.

6,000 officers. The so-called atrocities, if those incidents have such a violent characteristic, were committed by not more than twelve officers. This is a small percentage and might well justify silence when we consider that the subject has been thoroughly agitated and has been, and is still, the object of official investigation. It was a mistake to have touched on the matter in this official way unless something more definite could be given than has been vouchsafed by General Miles. His report will only serve to renew an unpleasant, not to say unseemly, discussion, and it is to be regretted that General Miles, among the last acts of a brilliant career, should have been betrayed into such an expression."

And *The Army and Navy Journal* (New York) remarks, in similar vein:

"It is difficult to understand what reasons that should commend themselves to the judgment of a soldier can have prompted Lieutenant-General Miles to make a special report concerning his observations in the Philippines which we give elsewhere. To catch up and circulate to the discredit of the army he commands the gossip he hears in traveling through the enemy's country is hardly the office of the lieutenant-general, and if he hoped to accomplish, or intended to accomplish, anything in the way of correcting abuses he should have presented something more conclusive by way of evidence than the expression of his moral conviction that such abuses existed. It is obvious that there can be no truth in the surmise that General Miles wished to promote his own credit at the expense of his fellow officers by this publication, for nothing could have so damaged him in the opinion of all fair-minded men in and out of the army as the appearance of his report. The only class of men it can gain him any credit with are those malignant detractors of the army who are as eager to suppress all evidence in its favor as they are ready to give currency to unsupported charges against it, whether they are presented by a disgruntled volunteer, by some 'guard-house lawyer' in the ranks of the enlisted men, or with the authority of the ranking officer of the army."

SUFFERINGS OF THE GREAT AT ST. LOUIS.

THE President had to crowd into a lunch tent with "the push" and lunch at a counter on a sandwich and a cup of cold coffee; Governor Odell and party were stalled in the freight-yards for two or three hours among the cattle and hog trains; Governor Odell was put into a little room over the kitchen at the hotel, and seventeen of his staff were crowded into two rooms at $75 a day for each room; the governor of Indiana, finding himself ignored, got mad and went home the day before the grand parade; the governor of Colorado went off in a rage at the scant courtesy he received; we have it on the authority of a Chicago paper that the governor of Illinois "was formal and frigid in his bearing"; even the ambassadors from the great nations of Europe were publicly humiliated at the reception by being introduced to the local fair magnates, when the magnates, being of lesser rank, should have been introduced to the ambassadors, and the diplomats left for Washington in high dudgeon; Cardinal Gibbons found a three-foot fence between him and the lunch tent, and had to be helped over it; and a St. Louis dog was mean enough to bite General Corbin in the leg. All this at the great celebration at St. Louis in honor of the Louisiana Purchase centennial.

No one died of hunger, cold, or injured feelings, however, and the editorial writers of the daily press, who have endured much worse experiences in the course of their journalistic careers, exhibit small sympathy for the sufferers. Thus the New York *Sun* remarks:

"The governors and other dignitaries, big, medium-weight, and little, who are going to their homes, swelling with wrath against St. Louis and the managers of the World's Fair, will soon recover their wonted temperature. Nobody meant to 'ignore' or 'insult' them. It is almost inevitable that any great ceremony in the United States should not proceed in the smooth and orderly manner common in less democratic countries. For one thing, the Americans are new hands at pageants. For another, the spirit of equality balks against restrictions and orders of precedence. The crowd pours in, overruns all the barriers, stands sovereign, and treads upon the corns of the notables. The orators speak in dumb show. There is much pushing and scrambling, and no solemn silence and little respecting of persons. The lack of officialism, the free-and-easy conduct of the people, the hitches and breaks in the program, would give a court chamberlain apoplexy and cover the stoutest footman's calves with gooseflesh.

"But this is the democratic way, good-natured, cheerful, noisy, irreverent, and indecorous from the point of view of the worshipers of musty etiquette, but frank, honest, equal, hearty, and essentially representative of democracy. . . . . .

"Even our strong and strenuous friend Mr. Roosevelt is said to have hinted that there was nothing fit to eat in St. Louis. The charge that the President and his party had 'nothing fit to eat' is curious. What does a man who has got 'the stuff' in him want of delicate food? Hard-tack should be good enough for him, and at a pinch he should buckle his belt tighter. Did the pioneers have canvasback duck and Clos de Vougeot? A cow-puncher and a soldier ought to be able to accommodate himself to any diet, however thin. The skippers of prairie schooners, the trappers and hunters and frontiersmen did not find buffets laden with club sandwiches along the trail. We have come to look upon Mr. Roosevelt as the hardiest of men, a man to walk undauntedly through the desert and on the Sierra, with hope in his heart and a piece of pemmican or a hunk of old shoe in his pocket-larder. He should be fit to eat anything. Have we been mistaken in him, and has he been mistaken in himself? Instead of having 'the stuff' in him, is he a soft Campanian?"

The St. Louis *Republic* says, by way of explanation:

"Those few slights and oversights which have occurred to mar the complete pleasure of one or two visting delegations are matters of sincere regret and disappointment to not only the World's Fair officials but all St. Louis.

"Some miscarriage of plans or omission of courtesies would seem to be inevitable in such an elaborate scheme of preparation. That a misunderstanding between host and guest should in a few cases mar the program of punctilio is not a novelty in great entertainments and is not to be remembered or even noticed on either side.

"Circumstances which caused an occasional confusion have been made plain to the visitors, and the sensible, good-humored, and gracious manner with which explanations have been received is commendable in the guests and gratifying to their entertainers.

"Every effort will be made to atone for the seeming slights, and it is not improbable that the delegations in question will return home feeling that, all together, they have enjoyed special distinction rather than suffered a lack of attention.

"It is St. Louis's desire that there be no 'wallflowers' at its frolic, no disappointments at its feasts, but that every prince and prophet shall have full share of honor and enjoyment; and, upon the whole, the city may congratulate itself that the occasion of its ceremonies, as compared with similar functions in other cities, has been marked by so little that is disagreeable in the memory."

The Chicago *Tribune*, however, cheerfully assures St. Louis that the worst is yet to be:

"The troubles of St. Louis have begun early, and there will be many more before the gates of the exposition are closed for good. Now and then she will wonder of what use expositions are. Sometimes she will almost wish the Louisiana purchase had never been concluded. . . . The trouble with the governors and the staffs is light compared with those to come. States will steal each others' sites and exhibitors each others' space. The concessionnaires will violate all rules. Some John Boyd Thacher will turn up and 'play hob' with the award system and keep the foreign exhibitors in hot water and entangle the exposition in litigation, and write saucy letters about it. 'When the band begins to play,' some of the musical exhibitors will get angry and try to drive it off because it is not playing on their instruments, and the piano men and the piano attachment men, backed by the musical committeemen from Idaho, New Mexico, and

Alaska, will proceed to make it hot for the musical director, and he may quit in disgust. Then the good people will begin their assaults upon the shows stretched along the Skinker road, St. Louis's Midway. By the time the board of lady managers gets fairly into action and begins to weep and call names, St. Louis will wonder whether it pays to celebrate the Louisiana purchase."

A DEFENSE OF RUSSIAN DIPLOMACY.

"ARE you the defendant?" said the judge of the police court to the colored brother who was up for trial. "No, sah," he replied; "Ise de gemman what stole de chickens." This well-known story is suggested by the vigorous denial of Russia that she has made the demands on China, in regard to Manchuria, that were discussed in our issue for May 2. The published reports of these demands, we are assured, "are absolutely incorrect"; but in the same breath the Russian diplomats go on to talk of Manchuria as if it were already a Russian province. They assure us that the Rusisan Government "has no intention to exclude other countries from advantages now enjoyed in Manchuria," and least of all the United States, whose commerce and capital "are those which Russia most desires to attract." Count Cassini, the Russian ambassador at Washington, has favored the press with a long interview on the Manchurian question, dealing with the intentions of Russia in regard to American trade in Manchuria, but not making the slightest reference to what China may want in the matter. He says:

"Those acquainted with conditions in Manchuria will bear me out in the statement that the country needs the importation of American goods for its upbuilding. And certainly Russia, who is doing all she can to develop that great territory, would be the last to stand in the way of an increase in this trade. We need American steel, lumber, cotton goods, and construction material of all kinds, and this fact, together with the traditional good relations prevailing between Russia and the United States, is sufficient assurance that American trade interests in Manchuria will be protected.

"Of the opening of new treaty ports in Manchuria it is impossible for me to speak at present, but it is the earnest conviction of those best acquainted with the state of affairs there that such a move will not be to the best interests of the territory. Were the question solely a commercial one it would be different. But open a treaty port in Manchuria, and close upon the heels of commerce will follow political complications of all kinds, which would increase the threats to peace. At New-Chwang this country has a treaty port, and American trade in Manchuria is rapidly on the increase. I am told that eighty per cent. of the cotton goods from the United States sent to China enters the Manchurian port of New-Chwang.

"Because of the singularity of interest held by the United States in Manchuria—for all the world realizes that yours is a trade, not a territorial one—it lies within the power of your Government to exert a powerful influence in the preservation of peace there. Russia's desire is also for peace, not disturbances, in Manchuria, and it is to this end that negotiations are now proceeding in Peking in the effort to establish a condition of evacuation and to safeguard Manchuria against a recurrence of the troubles of 1900. Striking evidence of the direct effort in this country caused by unrest in China was seen in 1900, when, I am told, many cotton-mills in the United States were forced to shut down until conditions in China were again normal. This fact and the evidence the United States has already given of its desire to make for peace are sufficient assurance that the Washington Government will lend its strong moral support to calm excitement wherever it has been aroused by the incorrect reports from Peking."

A still stronger statement is given by Alexis Edrikhine, political editor of the St. Petersburg *Novoye Vremya*, who is visiting this country, in a communication to *Harper's Weekly*. He says frankly:

"We took Manchuria by force of arms, in a war called forth not by Russia, but by the missionaries and traders of Western lands. Manchuria was taken by the efforts of an army of two hundred thousand men, of whom twenty thousand fell in battle. Manchuria has cost us hundreds of millions, drawn from our national treasury. In a short time, instead of anarchy, insurrection, and universal chaos, we have there evolved such order and well-being as have drawn forth unqualified praise from the English press, so perpetually hostile to us, including even *The Times*. In view of all this, Manchuria belongs to us by the best of all rights, the right of justice; and all claims on Manchuria we can not consider as other than attacks on our rights and our property. And if these claims, coming from England and Japan, each of whom is serving the interests of the other, are entirely intelligible, they are, on the other hand, quite unintelligible when coming from the United States."

THE SITUATION IN THE FAR EAST.

—*The Minneapolis Journal.*

AMERICAN VIEWS

"SIC 'EM, JAP!"

—*The New York World.*

As a matter of fact, the American papers, while they dislike what they consider the duplicity of Russian diplomacy, do not object very strenuously to the Russian absorption of Manchuria. Thus the Hartford *Times* says:

"The Russians have exactly the same position in Manchuria

that we shall have at the Isthmus of Panama after the United States begins the work of finishing the construction of the Panama canal. Great property interests are at stake in both places, and the governments which invest the capital in building railroads and canals must have full power to protect those investments. The great Russian railway across Siberia and Manchuria must have traffic to sustain it, and this involves the maintenance of peace and order. It is now admitted officially that the Russian Government has made no new 'demands' upon China in regard to the cession of Manchuria. The English reports to that effect were the result of some inquiries addressed to China by the Russian Government, with a view to the establishment of more definite arrangements in regard to Manchuria and the opening of new ports in north China.

"Our people have no reason to object to anything the Russians

THE BEAR—"Well, that was a pretty good meal; I think I'll become a regular boarder."

OF RUSSIAN

are doing in that part of the world, and our commerce will be helped, not hindered, by the prosecution of their plans for the opening up of Manchuria to settlement and trade."

GREATER PITTSBURG AS OUR FOURTH CITY.

GOVERNOR PENNYPACKER, of Pennsylvania, has signed a bill, recently passed by the state legislature, which may make Pittsburg the fourth city in the United States, following New York, Chicago, and Philadelphia in the census table, instead of standing eleventh. This act empowers Pittsburg to consolidate with Allegheny, McKeesport, and fifty or more boroughs and townships which surround it. In Allegheny the officials are bitterly opposed to the annexation; but no community desiring to stay out of Greater Pittsburg need go in. The question is to be settled by each community for itself by majority vote. It is estimated by the promoters that some of the smaller prosperous manufacturing boroughs will consolidate with Pittsburg before the larger cities come in, and that at the start Greater Pittsburg will have a population of over 600,000. Within a few years, if all the outlying communities decide to come in, Greater Pittsburg will number 800,000 people. A despatch to the Philadelphia *Press* tells us what advantages this consolidation will bring to Pittsburg. It says:

"There appears to be good ground for the supposition that all the territory in Allegheny county will some day be one homogeneous manufacturing community. As a matter of fact it is so

NOT LIKELY TO COME DOWN FAST WITH IT.
—*The Pittsburg Gazette.*

EXPANSION.

largely now, but requires governmental amalgamation. The wiping out of city and borough limits, as at present on the map, will greatly simplify the giving of better government to this city of growth and opportunity. It will mean the better administration of its public utilities. The county is now provided with a complete street-railway system, but the public control of the latter is hampered by the fact that the franchise grants come from so many cities and corporations as to prevent thorough regulation of the service by the grantors of the franchises.

"The fact that the way has been opened for the Greater Pittsburg at a time when political lines throughout the county have been uprooted is of special significance. This condition opens the road for a complete rebuilding of the city government. The new charter now governing the city was designed with this very idea in view. The Greater Pittsburg will be important politically as well as commercially, as the city will, under the new conditions, wield nearly as much political influence at Harrisburg and Washington as Philadelphia."

The following table shows the largest of the cities and boroughs which are expected to come into the Greater Pittsburg, and their population figures:

Pittsburg	321,616
Allegheny	129,896
McKeesport	34,227
Braddock Borough	15,654
Homestead Borough	12,554
Wilkinsburg Borough	11,886
Duquesne Borough	9,036

The Chicago *Tribune* declares that "the promoters may be counting their chickens before the eggs are hatched," for "advantageous as it appears to have the improved sanitation and better police and educational advantages of a great city, some of the boroughs may decide that it is better to 'let well enough alone.'" The Philadelphia *Press* remarks that "Pennsylvania has lost the prestige so long hers of having in her territory the second city of the Union," and "it will make some amends for this when the Keystone State enjoys the distinction of having within her confines both the third and fourth cities of the Union." The Pittsburg *Gazette*, commenting on the opposition of politicians to the Greater Pittsburg idea, says:

"Personal political considerations may interfere for a time with full realization of the greater city, but not always. Popular sentiment when sufficiently developed and properly directed will bring it about in spite of the political necessities of the men in control of municipal machineries. The matter is in a noteworthy degree within the power of the people themselves, acting in-

dependently of political interests through action of the court and by popular election. It is in the councils of the city asked to annex that real opposition will be encountered, if it is encountered any place in opposition to popular action, and the people of Pittsburg ought to be careful in all municipal elections to have their candidates for councils pledged to the greater city program. Pittsburg is and ought to be favorable to the annexation of any municipality that knocks at her door, whether Allegheny or one of the boroughs. Indeed, the sentiment of Pittsburg on that point is so strong that it will be dangerous for any politician or political interest to disregard it. The people, if they move earnestly for a Greater Pittsburg, will be more powerful than any set of politicians. If a demand should be made on the present Pittsburg councils to admit the city of Allegheny we think it would be a very difficult matter to control them against it."

PHILIPPINE EDUCATION—THE OTHER SIDE.

"FIFTY teachers could take the place of a regiment of troops," telegraphed Brigadier-General Grant to Governor Wright at Manila a year ago in a brief despatch describing conditions in Samar. Every dollar spent for Philippine education will do more to pacify the islands than ten spent for armies, courts, and police, says Frederick W. Nash, writing from Manila to *The Educational Review*. These rosy views of the American teacher in the Philippines are in striking contrast with the views quoted in these columns May 2. "An almost incredible amount of work has been accomplished within the past year," says Mr. Nash, "and the present educational situation is very encouraging." A thousand American teachers and 3,400 native teachers are giving instruction in something like 2,250 day, evening, and high schools, with an enrolment of more than 225,000 scholars.

"The whole Philippine problem is more or less an educational problem," in the opinion of Mr. Nash, and he does not hesitate to say that our Philippine Bureau of Education "has done more within the past two years to give these peoples a true conception of the benefits of civilization and good government than all the other influences ever brought to bear on them throughout all time, with the possible exception of the Christianity brought to them by the Catholic church." Strong objection has been made to the imposition of the English language on the natives through the schools. Superintendent Atkinson, who has just returned from the islands, said in a newspaper interview a few days ago that "the primary reason for the introduction of English into the schools is because the Filipinos wanted it." And Mr. Nash says:

"The wisdom of Superintendent Atkinson's policy of making the English language the basis of all primary instruction from the start has been thoroughly demonstrated. To-day everywhere within the radius of influence of the American teacher instruction is being carried on in English, and text-books in arithmetic, in geography, and in other common-school branches are in the English language. Perhaps the best illustration of the advancement made in English education within the last two or three years is the fact that thousands of Filipino students, who had never heard a word of English three years ago, are to-day able to receive instruction in the common-school branches given in that language. Two years ago there were less than two hundred native teachers who could give any instruction in the English language; to-day there are more than two thousand actually teaching in this language and daily putting in practise methods and ideas learned in the American-taught normal schools and from American teachers.

"The American teacher has become a recognized power in these islands, and no one acquainted with his work can doubt the wisdom of his coming. In the face of the splendid results he has accomplished, his critics have become silent. The advent of his influence marks the withdrawal of troops and the general betterment of the community."

"The American teacher in the Philippines is something of a missionary, more of a pioneer, and always an American citizen," says Mr. Nash, and he quotes the following illustration of this fact from Superintendent Atkinson's recent report:

"The work of the American teachers during the cholera epidemic, which in many of the most populous provinces reached its culmination during the school vacation, can not be too highly commended. In many cases, the teacher was the only American in the town. In some cases, there was not even a native or a Spanish doctor. Some teachers with a little knowledge of medicine, and all through their knowledge of hygiene and sanitation, accomplished wonderful work in preventing and suppressing the dread disease. In the remoter towns, isolated from prompt aid which alone can save life when the most dreaded of all scourges makes its attack, with no command to remain, with the allurements of foreign travel during the vacation put sternly into the background, with no relatives or intimate friends to protect or to encourage them, these noble men and women fought by night and by day, week after week, for the lives of an alien people, with no thought or chance of reward, with a heroism that

CAPITAL AND LABOR IN CARTOON.

is far above the bravery of the soldier fighting a foe that can be seen and known. The United States may justly be proud of the bravery of its soldiers in these islands, but it should also remember that the peaceful army of teachers has shown a nobleness of spirit, a self-devotion to the services of humanity, a steadfastness and bravery of soul, that is rarely excelled. Nor did all escape unscathed. Those who died of the cholera were Robert R. Jamison, R. Zumstein, William H. Badger, and Herbert Lucker."

Mr. Burgess Shank, a Cornell man who went to the Philippines as a teacher, adds his testimony, in the May number of *Gunton's Magazine*, to the good work of the American teachers in the archipelago, and declares his belief that the experiment will be a success.

SOUTHERN COMMENT ON THE SUFFRAGE DECISION.

THE Southern press show no surprise at the Supreme Court's refusal to interfere in the administration of the suffrage in Alabama, which was considered in these columns last week. The view in the South is that the suffrage is a state matter, and that the federal Government has no right to interfere; so, in the Southern view, the Supreme Court decision is the only one permissible. The Southern papers are careful to explain, however, that the court's decision does not hurt the negro, politically or otherwise. Thus the Memphis *Commercial Appeal* says:

"Excitable Northern people grow indignant over the passage of laws by some of the Southern States to 'disinfranchise' the blacks. One would imagine from their tirades that every negro in the South was prevented by law from voting. What are the facts in the case? The only negroes—barring criminals—who are prevented from voting in any Southern State are those who can not read and write. Is it a wrong to prohibit the illiterate negro from voting? We hardly fancy that it is. He can not vote in either Massachusetts or Connecticut. So he is wronged as much in those States as he is in Mississippi, Louisiana, or North Carolina. When paying his respects to the South the Northern critic assumes that the franchise is a natural right, but there is not a State in the Union that recognizes that assumption. In nearly all States, North and South, no man can vote unless he has registered. In some States the citizen can not vote unless he has paid his poll tax, and even this requirement is not uniform, for when a man has reached a certain age he is relieved of the necessity of paying it. Thus in Tennessee some men have to pay their poll-tax and some do not. In Vermont 'those who have not obtained the approbation of the board of civil authority of the town in which they reside' are excluded from the suffrage. In Wyoming those who can not read the state constitution are disfranchised. Can any one, in view of these facts, honestly claim that Mississippi wrongs the negro by imposing an educational qualification? Yet the only wrong done him is to exclude him from the suffrage if he is illiterate, just as Massachusetts, Connecticut, and Wyoming do. Thus it will be seen that the 'wrongs' done the negro with reference to the ballot are entirely mythical."

And the New Orleans *Times-Democrat* says similarly:

"Even if the court had jurisdiction and had found the grandfather and understanding clauses unconstitutional, it would not have benefited the negroes in the least and would not have added a negro voter to the electorate; indeed, it would have disfranchised many of them. In Louisiana, for instance, some negroes have claimed the franchise under 'the grandfather clause'—there are forty-eight in St. Tammany, eighteen in St. John, and twenty-three in St. Charles. The utmost, therefore, that the lawyers who have assailed the Southern suffrage laws could hope to accomplish was to strike from the rolls the names of the few illiterate white voters who have gained the right to vote through the grandfather and military clauses.

"The true basis of suffrage in the South is the educational qualification, and no one can or has attacked this provision. The educational provisions in the constitutions of Virginia, the two Carolinas, Alabama, Mississippi, and Georgia are borrowed, word for word, from the constitution of Massachusetts and are found in the organic law of Connecticut and four other Northern States. An educational qualification has been praised in New England as assuring a purified and intelligent electorate; and if it is necessary there how much more necessary is it in the South, where the illiterate and dangerous electorate is so large—in many sections in a majority?

"The success of the suits testing the constitutions of Alabama and the other Southern States could not have touched the wise provisions which declare that a voter must know how to read and write in order to enjoy the ballot. As to the other provisions, grandfather and understanding clauses and which are the only ones subject to legal attack, even if the courts swept them away, it would matter little. There was a great difference of opinion among the Southern whites as to the wisdom or advisability of these provisions, which are simply exceptions to the general suffrage laws—and there was much opposition to them at the time of their adoption. Fewer voters availed themselves of these provisions than expected, and whether they fall or not will not affect the vote of the South one iota or extend the suffrage to one negro."

The Richmond *Times-Dispatch* thinks that the negroes are better off under the new constitutions than they were under the old:

"Before the Southern States began to take legal action in this matter the negro vote was a mere farce. After having seen the evils and terrors of negro rule, it was simply out of the question for the whites to tolerate it, and they determined to suppress the negro vote at all costs. Various devices were employed, but finally it was discovered that they were demoralizing the whites and doing us more harm than the blacks. Then it was that the leading men in the white race determined to come out boldly and circumvent the Fifteenth Amendment and disfranchise the bulk of the negroes. It was done in the interest of pure politics and honest elections, and not so particularly in the interest of white man's rule, because the white man was ruling under the old régime and did not fear the negro vote.

"Mr. Shaw is quite right in saying that the negro vote counts for more under the new order of things than under the old, for now when the negro is put on the registration list he is permitted to vote as he pleases and his vote is counted as it is cast. Moreover, there is an incentive for the negroes to qualify themselves for the suffrage, and whenever they can meet the requirements of the constitution they are permitted to register and vote.

"It would be far better, however, if the Fifteenth Amendment were repealed, and it is a pity that the Northern people have not the courage to do it."

LETTERS AND ART.

A CRITICAL COURT OF HONOR.

MR. WILLIAM ARCHER, the English dramatic critic, has discovered what he considers to be "a long-felt want in the mechanism of English literary and artistic life," occasioned by "the misunderstandings and resentments which, in an imperfect world, can not but arise, from time to time, between artists and critics." He is especially impressed by this fact at the present time in view of the recent bitter controversy, in the public press, between Henry Arthur Jones, the playwright, and Mr. A. B. Walkley, the dramatic critic of the London *Times*. This controversy grew out of the fact that Mr. Jones, believing himself to have been unfairly treated by Mr. Walkley, withheld from him the usual press ticket for a first-night performance at the Garrick Theater. Mr. Walkley thereupon declared that Mr. Jones dealt in *comédie rosse* which no self-respecting Britisher should attend. Mr. Jones made rejoinder in an open letter discrediting Mr. Walkley's critical capacity. The whole episode, we are told, "left nothing elucidated, nothing decided."

What is needed, declares Mr. Archer, is a "recognized and representative body which can, on occasion, pronounce an authoritative opinion upon questions of literary, and especially of critical, ethics." He continues (in *The Fortnightly Review*, April):

"My suggestion is, then, that a representative board of arbitrators should be called into existence, with authority to investigate and pronounce upon any dispute between artist and critic that may be brought to its cognizance. It ought probably to consist of delegates nominated by the representative societies of the different classes concerned—by, say, the Authors' Society, the Institute of Journalists, and the Actors' Association. Each of these bodies might appoint two members of the board, and the six thus nominated might elect a president, from outside their number, to give, when necessary, a casting vote. The precise constitution of the board, however, would have to be carefully thought out and discussed; for the present, I can only present the scheme in rough outline. The board would of course have no power to inflict any penalties or (except in particular cases, to be hereafter mentioned) to award any damages. Its function would be merely to express a definite and deliberate opinion on any point at issue. An appeal to it would be of the nature of a wager, the losing party agreeing to bear the expenses of the proceedings, which should be kept as low as possible."

Mr. Archer goes on to point out the advantages of his plan:

"The usefulness of this court of honor, as one might call it, would, of course, depend entirely on whether it succeeded in establishing a reputation for competence and impartiality, or, to put it briefly, in acquiring prestige. Without prestige, its awards would be worse than valueless. . . . The court of honor, from its first institution, might quite well possess a provisional prestige, so to speak, arising from the personal character of its members, and from their position as the delegates of their respective crafts. . . . . .

"In the great majority of cases with which the board would have to deal, no question of pecuniary damages would arise. The damages awarded to the plaintiff in a libel suit are almost always, even when his cause of complaint was just, extravagantly in excess of any real injury he has suffered. In nine cases out of ten, a mere apology would amply have met the justice of the case; and the only excuse for giving substantial damages is that they may 'carry costs.' The board of arbitration would not be compelled to take this clumsy course of choosing what seems to be the lesser of two manifest injustices. Its judgment that an apology was due from one party to the other would, in itself, 'carry costs,' and costs not extravagantly disproportionate to the offense committed. If the board of arbitration could be made to work simply and satisfactorily, it seems probable, and not undesirable, that frequent claims would be made upon its services, at any rate until a certain standard of manners had come to be pretty well established. I do not conceive that any particular stigma ought to attach to an adverse decision of the board. We are all human, even dramatic critics; and many of us have often to write at high pressure, under the influence of the nervous irritation begotten by a tedious, a pretentious, or an inapt performance. It can not be but that offenses should arise. Which of us has not, on occasion, found himself unable to resist a facile insolence or an unnecessarily wounding jibe? There is nothing disgraceful in an occasional fault of taste; what is really deplorable and demoralizing is the resolution not to admit it. The board of arbitration ought to be an invaluable corrective of obstinate egoisms, a center of sweetness and light."

The New York *Evening Post* takes a much less optimistic view of the practical workings of Mr. Archer's plan. It says:

"Of course, no such court will ever be set up, and if it were, artists would be little inclined to commit their grievances to its adjudications. . . . It is more than doubtful if the artist really needs a court before which the unfair critic may be haled. Is not the critic always on trial? Week by week and year by year, as he addresses the public about the work of others, he is revealing himself. Not by a single testy word, but by his entire record he stands, and if he has served the public mere plentitude of words for ideas, if he has substituted a desire to exploit his own cleverness for an ambition to seize the artist's intention, if he has preferred casual brilliancy to sound judgment, and sharpness of pen to insight—by all these shortcomings he is judged. It may take time, but sooner or later he stands exposed—no critic, but a wordy or captious writer for the press. The artist may possess his soul in patience whenever an unfair or slighting word befalls him. For the cause of the good critic is the artist's cause, and no court is necessary to adjust their temporary misunderstandings; while the shallow or malevolent critic is gradually and inevitably working out upon himself the revenge of all the artists he has offended."

THE MARRIED LIFE OF THOMAS CARLYLE.

THE "New Letters and Memorials of Jane Welsh Carlyle" are obviously made public (in two octavo volumes) for the double purpose of vindicating the memory of her husband and of convicting his friend and biographer, James Anthony Froude, the historian, of an almost incredible bad faith with the public and violation of the claims of friendship. There is no doubt that Froude's "Life of Carlyle" badly tarnished Carlyle's reputation as a man and husband. Yet Froude was Carlyle's own choice as a biographer, the latter writing as follows in anticipation of his own death:

"My manuscript entitled 'Letters and Memorials of Jane Welsh Carlyle' is to me naturally, in my now bereaved state, of endless value. . . . Of that manuscript my kind, considerate, and ever-faithful friend, James Anthony Froude (as he has lovingly promised me), takes precious charge in my stead."

The letters in these two volumes, none of which appeared in Froude's "Life" or "Letters and Memorials," were (with the exception of six recently discovered) a part of the trust committed to Froude's care, and not one of them was published by him. The volumes now appearing might, according to one critic, be aptly entitled "The Damnation of James Anthony Froude."

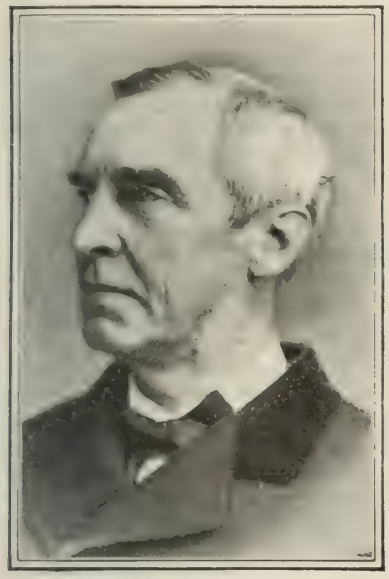
The following letter, written by Mrs. Carlyle, dated February 17, 1827, pertains to the early days of the Carlyles at Edinburgh:

"Indeed we lead a most quiet and even life here within doors all is warm, is swept and garnished; and without the country is no longer winter-like, beginning to be gay and green. Many pleasant people come to see us; and such of our visitors as are not pleasant people have at least the good effect of enhancing to us the pleasure of being alone. Alone we never weary: if I have not Jean's enviable gift of talking, I am at least among the best listeners in the Kingdom. And my husband has always something interesting and instructive to say. Then we have Books to read; all sorts of them, from Scott's Bible down to Novells; and I have sewing-needles and purse-needles, and all

conceivable implements for lady's work. There is a Piano, too, for 'soothing the savage breast.' "

On a visit to her early home, during which she was to procure carpets, curtains, etc., for refitting their home at Craigenputtock, being detained by illness, she sends back this message (August 20, 1828):

"Kindest and Dearest of Husbands: Are you thinking you are never to see my sweet face any more? . . . What progress you will have been making with Burns in my absence! I wish I were back to see it; and to give you a kiss for every minute I have been absent. But you will not miss me so terribly as I did you. Dearest, I do love you! Is it not a proof of this that I am wearying to be back to Craigenputtock even as it stands [*i.e.*, without the new furnishings she had gone to provide], and while every one here is trying to make my stay agreeable to me!"



JAMES ANTHONY FROUDE,
Carlyle's biographer, who is accused of suppressing letters that vindicate Carlyle's character as a husband.

In his picture of the Carlyles' life in Chelsea, Froude interjects this note:

"The house in Cheyne Row requiring paint and other readjustments, Carlyle had gone on a visit to Wales, leaving his wife to endure the confusion and superintend the workmen alone with her maid."

The editor of these new volumes, Alexander Carlyle, says that at the time Froude wrote the above he had in his possession the documentary evidence of its falsity. We quote:

"Carlyle's Letters to her show that he had tried to persuade her to accompany him on this Welsh tour; they also show that, failing in this, he next proposed to take a furnished Cottage, near Nottingham, in which to spend the month of August together. To the Letter in which Carlyle makes this proposal Mrs. Carlyle replies: 'No, certainly; . . . I do scream at the idea. Never mind me, Dearest; try to get the most good of the Country that can be got for yourself; I do not care a farthing for Country air; and am busier here than I could be anywhere else. Besides I should like to go to Liverpool when my Uncle returns home.' These words are part of Letter 48 (Letters and Memorials, i., 212), and Mr. Froude suppressed them. . . . . .

"She writes on the 8th of July, a few days after he had set out, 'Well! you can not come back here just now at all rates, that is flat. What think you of going to this Forster (W. E. Forster, Mr. Froude has mysteriously concealed the name)? Here, indeed, you would not "come out strong" under the existing circumstances. It is only I who can be "jolly" in such a mess,' etc. And on the 12th of July, she writes pleasantly to her friend Mrs. Russel: 'My Husband is gone into Wales, and I am taking the opportunity of his absence to do a deal of papering and painting, etc., that was become absolutely needed. He will never suffer the least commotion when he is at home, so one is obliged to concentrate the whole horrors of such operations into the rare periods of his absence.'

"Mrs. Carlyle appears to have had a much pleasanter time at home than her Husband had on his tour, judging from their Letters. She had visitors and visitings more than enough, and had no occasion to pine and fret in solitude 'alone with her maid.' The Letters she wrote during Carlyle's absence are more than usually numerous, sprightly, happy and gay."

Twenty years after marriage, in 1846, comes a letter to "T. Carlyle, Chelsea," telling how by a blunder of the post-mistress she had been told there was no letter for her from her husband on her birthday:

"Oh, mercy! what a two hours I had of it! And just when I was at my wit's end, I heard Julia crying out thro' the house, 'Mrs. Carlyle, Mrs. Carlyle! are you there? Here is a Letter for you!' And so there was, after all! The Post-mistress had overlooked it, and given it to Robert when he went afterward, not knowing that we had been. I wonder what Love-letter was ever received with such thankfulness! Oh, my Dear, I am not fit for living in the world with this organization. I am as much broken to pieces by that little accident as if I had come thro' an attack of cholera or typhus fever. I can not even steady my hand to write decently. But I felt an irresistible need of thanking you by return of Post. Yes, I have kissed the dear little Card-case. And now I will lie down a while and try to get some sleep—at least to quiet myself. I will try to believe—O why can not I believe it once for all—that with all my faults and follies, I am 'dearer to you than any earthly creature!' It will be better for Geraldine here; she is become very quiet and nice, and as affectionate for me as ever."

Such real unhappiness as did find its way into Carlyle's wedded life is sufficiently explained by the condition of Mrs. Carlyle's health, so thinks Sir James Crichton-Browne, the eminent neurologist, who contributes the "Introduction" to these volumes. He writes:

"But the true key of Mrs. Carlyle's frame of mind at the time of the Ashburton episode [Mrs. Carlyle's jealousy of Lady Harriet Ashburton] is to be found in her state of health. It seems clear that she then passed through a mild, but protracted attack of mental disturbance which would be technically called on its psychical side climacteric melancholia, and on its physical side neurasthenia. . . . For several years before the date which I would fix as that of the climax of her mental trouble she had been occasionally taking henbane or hyoscyamus to allay pain and excitability and pretty frequently morphin to compel sleep, and it is a secondary action of the latter drug to induce unfounded suspicions and even delusions of persecution in those who habitually indulge in it."

JANE WELSH CARLYLE,
Whose recently published correspondence has made a sensation in the literary world.

All this seems abundantly proved by these brilliant, fascina-

ting, but often morbid letters, where life is one incessant tragedy, and every day a catastrophe. Of this two examples must suffice. From a letter dated at Alderley Park, 24 August, 1860:

"My Dear, after one has gone for a week almost entirely without sleep, and almost entirely without other nourishment than brandy and water, one may be pardoned some omissions."

From a letter dated at Craigenvilla, Morningside, Edinburgh, 2 September, 1862:

"Imagine! after such a tiring day I never closed my eyes till after five this morning! and was awake again for good—or rather for *bad*—before six struck! My eyes are almost out of my head this morning, and—tell the Doctor, or rather *don't* tell him—I *will* have a dose of morphin to-night! am just going in an omnibus to Duncan and Flockhart's for it!"

In his review of this whole matter Sir James Crichton-Browne remarks:

"Throughout the whole of Mrs. Carlyle's illness, covering the Ashburton episode, Carlyle's attitude toward his wife was singularly noble. . . . When it was all over, his right-minded wife wrote, 'I can not tell you how gentle and good Mr. Carlyle is.' A sweet charity and loving forbearance are indeed characteristic of all his communications to and about his wife, not only at this period, but throughout their whole married life."

THOMAS CARLYLE,
At the age of 46. From a water-color sketch by Samuel Lawrence.

As a contrast to Froude's dark portraiture, is to be found the following letter written to Mrs. Carlyle by Sir George Sinclair, after her husband's visit at Thurso Castle in 1860:

"He has rendered himself a universal favorite with all the inmates of this house, young and old, male and female, high and low. For all he had a kind word, and a willing ear, and could accommodate his conversation with equal capacity and cheerfulness to the habits, occupations, and predilections of auditors the most widely differing from each other in all their elements of thought, action, and experience. His absence will leave a blank in my daily arrangements and pursuits, which can not be supplied, or cease to be felt and lamented. There never passed between us the most transient feeling of discord or impatience; and much as I admired his genius, I was even more fascinated by the strong undercurrent of tenderness and sympathy, which a superficial or commonplace observer might be unable to discover, appreciate, or respond to. His allusions to yourself always indicated the strength of his affection, and his unwavering conviction that you have no object so much at heart as that of promoting his happiness and consulting his wishes."

The motives that animated Froude have already been freely discussed and are likely to furnish the subject for much additional discussion. Sir Crichton-Browne considers this subject very freely in his "Introduction." "It is impossible," he writes, to believe that Froude contemplated or foresaw the evil he wrought." Froude was, in his later days, Carlyle's closest friend and most effusive disciple. Even in the Memoirs, he was unstinted in expressing his admiration of Carlyle, bursting out now and again in fervid eulogy of him as the greatest and best man he had ever known, without guile, insincerity, or malice. Sir Crichton-Browne finds the explanation of Froude's course in his character:

". . . his intellect, capacious and well polished as it was, had the trick of distorting the impressions made on it. He rarely saw the true meaning and intent of any matter that he studied, but wrested facts from their exact shape and nature and made them conform to his prepossessions and fancies, while he colored them beyond recognition. His judgment was built askew and he had a positive genius for going wrong. In private life an honorable and straightforward man, the moment he took pen in hand he became untrustworthy. There has never, I suppose, been a prominent English author who has been as frequently and as flatly contradicted, or who has taken his critical chastisement more meekly."

The Evening Post (New York), in an editorial review of the new work, speaks of Froude's course as follows:

"Both the Carlyles practised the greatest exaggeration of speech; both, under a veil of irony, were capable of the last exuberance of sentiment. Their exaggerations—and particularly Carlyle's 'remorse' as he worked over his wife's letters—were of a kind to deceive all but very hardheaded people; for the Carlyles were a serious pair. Froude, a delightful, scholarly person, with an eye chiefly to the picturesque, grasped at such promising literary material as Thomas's apparent remorse for his neglect of Jane. Froude was not hardheaded, but always lent himself to enthusiastic amateurism on great subjects. . . . He never corrected or verified an impression; not even adequately his proofsheets. He was incapable of realizing with how many grains of salt the Carlyles habitually took themselves and each other. Listening to Thomas's self-accusations, and reading over the letters of Jane, he took the consciously exaggerated expressions of minor miseries as the indications of a life tragedy."

IRVING'S PRODUCTION OF "DANTE."

THE play of Dante, written by Victorien Sardou and Emile Moreau, and altered in some important details by Sir Henry Irving, was produced by the latter in London on the evening of April 30. So far as demonstrations of the first-night audience were indicative, the production was a striking success; but the critics are not enthusiastic, and Sardou himself is so far offended by the alterations made that he refused to be present on the occasion.

The general features of the play have already been outlined in these columns (March 7). It is a four-act play, in which Dante himself and his creations figure as characters, together with more or less historical personages with whom Dante had or might have had relations of some sort in life. The first act is laid in Florence, Dante, Malatesta, Dante's daughter Gemma, and Giotto, the painter, taking part; and closes with the abduction of Gemma and the pursuit by Dante. In the second act, Gemma is found by Dante in the convent of San Pietro; but he is wounded in the side by a soldier, and is left for dead on the floor. In the third act, Dante goes down to the Inferno, led by Vergil, to interview the spirit of Gemma's mother, Pia dei Tolomei, and thus ascertains that Gemma has been carried by Bernardino to Avignon. In the fourth act, he finds Gemma and Bernardino at Avignon, but they have been condemned to the stake by the Pope. Dante towers before the Pope and foretells

his doom; the Pope falls down dead, and Gemma and Bernardino are saved.

The most important change made by Irving is in substituting for the Pope a cardinal legate, presumably out of respect for the religious sensibilities of Roman Catholics. The London *Times* review, as cabled to the New York *Times*, is rather contemptuous in tone. It runs in part as follows:

"For Dantists the Drury Lane Dante will not do at all. When they are asked to swallow the story of an adulterous amour between Dante and Pia del Tolomei they will remark that it is certain that Dante had not even a bowing acquaintance with this lady; that the house of Malatesta was not situated in Florence; that the love-story of Bernardino, brother of Francesca da Rimuta, and Gemma, daughter of Dante by Pia dei Tolomei, is all nonsense; that it was not Cardinal Colonna who reigned in Avignon; that several circles in the Inferno and Purgatory scenes in the third act are all mixed up like Sancho Panza's cabbages and baskets, and so forth. They will say all this, and more. Probably they will invent an additional circle in hell for the especial benefit of MM. Sardou and Moreau, who have laid sacrilegious hands upon one of the greatest poems in the world's literature."

While Dantists will thus be exasperated, the average playgoer, *The Times* thinks, will be more than half disappointed, as the play is "a rambling, confusing, and rather irritating thing"—the result of an attempt to blend the historical and the dramatic methods of treating the subject. The review concludes as follows:

"Was this rather puerile story of the hairbreadth escapes of Gemma and Bernardino (with Dante to the rescue) worth inventing? Could not some man of letters, better still, some real poet—not, of course, Sardou, that incorrigibly prosaic vulgarizer—have contrived a worthier scenic arrangement of the Dante legend which might still have exhibited Irving on every side of his remarkable personality? We think that a quite possible achievement. But in its absence there is the Drury Lane 'Dante' of Sardou and Moreau, rendered into English by Laurence Irving, to take or leave. We know what the Dantists will do; the Dantists who, as we began by saying, don't count. But the others? Well, the others applauded the whole affair last night with a positive frenzy of enthusiasm."

"If ever a man was born to look Dante to the life," says the same reviewer, it is Irving; and the London correspondent of the New York *Tribune* says, "his impersonation of Dante was one of the most impressive of his long series of great parts."

An interview with Sardou appears in *The Theatre* (New York), in which Sardou is represented as saying:

"I had fully intended going to London to see the final rehearsals and the first night, but circumstances have arisen which make it impossible for me to do so. You see, Sir Henry Irving has made certain modifications in my play of which I don't approve. In fact, I very strongly disapprove of them. In the scene in the lower regions I had, in accordance with the Divine Comedy, placed two popes in hell—Bonifacio VIII. and Clement V. This was the culminating scene in the play. In it Dante denounced the vices and crimes of these historic characters, and the force of this tirade, coming as a kind of reaction after the pent-up bitterness of long exile, was the most effective situation of the drama. When I first read this scene to Sir Henry he was full of enthusiasm about it. But I am afraid Sir Henry (whose talents none appreciate more than I) has not got a very strong will. He has allowed himself to be influenced by those who have told him that a scene showing popes in hell would cause a scandal, that it would hurt the susceptibilities of the Catholics. This is quite illogical and absurd. The Popes Bonifacio VIII. and Clement V. lived a long time ago. Their lives and crimes are ancient history. Besides, in monarchical England, you have members of the royal family, possibly the King himself, witnessing, in 'Richard III.' another King of England, the present King's ancestor, committing murders, and no one thinks of objecting. Yet, in Protestant England, it is contended that an outcry would be made if a part of Dante's 'Divina Comedia,' still further back in history, were placed on the stage. The whole contention is ridiculous.

"However, Sir Henry was afraid of something dreadful happening, and so a cardinal has been substituted for the popes. But all the dramatic force and significance of the scene is lost, and the play is spoiled. If Sir Henry had not been prepared to stage the scene as I wrote it, why did he accept it in the first instance? If I had known the scene was not to be acted as I had written it, I should perhaps not have done the play at all. At any rate, if I went to London for the rehearsals or the first night, I should seem to accept the alterations made, which I do not. I protest."

OUR DIMINISHING ROLL OF COMEDIANS.

THE death of Stuart Robson, who achieved wide popularity in America first as Dromio (with Crane) in "The Comedy of Errors" and later as Bertie in "Henrietta" suggests to several critics and editors the fact that American comedians are a disappearing class. The reflection may be placed alongside that

THE LATE STUART ROBSON,
Who achieved wide popularity as Dromio in "The Comedy of Errors" and Bertie in "Henrietta."

made in another connection by a recent English writer, Herbert W. Horwill, who insists that the traditional American humor (but not American wit) has about vanished, except as it finds expression in ridiculous exaggerations. *The Inquirer* (Philadelphia) is one of the journals that looks upon comedy as almost a lost art in this country. It says:

"The point that is borne in upon the mourner at this time is the fact that comedy is a most serious business, a great art. Of buffoonery, of high and lofty tumbling, of horse-play and nonsensical balderdash the stage is to-day redolent to a nauseous degree. There are comedians to-day—some of them real comedians—but most of them are the most counterfeit presentments of a 'counterfeit presentment.' The art of comedy is as great as that of tragedy, and all art is inborn. We see much of so-called art which is mere stage management, mechanical arrangement, and luxurious costuming, and little that comes from below the surface. The names which are great in the history of the stage and which will endure are those who, in whatever line of work they were called upon to perform, found their inspirations to action from within. These sought to move others because they could first move themselves. The great actors, whether in comedy or tragedy, are those who have had the afflatus within their inner souls. The stage to-day is incomparably superior in mechanism, coloring, costuming, and every other feature which appeals solely to the eye to anything which has preceded it, but

it has lost that long training, that weeding out and developing process which made the comedy theater more than a name for horse-play."

The Boston *Herald* takes about the same view, remarking that "the comic actor as he used to be on the American stage is extinct"—such actors as William Warren, John E. Owens, and William E. Burton, who played a wide range of comic characters. Our comedians now are all specialists, such as Joseph Jefferson and Nat C. Goodwin, and "there has seldom been a specialist more limited in his range than was Mr. Robson." *The Journal* (Providence) agrees with this estimate of Robson. His Bertie was "distinctly admirable," but he would have played a totally different character in precisely the same way. The dramatist simply wrote a part to fit him; and if it did not fit, he was unable to adapt himself to it. Moreover, no man without the gift of pathos, we are reminded, can be a great comedian; and Mr. Robson "did not have this gift in the least degree; his talent was farcical."

Robson's genial personality and the good cheer which he radiated both on and off the stage receive general recognition.

AN ANCIENT ART REVIVED.

THE art of leather-sculpture, which was neglected for hundreds of years and is practically unknown to the people of the twentieth century, is enjoying something of a renaissance both in Europe and in this country. Says *The Booklovers' Magazine* (Philadelphia):

"Gradually we are recovering from the past the secrets of arts that have been hidden from modern eyes. The latest of these to emerge into the glare and clamor of the twentieth century, clad in the picturesque, monastic garb of pre-Reformation days and shrouded in the dust of ten generations, is the art of leather-sculpture. . . . It owes its monkish garb to the fact that in the prior stage of its existence it was the monastery that sheltered it and the inmates of the monastery who practised it. It was a popular industry with the monks of the fifteenth and sixteenth centuries in the monasteries of continental Europe. Book-making was their favorite diversion and on it they exercised their artistic as well as their literary talents. To their labors in both fields we owe the preservation of the bulk of the literature that the world had accumulated before the art of Gutenburg and Caxton flourished. It was not enough that they laboriously copied the writings of Greek and Roman, Hebrew and Arabian, ancient and modern, and diligently and painfully rescued volume after volume of precious poetry, and philosophy, and history, and perhaps less precious theology, from oblivion; it was desirable that the books so laboriously produced be clad in a binding worthy of the time and pains they had cost, no less than of the gems of literature they so often contained. So it was that the good brothers of those days developed the art of leather sculpture and applied it to decorating the covers of their books.

"In the artistic character of the illumination and sculpture of the bindings the monks were influenced to some extent by the prevalent art of the day. Michaelangelo, Albrecht Dürer, Leonardo da Vinci, Hans Holbein, and Botticelli were all doing their noblest work about this period. Their subjects were mainly religious, and these humble disciples of the monasteries followed them from afar. The tools with which the monks worked the leather were clumsier than those that can now be produced, and the results attained were rough and crude, tho bearing always the stamp of artistic taste and durability. The colors of the numerous specimens yet treasured in the great libraries are but little dimmed by age, and the work on the whole is in good condition after hundreds of years. Some of the devices so sculptured in leather represent the patient work of many months, if not years. It was the tedious character of the process, doubtless, which largely caused it to disappear in the wreck of monasticism and tumult of religious warfare which followed the Reformation, while the development of printing almost simultaneously threw the making of books into other and ruder hands, which looked to utilitarian rather than artistic achievement."

The resurrection of this old monkish industry has been accompanied by the invention of new mechanism which produces far superior results. It is "the fifteenth-century idea driven by the twentieth-century electric motor." We quote, in conclusion:

"The revival was part of the great development of art industries that began in Germany a couple of decades back, and to Henry Bussé, of Hamburg, belongs the honor of reestablishing on a practicable basis the art which had been lost. The industry has now been extended to America, and Mr. Bussé and his son—the latter a brilliant designer and a thorough artist in execution—have a studio in Philadelphia.

"The art of leather-sculpture as practised to-day finds expression in many other forms than book covers. It is applied to making panels and screens, chairs, cushions, and a wide variety of other articles fitted for the adornment of richly furnished residences.

"A notable work of unusual character and scope is the paneling for the walls of the capitol at Harrisburg. There are eight panels, whose dimensions are six feet in height by fourteen feet in length. The designs are original and consist of allegorical figures representing the various industries which have raised Pennsylvania to her leading position among the States of the Union. This work will be a masterpiece in leather-sculpture, and from the prominence it will enjoy will perhaps do more to make known the beauties and wide range of the revived art than any other single specimen of it that can at present be named."

WESTERN LEARNING VERSUS CHINESE CLASSICS.

A recent article from a leading Chinese daily, translated and published in the Shanghai *Mercury*, clearly states the moderate conservative attitude toward the new learning that is making its way in China:

"At the present moment schools for Western learning are being established in all the provinces of China; but it is to be feared that before China gathers any good fruits from these new schools, she will suffer great harm. If the authorities of these institutions are wise, they will surely take due precaution against the production of all possible evil by them; otherwise the popular censure which has hitherto been applied to the existing system of literary examinations in China will soon be directed toward her new schools. Of the many evils which may attend the establishment of the new schools for Western learning, the greatest are the total disregard of the Chinese classics by the students, and the great contempt they may entertain for their rules. It is entirely by means of the classics that the good principles of government, established by our ancient kings and emperors, and the rules of ethics inculcated by our ancient sages have been transmitted to us. Tho these valuable classics, which should be used to mold the characters of good men, are nominally studied in the new schools along with the Western sciences, they are in reality so much neglected as to be practically put upon the shelf. Before the students of these schools have acquired a thorough knowledge of the various branches of Western science, such as chemistry, sound, light, electricity, etc., they will entirely lose their knowledge of the Chinese classics. So we may safely predict that after all these new schools have been run for ten years, it will be very difficult to find a single person who can be said to thoroughly understand the Chinese classics. But without a thorough knowledge of the Chinese classics a Chinaman can not be expected to treat his parents and superiors with due respect. If such a man is in power, he will go all lengths and breadths in breaking the existing systems of government and will behave as violently as an untamed tiger, and hasten the country to perdition.

"The existing system of literary examinations in China is bad because it keeps the people in such a state of ignorance that they do not know how to devise means to make their country strong. But the establishment of the new schools for Western learning is worse, because, while it enlightens the people, it fills their brains with all sorts of new ideas, which, if not properly regulated and bounded by the rules of propriety, will eventually lead to violent rebellions against the Government."

SCIENCE AND INVENTION.

INFLUENCE OF LIFE ON MATTER.

THAT man can mold and direct matter and material forces we all know. Everything about us that characterizes our modern civilization is the result of such direction. But what is the philosophy of this guidance? Is man simply part of the great natural machine, and is his guidance simply the action of one cog on another? Or is there something within him that is outside the scheme of mechanics, and, if this is so, how does it act on the material world without stultifying mechanical law? That there is such outside interference at each exertion of human will is the opinion of Prof. Oliver J. Lodge, the eminent English physicist. In a recent review in *Nature* (London, April 23), he sets forth this view and asserts also that in suggesting a theory formed in accordance with it he also shows how the divine control of the universe may be explained. Says Professor Lodge:

"On a stagnant and inactive world life would be admittedly powerless; it could only make dry bones stir in such a world if itself were a form of energy; I do not suppose for a moment that it could be incarnated on such a world; it is only potent where inorganic energy is in constant process of transfer and transformation. In other words, life can generate no trace of energy, it can only guide it.

"Guidance is a passive exertion of force without doing work; as a quiescent rail can guide a train to its destination, provided an active engine propels it. If a stone is rolling over a cliff, it is all the same to 'energy' whether it fall on point A or point B of the beach. But at A it shall merely dent the sand, whereas at B it shall strike a detonator and explode a mine. Scribbling on a piece of paper results in a certain distribution of fluid and production of a modicum of heat; so far as energy is concerned, it is the same whether we sign Andrew Carnegie or Alexander Coppersmith, yet the one effort may land us in twelve months' imprisonment or may build a library, according to circumstances, while the other achieves no result at all. John Stuart Mill used to say that our sole power over nature was to *move* things; but strictly speaking we can not do even that; we can only arrange that things shall move each other, and can determine by suitably preconceived plans the kind and direction of the motion that shall ensue at a given time and place. Provided always that we include in this category of 'things' our undoubtedly material bodies, muscles and nerves."

But at what point does will enter into the scheme? What "pulls the trigger" in a brain-cell, and thus originates the nerve-process whereby energy is liberated? What makes the process, whether chemical, atomic, or whatever it may be, occur just then and in that way? Says Professor Lodge:

"I answer, the same sort of prearrangement that determined whether the stone from the cliff should fall on point A or point B—the same sort of process that guided the pen to make legible and effective writing instead of illegible and ineffective scrawls—the same kind of process that determines when and where a trigger shall be pulled so as to secure the anticipated slaughter of a bird. So far as energy is concerned, the explosion and the trigger-pulling are the same identical operations, whether the aim be exact or random. It is vitality which directs; it is physical energy which is directed and controlled both in time and space. . . . . .

"Energy is needed to perform any physical operation, but the energy is independent of the determination or arrangement. Guidance and control are not forms of energy, and their supposition upon the scheme of physics perturbs physical and mechanical laws no whit, tho it may profoundly affect the consequences resulting from those same laws. The whole effort of civilization would be futile if we could not guide the powers of nature. The powers are there, else we should be helpless; but life and mind are outside those powers, and can direct them along an organized course.

"And this same life or mind, as we know it, is accessible to petition, to affection, to pity, to a multitude of non-physical influences; and hence, indirectly, the little plot of physical universe which is now our temporary home has become amenable to truly spiritual control.

"My contention, then, is that whereas life can not generate energy, it can exert guiding force, using the term force in its accurate mechanical sense; not 'power' or anything active, but purely passive, directing—perpendicular to the direction of motion; the same kind of force which can constrain a stone to revolve in a circle instead of in a straight line; a force like that of a groove or slot or channel or 'guide.'

"I do not see how this action of life can be resented, except by those who deny life to be anything at all. If it exists, if it is not mere illusion, it appears to me to be something the full significance of which lies in another scheme of things, but which touches and interacts with this material universe in a certain way, building its particles into notable configurations for a time—oak, eagle, man—and then evaporating whence it came. This language is vague and figurative undoubtedly, but, I contend, appropriately so, for we have not yet a theory of life—we have not even a theory of the essential nature of gravitation; discoveries are waiting to be made in this region, and it is absurd to suppose that we are already in possession of all the data. We can wait; but meanwhile we need not pretend that because we do not understand it, therefore life is an impotent nonentity. I suggest that the philosophic attitude is to observe and recognize its effects, both what it can and what it can not achieve, and realize that our theory of it is at present extremely partial and incomplete."

BEAUTY AS AFFECTED BY EYE-MOVEMENT.

A PERFECT circle is more pleasing than an irregular polygon, a serpentine line than a straight line or a line of sharp curves. Does this difference in esthetic effect rest upon a difference in ocular movements? The question has been debated for many years by estheticians. Some have argued that the esthetic value of the circle and of the serpentine line is due to the ease and harmony of the movements which the eye executes in passing over these figures. The eye is said to "sweep" about a circle or along a wave-line without resistance or constraint. But, on the other hand, doubt has been expressed as to the validity of this physiological explanation. Beauty, it has been urged, is a "spiritual creation" which has nothing directly to do with the eyes of the observer; it is, as the philosopher, Hermann Lotze, contends, a "matter of intellectual enjoyment," and not of the mere sensory factors in perception. The dispute might have waged endlessly had it not occurred to some one to settle it by direct appeal to experiment. Fortunately, the last five years have seen the development of extremely delicate methods of registering eye-movements. Prof. G. M. Stratton, of the University of California, has attempted to utilize these methods for the solution of the problem just stated. In his experiments, which are described in *Philosophische Studien*, Professor Stratton threw upon the cornea of the eye a bundle of rays from a stationary arc-light situated at some distance from the observer. As the observer's eye moved over the outlines of a figure laid before him, a photograph of the moving speck of light on the cornea was taken. Says the experimenter:

"Any one may observe that when the eye moves hither and thither, it causes a movement of any small image that may happen to be reflected upon the smooth surface of the cornea. And a photographic record of the movement of such a minute image would, to some extent, give an account of the course taken by the eye in running over characteristic curves and figures, a record, too, that would in no way inconvenience the eye nor add anything like a foreign momentum to its normal swing."

Of the accompanying figures, drawn from these photographic records, the writer says:

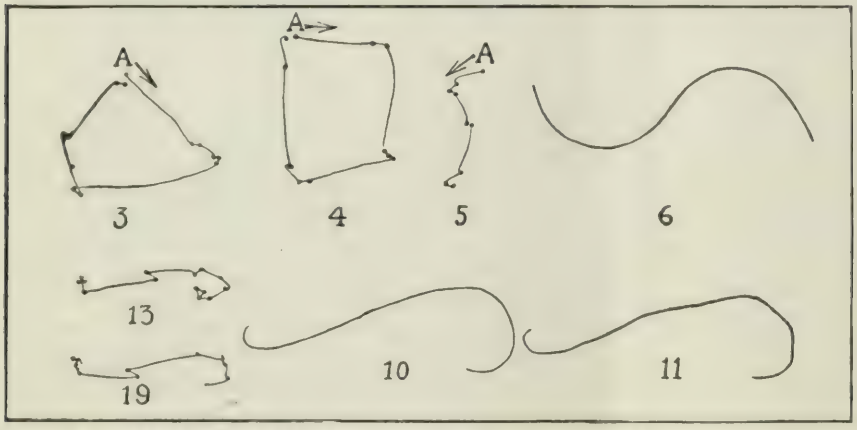
"Fig. 3 is the record of subject *N* in running the eyes around a circle 38.5 centimeters [14 inches] in diameter and about 80 centimeters [32 inches] from the eyes, starting from the top and

taking the direction of the clock. The heavier points, of course, show the pauses in the eye's course, as it seemed to swing around the curve. Figs. 4 and 5 are similar records from the same subject, but with other diagrams. In the one case the drawing observed was an outlined rectangle having the golden proportion (25x40.5 centimeters) placed perpendicularly; the other drawing [for Fig. 5] was a combination of two segments of circles as shown in Fig. 6 (extreme dimensions 60 centimeters). The point of beginning of the record is in each instance indicated by the letter *A*, and the direction of movement by an arrow."

A scrutiny of these figures reveals an astonishing fact, which is thus stated by Professor Stratton:

"The eye moves far less accurately over an outline than has usually been supposed; it takes a course which is but a rough approximation of the form which we perceive. The eye darts from point to point, interrupting its rapid motion by instants of rest. And the path by which the eye passes from one to another of these resting-places does not seem to depend very nicely upon the exact form of the line observed. The eye may take a short-cut that is nearly or quite a straight line while 'following' the segment of a circle, as in some portions of Fig. 3."

The writer anticipates the objection that the movements indicated by these drawings, altho they look harsh and irregular, may, nevertheless, by contrast with more irregular movements from decidedly ungraceful and ugly objects, seem positively pleasant. He presents records taken from allied figures (10 and 11), one of which is decidedly graceful and the other decidedly ungraceful. The ocular movements caused by the observation of these two figures are shown in Figs. 13 and 19—the first form the graceful, the second from the ugly curve. A comparison of the two records will show that they are of the same type: there is nothing in the one that could give esthetic satisfaction, and in the other, esthetic displeasure.



MOVEMENTS OF THE EYE IN FOLLOWING THE OUTLINES OF VARIOUS FIGURES.

"The main conclusions to be drawn from the present set of experiments seem plain enough. In the first place, they give evidence of a most striking introspective illusion. From the mere feeling, one would never suspect that the eye took so irregular a course. Introspectively it seems as if the eye's movements were smooth and continuous, while the records show convincingly that its course is wild and broken."

The illusion is due, the author thinks, to a confusion of the point of attention with the point of fixation. The *attention* moves continuously and freely along the line or the curve, tho the *eye* moves jerkily and spasmodically. Since the attention is uniform and continuous, we neglect the discontinuity of movement and thus fall into illusion. It is, moreover, clear, from the experiments, that the esthetic quality of spatial forms and figures must come from some other source than the movements of the eye. The writer concludes:

"On the whole, it seems probable that the motor and tactual sensations obtained during the vision of a beautiful outline are no more intimately connected with the final esthetic effect than are the sensations from our leg-muscles with our pleasure as we walk through the gallery at Dresden. The external apparatus of the eye merely brings the retina to such points of vantage as will permit various views of the more significant details, and out of the series of snap-shots obtained during these stops in the eye's course the mind constructs its object into a clearer whole. The part played by the external muscles of the eye is thus a menial one esthetically. They are not the star-actors of the performance; they are mere scene-shifters."

WHAT BECOMES OF OLD TIN CANS?

THE last word in the utilization of waste material seems to have been said by a correspondent of *The American Machinist* (April 30), who writes as follows to that paper about a New York factory for the transformation of old tin cans into various useful products. Says this writer:

"I was much surprised and greatly interested a few days since, when shown through a certain establishment near New York city, to find that the 'raw material' used consisted chiefly of empty fruit and vegetable cans rescued by the cartload from the dumps of the city. I had supposed, up to that time, that the only purposes for which such material was suited was food for goats or to be attached to the tails of unfortunate canines. The principal products of this establishment, which is a foundry, are window-sash weights, elevator weights, and ballast for boats. The weight castings are very hard and, when struck with a hammer, ring like steel. About the only tool which can be used for removing sprues and fins is the hammer, as a cold chisel or file will not stand up to the work. The fracture of the round sash weights is smooth, and shows crystals radiating from the center like spokes of a wheel. After delivery at the foundry the cans are first piled into a large iron grating, located under a sheet-iron hood which terminates in a smokestack. They are sprinkled liberally with crude oil, which is set on fire. This process consumes the labels, loosens the dirt, and melts the solder, which falls through the grating, is collected, washed and melted, cast into ingots, and sold to be used again. Some of the cans, which have simply lapped and soldered joints, melt apart completely; these are sorted out and the sheets forming the shell are straightened and bound into bundles to be sold to trunk makers, who utilize them for protecting the corners of Saratoga trunks. They are also bought by button manufacturers, who stamp from them the disks used in cloth-covered buttons. The remainder of the cans, being machine-made, do not come apart. These are loaded into large carts, taken to the charging-floor, on an elevator, and dumped into the cupola. The cupola is fed with coke and cans in alternation. There is occasionally an old wash-boiler or a bundle of tin roofing used, but cans form the bulk of the material. The cans are so light that some of them are carried out at the top of the stack by the force of the blast, and a large screen has been arranged to prevent the pieces from falling on the roof. If among those readers of *The American Machinist* to whom these facts are new, there are any who have occasion to use the elevators in the skyscrapers of New York, I can imagine such wondering how many empty cans it took to make the weights which balance the car in which they ride."

How We Go to Sleep.—This subject has been investigated during several years past, in an experimental study of the psychophysiology of sleep and dreams by Messrs. Vachide and Vurpas. According to a report in the *Revue Scientifique*, they have established the following facts:

"Sleep begins, in its first phase, by a state of distraction which brings on states of absent-mindedness accompanied always by numerous and separate hallucinations, closely connected with the length of the absent-minded states. Imme-

STEREOSCOPIC VIEW OF NANCY FROM A DISTANCE OF 1¼ MILES.

diately afterward, in a second phase, these states of distraction pass into a very delicate motor disturbance, due to the absence of parallelism in the axes of the eyes or by the deviation of their conjugate movements. Finally, in a third and final phase, which indicates the very near approach of actual sleep, the vasomotor system seems to conform to laws very different from those that regulate its mechanism during waking hours."—*Translation made for* THE LITERARY DIGEST.

LONG-DISTANCE STEREOSCOPIC PICTURES.

IT is well known that the effect of depth in a view is due to the fact that we see with two eyes. As the eyes are some distance apart the arrangement of objects is not the same in the two views that we get, and the mental combination of the two results is an impression of distance or relief that single-eye vision can not give. The same impression is given in a stereoscopic picture by taking two views with lenses the same distance apart as the eyes, and then viewing each with the corresponding eye. It has been found that the stereoscope can go even further than the eye. For distant objects, the eyes are not far enough apart to give appreciably different views, so that at a distance we get no effect of depth or solidity; a distant mountain looks flat—it has not the bold or rounded outlines of a nearer peak. But altho the relative position of the eyes is fixed by nature, we are under no limitations regarding the separation of two lenses. We may take the two parts of a stereoscopic picture from points ten, twenty, or thirty feet apart, and so get results that when combined in a stereoscope show distant and inaccessible mountains with an effect of solid relief that could otherwise only be obtained by viewing them from a near-by point. The recent development of this kind of photography, we learn from an article in *La Nature* (Paris, March 14), by M. S. Mareschal, is due to M. Bellieni, a photographer of Nancy, France. Says M. Mareschal:

"The ordinary stereoscopic apparatus gives an accentuated appearance of relief only when the foreground of the picture is near the objective of the camera; so that the operator often sacrifices the clearness of near objects in order to obtain a more complete perspective effect. . . . . .

"It may nevertheless be useful to have stereoscopic views of distant objects or of cities or mountain summits, and with this aim M. Helbronner has made use of a teleobjective. . . . . .

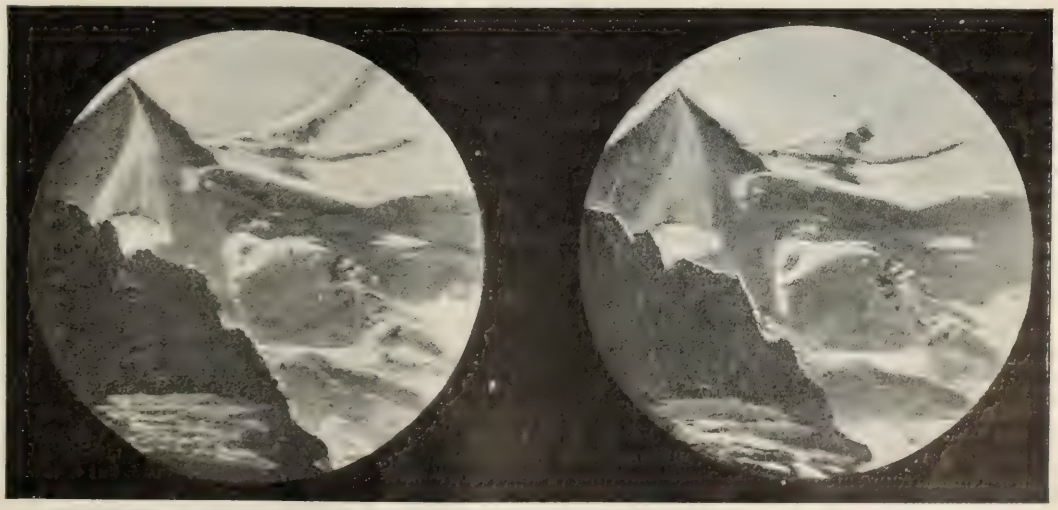
"It is plain that in telestereoscopy there is created an artificial relief in which we see clearly successive planes that are not distinguished by the eye in nature; but it is none the less true that the surprise felt when we consider the images obtained, soon gives place to a peculiar feeling of interest.

"With the ordinary stereoscope for pictures 9 x 18 centimeters; [3½ x 7 inches] the distance between the objectives is about 90 millimeters [3½ inches]. It is found that the appearance of depth or relief ceases for objects more than 50 meters [164 feet] distant . . . but that a satisfactory relief is obtained for objects 20 meters [66 feet] distant. Starting from this fact M. Bellieni has established mathematical formulæ that enable us to calculate how far apart the objectives ought to be to give the same relief to distant objects as if they had been at normal distance from an ordinary apparatus. When a teleobjective is used, the two views are not taken at once, but the apparatus is carried from one station to another. Practise has led M. Bellieni to formulate the following rules:

"For objects situated less than 100 meters [328 feet] away from the camera, we must take for the distance apart of the objectives as many centimeters as there are meters between the camera and the object; the separation of the objectives is $\frac{1}{100}$ of the distance from the object; thus, a station situated at 30 meters [98 feet] will necessitate a separation of 30 centimeters [12 inches].

"But when we come to views where foregrounds are distant 300 to 400 meters we must halve this distance. Thus, in a panoramic view when the principal subject is distant 2 kilometers [1¼ miles] and the foreground about 300 meters [⅛ mile] we use a separation of about 10 meters [33 feet]. These distances need not be absolutely exact. . . . . .

"In practise there are certain indispensable precautions that must be taken that this kind of view may succeed. The camera must be absolutely immovable and in an identical position, with reference to the horizontal, in both views. In general it will not be horizontal, for usually in this kind of work the photographer



STEREOSCOPIC VIEW OF THE PEAK OF THE JUNGFRAU, FROM LITTLE SCHEIDEGG.

takes a view from a mountain or some detail of sculpture seen from below. To insure the proper result, M. Bellieni has devised a very simple little apparatus which is placed on the camera and enables one to put it back, after it has been moved, at precisely the same angle. It is a small level mounted on a lever-arm that may be fixed at a more or less acute angle with the support of the camera. When the first view is taken this device is placed carefully on the camera; by means of a regulating-screw the air-bubble is brought to the center. When the second station is reached the bubble is again brought to the same position by moving the camera; we are then certain that it is at precisely the same inclination to the horizon as before. The photographic image must also embrace exactly the same objects. To insure this, a specially constructed finder is used. . . . . .

"This kind of stereoscopic view may be very useful to Alpine climbers by enabling them to study at leisure the path by which they wish to ascend. It will also render great services to archeologists by showing them in their studies the interesting details of monuments. Finally, topography and metrography will avail themselves of its aid in surveying and mapping inaccessible regions."—*Translation made for* THE LITERARY DIGEST.

THE TRACKLESS TROLLEY IN EUROPE.

ALTHO the trolley railroad was developed in this country much earlier and more thoroughly than abroad, the trolley omnibus, or "trackless" trolley, seems to be appreciated in Europe before it has found favor here at all, altho one or two experiments have been made here in that direction. In *Cosmos* (April 18) M. Emile Guarini tells us of some of the lines that are already

TROLLEY-OMNIBUS; SCHIEMANN, SIEMENS, AND HALSKE SYSTEM.

operated in this way. The great advantage of the trolley omnibus is, of course, as M. Guarini tells us at the outset, that it requires no rails. It can traverse narrow and tortuous streets and serve regions where the traffic is not large enough to warrant the installation of a regular electric railroad. Electric stages may of course be operated with storage-batteries, but the cost and weight of these are serious objections. Experiments with the trackless trolley have been going on in Europe since 1882 and M. Guarini describes some of the results as follows:

"In the Schiemann, Siemens, and Halske system two trolley-wires are used, one to bring the current to the motor, the other to carry it away. The vehicles are provided with two rigid trolley-poles like those of an ordinary trolley-car, but so movable on the roof of the carriage that it may depart as far as three meters [ten feet] from its normal course without losing connection. This arrangement enables the omnibus to pass or avoid other vehicles. If two of the motor carriages meet, one stops and lowers its trolley-poles by means of a cord until the other has passed. Arrived at the terminus, the carriage turns around to take its return position. This turning takes place with ease and promptness, without interruption in the contact. The motor carriages can also draw trucks for the transportation of merchandise. The speed is 12 kilometers [7½ miles] an hour, the capacity of the vehicles is twenty-six persons. . . . . .

"The Lombard-Guérin system uses a positive and a negative wire. The current is taken by an automobile trolley connected to the carriage by a flexible cable. The trolley wheels are run by a triphase induction-motor suspended under the two wires. They are carried on a frame. The motion is communicated to them by the rotatory field of the motor. The current passes first through the motor of the vehicle, which may be regarded as at the same time a rotatory transformer and a continuous current motor, and then through the trolley-motor, whose speed exceeds somewhat that of the vehicle.

"The Schiemann system has been established in the valley of the Biela, starting from Konigstein-Hütten. The length of the line was at first 2.8 kilometers [1¾ miles] but it has been extended to 9 kilometres [5½ miles], as far as Konigbrunn. There is also to be established a freight system, by means of special electric locomotives, which will serve specially the great paper factories and sawmills at one end of the line. . . . . .

"The Lombard-Guérin system has been tried on a line extending from Samois to Fontainebleau, a distance of 5 kilometers [3 miles]. . . . The time of the journey is 20 minutes. . . . According to the company the expenses of such a line are as follows: Electric energy 0.161 centime per vehicle per kilometer [about .05 centime per vehicle per mile]; cost of repairs 0.092 centime per vehicle per kilometer [.03 centime per vehicle per mile]."—*Translation made for* THE LITERARY DIGEST.

Telephones and Disease.—That the telephone-transmitter may serve to carry disease from one user to another has been suggested more than once. The feasibility of such an occurrence has been experimentally tested by Dr. William Bissel, of Buffalo, who reports his results in the Buffalo *Medical Journal*. They are negative, as far as they go, and seem to indicate that the supposed danger is rather remote. We quote the following abstract made by *The Medical Record*:

"It is well known that an individual to all intents and purposes in good health may be the carrier of noxious germs. For instance, the germ of croupous pneumonia is present in the mouth of every healthy person, and the diphtheria bacillus exists in the nose and throat of many persons who have never suffered from the disease. Again, those who have recovered from typhoid fever and cholera continue to throw off the germs of these respective diseases, while in cases of chronic pulmonary tuberculosis, when expectoration is profuse, the organism is expelled in large numbers. The experiments conducted by Dr. Bissel took place in the early part of this year, the telephones at three of the largest hotels in Buffalo being utilized for the purpose, and the particular organism for which search was being made being the diphtheria bacillus. After the most careful investigation it was found to be impossible to demonstrate the presence of the diphtheria bacillus on any of the telephones. It would thus appear as if there is little or no fear of contracting diphtheria by this means."

"SEVERAL years ago," says the *Revue Scientifique*, "to aid the shepherds in guarding their sheep, there were imported into Patagonia some Scotch collies, tame, well-trained, and docile. All went well for some time, but after a while loud laments were heard from the shepherds. The collies, instead of protecting the sheep, were eating them! What had happened? The shepherds had left a number of the dogs in the woods and they had bred there; but, being no longer under the influence of man, they had become wild, and as they regarded the sheep as belonging to them as much as to man, they attacked the herds whenever they were hungry. The dogs hunt in packs and attack vigorously, so that even the shepherds themselves are sometimes killed. They are now very sorry that they ever brought in the collies, which they say are worse than wolves. They are quite as strong, and more intelligent and brave. The situation of the shepherds is doubtless bad, but it is not altogether undeserved, and it is certainly not unnatural. However, probably this consideration, if it has occurred to them, will hardly console them."—*Translation made for* THE LITERARY DIGEST.

THE RELIGIOUS WORLD.

THE REVIVAL OF BUDDHISM.

IT has been said that the history of Buddhism is the history of the greater half of the civilized world for nearly two and a half millenniums. At the present time, this ancient religion is showing signs of renewed vitality and Prof. T. W. Rhys Davids, the eminent Buddhist scholar, of London, sets himself to inquire (in *The Hibbert Journal*, April) whether it is likely to have any serious power or influence on the future of the world. "Like Christianity," he observes, "rooted out in India, the land of its birth, and fallen into utter decay in China, the other empire it seemed about to conquer, Buddhism has survived in several smaller countries, widely scattered and remote—in the islands of Ceylon and of Japan, in Burma, Siam, and Tibet. And now, more than two thousand years after the period of its first missionary zeal, we hear, simultaneously from all these five directions, of its again bestirring itself to new efforts, not only of defense, but of attack." Prof. Rhys Davids proceeds to give an account of these Buddhist "forward movements," which we summarize as follows:

The Mahā-Bodhi Society, founded in 1891 at Colombo, for the propagation of Buddhism abroad, took up at the outset the task of gaining possession of the site of the ancient and most holy shrine of the Mahā-Bodhi temple at Budh-Gayā near Rājgir, built at the spot where the ancient records declare that the Buddha attained the climax of insight. By successful litigation the Buddhists won the right, in 1897, of pilgrimage to the temple. Shrine and society have gained increasing support. A pilgrims' house has been erected at Budh-Gayā. A monastic college is to be built at Calcutta, the headquarters of the Society. According to the Indian census, the number of professing Buddhists in India has increased during the last ten years from seven and a half to nearly nine and a half millions, an increase largely confined to Bengal. Branch societies have been established in North and South India, in Burma, and at Chicago; and the society has representatives in this country. It issues a monthly journal, printed in English and distributed in both hemispheres.

Another society, independent of the foregoing but identical in object, has just been started at Mandalay. It has taken the name of the Buddha-sāsana Samāgama (or, for brevity, Samāgama), and has issued in English, from the native press at Rangoon, its manifesto. It is headed by a converted Scottish gentleman of scientific training, and has representatives in the United States and Germany. It proposes to found a Buddhist library and a training-center for missionaries of any nationality, who, after ten years have lapsed, are to start on their work in different countries.

These two overtly propagandist organizations are consequent to and concomitant with a very general revival among Buddhist churches, caused by the necessity of defending themselves against encroaching Western methods of civilization and religious propaganda. Palmleaf manuscripts are being superseded by books, and the canonical scriptures, no longer the monopoly of student recluses, are being printed and circulated at large, both in the original Pali and Sanskrit, and also in the different vernaculars.

In Ceylon, Buddhists, aided by American sympathizers, have been inaugurating new schools for both boys and girls, and colleges for advanced studies for intending religious teachers. The revival is given further expression in such organs as *The Buddhist*, published in English, and a Singalese paper, the *Sava Sanda Rasa*, which is widely circulated.

In Japan, the rivalry of the twelve leading Buddhist sects has led to greater keenness of propagandist education. The intellectual adaptability of the Japanese has led some of these sects to send students to study Pali and Sanskrit in Europe. And the cause of Buddhist scholarship owes much to, and hopes much from, the works and research of writers like Messrs. Bunyu Nanjio, Fujish Ma, Takakusu, and Anesaki. *The Orient* is an excellently conducted periodical from the Buddhist standpoint, and publishes English readings of the chief Buddhist texts. This cultured and zealous activity is the more noteworthy in that the military class in Japan, now become through recent wars especially prominent, is, unlike the ancient Indian Kshatriya supporters of Buddhism, almost exclusively of the old pagan or Shinto faith.

A Japanese mission has gained a footing at San Francisco, has already several branches in the neighborhood, and publishes a Buddhist periodical entitled *The Light of Dharma*. There is no doubt as to the gradually increasing extent to which Buddhism is gaining on the attention of the general public in America. This was largely due to an awakening interest in the comparative study of religious belief, on the one hand, and to confused ideas among and about "Theosophists" on the other. Oriental propagandists of Buddhism protest that Theosophy, a doctrine steeped in "soul-heresy," "pilfers Buddhist terminology to mislead foolish people in England and America." At any rate, one result of this dual impetus has been a shower of popular text-books on Buddhism, which, even if they are the fruits of second-hand and not over-accurate study, are yet helping to break down the appalling self-complacency of the ignorant, and to familiarize men's minds with the startling advance made, long before Christianity, and far from the basin of the Mediterranean, in the deepest problems of life and ethics.

There are indications, concludes Prof. Rhys Davids, that the conditions which led to the first spread of Buddhism in India are again arising in that country. "The signs of a real revival," he says, "are already evident. And it seems quite possible, and even probable, "that Buddhism will again become a power in the East." The professor hazards no prophecy as to the advance of Buddhism in the West, beyond stating that it is likely to have "its groups of adherents in all countries." He thinks, however, that its philosophy and ethics have already entered as a permanent factor into religious life, and that they may influence "the thought of the immediate future" in the West.

THE DATE OF CHRIST'S CRUCIFIXION.

THE day of the month in which Jesus was crucified has for decades been a vexed problem in New-Testament research, especially in view of the fact that the Synoptic Gospels and the Gospel of John seem not to agree on this point. An entirely new effort to solve this matter has been made by Prof. Hans Achelis, of the University of Königsberg, and the result is published in the *Nachrichten* (No. 5) of the Göttingen Academy of Sciences. The novelty of the effort lies in this, that Professor Achelis tries to figure out the date astronomically, and reaches the conclusion that it was Friday, April 6, A.D. 30. His process is the following:

Jesus was crucified on a Friday, according to Matt. xxvii. 62; xxviii. 1; Mark xv. 42; Luke xxiii. 54; John xix. 31. According to John, he was crucified on the 14th of Nisan; according to the other evangelists, on the 15th of Nisan. The year is not mentioned.

Pilate was governor between 26 and 36, and at Easter of the latter year had been deposed. In the year 26, the 14th of Nisan fell on Saturday; in the year 27, on Wednesday; in 28, on Monday; in 29, on Sunday; in 30, on Friday, April 6; in 31, on Tuesday; in 32, on Monday; in 33, on Friday, April 3; in 34, on Tuesday; in 35, on Monday. During all of these years the 15th never fell on Friday. From these facts two conclusions can be drawn: one, that John and not the synoptics have the correct date, and Jesus could not have been crucified on the 15th of Nisan; second, that we must choose between April 6, A.D. 30, and April 3, A.D. 33.

To decide between these two, we must appeal to other data taken from Luke and John. Christ began his public ministry, according to Luke, in immediate connection with the activity of John the Baptist, and the latter began (1) in the fifteenth year of Tiberius; (2) at the time when Pontius Pilate was ruler in Judea; (3) when Herod was tetrarch in Galilee; (4) when Herod's brother Philip was tetrarch in Itureah, etc.; (5) when Lysanias was tetrarch in Abelene; and (6) when Annas and

Caiaphas were high priests. These data fix the time between August 19, A.D. 28, and August 18, A.D. 29.

According to John ii. 20, the Jews said to Christ, when he entered upon his ministry, that the Temple had been in process of erection forty-six years. This brings us to the year 27–28. Since Christ, according to Luke, was engaged in his ministry for one year—according to John, two or three years—both writers have taken the year 30 as the year of his death. Accordingly we can with good reason regard Friday, April 6, A.D. 30, as the date of the crucifixion.

This computation has, however, not been satisfactory to all, and a critic in the *Christliche Welt* (No. 14) tries to show that it is unreliable in method, altho correct in result. He says:

The Jewish month is not a fixed date like the Roman month. It went from new moon to new moon; or, better, from the time when the new moon became visible to the next time this occurred. It is accordingly only 27 or 28 days long, and twelve months is accordingly not a solar year, but only 354 days. Accordingly, at least once every three years the Jews had to add an intercalary month. The Jewish year began in spring, with the month of Nisan. If the month begins with the new moon, then the full moon falls upon the 14th–15th. The month of Nisan, as the first spring month, was so arranged that its full moon fell *after* the vernal equinox. In this way the beginning of Nisan and the beginning of the year were determined with reasonable certainty. But there are two ways of determining the 1st of Nisan, and we no longer know which of these two ways the Jewish almanac-makers observed. Did they adopt the most reliable way, namely, of counting backward from the full moon to the first? This is probably the case; but, if so, then they were at times compelled, as is seen by a glance at our own calendar, to begin the 1st of Nisan *before* the new moon had really become visible. But if they followed the more uncertain way, namely, not to declare the 1st of Nisan until they really had seen the new moon, then the later dates of the month could also have been changed. Much of this calculation, therefore, is uncertain, since in case of cloudy weather the new moon would be seen later than in clear. Nevertheless, a careful comparison of these calculations with the two chronological data concerning the beginning of Christ's ministry leads to the conclusion that Christ's death occurred on Friday, April 6 A.D. 30.—*Translations made for* THE LITERARY DIGEST.

DIVINE PROVIDENCE AND THE POPE'S TEMPORAL POWER.

TO many it will seem like audacity for a Roman Catholic magazine published in Italy to assert that the loss of the Pope's temporal power was a thing ordained by Providence and that it has proved a blessing to the church. Yet the *Rassegna Internazionale* (Florence), organ of an influential section of Roman Catholic opinion, maintains these views. It has printed an anonymous article which has caused great displeasure in Vatican circles, and which is the occasion of spirited retorts in the more official Vatican organs. "Divine Providence," remarks the Florentine publication, "either does not enter at all into human events, or, if it does concern itself with them, evidently had to do with the fall of this power." It then reviews the combination of fortuitous events which, it says, would indicate that Providence was slowly making ready an event so far-reaching in its influence upon the Roman Catholic Church. To quote:

"What could yet make possible a restoration of the temporal power? A change of public opinion in Italy in its favor. In what way could this change be brought about? Whenever a general return to religious principles is manifested in Italy. Now what is the thing which has chiefly led to the decline of Catholic religious sentiment in Italy? The aversion of the Vatican to the national movement. In other words, what has diminished in Italy the religious sentiment, which is the only force that could still restore the temporal power? It is the temporal power, it is the obstinacy in not wishing to renounce the temporal power, a desire to retain it, that imperils the independence, the liberty, the unity of native land. The temporal power in the past is what has rendered impossible the temporal power in the present and will render it impossible in the future.

"Restore the temporal power! Let us save in Italy, if there be yet time, the Catholic religion. Forty years ago, Italy was a nation wholly Catholic. The national movement arose among

CARDINAL ORIGLIA

Opposed to any compromise regarding the temporal power.

CARDINAL AGLIARDI.

Said to favor "the moderate party" in the matter of the temporal power.

LEADERS OF TWO VATICAN MOVEMENTS.

us associated with the closest, the most general religious sentiment. The blessing of independence, of unity, of liberty, was so great, so desirable, so longed for, that in all hearts the desire was irresistible to publicly thank God, the giver of all good, for the blessing received. We remember well with what a sincere impulse it was desired to associate the national holiday with the chanting of the Te Deum, to associate the love of country with the love of religion. What was done? The churches were closed. Those who wished to enter them were hunted forth. Those who had entered them were declared guilty of sacrilege. And now it is lamented that the people no longer enter the churches."

Forty years ago, continues this authority, all Italy was a Catholic nation, "but now there are newspapers, declaring themselves representatives of the Catholic religion, which are triumphant when they say that the Catholic party in Italy is growing and strengthening. . . . A Catholic party in a Catholic nation, far from being a thing to jubilate about, is a confession of the greatest of defeats. It is a sign that Catholicism, once the faith of the great majority of the nation, is now professed by but a single party." However, the anonymous writer of the article we are quoting consoles himself with the reflection that the loss of the temporal power has been a great blessing to the church, thus revealing the hand of divine Providence. He declares:

"As long as the temporal power, by its existence, represented in Italy the cause of division, of menace, of continual foreign intervention to sustain it, it was clear that this power could not win the sympathies of Italians. . . . Another benefit [from its loss] concerns the internal life of the church, the maintenance of the ecclesiastical spirit. The temporal power required the Roman Catholic Church to keep a large ecclesiastical force engaged in strictly lay and civil functions. Now it is certain that lay and civil office is not the most adapted to inspire in perfection the true priestly spirit. . . . The temporal power was always alleged as a means of spiritual independence. It may be admitted that in many respects it achieved this end. But can it not be asserted that the exact contrary was more than once the case? Did it not frequently happen that political considerations came in to inspire and guide religious decisions?"

For these and other reasons, the conclusion is arrived at that "the fall of the temporal power was permitted, was ordained by God for the good of the church." But this way of looking at the matter is roundly condemned by the official organ of the Vatican, the *Osservatore Romano*, which in two leading editorials pronounces the arguments of the anonymous one "petulant" and "presumptuous." It scouts all his inferences, and sarcastically remarks:

"All things human were in accord to put Jesus Christ on the cross, and in the hands of Caiaphas and those of the synagog favoring circumstances abounded to condemn the Messiah to death. Is it not clear that Providence ranged itself on the side of Caiaphas and the populace and justified by its efficacious intervention the passion and death of the man-God?"

Less satirical, but none the less emphatic in refuting the arguments alleged by the anonymous opponent of the temporal power, is that other Vatican organ, the *Civiltà Cattolica* (Rome), which asserts that "the governed are the faithful, the governors are the bishops and the inferior clergy, the supreme monarch is the Vicar of Christ, in whose person Christ himself lives and visibly reigns on earth. Further, it is necessary that the Church, in the quest of truth, virtue, and justice, should freely enjoy the three powers, legislatve, executive, and judicial, without which true independent and regal authority can not be conceived." It continues:

"It is further necessary that, with a due regard to this purpose, she should have ministers, forces, and associations which, duly organized, shall be fitted for the several parts of her function, and that all these officials shall receive stipends and means for the maintenance of life and the dignity of their respective ministries. Hence the clergy, the religious orders, the right of property and temporal possessions. Finally, since the unity of this kingdom can not be conveniently and easily preserved in the diversity of lay governments and of nations, if the supreme head, the Roman Pontiff, who gives laws to all and whom all obey, be subject to this or to that prince in particular, the church has the right to political independence and to territorial sovereignty sufficient to guarantee her from any obstacle through a power other than her own. Hence come the necessity for the civil principality of the Popes as the ages and divine Providence have constituted it, and the Catholic truth of the formula: Precisely because the kingdom of Christ is not of this world is it necessary that the Vicar of Christ should have a temporal kingdom in this world."—*Translation made for* THE LITERARY DIGEST.

A RELIGION FOR THE SELFISH.

THOUSANDS of persons, even among the well-informed, have never learned that selfishness is one of the loftiest of human virtues. This may be ascribed partly to the influence of a primitive type of Christianity and partly to mere prejudice arising from unintelligent contact with selfish people. All this, however, will change in consequence of a tremendous ethical force in which selfishness will be revealed as a manifestation of the over-soul. M. Emile Faguet, of the French Academy, who gives these ethics the benefit of his exquisite French in the *Revue* (Paris), is careful to explain that they are not his. They are Nietzsche's and Nietzsche got them from Goethe. M. Faguet practically accuses Nietzsche of having stolen his selfishness ethic from Goethe without giving the latter any credit at all. It seems, from the article just referred to, that Goethe got his selfishness from his mother. "She had a marked tendency," writes M. Faguet, "to refrain from concerning herself with the misfortunes of others":

EMILE FAGUET,
The French Academician who attributes the "religion of selfishness" to Goethe.

"This form of selfishness, not haughty, but compounded of discretion and commanding a reciprocal discretion, was manifest in Goethe himself. He was peculiarly distant in manner, and he kept at a distance in order that others might keep at a distance from him. This selfishness I will not say that he avowed, exactly, or that he openly preached. Some temporizing expression is called for in characterizing it, and that expression he has supplied himself. Mastery, he said, is apt to be mistaken for selfishness."

The French Academician, however, says that this was selfishness pure and simple, "profound, open selfishness," which Nietzsche preached, recommended, and formulated "as a doctrine" and which has resulted in the creation of a school of "morality." We quote again:

"The strong man, therefore, must cultivate his strength, exercise his strength, and above all not permit it to be made use of by others. That would constitute an invasion of his strength, and invasion of it would mean its paralysis. The strong man's duty to himself requires that he shall not let himself be bound as the Liliputians bound Gulliver. He would be guilty of self-betrayal if he let himself be duped by the stupid maxim of each for all and by the equally silly morality of charity and philan-

thropy. Since selfishness is the right of the weak it is the duty of the strong. And since selfishness becomes the duty of the weak it becomes a law of the strong. The weak man, who has just strength enough to maintain life, has also the right, poor devil, to devote himself solely to himself, to be selfish. The strong man, for the reason that he is strong, must recognize his duty to prevent the weak from sharing his strength with him. . . . Such is the right, the duty of the strong man. It is not manifest at first sight because to the weak, that is, to the majority, it does not appear that selfishness is a virtue."—*Translations made for* THE LITERARY DIGEST.

A FRENCH ANTI-CLERICAL CONCEPTION OF THE CHRISTIAN IDEAL.

RELIGION to the French anti-clerical is an abomination, and he wishes it uprooted, destroyed, according to the clerical press of Paris. It asserts and reasserts that the party now in power is animated, not by any special hostility to the monks and nuns, but by a hatred of God and of His worship in any form. The Roman Catholic *Gaulois* (Paris) puts the case even more strongly, while the *Correspondant* (Paris), equally clerical, declares that since the Reign of Terror, no anti-religious force of like virulence to that now exhibited in France has been released in any country. Prompted by criticisms of this sort, expression has been given to radical anti-clerical views of "the Christian ideal," in the columns of a new anti-clerical organ, the *Action* (Paris). The writer is Senator Delpech, a noted champion of separation of church and state, whose demands for the suppression of the French embassy at the Vatican have embarrassed the ministry of late. "These fine gentlemen of the religious orders attribute the vilest designs to the emancipated men who are carrying on the work of intellectual liberation against the church," writes the senator in his emphatic article, contributed to the *Action*. "Simple minds have long been fobbed off with childish words." He proceeds:

"What does their Christian ideal amount to?

"An answer is supposed to be made to everything by citing the story of the good Samaritan and the Sermon on the Mount. If the guiding principle of Christianity lay in the idea of brotherhood, it would have had different effects upon the peoples in submission to the church both in former times and now. It would not have let fierce passions loose and inspired the hatred we are all familiar with. Manners would have been softened by it. The triumph of a genuine brotherhood of man does not even now seem so far off. Long before the gospels were written Buddhist priests and Stoic philosophers had preached a morality based upon the spirit of fraternal solidarity. Confucius summed up his philosophy in this maxim: Do to another as you would have him do to you. The maxims of Epictetus and those of Marcus Aurelius are compounded of the healthiest morality, goodness, and the spirit of justice. In truth, Christianity was so little of a code of submission that the Christians fell to attacking one another abominably as soon as they were freed from dread of the suspicious hostility of the Roman emperors. St. Augustine gives us edifying details on this head. That which is peculiar to primitive Christianity, as the Roman Church still understands it, is a doctrine of despair, calculated to dry up the sources of all activity and all joy."

This "doctrine of despair," says the anti-clerical senator, is very plainly brought out for our benefit in the "gospel story of the two sisters of Lazarus," which he relates thus:

"One day Jesus and his apostles arrive and ask hospitality. Martha, tucking up her skirt and rolling back her sleeves, sets to work to prepare a meal. It was something of a job to satisfy this crew of holy apostles. While she comes and goes, making the fire, washing the vegetables, setting the table, she sees her sister Mary squatting at the feet of Jesus and contemplating him. Irritated at this, she said to Jesus: 'Master, is it right for my sister to leave me all the work to do? Tell her to lend me a hand.' And Jesus answered: 'Martha, Martha, thou art careful and troubled about many things. Mary hath chosen that good part which shall not be taken away from her.' That was the notion of Jesus. He approves Mary's conduct! He encourages her to continue in her contemplative idleness and credits her with a merit greater than that of Martha, the alert and brave woman who assumes the whole burden of household work. Martha bakes the daily bread. Mary, the contemplative and sterile woman, will eat her share and Jesus will reserve the best place in Paradise for her. Does not this put a premium upon idleness?"

To satisfy Jesus, continues the French anti-clerical, we must "abandon all that makes up human personality"—reason, will, fruitful activity. "Abase yourself," he quotes from Pascal, "such is the Christian ideal." He cites Eusebius as saying to the masters of profane science: "We feel only contempt for your useless labors. We apply our minds to higher things." But what labors, proceeds the anti-clerical, are more useful than those of Aristotle, Euclid, Archimedes, Lavoisier, Pasteur, Duclaux, Berthelot? "The fathers of the church strive to ascertain if the Son coexisted from the beginning with the Father; under what form God is incarnate in the eucharistic bread; if the angels have sex; if the Virgin's mother also conceived through the operation of the Holy Ghost; if the Pope is infallible; and other things of equal intellectual importance, while Pope Gregory I., a saint, burns the magnificent library of the temple of Apollo, formed at great expense by the Roman emperors." Why, asks the senator sarcastically, be bothered with the trivialities of the sages and philosophers of Greece? We have the works of the prophets and apostles, which suffice for everything:

"They suffice for everything, indeed, since, according to Pascal, the secret of the Christian life is the renunciation of everything calculated to inspire intellectual research. The Christian ideal was realized by the hermits of the Theban desert, by Paphnutius, St. Anthony, and that extraordinary Simeon Stylites who spent months and months on top of a pillar in an immovability so ecstatic that birds built nests in his hand. The church has made him the most honored of saints. Such is its invariable ideal from the days of Mary, sister of Lazarus, to those of blessed Mary Alacocque, to whom we owe the devotion to the Sacred Heart. When young girls abandon father and mother to take refuge in the cloister, when Madame de Chantal gives up her young son to enter the convent, they are complying with the gospel injunction—who loves son, daughter, father, or mother more than me is not worthy of me. For centuries and centuries the children of Christians have been reared in this stupefying doctrine. Here is the source of the decline of the nations remaining in submission to the Roman Church."

It is for this reason, concludes the senator, that French anti-clericals maintain their struggle against the church. "To its ideal of death we oppose an ideal of life. Submit, says the church. We reply: Revolt! Revolt against despotism and tyranny. Vindicate your human individuality. Drink deeply of the springs of life, through unhampered research, through labor, through love. Be a creature joyous, dauntless."—*Translations made for* THE LITERARY DIGEST.

RELIGIOUS NOTES.

"I DON'T care how liberal you may be, or how hospitable," writes Rev. W. S. Rainsford in *The Outlook* (New York), "the church of God is not the place to exercise mere hospitality. Every man seeking his Father has a *right* there. The thing is to open your heart and hand to every man because he is a child of God and has a right to hear of his Father; the church was built for that purpose; it is futile for her to repeat the Gospel of freedom and practise something else."

"THE rest of revelation," so Dr. John Bascom thinks (*Bibliotheca Sacra*), "does not lie in itself, but in its correspondence with facts, its disclosure of things. It has been a constant and disastrous mistake in theology to suppose that a certain verbal advantage was given us by revelation; that words, as footprints of thought, might be scented and pursued till the grandest truths were overtaken and pulled down. If we had looked upon the phenomena of life as interpreters of revelation, as we have made revelation the expounder of these phenomena, we should have fallen into no such absolute rendering of depravity, redemption, salvation, the justice of God and His dealings with men, as has characterized our theology."

FOREIGN TOPICS.

AN ANTI-GERMAN VICTORY IN ENGLAND.

STATESMEN who direct British foreign policy are divided into two schools—those who favor Russia and those who favor Germany. A violent controversy between these factions has just ended in a great victory for the anti-German influence. Mr. Balfour, the Prime Minister, announces that the Government will have nothing to do officially with the Bagdad Railway scheme. "The nation had made up its mind after the Venezuelan episode," says the anti-German *News* (London), "that there must be no more flirtations with Germany." It should be remarked, before further press comment is quoted, that a secret treaty admittedly exists between Great Britain and Germany. The fact that the provisions of this secret treaty have so long eluded the conjectures of the anti-German element in England has caused some London organs to think that "it commits the nation to some very doubtful and entangling engagements." It was feared that Great Britain was bound to aid the railway, which, according to the anti-Germans, meant giving the Berlin Government a port on the Persian Gulf and arousing the enmity of Russia. *The Spectator* (London) said on this point:

"How comes it, if the railway is to be purely commercial, that Russia has not been consulted in the matter by us? Has our Government asked the Russians whether they have any objection to the scheme, assuring them at the same time that if so we should certainly not move in the matter? If such a question has not been asked, ought it not to be asked forthwith? In truth, the whole matter turns on the interests of Russia in the scheme. If we tell Russia that we can not allow her to alter the *status quo* in the Persian Gulf, or to make a railway through Persia to a port on the Gulf, and at the same time help an international railway to reach the Gulf, are we not treating Russia with a hostility which must make her believe even more strongly than before that we are her natural and essential enemy—the view that German secret diplomacy has so often instilled into her?"

According to this unfriendly critic, the scheme arose in the mind of the German Emperor, who saw in it a means of furthering his dreams of world conquest. It is conceded that the railway extension would not pay, but the Turkish Government was to guarantee it a certain subsidy and the British Government was to let it carry the Indian mails and to use its good offices to procure it a terminus on the Persian Gulf. This last proviso was what particularly exasperated the pro-Russian organs in London. They pointed out that Great Britain was keeping Russia from the Persian Gulf. Why, then, let in Germany? The matter was warmly discussed from this point of view by *The National Review* (London). There was the further fact that the *Novoye Vremya* (St. Petersburg) had declared that Russia was unalterably opposed to the Bagdad Railway scheme and would regard it as putting a new aspect on the whole Asiatic question. Even the pro-German *Saturday Review* (London) had to make the following admission:

"In all cases the attitude of Russia must be taken into account. Without stopping to bewail the past, it must be recognized that Russia has attained a dominant position in the councils of the Shah. Call it 'commercial occupation,' 'peaceful penetration,' or 'painless identification,' however the process be named and accomplished, Russia at present entirely controls Persian policy. Russia is absolutely opposed to the Bagdad Railway. It introduces foreign commerce and hostile influence into a region which she would wish herself to monopolize. And, worse still, it is a line of strategic importance enfilading her frontier in Asia Minor and preventing a sudden occupation of the Turkish strongholds on an outbreak of hostilities."

The German newspapers do not conceal their opinion that the declination of the Balfour Government to countenance the scheme is a victory for the anti-German party in England. The *Hamburger Nachrichten* says that the event is the result of that unreasonable hatred and distrust of Germany which all Germans note with wonder. The *Vossische Zeitung* (Berlin) says the enemies of Germany in London are mistaken if they think they can baffle the fatherland, and the *Berliner Neueste Nachrichten* says the episode is "evidence of the ill-will with which Germany is regarded by other Powers." The Austrian papers, and particularly the *Neues Wiener Tageblatt*, think the incident foreshadows the rise of Rusian influence in British foreign policy. That discreet organ of the Foreign Office of France—and France is the ally of Russia—the Paris *Temps*, remarks:

"The movement of public opinion in England against any British participation in the construction of the Bagdad Railway is highly significant and worthy of every attention. It shows more than any other one thing the distrust of Germany with which English opinion is penetrated. . . . It is enough merely to glance at the English newspapers to perceive that this feeling is sincere, universal, and without distinction of party. Another German complication! Remember Venezuela! Let us not fall into this trap! Germany wants to fool us again! These are the opinions universally expressed. . . . It is an instructive thing to note."—*Translations made for* THE LITERARY DIGEST.

RECONSTRUCTION OF THE ITALIAN MINISTRY.

A SIGNIFICANT connection is beginning to assert itself between the growth of the Italian navy and the development of Italian foreign policy. It is from this point of view almost exclusively that the late reconstruction of the ministry is commented upon in the foreign press. "Quite recently the Italian navy was called upon to cooperate in the settlement of the Venezuelan question," observes the *Pester Lloyd* (Budapest), and it assures us that there is much meaning in the fact that Admiral Morin, hitherto Minister of Marine, has been promoted to the inner circle of the cabinet, or Consulta, by the bestowal upon him of the portfolio of foreign affairs. Thus asserts itself once more the growing tendency of Roman diplomacy to fall under the control of men who regard a powerful navy as a persuasive force. Other European journals interpret in a similar spirit the fact that Zanardelli, Giolitti, and Prinetti, the triumvirate upon whose shoulders has recently rested the ministry that assumed power in the eternal city over two years ago, have been driven by circumstances to reconstitute the cabinet at last. Signor Prinetti, the minister of foreign affairs, after holding out bravely against a stroke of paralysis for some months, has given way to Admiral Enrico Morin, while the post vacated by that distinguished naval officer is assumed by Admiral Bettolo. These changes are deemed momentous. They will affect not only Italy's relations with the two other Powers uniting with herself to form the Triple Alliance, but they will have a marked effect upon that closer union with France which it is the desire of some Roman politicians to bring about. So says the *Journal des*

ADMIRAL ENRICO MORIN,
Whose assumption of the portfolio of foreign affairs emphasizes Italy's naval policy.

Débats (Paris), which insinuates that Italy's international position may soon bring the question of the Mediterranean prominently to the front. It observes:

"For a long time an effort was made to propagate the idea that republican France was a menace to dynastic Italy. Our adversaries in the peninsula affected to think it but natural that Italian radicals, republicans, and socialists should be advocates of closer relations with France, but they declared that sentiment incompatible with loyalty to the crown. This argument, as is known, was made use of by Crispi to injure us in the estimation of the late King Humbert. But what have we seen? Whereas the chief promoter of Franco-Italian discord was the former revolutionist Crispi, the three conservative ministers, di Rudini, Visconti Venosta, and Prinetti, contributed most, on the Italian side, to closer union with France. Everybody finally perceived how delusive was the revolutionary phantom conjured up for Italian eyes. . . . Admiral Morin, now in the inner cabinet circle after a temporary period of service at the Foreign Office, during which he showed that a naval officer is not necessarily out of his element in a diplomatic position, finds all Italian parties favorable to friendlier relations with France."

The Triple Alliance comes into discussion every time there are changes in an Italian ministry, observes the *Temps* (Paris). When Signor Prinetti, the bicycle manufacturer, an "outsider," took charge of the foreign affairs of Italy a trifle over two years ago, "the stout champions of the Triple Alliance asked themselves if he would have the courage to maintain a combination which, while necessary, doubtless, was also onerous and not at all popular. The advocates of a natural union between France and Italy, between two Powers, that is, who ought to be at one in interests, traditions, sentiment, and aspirations, but between whom hands too adroit have sown dissension, were not without anxiety." But this anxiety has been dissipated, says the Paris paper, and France is convinced that her future relations with Italy will be most cordial. The *Neue Freie Presse* (Vienna), which regards the Triple Alliance from the Austrian point of view, confirms this analysis of the international situation:

"Prinetti laid particular stress upon the promotion of friendly relations with France. In this respect he trod in the footsteps of his predecessor, Visconti-Venosta, but not at all in those of Crispi, who was in the habit of ostentatiously emphasizing the alliance with Germany to such an extent that he offended France. Geographical position, national tendencies, and, if one wants to be sentimental, national affinities indicate for Italy a decided or at any rate friendly relationship with France. . . . Of Italy's two allies in central Europe—let us not deceive ourselves on this point—Austria-Hungary, the neighbor, is the least popular. Everything has had a tendency lately to confirm this lack of popularity. King Victor Emmanuel III. and Emperor Francis Joseph can not, for well-known reasons (the opposition of the Vatican), exchange visits with each other."

While there are many voices friendly to France in Rome, there are still friendlier ones there for Russia, thinks the *Pester Lloyd* (Budapest). "All Europe now bows the knee to Russia." It admits that Signor Prinetti resisted the Russian tendency, but, it asks, who knows if the new minister of foreign affairs will do likewise? Other observers in Austria expect that the Zanardelli ministry will not heed the radical and Socialist element so much as formerly. It may even throw them overboard and accept the support of the faction led by Rudini. The orthodox opposition, led by Baron Sonnino, will come to no terms whatever, it is predicted. The Italian ministerial organ, the *Tribuna* (Rome), does not commit itself on this or any kindred point, but it can not refrain from congratulating the country upon the general character of the Zanardelli ministry. Thus:

"It was during the Zanardelli ministry and while our foreign affairs were under the direction of Signor Prinetti, that the liveliest sympathy for Italy was awakened in England. For the first time in her ancient and exemplary Parliament British ministers were urged to treat our nation with more consideration, to cherish with sincere friendship a natural alliance, a cooperation in the difficult question of the Mediterranean. When the interests of Europe generally in this sea were under discussion, our prior rights in the Tripolitaine were recognized. As England voluntarily offered to refrain from interference with us there, she thereby recognized our ultimate claims. So, too, the French foreign minister, Delcassé, admitted the force of our position and all obstacle from France was eliminated. In this way the Mediterranean, at first the occasion of suspicion and difficulty, became finally the scene of peaceful concord between the Italian and foreign fleets, the source of union of the great Powers which hitherto had struggled for primacy there. Further proofs of improved Anglo-Italian relations were the British support of our efforts against slavery in the Red Sea and our aid in rendering easier to England her pursuit of the Mad Mullah."—*Translations made for* THE LITERARY DIGEST.

THE EUROPEAN CONCERT AND THE BALKANS.

WAR in Europe as a consequence of the alleged bad faith of the Powers in dealing with the problem of the Balkans is a contingency, but far from a probability. Leading organs in Paris, Berlin, and St. Petersburg assert this with some emphasis as a reply, apparently, to the pessimism of the London press and to predictions emanating from papers like the *Indépendance Belge* (Brussels), which are denouncing the European concert for trifling with the crisis. "War can not yet be deemed inevitable," says the Belgian sheet, "but it is none the less true that it is being prepared for on all sides, and it is difficult for Powers ready for the struggle to sacrifice in the interest of peace forces that have been patiently and painfully grouped." It proceeds:

PRINCE FERDINAND OF BULGARIA.
He has been accused of complicating the Macedonian crisis by double-dealing.

"Whose fault is it if things have turned out so badly? Is Turkey alone responsible for this severe crisis? We do not think so, for her chief concern must be to prevent the armed intervention of Europe. The weakness of the Porte has been glaring, it is true, but it was known beforehand that no one could rely upon rapid and energetic action on the part of the Turkish Government. Had it still been capable of such a thing, neither Russia nor Austria-Hungary need have used their influence to impose the reforms upon it. It would have thought out the problem long ago. It would have eliminated the factitious agitation of the Bulgarian revolutionaries, and it would have weaned the Christian population of Macedonia away from them by giving them a government in harmony with their aspirations and suitable to their needs. Turkey's responsibility in this business is therefore very limited, and it is from the guiding Powers that one has the right to ask an accounting for a situation which they have allowed to grow complicated at pleasure, so to speak. Bulgaria, left to herself, can accomplish nothing, has no existence as a political actor. It is Russia who absolutely dominates. It is the St. Petersburg cabinet that is wholly master of its own action. Russia can be censured for having permitted the Bulgarian hopes to expand for years in the direction of a conquest of the Macedonian districts. These hopes are so firmly rooted in the minds of politicians at Sofia that they can not comprehend

advice to them to be patient in the interest of the peace of the world. They have been pushed forward and now it is sought to hold them back."

Bulgaria, Servia, and Greece do not count as guiding influences in the general policy of Europe, continues this authority. These countries are under the protection of one or other of the great Powers. "The latter control the game and they mark the points. When the pretension is put forward to direct the general policy of a continent like Europe, no attention is paid to the unjust reclamations of a petty state, created yesterday. General interests will not be sacrificed to small personal ones. Either the European concert exists or it does not exist. If it exists, let it put forth the solution that it deems just. If it does not exist, what signifies the pretensions of certain Powers to intervene in all international differences?" We are told, to be sure, that perfect harmony subsists in all that relates to the Macedonian question in its connection with the European concert, but as a matter of fact only Russia and Austria-Hungary have appeared openly in the matter. How do the other Powers stand? The Belgian organ thus replies:

"The Russian ambassador and the Austrian ambassador are practically the only ones who are active at Constantinople. France has been the sole Power as yet to give a definite opinion in the matter while acknowledging that the cabinets of St. Petersburg and Vienna should be allowed to adjust the difficulty. Great Britain has palpably shirked the subject. Germany has thought only of obviating the Sultan's serious embarrassments. Moreover, it is known that since Bismarck retired the Balkan question is not worth the bones of a Pomeranian grenadier. As for Italy, she concerns herself chiefly with Austria-Hungary's designs on Albania. What, then, is this European concert in which only Russia and Austria-Hungary are now playing a part?"

PRINCE FERDINAND OF BULGARIA AND HIS WIFE.

Disorder, violence, and pillage are rampant throughout Macedonia, and the fault is entirely that of the Bulgarian bands under revolutionary leaders. This is the estimate of the situation to which the *Revue des Deux Mondes* (Paris) lends the weight of its name. "It is evidently yet the plan of the Bulgarians to force Europe to intervene," says this authoritative periodical. "But Europe is determined not to intervene at all." As for Russia, she is so busy in quite another region of the world that she beholds with an irritated and impatient eye the events transpiring in Macedonia. This view is adopted by the British press, but the London *Outlook* thinks war in the Balkans may yet demand the whole of Russia's attention. It indulges in various gloomy reflections upon the troubles and says:

"The Albanians have given up all intertribal and local strife to unite in resistance of the reform program. Clearly, therefore, the Albanian question is of a highly elastic nature. So also is the Macedonian, of which if we hear less at the moment, the reason is not that a Macedonian is more peaceful and contented than an Albanian, but only that he is awaiting his leader's command to rise and also go forth to slaughter."—*Translations made for* THE LITERARY DIGEST.

DICTATORSHIP IN FINLAND.

WHOLESALE dismissal of judges for refusing to give decisions satisfactory to the governor-general, the opening of private correspondence by the post-office, and warnings to the newspapers to express no editorial opinions without official permission, form the most recent episodes in the Russification of Finland. A patriotic organ published in Viborg, the *Nyheter*, and that well-known Finnish journal, the *Bladet* (Borga), were threatened with suspension for "disrespectfully printing the manifesto of progress" (that is, the Czar's manifesto) on their last page, among the advertisements. The Kotkan *Uutiset*, a Finnish paper which had distinguished itself by a firm but temperate opposition to the Russification of the land, has been compelled by rigorous military measures to abandon anything in the nature of criticism. The only authoritative exponent of Finnish public opinion that now expresses its views freely is *The Finland Bulletin* (London), organ of a patriotic exile group. It said recently:

"Provincial governors who have dared to tell General Bobrikoff the truth, and to request that their statements may be laid before the Emperor, have been dismissed, and already a majority of the provincial governorships are filled by Russians. Even more startling to the mind of the English-speaking people is the wholesale dismissal of the judges of the Court of Appeal at Abo for their refusal to act on instructions received from the executive Government, when by so doing they would have been guilty of violating the law which it was their sworn duty to administer. The independence of the judiciary is one of the most elementary safeguards of popular rights, but that is a principle which is inconsistent with the root idea of Russian methods of adminstration. Simultaneously with the dismissal of provincial governors and judges, steps have been taken by General Bobrikoff, acting under the instructions of his official superiors at St. Petersburg, to tamper with the secrecy of the post-office. Both the postmaster-general and the secretary of the post-office resigned their positions rather than make themselves parties to a course of action which they regarded as not merely illegal, but as contrary to the most elementary principles of good government, as those are understood by a people which has been taught to value and to enjoy free institutions."

The Czar has invested Governor-General Bobrikoff with dictatorial power in Finland, observes the *Aftonblad* (Stockholm), and it says, too, that the absolute authority this official enjoys is to be used in the most unsparing fashion. General Bobrikoff's mission is to stamp out Finnish nationality, to sweep it away as effectually as the wind scatters the dead leaves. He gave an instance of his methods at the time of the unveiling in Helsingfors of the colossal statue of Elias Lonnrot, father of Finland's national literature and recensor of the "Kalevala," the famous Finnish epic. General Bobrikoff insisted that the Finnish national hymn must not be sung at the unveiling, and also that all speeches for the occasion be previously submitted to him that he might "correct" them. These conditions were felt to be intolerable, and the statue was unveiled in perfect silence without

any ceremonies whatever. Commenting on these things *The St. James's Gazette* (London) says:

"The loss to the resources of the Russian empire which this gradual obliteration of Finland is bringing about is totally disregarded by those responsible for this extraordinary reactionary fanaticism of the last few years."—*Translations made for* THE LITERARY DIGEST.

NEXT STEP AGAINST THE MAD MULLAH.

IT has occurred to the British Government to revise its ideas of the Mad Mullah's strategy. There is not to be the least cessation of the pursuit of him across the sands of Somaliland, but the smart defeat recently sustained by the British forces has given the Government at home the benefit of a large amount of newspaper advice. A fatal misconception of the power and resources of the enemy has boggled the pursuit of him from the first, it is contended. "The slow and steady method adopted by Lord Kitchener against a similar foe will have to be adopted." *The Daily News* (London), from which we quote these words, can not pardon the British Government's inadequate measures against the Mad Mullah ever since he first laid claim to attention at its hands. "It is the carelessness of the authorities which is so galling," it declares. It appears from the latest despatches that the Mullah actually had spies in the British ranks who served with the native troops and betrayed every movement to their master. Says the Liberal organ:

"A year hence some minister will arise like Mr. Chamberlain, and tell us, when the agony is past, that it arose out of 'a misunderstanding.' Let us consider for a moment what has actually happened in Somaliland. It was in 1901 that the first expedition set out for the purpose of castigating the Mad Mullah. In May, 1902, a second expedition set forth into the interior, but the Mullah, as usual, retired into his waterless fastnesses. It is therefore the third expedition which has been checked in this month's 'skirmish,' and there is only too much probability that Obbia, with its stores, has been evacuated, and that the line of communication is 'in process of being rolled up.' At present we know nothing but the bare facts, which are bad enough. But no one can acquit the nation—for the responsibility does not wholly lie with the Cabinet—of gross recklessness. We must pull ourselves together, and place the best, the most prudent, and the most far-sighted men at the helm. We must no longer toy with ideals which ought to dominate us. We must recover something of the Puritan passion for hard blows in right causes."

We are asked to believe, however, that the British Government recognized from the very first "the difficulties of the operations in Somaliland," and that on the authority of the London *Times*. "The cooperation both of the Abyssinian and Italian governments was secured before the last active campaign against the Mullah was undertaken," it observes, adding with regard to the recent defeat:

"It can not be denied that this is a very disappointing incident in a campaign which was undertaken with the hope of establishing peace on a settled basis in Somaliland. In that object, Italy and Abyssinia were prepared to cooperate with this country, tho the main burden of action against the Mullah fell upon England. That task has still to be carried out, and the Power which has the largest share of interest in the future of the 'Dark Continent,' and which can not renounce the hope of seeing direct communication by land established between South Africa and Egypt, will not permit it to lapse. It is, no doubt, true that, if the Imperial Government had properly measured, at the beginning, the proportions of the undertaking that had to be faced in Somaliland, more troops would have been provided from India or elsewhere. The splitting up of a comparatively small force, mainly composed of native levies, into still smaller contingents, each acting at a distance from its base, was obviously a source of danger. After the alarming check sustained not long before at Erego, the lesson ought to have been taken to heart. Now it has been driven home again at a heavy cost, and further efforts will have to be made—at a much greater expense than would have been needed a year ago—to wipe out the effect of a reverse which foresight and timely preparation might have averted."

PROPOSED ANNEXATION OF BOLIVIA BY ARGENTINA.

A SOUTH AMERICAN situation of an extremely serious kind may be the outcome of the movement to annex Bolivia to Argentina. An issue of such magnitude is raised by the proposition that the mere discussion of it has affected the tone of press comment, not only in the countries concerned, but in Chile and Brazil. It should be remembered that certain South American republics have declared their resolve to tolerate no fundamental modification of the map of the continent. This is aimed at Chile, whose propensities for territorial acquisition would bring her into violent conflict with the Monroe Doctrine were she a European Power. So thinks the *Prensa* (Buenos Ayres), which, however, has not found it necessary to protest with energy against Bolivia's absorption by Argentina.

Very different is the attitude in Chile. There the newspapers assert that the Santiago Government can never consent to a measure "fatal to the peace of the world." The *Lei* (Santiago) insinuates that if Bolivia feels disposed to submit to a process of absorption she must apply elsewhere than to Argentina, a Power already too great for convenience. The *Ferrocarril* (Santiago) warns both Bolivia and Argentina against precipitating a general war by this step. In Bolivia the *Opinion* (La Paz) suggests combination with Argentina as a means of vindicating the former republic's claim to Acre, upon which Brazil has "ruthlessly trampled." The *Commercio* (La Paz) likewise thinks union with Argentina might be of mutual benefit. In Brazil the scheme is considered menacing even in its present incipient shape. The official *Tribuna* (Rio Janeiro) scores the Argentine Government for "secretly conspiring to change the political map of the continent." It adds:

"While we are discussing terms of peace with reference to the disputed territory of Acre, our sympathetic friends in the opposite camp are secretly conspiring to renew our conflicts by incorporating Bolivia with Argentina. Bolivian journals are even now negotiating this idea as a means of maintaining the national dignity! Such a suicidal notion, such infatuation, dominates the Bolivian people at seeing themselves unable to maintain their sovereignty in the field. We may see in this the result of Argentine diplomacy. But this annexation can never be effected. Neither Chile nor ourselves would consent. It would destroy the balance of power in South America."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

"FUROR AMERICANUS." There was a time when the question of war between Germany and the United States hung in the balance by the weight of a hair and that time was during the recent Venezuela complication. This sensational statement, made in the *Preussische Jahrbücher* (Berlin), a conservative magazine, has attracted much attention in Berlin. "Can this really have been the case?" asks the *Vossische Zeitung* (Berlin). "In Germany no one thought of such a thing." It deprecates the so-called American fury fed by misrepresentations in the English press, and advises that gifts and flatteries from Germany to the United States be stopped and the cultivation of friendly relations on a more dignified basis be begun.

ENGLAND'S PERIL.—"The British navy is not only the possession and the pride of a great nation; it is the sole guarantee of their daily bread, their personal liberty, and their political existence," says *The Monthly Review* (London). It adds: "The world's history shows no parallel to our present position; it is a truism which has been uttered again and again, and which should be repeated until every child in the country knows it by heart, that from the moment when we cease to command the sea, we exist only upon sufferance, and from the moment when our navy is crushed by an enemy England is no more the seat of an empire or a nation, but an island off the coast of Europe, crowded with forty millions of starving and helpless people."

M. LOUBET.—"The French President is, we fancy, essentially a grave and respectable lawyer, with a reminiscence of the farmstead from which he sprang still visible in his character; without genius, but a man of acumen and of sterling worth. He has done nothing great, but under him no one expects disorder; and if he has not picked out first-rate administrators as ministers, he has chosen men capable of the most solid work." Thus the London *Spectator*, which adds: "The French see their innermost preference embodied in the President, and even when it rains epigrams in Paris they pay him every reverence, crowd to hear his plain and direct, tho brief speeches, and strive in every village he passes to display some evidence of good-will."

$500.00 in Cash Prizes

For the Five Best Reasons why Everyone Should Use the

Ostermoor Patent Elastic Felt Mattress $15.

1	Person sending five best reasons,		$100
2	Persons sending five next best,	EACH $50,	100

146	Prizes amounting to		$500

Send for Free 96-Page Book

"The Test of Time," which tells about the good points of the OSTERMOOR MATTRESS that *we* can think of. You don't have to own an OSTERMOOR to enter this competition, but experience regarding its qualities might help you in winning.

CONDITIONS: All answers must be mailed not later than midnight July 31, 1903, and all competitors must answer *all* of the three following questions:

1. Do you own an OSTERMOOR MATTRESS?
2. Have you ever sent for a copy of our free book?
3. Do you wish us to send at once a copy of "The Tes of Time" (mailed free)?

AWARDING OF PRIZES

will be in charge of Mr. E. A. Ames, of Ostermoor & Co., Mr. C. M. Nast, of *Collier's Weekly*, Mr. George H. Hazen, of the *Century Magazine*, Mr. E. W. Spaulding, of the *Ladies' Home Journal*, and Mr. William H. Johns, of George Batten & Co., Advertising Agents, who will judge the answers and award the prizes.

STANDARD SIZES AND PRICES:

2 feet 6 inches wide,	25 lbs.	$ 8.35	All 6 ft. 3 in. long
3 feet wide,	30 lbs.	10.00	
3 feet 6 inches wide,	35 lbs.	11.70	
4 feet wide,	40 lbs.	13.35	
4 feet 6 inches wide,	45 lbs.	15.00	

Made in two parts, 50c. extra. Special sizes, special prices.

Express Charges Prepaid Everywhere.

THIRTY NIGHTS' FREE TRIAL

You can have an OSTERMOOR MATTRESS, sleep on it 30 nights, if it is not better than any other mattress you have ever used, return it at our expense and your money will be refunded immediately without dispute.

CURRENT POETRY.

The Open Door.

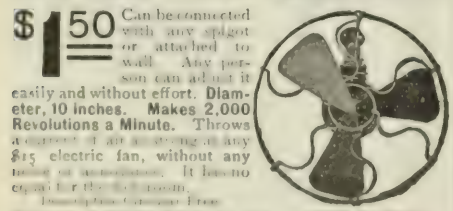
By ROSAMUND MARRIOTT WATSON.

O listen for her step when the fire burns hollow,
When the low flame whispers and the white ash sinks,
When all about the chamber shadows troop and follow
As drowsier yet the hearth's red watchlight blinks.

While bare black night through empty casements staring
Waits to storm the wainscot till the fire lies dead,
Fast along the snow-bound waste little feet are fairing
Hush—and listen—listen—but never turn your head.

Leave the door upon the latch—she could never reach it—
You would hear her crying, crying there till break of day,
Out on the cold moor, mid the snows that bleach it,
Weeping as once in the long years past away.

Lean deeper in the settle—soon but she shall find you—
Find and grow fearsome, too afraid to stay:



WATER MOTOR FAN

$1.50 Can be connected with any spigot or attached to wall. Any person can adjust it easily and without effort. **Diameter, 10 inches. Makes 2,000 Revolutions a Minute.** Throws a current of air as strong as any $15 electric fan, without any noise or annoyance. It has no equal for the [illegible] room.

Do you hear the lunge of the oaken press behind you?
These all her toys were kept, there she used to play.

Do you hear the light, light foot, the faint sweet laughter?
Happy stir and murmur of a child that plays:
Slowly the darkness creeps up from floor to rafter,
Slowly the falling snow covers all the ways.

Falls as it fell once on a tide past over.
Golden the hearth glowed then, bright the windows shone;
And still, still she comes through the sullen drifts above her
Home to the cold hearth tho all the lights are gone.

Far or near no one knew—none would now remember—
Where she wandered no one knew, none will ever know;
Somewhere, Spring must give her flowers, somewhere white December
Call her from the moorland to her playthings through the snow.

—In May *Scribner's Magazine.*

Snow in May.

By MILDRED I. MCNEAL.

She kisses lovingly the crocus' lip,
Seeks out the violet by its mossy stone,
And fondles, while she may, the early ferns—
This childless mother longing for her own.

—In May *Lippincott's Magazine.*

Revealment.

By MADISON CAWEIN.

A sense of sadness in the golden air,
A dreaminess, that has no part in care,—
As if the Season, by some woodland pool,
Braiding the early blossoms in her hair,
Seeing her loveliness reflected there,
Had sighed to find herself so beautiful.

A pensiveness, a feeling as of fear,
Holy and dim as of a mystery near,—
As if the World about us listening went,
With lifted finger and hand-hollowed ear,
Hearkening a music that we can not hear,
Haunting the quickening earth and firmament.

A yearning of the soul that has no name,
Expectancy that is both wild and tame,—
As if the Earth, from out its azure ring
Of heavens, looked to see, as white as flame—
As Perseus once to chained Andromeda came—
The swift, divine revealment of the Spring.

—In May *Atlantic Monthly.*

Two Voices.

By JOHN VANCE CHENEY.

The winds at play on a breezy day,
Sweet, sweet to hear what they sing and say;
But sweeter the murmur of winds that blow
When only the heart and the high leaves know.

—In May *Harper's Magazine.*

IF you believed that the **Cecilian** was a more perfect piano player than any other, that its rendering of any musical selection was *more expressive, more artistic than that of any other*, then the **Cecilian** is the one you would wish to buy, isn't it? We believe that we can prove these facts to your entire satisfaction, and we will appreciate an opportunity of presenting the evidence to you. The Cecilian costs $250.00; monthly payments if desired.

PERSONALS.

A Vatican Episode.—F. Montague Handley, the American sculptor, tells of an episode which he witnessed at the Vatican and which is quoted in *The Saturday Evening Post*:

A young New Yorker wintering in Rome had joined the Circolo di San Pietro, a club to which most of the young Roman noblemen belong and whose object is charity. Shortly after his admission he was notified that an audience was to be given by the Pope to several hundred people on a certain date, and that his name had been placed on the list of club members who would help to receive. Full-dress is always worn at these audiences, and the club members wear a badge to distinguish them from the guests. Our young friend, being somewhat of a dandy, added a few sprays of lilies-of-the-valley to his costume. Now, it is a strict rule of the Vatican that no flowers shall be worn, but of course no one thought of a "Circolo" man ignoring the fact, and nothing was said to him.

As Leo XIII. appeared, carried in his big gilded chair, the receiving-men walked up, as is their wont, to kiss his hand. When the New Yorker approached, the Pope looked admiringly at this fair, stalwart youth, so unlike his young Romans, and then, noting the forbidden flowers, smiled gently.

"We do not wear flowers in the Vatican, my son," he said, taking the offending blossoms as if to cast them away, but he hesitated, smelled their fragrant petals, and then, suddenly changing his mind, he returned them to the owner.

"Keep them," he almost whispered, "and may your life be as spotless as they now are."

Baron von Sternberg Sees the President Off.—The only representative of the diplomatic corps who went to the railway station to see President Roosevelt off on his long Western journey was Baron von Sternberg. A large crowd was present, including prominent officials, but the President saw the baron at once, and, according to the Baltimore *Sun*, jumping forward with his usual enthusiasm, he grasped the baron's hand and exclaimed:

"Why, Speck, what are you doing here? Come to see me off? Why, that's perfectly lovely."

Then when the baron had expressed the hope that the Presidential trip would be a pleasant one, the President asked:

"Are you going to be here when I get back?" An affirmative reply brought:

"Then we'll have some more bully rides together. By the way, where are your horses?"

The baron said they were still in India.

"Then you shall ride mine," replied the Presi-

TO INVESTORS

A VERY UNUSUAL OPPORTUNITY

Mr. John Brisben Walker is taking the Presidency of a Company which offers unusual features for safe and highly profitable investment; namely, First Mortgage, 6-per-cent., Real Estate bonds, accompanied by a 60-per-cent. bonus in the Company's Preferred Stock. This Company takes over more than 900 acres of land within 3½ miles of center of Denver. Berkeley Heights is the most beautiful plateau around this rapidly growing metropolis of the Rocky Mountain region—the most prosperous city on the continent to-day. The property is to be immediately developed upon an extensive scale as a residential quarter upon modern plans, with reservations. Mr. Walker will hold a controlling interest in the stock, and personally recommends the investment as absolutely safe and likely to be extremely profitable. For further particulars address James Randolph Walker, Secretary, The Berkeley Heights Investment Co., Irvington-on-the-Hudson, New York.

Who makes the lamp chimneys?

Macbeth makes the good ones.

His name on every one.

If you'll send your address, I'll send you the Index to Lamps and their Chimneys, to tell you what number to get for your lamp.

MACBETH, Pittsburgh.

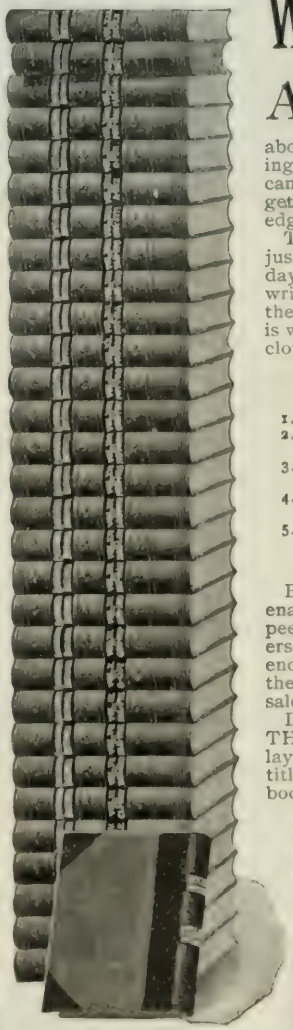
Why Some Men Succeed!



31 Massive Volumes
Weight Over 200 Lbs.

A MAN'S SUCCESS is largely due to his ability to learn things and to put what he knows into practice. If the **Encyclopaedia Britannica** can give you the living facts about any trade, profession or calling — teach you ironworking, chemistry, engineering, science, philosophy or history — can you afford to go without it, especially when you may now get it for a few cents a day? It contains the kind of knowledge that helps men to succeed.

The **Encyclopaedia Britannica** is without a peer. It supplies just the sort of information the busy man needs from day to day. With its 25,000 pages teeming with thought and facts, written by 2,000 of the ablest minds in the world, it represents the highest sum total of human learning and research. That is what critics mean when they call it the *one standard* encyclopædia.

A COLLEGE AT HOME

In the ENCYCLOPAEDIA BRITANNICA you have:

1. A corps of teachers of recognized authority.
2. A series of special articles on every important subject, many of which have been reprinted as text-books for use in schools.
3. An outline course of reading which will guide you along private lines of work.
4. A mine of general facts always open to you, giving a fund of knowledge unsurpassed by any college curriculum.
5. A wise friend to cultivate during your spare moments or during the long winter evenings.

And the Price is Special

By reason of our large advertising contracts we have been enabled to supply the **New Twentieth Century Edition** of this peerless work at remarkably low terms and direct to customers, giving THEM the benefit of the middleman's profit. An enormous number of sets have been thus distributed during the last few months — no less than 252 carloads! — a greater sale than all other encyclopædias combined.

DO NOT PUT OFF doing a good thing. CUT OUT THE COUPON GIVEN BELOW and send it in before you lay aside this magazine. **A PROMPT RETURN** of it will entitle you to the special price and privilege of paying for the books in **SMALL MONTHLY SUMS.**

WHAT IS SAID OF IT

"It is without a peer in the whole noble army of encyclopædias."
LYMAN ABBOTT, D.D.

"The Encyclopaedia Britannica is king of its tribe."
PROF. DAVID SWING

"If all other books were destroyed, the Bible excepted, the world would lose but little of its information."

THE LITERARY DIGEST.

dent. "I want you to ride them all the time I am away. Promise me you will. My horses and Mrs Roosevelt's will be in the stable here during our absence, and I want you to use them. You (turning to his sister, Mrs. Cowles) are to see that my horses are at the disposal of Baron Sternberg during my absence, and see to it also that he rides them."

The baron promised that he would.

"But I'm afraid," he protested, "they can't carry my weight."

At this the President laughed heartily, as the Sternberg physique is diminutive. The President gave over half his time while waiting for a personal chat with the German envoy. Later, after the visitors had left the car and just as the train started, Mr. Roosevelt hurried out on the rear platform and called:

"Baron, baron——"

As the German minister turned the President waved his hand and called out:

"I just wanted to tell you again, baron, how much I appreciate your coming to see me off. It was lovely of you. I am perfectly de-light-ed."

One Place Left for General Grant. At a recent meeting of Confederate veterans in Richmond, many amusing tales were told. One of them was how General Grant got the worst of it at the hands of a Southern woman. The Baltimore *Sun* tells the story:

While Grant was in Charles City county an old lady sent one of her grandchildren to him to ask where he was going.

"Tell your grandmother," said General Grant, "that I am going to Richmond or Petersburg, or heaven or h—l."

In a little while the boy returned and said:

"Grandmother says you can not go to Richmond, for General Lee is there; you can not go to Petersburg for Beauregard is there; and you can not go to heaven, for General Jackson is there."

General Grant very readily saw that only one place was left to him in case he wanted to go somewhere.

A Cool Monarch.—King Victor Emmanuel III., of Italy, is known for a man of dauntless courage and iron nerves. To show this, *The Saturday Evening Post* tells the following story:

A few years ago while holding the rank of colonel in a regiment of artillery he was intrusted

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

with the testing of a new cannon that the Army was then experimenting with. He proceeded to the trial field accompanied by several officers of rank and the inventor, and after a short explanation of the relative points of the gun, order was given to train it at the target.

At the first shot the huge engine of destruction exploded near the breech with a terrible crash, and the panic-stricken men fled precipitately. Not so Victor Emmanuel, who did not stir an inch, but, turning with an amused smile to the frightened officers, reassured them chaffingly:

"No danger now, gentlemen," he said calmly; "you should have fled before the explosion."

Coming Events.

May 19.—Convention of the American Federation of Musicians, at Indianapolis.

May 19–21.—Convention of the Military Surgeons' Association of the United States, at Boston.

May 19–22.—United Confederate Veterans' National Reunion, at New Orleans.

Convention of the National Master Plumbers' Association, at San Francisco.

May 21–24.—Convention of the National Railway Agents' Association, at Eureka Springs, Ark.

May 22–28.—Convention of the National Electric Light Association, at Chicago.

May 20–22.—Convention of the Sunshine Society, at New York.

Current Events.

Foreign.

MANCHURIA.

May 4.—Ministers in Peking discuss with Prince Ching the Manchurian demands of Russia; the demands are the same in effect as those originally cabled, despite Russia's denial.

May 8.—The Russian troops reoccupy New-Chwang and fortify points between Lioa and Yalu rivers.

May 9.—The Russian troops withdraw from New-Chwang.

THE BALKANS.

May 4.—An engagement occurs at Monastir between Turkish troops and revolutionists.

May 5.—News of an engagement between Turks and revolutionists at Okrina, on May 2, is received.

May 6.—The Porte addresses a sharp note to Bulgaria holding it responsible for outrages committed in Macedonia.

May 7.—Bulgaria returns the Porte's note.

May 9.—A supposed agent of the Macedonian insurgents blows up a mosque at Kuprili, on May 2, burying 200 Moslems in the ruins.

The Turkish Government apologizes to the Bulgarian diplomatic agent at Constantinople for domiciliary visits by police and arrests of Bulgarians in that city; the Government also requests Austria and Italy to withdraw their war-ships from Salonica.

OTHER FOREIGN NEWS.

May 4.—King Edward leaves Paris and arrives at Cherbourg; Emperor William attends a military review near Rome.

Thousands of Jews are fleeing from Kieff, Russia, fearing an antisemite crusade.

A Nicaraguan rebel ship sinks a government ship; the revolutionists are reported to be gaining ground.

May 5.—King Edward arrives in London; Emperor William and King Victor Emmanuel visit the Benedictine Abbey at Monte Cassino.

The associated Chambers of Agriculture in London protest against the abolition of the grain tax.

The Italian Under-Secretary of State makes a statement in regard to the international

The Connecticut House of Representatives rejects the woman-suffrage bill.

May 7.—Former Mayor Ames, of Minneapolis, is found guilty of accepting a $600 bribe.

May 8.—Secretary Root exonerated General Baldwin from the charge of criticizing Filipino and negro soldiers.

May 9.—A supposed infernal machine, containing one hundred pounds of dynamite, is found on board the Cunard liner *Umbria* just before she sailed.

May 10.—A blue book is issued containing the correspondence and dispatches relating to the Venezuelan controversy.

The Civil Service Commission issues a statement in regard to the appointment, as a rural free-delivery carrier in Tennessee, of

Pears'

People have no idea how crude and cruel soap can be.

It takes off dirt. So far, so good; but what else does it do.

It cuts the skin and frets the under-skin; makes redness and roughness and leads to worse. Not soap, but the alkali in it.

Pears' Soap has no free, alkali in it. It neither reddens nor roughens the skin. It responds to water instantly; washes and rinses off in a twinkling; is as gentle as strong; and the after-effect is every way good.

Established over 100 years.

DIAMONDS ON CREDIT

THE loved one's emblem of her bethrothal should be a Diamond solitaire ring. In addition to being beautiful it should be valuable The giver should remember that it is a life-gift; that it lasts forever and every day reminds the wearer of the giver and his generosity. He should also remember, that it will be the best investment to which money can be put, for Diamonds increase in value at the rate of about 20 per cent annually. On the **LOFTIS SYSTEM**, the most beautiful Diamond rings, brooches, studs, lockets, earrings, cuff buttons, watches, etc., may be bought on the **INVESTMENT PLAN.** You simply select the article from our **beautifully illustrated catalogue**, and it will be delivered at your door with all express charges paid. Only one-fifth of the price need be paid at first; the balance falling due in a series of small payments extending over eight months. No interest is charged; no security is required and no publicity is created when you open a **CONFIDENTIAL CHARGE ACCOUNT** with us. When you make a selection it is always upon the distinct understanding that your money will be promptly returned in case you decide not to purchase. We are the largest concern in the business and one of the oldest (Established 1858.) We sell only the finest Diamonds and our prices are from 10 to 20 per cent lower than those of other dealers. Every Diamond is sold under a written guarantee of quality and value, and at any time in the future will be accepted at full price in exchange for other goods or a larger Diamond. **Our Confidential Credit System** is open to all honest persons without regard to their financial worth; but to those who prefer to pay cash we make the most astounding and liberal offer ever made. It is no less than guaranteeing the return of all money paid—less ten per cent, at any time within one year. **Please write for our Catalogue** which fully illustrates our beautiful goods; quotes the lowest prices and explains our popular system in every detail. **We also send a Souvenir Booklet which is worth its weight in gold to any person interested in Diamonds.** We refer to your local bank—step in and ask them to tell you how we stand in the business world. They will consult their Dun or Bradstreet book of commercial ratings, and tell you that no house stands higher in credit, responsibility or promptness.

Comments by Reichhelm.

(a) The Berger defense consists in playing K—B sq, then on R x B, Kt—Q B 3; 11 P—Q 4, etc. White can't take Knight on account of Q—Q 5 ch, and, on any other line, can't afford to lose time by wantonly waving Rooks.

(b) P—Q 4 is bad on account of B x P ch.

(c) These countermoves constitute the Napier attack, which, at first sight, appears to do up poor White.

(d) A departure from the accredited move, which is P x B, but it amounts to about the same thing.

(e) The saving clause.

(f) Another very important move for White.

(g) If Q x P, White wins through Q—R 8 ch, P x P ch, etc.

Eugene Delmar suggests instead of 14 Q—R 4 ch, 14 R x B ch, Kt x R; 15 Q—K sq, and he believes that Black has a very difficult game to defend.

Canadian Pacific Railway

..SEASON 1903..

The first Imperial Limited Train of the CANADIAN PACIFIC RAILWAY will leave Montreal and Toronto on June 7th, and on each succeeding Wednesday, Friday and Sunday during the season. Its equipment will be superb and up-to-date in every respect. It is scheduled to reach Banff in 72 hours, and Vancouver, B. C., in 97 hours. This service will be in addition to the daily Pacific Express, thus giving ten through trains weekly from ocean to ocean.

The C. P. R. Rocky Mountain Hotels

have been enlarged to double their former capacity, and provision has been made to accommodate a large additional volume of travel. The Châlet at Emerald Lake is ready, and now forms a convenient base from which to visit the unrivalled waterfalls, forests and glaciers of the Yoho valley. The popular Châlet at Lake Louise has been added to and improved.

The Vienna Tourney.

What is known as a King's Gambit Tourney is in progress in Vienna. The Masters contesting are Pillsbury, Marshall, Teichmann, Gunsberg, Mieses, Swiderski, Tschigorin, Schlechter, Marco, and Maroczy. The first two moves in every game must be as follows:

1 P K 4 — P K 4
2 P K B 4 — P x P

making the King's Gambit. Out of this sacrifice of the P comes various openings: The Allgaier; the Allgaier-Kieseritzki, the Muzio, Salvio, Cunningham, and Cochrane, all leading to brilliant play.

It is the opinion of some masters that any Gambit as unsound, and should lose, simply from the fact that the first player gives the second the odds of a Pawn. Others hold that the loss of the Pawn is more than compensated by the attacking position.

At the time of going to press the score stands:

Marshall	2	1	Teichmann	1½	1½
Mieses	2	1	Tschigorin	1½	1½
Pillsbury	2	1	Schlechter	1	2
Marco	1½	1½	Swiderski	1	2
Maroczy	1½	1½	Gunsberg	½	2½

MAL-ASSIMILATION

Lowers Your Possibilities

Mentally, Physically and Genitally

Mental Symptoms

The mental symptoms of mal-assimilation are: Lack of concentrating power, failure of the memory, imperfect judgment, indisposition to use the will, worry, blues, despondency, irritability, lack of confidence in one's self, in his friends, and even in his Creator.

Physical Symptoms

The physical symptoms are an indisposition to exert one's self, tired feeling, depression, heaviness of the body, imperfect circulation, cold hands and feet, nervous twitching, neuralgia, and darting pains, complicated by mental symptoms.

Genital Symptoms

Genital symptoms of mal-assimilation are failure of the organs to perform their functions properly, shown by irritation, inflammation, and even paralysis. These symptoms are always complicated by the preceding symptoms.

Local Symptoms

The next set of symptoms which make their appearance in one who is suffering from mal-assimilation is congestion in one or more of the various organs composing your body. Congestion may continue until degeneration and dissolution set in. The weakest organs suffer first, but sooner or later throw the others out of gear. All these troubles are caused by the fact that the individual cannot assimilate the food which he is eating, and rid his system of the poisons caused thereby; it is therefore evident that he should change his diet.

By practical experience in thousands of cases, I have found that the more natural the food taken into the system, the more naturally it is assimilated, thus making the individual healthier, mentally, physically and genitally.

A Business Man's Testimony

DR. JULIAN P. THOMAS, 26 W. 94th St., New York City. SPRINGFIELD, ILL., January 9, 1903.

My Dear Doctor:—Three months' treatment with you has increased my weight from 142 to 175 pounds, something I have longed for all my life, but never expected to attain. For twenty-six years I have been compelled to use a syringe daily to keep my bowels open. I have not needed it for two months, thanks to your treatment. For years I have suffered from indigestion and mal-assimilation of food, having more or less pain in my stomach and bowels all the time. Now I am well and happy, thanks, a thousand times, to you and your wonderful system of dieting and exercise. You have simply performed a miracle on me and my gratitude is unbounded. You can safely refer inquirers to me and tell them that my business takes me out on the road four or five days each week, and I have not lost a day from work since you commenced treating me. Yours in health and gratitude,

W. H. Frederick

The Literary Digest

VOL. XXVI., NO. 21 NEW YORK, MAY 23, 1903. WHOLE NUMBER, 683

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

AMERICA'S DESTINY ON THE PACIFIC.

THE United States not only maintains, by the Monroe Doctrine, its paramountcy in this hemisphere, but, President Roosevelt declares, we must dominate the Pacific ocean. The President's speech in San Francisco, on Wednesday of last week, in which he expressed this view, reminds several papers of the conduct of Balboa, who claimed the entire ocean for his sovereign as soon as he set eyes on it. The President said:

"Before I saw the Pacific slope I was an expansionist, and after having seen it I fail to understand how any man, confident of his country's greatness and glad that his country should challenge with proud confidence our mighty future, can be anything but an expansionist. In the century that is opening, the commerce and the progress of the Pacific will be factors of incalculable moment in the history of the world.

"Now, in our day, the greatest of all the oceans, of all the seas, and the last to be used on a large scale by civilized man, bids fair to become in its turn the first in point of importance. Our mighty republic has stretched across the Pacific, and now in California, Oregon, and Washington, in Alaska, and Hawaii, and the Philippines, holds an extent of coast line which makes it of necessity a Power of the first class on the Pacific. The extension in the area of our domain has been immense, the extension in the area of our influence even greater.

"America's geographical position on the Pacific in such as to insure our peaceful domination of its waters in the future if only we grasp with sufficient resolution the advantages of this position. We are taking long strides in this direction; witness the cables we are laying and the great steamship lines we are starting, steamship lines some of whose vessels are larger than any freight-carriers the world has yet seen.

"We have taken the first steps toward digging an isthmian canal, to be under our own control, a canal which will make our Atlantic and Pacific coast lines, to all intents and purposes, continuous, and will add immensely alike to our commercial and our military and naval strength. The inevitable march of events gave us the control of the Philippines at a time so opportune that it may without irreverence be held Providential. Unless we show ourselves weak, unless we show ourselves degenerate sons of the sires from whose loins we sprang, we must go on with the work that we have begun.

"I earnestly hope that this work will always be peaceful in character. We infinitely desire peace, and the surest way to obtain it is to show that we are not afraid of war. We should deal in a spirit of fairness and justice with all weaker nations; we should show to the strongest that we are able to maintain our rights. Such showing can not be made by bluster, for bluster merely invites contempt.

"Let us speak courteously, deal fairly, and keep ourselves armed and ready. If we do these things we can count on the peace that comes only to the just man armed, to the just man who neither fears nor inflicts wrong.

"We must keep on building and maintaining a thoroughly efficient navy, with plenty of the best and most formidable ships, with an ample supply of officers and men, and with these officers and men trained in the most thorough way to the best possible performance of their duty. Only thus can we assure our position in the world at large, and in particular our position here on the Pacific."

Russia, Japan, England, Germany, and France also have interests in the Pacific, some of them very important; but most of the American papers agree with the President that our interests are paramount, and that our influence must be made equal to our interests. Says the Baltimore *American*:

"There are reasons, so valid that nations are bound to respect them, why we should dominate the Pacific ocean. No other nation has interests comparable with ours that center there. We have our own Western coast line lapped by its waters. Then we have Alaska, the Hawaiian Islands, Guam, the Philippines, the Midway Islands, and one of the Samoan group, all of which are set down in that mighty ocean. These possessions—and there is nothing left upon which any other Power might seize as a site for dependencies equal in importance to those held by this nation—are destined to play a conspicuous part in our future development. They will become the homes of millions of Americans, and their mines, fields, and factories will give freely of their products to supply our wants and swell our national wealth. Every consideration demands, therefore, that the Pacific ocean, which we are compelled to use as a highway in going to and coming from our distant possessions, shall be dominated by this Government. This may be a selfish view to take of a grave question, yet it is moderate and progressive, and the only one permissible if we would guarantee the freedom and security of intercourse with those possessions."

The Boston *Transcript* expects to see the expansion of our trade and influence which the President foretells, but believes that it will be accomplished peaceably:

"This expansion can be peaceful. That it will come by the mere push of a people eager for trade is scarcely to be questioned. The people of the Pacific slope look out upon the Pacific as we look out upon the Atlantic. Sir Edward Creasy, writing fifty years ago his 'Fifteen Decisive Battles,' expressed the opinion that the progress of the American people westward would not

stop at the Pacific, and that the conquest of China and Japan by the fleets and armies of the United States might be witnessed by men living when he wrote. Half of Creasy's prophecy has been realized, but thanks to a benevolent tendency in our national character which he did not detect, we have become the great friend of China and Japan, not their conquerors. Strongly planted within eight hundred miles of Hong-Kong, the United States is still more likely to be a friend to the great Eastern empires than when she was separated from them by the whole width of the Pacific.

"President Roosevelt realizes that our expansion in the Pacific carries with it the possibilities of frictions we have heretofore escaped, and urges that we have a formidable war fleet for the protection of our merchant marine. That we shall have a fleet equal to our needs we have no doubt. It will come from the expansion of our merchant marine, by the evolution so familiar in the history of maritime nations. On the development of the merchant service depends the development of the navy. No nation ever yet became great in naval warfare that did not have a great merchant service. A great navy without a great mercantile marine simply shows the former to be artificial, that the tendencies of the people of the nation that has it are not toward the sea."

THE PENNSYLVANIA LIBEL LAW.

SELDOM has such a chorus of disapproval and denunciation been heard from the American press as that which greets the new Pennsylvania libel law which was signed by Governor Pennypacker on Tuesday of last week. The newspapers outside that State, which are not directly affected by the new act, devote columns of editorial space to censure of the law and the governor; while within the State every newspaper that has come under our observation, from the Philadelphia *North American*, aggressively Democratic, at which the law is believed to have

MUZZLED!!
—*The Philadelphia Evening Telegraph*

been principally aimed, to the strongest and most consistently regular Republican journals, like the Philadelphia *Inquirer*, condemns the measure. If the intent of the act is, as supposed, to suppress the editorial and cartoon assaults on Governor Pennypacker, Senator Quay, and other political leaders, it has so far had an effect exactly opposite to that intended, for never have the cartoons been more satirical, nor the editorials more incisive, than now.

Under the new law, "negligence . . . in the ascertainment of the facts" by any newspaper shall be sufficient ground for damages "for injuries to business and reputation" and "for the physical and mental suffering endured by the injured party"; and whenever the matter complained of "has been given special prominence by the use of pictures, cartoons, headlines, displayed type, or other matter calculated to specially attract attention, the jury shall have the right to award punitive damages against the defendant or defendants."

Governor Pennypacker accompanies his approval of the measure with an explanatory message of some 3,500 words, giving his reasons for signing it. He devotes a large part of the message to an attack on the newspaper methods of criticizing himself, Senator Quay, the mayor of Philadelphia, the members of the legislature, and other public officials; but he also says:

"There is nothing in the terms of the bill which prevents any newspaper from making such comments upon legislative measures or upon the official acts of state, municipal, county, or public officers as are proper for the information of the public or are in the line of legitimate public discussion. There are no inhibitions in the bill. It subjects all preliminary inquiries as to facts and their subsequent publication to the test of care. The doctrines of the law of negligence are well known and apparently easy of application. Haste and recklessness in the ascertainment of facts prior to publication, or in the manner of publication, amounting in the judgment of a court to negligence or the want of that degree of care which a man of ordinary prudence would exercise under the circumstances, will, if proved, give a ground of action for such damages as result from injuries to business and reputation. There is no interference with 'privileged communications.'

"The bill, in its application, is not confined to officials, but affects as well the citizen or business man whose conduct constitutes no part of the right of the public to information. The corporation officer who has been falsely charged with crime; the manufacturer who has been falsely accused of being a drunken brawler; the woman whose domestic griefs have been unfeelingly paraded, or whose chastity is improperly suspected; the student who has been falsely accused of murder; the clergyman who has been cruelly maligned; the quiet citizen whose peace of mind has been destroyed by the publication of evil gossip; the merchant whose credit has been affected by groundless rumors; the sufferers from reckless but not necessarily malicious publications, are given the right, not to prohibit publication, but to recover the damages which they have sustained, provided they prove negligence or lack of care on the part of the publishing newspaper. All of these are instances of what has, in fact, recently occurred."

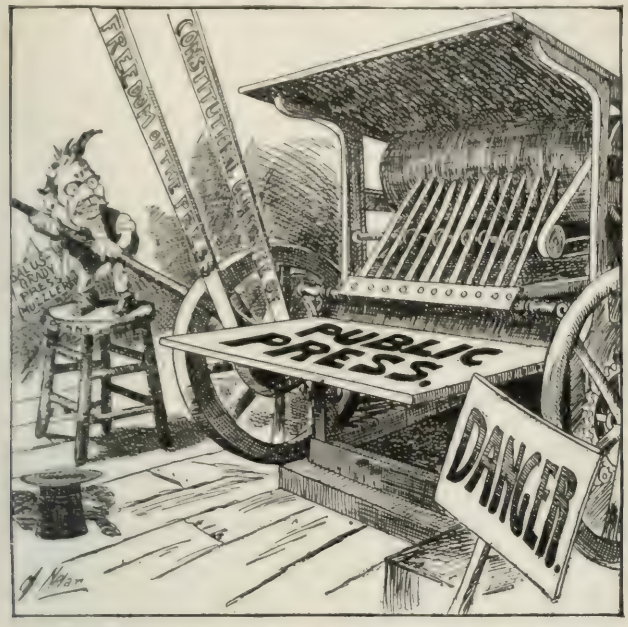
The Pennsylvania papers fall back on the provision of the state constitution that "the printing-press shall be free to every person who may undertake to examine the proceedings of the legislature or any branch of government, and no law shall ever be made to restrain the right thereof," and proceed to discuss the governor with the greatest freedom. He is considered by the Philadelphia *Evening Telegraph* (Ind. Rep.) the "latest recruit" to "the frightened, cowering gang of political hucksters" who are running the State; while the Pittsburg *Times* (Rep.) says:

"He will take his place among those lonely and forbidding figures in history that are recalled only by reason of some act of shame, or folly, or of treachery to their fellow men. Nothing that he may do in the almost four years more of his term will ever regain for him the public confidence and esteem. He has put a blight upon his own name and fame, upon his State, and upon the statute books. While in office he will be sneered at, and when he goes out he will be forgotten. It was a bad day for Pennsylvania and a sorry day for Pennypacker when his cousin picked him out for governor."

The Pittsburg *Post* (Dem.) accuses him of being a "convenient tool" of Senators Quay and Penrose, and proceeds:

"How does Samuel W. Pennypacker, governor of this commonwealth by the grace of Cousin Matthew Stanley Quay, feel now? Is he stalking in his ancient boots across the modern carpets of the executive office, buoyed by his immeasurable conceit

that he has woven a cloak to protect all the public rascals that may flourish during his term? Or is he wringing his hands like Lady Macbeth and shrieking, 'Out, damned spot'? But let him not lay the flattering unction to his soul that he has muzzled the press. It is believed to be true that the Salus libel bill is his progeny. He drafted it, and he presaged its passage in his



GOVERNOR PENNYPACKER SAYS OF THIS CARTOON, IN HIS MESSAGE:

"A cartoon in a daily journal of May 2 defines the question with entire precision. An ugly little dwarf representing the Governor of the Commonwealth stands on a crude stool. The stool is subordinate to and placed alongside of a huge printing-press, with wheels as large as those of an ox team, and all are arranged so as to give the idea that when the press starts the stool and its occupant will be thrown to the ground. Put into words, the cartoon asserts to the world that the press is above the law and greater in strength than the Government. No self-respecting people will permit such an attitude to be long maintained. In England, a century ago, the offender would have been drawn and quartered and his head stuck upon a pole without the gates. In America to-day this is the kind of arrogance which 'goeth before a fall.'"

inaugural. He enacted the miserable pretense of hearing the publishers of the State, but, like an unjust judge, his mind was not open to conviction when he began the hearing. . . . . .

"If due excoriations of this misfit governor, just criticisms of this product of the Perkiomen valley affect him, let him bring suit against *The Post*. This journal will not hesitate, now or hereafter, to expose the scoundrels in public life who filch money from the treasury, shake the plum-tree for luscious fruit, concoct bills to afford chance for blackmail and ransom from corporations and business institutions, or to provide means for syndicates of favored relatives to utilize the public utilities of cities for self-enrichment; and if such exposures grate upon the Ancient One he should join in the petition.

"*The Post* will take every opportunity to picture by cartoon and flay by words political corruption, and the efforts of a pitiable and inexpressibly little occupant of the gubernatorial chair will prove futile. If this libel law is intended as a payment to Cousin Quay for having made him the chief executive, he should have the courage to say so. Governor Pennypacker is regarded as an honest man, but so, too, was Don Quixote."

The Philadelphia *Press* (Rep.), which supported the governor during his campaign and until now, is unable to follow him further. "He has hopelessly blighted his administration," says *The Press*, and "has proved himself so narrow, so jaundiced, so pitifully small, as to share in a great public wrong and destroy what might have been an honorable fame." *The Press* also remarks that, in referring to one of the Philadelphia cartoonists, in his message, as a "hired outcast," the governor becomes the first offender under the new law. The Philadelphia *North American* (Ind.), in a severely denunciatory editorial, says of the governor's message:

"What a shallow, vain, and bumptious governor it is, to be sure, that has written down such childish twaddle, emphasizing his inflated sense of personal importance as a reason for putting a muzzle on the printing-press of a free people.

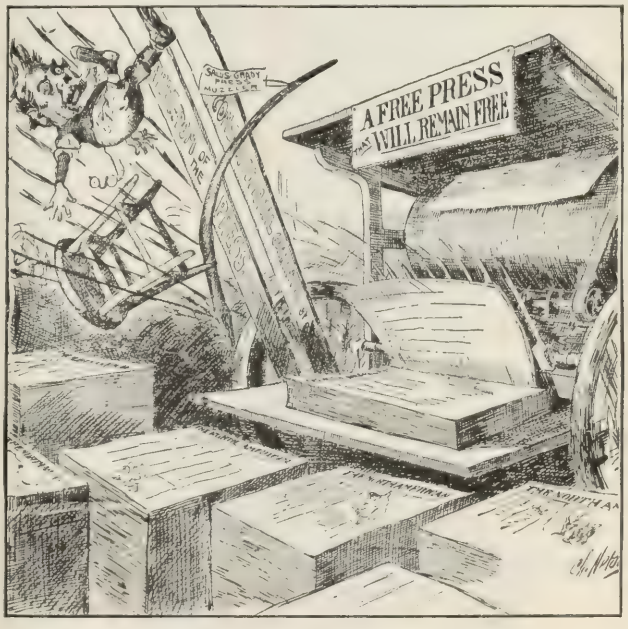
"It would be useless and tedious to follow the governor through his puerile paper. It abounds in false analogies, false facts, false law, false history, and false grammar. It is sanguinary, barratrous, pedantic, misleading, and disingenuous from beginning to end. Its ideals are ignoble and its morals are sodden as those of a thrall of the Middle Ages. It breathes the spirit that animates tyrants and urges the familiar tyrant's plea against free speech and a free press. It would fit the lips of a Torquemada or a Louis XI., and should blister the tongue of any lover of liberty to utter. . . . . .

"His bloodymindedness and infuriated hostility to the freedom of the printing-press lead him likewise into the grossest falsehoods and perversions of history. In his reckless fury he says as follows:

"'Many years' experience on the bench has led me to the conclusion that crimes are widely propagated' by the press. Falser words were never uttered or a baser slander ever penned. A free press is crime's greatest enemy, and none fear a free press or desire its restriction so much as criminals and their friends—particularly official criminals.

"What are the crimes which Pennypacker's 'long experience on the bench' caused him to conclude were 'widely propagated' by the press? Was it ballot-box stuffing? Gambling with public funds? Official bribery? Policy, pool-selling, slot-machines, prostitution, speak-easies, rape, burglary, larceny? Name the crimes, thou flippant and reckless slanderer, that a free press has 'widely propagated.' Name them or stand convicted of a lying insult to the journalism of your State. Thousands of honorable men, engaged in as honorable a vocation as you ever followed—who never stood in a criminal dock, as well as always have kept their promises and paid their debts with money honestly earned—are grossly, falsely, and malevolently insulted by your charge that they have widely propagated crime. The law against gross and reckless defamers of reputation applies to private persons. Why should it not apply to gubernatorial purveyors of slander and libel?"

The Philadelphia *Ledger* (Ind.) thinks the measure is "rightly



BUT THE PRESS DIDN'T STOP, AND IT WON'T.

This cartoon, which is virtually a defiance of the governor, appeared in the Philadelphia *North American* the day after he signed the bill.

condemned and opposed," but believes, at the same time, that the newspapers are "unduly excited." It observes:

"The courts can be trusted to interpret the law, when called upon, with impartial justice. We do not believe that this act will be found to have made any material change in their action or rulings, or in the attitude of juries, any more than it will affect the conduct of responsible newspapers. It has injured its

promoters more than those who sought to persuade them from an error.

"While the newspapers of Pennsylvania were right in opposing the lawless spirit manifested in this legislation, they have nothing to fear from its consummation. If it has any good purpose, it can do no harm; its evil intent must defeat itself. It has neither increased nor diminished the actual responsibilities of newspapers which seek only to print the truth, in soberness and reason, and an exchange of angry vituperation and personal resentment between public officers and their critics can gain no credit to either side nor prove of public interest or advantage."

THE COTTON BOOM.

THE recent rise in the price of cotton to between 11 and 12 cents a pound, the highest point in thirteen years, has added something like $110,000,000 to the value of the American crop for the year 1902, assuming it to be 11,000,000 bales, which is now the lowest estimate made by any of the reliable statisticians. Altho cotton has not again taken its place as king of commercial and industrial products, it is likely to do so in the near future if the world's consumption continues to increase, for there are fairly well-based claims that the maximum of production has about been reached in this country, and the foreign product increases far less than the demand. As to the value and relative importance of the crop, the New York *Journal of Commerce* says:

"The value of the crop is partly a matter of estimate, as the commercial year ends with August 31, but it is set down at $501,897,134, making it next to corn the most valuable crop of the country. Last year was an exceptional year with corn, but for 1901 its value is put at $921,555,768. That of wheat for the same year, when the crop was larger than last year's, was $467,350,156. Attention is called to the fact that within the limits of the 'Louisiana Purchase' 2,439,965 bales of cotton were grown last year, valued at $113,885,044. It occupied but one per cent. of the area of that territory and furnished 23 per cent. of the cotton production of the country. In exports raw cotton holds the first place, amounting for the fiscal year ending June 30, 1902, to $290,651,819, which was $77,517,475 in excess of the value of breadstuffs exported and $90,790,441 more than that of provisions, including meat and dairy products. Including the products of cotton, manufactured goods, waste, and the seed products, the exports were valued at $349,479,747, or 25.8 per cent. of all the commodities sent abroad."

The crop of 1901 was 10,700,000 bales, and that of the year previous was but 10,400,000, while the world's American consumption during those years was equivalent to 12,000,000 bales per annum. Thus the large surplus stocks carried over from previous years were so reduced that we carried over at the end of last year the smallest world's visible supply of American cotton in a number of years. It is thus assumed that it will require a crop of at least 11,000,000 bales this year to meet the world's requirements to the beginning of the new crop year. This is the situation in a nutshell, and is no doubt the basis for the unprecedented rise in price. But how will the increased price affect consumption? This is best answered by the following despatch from Fall River, the great cotton-manufacturing center of New England, to the *Journal of Commerce*:

"The continued rise in the price of raw cotton and the stagnation in the cloth market, together with certain other unfavorable features, are causing some uneasiness among many of the managers of the forty manufacturing corporations in this city. Mill-owners in Rhode Island and elsewhere also are watching the situation closely, but in no section has a satisfactory remedy been decided upon. Manufacturers assert that the wages as well as cotton are too high, while cloth is too low.

"Some of the managers favor a general reduction in wages, while others advocate a curtailment in production; but so far there has been little disposition among all mill treasurers to act in harmony. It is thought that unless conditions show signs of improvement within the next month individual curtailment will be resorted to.

"A reduction, on the other hand, can be brought about only by general agreement, and it is by no means sure the treasurers would act together on this question any more than on that of curtailment.

"Manufacturers say the high price of cotton is not the only difficulty which confronts them. They say the cotton they are compelled to buy is either tinged, stained, or dirty, and they can not hope to store goods made from this kind of staple at the high-notch costs now prevailing. Much of the cotton that is being offered is little better than high-grade waste, but the brokers say that prices for other grades are prohibitive and there is little for the manufacturers to choose from."

But the fact of public importance is not the speculative movement of cotton nor its statistical position. It is rather that this agricultural staple brings in an annual income of more than half a billion dollars to a comparatively small section of the country,

"A LITTLE LOUDER, PLEASE."
The Chicago Record-Herald.

WHAT IS THIS—A POLITICAL PROBABILITY, OR A DREAM?
—The Duluth News Tribune.

SOME POLITICAL UNCERTAINTIES ILLUSTRATED.

and that it stands next to corn as the sovereign product of commerce and industry. Says the Atlanta *Constitution*:

"When the cotton growers of the South by a large majority can 'corner the market' on their own behalf by being independent enough in cash and credit to hold their crops at their own will, then a large share of the advantages now monopolized by the exchange gamblers will pass from them forever. If the Southern planters can only have a few more years of good prices like those of the past three seasons, those of them who have wit enough to dodge flying bricks will be in such financial condition as to escape the compulsion of selling their crops at opening prices."

PREVALENCE OF STRIKES.

THE strike items have become so numerous in the past few weeks that some of the newspapers are beginning to wonder if the nation's business is not being seriously affected. In Lowell, 17,000 textile workers have been on strike for six weeks; in Chicago, 20,000 strikers in various trades are idle; in New York, 4,000 subway workers are out, and there is a fight between two carpenters' unions that has tied up a large proportion of the building enterprises in the city; something like a thousand striking Italian track-workers have been marching up and down the railroad between New York and New Haven trying to precipitate a general strike; in Omaha, 3,000 teamsters are striking; there is a strike on the Mobile and Ohio Railroad, and a strike of boilermakers on the Union Pacific; the Staten Island carpenters are out; a strike of 635 employees of the Hammond (Ind.) Packing Company has determined that firm to move to Chicago; in Denver, the butchers, the bakers, the cooks, and the waiters are striking for recognition of their unions; in Toledo last week a funeral was interrupted by the union hackmen because a non-union man was driving the hearse; in New Haven last week the union grave-diggers refused to dig a grave for a funeral conducted by a non-union undertaker; and in the same city it has been found desirable to request the mourners to come to the funerals in union hacks.

"Candid men do not view the situation hopefully," declares *Dixie*, a manufacturers' journal published in Atlanta. It goes on to say:

"Employers generally believe that the lines are being strengthened for battle. The labor-unions are already 'belligerent.' Numerous overt acts have been committed. The other side, rather slow to recognize the situation, inclined, until now, to treat the matter lightly, has at last sounded a bugle call, and the forces are marshaling: for counsel first, and for fighting later on, if necessary; and the general impression prevails that fighting is going to be necessary. The labor leaders are spoiling for it, undoubtedly, and the employers have tired of compromises. They are going to have fair play or a fight, and most of them think that one will be impossible without the other, for the unions are laying down conditions that can not be complied with. They demand control, absolute control, and when they accept less, it is simply because brute force has failed to secure all. The questions of justice and fair play are not considered, and greater strength would mean greater injustice, for the measure of their demand is simply the measure of their power.

"With the employer the question is that of abject submission or war. He is preparing for war, and on his preparedness for this contingency rests the hope of increasing wisdom, and a better recognition of right methods, on the part of labor leaders."

People who are inclined to view the labor situation with alarm may find comfort, however, in the following reassuring reflections by the New York *Evening Post*:

"There is a prevailing belief in the public mind that labor troubles were never so numerous, never so menacing to the prosperity of the country and the peace of society as now. It is true that the outlook is serious, but it is not true that this is the worst situation we have ever faced. In 1877 several large cities were in the hands of mobs in consequence of strikes, and the militia were under arms in half a dozen States, including New York and Pennsylvania. The city of Pittsburg was set on fire and the railroad shops and depots were consumed together with a vast quantity of goods in transit. The government of Fort Wayne was temporarily overthrown, and its place was taken by a committee of strikers, who solemnly proclaimed themselves the friends of law and order. A similar condition of affairs existed in Hornellsville and other places in Western New York.

"These scenes of disorder were due to a strike against a reduction of wages which had been brought about by the panic and commercial crisis of 1873. The immediate trouble passed away, but the eternal question, What is a fair day's wages for a fair day's work? remained. It came up later in the Martin Irons strike on the Missouri Pacific Railway and again in the Debs strike against the Pullman Car Company. The latter began with a local strike on the Great Northern Railway and extended itself to all the Northwestern States, as far as the Pacific Coast, leading to the employment of the regular army by President Cleveland to suppress riots in Chicago and to clear the way for trains in California. Still later came the great strike in the building trades in Chicago, which stopped the work of construction, and even of repair, in that city for eighteen months.

"We recall these comparatively recent events in order to remind those who are inclined to pessimistic views that the present is not the most discouraging period that American industry has ever witnessed. The main difference between those disturbances and the present is that the earlier ones came in times of great business depression, while the present ones are coincident with the greatest prosperity that the country has ever known. All the strikes now, in so far as they relate to wages, are strikes for an increase, not against a decrease. These facts show pretty conclusively that we shall never reach a golden age when employers and employees will be permanently content with the conditions in which they find themselves."

INJUNCTIONS IN OMAHA.

NO one in Omaha has yet been restrained by injunction from continuing to breathe, but the application of injunctions there has proceeded further in that direction than such orders have hitherto gone. Judge Baxter, of Omaha, on Thursday of last week, according to a special despatch to the New York *Times*, issued an injunction restraining Mrs. E. Berge from talking so much. It appears that Mrs. Berge talked so much that the other tenants of the apartment-house where she lived and talked began to move out, thus causing financial loss to the owner of the house. Mrs. Berge refused to leave until her lease expired, so the owner secured the injunction. More fame, however, has been accorded by the newspapers to two other Omaha judges, Judge Munger and Judge Dickinson, who have each taken a hand in the Omaha teamsters' strike. Judge Munger issued his order on May 6, upon the request of fifteen employing companies, restraining the members of the teamsters' union from interfering in any way with the non-union men, "and, further, restraining and enjoining the Team Drivers' International Union, Local 71, its officers and members, from continuing said organization, and from continuing in combination or agreement to restrain commerce between the States," etc. Judge Munger perceived, next day, however, that his injunction was so sweeping as to prevent the men from holding meetings, employing counsel, or even declaring the strike off, so he eliminated the provisions quoted above. Then the labor-unions resorted to injunction. Judge Dickinson, upon request of the attorney for the strikers, issued an injunction on May 12, restraining the business men of Omaha from threatening, boycotting, or bribing the unionists, from refusing to sell goods to the unionists, from threatening or intimidating other business men into discrimination against the unionists, "from importing, or engaging agents or servants to import, any laborers into the city of Omaha or State of Nebraska, in pursuance of any existing plan to destroy labor organizations, or under any similar or new arrangement or

plan," and "from bringing any other injunction suits or actions, in pursuance of any general plan of prosecutions to break up labor-unions, or of any new or similar plans connected directly or indirectly with any existing plans."

The New York *Times* notes with interest that the business men are not restrained from standing on their heads during business hours, and the New York *Mail and Express* remarks that the learned judge is "several sorts of a freak." In the main, however, the newspapers think that honors are about even between the two parties. "At all events," says the New York *Evening Post*, "the employers who resort to the courts for injunctions against similar conspiracies on the part of the unions, can not complain if they are required to take their own medicine now and then."

In the mean time, business in Omaha is pretty badly tied up by the teamsters' strike. Says the Omaha *News*:

"Omaha is confronted with a grave crisis. A labor strike is never a pleasant thing. When both sides line up with a grim determination to win, it becomes so serious as to command the attention of every one.

"That situation exists in Omaha to-day. Business is proceeding with the utmost difficulty. Three thousand men are idle, and not alone are they affected, but their families, their meat dealers, their grocerymen, and others are suffering.

"The inactivity in commercial lines is spreading, until not alone Omaha but its tributary territory is suffering. The country merchants who depend upon the wholesale houses for their stocks are seeking other sources of supply. In short, Omaha's commercial supremacy is threatened. . . . Why not arbitrate now, and save Omaha from a commercial stagnation which it will require five years to overcome?"

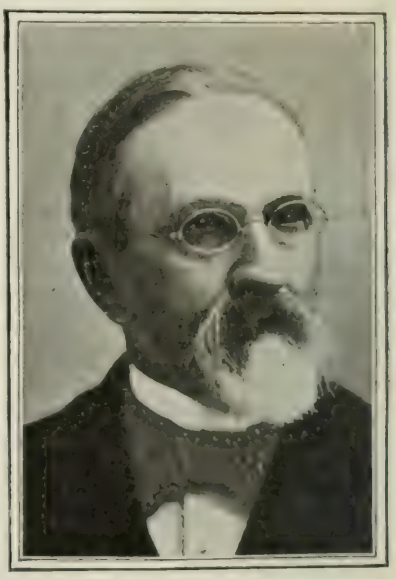
CANAL TREATY IN DANGER.

THE reports that the Colombian Congress is likely to reject the Panama Canal treaty have been received by our newspapers with no little surprise and concern. Recent despatches affirm that a number of government officers are wavering in their adherence to the treaty, and predict that the majority of the Congress will vote against it. In a despatch to the New York *Tribune* it is asserted that opposition to the treaty is spreading among the people of Colombia. Three elements oppose it. One element antagonizes the feature giving the United States perpetual control; another urges that the indemnity and annuity are not sufficient; and the third element consists of the revolutionary spirits, who fear that with the Colombian treasury enriched by $10,000,000, which is to be paid to Colombia by the United States, the Government will be strong enough to destroy all hope of success from any revolutionary movement. But, in spite of this opposition, William Nelson Cromwell, attorney for the new Panama Canal Company, believes that the Congress will surely ratify the treaty. Señor Herran, the Colombian Minister to the United States, however, takes a gloomy view of the situation. He is quoted as saying:

GEN. RAFAEL REYES,
Reported successor of President Marroquin.
Courtesy of "El Economista Internacional."

"While the outlooks for the passage of the canal treaty at the extraordinary session of the Colombian Congress, which has been called to meet June 20, are not hopeless, they are certainly not as bright as the friends of the canal could wish. There is a very strong sentiment in Colombia against the canal. It is regrettable that this should be the case, as the construction of the canal by the United States would be of benefit to my country.

"My strongest fear is that the Colombian Congress will tinker with the convention and amend it and change it until it will prove absolutely unacceptable to the United States Government. I am familiar with the situation in both the United States and Colombia, and I, with other friends of the canal, regret the existence of a mistaken sentiment which will do more to prevent the construction of the waterway than anything else.



JOSÉ MANUEL MARROQUIN,
President of Colombia, who is said to have resigned, in despair of the ratification of the Panama canal treaty.
Courtesy of "El Economista Internacional."

"The Colombian people believe that the consideration of the Nicaraguan Canal route by the United States Government was merely a ruse, a barefaced bluff, and they scoff at the idea that there was anything more in it than just that.

"The friends of the canal in Colombia, notably Enrique Cortes of the well-known Colombian firm in London of Cortes & Co., have done, and are doing, through their arguments and able writings and by every other means in their power, a great deal to eradicate this false idea. But it is still a fixed belief in the minds of a large portion of the Colombian population."

A few of the papers take a somewhat pessimistic view of the situation, and their fears have increased considerably since it was reported that President Marroquin, who has been an earnest supporter of the canal project and in favor of the ratification of the treaty, has resigned. These papers declare that if the President has resigned, it is probably due to his inability to secure the consent of the Colombian Congress to ratify the treaty, for when he called the special session to meet June 20, it is believed that he was confident of having sufficient support to assure its approval. General Rafael Reyes, who, it is reported, will succeed President Marroquin, has in no way expressed himself as opposed to the construction of the canal by the United States, but he is suspected of being a little cold toward the treaty. The Washington *Star* makes the following observations on the President's reported resignation:

"The news is disquieting to those who hope for the prompt ratification of the treaty and the starting of the great canal work by the United States. The Government can not afford to be kept in suspense while rival Colombian factions strive for the mastery or the Congress haggles over the treaty, using it as a weapon in campaigning for political advantage. The canal work has already been too much delayed by legislative debates, and Colombia should be reminded, when the occasion offers, that it has no assured corner on available routes."

"The Panama people understand too well the advantages they would gain from the completion of the canal to endanger the work by haggling too long over its 'terms,'" says the Brooklyn *Times*; and "when they find that the Government of the United States has reached the limits of its liberality, they will doubtless ratify the treaty without more ado." If the Colombian Government fails to ratify the treaty, or is disposed to defer final action, the State Department at Washington, it is expected, will reopen

negotiations for the Nicaragua route. But the Colombian Constitution gives the President considerable power. In case of disturbed conditions, or if there is a sign of forcible opposition to the Government, or a revolutionary uprising, he can assume dictatorial powers and ratify the treaty himself. "The choice of the Panama route was a stupendous blunder," in the opinion of the New York *Herald*, "but it is not yet too late to secure the building of the canal viâ Nicaragua, where all conditions—physical, sanitary, technical, and political—conspire to favor its construction."

MASSACRE OF JEWS IN KISHINEFF.

THE Czar and his Government are held responsible by most of the American papers for the massacre and pillage of the Jews of Kishineff, the capital of Bessarabia, in Russia, on April 19 and 20, the days of the Russian Easter celebration. The reports of the affair which have reached this country by wire and mail have it that the police and other officials in Kishineff actually urged on the rioters, and that some of them took an active part in the saturnalia of murder, rapine, and plundering that left 8,000 families homeless and destitute, 500 persons wounded, and 50 dead. What purports to be the text of a remarkable despatch from von Plehve, Russian Minister of the Interior, to the governor of Bessarabia, sent three weeks before the massacre, is printed in the newspapers, from which it appears that the outbreak was fully expected. Instead of enjoining the governor to preserve order, however, von Plehve dwells upon the "undesirability of instilling by too severe measures anti-governmental feelings into the population," and tells him to use "admonitions, without at all having resource, however, to the use of arms." It was only after this peculiar Easter celebration had been running amuck for two days that the Minister authorized a military demonstration. The troops were ordered to fire into the air, and at the first discharge the mob dispersed

HIS LITTLE JOKE.

"Oh, no! We are not occupying Manchuria, Manchuria is merely occupying us." —*The New York Press.*

and quiet was restored. Some of the rioters were hurt by the Jews who tried to defend themselves, so "a ministerial circular forbidding the Jews to defend themselves" has been issued, according to a despatch from St. Petersburg, and "it is expected," the despatch proceeds," that this step will stimulate Jewish emigration to America."

All these bits of evidence are accepted by our newspapers as proof that the Czar's Government is responsible for the Kishineff massacre, and they do not hesitate to point at him the finger of scorn and derision. This is the author of the peace conference and the manifesto of religious toleration! exclaims the New York *Jewish Daily News*. This is the ruler who seeks vaster territories, the guardianship of weak peoples, the "white man's burden"! exclaims the New York *World*. This is the monarch who admonishes the Turk to reform! exclaims the Pittsburg *Gazette*. This is the ruler, remarks the Philadelphia *Inquirer*, who thinks that the men and women who dare to discuss political and religious progress are not fit to live in Russia, and must be exiled and excommunicated! No such Government, declares the New York *Times*, "can be called civilized, or can ask the respect of decent governments," and the New York *Commercial Advertiser* says:

M. VON PLEHVE,

Russian Minister of the Interior, who is accused of complicity in the Kishineff massacre.

"Russia, indeed, to-day stands before the world not as one of the great Powers of Christendom, but as a gigantic force which makes for barbarism. In the Far East, her emissaries have destroyed respect for treaties. They have violated the law of nations, and they have done it with the shamelessness of Orientals in whom there is no touch of the higher, nobler civilization of the Western world. In Finland, the liberties of a free people are being remorselessly trampled under foot in defiance of the written promises of the Russian autocrat. And now in Bessarabia, the work of devils has gone on unchecked until the imagination is appalled by the mere recital of the nameless horrors. Surely, the rulers of no nation can pile up offenses such as these and go unscourged. A few more chapters added to a chronicle so black will cause the name of Russia to be held in universal detestation as that of an enemy of all mankind."

The Philadelphia *Ledger* says similarly:

"The modern world can not countenance crimes like this. It can not even suffer them to pass with mere private and unofficial protest. If the Russian Government, sounding proclamations of religious freedom on its lips, has no protection for its citizens of the Jewish faith; if its provincial governors look out of the windows of their palaces upon three days' massacre without lifting a finger to save property from destruction, men and babes from torture and death, and women from dishonor, then the Russian Government has no title to the respect of civilized Powers, and deserves to be dealt with as are barbarous nations when they outrage humanity.

"The swelling wo of the Kishineff horror is upon the Christian as well as the Jewish world. They were Jews who suffered; Christians who inflicted the suffering. It behooves the Christians of enlightend lands where sectarian persecutions are impossible and inconceivable to purge their religion from the blood with which its white garments have been stained in Bessarabia. The Christian nations hate, abominate, abhor, and execrate the deeds of Kishineff, and it is within their just province to demand of Russia that she punish the guilty and see to it that from this moment the persecution of Israel cease."

Says the London *Jewish Chronicle*:

"We charge the Russian Government with responsibility for

the Kishineff massacre. We say it is steeped to the eyes in the guilt of this holocaust. If Europe does not disassociate itself from the leprous taint of this barbarian Power it writes its humanity down as a sham, its civilization as organized hypocrisy. The explanation of the Minister of the Interior is of a piece with the lies and prevarications which for years have poured from the Russian official printing-press. . . . . .

"The whole of Russia, from the bureaucrats who lord it in their offices down to the local officials, the well-dressed ladies who shared the spoil from the looted shops, and the blood-drunken mob, is convicted of this foul crime. . . . . .

"The Central Government is doubly guilty. So long as a 'civilized' Government brands 5,000,000 people as a perilous pest which must be slowly annihilated, so long its baser subjects will think themselves justified in accelerating the process of extermination with knives, axes, and hatchets."

MYSTERIOUS DEPRESSION IN SECURITIES.

THE fact that the general lists of railway and industrial securities have reached lower figures than for the past two years, despite the further fact that their earnings average higher than at any time during the same period, causes interested business men anxiously to ask: "What's the matter?" Mr. J. Pierpont Morgan answered the query a few weeks ago, and he made the term "undigested securities" a transient by-word. But he added that stocks had found their level and would soon begin to rise. *Per contra*, during the next few days they slumped still further. Then, by request, Mr. E. H. Harriman, another financial and business authority, rose to assure the public that the worst was over; but it was not. Many are still giving reasons for the remarkable situation that has put the stocks of such railway systems as the New York Central and the Pennsylvania at from 25 to 30 points lower than they were last February. The New York *Financial News* says there is "abundance of money indeed, the man who has money to lend has to go out these days to look for a borrower," and it draws the conclusion that "the American people have been extremely busy the past season and are now resting and looking the situation over." The New York *Herald* notes that "many take a blue view of the widely distributed labor disturbances." The New York *Sun* is of the opinion that "one thing that would help matters a good deal would be the cessation of the dangerous upward movement in the price of cotton." But *The Evening Post* takes the opposite view: "It is evident that the conditions of the cotton market are going to prove of immense benefit to the Southern planters and to the railways and the other corporations in the Southern States. It may be said, in short, that accepting the theory that the prosperity of the farmer underlies the prosperity of all other classes in the community, present conditions and prospects furnish no ground for cavil." It likewise has this to say regarding the somewhat important point as to whether the West has money enough in its banks to move its crops without Eastern assistance:

"Western despatches in the past week or two have renewed the assurance that this year's interior can move the crops for itself without drawing currency from the East. This is a rather familiar statement at the present season, but it depends now, as always, on the position of the interior banks themselves.

"Last year the West sent currency steadily to New York, up to the closing week of August. It then began to draw, and in the two ensuing months, notwithstanding large inflow of currency from near-by cities, New York's net loss in cash was $21,000,000. It shipped to the harvest States during the season at least $50,000,000, and probably a good deal more.

"To move the crops cash is required, not credit. The West can provide the harvest money, which it could not provide last year, on either of two conditions—if it holds enough in actual currency reserve or if its liabilities are so much reduced that it will need less currency in its own vaults to keep good its reserve percentage."

However this may be, from present indications it will require more currency to move the crops this year than for several years past, for the reason that they promise to be larger. And if it requires more money to move them, it will make better business for the railroads. Then why this depression of their securities? Some of the newspapers aver that the depression is due to apprehension caused by the labor troubles; but others point out that there was more apprehension last year at this time, when the miners' strike was threatening every branch of industry which used coal.

The Real Estate Record and Builders' Guide (New York) remarks that while "general business is very prosperous . . . . one gets the impression that the business of the country has come to a turn in the curve." And it goes on to say:

"The stock market has distinctly lost tone of late. More liquidation is undoubtedly in progress and that by very strong interests. Should the crop news continue to be bad it is very probable that the present sagging market would continue throughout the rest of the year. It by no means follows, however, that a smaller volume of general business and lower prices will be accompanied by a steady decline in security values. The financial position of the more important railroads and of many of the industrial corporations is very strong. They have been making large expenditures out of income for permanent improvements, and in most cases they are earning handsome surpluses over dividends declared. They could consequently stand very severe losses in gross earnings without diminishing their distributions to stockholders. The underlying business situation is consequently very strong; and it would take a very severe fit of business depression to affect the income-producing power of this class of securities. Moreover, while the present speculative temper continues, values are likely to be diminished more than there is any real justification for, so that under some really favorable piece of news, such, for instance, as better summer crop prospects, the market might well recover with a bound. For the present, however, things look the other way."

LETTERS AND ART.

LITERARY MOVEMENTS IN TURKEY.

IT is so seldom that anything about the literature of modern Turkey appears in print that one turns with some curiosity to an article in *La Revue* (Paris) by a Turk, Dicher Bey, on the subject of literary tendencies in his own country. He finds among the "Young Turks" what may be characterized as a literary school, the leader of which is Halid Zia, and to this leader and this school he applied the terms decadence and romanticism. The thought of Dicher Bey is not as clear and well-defined as it might be, but critics of Turkish literature who have a first-hand acquaintance with their subject do not abound, and his views will be read, therefore, with interest. He writes:

"A little *résumé* of the history of Turkish literature would have been an illuminating preparation for the ensuing study in criticism of the 'young' literature of Turkey. This school, however, is, so to speak, independent. Having its roots without the literary traditions of Turkey and its sources of inspiration in the modern school of France, our 'young' literature forms a class by itself. . . . One of the principal figures in this new school of romantico-decadentism is Halid Zia, and here I must interrupt myself, because I have employed the word 'decadent,' which, before I proceed further, I shall be obliged to define in its application to the Turkish writers.

"Is not decadentism 'art which has reached a point of extreme maturity, caused by the oblique sunlight from aging civilizations' (T. Gautier)? According to this definition, I should find it difficult to show you anything but semblance of maturity in our singular civilization, which grew old without ever having become mature. For the solution of this paradoxical situation, I have been obliged to take an analytical survey of the physiological and psychological traits of our writers, particularly those which were of the Turkish race. The summary of my conclusions is that this condition has resulted largely from the manner in which Turkey has thrown herself into the Western civilization, without preparation and without system, with the result that the alien civilization is only a veneer covering a rough and brutal foundation. . . . Being without national traditions, the education of these men [representatives of the 'Young' Turks] sometimes rings false. Too quickly formed, they lack the force given by a solid foundation of traditional learning. It is therefore difficult to classify their work, to understand their origin, to judge rightly what their several capacities are, and to feel what the predominating influence of their work is."

The most conspicuous example of these interesting hybrids, Halid Zia, has had an important influence on Turkish thought of to-day, so we are told. Dicher Bey describes this author as follows:

"A romanticist who had gone astray in decadentism or a poet who had mingled with the ideas of a romanticist the intemperate and nervous style of the de Goncourts—so Halid Zia appears to me. Always under French influence, he followed in turn de Musset, then Théophile Gautier, whose plastic style he borrowed, then Daudet, whose sensitiveness and sympathy he possessed naturally. But the fact that he has formed himself on the models of the French romanticists and decadents does not cause me to judge him after French ideals and French methods, for then I should have explained nothing."

Dicher Bey proceeds to describe Halid Zia as full of sentiment and sympathy, nervous and impressionable, and withal profoundly moral and honorable. His intellectual surroundings are described as follows:

"He came at a moment when the public was deafened by the unfruitful tempests aroused by our great vulgarian (the one who wished to be called the Voltaire of Turkey), Ahmed Midhat, and his disciple Nadje, the docile mouthpiece of his ideas. The public, which at bottom was very restrained, full of old prejudices, acquainted only superficially with science, with a doubtful taste which was easily pleased, had on the other hand an inextinguishable thirst for occidental civilization, of whose exterior it had caught dazzling glimpses. . . . . .

"The public had for national poet the great Kémal Bey, also Ridjaï Zadé Ekrem, and Abdulhac Hamid, whose talent was cut short; for universal genius, savant, and philosopher, Ahmed Midhat; but it desired a novelist of talent, responsive to its ideals, realizing its dreams, giving a fictitious picture of life as they would have enjoyed living it, love affairs they would like to have had, written in a delicate and esthetic style—something new and fresh in both style and sentiment. Our language was heavy through and through; in spite of the work done by Kémal, it was still involved, it was a language laden with symbols, with old catch-words, with conventional phrases. At this time there appeared at intervals and steadily improving 'Numidé,' 'Carnet d'une Morte,' 'Ferdie et Cie'—a long line of novels published in the papers."

These novels by Halid Zia are discussed one by one, and "Bleu et Noir" is given as the author's masterpiece. A school of young men soon formed themselves around Zia, all of whom were the outcome of the peculiar conditions and in each the thought of France was engrafted on Turkish civilization. Halid Zia has progressed steadily toward realism, giving vivid pictures of the life of Turkey of to-day. "To a Frenchman," says the writer, "this literary movement might appear old and even superannuated; but to us realism was something absolutely new," and Halid Zia and his school, we are assured, have renewed the life of Turkish literature, opened the door to new thought, and, above all, rejuvenated the written language.—*Translation made for* THE LITERARY DIGEST.

SINGING A LOST ART.

THE close of the opera and concert season is usually signalized by the appearance of critics who await their opportunity to discharge a whole battery of lessons, not infrequently animadversions on the artistic method employed by those who have ministered to our pleasures. A British critic, Mr. M. A. R. Tuker, writing in *The Nineteenth Century* (May), addresses especially a British audience, but with a comprehension that implies the extension of his remarks to other countries. He declares that the art of singing, the true *bel canto* which the teachings of Porpora developed less than two hundred years ago, is already a lost art, and that the modern substitute is a hybrid production of the declaimer or the *diseur*. "We have no longer the *cantante*," says the writer; "we roar, scream, or warble, we talk or we declaim, we pour out sentiment and 'classical taste'—but do not sing." We quote further:

"Popular taste and popular sentiment have made of our modern singers not vocal artists, but vocal artisans, vocal 'Jacks of all trades.' The public does not expect art, the trained organ, the voice which resembles the pipes of an organ; but in its place it asks for sentiment, and an amateur and untrained use of the voice which is thought to be vocal expression, so that a voice which does not provide us with adventitious effects is supposed to be inexpressive. We forget, or we have never known, that it is because the instrument is imperfect that it yields us this class of effects, while it is at the same time incapable of producing the only effects which would be legitimate. This absence of legitimate technique causes the young singer to mistake the real resources of his art, and he is supported in his ignorance by British sentimentalism. Popular taste in Italy may be saved by the necessity for passion in art, but there is no such safety-valve in the unbroken sentimentality of the English ballad. The ethical rather than artistic instinct which asks claptrap sentiment of the arts, which makes the 'gods' applaud a sound commonplace sentiment in a theater, and miss the only art in the piece, tolerates and encourages vapid sentiment in singers. . . . . .

"The singer's audience, as it settles itself down to listen, hugs itself with the flattering assurance: 'I know what I like.' Curiously enough, this is held to imply some definite esthetic criterion. Yet in what other art would such a criterion pass muster? For the chance good singer, therefore, a hard fate is

reserved; he sings before judges who 'know what pleases them' and are devoid of all criterion of the art they are to judge. . . . . No public has sufficient art to judge for itself, and there are now not enough great singers to teach them. That which pleases them and that which accords with the traditions of the art have in this year of grace 1903 no chance of being identical."

Mr. Tuker therefore points out that intelligent criticism is at this moment one of the chief *desiderata*, for if the singers do not know how to sing, neither do the critics know how they ought to sing; and he spends considerable space in holding up to scorn the ignorance and mistaken notions of many whom the papers have employed to write musical criticism. The writer's attitude is not wholly one of pessimism, for he affirms that it is unlikely that singing should flourish if the conditions remain unchanged. A dearth is noted of first-class oratorio and concert-singers, and an impresario is quoted as asserting that his difficulty was not in the selection of operas but of finding singers to interpret them, adding that "Lucrezia Borgia," "Norma," "Medea," "Vestale," "La Sonnambula," and "Flauto Magico" are practically debarred from production because there are scarcely any who can sing them. The writer continues:

"A return to the Italian school of which Titiens wrote, 'Believe me, there is but one method of singing—the good old Italian,' is in the air, and we hear much talk, not seasoned with the same amount of knowledge, about methods of singing. It is improbable that we should always be content with opera which affords no scope at all for *bel canto*. We must get some distance from a movement if we would place it in its due perspective, if we would see it in relation to what went before and what will come after it. Those who came to mock at Wagner remained to pray; but the cheap, silly contempt for the Italian school, to which we owe every step in the art of music till we come to the German giants of the late eighteenth century, was clearly evanescent. That a change is coming has been prophesied on both sides of the Atlantic. Italian opera with Italian voices has just been tried with signal success in Vienna, and Covent Garden followed suit last season."

THE PASSING OF A VENERABLE POET.

RICHARD HENRY STODDARD, who died at his home in New York city on Tuesday, May 12, in his seventy-eighth year, was, since the recent death of Charles Godfrey Leland, the eldest of our living poets and one of the best beloved by his associates. Through him the earliest circle of American authors was connected with the latest. As the New York *Evening Post* remarks:

"He was a lonely survivor of the class which, seventy years ago, made many an American literary reputation on a slenderer basis than his. Willis, and Halleck, and Paulding—they were, as Irving, numbering himself with them, confessed to James Grant Wilson, 'fortunate in being born so early. We should have no chance now against the battalions of better writers.' Stoddard seemed to belong to that generation—tho born too late to reach great fame by its standards."

"But," *The Evening Post* adds, "tho his individual name stood for less than did the names of his early associates, his typical capacity appeared to be heightened by the flight of years; until, at his death, he represented as no other American writer did the tender grace of a day that is dead."

This grace, as expressed in Mr. Stoddard's poetry, has been described by his old friend, yet nevertheless impartial critic, Edmund C. Stedman, in "Poets of America." Referring to Stoddard's long service in journalism (he was literary reviewer of the New York *World* from 1860 to 1870, and of the New York *Mail and Express* from 1880 until his death), Mr. Stedman says:

"The exigencies of his profession have too constantly drawn upon his resources; the bulk of his miscellaneous verse is large, and to this is somewhat due its unevenness. No poet is more unequal: few have more plainly failed now and then. On the other hand, few have reached a higher tone, and a selection could be made from his poems upon which to base a lasting reputation. 'The Fisher and Charon,' 'The Dead Master,' and the 'Hymn to the Sea' are noble pieces of English blank verse, the secret of whose measure is given only to the elect; one is impressed by the art, the thought, the imagination, which sustain these poems, and the Shakespeare and Lincoln odes. Stoddard's abundant songs and lyrics are always on the wing and known at first sight—a skylark brood whose notes are rich in feeling. The sweet and direct method of 'The King's Bell' placed him high in the ranks of writers of narrative verse. Among poets equal to him in years, he is, perhaps, the foremost of the artistic or cosmopolitan group."

RICHARD HENRY STODDARD AND HIS WIFE.

He was a connecting link between the earliest and latest groups of American authors, and his wife's poetic and dramatic talents were esteemed by some even more highly than his.

Mr. and Mrs. Stoddard celebrated in 1902 a sad and lonely golden wedding, for the last of their three children, Lorimer, a successful dramatist, had just died. The mother soon followed him. The last of his household, Richard Henry Stoddard bequeathed before his death his collection of books and manuscripts, one of the most valuable in America, to the Authors' Club, of which he was a venerated member.

The following sketch of his life is taken from the various press notices:

R. H. Stoddard was born at Hingham, July 2, 1825. He was descended of a long line of sea-captains, and his father was never heard of after a voyage to Sweden when he was a child. His mother married again, and he perforce went to work at whatever he could do, and finally in an iron foundry in New York city, where his stepfather went. Nothing much more unfit for Stoddard could be imagined, but he kept on, without much school education, but with much reading, because he was made so that he had to have it. He gradually got into communication with other young men who were struggling along, and became one of the leading members of an interesting coterie (as they grouped

themselves) in which Bayard Taylor, the late C. G. Leland, Henry Clapp, and others were members. His first volume was published in 1849; it was called "Footprints," and he suppressed it later, but some poems from it are in his collected edition. In 1852 he published his "Songs of Summer," which have never failed of admiration for their spontaneous beauty. He became a contributor to the *Knickerbocker*, and engaged in literary work, but he had a year before married Elizabeth Barstow, as much of a genius as he himself, if not a greater one, and life became too strenuous. He therefore made interest with Hawthorne, who in his turn moved Franklin Pierce, then President, to bestow upon Stoddard a place in the New York custom-house. There he was employed from 1853 until 1870. While Gen. George Brinton McClellan was chief commissioner of docks, 1870–73, Mr. Stoddard was his confidential clerk, and in 1874–75 he was city librarian of New York. Among his works in the mean time may be mentioned "Town and Country" (for children); "Life, Travels, and Books of Alexander von Humboldt," with an introduction by Bayard Taylor; "The King's Bell," a poem; "The Story of Little Red Riding-Hood," "The Children in the Wood," "Abraham Lincoln," a Horatian ode; "Putnam the Brave," and "The Book of the East," a collection of his poems on various Oriental subjects. He also did a great deal of editorial work, supervising "The Last Political Writings of Gen. Nathaniel Lyon," "The Loves and Heroines of the Poets," John Guy Vassar's "Twenty-one Years Round the World," "Melodies and Madrigals," from the old English poets, "The Late English Poets," "Poetry and Poets of America," and the "Bric-à-Brac Series." He also wrote translations and prefaces and a number of monographs, including one on Edgar Poe and another on William Cullen Bryant. Among his latest productions are "Under the Evening Lamp" and "The Lion's Cub."

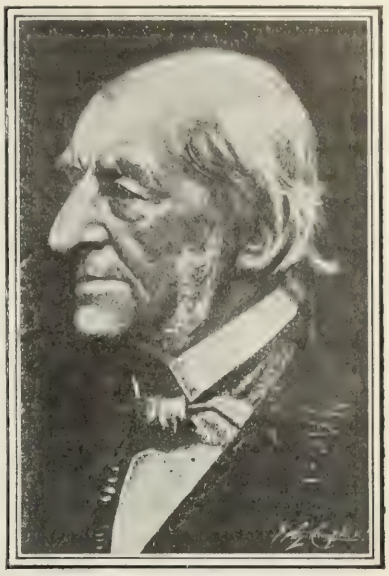
In 1880 he accepted the literary editorship of *The Mail and Express*, and continued in that post until his death, tho for some time, because of his almost total blindness and failing health, his editorial duties were nominal.

EMERSON'S LIMITATIONS.

THE men and women who are writing anniversary articles for the magazines this month on Emerson as a philosopher, Emerson as a teacher, Emerson as a poet, Emerson as a man, "Emerson as I knew him," etc., display a marked tendency to eulogy rather than criticism. Matthew Arnold once remarked that the whole body of Emerson's verse was not worth Longfellow's little poem, "The Bridge." Ah, says one of the Emerson eulogists, "this indicated Arnold's limitations," not Emerson's. Even the most trivial words and actions of the Concord philosopher are reverently recorded. Julia Ward Howe recalls fondly how he once said at dinner: "Mrs. Howe, try our snap cake"; and William Dean Howells chronicles the fact that when Emerson smoked a cigar, "it was as if one then saw Dante smoking, and one then saw it with all the reverence due the spectacle."

A more critical estimate is made by Charles Leonard Moore, in an article in *The Dial*. Compared with Carlyle, he says, Emerson "is trivial and shallow and prosaic." He continues:

"Emerson's essays are full of allusions to philosophy. Plato and Zoroaster and the Rig Veda do business at the old stand on almost every other page. Yet one doubts whether he was really capable of forming a metaphysical concept. He could never concentrate his thoughts long enough on one subject to do so. He scorns logic and cohesion. His sentences are a heap of glittering particles that run through one's fingers. Hence his baffling quality. There is no founding anything on him. He is a veritable quicksand of an author. Nearly every great thinker has some central thought fixed firm against all shifting tides and winds. The central thought of Plato is the theory of Ideas—the assertion of the apparitional character of the seemingly real world. The central thought of Pascal is that of Human Intelligence confronting the Universe and strangled by it like Laocoon in the inexorable coils of the snake. The central thought of Schopenhauer is the absurdity of life. We know where to have these writers—but Emerson we never know. He chops and changes with every book he has been reading, or with every reader he desires to mold. Like *Polonius*, he is willing to agree that the cloud may be a camel, or a whale, or a weasel. And he is never thorough, in Strafford's sense of the word. He writes you about the scholar or the poet—and the strain rises like a stream of rich distilled perfume; but then it occurs to him that the butcher, the baker, and the candlestick-maker are also vertebrate animals, and have a certain reason for being, and he gives you their apotheosis. What he was after, all his life, was practicable idealism. But practicable idealism is a contradiction in terms, and sacrifices both the ideal and the practical."



RALPH WALDO EMERSON.
From a drawing, artist and date unknown.

Mr. Moore finds much to admire in Emerson's philosophy and poetry, but says, at the same time:

"He can never be satisfactory to the imaginative or the logical mind. He has not the energy, or the richness, or the profundity, to appeal to those who have fed upon the great poets and philosophers. He was a purveyor of first-lessons in philosophy, and of proverbial rules of life for intellectual children. He may keep an audience of these to the end; or they may seek other masters. But great men will pass him by with but a slight salute."

What strikes the Philadelphia *Inquirer* most forcibly in its observation of the Emerson centennial celebration is the lack of spontaneity. It says:

"The one patent fact in connection with the effort to make the centennial of the birth of Emerson a success is the fact that it is very labored. There is no spontaneity in the movement, but an immense amount of urging, which is a sad commentary on the declining popularity of the Sage of Concord. People do not read Emerson any more, at least he is no longer considered a seer in literature or in life. It is true that there can be found any number of persons who admire him. Let the conversation on the subject start (tho it seldom does), and there will be found plenty of men and women to pay the highest tribute to his life and works. This is done conscientiously because they have never read him, but take him on faith."

THE POSITION OF AMERICAN VERSE.

AMERICA is too self-satisfied with the character of the verse which her poets are turning out at the present time, and too indiscriminate in her regard for the work of her poets of the past. This is the view set forth by Mr. Louis How in an article in *The Reader* (June), advance sheets of which are sent us. "While little of it"—our poetic product—"is fairly good, most of it," he says, "is bad." The reasons for our excessive self-satisfaction he finds to be four. "The first is a mistaken chauvinism which proclaims, in effect, just as we can support ourselves, having food independent of Europe, so can we revel in the literature we produce for ourselves." The second is our insularity: "We are out of the main current of Western thought, and, being from our youth nourished (poorly) on our own poetry, we become accustomed to it, even to liking it." The third is our false culture. He writes:

"We love to show how cultivated we are. For our pursuit of culture, whatever it may accomplish some day, results at present

in the triumph of what has been wittily called 'culturine,' which brings its adherents nothing unless they can flaunt the trophies. While our low state of taste leads us to prefer the fourth-rate verse, our egregious assumption of good taste causes us to exploit it. Untrained natural taste, tho vulgar, is not necessarily insistent, frequently not haughty: whereas ill-trained taste acquires the pride that distresses one and bores. This phenomenon is probably at the root of the whole matter."

The fourth cause is "sectional rivalry":

"The South boasts her singers to keep up her equality with New England: and the West, in its various subdivisions, makes desperate efforts to get into the game. He who has not seen a library of these precious volumes [local anthologies] will never imagine how many are the contributors. They are like locusts for number."

All four of these causes, Mr. How thinks, are intensified by our national trait of kindliness. "This genial, but too genial, habit accords to our verse an acceptation, presently an admiration, an adulation, which settle it at a high place." American readers should put themselves above this adulation, and place the poet in his true position, regardless of local and national sentiment. "Nearly all the better poems in Mr. Stedman's anthology [of American verse] are disfigured by a false note, either an irritating blemish in technic or an irritating trait of sentimentality." We quote further:

"Enough of the general American idea that all verse is something unusual, therefore wonderful, therefore of worth. Does a British anthology include Pye or Tupper? Why, then, shall an American contain every native and adopted bard who can be rooted out? True, the worst are not so far below the best; but to the caretaking mind there is a difference; and the energy of collectors from now on had best be spent less on research than on discrimination. . . . If the germ of it [American humor] does consist in seeing things in their true proportional relations, then our national sufficiency of it should make us willing to apply the proper standards for judging our verse. Like everything else, we must judge it by world standards. Suppose our steel rails were not the best there are, should we be proud because we make more of them than any other country? We may justly feel proud because they are the best—at any rate, the best for their price. Poetry, to be sure, is beyond, and quite disassociated from, any idea of price; but it is gaged by criteria. And our humor should make us not only willing to apply these criteria, but simply unable to refrain from an almost reflex application."

Mr. How thinks that there is much that is praiseworthy in the poetry we have produced, but we should take care not to plume ourselves upon it:

"There is small danger that we shall, if we regard how we actually do stand in the world's arena. If comparisons are odious, all criticism is odious. To spare our blushes somewhat, I will not limit the ordeal to poetry; nor will I pause to ask what name from our own private Hall of Fame we are to insert among the foremost in *belles-lettres*, such as Homer, Dante, Cervantes, Rabelais, Goethe, Chaucer, Shakespeare. But I will propose an easier test, and broaden the list of entries. I add Sophocles, Calderon, and Rojas, Boccaccio, Molière and Balzac, Marlowe, Milton, and Keats, Scott, Defoe, Turgeneff, Landor—and whom of our own? Temerarious fondness (not necessarily American this time) might present Emerson. And in goes Emerson; but not—but not Emerson the poet. The test is still maliciously hard. Let me make it less crucial by proposing merely the literature of the nineteenth century. Whom shall we offer? The literature in English of the century. In this narrower field, and making our choice generous, suppose we say, Emerson, Hawthorne, Whitman, Poe, Lowell (not the poet, but our graceful essayist), Cooper, and Irving. There is a showing we may well be satisfied about, especially when we add that of this list Emerson, Poe, and Whitman (and from the century before, Franklin), and to a less degree Cooper and Irving, have notably influenced individual foreign writers, if seldom groups. So justly we may be satisfied, that there is no call for boasting besides of the fine things we have not produced."

Our American poets, Mr. How remarks further, have simply skimmed the surface of life, "have had nothing which they must either die or say, and nothing at all but platitudes." We find poems of melancholy, occasional poems, poems written by a love-lorn poet to a lady who is dead or has never existed; but no poet shows the deep passion such as Shakespeare showed for the unknown lady in his Sonnets, or Dante for his Beatrice. We find a triteness of the tag-moralizing, a fondness for catch-lines, and provincialism. Mr. How does not praise any definite movement in American poetry, tho he points with approval to individuals, instancing especially Emily Dickinson, who is to be exculpated of all the weaknesses he has named. On the whole, his view is a despondent one. In summarizing, he writes:

"Already my summary praise has gone far enough for a reader to surmise that an anthology of painfully selected verse can be made, which, tho not a golden treasury, nor a cause for boasting, may yet afford a pleasant and ennobling occupation for some of our moments,—and that is, after all, the true end of poetry. While that sentence sums up the whole matter, it doesn't prove very gratifying. I confess I am not prophet enough to foresee the glorious day dawning for our verse. Nevertheless, I so hope for it that I should not be surprised at any time to see the great poet put forth his first book; which, tentative however it be, shall cast into the cool shade our actual mass of verse, shall make even the winnowed measure appear yet more poor and pitiful.

"But until he comes, let us cherish the best of what we have, and make the most of it; always realizing clearly that at the most it is nothing to lose our heads about."

NOTES.

THE New York Yiddish stage furnishes a new interpretation of Shylock. Jacob P. Adler, a star of that stage, represents Shakespeare's Jew as just and affectionate, and the demand for the merchant's heart was, so to speak, a "bluff." Shylock desired to frighten his adversaries and then, when the law decided in his favor, he intended to throw away his knife and spare Antonio!

THE Rome correspondent of the London *Daily Mail* writes of a loss art has sustained in the spoiling of two Van Dykes, one Paris Bordone, two Guido Renis, one Carlo Maratta, one Valerio Castelli, and other famous pictures belonging to the Rosso Palace at Genoa. The pictures were entrusted for cleaning to an unskilful cleaner, who washed them with an alkaline solution that "has completely destroyed them."

QUILLER-COUCH, the English critic and novelist, in an article on the late Francis Thompson's poetry, makes an interesting reference to Poe. Speaking of the joy he experienced from a first reading of Thomson's "The Mistress of Vision," he writes: "It seemed to me the more likely to be a perishable joy because I had once clutched at, and seemed to grasp, similar beauties in Poe. But Poe, on later readings, was seen to be incurably vulgar. One by one all his gems faded except 'For Annie,' 'Helen,' and 'Annabel Lee'—tho one returned to them wistfully, hoping to see their colors renewed; and even about 'Annabel Lee' it was difficult to be quite certain."

THE Count de Rochambeau was so pleased over his reception in this country last year that he has taken the initiative in securing for the American Government a bust of Washington by the great French sculptor, David d'Angers. The bust was done in 1828 in Carrara marble and sent to Washington, where it was destroyed by fire in 1851. The original model still exists in Paris, however, and an exact reproduction in bronze has been obtained by the count, with whom are associated in the enterprise Marquis de Lafayette and Marquis de Grasse. The count writes (*The Independent*): "To have sent it back to you in marble would have required the hand of the grand artist, which long since is still in death. We can not get nearer than this to the bust as it existed in 1828. But we all feel sure that you will take the will for the deed, and see in our modest offering another sign of the old friendship which has so long bound the two nations together, tho separated by so many miles."

A NEW Dickens Fellowship has been organized in London, and has started out, it is said, with a "veritable boom." It had over 2,000 members in a short time, and has held an exhibition of Dickensiana in Memorial Hall, where Fleet Prison once stood, wherein Mr. Pickwick and Sam Weller abode. "Everything was gathered together that related to the master story-teller—first and special editions of his works, pictures of scenes and places made celebrated by his pen, manuscripts, and corrected proofs, letters, drawings in illustrations of his works, and relics manifold from his writing-desk and quill pen to his spoon-warmer and linen collar. . . . There was the original 'little wooden midshipman' from the shop in the Minories described in 'Dombey and Son.' There was an old copper boiler from the inn at Chigwell—the original of the 'Maypole' in 'Barnaby Rudge.' There were two chairs from the Bull Hotel, in Rochester, where Mr. Pickwick had a room, and a staff from the Marshalsea prison of 'Little Dorrit.'"

SCIENCE AND INVENTION.

THE TRUTH ABOUT THE "POISON-EATERS."

IT is to be regretted that, owing to the disposition of many newspapers to treat with levity Professor Wiley's experiments on food preservatives, the Secretary of Agriculture, in whose department they are being carried on, has found it necessary to order that no more information is to be given to the public about them. As they will not be concluded for several years, their results, which will be valuable beyond a doubt, will not be available for a long time. This being the case, it is interesting to find that an authoritative scientific exposition of Professor Wiley's objects and methods has been contributed to *The Scientific American* by its Washington correspondent. The writer tell us, in the first place, that the experiments in question are conducted by authority of an act of Congress, approved on June 3, 1902, providing funds "to enable the Secretary of Agriculture to investigate the character of proposed food preservatives and coloring-matters, to determine their relation to digestion and to health, and to establish the principles which should govern their use." The experiments are carried on in the Bureau of Chemistry, where a special kitchen and dining-room have been fitted up. Dr. Wiley's "boarders," who are in charge of an expert cook, are volunteers drawn chiefly from his own bureau. Says the writer:

"Each man throughout the entire course of the experiments is allowed only the same amount of food, which, however, may vary with the individual, but which amount is determined after experimentation to be just enough to maintain the individual in a normal condition. Charts were prepared for each person, on which the weight is daily recorded, and also a record made each day of the temperature taken before and after dinner. The number of heart beats and the respiration are determined twice daily, the blood-corpuscles are counted, and the amount of hemoglobin in the blood measured. Of course it is understood that the subjects were pledged to eat only the food given to them by Dr. Wiley, and to refrain from the use of stimulants, altho tobacco is allowed during the experiments in the regular manner in which it had been used.

"The selection of the first substance to be experimented with was considered, and borax was chosen, concerning which it is generally admitted that it is a most excellent preservative, especially for meats and dairy products. . . . . .

"The young men having reached a normal condition, that is, possessing a constant weight, and the proper amount of food for each having been determined, they were divided into two sets of six each, and the experiment began. One set was fed with pure food only, and the other set with food to which borax, in increasing amounts, was added, and the effects on metabolism noted. These experiments continued for about four weeks, when the young men changed. That is to say, those who had been eating the food to which borax was added were now fed only on pure food. There was also a special set, consisting of two young men, who were fed continuously on food containing borax. It is understood, of course, that the object of the investigation is to ascertain the changes that occur in the subject, in consequence of the use of the special preservative employed, which in this instance was borax. Therefore, the exact quantity of food required normally by the individual being known, he is given exactly that amount, with the addition of varying proportions of borax. The food is carefully analyzed, so that it may be known exactly how much of each ingredient is given to him, and all that is excreted, both solid and liquid, is carefully weighed and analyzed. By striking a balance, the precise amount assimilated is determined, and the changes in weight or metabolism show the results of the value of the food on the individual. It may be added that the services of some twenty chemists and assistants are required for the various analyses that are essential in this investigation."

It is supposed, our informant tells us, that the experiments with borax will be continued until June, when a further selection from substances such as benzoic acid, formaldehyd, salicylic acid, sodium benzoate, and sulfurous acid, will probably be made. Several years will doubtless elapse before the entire series of experiments will be completed.

As to the ultimate value of the result to be obtained, the writer says, in his concluding paragraph:

"It may be said that the information will be of service in shaping intelligent legislation, regulating commerce in food products, securing the removal of unnecessary and unjust restrictions, and making effective those that are necessary and just. It will serve as a basis for international agreement in regard to the composition of preserved foods. At present different nations have widely different laws to protect and regulate the importation and exportation of food products. The experiments will serve also as a basis for rational advice on the part of hygienists and physicians in regard to the foods that should be or should not be used by persons in ordinary health, and they will be especially valuable in the treatment of invalids. The investigation will produce results which will tend to conserve the public health and guard the invalid and the weak person from injurious substances."

HAS THE UNIVERSE A CENTER?

THE recent contention of Dr. Alfred Russell Wallace, that our universe is finite and that our solar system is at its center, has been noticed in these columns, as well as some of the criticisms thereon. To *Knowledge* (London, May) a number of astronomers contribute letters on this subject. Dr. Wallace himself writes that he is grateful for criticism, and adds that he is preparing a volume in which his views will be presented in a more complete and more convincing manner. Dr. J. E. Gore writes:

"As it is at present impossible to fix the exact limits of the visible universe, we can not determine where its center may lie, and altho the sun and solar system *apparently* lie near the center of the Milky Way, it does not follow that we are really at or near that center. Indeed, there is evidence to show that we are perceptibly nearer to one side of the Milky Way than to the opposite side. Sir John Herschel was of opinion that the southern portion of the Milky Way near the Southern Cross is nearer to us than the northern part. Professor Newcomb considers that we are probably nearer to the boundary of the visible universe which lies in the direction of Sagittarius and Scorpio, and he thinks that we may possibly be so much nearer this particular region that we may soon be able to detect proper motions among the fainter stars in this direction."

The same question is thus taken up by Agnes M. Clerke, the well-known astronomical writer:

"But has the universe a center? In other words, is it of limited dimensions? Dr. Wallace avers that it is. His arguments are, nevertheless, contravened by the high astronomical authorities just referred to. The all-pervading illumination of the sky-ground, which should attest the shining of infinitely numerous suns, would be prevented, they agree in considering, by the intercepting action of an *equally infinite* number of dark bodies. These, however, can not be supposed to screen off gravitational influences; they should, on the contrary, reinforce them. Hence, every body in space would be acted on by infinite forces, soliciting it to move in every direction at one and the same time. Cosmical paralysis would result; the 'constellated suns' would stand stock still; unless we make the hazardous assumption that a finite attraction, superadded to an infinite sum of attractions, might avail to determine velocity. That is to say, neighboring stars might exert effective pulls upon each other irrespectively of the equilibrating pull of a measureless universe. There is, however, little profit in dwelling upon this baffling aspect of the question: clearer evidence is before our eyes. Everywhere in the heavens structural relations are manifest. Architectural design is traceable in them; they have parts fitted in together to form a vast yet limited whole. The Galaxy has shape and boundaries, and we have no assured knowledge of anything lying outside those boundaries. It seems, then, a gratuitous

exercise of the imagination to conjure up abysses stored with stars, energetic and effete, one set cutting off the radiations of the other."

WATERLESS GOLD-MINING.

THE gold separator invented some time ago by Thomas A. Edison is again receiving notice in the daily press, owing to successful experiments said to have been made with it in New Mexico. This device, if successful, practically makes possible placer gold-mining without water, and so opens up many rich deposits hitherto unavailable. In an editorial headed "Gold from the Desert," the Baltimore *News* thus describes the apparatus:

"It is a device for separating the gold from the gravel by the use of a powerful air-blast, instead of making the separation by the usual washing process. Experiments have been made in New Mexico with the new device by Cloyd M. Chapman. Mr. Chapman says they have demonstrated the efficiency of Mr. Edison's invention.

"It is stated that there are rich deposits of placer gold in New Mexico, Arizona, California, and Mexico which can not be worked because of the absence of water in sufficient quantities. It was to work these deposits that Mr. Edison's device was invented.

According to the statement of Mr. Chapman, while the hydraulic method separated from the gravel but seventy-five per cent. of the gold, Mr. Edison's device separates about ninety-eight per cent. of the gold. Still the Edison process is not so cheap as the hydraulic process where water is available. It costs by the water process but three cents a ton to work the ore, while by Mr. Edison's device it costs about eight cents a ton. Only in rich deposits would the increased cost justify itself by increased efficiency.

"In the Edison process, after the gravel has been excavated it is conveyed to a mill, where it is passed over a series of screens and the gravel is separated according to size. Each size of gravel is handled separately. It is placed in the separator hopper, and is fed through a narrow slit at the top of the machine, the gravel falling to the bottom. Powerful air-blasts are turned upon the falling gravel. The metal, being heavier, falls into a chamber, and the gravel and other impurities are driven on so that they fall outside and are carried away. Thus the gold is left so nearly pure that there is little difficulty in cleaning it absolutely by simple processes. Experiments with the machine were made on the Oritz mine grant near Santa Fé, N. M., three years ago. While the machine worked well, the mining operations did not pay, as the deposit did not prove as rich as was expected.

"Mr. Edison's device is very simple, and it may well prove as effective as is predicted. . . . It seems reasonable to suppose that a good deal of gold is deposited in desert spots, and that Mr. Edison's invention may add materially to the world's stock of the precious metal."

Commenting on the descriptions similar to the above, that have appeared in the daily papers, *Engineering News* notes that the invention is not new, and that improvements have probably been introduced since Mr. Edison's first device was tried. It says:

"In so far as this general description indicates the character of the invention there is no novel feature; doubtless it is in the details of the device that we may look for the improvements. The main difficulty, it is said, has been to secure a blast that would blow with equal pressure at all points. Patent lawyers are reported to be at work drawing the specifications and claims. If they are as successful in delaying the issue of this patent as they were on the Edison kinetoscopic camera, we shall know what the claims are in about fifteen years."

Water-Filtration as a Preventive of Typhoid.—This subject has recently been brought forcibly to the attention of the public by epidemics in several places, the most serious of which was the one in Ithaca, N. Y. Says *The Scientific American* (May 9), discussing the matter in a leading editorial:

"The experience gained by those cities in America which within the past few years have installed filtration-plants through which the whole of the city's drinking-water is passed before it is turned into the city's mains, has given the strongest kind of proof that the reports of the wonderful efficacy of such plants, which have reached us from time to time from European cities that have already made the experiment, are not in the least exaggerated. Professor Siebert, of this city [New York], a leading authority upon the subject on both sides of the Atlantic, in a recent work upon the relation of typhoid to water filtration, gives statistics to prove that for the decade previous to the installation of filtration-plants in certain of the larger European cities, the death-rate from typhoid epidemics reached the high percentage of 1 in every 2,600 inhabitants; whereas in the six years immediately succeeding the use of filtered water in these cities, the death-rate fell to 1 in every 11,000 inhabitants. . . . Altho it is not claimed that filtration gives absolute immunity, this only being possible where the water is boiled, this dread disease can be so far controlled by this means that the possibility of an epidemic in a city so protected is extremely remote."

A SCIENTIFIC MAN ON TELEPATHY.

THE attitude of the orthodox scientist toward the dalliance with occultism represented by the work of the Psychical Research Society is well set forth in an article on telepathy contributed to *The Evening Post* by Prof. John Trowbridge, of Harvard, the eminent physicist. Professor Trowbridge will not admit that there is the slightest evidence of the existence of telepathy. He says:

"There is at present no evidence of telepathic communication which would be accepted in a court of law in regard to property, or in a scientific laboratory. The evidence which is adduced and submitted to societies of psychical research can not be compared with that of the simplest analysis of a chemical compound, or that which gave men the suspicion of the electric action excited by the motion of a magnet. . . . It is one of the chief characteristics of a science that it has a history, and no subject can arise to the dignity of a science unless it has at least the rudiments of a history. Wireless telegraphy has a past, and is the result of the patient study of almost countless facts, gathered by thousands of workers in laboratories. These facts and phenomena can be studied and the phenomena can be repeated by any skilled person. Telepathy has no history, and if it should be ascertained to-morrow that it is possible, it will be the first instance in the history of science of the discovery of a new manifestation of energy or of a new law of nature which had not been preceded by the patient study of repeatable phenomena. It is therefore safe to prophesy that telepathy will not be a fact until it has a history of repeatable phenomena.

"It would seem that abundant opportunity has been offered for the accumulation of reasonable evidence of the action of one mind on another during the past hundred years of active intellectual scientific inquiry. Moreover, the hosts of card-players, since the beginning of the powers of ratiocination in man, have been in an attitude of interested attention in regard to the action of one mind on another. Telepathic communication would be of great advantage to the gambler, and to the speculator who plays a larger game on the Stock Exchange. However the latter may romance in regard to telepathy at the club, he never relies upon it where dollars and cents are involved."

The fact is, Professor Trowbridge goes on to say, that there is no science in telepathy—it is merely a belief. What are the grounds of this belief? Says the writer:

"When we examine the grounds of this belief, we naturally ask ourselves, How do we communicate with kindred spirits with even the full use of our faculties of seeing and hearing? Do we not judge of a friend's opinion more by the tones of his voice, the lifting of the eyebrows, the gestures of the hands, than even by his words? When he rings us up on the telephone, we gather his meaning by the accumulated memories of the look which habitually accompanies his speech—his smile, whether it be cynical or optimistic. Two deaf, dumb, and blind persons are not conscious of proximity except from the sense of touch. When we express a belief in telepathy, we indulge in a hypothesis of

an occult radiation of vibration of a mind cell, far off in China, perhaps, which can affect another mind cell at the antipodes; and we profess a belief that this radiation, like that employed in wireless telegraphy, can set a mind cell in action and communicate the senses of sight, hearing, and the tactile sense. Otherwise, how can we recognize a friend or penetrate his meaning? This is a large hypothesis; it is not in consonance with scientific thought; it belongs to the realm of demonology and witchcraft. Remember, we are not stating our conviction that telepathy is not possible; we are merely saying that if telepathy becomes an acknowledged fact to-morrow, it will be an unprecedented fact in the history of the scientific advance of the human race. There are, doubtless, more things in heaven and earth than are dreamed of in our philosophy; psychic philosophy seems to have taken these words to heart, and is more than ready to substitute intuitions for strenuous scientific investigation. It must be remembered that there are no limits to scientific inquiry, but there are fatal limits to metaphysical speculation."

Telepathy, the professor goes on to say, has no instruments for measurements; it has no reagents; it has no history of past phenomena leading up to a possibility. Its observers are discredited; and its methods of inquiry give full scope for misrepresentation and romance, leading up to fallacious results. He goes on:

"Let us, for instance, contrast the evidence for the true value for the specific gravity of lead with the evidence for telepathy. Scores of scientific observers have measured the weight of lead in comparison with that of water, and have compared their results with the strictest impartiality. The faults of the instruments employed in the measurements are given, and complete information is afforded of the means that are taken to arrive at a result which shall not be influenced in the slightest degree by the personality of the observer. There has been no secrecy, no claims for the mystical effect of moods. Compare this method with that of the physical observer who brings forward telepathic evidence. Suppose this evidence consists of a message between friends separated by seas and continents. In the first place, is the probability of coincidences given due weight? Is the astronomical difference in time between the places calculated? In order to be scientifically accurate one must be able to measure this time to at least the thousandth of a second, and his measurement can not be made by the ordinary psychical observers. How much credence can be given to what is called corroborative evidence, such as the description of a witness at the deathbed and the conversation of those present? How much of this is subsequent cerebration; and what care has been taken to prevent the unconscious collusion of the witnesses and the romancing after the event? . . . . . .

"Scientific men are sometimes counted among the believers in telepathy. We must remember that laboratory investigation is so strenuous that many men who have made their reputations by accurate work, in advancing years abandon labors which yield at the best small, tho precious, returns, for they find it easier to philosophize and to write out their thoughts than to put them to the test of experiment. When a scientific man takes to such work in psychics and philosophy, the death-knell of his scientific career is rung."

The Rage for Speed.—That traveling at high speeds in motor-cars breeds a form of disease that may reach the stage of delirium is maintained by an editorial writer in *The Horseless Age* (New York, April 29). Says the writer:

"The disease is generally referred to as the speed craze or speed mania. By a rather strange coincidence a discussion of this subject took place at the Société de Hypnology et de Psychologie, in Paris, only a few days before the tragic death of Zborowski. One of the speakers, a Dr. Hachet-Souplet, maintained that persons in position to increase their speed of transition at will are simply carried away by the consciousness thereof. They have no longer control of themselves, they are intoxicated. They then develop characteristics which are foreign to them when in the normal state: boastfulness, combativeness, crabbedness, hatred, mischievousness, and violence. These characteristics vary in form and degree, but may attain a maximum in the cyclist and automobilist. According to Dr. Bérillon, there is a strong analogy between the delirious intoxication of speed and that of morphin. Those who indulge in abnormal speed simply for its own sake and without any useful object in view are mostly degenerates, devoid of all self-restraint and having absolutely no control over themselves. They may sometimes be seen to dash furiously against even the most insignificant obstacles. Examples are on record where furious speeding has brought automobilists into the most serious difficulties, and yet, after a short interval, they would again indulge their passion. For instance, the French automobilist who ran over a customs official and was compelled to pay a heavy indemnity to the family of the latter, while abstaining from excessive speed for a while, soon had a relapse and sped his machine as recklessly as before. The speed habit resembles the alcohol and morphin habits, in that it develops by degrees, and that in the last stages the victim indulges it with complete abandon. So far the conclusions of the psychologists. Their generalizations may seem rather too sweeping, but a number of extreme cases of automania during the last few years afford considerable substantiation for their arguments."

WHY DOES POPCORN POP?

THE peculiar explosive expansion of the starch grains that has given popcorn its name has been studied by Prof. Henry Kraemer, of Philadelphia, who read a paper on the subject at a recent meeting of scientific men. From an abstract in *Science* (May 1), we learn that there is a marked difference of structure between different kinds of corn. All are altered by heat, but only in the popcorn is the structure such as to favor an explosion. According to *Science*, three distinct kinds of grains may be distinguished, as follows: One variety, representing the sweet corns, contains comparatively few nearly spherical starch grains, besides considerable dextrin and a small amount of a reducing-sugar. The second class includes the dents and possibly also the soft corns, and in these the greater portion of the endosperm is whitish and more or less mealy; the starch grains in this mealy area are rounded or slightly polygonal, . . . and have a central rarefied area or point of origin of growth. . . . . The third class includes the popcorns, in which the endosperm is more or less translucent and horny, and the cells of which contain closely arranged polygonal starch grains having a central rarefied area. . . . Some of the flint corns closely resemble the popcorns and form a group intermediate between the latter and the dent corns. The writer goes on to say:

"If the entire grains of these several groups are heated in a popper or in a hot-air oven at a temperature between 145° C. and 160° C. for from four to ten minutes, there will be a splitting or popping open of the grains from the apex and a modification of the contents varying according to the kind of corn. In the sweet corn the grain swells very perceptibly, becoming hollow in the center, the endosperm becoming more or less friable and containing an increased amount of reducing-sugars. In the dent corns there is a splitting of the hulls and the endosperm, and this may take place on the flat surface or along the edge, or the upper portion may separate like a lid. . . . In the popcorns there is a splitting of the grain along the two radii, the endosperm swelling very considerably, the peripheral portions cohering with the hull and thus leaving a central more or less rounded mass; where the popping is perfect the quarters turn back and meet below the embryo. On examining the endosperm of the popped grain it is observed that there has been considerable alteration in the starch grains and cell-walls, and that the starch has been changed into a soluble form, the amount of which depends upon the degree of alteration in the endosperm cells and their contents.

"The structural characteristics of the starch grains in the altered areas of the different popcorns would seem to indicate that the popping of the grain of corn results from the expansion of the individual starch grains, the degree of expansion depending upon the relative amount of water and air in the grains. As an illustration of this it may be stated that perfectly fresh popcorn or popcorn that has been soaked in water for twenty-four

hours will pop but little in the true sense of the word. On the other hand, a popcorn which was seven years old, but had not lost its germinating power, would not pop unless first soaked in water and then allowed to dry for from four to twelve hours. That this property probably resides in the starch grain is further shown by the fact that pieces of the popcorn grain will pop."

THE FUTURE EVOLUTION OF MAN.

ARE the imperfections of man's nature inherent, or can they be remedied? In particular, are things getting better with us, or growing worse? In a recent book, entitled "Studies of Human Nature: an Essay in Optimistic Philosophy" (Paris, 1903), the former view is taken by Prof. Elie Metchnikoff, the eminent physiologist. A review of the work in *Cosmos* (April 25) gives a good idea of the writer's line of thought. He assigns four kinds of causes for the troubles of human life, namely, our imperfect nature, disease, old age, and death; and he expresses his belief that science in the course of our further development is competent to deal with all of them—a belief in which the reviewer does not agree with him. Says the latter:

"He [Professor Metchnikoff] attributes our physical imperfections to atavism. In his opinion, man is a descendant of the ape. . . . We know that, sometimes, there come into the world infant prodigies that are distinguished from their parents by some new and highly developed talent. Man is the descendant of a simian prodigy.

"After stating this hypothesis, which he bases only on rather remote analogies, the author sees in the animal origin of man the cause of his imperfections.

"His animal origin explains the persistence of imperfect organs, ill adapted to their functions. The eye might be better made; other parts of the body are useless or harmful, such as the wisdom teeth, whose appearance often involves trouble, or as the vermiform appendix, the source of peritonitis and of fatal appendicitis. Such even, according to him, is the large intestine, a favorable culture medium for the breeding of the germs of disease.

"Our instincts, our wants, often lead us to acts that are harmful to health, and their exaggerated satisfaction is often contrary to hygienic rules.

"There exist in nature inharmonic instincts, dangerous aberrations of instinct. Who has not seen in summer the masses of insects around lamps and candles, attracted by the light? After circling about a few times they burn their wings and die in great numbers—victims of their aberration. From this point of view, here are unhappy creatures, who, ill-adapted, ill-directed by incongruous instincts, end by injuring themselves or even by losing their lives.

"Man, says Metchnikoff, may be compared to these insects. We may say to this that, being endowed with intelligence, he can struggle against these inharmonic tendencies; he can, in a measure, gain the mastery over his passions, and it is on this account that we assert a duality and often a strife between matter and spirit—the consequence of the weakness of our nature. The author appears to rely on progress, selection, the more complete adaptation of the creature to its environment, a more perfect knowledge of what is truly useful to him, to finally alleviate these incongruities.

"Sickness is man's second enemy; science, and especially microbiology, will soon master that. Old age itself is a malady. Metchnikoff has made a curious and truly original study of senile degeneracy. This chiefly manifests itself in hardening of the tissues, which is hastened by certain kinds of poisoning—alcoholism, various avoidable maladies, and also the formation in the large intestine of microbian toxins that spread through the system. These causes are avoidable or will become so with the progress of medicine. Then we shall live for long years, a hundred and forty or fifty, like the patriarchs; and old age will be exempt from infirmities. . . . Death will appear to us as the evening of a beautiful day, and we shall develop, side by side with the instinct of life, the instinct of death.

"The author seems not to see that he is accumulating hypothesis on hypothesis. Even supposing that his optimistic dream could be realized, he would not have found the solution of the problem of philosophy and religion.

"Suppose that science does give us the means of suppressing sickness and the infirmities of age, and that it can do away with certain imperfections of our organism. There are other causes of misery: they are not all physical. . . .

"What kind of morality can be based on these biological conceptions? Morality, according to the author, should have in view not vitiated human nature as it is, but ideal human nature as it should be in the future. Before all else we must try, so to speak, to reform the evolution of human life, that is, to transform its incongruities into harmonies.

"To suppress disease, to prolong human life, to prevent the infirmities of old age, to cause the instinct of death to arise—it is to science that he assigns this heavy task.

"In certain animal societies, by the side of individuals capable of reproduction, we find others, sterile, occupied in bringing up the young and doing the necessary work of the society. This differentiation, which is very useful to the community, must have developed independently among different social insects. Thus among the ants and bees the workers are sterile females, while with the termites they include both sexes. According to M. Metchnikoff, this evolution is proceeding in another way in the human species. It has not resulted in the formation of a class of sterile individuals; but, as the life of man is longer than that of insects, it has been divided into two periods, a reproductive and a sterile. Old age, which in its present state seems rather like a useless burden on the community, will become a period of work profitable to society. The aged person will no longer suffer from loss of memory or intellectual weakness, and so can apply his great experience to the most complicated and delicate affairs of the social life.

"In his preface, the learned biologist agrees that it would be preferable to show a finished work where hypotheses would be replaced by exact facts. He is following a beautiful ideal—the suppression of human misery, illness, old age, the fear of death But there remain moral miseries that can not be suppressed, even if this dream should be realized. . . . Biology can not reach our moral miseries. Our temperament is doubtless the cause of certain discrepancies, but these are not all our possible incongruities. Man is born free and endowed with reason; he can abuse the gifts that God has bestowed on him, and neither the fear of illness nor the hope of a longer life will suffice to form a basis of morality."—*Translation made for* THE LITERARY DIGEST.

SCIENCE BREVITIES.

A STEREOSCOPIC method of photographic surveying devised by an Englishman in South Africa, Mr. H. S. Fourcade, is thus described in *Science Abstracts*: "Photographs are taken at two points with a surveying-camera, the plates being exposed in the vertical plane passing through both stations. The developed plates, or positives from them, being then placed in a stereoscopic measuring-machine which combines the pictures, a brief calculation gives the exact position of any desired point." The effective range of the instrument is put at about five miles, and the method is said to be of particular advantage in mapping large areas of mountainous country.

"THE strawberry season is at hand, and this delicious fruit is not without its advocates as to its advantages in rheumatism," says *The Lancet*. "Indeed, some have gone the length to state that strawberries may not only be taken with impunity by the rheumatic and gouty, but with distinct advantage if not relief. It is a somewhat curious coincidence, therefore, that in the strawberry the presence of salicylic acid, which is, of course, a specific in acute rheumatism, has been definitely established. As a matter of fact, salicylic acid would appear to be a normal constituent of most fruits. At any rate, this acid has been found not only in the strawberry, but in grapes, apples, plums, oranges, and cherries, altho the amount is probably less than one milligram ($\frac{1}{65}$th of a grain) per kilogram (two pounds) of fruit. It is hardly possible therefore that the strawberry should have any specific medicinal effect attributable to the salicylic acid present."

"IN the course of a lecture at the Conference of Musicians in Dublin, Ireland, some interesting particulars and some astonishing statistics were given relatively to the amount of work accomplished by the brain and nerves in piano-playing," says *The Scientific American*. "A pianist in view of the present state of pianoforte playing has to cultivate the eye to see about 1,500 signs in one minute, the fingers to make about 2,000 movements, and the brain to receive and understand separately the 1,500 signs while it issue 2,000 orders. In playing Weber's 'Moto Perpetuo,' a pianist has to read 4,541 notes in a little under four minutes. This is about 19 per second; but an eye can receive only about ten consecutive impressions per second, so that it is evident that in very rapid music a player does not see every note singly, but in groups, probably a bar or more at one vision. In Chopin's 'Etude in E Minor' (in the second set) the speed of reading is still greater, since it is necessary to read 3,950 signs in two minutes and a half, which is equivalent to about 26 notes per second."

THE RELIGIOUS WORLD.

WHY OLD DOGMAS DO NOT REVIVE.

IT is a great delusion to suppose that the decay of religious beliefs is an accident, that it can be explained by the wickedness of the impious, the corruption of the age. That decay is a part of evolution itself, it goes with modern progress and is its necessary consequence. Such is the summing up of that influential thinker, Gabriel Séailles, whose writings have markedly affected the religious philosophy of our time and who, in the *Grande Revue* (Paris), devotes two elaborate articles to an exposition of his view of the coming doom of all ancient dogmas. But, not wishing to be misunderstood, this candid expositor assures us that he has no bias against the Christian religion. "It would ill befit me," he writes, "to speak lightly of questions which one owes it to oneself and to others to treat seriously." And still further to reassure us he says:

"It is difficult to speak of religious matters with moderation. Believers are convinced that human morality rests upon their dogmas. They think their opponents only want to free themselves from all discipline and abandon themselves without restraint to their brute passions. The vague feeling that doubt is contagious, that faith can be maintained only by agreement, adds to their impatience of contradiction a certain personal anxiety. The unbelieving for the most part simply turn fanaticism inside out. While rejecting religion, they retain all the evil passions it has inspired. They refuse to admit the sincerity of a belief they no longer share. They affect a proud disdain for dogmas of whose history they are ignorant, whose meaning they do not understand. They ascribe to religious souls no other alternatives than those of hypocrisy or stupidity. Passion and hatred are poor guarantees of impartiality. To judge an institution, it is well to understand it and if possible to love it. To estimate its future, it is useful to know what has constituted its strength in the past. The evils wrought by religions strike every beholder—corruption in the clergy, tyranny over conscience, denial of great scientific truths, persecutions, slaughters, murders. The good wrought by religions escapes our observation largely. That is the secret of those souls they have sustained, purified, to whom they have given strength and consolation. The impiety of partizanship is not only lack of intelligence, it is ingratitude. The dogmas we have outgrown have contributed to the formation of our consciences. In all positive religion there is something that merits our respect, namely, the religious sentiment itself, of which it has been the temporary form. Not to mention the moral influence they still have over many minds, how is it possible to remain indifferent to all that religions have created in the way of beauty—legends and symbols, temples, hymns, and ceremonies? A cathedral inspires in us, by an involuntary sympathy, the mystic emotion of which it is the living language."

Having thus cleared the ground, our luminous expositor invites us to contemplate "our venerable mother, the church," whose present plight, if we must accept what follows, is a desperate one:

"The church is no longer what she was. She has great riches, warm defenders, admirable discipline. Yet is there something which, in spite of everything, she can not win back: spiritual influence. She has more clients than believers. Truth is no longer asked of her. She is only requested to keep up a delusion necessary to the people. Art, science, morality, develop outside of herself. She belongs to the past. Her triumph is that she lasts. She is no longer sustained, as in the early days, by the poor and the humble, to whom she bore the good word; by men of thought and action, won by the longing for a new ideal. She has on her side the privileged, those in possession, all the enemies of Jesus—Cæsar, the Pharisees, the publicans, the rich and the great ones of this world. The church does not choose the part she plays. It is forced upon her by her history and by the conditions which the progress of science and of conscience have created for her. She is becoming more and more a temporal power. Minds escape her. She is amazed, indignant. She accuses the philosophers, the free-thinkers. She deceives herself. She is better organized, stronger, richer than her enemies, but a force fights for them which she is incapable of suppressing. Dogmas are not destroyed by the higher criticism, by pamphlets, by the witticisms of the impious. They are submerged by the positive truths that can not be reconciled with them, that enter the mind by expelling them. Dogmas no longer correspond to the conception we have of the universe and of its laws. Dogmas are not contradicted, but ignored."

We pass now to the citadel of the subject. Says M. Séailles:

"The mind is not a kind of storehouse into which we put whatever we please, into which the most varied objects can be packed together without confusion or antagonism as we place side by side on our library shelves two books that refute each other. The mind is a living thing made up of living things—not that it can be conceived purely and simply as analogous to the animated body, for it has its own peculiar laws and functions—and the ideas in the mind are not inert elements. They tend incessantly to coordinate themselves into defined systems, and out of these systems the mind instinctively frames a single, coherent system of which the several constituents act together. The principles of identity and contradiction express this necessity of self-agreement in the simplest and most general way. We can not both affirm and deny the same proposition at the same time. The moment the intellect was turned inward upon itself, the moment it contemplated itself as an object of knowledge, philosophers declared again and again that reason is order and that unity is its law. Ideas are not external to the mind. It dominates them, but they constitute it. If they are in antagonism with it, if they contradict it, this disorder is its disorder. This disorder divides it, weakens it, translates itself into doubt and pain. The self, the I, is not a particular substance apart from its ideas and feelings, whose unity remains unaltered amid the anarchy of contradictory thoughts and desires. It exists with a real existence only to the extent that it succeeds in combining its elements in the harmonious unity of intellectual form.

"If this be so, if the unification of its conceptions into a definite system be a law of the mind, how can we admit that our conception of the universe, of its laws, of its government, of its extent, are made over, and that the dogmas of a religion corresponding to quite opposite hypotheses shall alone remain the object of an unchanging faith? The mind rejects the old dogmas. It eliminates them by the very fact that it can no longer assimilate them. There are ideas which repel each other as there are ideas which attract each other. Man had a passion for theological problems. He died, and with good reason, for an opinion regarding the Trinity, Transsubstantiation. Everything depended upon it once. We think of it no more. There is no occasion to cry out against intellectual malice or the heart's corruption. Doubt is denial only in appearance. Incredulity denies only what it can not reconcile with truths which the church itself, after vain resistance, was forced to admit.

"In short, dogmas correspond to a science and a philosophy that have been supplanted by a new science and a new philosophy. There is no reaction, no persecution, no wealth, no discipline, that can give back to the church her authority over minds. Dogmas can no more revive than can the conception of the universe and of life which gave them birth. This is a law of thought from which there is no escape."

Having thus developed his thought, the writer proceeds to apply it. Our conception of the universe, he tells us, no longer has the earth for its center. "Our world, which we imagined so great, is lost, isolated in a corner of space." Consequently:

"The universe thus amplified widens its limits in space and time, so that petty little god no longer corresponds to its greatness and sublimity. A creative and providential mind must be conceived in the measure of its object. In the face of multiple worlds, millions of suns, billions of planets, the terrible Jehovah, who knows the abode of light and the abode of darkness, who, bad geometer and poor astronomer that he is, stops the sun—this Jehovah, whose attention is fixed upon a little people of the tiny planet earth, who, like the Homeric gods, mixes himself up in men's fights, wants blood and murder, is passionately absorbed in the death of Agag, King of the Amalekites, who

later sends his son to a particular point in space, in the form of a man, to show that his manners have grown milder, subordinating to that event the immensity of worlds—this Jehovah plays a singular part. Science does not deny him, does not bother about him, ignores him, yet little by little creates, through discovery, a world wherein this little god has neither place nor part. Man can not alter the conception of the universe without altering, whether he wishes to or not, the idea of God."

All this, it will be noted, is in rather striking contrast to the conclusions reached by the English scientist, Alfred Russell Wallace, in his recent article on "Man's Place in the Universe" (see THE LITERARY DIGEST, March 21, 28; also p. 753, this week). In that article Mr. Wallace reached the general conclusion that "all the evidence at our command goes to assures us that our earth alone in the solar system has been from its very origin adapted to be the theater for the development of organized and intelligent life. Our position within that system is, therefore, as central and unique as that of our sun in the whole stellar universe. . . . Those thinkers may be right who, holding that the universe is a manifestation of Mind, and that the orderly development of Living Souls supplies an adequate reason why such a universe should have been called into existence, believe that we ourselves are its sole and sufficient result, and that nowhere else than near the central position in the universe which we occupy, could that result have been attained."—*Translation made for* THE LITERARY DIGEST

RELIGIOUS UNREST AMONG THE POLES IN THE UNITED STATES.

SOME of the Polish newspapers published in this country are devoting attention to the Independent Polish Catholic movement, which has Chicago as its center and claims to be gaining in strength. A national church has been organized, with Rt. Rev. Anthony Kozlowski as bishop. This clergyman was some years ago assistant pastor of a Roman Catholic church, but he and his followers withdrew from communion with the Holy See because, as they claim, they were not allowed a due right in the management of ecclesiastical property. The outcome of their movement is the Polish Independent Catholic Church of America, which claims a membership of over 80,000. There are registered twenty-four priests, thirty-two congregations, and twenty-six churches and chapels, with 13,000 school children, twenty-six Sunday-schools, that at All Saints, Chicago, having seven teachers. There are in connection with the bishop's church at Chicago seven sisters, an asylum, and a large hospital. Bishop Kozlowski has appealed to the authorities of the Protestant Episcopal Church in this country for recognition, and his cause has aroused much discussion. The *Gazeta Pittsburgska*, a Polish newspaper, says:

"When Bishop Kozlowski founded the independent parish in Chicago, he proceeded along the same lines as all reformers. He did not want to sever relations with the Catholic Church to which he belonged. He proclaimed from the beginning that he was and is a good Catholic, only he does not want to subject himself to the Irish bishop. When, however, his parish grew, when new parishes began to rise, and when at length the Rev. Kozlowski as bishop assumed the government of those parishes and organized them into a diocese, he observed that it could not continue as it was. He and his followers began to feel that they surely were no longer Catholics, since only he is a Catholic who obeys the Pope and the bishops established by him. They began to recognize that the Catholic faith is not a living faith, but only a senseless obedience to the orders of the Pope. Then they began to incline toward Protestantism. But that conservatism which manifests itself so conspicuously in every religious movement again exerted an influence over them, so that they began still more stoutly to proclaim that they were and are Catholics, only they do not want this, they reject that, and they want to introduce the other thing. If Rome will only accede to their propositions, everything will be all right and they will remain in the Catholic Church. The Jews hanged our Lord Jesus on the cross because he wanted to reform them. For the same reason Rome burned Huss at the stake. To-day Rome could not burn Kozlowski; so it excommunicated him. Just as the sentence of death pronounced by the Pharisees against Christ invested him only with additional glory, so also this excommunication by the modern arch-Pharisee only brings Kozlowski honor. But this, too, did not yet fully open the eyes of Kozlowski and his follow-

THE RT. REV. ANTHONY KOZLOWSKI,

Bishop of the Independent Polish Catholic Church in the United States, who is attracting attention in church circles.

ers. They began to make a distinction between Catholicism and Romanism. They said that they are not Romanists, that they did not belong to the Roman church. But still they are Catholics, who hold the Catholic faith, but reject only the Roman discipline."

In a somewhat similar strain comments the *Obranca Polaski* (Chicago), which regards the attacks of the Roman Catholic papers upon Bishop Kozlowski's movement as evidence of alarm. But the Roman Catholic *Polak w Ameryce* (Buffalo) pronounces Bishop Kozlowski's organization to be "the work of a few evil and perverse people, moral bankrupts and fallen priests." It adds that the movement is "verging toward decay":

"Not long since the ringleaders of the independent church threatened to draw over from the Catholic Church all the Poles living in the United States, and to form a separate sect. To-day they are finding out that their boasts were vain, and that not only are they unable to convert the Poles to their cause, but that even the handful which at first allowed themselves to be seduced from the true faith are daily thinning out. Soon will come the time when there will be left of these independents only a disagreeable memory. The ringleaders have discovered what other heretics and apostates have discovered before them—that the Catholic Church not only can not be destroyed, but it even can

not be shaken, that it is not in human power to defeat that which was founded by Jesus Christ himself."

Bishop Kozlowski, in a statement over his own signature, asserts that his movement is not Protestant, but makes for the union of the Church Catholic. "Protestantism," he says, "arose in consequence of the abuses of Rome, and when the Papacy comes to an end Protestantism will cease to be, for there will be nothing left against which to protest."—*Translations made for* THE LITERARY DIGEST.

IS SOCIAL DEMOCRACY BECOMING FRIENDLY TO CHRISTIANITY?

ALTHO it is the official attitude of Social Democracy, reiterated by its representatives scores of times, that "religion is the business of the private individual alone," yet it is an undeniable fact that the Social Democrats of Europe, as a rule, have been determined opponents of the Christian creeds and churches. It is a significant sign of the times that the animosity of this party against Christianity has decreased notably within recent months; at least such is the inference drawn from a series of facts presented in *Glaube und Wissen*, edited by Dr. E. Dennert (Stuttgart). He says in substance:

A careful observer of events can not fail to recognize the fact that within the Social-Democratic party there has been a marked change in the struggle against Christianity. Just what the cause of this change of front is does not appear clearly. Possibly it is the dictation of a policy of wisdom, or perhaps the masses are coming to see an essential difference between Christianity and the teachings of Haeckel and his school, or it may be that Christianity and Social Democracy are seen to be, at heart, harmonious and not hostile. Whatever the cause may be, there is no doubt as to the fact, altho the change is more noticeable in other countries than in Germany. In Groningen, in Holland, a Congress of Social Democrats recently voted in favor of religious instruction in the public schools; in Belgium the mission church is rapidly gaining recruits from the ranks of the workingmen; the Social-Democratic libraries in Hennegau contain a goodly number of Bibles; the Social Democratic Congress in Lutich decided to recall its antichristian declarations of former years; quite a number of periodicals of this party discuss religious problems and even open their columns to the writings of Protestant pastors; in England and America the socialistic movement has shown no evidence of being antichristian. Even in Germany it recently occurred that in a meeting of the party a speaker, Dr. Vogel, a naturalist of note, declared that he had "become a happy man only through the grace of Jesus Christ"; and when, at the latest national convention of the party in Wiesbaden, the "free" pastor Welker attacked Christianity, he was severely criticized and called to order by the famous Reichstag delegate, the Socialist von Vollmar. One of the significant signs in this direction is the evident purpose of the scholarly representatives of the Social Democrats to prove that original Christianity was really at bottom a movement for the benefit of the proletariat. The leading champion of this agitation is Dr. Losinsky, who has written several pamphlets in defense of this proposition, and has been followed by another writer of this party, Dr. Kautschky, who in a recent discussion on the subject of "The Social Democracy and the Catholic Church" says: "Original Christianity was a movement closely akin to Social Democracy in its modern phase; for Christianity sprang essentially from the lower strata of society; it was essentially a movement for the elevation of the masses."

Replies to this have been published, the principal ones being three brochures by Dr. P. Fleischman, and the opposition to this view is so strong in certain sections of the party that the wildest tirades are heard against Christianity. In the Italian organ of the Socialists, the *Avanti*, Christianity was recently called "the dirt-heap of modern thought," and an article on this subject closes with the words: "The civilization of Social Democracy will never befoul itself with Christianity."—*Translation made for* THE LITERARY DIGEST.

THE KAISER'S LETTER AS VIEWED BY PROFESSOR HARNACK.

EMPEROR WILLIAM'S widely quoted letter on Christ and Revelation (see THE LITERARY DIGEST, March 14) has undoubtedly been more freely criticized in the English-speaking countries than it could ever have been in Germany. Yet even in Germany the theological problems raised are being quite frankly discussed in religious circles. Prof. Adolf Harnack, the well-known Berlin theologian, makes an interesting contribution to this discussion in an article which appears in the *Preussische Jahrbücher* (Berlin) and is translated in *The Contemporary Review* (April). Praising, first of all, the liberal spirit of the letter, he says:

"There is no suspicion of authoritative decisions, the whole letter breathes the spirit of liberty. For the writer is alive to the fact that in matters so delicate and sacred there is no room for behests; and he further recognizes that theology can not shirk these questions, but that they must be threshed out most thoroughly, with courage and freedom. He hands them over to theological science.

"More fascinating still is the effect produced by the determination, the straightforwardness, and the warmth with which the Kaiser takes up his position in the controversy. What he has written is his very own, comes from his heart. He sets it forth just as he thinks and feels it, and he has jotted it down like one who is giving an account of the matter to his own self, omitting none of the little tokens of his own feeling, of his own personal experience. He feels his soul is bound up in Christ, and he will not speak of religion without bearing witness to and praising him.

"The imperial document is thus meant to be a personal confession, and as such we must respect it. But it surely would not be in accordance with the idea of the royal author, were we to answer it by silence. In the evangelical church the highest and most weighty questions are always open to discussion, and each generation must work out the answers anew for itself. Moreover, our spiritual life depends on stress and struggles, and is alive only in them. How then can we be silent when the deepest and most sacred questions come up before us in this form?

"Heartily and gladly all evangelical Christians will indorse the final sentence of the Emperor's letter: 'Religion has never been a product of science, but an outpouring of the heart and being of man, caused by his intercourse with God.' Theology assents to this proposition, for she knows very well that she but strives to meditate with awe upon data which she does not herself create.

"Equally certain of general acceptance is the Kaiser's conviction that religion, too, has need of forms, in order that we may understand and teach it, but that these forms can not be exempt from change. I hold that Professor Delitzsch also attained the chief end he had in view by calling forth the admission that the customary forms of the scholastic tradition about the Old Testament sorely need a modification."

After paying this tribute to what he deems the laudable feature of the Emperor's letter, Professor Harnack takes up its debatable points. "Queries and doubts," he says, are sure to arise in connection with the Kaiser's "theory of double revelation and the divinity of Christ." He continues:

"The word 'revelation' brings the line of cleavage between belief and science in their relations to religion sharply into view. Science in the real sense can not admit this conception; to her it is transcendental. On the other hand faith can not allow itself to be deprived of revelation. But none the less a certain common ground has been reached in the course of the development. The evangelical faith of to-day—apart from the awe-inspiring contemplation of the universe—recognizes a revelation in persons only. The entire lower series of alleged revelations has been set aside. There are no revelations by means of things. And the imperial letter has taken this proposition for its starting-point: God's revelations in His humanity are persons and more particularly persons of preeminence. Now inasmuch as for science also striking personalities represent a mystery in their individuality and force, the formula of agreement between faith and

knowledge is, so far as is possible, restored. But that I and others should look upon these striking individualities as revelations of God is an act of inner experience, which no science can call forth or forbid.

"Yet on this common ground the imperial letter distinguishes between two kinds of revelation: one general and the other of a more religious character. And in this distinction there is great force; for it brings out in boldest relief the fact that there is no more weighty business for man than his relation toward God, and that on the nature of this relation everything depends. On the other hand, however, thoughtful people can not possibly content themselves with the theory of two kinds of revelation running, so to say, parallel to each other; indeed, His Majesty's letter itself gave expression to this view by according to Abraham a place in both classes. There can not consequently be two revelations—religion, moral force, and knowledge being most closely interwoven—but only one, the bearers of which were and are in truth wholly different from each other in character, vocation, and mission. If Jesus Christ loses nothing of his individuality and uniqueness when placed in line with Moses, Isaiah, and the Psalmists, neither does he lose aught by being ranged side by side with Socrates, Plato, and the other personages named in the imperial document. The religious contemplation of history can in the last analysis be only one and indivisible—humanity, which God takes from the depths of nature, from error, and from sin, redeems and adopts by raising it to the relation of sonship. This does not prejudge the contention that the history of God in Israel represents the specific line in olden times.

"The Christian community is bound to repudiate every appreciation of Christ which effaces the difference between him and the other teachers. He himself, his disciples, and the world's history have spoken so plainly that a doubt ought not to be possible; in his word he still continues to speak just as plainly to us as formerly to his disciples. But whether for all that the cast-iron formula 'Godhead of Christ' is correct may, nay must, be questioned. He himself did not use it, but chose other designations, and whether any one of his disciples ever uttered it is, to put it moderately, very doubtful. . . . The Pauline saying, 'God was in Christ,' seems to be the last word which we can venture to utter here, after having slowly and painfully freed ourselves from the utter delusion of ancient philosophers, that we can fathom the mysteries of God and nature, humanity and history."

Professor Harnack says in conclusion:

"'If ye love me, keep my commandments'; 'by this shall all men know that ye are my disciples, if ye have love one to another'—it is more important to ponder on these words and to order our lives in conformity with them than to seek to press the inscrutable and venerable into formulas. And the time will come, is indeed at hand, when evangelical Christians will sincerely unite in acknowledging Jesus Christ as the Lord, and in resolving to carry out his teaching; and then our Catholic brethren must needs follow suit. The burden of a long history, bristling with misunderstandings and formulas—grown rigid like swords—the burden of tears and blood, weighs heavily on us, but in that history withal a sacred legacy is also bequeathed to us. Both seem to be bound inextricably together, but by degrees they are moving asunder even tho the last fiat: 'let there be' has not yet been uttered over this confusion. Straightforwardness and courage, veracity to oneself, freedom and charity are the levers which will raise the burden, and to the work of achieving this noble task the imperial letter is a contribution."

THE MISMANAGEMENT OF RELIGION.

RELIGION, in proportion to its importance, is the "worst managed" of human undertakings; and this is characteristic of each and every form of religion. Prof. Josiah Royce, of Harvard, from whom this generalization comes, thus enlarges on it in *The International Journal of Ethics* (Philadelphia):

"Humanity's important business has generally been mismanaged in proportion to its significance. I remark merely that this holds true in the case of the highest of all humanity's interests. My proof is in the best-known facts of history. The variety of contending faiths, the cruel mutual misunderstandings that the followers of opposing faiths have cherished toward one another, the religious wars, the multiplication of sects, the confusion of the essential with the trivial in religious life, the substitution of conventionality in religious practise for spirituality in religious experience, the enormous waste of energy over confused thinking about religious matters,—these are a few of the evidences of the truth of my principle. Religion has fared, in even comparatively recent history, far worse than the cause of human liberty, far worse than philanthropy, incomparably worse than the care of physical health. Nothing has man treated worse than his own and his brother's chances of spiritual salvation. Nowadays, to be sure, the religious situation is much improved. The religious wars have almost ceased. But many evils remain."

This is the attitude toward religion, it should be explained, of a teacher of philosophy. He is confirmed in a somewhat striking way by an able leader of evangelical Christianity, Dr. David R. Breed, of Pittsburg, who says, in *The Princeton Theological Review* (Philadelphia), that what he calls "Moodyism" was in reality a symptom of an unfortunate state of affairs. This observer does not, indeed, pronounce religion the worst managed of human institutions, but he admits a bad state of things and thinks "there must be some change effected in all this by some means." "Moodyism" can not bring it about—of that he is convinced, remarking:

"It is admitted that there were skilful and useful men among these lay evangelists; but the system which they represented was sadly at fault in its very first principles. Apart from the evangelists themselves there were certain features of the system which became, after a time, burdensome, to say the least. These were what may be called the spectacular features. The condition—usually an inviolable one—that there should be union services in order to insure a crowd; the confining of effort to the cities and large towns for a similar reason, to the utter neglect of many a small and destitute village where the Gospel was seldom if ever proclaimed; the sinking of all ministerial personality and authority in abject submission to the will and word of the evangelist; the stultifying of experience and training; the imposing choir with its wretched but 'catchy' music, and all the nameless paraphernalia, furnished and maintained at excessive cost—such were some of the more conspicuous features in the evangelism out of which we are now emerging."

But even if a new era has set in, and Dr. Breed is sure it has, there are many evidences of deplorable management still, the remedy partly consisting in the retirement of the layman from the preacher's place and the retirement of the preacher from the layman's place. Dr. Breed notes:

"The ministry of to-day, particularly the city ministry, has been crowded into the condition of Martha of Bethany, 'cumbered about much serving,' so that it gets with Mary to the Master's feet all too seldom. If there is one sentiment above all others which we ought to lay to heart in this connection, it is that expressed in one of our most beautiful gospel songs:

> Take time to be holy,
> Speak oft with thy God.

And many of us will answer, 'Alas, true! But I am not able to take the time. My engagements are more than I can meet. I keep the vineyards of others; my own vineyard I can not keep.' There must be some change effected in all this by some means."

RELIGIOUS NOTES.

"THERE are two great themes," says a writer in *The Hibbert Journal* (London and Oxford), "which should engage the mind and heart of every religious thinker. These are *truth* and *salvation*. The quest for truth is the counterpart of our liability to error; the desire for salvation arises from our consciousness of sin."

"YOUR most delightful acquaintance is the man who grows on you," says *The Interior*. "You know people in plenty who do not gain in your appreciation; every time you meet them they seem more shallow and more petty than before. Indeed, there are times when your discoveries of inner character within the circle of your associations run so much to the revelation of paltriness that you feel in danger of being compelled to discount all human nature as a deceiving sham. But the man who grows on you saves you from cynicism. Every day you are finding in him some factor of manhood that you had not suspected; every day he proves in a new test to have resources of strength upon which you have not counted in your estimate of him."

FOREIGN TOPICS.

HOW TO IMPROVE OUR RELATIONS WITH GERMANY.

ORGANS of German opinion agree that the existing relations between their empire and the American republic are unhappy. It is further agreed that those relations will never be improved by gifts of statues and by princely visits. The *Vossische Zeitung* (Berlin) and the *Hamburger Nachrichten*, representing opposed schools of German thought, are at one regarding this, and the conservative *Kreuz Zeitung* (Berlin) assents to the same proposition. But when it comes to a discussion of the means best calculated to improve matters, there is great diversity of view. The *Hamburger Nachrichten* advocates a stalwart assertion of the Bismarckian diplomacy and a display of what it terms energy. It argues that American inability to appreciate courtesy indicates that the strong man armed would be more respected. The *Kreuz Zeitung* opens up another train of thought altogether. It says that better relations between Germany and the United States can be established only by more direct communication. At present the two nations regard

GREAT UNCLE SAM.
"Help! he's crushing us!"
—*Der Wahre Jacob* (Stuttgart).

each other through British spectacles. As a result, the Americans are so prejudiced against the German Government that it may be now too late to recover the lost ground. To quote:

"Were it possible to present to the American nation a faithful picture of German imperial policy it would certainly have the most favorable effect. At present everything is seen through English spectacles. For instance, it is firmly believed that the aim of German policy in the last few months was nothing else than the annexation of Holland and Denmark. The American press has told dire things about this, but all on the strength of English authorities. It was further related, for instance, that the German Emperor would make the railway strike in Holland an occasion one fine day to declare suddenly that the kingdom was German imperial territory, and that he was seeking to accomplish the same thing in Copenhagen through the power of his personality, that is, by friendly words. Against such writing of fables the gods, naturally, must fight in vain. Whoever does not believe it all is deemed prejudiced. The reader may ask in surprise how such ravings can be propagated. But the English press is responsible for it all. It gives birth to the silly reports, and the Yankee, with his tendency to the sensational, exaggerates the stories in the most fantastic fashion. As the folk-lore tale has cast its garland about many a personality, so now has Emperor William become to the Americans, together with his empire, the pillar upon which the powers of their imagination soar. The Emperor especially appears in the guise of an Alexander of Macedon or a fairy prince, ever going forth on the most wonderful adventures. The loftiest notions of his genius and energy are entertained. But all this does not tend, naturally, to prevent the taking of precautions against his designs, but rather to inspire them. Many newspapers indeed entertained the idea that he intended to land an army suddenly in the United States."

The state of mind here outlined would not exist to the same extent, proceeds our authority, "if all German and European policy were not viewed through English spectacles. London telegrams bring the first 'news,' and the impression created is usually decisive. Then the 'editor' of the newspaper supplies it with a corresponding article, and here the English papers come into play. *The Times*, *The Spectator*, *The Saturday Review*, even *The National Review*, are drawn upon, their articles being either worked over or simply copied outright. For a serious political article on a non-American question, the American newspaper publisher has little money to spare. The reporter who brings in the first news of a sensational murder receives $100. For a good article on German policy no more than five dollars would be paid. It would not excite anybody, and so the ass's bridge of the London press is used." Our authority concludes:

"If a London paper says Germany is contemplating Holland's admission into the German empire as a federal state, some accurate Yankee sheet exaggerates this into a projected invasion of the Netherlands. Even the sudden annexation of Austria-Hungary by the German empire has been represented as credible by a few Jingo papers. How it will be accomplished is known in detail. The neighboring state will be overrun, and in eight or fourteen days more will become German imperial territory."—*Translations made for* THE LITERARY DIGEST.

THE CIVIL WAR IN MOROCCO.

MULUD, the holy festival so dear to the faithful in Morocco, has come and gone. With it expires the period during which the youthful Sultan announced that he would take no military measures against the pretender, who, as appears from the statements of no less eminent an authority than himself, is the recipient of the divine command to rule all Morocco. Something, therefore, as the Paris *Figaro* rather oracularly says, ought to happen. What will happen, according to the London *Times*, depends upon whether the hard-pressed Sultan leads his troops in person against the pretender. "That course," says the discriminating observer on the Thames, "would have some obvious advantages and some not less obvious risks. At all events, it would have the merit of putting the fate of Morocco to the touch once for all, and terminating the long and bloody welter which is ruining the land and its peoples."

Things have not been going the Sultan's way of late. At last accounts the pretender was master of all the north, even dictating terms to the Spaniards, who claim a sort of control over two or three towns on the Mediterranean shore. Only the serious claims upon the time and attention of the European concert in other parts of the world have prevented the entrance of the Moroccan question into the aspect of a "crisis," according to the Spanish press. But the Powers must not anticipate, thinks the *Journal des Débats* (Paris), a view indorsed, with slight reservation, by the *Dépêche Coloniale* (Paris). News from Morocco is so contradictory and so distorted, remarks the French colonial organ, that all expressions of opinion in the premises are hazardous. It was said and then denied that the brother of the Sultan had been proclaimed Commander of the Faithful and Prince of True Believers at Fez. This step was conjectured to be a slap at the pretender himself, who claims to be no other than the elder brother in question. However, the pretender met this move by proclaiming that he is "a descendant of Mulai Edris, the founder of the first Mussulman dynasty of Morocco," a claim, we read further, carrying great weight with a people who pride themselves upon the purity of the faith in their land. In Morocco, it should be noted, the position of the Sultan is religious, primarily. In other Mohammedan lands the faith is conditioned by the authoritative expositions of the Koran which emanate from the Ulema, but the interpretations of that sacred corps are dispensed with in Morocco. It is this religious character of the forces at work which gives such uneasiness to the Powers, remarks the *Indépendance Belge* (Brussels), and causes a certain reluctance to take up the matter just yet. It remarks:

"It is not possible, unfortunately, to obtain accurate informa-

tion from Morocco. The news we do get is very contradictory, depending for its tone upon whether it proceeds from Tangier or Madrid. At Tangier, where the English correspondents are stationed, there is a tendency to extenuate everything unfavorable to the Sultan, while at Madrid the successes of the pretender are exaggerated in the hope of inducing an intervention of the Powers, which would not be displeasing to Spain. We have, therefore, to steer a middle course and conjecture the continued activity of the pretender, while regretting the weakness of the Sultan, who seems unable to emancipate himself from the evil influence of those about him. . . . But as far as it is possible to deduce anything from the contradictory despatches, the pretender may not be far from triumph. . . . Meanwhile civil war is raging throughout Morocco. The cities in which Europeans live are menaced by the rebels. It is the imperative duty of the Powers to take note of this state of things and to adopt the measures which the circumstances call for."

The grand cohesive force in Morocco, the religious position of the Sultan, "the veneration felt for his sacred office, for the descendant of the prophet, grows less day by day," remarks a writer in the Paris *Temps*. "He is an unbeliever, an apostate, in the opinion of the masses. 'He is more of an Englishman than a Mussulman,' they repeat; 'he has bought a house in England, and one fine day he will go and live there and marry the daughter of [his British adviser] MacLean.'"—*Translations made for* THE LITERARY DIGEST.

EUROPEAN UNEASINESS REGARDING ITALY.

IN every primer of world politics we read that continental Europe is balanced diplomatically by the Dual Alliance—France and Russia—on one hand and the Triple Alliance—Germany, the Austro-Hungarian monarchy, and Italy—on the other. Italy, however, after some years of dutiful traveling in the orbit prescribed for her by that force known as the balance of power, has begun to describe a somewhat eccentric circle. The influence of France is responsible for it. If the tendency toward a Franco-Italian attraction continues as pronounced as it has been, the Triple Alliance may enter a totally new phase. To this effect the newspapers of Austria have expressed themselves rather frequently of late. It is the *Neue Freie Presse* (Vienna) that gives most pointed utterance to these ideas. It invites Italy to consider maturely whether or not she can afford to throw herself into the arms of the Power whose policy, in the event of a clerical reaction, must inevitably be to restore the temporal power of the Pope and thus put an end to united Italy. It is the Triple Alliance, according to the Vienna daily, which guarantees to the house of Savoy the sovereignty of Rome, and Italy is rushing to destruction in her present dalliance with her Latin sister. The *Reichswehr* (Vienna), the militarist organ, paints the perils of the Italian monarchy in even more thrilling language. France is ambitious to lead a Latin federation along the paths of dominion, and she is luring Italy to her doom. In the emergency presented by this fact, Germany and Austria must look to themselves and, in business language, make other arrangements. Other commentators fear that the steady growth of the Italian navy and the rise of Italy as an industrial power, notwithstanding the embarrassments presented by the depression of her southern provinces, have contributed to the growth of a certain conceit in Roman governmental circles. Anyhow Italy is unanimously warned to hold aloof from her Gallican sister.

Representations of this character have taken such a form that the French press feel called upon to reassure the Italian friend. The *Journal des Débats* (Paris) notes that "now in Germany, again in Austria, sometimes in both countries at once, efforts are made to have Italy understand that her approaches to France, the reality and cordiality of which are daily strengthened, will end by becoming incompatible with an entire devotion to the Triple Alliance":

"It is easy to see that this ill-humor is due to the impression, which can not be removed in Austria any more than in Germany, that the Triple Alliance, as renewed, is not the same as it was. Baron von Hertling recently stated in the German Reichstag that such was the general view, and Chancellor von Bülow, instead of making a satisfactory reply, put the subject off with an evasion. . . . In the midst of these manifestations of bad temper there is always an element that is frankly amusing. We refer to the grand argument, the Roman question, which the Austrians urge to the Italians to prove to them the necessity of bewaring of France. For it is known—or that is an axiom in certain quarters—that one of the concerns of our foreign policy is the restoration of the Pope's temporal power. That is why the *Neue Freie Presse* and the *Reichswehr* have just once more reminded the Italians that the Triple Alliance is their only guarantee of the possession of Rome. They do, indeed, admit in

Vienna that it is not the Government headed by Premier Combes that would go to war with Italy to restore Rome to the Pope. But neither Premier Combes nor the Government he stands for is eternal, and there is in France a political party that is represented as very dangerous to the Italians—the moderate republican party, that would in certain contingencies be favorable to clericalism. According to certain Austrian journals there are two men of whom the Italians should be particularly on their guard. These men are M. Méline and M. Ribot, who, as all the world knows, are the props of reaction and clericalism. Now, if ever these men return to power—! The Italians, however, know what to expect in this terrible eventuality. They heard M. Ribot in the French Chamber expressing his gratification at the Franco-Italian friendship. As for M. Méline, who has lately passed some days in Rome and who had a long audience with the King, he certainly can not have impressed the Italians as the enemy of their country's unity. But what helps particularly to impart to the utterances of the Austrian journals their highly comical feature is the fact that they themselves admit that one of the causes of the straining of Austro-Italian relations is the failure of the Austrian Emperor to return the visit of King Humbert. Now it is well known that it was the Roman question that prevented the return of that visit."—*Translations made for* THE LITERARY DIGEST.

AUSTRO-HUNGARIAN LEADERS ON THE HAPSBURG MONARCHY.

"THIERS once compared old kingdoms to old castles. When a storm arises in the night, all is clatter and rattle: the wind howls through the corridors, tears the doors from their hinges, and people believe that the end has come. The next morning they ascertain that a couple of window-panes have been smashed, and a pair of candlesticks have fallen from the mantelpiece. But the old building is as firm as ever."

The metaphor which all this suggests may, in the opinion of Dr. Adolf Stransky, leader of the Young Czech party in Francis Joseph's dominions, be applied to the case of the Austro-Hungarian monarchy. He presents his views with emphasis to the effect that any dissolution of the realm of the Hapsburgs is not within the range of practical possibility. In this he is confirmed by nearly every party leader of importance in the monarchy as given in a symposium recently published in *The Monthly Review* (London). The leader of the Christian Social party, Dr. Albert Gessman, after noting the many predictions of a general break-up when Francis Joseph dies, feels called upon to say:

COUNT N. BANFFY,

Hungarian ex-Premier, who says the Hapsburg monarchy will not be dismembered.

"The Hapsburg empire is not only entitled to further existence on the ground of its historical development, but the most important neighboring states will feel themselves compelled in their own respective interests to insure the continuance of the Dual Monarchy. For in the event of a dissolution of Austria, those neighboring states which acquired portions of the present empire would soon find themselves involved in political bankruptcy; '*Timeo Danaos* . . . ' is still to-day a diplomatic byword. Germany, or rather the present ruling circles in Germany, look with great mistrust upon any realization of the pan-Germanic—or, as we term them, 'Alldeutsch'—ideals. Bismarck, Austria's most gifted enemy, declared this often enough with no uncertain voice. He had very good reasons for so doing, and the successors of the great chancellor know perfectly well why they take especial care to follow in the footprints of their predecessor in this respect.

FRANZ KOSSUTH,

Son of the great Hungarian patriot, who leads the "Independence" party

The moment Germany were to annex the German-speaking provinces of Austria, she would be the larger by twelve millions of population, but this addition would considerably strengthen the South German Catholic element in the German Reichstag, and seriously menace both Prussian hegemony and the sovereignty of the Hohenzollerns. For one point is certain: the Austro-Germans, when once citizens of the German empire, would immediately unite with the Bavarians, to whom they are intimately related in race, dialect, and religion, to oppose the Protestant preponderance of North Germany. The antagonism between North and South Germany is so great that this result would inevitably ensue. Bismarck's German empire has now existed for more than thirty years, and the gulf between North and South Germany still remains unbridged. German statesmen know it well, for they possess the one quality which is but too often lacking in many of their foreign colleagues, viz., foresight. They have therefore always politely declined when a separation of the German provinces of Austria has been mooted by overzealous Austrian Germans."

Nor would Russia be more favorably disposed toward any partition of the Austro-Hungarian monarchy, in the opinion of this authority. "Russia finds trouble enough with her own Polish subjects." To which Count N. Banffy, Hungarian ex-Premier, adds that "the rumor of a possible dismemberment of the Austro-Hungarian monarchy within reasonable distance—a hundred years or more—can not boast the slightest shadow of foundation. It can only originate among people totally unacquainted with the situation":

"Both Austria and Hungary are aware that, failing the common bond which insures their twofold independence, neither could survive except through the hardest of struggles. The necessity of its maintenance is not a purely political one; from the economic standpoint, Austria and Hungary are thrown on their mutual resources, and this is a factor which is daily growing in importance."

German-speaking Austrians will not, it is true, "renounce their conception of Austria as an exclusively German power," writes Dr. Stanislas Ritter von Starzynski, leader of the Polish Conservatives. Nevertheless:

"The historic mission of Austria has ever been to act as a storehouse for all the peoples and nations within her fold; indeed, whenever she has sought to cast herself into a purely German mold, the experiment has invariably proved abortive and disastrous. Nowadays it would stand even less chance of success; all the non-German races are growing steadily in numbers, material resources, and intellectual importance alike, while equality of rights is guaranteed by our Constitution. Besides, the majority of Germans cling to the idea of a centralized Austria, whereas her natural and vital development is to be found in a wide-reaching system of autonomy and decentralization."

Nor can the leader of the Hungarian Independence party,

Franz Kossuth, son of the great patriot, bring himself to disagree categorically with the views already quoted. In fact, he says that "no decisive change is probable during the lifetime of the present Emperor of Austria and King of Hungary." As to the general impression to be derived from all these expressions of opinion, that able student of the whole situation, Maurice A. Gerothwohl, infers that all the existing forces make for closer union. He sums up, while not seeking to minimize the perils of the present situation:

"I refuse, however, to subscribe to the mischievous doctrine epigrammatically phrased a short time ago by a famous Balkan politician: 'There is but one Austrian in Austria, Francis Joseph.' I know that this is echoed by most of the public opinion in this country, and a leading diplomatist has not hesitated to lend it the authority of his pen. But I look upon it as sheer insult to those intelligent patriots, and we know they exist, who, in the face of innumerable and painful obstacles, are aiming at the same goal. Moreover, the reverent sympathy which invests the present occupant of the throne of the Hapsburgs is due not to his own winning personality, tho that no doubt intensifies this feeling, but to the long association of throne and people through centuries of glorious achievements and of sufferings hardly less glorious. To maintain, therefore, that the sympathetic feeling will disappear with the passing of an individual ruler is to be false to the teachings of psychology and of history. The indifference to precedent displayed by the heir to the crown in his calculated interference in the Cabinet discussion on the Ausgleich question, and the splendid audacity of his marriage—a choice which should endear him to all Bohemian hearts—seem to promise the country a ruler of energy; and his popularity will by no means be impaired if at first he prove disconcerting to the 'court fossils,' who can not see any more solid foundation for the dynasty than the mummified rigidity of chamberlains and a code of ethics much akin in spirit to those of the Stone Age."

COOLNESS BETWEEN RUSSIA AND THE UNITED STATES.

THOSE friendly relations between Russia and the United States to which the term "traditional" has so diplomatically been applied are about to be subjected, if European press opinion be well informed, to a series of strains. It is even noted abroad as significant that the Government of the "great republic" has strengthened its squadron in Asiatic waters. The future depends entirely upon a certain door which Russia asserts to be open, but which the United States would like to see far wider on its hinges than the latest reports from Manchuria suggest. Such is the analysis of the situation upon which the newspapers of Berlin, Paris, and London find themselves able to agree. What will happen next is the moot point. England does not quite like the determination of the United States to "go it alone," that is, to refrain from an entangling cooperation with herself. Berlin thinks the United States is the one Power to give real trouble to Russia in the settlement of the Manchurian muddle. Paris, true to its "ally and friend," is a little non-committal. Meantime, it is conceded in Europe that John Hay is an astute diplomatist, well able to look out for his side of the case. It is a fact of the first importance in the settlement of the Manchurian question, thinks the *Vossiche Zeitung* (Berlin), "that the United States does not appear inclined to meet the expectations of the British and the Japanese in the matter of a concerted action, but prefers to hold as much aloof as possible in protecting American interests." Further:

"The United States has been induced to adopt this attitude not only from a general indisposition to abandon its independence of action, asserted even as far back as during the outbreaks of 1900, but also by reason of the peculiar point of view from which it regards Russian policy in east Asia. To the Americans it is at bottom a matter of indifference whether the Russians or the Chinese are rulers of Manchuria, provided only they are made sure that they will not be excluded from commercial relations with this economically important region. Before the conclusion of the present Manchurian agreement, which Russia now wishes strained in her own favor, the United States always demanded an open door in Manchuria with no privileges for any one nation in particular. Anxiety for the integrity of the Chinese empire has never really been felt in Washington. Official circles there appear to have long since reached the conclusion that Manchuria is hopelessly lost to China. Hence the conferences between Secretary of State Hay and the Russian Ambassador in Washington, Count Cassini, have had to do so far with the economic side only of the problem. It will not be easy for Count Cassini to persuade Mr. Hay that the injuries sustained by American interests in Manchuria were unpremeditated."

All that has hitherto been made public regarding the Manchurian question comes principally through English sources and is therefore open to suspicion, declares the *Hamburger Nachrichten*. It is too evidently the intention of the English press to defame the Powers of continental Europe for the sake of effect in the United States. This must be remembered before forming any opinion upon the alleged facts in the Manchurian question. The *Frankfurter Zeitung*, however, finds itself forced to accept as only too true all the information that has been made public regarding Russian designs in Manchuria. What Russia is striving for, it says, is perfectly evident. The question now arises, "Who will and can stop her?"

"The natural assumption would be that the Powers chiefly concerned, first Japan and Great Britain, then the United States, Germany, and lastly France, should raise objections and for the sake of greater effect act in common. But united action is out of the question. To begin with, France is eliminated because of her alliance with Russia. For the sake of certain advantages in south China, she will abandon her interests in the north to Russia. The news that the Viceroy of Kwang-Si has made a treaty with France in order to get French troops to put down an insurrection in his province bears out this assumption. The interests of the other Powers are not the same. Great Britain and Japan have formed an alliance to maintain the integrity of China, and they have a political interest in preventing China from becoming the prey of Russia. In Japan the course of Russia has created a peculiarly painful impression because Russia herself in 1895, acting with other Powers, prevented Japan from doing what the Government of St. Petersburg is doing at this very moment. The Japanese are consequently so much aroused that the British press feels called upon to preach moderation to them. Germany has only economic interests in Manchuria. It can be only a matter of indifference to us, in comparison with Great Britain and Japan, who rules in Manchuria. Nevertheless we should aid all measures having for their object the maintenance of the open door in China and Manchuria. The position of the United States is pretty much the same. Throughout the Chinese upheavals the United States showed great self-control. It even now asserts that its interests in Manchuria are purely commercial. Consequently the original contention of the British press that Great Britain, Japan, and the United States should act in concert has been rather coolly rejected. Between Washington and St. Petersburg a very animated exchange of views is going on. The Russians are naturally pleased that the United States should act alone in this matter, and they are doing all that lies in their power to soothe the Americans."

The German daily sees reason to think that the efforts to calm the anxieties of the United States will not meet with the success to which St. Petersburg looks forward. It points out that Russia's aims in East Asia are not only political, but commercial. The Czar's Government is determined to prevent the exploitation of Manchuria by any other Power than Russia. The United States does not propose to be ejected in such a summary way. What will happen? The German daily frankly gives it up. As for that expert mouthpiece of the French Foreign Office, the *Temps* (Paris), it handles the topic with the utmost reserve. "In any event," it remarks, "the United States will, as usual, go its own way"; but it earnestly hopes "that the divergences of the Powers will not go to the length of an open quarrel." It is a striking circumstance to this organ no less than to other organs of equal authority in Europe, that the United States seems determined to adhere to that policy of isolation which has been its diplomatic tradition since the days when Jefferson sat as Secretary of State in the cabinet of President Washington.—*Translations made for* THE LITERARY DIGEST.

NOTABLE BOOKS OF THE DAY.

FOREIGN FORTUNE-HUNTERS.

THE GOLDEN FLEECE. By David Graham Phillips. Cloth, 5¼ x 7¾ in., 327 pp. Price, $1.50. McClure, Phillips & Co.

THE fortune-hunting nobleman and his American prey have been fair game for a long time past. A long array of such books has passed before us. They bore a curious family resemblance. They were smart with a smartness more or less cheap. They dealt with very unpleasant people—people who were worldly, vulgar, and malicious, without a ray of any kindlier quality in their make-up. The books of this class which were strong enough to make an impression left a bad taste in one's mouth. Most of the characters, moreover, were not real people at all, only disagreeable abstractions. The temptation to burlesque a situation which was already a farce has proved too strong for one author after another, and in spite of the ever-increasing number of books on this theme, there has not been one which dealt with it adequately until Mr. David Graham Phillips wrote "The Golden Fleece."

DAVID GRAHAM PHILLIPS.

This is a thoroughly amusing book. It is incisive without ill-temper, a satire on the social life of this country which is not a burlesque. This social life of ours is a delicate thing to handle without making it seem either despicable or grotesque, both of which faults Mr. Phillips has skilfully avoided. The plot of the story is simple enough. A needy English nobleman comes to America for the purpose of marrying a rich American girl. He proposes to girls in five different American cities and returns home at last to marry an English girl for whom he has cared all along. In his absence, she has come into a fortune.

It is as a series of pictures of life in different cities in this country, and also as a series of brilliant character studies, that the book is valuable. The American men described in most of the former books of this nature have been very poor specimens. They have usually been "nature's noblemen" or else disgusting snobs, and both the bad and good were overdrawn and untrue to life. Mr. Phillips's studies of the various types of ambitious men are not merely clever, they have an unusual atmosphere of truth. Altho the book is written in a light vein, the author shows a knowledge of life, and his studies of people have more depth than one is accustomed to find even in much more pretentious works. The hero is especially well drawn. He is not the conventional fortune-hunter, but a decent sort of chap who manages to keep the reader's sympathy throughout the story, in spite of the unpleasant object of his journey.

A CHRISTIAN SCIENCE NOVEL.

THE LIFE WITHIN. Cloth, 5½ x 8 in., 385 pp. Price, $1.50. The Lothrop Publishing Company.

HERE is a novel of peculiar interest. It is the first complete novel put forth from an avowed Christian Science standpoint. Many novels have appeared having for a central motive the power of mind over matter. The novels of Henry Wood are notable examples in this line of fiction. But this story, true to its Christian Science claim, ignores all other agencies having control over sickness and suffering than those illustrated in the miracles of Christ and of Mrs. Eddy. The founder of Christian Science is not directly named in this story, but she is referred to as "the wonderful woman" through whom this light first dawned upon the world.

It is evident that the anonymous author is sincere to the core and very much in earnest. "I am but a reporter of the workings of the wonders I have seen," she claims. "Herein are facts; I have tried to put them in a setting not too far from the original, in a way that would appeal to many people. . . . I desire only that this little tale may cause you to wonder if it is fair to allow your intolerance of what is a mystery to you to keep the sufferer to whom hope means so much in the shadow of your disbelief."

This is fair and honest, so much so that one feels something of regret that her art is not complete and potent enough to convince the reader of the things she records. If the miracles were less sudden, they might seem more convincing. A young girl, the daughter of a hard-headed judge and a worldly mother, who experiences a sudden conversion after seeing walk into the house an aunt who had been bedridden with a broken spine for twenty years, promptly becomes able to cure people *instanter*. We see her take into her arms an unfortunate child whose bandaged limbs are half-eaten away with scrofula, and in a few moments set the child on its feet whole-skinned, smooth, and fair. We see her cure another child of smallpox, and more slowly cleanse a man of drunkenness; but we are not made to see or to feel how it is done, or how we might set to work and do the same thing ourselves.

In Henry Wood's novel, "Edward Burton"—the pioneer in this line of fiction—we witness an equally marvelous cure of a life-long ailment, yet by contrast with "The Life Within" it seems entirely credible. There is in its working out a largeness, a relatedness to all the life forces we know or have heard or read of, that brings us into touch with the spiritual reality of the thing recorded. It exhales a faith atmosphere that is not a thing apart from the visible universe. It does not tie one up in one esoteric little knot to the mystery of which only one mundane creature in all earth's history ever found the key.

For the rest, that portion of the story which shows the insanity of prejudice to which the mob resort in its revolt against the new cult, and the ignoble part played by petty-minded medical men whose real fear is the depletion of their own incomes—all this is very well done and very little exaggerated—as our daily papers amply prove.

The author is a pioneer in a new field and will no doubt have followers. It would be well, however, if Christian Scientists intending to turn novelists would give more latitude to the play of "mortal mind," since through this poor, despised medium they will be much more likely to gain the ear of the uninitiated public and keep in close touch with their readers.

ORIENTAL GLAMOUR AND OCCIDENTAL GUMPTION.

WINTER IN INDIA. By Eliza Ruhamah Scidmore, author of "Jinrikisha Days in Japan," etc. Cloth, 8vo, 6 x 8½ in., 400 pp. Illustrated. Price, $2. The Century Company.

AS we go a-wayfaring through these brisk and breezy pages, we find ourselves happy in our guide, in whose exhilarating surprises of remembrance and of mood are joined divertingly "the glamour of the East" with the gumption of Western shrewdness and humor—occasional irreverences that are only playful, and mockings that are never malicious. We are reminded of "Eothen," and Kinglake's prefatory letter to a friend: "As I have felt, so have I written; in my narrative will often be found a jarring discord between the associations properly belonging to interesting sites, and the tone in which I speak of them." His prejudices "in favor of other people's notions" were exceedingly slight in those days. So Miss Scidmore, tho at times she "hears the East a-callin'," and has her proper visions of "the sunshine and the palm-trees and the tinkly temple-bells," never so loses in them a just regard for her day and generation as to forget the ice in the bath-tub of Agra and Delhi, and the cold raw nights in springless cars.

ELIZA RUHAMAH SCIDMORE.

We begin to comprehend the significance of "winter" as applied to India, when we read of the solid two-o'clock tiffin following the heavy ten-o'clock breakfast, and quite demoralizing the thinking animal for the demands of the four o'clock tea and the eight-o'clock dinner—the surfeit and the bore taking desperate refuge in each other; the piercing dampness succeeding the sunset and the night-fogs shrouding the lampposts, until street-travel is at a standstill. Then it is that, in some of the older homes of Calcutta, one is bidden, quite seriously, to "sit nearer the lamp and enjoy its benign radiation."

Speaking of "the drawing-room" in Christmas week, and of the vice-regal pair, Miss Scidmore addresses herself, with no stint of praise, to the beauty and the gracious tact of Lady Curzon, receiving on the dais,—"her train rippling over the edge of the steps, reminding one of certain of David's historical pictures." Lord Curzon is described as sharing with the Empress of China dominion over half the human race, "and still finding time to breakfast under the banian-tree." But, we are told, he has impressed his vigorous personality—his formidable activity, his frenzy for work—upon every branch of the imperial service; and has imparted to India an impetus in the direction of progress and prosperity. And none too soon, for the curse of caste, and all the hindrances its observance implies, complicate and perplex all dealings with the Indian people; and a century of enlightened rule has failed to relieve the situation. Nevertheless, the railway has done surprising missionary work. The politic and clever Brahman pretends to regard steam as one of the thousand uncatalogued manifestations of Vishnu; he conceals his "sacred thread" and his caste-mark, and rides in the jam of a third-class car, among the water-carriers and the sweepers and the corpse-burners—trusting conveniently to his "purification," as prescribed and provided.

Our vivacious lady is of the clan Kipling; impugn his transcendent

claim, and you will find her eager for the fray—ready to try conclusions with you, in the very rapture of battle. To her, India is Kipling, and Kipling India. "One must read his Kipling to enjoy Peshawar; one must see Peshawar to enjoy Kipling."

Miss Scidmore is so audaciously exceptional as to confess that she failed to *enjoy* her India. The races and the people, diverse and picturesque to look upon, seemed yet, to her occidental notion, as antipathetic, as devoid of charm, as the Chinese. "The irrational, illogical turns of the Indian mind and character, the strange *impasses* in the Indian brain, the contradictions of traits"—these vexed and wearied her; perhaps by force of that very sympathy, in herself, which she seems so ready to deny.

A STORY OF COURT JESTERS.

UNDER THE ROSE. By Frederic S. Isham. Cloth, 5¼ x 7¼ in., 427 pp. Price, $1.50. The Bobbs-Merrill Company.

IT is probably not exaggerating to assert that there are published every year a number of novels every whit as good as some of those which made spectacular successes a few years ago when the new historical novel was something of a novelty. Mr. Isham's book is of its kind rather a neat piece of work. It is very much better put together than "The Strollers," which he brought out last year. He has a love for the picturesque vagabond element of society, and delights in strolling players, mummers, jesters, and all sorts of merry-makers of a bygone day. He has also a fancy for ladies of rank who, by necessity, are forced to masquerade as players or jesters until they at last come into their own. It is out of such rather picturesque trumpery that Mr. Isham is wont to make his books. They are readable, they carry the reader merrily through their pages. What if we do know from the very first that the jester is the duke and have a shrewd suspicion that the Jacqueline is herself a lady of rank?

FREDERIC S. ISHAM.

Historical romances, as they have appeared in this country, have not taken a very high rank. They have been naïve tales full of surprises which surprised only the characters in the book, and of dénouements which were preshadowed almost from the first. So when we speak of "Under the Rose" as a good romance we mean good of its rather elementary kind. Stories which need so much dressing up in the way of picturesque detail and are dependent entirely on melodramatic effects for their interest can not be developed beyond a certain point of excellence, and our little romantic tales, even the better ones like "Under the Rose," have no close relation to the really great historical novels.

Mr. Isham's book is free from the excessive shedding of blood which has marred so many of the kind, and, while the hero is kept busy enough, he is not so miserably overworked as to cause the reader's pity to be aroused for him. The author's most serious sin against art has been an absurd attempt to give an impression of old French by the many certain archaic phrases, resulting in a jargon that never existed outside the pages of an historical novel.

LURID LIGHTS OF A LONDON SEASON.

A PICCADILLY. By Benjamin Swift. Cloth, 5 x 7½ in., 254 pp. Price, $1.50. G. P. Putnam's Sons.

MR. SWIFT has given an engaging name to this short tale. There are few who escape the mysterious fascination of the Calypso of cities, and one has grasped London very inadequately who does not know that Piccadilly, during the season especially, stands for the gayest social life of the great grimy town and, as well, for its most charming urban characteristics. Mr. Swift keeps you with the real Piccadillians. Even the "low" characters are very smart Mayfair valets and the shrewd proprietor of the swellest hotel in London.

Taking his smart set as his *dramatis personæ*, the author leads up to a tragic ending. Lady Ossington is a lovely lady who has thrown over a superb young man, Debrisay, whose family has had instances of insanity, to marry a wealthy lord. The story opens toward the close of the honeymoon. Throughout this, Debrisay has followed on their heels. Everywhere they go, he pops up. It is rather a peculiar persecution and it has begun to get on Ossington's nerves.

A Scotch Laird of Bargarran has a young son, Ninian, and he has come from his gaunt old place in the northern moors to a fine Piccadilly mansion. Ninian too is very much taken with Lady Ossington; so Lord Ossington is not as happy a husband as he expected to be. At last, he gets so "rattled" over Debrisay that he decides to shoot him while they are deer-stalking on the Bargarran moors.

There is a miserably conceited valet of the Bargarran and Ninian, a Frenchman named J. C. Dalbiac. He is extremely good-looking and is resentful over his condition of servitude. He counts on bettering this by wheedling some old gentleman, or a romantic woman, into a devoted consideration for him.

When Ossington lets drive at Debrisay, it is Dalbiac whom he kills (there is poetic injustice in *that!*), and when he shoots a second time his gun explodes and he is literally "hoist by his own petard."

This is the little story which Mr. Swift has set forth in an incisive and polished style, with a string of character studies. "In Piccadilly" does not pretend to any great importance, and deserves no very great censure, no very great praise. It is a brightly written sketch of London in the season, with an incongruous weight of tragedy to it.

A VIVISECTION OF HEARTS.

THE MANNERINGS. By Alice Brown. Cloth, 5¼ x 7¾ in., 382 pp. Price, $1.50. Houghton, Mifflin & Co.

ALICE BROWN is a name in literature that stands for strong primal qualities in the art which the lady professes and adorns. Miss Brown has written essays, poems, novels, all with a vital tang of New-Englandism in them. "Meadow Grass" proved her the peer of Mary Wilkins in delicate poignancy of appeal and the penetration that pierces to the hidden nerve of feeling. To one equipped in this wise it is the manner of the doing rather than the thing wrought out that counts. But in this sterling novel there is much absorbing interest. Her characters are impressive and, as a rule, clean-cut. "The Mannerings" is a love-lyre, and from it are drawn chords deep, mournful, sweet, and tragic.

Katherine Mannering is married to the wrong man, and matrimonial bondage rubs her soul raw every time she breathes. Brice Mannering is a good-looking, commonplace, habit-dried husband, with a filial regard for his father, who is a crank on Homer, a shoppy shadow of an Hellenist. Elinor Thayer is a woman of thirty-three, spinster, whom the blows of life have triturated into spiritual sweetness. She is in love with a splendid fellow, big, muscular, a naturalist; has been in love with him for nine years and he does not know it. There is an exquisite girl, Natalie, one of these frail things whom love absorbs and absolutely dominates, but who has a gentle dignity that can disguise. She is in love with Richard Horne, Gilbert's nephew, a young, vivacious fellow, full of energy and thoughtlessly selfish. There is Cassie, "a great creature made out of the best of New-England earth," a maid in Gilbert Horne's bachelor household. She is not quite thirty, but she is large, mature, ruminant, elemental and—smolderingly in love with Gilbert Horne. Then there is Lorraine, Natalie's sister, and she is a Dryad in soul—a kinswoman of the Demigods—she dances beautifully; she makes everybody alive by her own superabundant vitality; she is absolutely and unrepulsively selfish. Her grandmother, a marvelous old woman of seventy-eight, has Lorraine's measure to a hair. "There is only one person likely to get any power over Lorraine," she told Richard Horne, who is being swept away by the young witch's charm, "and that's that brute Levinski. Not a bad fellow, but simple, normal brute. He's more selfish even than Lorraine, and the force of it fascinates her. She'll end by marrying him." And she did.

ALICE BROWN.

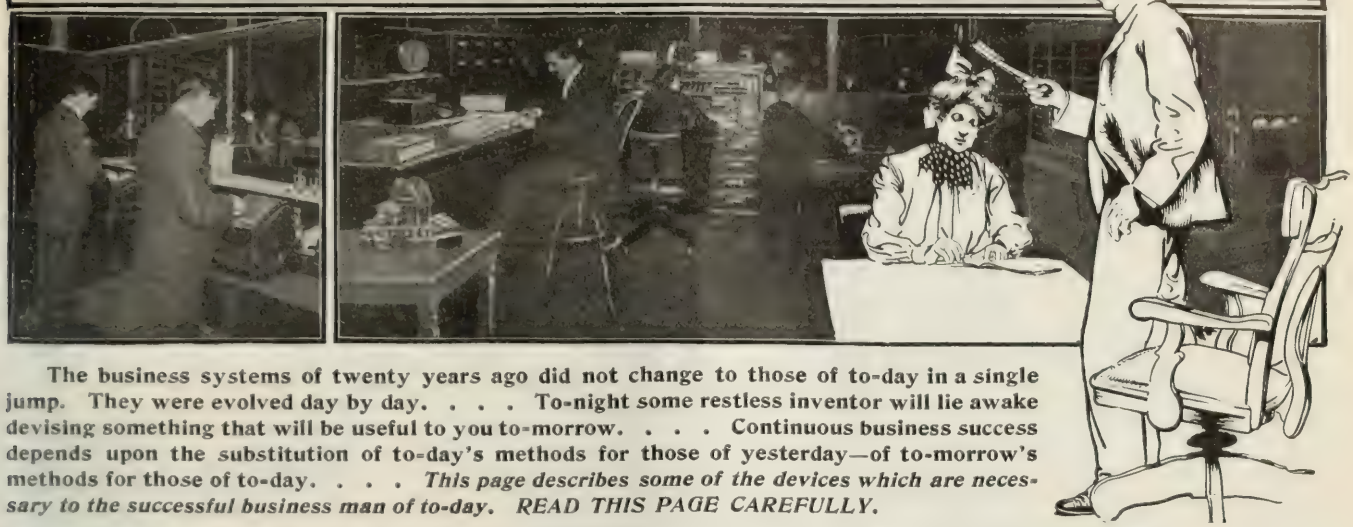
So there you have the five love-chords that Miss Brown elicits such diverse tonality from, but with a New-England way of appraising New-England emotionality. It is a brilliant book. A reader feels grateful and flattered to have such good things set so constantly before him, and the appetite grows by what it feeds upon.

Miss Brown's comments and elucidative reflections are trenchant and subtly expressed. The interest in the story is unflagging. There is incident enough, but it is the unfolding of souls that makes the interest. And the end is happy, in the main, for three of the women get their men, including Lorraine, who is a rank intruder and a dazzling irritant.

A critic need not hesitate to call a book like this "great," altho it betrays no wonderful invention. It is so strong, so coherent, so justly handled, so full of exquisite touches; and the characters, too, are drawn with the suavity and correctness of Leonardo da Vinci.

FOX, DUFFIELD & CO. is the name of a newly incorporated firm of publishers, who will engage in "a general publishing business" in New York. The heads of the firm are young men and Harvard graduates. Mr. Rector H. Fox has been for nearly seven years in the publishing house of R. H. Russell. Mr. Potts Duffield has been in the employ of Charles Scribner's Sons for the past five years.

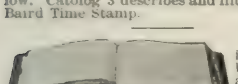
Practical SYSTEM *in* BUSINESS



The business systems of twenty years ago did not change to those of to-day in a single jump. They were evolved day by day. . . . To-night some restless inventor will lie awake devising something that will be useful to you to-morrow. . . . Continuous business success depends upon the substitution of to-day's methods for those of yesterday—of to-morrow's methods for those of to-day. . . . *This page describes some of the devices which are necessary to the successful business man of to-day. READ THIS PAGE CAREFULLY.*

Every man who conducts correspondence is interested in the question "Which is the best typewriter?" There are twenty-five substantial reasons why the OLIVER TYPEWRITER is the best machine the world has produced. It has proven its unqualified right to the title, "The Standard Visible Writer," and its adoption increases quantity, improves quality and reduces expense. Strong claims—but easily proven. The wide range of the Oliver Typewriter's usefulness makes it easy to adopt systems heretofore impracticable except with the pen. Catalog 2 explains in detail.

Time is money. BAIRD'S No. 12 TIME STAMP makes an absolutely accurate record for every purpose where time counts. Receipt of correspondence, job time, arrival and departure of employees and in countless other cases time is measured to the minute by this—the only durable time stamp. The clock movement, in an entirely separate compartment from the stamping mechanism, is unaffected by the hammer action. The price is remarkably low. Catalog 3 describes and illustrates the Baird Time Stamp.



Old-fashioned bound books for accounts are impractical and expensive. Loose leaf books allow of arrangement, rearrangement and expansion. They save time, for yearly or semi-yearly opening of new books is done away with. They are self-indexing. The JONES PERPETUAL LEDGER COMPANY'S LOOSE LEAF BOOKS have every advantage of any loose leaf book and more—absolute alignment of the leaves—a strong binder in which the leaves can not move a hair's breadth. Every progressive business man should read Catalog I. It explains JONES PERPETUAL LEDGER COMPANY'S LOOSE LEAF BOOKS and how to use them in your business.

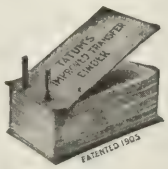
An ERICSSON INTERIOR TELEPHONE SYSTEM shortens office work, saves actual time, saves confusion. To some men such a system seems a luxury. All who have installed the system *know* it is an economy. Cheap interior 'phones soon get out of order. That's worse than no system at all. But the Ericsson is built to last—the same quality and style used on long distance lines. No other concern anywhere has studied the telephone system so thoroughly, or devised so many special instruments and attachments to save time and bother in office communication. Ask now for Catalog 4.

The ADDRESSOGRAPH is as necessary to a modern office as steam is to an engine. With it an office boy can do in one hour what it formerly took ten clerks two hours to do. It addresses envelopes in exact imitation of typewriting, fills in names on duplicate letters, prints names and addresses on shipping tags, pay envelopes, time tickets, monthly statements and loose leaf systems. Thousands of business houses now have their lists of names arranged for the Addressograph and kept by States or Territories so that printed matter can be speedily sent to any special list. Catalog 7 describes it, and illustrates its many uses. Write for it to-day.

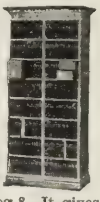
For many years methods of accounting did not change materially, but when the BURROUGHS ADDING MACHINE was placed on the market this branch of office work was revolutionized. To-day there are 12,500 of these great time savers in banks, mercantile houses, factories, wholesale and retail stores, etc. The Burroughs Adding Machine bears the same relation to figures that the typewriter does to correspondence. It adds figures with ten times the speed of the quickest clerk and it is mechanically impossible for it to make a mistake. Described in Catalog 13. Write for it.

Some business men are prejudiced against fountain pens. And that same prejudice has kept them from knowing how great a saving WATERMAN'S IDEAL FOUNTAIN PENS would make in their office work. Continuous writing without dipping and blotting saves so much of a man's own time—and the time of his stenographers and clerks—that a pen pays for itself in a short time. But the fountain pen must be a "Waterman." Catalog 5 tells all about Waterman's Ideal Fountain Pens, and of special pens made for modern office work. Write for Catalog.

There was a time when any old chair would do for the office. But times have changed, and ideas of business comfort have changed with them. McCLOUD'S NEW TWENTIETH CENTURY ADJUSTABLE SPRING BACK CHAIRS have been important factors in the improvement. "Back Resters" they call them—because they give complete back rest while at work, thereby enabling the man at the desk or woman at the typewriter to accomplish more work with greater comfort. Catalog 14 describes the McCloud Chairs.



Modern business methods presuppose a convenient and orderly arrangement of papers. By the most approved systems, all orders, forms and records are spread on punched loose sheets, which are filed and classified according to the varying needs of each business. These loose sheets are kept in Holders if there be few, and in Binders if there be many; and when old the sheets are consecutively filed away in Transfer Binders as permanent records. The TATUM HOLDERS AND BINDERS comprise 3 styles and 78 stock sizes. Ask for Catalog No. 16.



File your clippings, memoranda and manuscript. Every busy man—literary, business or professional—realizes the great necessity of properly filing and classifying memoranda, clippings, data, etc.

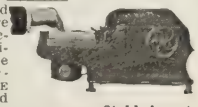
Any one will appreciate the tremendous advantage of having such data arranged in order and at his fingers' ends.

The LIBRARY FILING CABINET is the solution of the problem of classification. It is the acme of simplicity and ready reference. Send to-day for Catalog 8. It gives valuable information that can not be acquired from any other source.

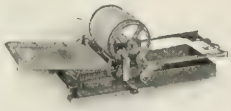
The PROTECTOGRAPH will absolutely secure the integrity of your checks. It impresses a line like this:

NOT OVER FIVE DOLLARS 5

in strictly indelible ink upon any preferred part of the check so deeply as to make the line a part of the document itself and absolutely unalterable and ineffaceable. It is used by the U. S Treasury and more than 10,000 financial and industrial institutions. Write for Catalog 15 which tells some things about check raising and check protection that you may not know.



To save time and labor, to insure neatness and accuracy, to facilitate work, use the THEXTON ELECTRIC ENVELOPE SEALER. Endorsed by over 1,000 concerns as a profitable investment. It performs the labor of several people. So simple any boy or girl can use it and feed envelopes at a minimum speed of 100 per minute. It is being used by the largest trust companies, banks, commercial and mail-order houses in the country, who have installed it after thorough and practical tests, and found to fulfil every claim made. Sent out on free trial to sell strictly upon merit. Ask now for Catalog 11.



No office is considered complete without an Edison MIMEOGRAPH. It both quickens business and saves money. There is a place in almost any business where an Edison Mimeograph will save time and money. Perhaps you see no use for it in *your* office. You probably will after you read Catalog 6 and understand what a Mimeograph will do. Simply cut out and sign the coupon on the corner of this advertisement, or better still, write us a letter stating your business, and we can suggest methods to meet your requirements.

No matter what you want to file—information, papers, samples, documents—there is a Shaw-Walker way to do it. Shaw-Walker card systems are better than books—Shaw-Walker vertical letter files better than flat sheet cabinets—Shaw-Walker sectional bookcases better than solid ones. All are built in sections so they will grow as your business grows. Send to-day for Catalog 19. It tells all about SHAW-WALKER SYSTEMS. Costs the Shaw-Walker Company 38c. to send it. Simply sign the coupon on the corner of this advertisement.

The little things in an office sometimes save the most time, labor and money. RUBBER STAMPS, NUMBERING MACHINES, ETC., suited to your business, will aid you in a countless number of ways, and at little cost considering the valuable service they can render. An ingenious little holder called "Rex" keeps them in order, clean and handy. The best ideas on Rubber Stamps and kindred articles are described in Catalog 12. If you send for this catalog you will receive not only the latest and most practical ideas discovered up to date, but will be kept informed of new schemes that are being constantly originated in the leading mercantile houses.

Free information is offered you here. Mail us this coupon or write us a letter

I enclose ..... Send SYSTEM, the magazine, for ..... on approval. If I am not satisfied when the subscription ends, you agree to return my remittance.

Dollar Offer

There are many little things—and big things—in your business which will need improving to-morrow—which, perhaps, need improving to-day. **System**, the 96-page magazine, will show you how to improve them—brimful of brightness that will help you to devise clever systems for yourself.

This is really a half-price offer. The publishers have doubled the price and trebled the value of SYSTEM. Two dollars a year is the cost. But this introductory offer is available: Send a single dollar now and you will receive the next six numbers of SYSTEM and six valuable back numbers for immediate reading. Or, better still, send two dollars for a full year's subscription and the six back numbers. Send the coupon or write a letter TO-DAY. YOU CAN NOT AFFORD TO CLOSE YOUR CASH DRAWER AGAINST SYSTEM.

CURRENT POETRY.

My Friendly Rain.

By MILDRED I. MCNEAL.

The rain?
Who cavils at the rain?
From kind gray skies
It comes—calm touch of heaven—
Upon my lips,
My hair, my eyes,—
And slips
About me like a garment woven of love
And broidered with the seven
Sweet virtues of a maid.
Who would not be content,
Even with his last wish spent,
Taking the simple joys of such a day!
So, guided by some strain
Of hidden song it hath, and unafraid
Of any evil, forth I move
Upon my still, glad way.
Singing for the rain!
Love for the rain!
My friendly rain!

—In May *Harper's Magazine.*

THROUGH HELL WITH HIPRAH HUNT. By ARTHUR YOUNG. A [illegible] comedy. Very laughable, very true. And altogether genuine. Mail book-shops or by mail post paid, $1.25. Address ZIMMERMAN'S, 156 Fifth Ave., New York.

Slow Through the Dark.

By PAUL LAURENCE DUNBAR.

Slow moves the pageant of a climbing race;
Their footsteps drag far, far below the height,
And, unprevailing by their utmost might,
Seem faltering downward from each hard-won place.

No strange, swift-sprung exception we; we trace
A devious way through dim, uncertain light,—
Our hope through the long vistaed years, a sight
Of that our Captain's soul sees face to face.

Who, faithless, faltering that the road is steep,
Now raiseth up his drear insistent cry?
Who stoopeth here to spend a while in sleep
Or curseth that the storm obscures the sky?
Hold not the darkness round you dull and deep:
The clouds grow thickest when the summit's nigh.

—From "Lyrics of Love and Death." (Doubleday, Page & Co.)

An Afternoon.

By WITTER BYNNER.

Through the soft hours, forgetful on the grass,
Watching the birds and clouds and things that pass,
How sweet it is thus without life to lie,
And with no heart to know how sweet it is to die!

—In May *McClure's Magazine*.

A Mile with Me.

By HENRY VAN DYKE.

O who will walk a mile with me
Along life's merry way?
A comrade blithe and full of glee,
Who dares to laugh out loud and free,
And let his frolic fancy play,
Like a happy child, through the flowers gay
That fill the field and fringe the way
Where he walks a mile with me.

And who will walk a mile with me
Along life's weary way?
A friend whose heart has eyes to see
The stars shine out o'er the darkening lea,
And the quiet rest at the end o' the day,—
A friend who knows, and dares to say,
The brave sweet words that cheer the way
Where he walks a mile with me.

With such a comrade, such a friend,
I fain would walk till journeys end,
Through summer sunshine, winter rain,
And then?—Farewell, we shall meet again!

—In *The Outlook* (New York).

Could I Go Back.

By THEODOSIA GARRISON.

Could I go back again the self-same way
Where Love and I that wondrous yesterday
Walked hand-in-hand with tender lips and eyes,

View from our Property of Riverside Drive and Grant's Tomb, the Most Beautiful Section of New York City.

Make Your Money Make Money

and have it so invested as to be at all times absolutely safe. The safest, surest medium within your reach is **Real Estate in New York City and vicinity**, in which an investment judiciously made has **never failed** to return many fold in profits; the one investment that has made **more millions in New York** than any other.

Our properties are at New York's threshold. 35 minutes from the great commercial and financial centers of the city.

GRANTWOOD-ON-HUDSON AND MORSEMERE

are directly opposite Grant's Tomb and Riverside Drive, the Geographical Center of Manhattan, and but 15 minutes distant. Macadam streets, flag walks, curb, water, gas, unexcelled sewerage system. Beautiful parks completed and others in construction. Handsome schools and churches. $7,000,00 new R. R. station. Trolleys in operation and more contracted for.

65 new homes built in **GRANTWOOD** in the last 2 years and 22 at **MORSEMERE** within last 12 months. Lots similar to those sold in 1899 for $450.00 now selling at $950.00. Values have doubled and should double again in another 3 years.

Lots at MORSEMERE, $350 to $700. At GRANTWOOD, $700 to $2,000 (all lots 25 x 100); as desirable for residential purposes as those sold for same price in Harlem or Bronx (in the upper part of New York City) ten years ago, which now bring from $4,000 to $20,000 each.

EASY PAYMENTS: $15 down and $5 monthly, for lots under $700.

These properties have already proven their profit possibilities; but to demonstrate our faith in their future increase, we will guarantee that if the actual increased value within two years from your purchase is not equal to 15 per cent. per annum on your cash investment (as determined by the price at which we are selling similar lots at that time) we will refund the entire cash paid us, with interest at 6 per cent. If interested we will give you a

FREE TRIP TO NEW YORK

paying your railroad fare both ways for the purpose of having you inspect our property. But don't delay. Reserve lots at once, and thereby secure them at present prices, as **all lots advance 10 per cent. on or before July 1st.** Write to-day for testimonials from **buyers who have already sold at a profit,** photographic views, etc.

Satisfies
Sense and Senses

IT IS NOW KNOWN THAT THE CHIEF CAUSE OF SICKNESS AND DISEASE IS THE USE OF UNNATURAL FOODS.

SHREDDED WHOLE WHEAT BISCUIT

is your natural food. **Natural** because its properties both in **kind** and **proportion** are precisely the same as the elements of your body. Its regular assimilation **insures you absolutely from elemental weaknesses** and leaves no poorly nourished elements in the system for the lodgment of disease germs. Shredded Wheat is many times more porous than other foods and therefore more quickly digested. Keep well by its use and start to-day. Combined with fruit, Shredded Wheat is seasonable and delicious and satisfies both sense and senses. Send for "The Vital Question," **free.** —our charming little cook book, illustrated in colors.

TO INVESTORS

Money Invested in Sheep and Cattle in Montana is safe and pays a big profit. A small investment here grows into a large fortune in a few years. Every one, women and children now have profits coming to them. Write for Annual Report, a most interesting document.

Montana Co-Operative Ranch Co., Great Falls, Montana

I think perhaps now grief hath made me wise,
I would not blunder where the pitfalls lay,
I would not be so sure, so quick to stay,
So certain of the sun-filled, cloudless skies,
But over-careful of what storms might rise,
Could I go back

Oh, useless words, too impotent to say!
Who seeks in Winter for the suns of May,
Or stands again where last night's moonlight lies?
Oh, heart, our folly lost us Paradise—
Poor prodigal, too late I turn to pray,
Could I go back.

—In *Collier's Weekly*.

PERSONALS.

A Battle-field Joke.—To look at General Jack Hays it seems almost incredible, says the Washington *Post*, that he could have served for forty-eight years in the United States army, because he seems no older than that. In narrating some of his experiences recently, the general said:

"I was in a hot fight with the Indians out in western Texas, in 1859, in which Fitzhugh Lee received an arrow in his side from the bow of a Comanche chief. Not one of his men who crowded about him expected he would live. His look was so ghastly, his voice so faint, that we expected every breath would be his last. My heart was nearly broken, for I had the same warm liking for him then I have ever since cherished.

"While we stood in a mournful group around him one of the boys remarked, at the same time exhibiting his hat, with a bullet-hole through the top: 'They've got the lieutenant, and if the bullet that made this had gone two inches lower, I'd been a dead man, too.'

"At this Fitz Lee opened his eyes just a fraction, and as the ghost of a smile played on his pallid face, observed: 'Jim, you needn't try to impose any such yarn as that on us. You got behind a tree, and shot that hole in your hat yourself.'

"Then and there I knew Fitz Lee wasn't going to die. A man who had life enough left to joke was sure to get well."

Convenient Deafness.—John Mitchell, president of the United Mine Workers, was recently a guest of the Clover Club of Philadelphia. It is the rule of this organization, says the New York *Tribune*, to call upon its guests to speak, and then to confuse them with interpolated remarks. But Mr. Mitchell could not be confused, and the only notice he took of the gibes was to say:

"I guess I could get along better with my speech here if I were deaf. It is often a good thing to be deaf. There is a deaf old woman I know up in the coal regions.

"Once I went to see this woman, and she asked me to stay to tea. I thanked her and said I would, as I was not expected home before dark. She had been hearing pretty well up to this point, but now she got very deaf all of a sudden. She had to ask her daughter what I had said.

"'He said, mother,' exclaimed the daughter, 'that he thanks you, but he can't stay, as he is expected home before dark.'

"At this the old woman looked relieved, and I departed."

Miss Ethel Barrymore's First Appearance. "We had 'gotten into our parts' thoroughly during the protracted run of 'The Bauble Shop,'" says Miss Barrymore, in *Lewis's Monthly* (May), in telling

OHIO STEAM COOKER CO. 750 Jefferson St., Toledo, O.

of Miss Barrymore's début," nevertheless nervousness reappeared when Miss Barrymore's first appearance was 'coming' to mind."

"She was to act instead of Miss Elsie De Wolfe, and was to use Miss De Wolfe's gowns; one, an affair in an excellent shade of blue with huge black butterflies scattered all over it, the dressmaker had so fitted that the butterflies came in exactly the right places when the gown was originally designed. Of course, Miss Barrymore, then immature, practically a school-girl, did not quite fill the dress. At any rate, the maid nearly had hysterics in an effort to induce a refractory butterfly to perch on the shoulder when it persisted in alighting half-way down the back. Well, the time for her cue came and the new actress left her dressing-room laughing; her uncle, Mr. John Drew, was already on the scene, and Mr. Frohman was 'out front.' But with every one else on tenter-hooks, this girl who had never faced an audience before, walked on the stage with as much assurance as if she were about to recite her geography lesson in school. She went through the performance so neatly that one could hardly avoid the notion that she had been acting since she was a baby of five. And when she came off she was still laughing."

Coming Events.

May 24-26.—Convention of the Commercial Telegraphers' Union of America, at New York City.

May 24-30.—New York City's 250th Anniversary Celebration of the Founding of Municipal Government and 100th Anniversary of the Building of the City Hall.

Pears'

Economical soap is one that a touch of cleanses.

Get Pears' for economy and cleanliness.

Sold all over the world.

PURE WATER AND GOOD HEALTH GO HAND IN HAND.

In everything pertaining to health the nearer we get to Nature and to Nature's ways the better we are. Perfect filtration is absolutely necessary to make water the true, wholesome solvent it is intended to be.

The National Filter

is patterned closely along natural lines and is based strictly upon Nature's methods. The finest quality of tripoli stone is the filtering medium used, and its construction and action are such as to positively remove every trace of bacterial and animal matter. Hence absolutely pure water is the result. The National Filter never needs taking apart for cleaning—there is no removal of the stone, and anybody can clean it thoroughly in three minutes.

Made in all sizes for the home, the office and large institutions. Installation is direct with the supply pipe and in no way interferes with water drawn direct from faucet. Write for illustrated booklet, "Pure Water in Nature's Own Way"—it's free.

TO INVESTORS

A VERY UNUSUAL OPPORTUNITY

Mr. John Brisben Walker is taking the Presidency of a Company which offers unusual features for safe and highly profitable investment; namely, First Mortgage, 6-per-cent., Real Estate bonds, accompanied by a 60-per-cent. bonus in the Company's Preferred Stock. This Company takes over more than 900 acres of land within 3½ miles of center of Denver. Berkeley Heights is the most beautiful plateau around this rapidly growing metropolis of the Rocky Mountain region—the most prosperous city on the continent to-day. The property is to be immediately developed upon an extensive scale as a residential quarter upon modern plans, with reservations. Mr. Walker will hold a controlling interest in the stock, and personally recommends the investment as absolutely safe and likely to be extremely profitable. For further particulars address James Randolph Walker, Secretary, The Berkeley Heights Investment Co., Irvington-on-the-Hudson, New York.

Solved by M. W. H., University of Virginia; the Rev. I. W. B., Bethlehem, Pa.; M. Marble, Worcester, Mass.; the Rev. G. Dobbs, New Orleans; F. S. Ferguson, Birmingham, Ala.; H. W. Barry, Boston; A. C. White, New York City; the Hon. Tom M. Taylor, Franklin, Tex.; J. J. Burke, Philadelphia; the Rev. J. G. Law, Walhalla, S. C.; E. N. K., Harrisburg, Pa.; F. Gamage, Westboro, Mass.; R. H. Renshaw, University of Virginia; W. T. St. Auburn, Grosse-pointe Farms, Mich.; E. A. C., Kinderhook, N. Y.; W. J. Ferris, Chester, Pa.; O. C. Pitkin, Syracuse, N. Y.; Dr. E. B. Kirk, Montgomery, Ala.; A Knight, Tyler, Tex.; G. Patterson, Winnipeg, Can.; "Twenty-three," Philadelphia; Chess-Club, Ouray, Col.; Dr. J. H. S., Geneva, N. Y.; W. B. Hall., Marion, Kan.; W. K. Greely, Boston; W. Rech, Freeport, Ill.

831: J. L. Cardozo, Brooklyn, N. Y.; D. H. Wiltsie, Jamestown, N. Y.; Dr. H. W. Fannin, Hackett, Ark.; Z. G., Detroit; A. S. B., North Berwick, Me.

832: The Rev. P. D. Thompson, East New Market, Md.

Comments (831): "An ingenious threat"—G. D.; "Good key, but too many duals"—F. S. F.; "A good study"—J. G. L.; "A thing of beauty"—E. B. K.; "Pretty as a bouquet"—A. K.; "Very good"—"Twenty-three"; "Far above the average"—D. H. W.; "Difficult key"—H. W. F.

832: "The violation of the canon must be overlooked in order to make the figure complete. A work of genius and genius, will not submit to the restraints of the law, all the time"—F. S. F.; "Beautiful in construction and brilliant in execution"—J. G. L.; "Strange key for a first prize"—W. T. St. A.; "Oh!"—"Twenty-three;" "An interesting 'freak'"—J. H. S.

While the author of this problem violated a canon of problem-construction, this does not render the problem unsound. The rule in reference to the key-move, that it should not be a "capture" or a "check," etc., is something like the law of harmony forbidding consecutive fifths, which law great genuises constantly violate. Several solvers think that the law says: "you must not solve a problem by a 'capture,' etc." If a problem is solvable, it is 'sound,' altho it may not be pretty.

In addition to those reported, Dr. H. W. F., G. P., "Chess-club," A. S. B., Dr. E. B. K., and Dr. B. M. Cromwell, Eckhart Mines, Md., got 829; W. T. St. A., 829 and 830; M. Almy, Chicago, 827 and 829; E. A. Kusel, Oroville, Cal., 827.

End-Game (May 2).

7 R—K 8, mate	

Any other play by Black would force mate in fewer moves.

The Vienna Tourney.

The ninth and final round of the first part of the International Gambit Tourney shows the following score:

	W.	L.		W.	L.
Tschigorin	7½	1½	Maroczy	4½	4½
Pillsbury	6	3	Marco	4½	4½
Marshall	5½	3½	Swiderski	4	5
Teichmann	5	4	Schlechter	3	6
Mieses	4½	4½	Gunsberg	3½	5½

In this first part of the Tourney, White won 18 games, Black 16, and 11 were drawn. Tschigorin lost 1 game, to Maroczy, and "drew" with Pillsbury, winning the others. Pillsbury lost only 1 game, to Marshall, but he had 4 "Draws," with Tschigorin, Marco, Maroczy, and Teichmann, so that he won only 4 games. Marshall won 5 games, drew 1 with Schlechter, but he lost 3 games, to Marco, Teichmann, and Tschigorin. Maroczy won only 2 games, from Marco and Tschigorin; he lost [illegible] and drew 9.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

SHALL WE SEND A PROTEST TO RUSSIA?

WILL our "reformed poet in the frock-coat of a Secretary of State" send a protest to Russia against the massacre of Jews at Kishineff, asks the New York *American*, a Democratic paper whose editor, Mr. Hearst, was recently elected to Congress. If he will not do so, the same paper proceeds, then Russia's rulers will hear from Congress, and "they will know when they hear from Congress that they are hearing FROM THE POWER THAT MAKES TREATIES AND DECLARES WAR. Let Mr. Hay bow as politely as he chooses to the bear with the bloody paws," adds *The American*, warningly, "that bear knows that there is a power over Hay, and from that power Russia will hear." Mr. Hearst's paper is alone, however, so far as we have seen, in seeming to threaten the Czar with war; and only one other paper that has come to our notice, the Des Moines *Register and Leader*, advocates sending a protest to Russia. The latter paper says:

"The United States should lead in a protest to Russia that will stir the Czar to see to it that there shall be no repetition of this Kishineff affair. For reasons that are apparent no European nation is in position to take the lead, and if any European nation should, its motives might be open to question. But the United States occupies a position of independence and at the same time of friendship toward Russia. A protest from this country could not be misinterpreted, and could not fail to bring home to Russia the enormity of the crime against civilization that has been tolerated if not encouraged by the Government. Russia is not unmindful of the good opinion of the world. It would not court a second formal arraignment from a Government occupying the important and yet commanding position of the United States. A protest from us, couched in no uncertain terms, will be a service to humanity and to civilization, and will be notice to other nations than Russia that outrages, rapine, wholesale slaughter, and unprintable atrocity must cease or that the governments that tolerate them will be held up to the lasting scorn of all right-thinking people and to the condemnation of history."

The only representation our Government has made to Russia, so far as the public has been informed, is an inquiry asking whether the money and supplies that are being offered from all parts of America for the Kishineff sufferers will be acceptable to the Russian Government. In reply to this, the Russian Foreign Office has said that while the American generosity is appreciated, there is no need for relief, as the wants of the people of Kishineff are being looked after.

If the persecution of the Jews results in a great increase of immigration of Russian Jews to this country, our State Department may make this fact the basis of representations to Russia, following the example of the recent protest to the Powers against the persecution of the Jews in Rumania; but the Washington correspondents do not think that any protest will be made unless such an increase of immigration demands it. And the great majority of our newspapers approve this program. No American citizens were killed or hurt in the Kishineff riots, they argue, and we have no more right to protest than Russia would have to protest against the lynching of negroes in this country. If any foreign Government should protest against our lynchings, says the Chicago *Tribune*, it "would create a whirlwind of indignation in this country," and "Americans would resent bitterly what they would call an insolent interference with their internal affairs." The New York *Evening Post*, too, recalls the lynchings of Italian subjects at Erwin, Miss., and remarks that "self-respect requires that when we go into the court of nations we should go with clean hands." And the Springfield *Republican*, recalling the massacre of Chinese at Rock Springs, observes:

"With no Rock Springs massacres to our credit, no slaughters of Italians, no roastings to death of negroes, no lynchings, no savagery in labor wars, America would be in a better position to tell the Czar that his people were a very barbarous set, and that all of us, in this blessed land of civilization and humanity, were indescribably shocked by the reports from Bessarabia. Until our own skirts are cleaner, this should be a cardinal feature of our policy—to mind our own Kishineffs, and pray that other nations may be saved from the brutal and passionate excesses of mankind."

Even if there be no official protest, however, the Russian Government can not disregard the indignation and condemnation which the Kishineff massacre has aroused throughout the civilized world. This "protest of humanity against inhumanity, of the modern against the medieval, of light against darkness, of civilization against barbarism," says the Brooklyn *Eagle*, is "a protest more formidable than the combined pronunciamentos of Washington and London, of Paris, Berlin, and Vienna." And the Milwaukee *Sentinel* says similarly:

"Against this horror in Kishineff there are already protests which the Russian Government can not ignore. Every organ of enlightened opinion throughout the civilized world is crying out

against it, and Russia will find it hard to evade the duty, should she feel inclined to do so, of ascertaining the truth, searching out the leading malefactors, and bringing them to justice. International public opinion is a force nowadays not to be lightly disregarded, and Russia has on a certain occasions shown some eagerness to stand well with it. It is not, of course, the ignorant populace of Kishineff that is primarily culpable. The instigators of the riots, the sowers of the seeds of race hatred and superstitious fanaticism, the agitators and rabid antisemitic newspapers that designedly wrought the mob up to its murderous frenzy—these and the supine or implicated local authorities are the ones that must be punished if the Russian Government is to clear its skirts of the suspicion of complicity in the outrage."

PROSPECTS OF ANOTHER PHILIPPINE INSURRECTION.

THE quotation, in these columns, three months ago, of a passage from the book by "Captain Bellairs" on the Philippines, in which he reported that the Americans in the islands were expecting another armed outbreak, has attracted considerable attention in Manila. "Captain Bellairs" has since been written up by the New York *Sun* and *Evening Post* as an ex-convict with a list of aliases like the catalog of the cast on a playbill, and now the Manila *Times* comes to hand with the opinion that the "captain's" prophecy of insurrection is a "one-eyed vision." Against this view of the *Times* may be placed the recent annual report of Governor Taft, in which he expressed surprise that the famine had not caused a renewal of the insurrection, and said that an outbreak of ladronism would probably occur in Cavité province that would have to be suppressed by the military. Several Manila papers, during the recent ladrone uprising, also expressed the suspicion that it was part of a general insurrectionary movement. But *The Times* says:

"So far as we know there is no American in the Philippines losing sleep over the prospect of that air-blown insurrection so artistically conjured up by the doughty correspondent-captain, nor do we apprehend that it cuts any figure in the calculations of those who are investing or preparing to invest in the islands, even when such investments are placed in the provinces, where the full danger and destruction incident to such a calamity would soonest and surest fall. From reports which we have received the contrary is rather true; we hear of several haciendas which were destroyed during the last insurrection being restored and the buildings upon them being erected even more substantially than before. As the owners of these haciendas are Filipinos, this fact affords the best sort of testimony against the day of doleful doom so soberly silhouetted for us in the parlous pages of 'As It Is in the Philippines.'

"As to the danger of the scouts and constabulary deserting, Captain Bellairs must have known, even without his 'staff of local correspondents in various parts of the islands,' that the last thing on earth which the scouts would be likely to do would be to desert. He must have known that the scouts are recruited almost entirely from the tribe of Macabebes, and that the long-standing and deadly enmity between them and the Tagalogs gives the strongest kind of assurance that they will never join themselves to the latter people in any insurrectionary movement. The Macabebes know all too well what their fate would be should a successful insurrection occur in these islands, and, as they value their own lives, they may be depended on in any emergency.

"As to the constabulary, we are likewise not worrying. In not one but many instances they have shown a sense of obligation and a devotion to duty as sterling as they were gratifying and commendable. Whatever trouble has occurred in the way of defection has been altogether insignificant, and in nearly, if not every, case due to some private trouble or grievance, and not to political motives."

THE TULLOCH POSTAL CHARGES.

SEYMOUR W. TULLOCH, formerly cashier of the Washington post-office, has thrown something like a dynamite bomb into the midst of the postal investigation by making public a letter of charges which he wrote to Postmaster-General Payne; and Republican papers, like the Chicago *Tribune*, the Buffalo *Express*, and the Rochester *Post Express*, are demanding that these charges be probed, and that no attempt be made to shield the guilty or cover up wrongdoing. General Payne has referred to the Tulloch charges as "hot air," "glittering generalities," and "a stump speech," and his attitude has led a number of papers to the conclusion that he is not conducting the investigation with any too much vigor or enthusiasm. It is predicted by the Washington correspondents that Congress will take a hand in the affair next fall, demand a reorganization of the department, and object to making any more appropriations on the plan heretofore followed. A surprisingly large deficit has been discovered in the rural free-delivery department, due, it is said, to the inclination of Superintendent Machen to run the department on more of a political than a business basis.

Perry S. Heath, the former first assistant postmaster-general, whose influence placed Neely and Rathbone in the Cuban postal service, and who has been under criticism in other postal matters, also figures in the Tulloch charges, for "it is straight into Heath's office," says the Washington correspondent of the New York *Evening Post*, "that all the lines of the Tulloch charges converge." This is explained more fully by the Baltimore *News* in the following paragraphs:

"Ex-First Assistant Postmaster-General Perry S. Heath is the chief culprit, if Mr. Tulloch's charges are true. Nearly all of the alleged offenses can be traced back to him. He, Mr. Tulloch says, violated the rules of the department by ordering the Washington post-office to pay bills for goods delivered to a subordinate of the general department. He approved the payment of his own and other employee's traveling-expense bills without the required departmental checks. He authorized the payment of a bill for postal furniture to Mr. J. Holt Livingston, when, according to Mr. Tulloch, Mr. Livingston himself admitted that his company hadn't even begun to make the furniture yet. An intimate friend of Mr. Heath's—Mr. M. D. Helm—was vice-president of this company. The first assistant postmaster-general further, says Mr. Tulloch, ordered the purchase of some postal furniture at very high prices from George W. Cobb, Jr., of New York. He instructed the Washington postmaster to turn over the route books of the letter-carriers to agents of a private company which sold family letter-boxes. He appointed friends to sinecures, approved the appointment of two women as cleaners whose names were not to go on the payroll and who were not expected to report for any duty, and ignored the classification act of the department so that certain clerks were paid from $200 to $300 annually over their lawful salaries.

"Mr. Tulloch gives names and dates in these instances and many more. They should thus be capable of easy disproof, if the charges are untrue. If Mr. Heath is guilty, however, it is the Postmaster-General's duty to see that this is established, and to show conclusively and beyond the shadow of any doubt that none of the present officers or employees of the department are guilty of similar practises. It is his duty also to show that the indefensible methods of accounting and auditing which made these abuses possible have been abandoned. That there is a good deal of dirty linen in the department seems to be beyond question. It is too late to talk of not washing it in public, even if such talk were not intrinsically opposed to sound public policy. The only thing to do is for the Government to make the washing thorough and complete while it is about it."

Controller Tracewell has issued a reply to Mr. Tulloch's charges in which he avers that the irregularities alleged were mainly due to divergent methods of accounting, and did not arise from any dishonesty or result in any loss to the depart-

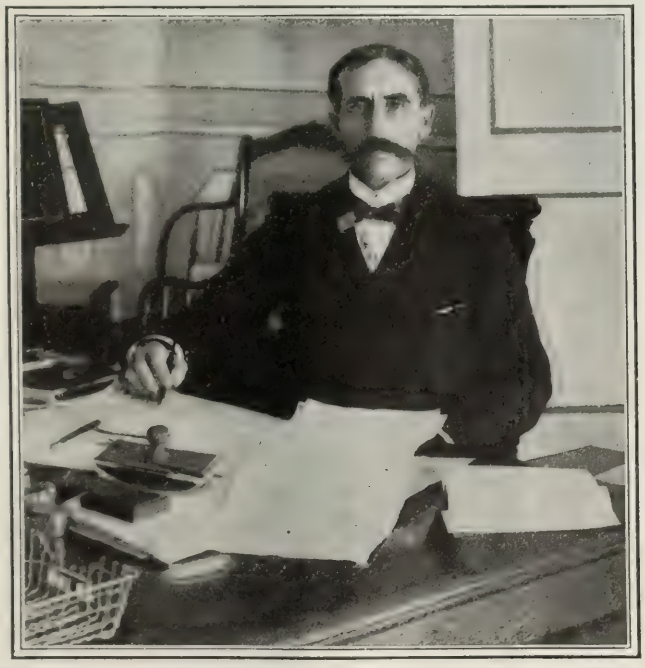
POSTMASTER-GENERAL PAYNE,
Who calls the Tulloch charges "hot air" and "glittering generalities."

ment. Postmaster-General Payne considers his reply conclusive, but his critics want the charges investigated.

It is considered pretty well established that the various leakages in the postal service have aggregated a large sum annually, enough, perhaps, to have paid the deficit. The New Orleans *Times-Democrat* says on this point:

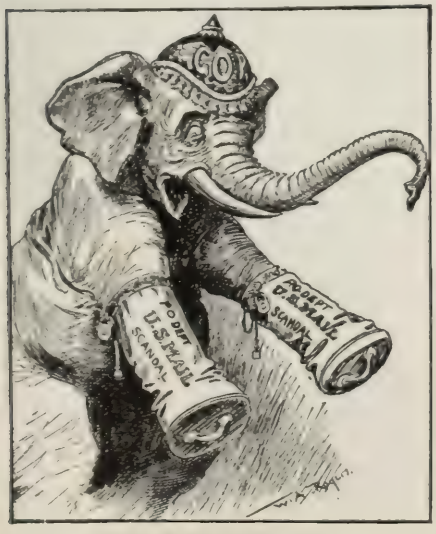
"The postal receipts of the country are in excess of $130,000,000. The divisions over which George W. Beavers and August W. Machen presided expended annually one-half of this sum. Beavers resigned rather than face an investigation. His division purchased the post-office supplies. Machen announced when the charges were preferred against him that he would not resign under fire, but would fight it out, but he was removed by Mr. Payne under instruction from the President.



FOURTH-ASSISTANT POSTMASTER-GENERAL BRISTOW,
Who is conducting the Postal Investigation. Mr. Bristow unearthed the postal scandals in Cuba.

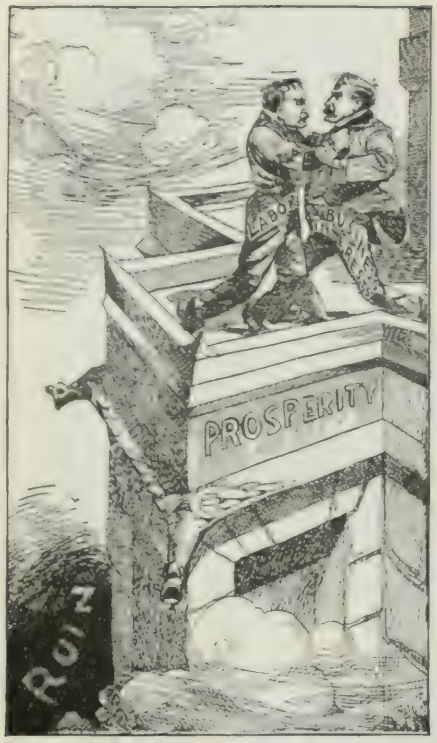
"It has come to light that there is no adequate system of auditing accounts in the Post-Office Department and that practically no checks have been imposed on the heads of departments. Thus, in handling the government money there has been every opportunity for fraud, as there was no chance of detecting a fraud when committed. The irregularities that have prevailed and that are semi-confessed by resignations have been mainly in the Division of Allowances and the Free Delivery system. The Philadelphia *Ledger*, which has given the subject considerable attention, declares that the evidences of waste and extravagance in these departments have convinced those conversant with developments that correct business methods in all departments would have resulted in a sufficient saving to have prevented the post-office deficit. The increased compensation of letter-carriers for rural and city routes would not have been sufficient to have caused a deficit had good business management prevailed.

With the revelations regarding two important divisions staring him in the face, the Postmaster-General has increased the scope of General Bristow's investigations to include all important post-offices in the country. An investigation upon such a mammoth scale has never been attempted in any department of the Government. One Postmaster-General has



"THEY WON'T COME OFF!"
—*Harper's Weekly.*

IT WILL OUT!
—*The New York Herald.*



EACH TO THE OTHER—"I'll bet if we jump off here you will be hurt more than I will."
—*The Denver News.*

followed another, and permitted the vast and increasing revenues to be expended without effort to evolve a comprehensive system of checking accounts which would guarantee protection to the Government. This work the present Postmaster-General or his successor will have to do.

"A great deal of overhauling will be necessary to put the Post-Office Department on a proper basis of efficiency; and Congress will have to do the work. An excellent suggestion is that the assistant attorney-general for the Post-Office Department shall hereafter be appointed by the Attorney-General instead of by the Postmaster-General, as this will prove some check on the department."

The Republican Chicago *Tribune* demands that the investigation be thoroughgoing and impartial. It says:

"The Republican party when in power never has been afraid to investigate the alleged misconduct of its officials and punish them if they deserved it. It has had the wisdom to know that rumors of corruption exaggerate facts and do more harm than the truth can, no matter how disagreeable it may be. It has been the policy of the party always, when suspicion of wrong was simmering, to 'take the lid off' the pot and let the steam escape. That is a policy to which the party should adhere, not merely because it is honest but because it is expedient. There should be no deviation from it because a veteran politician in office does not like to expose malfeasance in his department. . . .

"The charges are to be investigated, but the Postmaster-General is not in sympathy with the investigation. He has endeavored to make it ineffective by stopping the mouths of witnesses. He has said that if the name of any man who held a sinecure office is given him he will have that person sued on the charge of stealing money from the United States. The sinecurists will be dumb when asked for information.

"It is time for the President to intervene. He abhors the policy of suppressing wrongdoing. He has moral as well as physical courage, and he believes in exposing crime and punishing the criminal, no matter where the blow falls. He should turn his thoughts for a moment from the Yosemite to affairs at Washington, and direct peremptorily the Postmaster-General to do all in his power to promote the ends of justice and expose rascality and misdoing, no matter who the culprits may be."

TROUBLES OF A LABOR MAYOR.

"THE 'stoker mayor' of Bridgeport has got into the fiery furnace this time," remarks the Springfield *Republican*, in commenting on the troubles of Dennis Mulvihill, the "labor mayor" of Bridgeport, Conn. Bridgeport is in the throes of a street-car strike, which has been marked by a number of small riots, and it is charged by the mayor's critics that his sympathy with the unionists has encouraged them to violence. He has "done more to incite riot than all other causes combined," said one critic at a law and order conference. The "limit" was reached when the mayor interfered with two officers who had arrested a rioter, and instructed them to release him. The sheriff and police authorities thereupon held a consultation with Mayor Mulvihill, and presented matters to him in such a light that he agreed to surrender all control over the police power. A movement is afoot to have the state legislature curtail his authority still further, but this the mayor resents. He says, in a newspaper interview:

"I am the mayor of Bridgeport, elected by the people, and the legislature can not take away from me the power vested in me by the people. I have done only what I believed to be my duty, and I shall continue to do so. You may have observed that the greater number of my opponents are Republicans. The whole thing is merely political capital that they are trying to make out of this situation.

"The rights of the laboring men will be respected in Bridgeport while I am mayor. I am not a silk-stocking mayor."

DENIS MULVIHILL,
The "labor mayor" of Bridgeport, Conn., who has abdicated his control of the police.

Mr. Mulvihill was a good stoker before he was elected to the mayor's chair, and the New York *Times* thinks that Bridgeport would have been wiser if it had kept him at the work at which he was doing so well. It says:

"Organized labor wanted a representative in the mayor's office, and Mr. Mulvihill was nominated and elected. The fact that he was a stoker is not to his discredit. He may have been a very good stoker and entitled to the confidence of his employers and the respect of all good citizens. But it goes without saying that his training in passing coal no more fitted him for the mayoralty than it would for the presidency of the

LIBERTY?
The walking delegate enlightening the world.
—*Puck.*

company he worked for or for the control of a national bank. He began his administration by vetoing necessary public appropriations, and not being able to distinguish between a proper liberality in public expenditure for purposes connected with the city's business and reckless extravagance, he carried economy too far. Ever since he has maintained an attitude of hostility to public improvements demanded by the growth of the city. In these matters he may have been, and perhaps was, honestly mistaken. The practical problems of municipal finance were as far beyond his comprehension as astronomical calculations. The business, part of his administration has been a failure for the good reason that he is not a business man and is incapable of looking at anything from the business point of view."

It is interesting, in this connection, to note a commendation of another Connecticut "labor mayor"—Mayor Chartres, of Derby—who was borne into office on a trades-union tidal wave, just as Mayor Mulvihill was. A press despatch from Derby says of its carpenter mayor:

"The direst municipal calamities were presaged as the result of his election, but his administration has brought very little solace to the prophets of evil.

"In his first year he was confronted with $18,006 in unpaid bills from the previous administration. Without any advance in the tax rate or the stinting of any department, this legacy of indebtedness was paid within a few months. Besides this, during his first year, a stone-crushing plant costing $2,500 was established and paid for, the city's sinking fund was increased $6,000, and $7,000 in unexpended revenue was turned back into the city treasury.

"This year the administration has had to meet a falling-off in the grand list of $139,000 through the exemption of certain property by a new state law, and the necessity has arisen for increasing the rate paid into the sinking fund in order to meet maturing bonds issued eight years ago. Despite this and the further circumstances that the salaries of the public-school teachers have been materially increased this year, there has been an advance of only a quarter of a mill in the tax rate, from 10 to 10¼ mills."

MEXICO'S NEW CURRENCY.

"WE are not trying to make Mexico a gold country," says José Yves Limantour, Mexican Minister of Finance, in explaining the new currency scheme Mexico is about to adopt; but the American newspapers regard his denial as proof either that he is himself deceived, or that he is trying to soothe the sensibilities of the friends of silver in Mexico. The gold basis "is the only monetary standard his description will fit," says the New York *Times;* and the Philadelphia *Press* regards it as clear that "Mexico will really be on a gold basis when this proposed arrangement is carried out." So say many other journals. Here is Señor Limantour's description of the new coinage as reported by a representative of the New York *Times:*

"There is to be a new Mexican dollar coined.

"There will be $100,000,000 of this coinage.

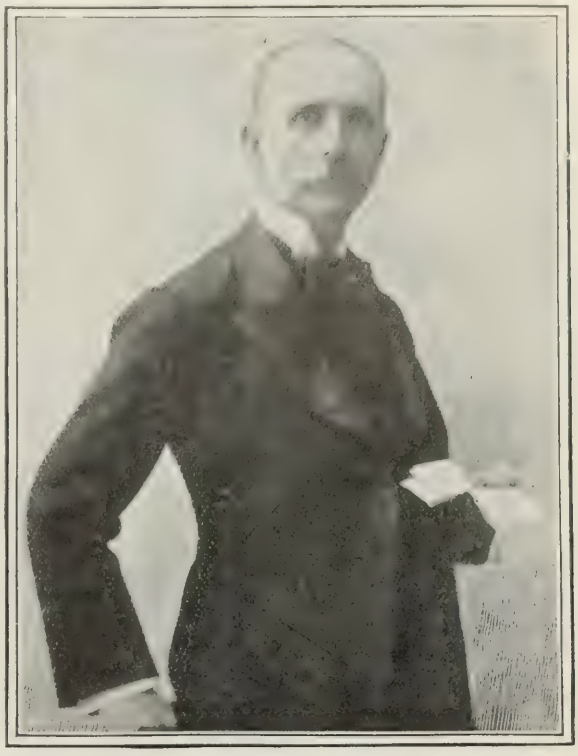
"This dollar will be made a legal tender for every debt and account collectible in Mexico.

"Back of this dollar—guaranteeing it—will be a specific gold deposit of $25,000,000.

"The present dollar will be no longer recognized in any legal sense as Mexican money. It will be pushed absolutely into classification as merchandise. Free and unlimited coinage—as now prevailing—will be abolished. The only government issue will be under the provisions that guarantee the new $100,000,000.

"How much Mexican silver money is now outstanding? Nobody can make any approximate calculation. Since first Mexico started the issue there has been emitted $2,400,000,000. As through the years the bullion's market value has fluctuated, this output has naturally had many changing figures. When, aforetime, silver as merchandise rose to high figures, Mexican coinage had its chief value for melting. Time was when the present friendless coin went current readily at its face and better in New York and at London and Paris. Prior to 1859 it had even a quasi legal-tender quality in this town.

"Much more than the majority of outstanding Mexican dollars are outside of Mexico. They have been shipped out of Mexico in these latter days as mere merchandise, not in any actual money capacity whatsoever. And this, in the view of Señor Limantour, warrants one radical provision in the Government's



JOSE YVES LIMANTOUR,
Mexican Minister of Finance, who is designing a new currency system for his country.

new fiscal plan—the provision that Mexican dollars of the present coinage shall not return to Mexico except as merchandise and subject to an import tax.

"It has been necessary, of course, for Limantour and his banker associates and advisers to keep in view the fact that some abnormal condition might at times develop to affect the status of the new coinage. It might be that at some point and in an extraordinary situation there could be a surplus of the government coinage, and it is conceivable that under some circumstances shopkeepers or bankers might decline to make exchange with buyers on the fixed fifty-cent basis. Therefore this has been determined upon:

"Whenever for any reason a surplus offering of the coinage shall show effect upon value, the Government will enter the market as a buyer (for gold) of whatever volume of coin offers at even the slightest fraction below the guaranteed parity. And as there will be $25,000,000 of gold so available, $50,000,000 of the coins (one-half of the total issue) can be thus immediately withdrawn from circulation—held ready, of course, for reutterance as normal conditions later demand.

"And as to the remotely possible complication of the new coin rising in the market above the Government's guarantee of fifty cents in gold, this, too, has been considered. Upon this account, indeed, there has been especial safeguarding. One of the important functions of the international silver commission (conspicuous members of which are now in this city) is to obtain from the silver-using countries of the world an agreement that bullion for coinage shall be taken only when it is at or below the ratio of 32 to 1—cutting in two Mr. William J. Bryan's 16 to 1 prescription."

This change is expected to stop the disturbing currency fluctuations which have played havoc with business in Mexico and with commerce between Mexico and the gold-standard countries. Mr. Jackson Smith, of the Mexican International Railroad, says

DUE WARNING FROM THE BRYANITE.

GROVER—"Now stop looking at me like that!"
—*Harper's Weekly.*

CARTOON GLIMPSES OF MR. CLEVELAND.

that the currency disturbances have brought railroad construction in Mexico to a standstill, and that construction will not be resumed until monetary stability is established. "When that is accomplished," he says, "there will be one of the greatest building eras in Mexico that the country has ever seen."

IS GENERAL WOOD BEING PERSECUTED?

NOT often are the editorials of two or three newspapers made the subject of disapproving criticism by the President of the United States in a public speech. The campaign of the New York *Sun* and *Evening Post* and the Memphis *Commercial Appeal* against Gen. Leonard Wood, however, has apparently been treated to this unusual attention. For about two months these papers have been assailing the general, principally by trying to show that his reputation was in large part created by an ex-convict and swindler who was Associated Press correspondent in Havana, and who passed under the name of Bellairs. Then about a month ago *The Evening Post* asserted that General Wood inspired a magazine article published three years ago over the name of Major Runcie, attacking General Brooke. Upon investigation, this latter charge was found to be untrue, and it was withdrawn by *The Evening Post* on May 8. Six days later, in his speech in San Francisco, the President spoke of the general in terms that are construed by several papers as a reply to these newspaper attacks. Referring to General Wood's work in Cuba the President said:

"He was put down there to do an absolutely new task; to take a people of a different race, a different speech, a different creed, a people just emerging from the hideous welter of a cruel war, beyond what we in this fortunate country can not readily conceive; to take a people down in the depths of poverty, in the depths of misery, just recovering from sufferings which make one shudder; to take a people untrained utterly and absolutely in self-government and fit them for it. And he did it.

"For three years he worked. He established a school system as good as the best that we have in any of our States. He cleaned cities which had never been cleaned in their existence before. He secured absolute safety for life and property.

"He did the kind of governmental work which should be the undying honor of our people forever, and he came home to what? He came home to be thanked by a few, to be attacked by others—not to their credit—and to have as his real reward the sense that tho his work had been done at pecuniary sacrifice to him, that tho the demands upon him had been such as to eat into his private means, yet he had willingly and well done his duty as an American citizen, and reflected honor, fresh honor, upon the uniform of the United States army."

"The dignified rebuke administered by the Commander-in-Chief of the army is deserved and timely," declares the New York *Times*, which also says:

"The charges and insinuations against Gen. Leonard Wood appear, to date, to be pure calumnies, black lies, and base inventions, such foul slanders as breed in mean hearts and come to expression upon coward lips. There may be a fool or two in the case. We see evidence of the credulous, fly-gobbling, helpless simpleton's cooperation here and there. But calculating slanderers and schemers are at the bottom of the mess. The campaign of defamation has been deliberately organized, the material of attack has been accumulated, forged, and purloined, and fire was opened at the moment of General Wood's departure for the Philippines, and has been kept up during a period of several weeks when it was impossible that the charges should fall under his notice.

"One of the falsehoods, after being exposed and exploded, has been withdrawn from service. Others are kept in circulation, rather in the guise of hints and insinuations, furtive poison in defiling ink, than as open accusations. The motley trickster Bellairs is made to do duty in the meanest of the charges. Of course, the denials and disclaimers of Bellairs count for nothing, but they are every whit as sound, valid, and respectable as the innuendoes of the creatures who, from their sheltered obscurity, let fly their arrows at General Wood. The thing has gone far enough now for the syndicate of defamation to produce proofs, if it has any; if not, it can keep up the detestable business only at the cost of incurring the public contempt."

"Bellairs," in a letter to the New York *Herald*, says it is "ridiculous" to suppose that he "made" General Wood. "To believe such a thing possible," he declares, "must stamp the President, the Secretary of War, and the Government, generally, as an incompetent lot of fools, hypnotized in some extraordinary manner by an obscure correspondent of the Associated Press." And *The Army and Navy Journal* (New York) says:

"As to the statements of the New York *Sun* concerning Bellairs, the former correspondent of the Associated Press, we are forced to the conclusion, from facts within our knowledge, that the inspiration to that attack was from within the circle of the

army, and that its real purpose was to discredit General Wood. It is wholly unjust to hold General Wood responsible for a man who so imposed upon army and navy circles that he was elected a member of the Army and Navy Club in Manila and was given a dinner by one of the Service clubs when he left the islands. He was a man of education and cultivated manners, and as the agent of the Associated Press he was naturally brought into close relations with public officials. So strong was their faith in him that even when rumors to his discredit were set afloat they were not believed; for it was easy to make it appear that his association with a discharged convict was a matter of mistaken identity. If General Wood was deceived in an English adventurer so were others, and the general should be fairly treated in the matter, even by those who think that he has been rewarded by the President beyond his deserts and that personal partiality has led to his receiving too exclusive credit for work in Cuba in which others shared."

There has been a lull in the attack for the last week or so, but *The Sun*, in commenting on the President's speech, suggests that in order to show the "self-impoverishment" of General Wood during his administration in Cuba, the accounts covering that period should be "brought from the dark into the light" and thoroughly overhauled. *The Sun* says:

"In Mr. Roosevelt's earnest remarks at San Francisco concerning unselfishness in the public service, the President made the remarkable statement that Gen. Leonard Wood at Havana not only did his work at a pecuniary sacrifice to himself, but also permitted his expenditures as military governor to 'eat into his private means.'

"This announcement from so authoritative a quarter indicates a plain duty of Congress at its next session.

"In justice to General Wood, not less than for the sake of the nation's self-respect, the accounts of the period of military occupation should be brought from the dark into the light, and sifted by the best expert skill available.

"It had been supposed by some that the military governor drew rather freely upon the Cuban Treasury for his official maintenance. Mr. Roosevelt, who is in a position to know the truth if any man is, asserts on the contrary that General Wood spared the Cuban treasury at the cost of his personal resources.

"This can never be permitted by a people so just and a Government so well-to-do as our own.

"Let Congress, therefore, accurately ascertain from the actual figures the amount of General Wood's self-impoverishment in the public service, a fact now for the first time revealed by the President of the United States.

"Then let Congress vote an appropriation sufficient to reimburse General Wood for every dollar necessarily expended by him in this way from his private fortune, with interest to date.

"After Mr. Roosevelt's disclosure of the circumstance, apathy or delay on the part of the legislative department would be nothing short of scandalous."

REAPPEARANCE OF THE CHAMBERLAIN TARIFF SCHEME.

THE man who believed in the law, but was "agin its enforcement" is recalled to mind by the speech of Mr. Joseph Chamberlain at Birmingham, England, a few days ago, in which he declared that he was a free-trader, but was in favor of setting up a preferential tariff system to promote trade with the colonies. "He admired the free-trade principle," remarks the Philadelphia *Inquirer*, "but was inclined to prefer the protective practise." The Colonial Secretary's speech was devoted to a renewed advocacy of his scheme of a preferential tariff union of the entire British empire, binding the colonies and the mother country together in a commercial system that should promote prosperity in peace and patriotism in war. The colonies already have tariff systems, and some of them, notably Canada, admit English products at a considerable reduction. England, however, being a free-trade country, can not return the favor, and there is talk in Canada of reconsidering these unreciprocated preferences given to British trade. So Secretary Chamberlain wishes England to set up a tariff system, grant the colonies preferential treatment, and bind the empire into a vast business union.

Mr. Chamberlain "is a man of sense" and "a practical man of business," declares the Philadelphia *Inquirer*, one of the strongest protectionist papers in this country; and *The Iron Age* thinks that "it may not be improbable that he has correctly gaged the predominant sentiment of the United Kingdom." "Mr. Chamberlain puts it mildly when he says that the strict interpretation of British free trade must be abandoned," says the Detroit *News*, for "had the colonies not been loyal and sentimental to an extraordinary degree, a modification of policy would have been forced long ago by the threat of a disintegration of the em-

THE OUTSIDERS—"Gee, what an idea!" —*The Detroit News.*

PENNSYLVANIA LIBEL LAW IN CARTOON.

pire. Several of our protectionist papers not only think that the Chamberlain plan will strengthen the empire, but believe that a protective tariff will stay the ebbing tide of British prosperity.

About as many other American papers, however, predict the failure of the Chamberlain program. The Colonial Secretary urged his idea upon the conference of colonial premiers in London last summer, and the general impression at that time was that the attempt was a dismal failure. The idea is widely entertained in England that a tariff would increase the cost of living, and "however powerfully the grandeur of the British empire may appeal to the imagination of the British voters," says the New York *Sun*, "a signal rise in the price of bread would strike home to their business and their bosoms." And so think a number of other journals. The British consumer "can not be persuaded to pay taxes to stimulate colonial trade," declares the Boston *Transcript;* and the Springfield *Republican* remarks that "the masses of the people in England are not prepared to suffer from an increased cost of food in order to benefit the farmers of Canada."

ONE YEAR OF FREE CUBA.

WITH enthusiasm similar to that which marked the inauguration of the Cuban republic last year, the Cubans, on May 20, celebrated the first anniversary of their independence. "It is doubtful whether any other republic of modern times ever entered upon its career as easily and successfully as Cuba has done," remarks the New York *World;* and the Brooklyn *Standard Union* declares that Cuba "has established a record among Latin-American republics, for none of them can compare with her in respect to the auspicious circumstances that mark her first anniversary." Secretary Root, who recently returned from a visit to the island, says in his despatch of congratulation to President Palma that the year's work has "confounded the enemies of Cuba and strengthened the courage and hope of her friends." The $500,000 net surplus left in the treasury when General Wood turned over the Government to the new officials last year, has been increased a little over four times, the amount in the treasury on March 31 being nearly $2,700,000. The public order has been admirably maintained, with the exception of strike riots in Havana, the kind that frequently occur in the United States. The educational facilities have been increased, sanitation has been maintained, and other improvements of many kinds are being provided. To show how thoroughly the Government is sustaining the sanitary measures, it is pointed out that the death-rate, per thousand, is the lowest in the history of the island, being 21.19, while in Washington it is 21.21. Trade has increased considerably. We learn from an article in the New York *Tribune* that the tobacco crop has not been satisfactory because of unfavorable weather, but that the sugar crop has been the second largest in the history of the island. The Cuban legislature, tho having had no experience in legislation and therefore working slowly, has passed the reciprocity treaty, the $35,000,000 loan bill, and a tariff bill.

This record speaks well for the Cubans as a law-abiding people and one capable of self-government, remark some of the papers. "Few people realized how many Cubans had governmental experience even under Spanish rule," says the New York *Evening Post*, "and how many were qualified to take office and administer it well." When the government was turned over to the new officials, many army officers and newspapers predicted that all sorts of trouble would come to the Cubans, with the result that after a few weeks they would apply to the United States for annexation, or that the United States would be compelled to interfere. The chief thing to bring about this would be the failure of Congress to grant reciprocity. The Brooklyn *Eagle*, which last year took a pessimistic view of the permanency of the new Government, says that "the record of the last twelve months proves that these apprehensions were unjustified. Cast adrift to paddle her own canoe, Cuba has paddled it with skill and determination." The work of President Palma comes in for considerable praise by the press. "President Palma seems to be the right man for the helm of state," declares the Brooklyn *Standard Union;* "he is patriotic and, withal, level-headed."

But the New York *Sun* sees two disorders in the Cuban body politic that, it thinks, are a cause for uneasiness. The first is a "cumbersome and unduly expensive" system of provincial government, which is provided for in the Cuban constitution to avoid a centralization of power in the hands of her national organization. Recent attempts to enforce it have been met with protests, and it is believed that Cuba must do away with the system or run the risk of some sort of internal trouble. The other is the $35,000,000 loan, with which the Government intends to pay the so-called liberating army. The loan has been indorsed by the Cuban Congress and President, but there is a hitch in the proceedings. *The Sun* says that if the veterans had not received encouragement in their hope for a speedy payment, they would have threatened an uprising.

Extent of the Louisiana Purchase: A Correction.—Napoleon's ghost is represented by the cartoonists as standing transfixed with astonishment at the tremendous wealth of the "Louisiana Purchase," which he sold a hundred years ago for $15,000,000. The shade of the emperor would perhaps have fallen in a faint if it had read of the amazing fertility of that region as told in an article in these columns May 9. In that article the statement was made that Napoleon sold us a "million acres of wilderness," and it was added that "the wheat crop raised every year in this former wilderness, to say nothing of other products, would pay the $15,000,000 a hundred times over." To raise a wheat crop worth $1,500,000,000 on a million acres of land, "to say nothing of other products," would require a yield of about 2,000 bushels to the acre! It would be nearer the truth to say that Napoleon sold us 875,025 square miles of territory, and that the entire annual wheat crop of the country, a large part of which is raised in this territory, would pay the $15,000,000 about twenty-five times. It was also stated that the purchase "has added fourteen stars to the national flag," and a map was subjoined showing that it has added only twelve. The other two stars are due when Oklahoma and Indian Territory become States. This interesting collection of errors, all within the space of five lines, was due to the simple trustfulness of the writer in the statements of newspapers that are usually reliable, but which seem to have been swept some distance into the realm of fancy on this occasion.

It is to be hoped that it will not be at length discovered that the fault with the Declaration of Independence ink was that it was not union-made.—*The Baltimore American.*

It is reliably stated that J. Pierpont Morgan has been swindled in the purchase of bogus art treasures. Well, we knew it would take an artist to do it.—*The Atlanta Constitution.*

According to Hugh O. Pentecost, it is a crime for the poor to bring children into the world. Perhaps President Roosevelt will agree with him when he reflects that the poor generally vote the Democratic ticket.—*The Chicago Journal.*

One of the latest and most popular fads with us is this breakfast fad. It is simple and pleasing, and after you have tried it a few times you feel like a new man. It is this: You get up in the morning and eat a hearty breakfast. It beats medicine.—*The Minneapolis Journal.*

While traveling on skis in Yellowstone Park, the President fell head first in a snow-drift. We shall expect to read a sympathetic and reminiscent editorial in the next issue of *The Commoner*. Mr. Bryan had a similar experience on two occasions.—*The Philadelphia North American.*

LETTERS AND ART.

"PREDIGESTED" LITERATURE.

IN a recent issue of *The Booklovers' Magazine*, an American novelist, Mr. Frank H. Spearman, enters a plea for the "art of skipping." It is not too much to say, he affirms, that "the whole body of literature, as we know it, stands for no art so much as that of skipping. The forgotten, the lost, the buried tomes, represent what the world has skipped." He continues:

"The trouble with our dutiful American booklover is that he feels a question of conscience in skipping. No scruple could be more strained. Is not every book provided for his recreation of value largely in proportion to the author's own mastery of the art of skipping? Every book that charms its reader does so not alone by what it provides; it charms by what it omits.

"Let the booklover cultivate the art of skipping. It is an art, and it may be learned, mastered even, by the average reader. Follow your own instinct in it; nothing in the art of skipping is so sure as your own instinct. Read while your book holds you. The booklover offers himself a willing victim to his author. 'Here,' he says in effect, 'is my attention. If you can hold it, you are welcome to it. I rather hope you can hold it.' The battle is on. Does your interest lag? A long paragraph stares at you? Take the first sentence and jump straight to the last. Is the subject still the same? Go ahead. Has the subject changed? Dip into the middle of the paragraph. A glance gives you the connection and again you are away at a canter: before you know it you are reading in lines and paragraphs instead of in words and sentences.

"Then comes something you want—every word of it. You read contentedly on till an inward monitor stirs and, like a master, you resume the art; one glance, one page. If you go too far, as you easily may, retrace. It is a pleasure to be compelled by your author to do so; but, above all, follow your instinct, the instinct of selection, the first and greatest of natural instincts—and soon you will be looking for something to read. Moreover, you will feel after the exercise of this instinct the beginning of your own conclusions on literature and life. Selection makes one think. The booklover who can select for his own needs out of what has been provided for all is not far from being already a capable critic. Taste many books; hold fast to those that your instinct approves."

The Springfield *Republican* considers this very bad advice, and devotes nearly two columns to a rebuttal of Mr. Spearman's argument on behalf of "predigested" literature. It says, in part:

"How many readers there are who read after this lazy fashion, and how many writers there are who feel compelled to cater to their laziness. The question which the average novelist anxiously asks himself is not, 'Is this good art?' but 'Is this easy reading?' Does the story get well under way in the first chapter? Is everything such clear sailing that absolutely no mental effort is required? Is everything cut out in advance which the average reader, for whom the average novelist writes, might be tempted to skip?

"If the average novelist fails in his estimate of the mental grasp of the average reader, he has the average publisher at his elbow to help him with friendly advice and commercial experience, cutting out descriptions, abridging conversations, excising digressions, getting rid, in short, of everything that might tax in ever so little this precious, coddled faculty of attention. The book must be prepared beforehand like a predigested food; nothing must be left for the reader to do but kindly to allow his eyes to rest for a certain number of minutes or hours on the printed page, after which the contents are supposed to be absorbed. If at any point a bad symptom appears, such as a tendency to wander, there is something wrong with the preparation—a hard piece, perhaps, not quite predigested. Out with it; let us go on with the literary maltose. Unfortunately with many readers, those in whom mental activities have not been altogether destroyed by predigestion, the method defeats its very end. Left with nothing to do, the mind blissfully wanders off into quite other pastures, or emerges from a state of delicious unconsciousness from time to time, just long enough to make sure that all is well with the hero and the heroine. There is perhaps something to be said for Mr. Spearman's remedy as a specific for drowsiness—a change from the steady jog-trot to a lively cross-country canter."

The Republican traces three evil tendencies in American fiction to a prevailing "appeal to the lazy reader." The first is toward undue compression. The second is the tendency to indulge in "showy" and inartistic beginnings. The third is the insistence upon a sustained high key, "a resolute fortissimo suited to the ear of the multitude." We quote, in conclusion:

"In any sustained work of art it is a mistake to try to keep the tension always on the strain. There should be gracious smiling valleys as well as mountain-peaks in the landscape. Even the longeurs of the great writers have their function, the slow descriptions which the hasty reader bolts, the painstaking characterization of people, the episodes which relieve stress or retard the action. The careless may be impatient of the elaborate pedigrees in 'Henry Esmond,' but how they add to the solidity of the structure! It is perfectly true that a new 'Henry Esmond' would be a burden to the book reviewer of the present day, whose desk groans with new novels, and whose estimates of them must inevitably be affected by the ease with which the contents are absorbed. But the book reviewer's attitude, as he himself well knows, is essentially a false attitude, the attitude of one always in a violent hurry, and it is not for such that masterpieces are written. The mistake of too many writers of the present time is in paying over-much deference to the man in a hurry. It is not necessary to read many novels, and those that are read ought to be worth serious and deliberate attention. The clipped, noisy, bustling novel, clamoring on every page, may catch the multitude for the moment and figure among the 'best-selling books' of the month, but its career is brief. 'To say what every one has said and say it as tho no one had ever said it,' observed Goethe, 'that is great art.' It may be added that the great novelist is a novelist who writes as tho no one else were writing novels, and disdainfully refuses to raise his voice in the strident clamor of the multitude."

THE OLDEST COLLECTION OF MORAL MAXIMS.

THE Presse-Papyrus, recently found in the tombs of Egypt, has now been translated by the famous French Egyptologist, Philippe Vivey, who gives some interesting data as to its character and contents. The document was originally found in Thebes, and was written about 2600 B.C., being the oldest collection of moral maxims known. The first two pages are the product of the Prefect Kakimna, who lived under the reign of King Senoferus, of the third dynasty (3900 B.C.). The second and larger portion, consisting of sixteen pages, is the work of the Prefect Ptah-ho-tep, who lived in the days of King Assas, of the fifth dynasty (3500 B.C.). This man had attained to all the honors that his royal master could bestow upon him, and in his old age he prepared this book of practical wisdom and philosophy, primarily for his own son, but also for readers in general. From the translations as found in the Berlin *Norddeutsche Allgemeine Zeitung* we reproduce the following specimens of this ancient sage's wisdom:

"Be not proud of your wisdom, but speak to the ignorant man as you do to the learned. For the boundaries of knowledge are never closed, and no savant possesses the fulness of knowledge. But it is more difficult to find wisdom than to discover genius.

"If you must deal with an antagonist while he is in anger and he is more powerful than you, then bend your neck to him. Since he will not permit you to destroy his language, do not interrupt him. This shows that you can keep quiet if you are opposed, and you have the advantage over him if you do not become excited.

"If you have the position of a leader and must decide the fate of many people, then seek out the best way that you may not

suffer reproach. Do not intimidate people or God will antagonize you also.

"If you are of a company who are taking a meal in the house of a prominent man, then take what is given you and bend yourself humbly. See what is before you, but do not stare at what is blameworthy.

"Do not speak more to a great man than he asks you, because you can not know what will displease him. If you carry messages from one great man to another, then do exactly as you are directed.

"A thousand men have been lost on account of their enjoyment of a moment, which is as brief as a dream, and they reap death as a consequence. Be on your guard against attacks of evil impulses.

"That is a sad sickness that leads to dissensions between father and mother, brother and sister, and causes husband and wife to despise each other. If you are wise you will make provisions for your house and will preserve a pure love for your wife. Fill her stomach, clothe her back, and care for the wants of her body. Be affectionate to her and satisfy her wishes as long as she is yours; this is friendship on the part of her master.

"You can manage a wife better by persuasion than by force. Be not brutal. Then she will take good care of your house; but if you cast her aside, all is lost. Rather open to her the arms of your affection; call her with the voice of love."—*Translation made for* THE LITERARY DIGEST.

THE BACH FESTIVAL.

THE musical critics of the press have given a very imposing amount of space to the third Bach festival, produced in the little town of Bethlehem, Pa., by local talent, and lasting for an entire week. The festival, which ended Saturday, May 16, was the third given under the same auspices, but was produced on a more ambitious scale than heretofore and attracted music-lovers from many parts of the country. The leader and the originator of these festivals, Mr. J. Fred. Wolle, has had a chorus in Bethlehem for fifteen years singing Bach music; but the Bach choir was not organized until 1898, and the first Bach festival was given in 1900; the second, lasting three days, in 1901. This year's festival was produced by a chorus of one hundred and eighteen voices, in addition to a boys' choir of fifty voices, and an orchestra of sixty pieces, most of the latter coming, not from Bethlehem, but Philadelphia.

J. FRED. WOLLE

The originator and the leader of the Bach Festival, held in Bethlehem, Pa., and attended by many persons.

There has been criticism, of course, especially of the orchestra and the soloists; but on the whole the press has treated the festival with many signs of respect and approbation. A general idea of the program is presented in the following comment written toward the close of the festival by the special correspondent of the Boston *Evening Transcript*:

"In order to enter sympathetically into the spirit of the festival, which is so unlike any other American music festival, let us begin by referring to the daily events not as concerts, but, as they are called locally, sessions. . . . Analysis of the programs shows that they have been designed to set forth the life of Jesus in its religious significance from the Protestant point of view. The first three sessions dealt with the Savior's birth, tho in no rigidly precise way. Monday evening's session was a prelude to the series considered as a whole, the religious or spiritual significance of the prelude being indicated by the choice of 'Sleepers, Wake!' as the opening cantata. This was associated with a general hymn of praise, the 'Magnificat,' and the two compositions paved the way for the presentation of the 'Christmas' oratorio at the two sessions of Tuesday. Christ's mission furnished the subject-matter for the sessions of Wednesday and Thursday. Again the prelude, or in this instance interlude, idea was manifest in the presentation on Wednesday of two short cantatas whose relation to the subject was more suggestive than direct, 'Strike, oh, strike, long looked-for hour,' and 'I with my cross-staff gladly wander.' Associated with them was the second Brandenburg concerto, the only purely instrumental feature of the festival. These compositions led to the greatest of oratorios, the 'St. Matthew Passion,' which occupied the two sessions of Thursday. To-day and to-morrow we have to do with the ascension and the proclamation of faith, the result, so far as this life is concerned, of Christ's mission. The works chosen for this phase of the subject were an Easter cantata, 'The Heavens laugh,' and an ascension cantata, 'God goeth up with shouting,' to-day, and the B-minor mass to-morrow."

The village of Bethlehem was settled by Moravians about one hundred and fifty years ago, who brought with them and have retained both a love for music and deep religious sentiment. The latter, rather than an artistic purpose, according to *The Transcript* critic, is the animating motive of the festival. He writes:

"There is one salient feature of the undertaking that not only came down from the first festival, but that preceded it during the many years of Mr. Wolle's conductorship. It was here among the people before he was born, it came with his ancestors who established the village. This may not be defined in a word, for to speak of it as religious fervor would be misleading, but veneration for everything that has to do with religious service is its common manifestation. That is the secret of the festival's design, and it might have been inherited directly from the master composer, whose deeply religious nature was expressed in his life and works alike, and to whom the dedication of his best thought to the church was as natural and unaffected an offering as the prayers of the simplest-minded pastor of a country parish. The spirit of Bach was that of the Moravians who founded this town, and their descendants, little affected by the artificial developments of modern life, have retained it to a remarkable degree. They still give the village its distinctive character, and while the transient stranger may not venture to arrive at a final estimate of the people—presumably they are wonderfully like other people—it is perfectly apparent that veneration for everything pertaining to the church lingers as a strong if not dominating impulse of their lives. This perceived, it is a quick step to a perception of the festival's character that precludes such critical attention to it as would be proper and necessary in the case of a secular festival, such as that annually given at Worcester. The Bach festival is not quite a religious observance, but, given in an ancient church, limited with the single exception of the Brandenburg concerts, to religious music, it is viewed by the residents, listeners and performers alike, as much akin to a continuous service. . . . The people sit in reverent silence from beginning to end, save when the chorales are sung. Then all arise, and the audience joins with the choir in giving vocal utterance to the hymn. Applause at any time would be sacrilege. For the most part the people sit with their backs to the music, facing the shrouded pulpit. Even the solo singers yield to the spirit of the occasion by refraining from festal dress."

The verdict passed upon the festival as a whole by the New York *Tribune's* staff correspondent represents the prevailing view of the critics: "On the whole, there were more shortcomings in the performances than in that of two years ago; but they were not the fault of the choir, which sang with splendid spirit and gave distinct utterance to every note in the vast and complicated score." Financially, it is reported, the festival was a success. The nine sessions were attended by 10,000 persons, one-third of whom, probably, came from the larger cities.

FAILURE OF GREAT WRITERS AS DRAMATISTS.

ACCORDING to Mr. Arthur Wing Pinero, the English dramatist, there is hardly a novelist or poet in the nineteenth century who has not essayed to write plays and failed. Mr. Pinero, when making this statement, was addressing an audience on Robert Louis Stevenson as a dramatist, and his address, which is published in full in *The Critic* (April), is for the most part devoted to three plays of Stevenson's—"Deacon Brodie," "Beau Austin," and "Admiral Guinea," the last named being the joint production of Stevenson and Henley—and to a consideration of the reasons for their failure. Mr. Pinero said:

"There is hardly a novelist or poet of the whole nineteenth century who does not stand in exactly the same position. They have one and all attempted to write for the stage, and it is scarcely too much to say that they have one and all failed, not only to achieve theatrical success but even, in any appreciable degree, to enrich our dramatic literature. Some people, perhaps, will claim Shelley and Browning as exceptions. Well, I won't attempt to argue the point—I will content myself with asking what rank Shelley would have held among our poets had he written nothing but 'The Cenci,' or Browning if his fame rested solely on 'Strafford' and 'A Blot on the 'Scutcheon.' For the rest, Scott, Coleridge, Wordsworth, Keats, all produced dramas of a more or less abortive kind. Some of Byron's plays, which he justly declared to be unsuited for the stage, were forced by fine acting and elaborate scenic embellishment into a sort of success; but how dead they are to-day! and how low a place they hold among the poet's works! Dickens and Thackeray both loved the theater, and both wrote for it without the smallest success. Of Lord Tennyson's plays, two, 'The Cup' and 'A Becket,' in the second of which Sir Henry Irving has given us one of his noblest performances, were so admirably mounted and rendered by that great actor that they enjoyed considerable prosperity in the theater; but no critic ever dreamed of assigning either to them or to any other of Tennyson's dramas a place coequal with his non-dramatic poems. Mr. Swinburne has written many plays—has any one of them the smallest chance of being remembered along with 'Poems and Ballads' and 'Songs before Sunrise'? There is only one exception to the rule that during the nineteenth century no poet or novelist of the slightest eminence made any success upon the stage, and even that solitary exception is a dubious one. I refer, as may be surmised, to Bulwer Lytton. There is no doubt as to his success; but what does the twentieth century think of his eminence?"

The reasons for Stevenson's lack of success may, in a measure, explain the lack of the others, so Mr. Pinero thinks. The first reason is that Stevenson "failed to realize that the art of drama is not stationary, but progressive." In all his plays "he was deliberately imitating outworn models, and doing it, too, in a sportive, half-disdainful spirit, as who would say, 'The stage is a realm of absurdities—come, let us be cleverly absurd.'" Mr. Pinero adds:

"I do not mean to imply, of course, that this was the spirit in which the other great writers I have mentioned—Shelley, Browning, Tennyson, and the rest—approached their work as dramatists. But I do suggest that they one and all, like Stevenson, set themselves to imitate outworn models, instead of discovering for themselves, and if necessary ennobling, the style of drama really adapted to the dramatist's one great end—that of showing the age and body of the time his form and pressure. The difference is that while Stevenson imitated the transpontine plays of the early nineteenth century, most of the other writers I have named imitated the Elizabethan dramatists. The difference is not essential to my point—the error lies in the mere fact of imitation. One of the great rules—perhaps the only universal rule—of the drama is that you can not pour new wine into old skins.

"Some of the great men I have mentioned were debarred from success for a reason which is still more simple and obvious—namely, that they had no dramatic talent. But this was not Stevenson's case. No one can doubt that he had in him the ingredients of a dramatist. What is dramatic talent? Is it not the power to project characters, and to cause them to tell an interesting story through the medium of dialog? This is *dramatic* talent; and dramatic talent, if I may so express it, is the raw material of *theatrical* talent. Dramatic, like poetic, talent is born, not made; if it is to achieve success on the stage, it must be developed into theatrical talent by hard study, and generally by long practise. For theatrical talent consists in the power of making your characters not only tell a story by means of dialog, but tell it in such skilfully devised form and order as shall, within the limits of an ordinary theatrical representation, give rise to the greatest possible amount of that peculiar kind of emotional effect the production of which is the one great function of the theater. Now, dramatic talent Stevenson undoubtedly possessed in abundance; and I am convinced that theatrical talent was well within his reach, if only he had put himself to the pains of evolving it."

Mr. Pinero goes on, at some length, to describe and analyze Stevenson's plays. "Deacon Brodie" he finds "chiefly interesting as exemplifying the boyish spirit of gleeful bravado in which he approached the stage." His instinct was to play with it as he had played, when a boy, with a pasteboard theater. "Admiral Guinea" is full of beautiful speeches:

ARTHUR WING PINERO,

Author of "The Second Mrs. Tanqueray," "The Notorious Mrs. Ebbsmith," "The Princess and the Butterfly," "The Gay Lord Quex," etc.

"What chiefly strikes one after seeing or reading the play is that Stevenson's idea of dramatic writing was that fine speeches, and fine speeches alone, would carry everything before them. I can picture the collaborators [Stevenson and Henley] sitting together and discussing the composition of their work and saying to each other, 'This position, or that, will furnish a capital opportunity for a good speech'; I can imagine Stevenson subsequently telling his friend what a splendid 'speech' he had just written. In short, 'Admiral Guinea' is mainly rhetoric, beautifully done but with no blood in it."

"Beau Austin" was Stevenson's nearest approach to an effective drama; but the same faults are manifest in it, so Mr. Pinero thinks. "The beauty the authors aimed at was, I believe, the absolute beauty of words, such beauty as Ruskin, or Pater, or Newman might achieve in an eloquent passage, not the beauty of dramatic fitness to the character of the situation." Moreover, it was a mercantile rather than an artistic impulse that moved Stevenson to write plays:

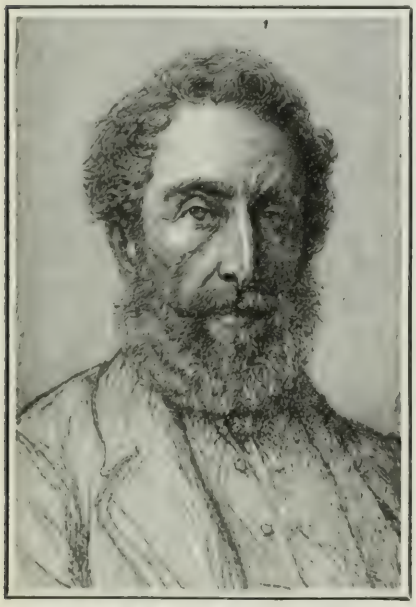
"When Stevenson says, 'The theater is the gold-mine,' and when Mr. Graham Balfour tells us that Stevenson felt that 'the prizes of the dramatist are out of all proportion to the payment of the man of letters,' the implication obviously is that the gold-mine can be easily worked, that the prizes are disproportionate to the small amount of pains necessary in order to grasp them. That was evidently the belief of these two men of distinguished talent; and that was precisely where they made the mistake.

"Toward the end of his life, while he was in Samoa, and years after his collaboration with Mr. Henley had come to a close, it seems to have been suggested by his friends at home that he should once more try his hand at drama; for we find him writing to Mr. Colvin: 'No, I will not write a play for Irving, nor for the devil. Can you not see that the work of *falsification* which a play demands is of all tasks the most ungrateful? And I have done it a long while—and nothing ever came of it.' It is true—it is fatally true—that he had devoted himself in his dramatic

ventures to 'the work of falsification'; but that was, I think, because he misconceived entirely the problem before him. The art—the great and fascinating and most difficult art—of the modern dramatist is nothing else than to achieve that *compression* of life which the stage undoubtedly demands *without* falsification. If Stevenson had ever mastered that art—and I do not question that if he had properly conceived it he had it in him to master it—he might have found the stage a gold-mine, but he would have found, too, that it is a gold-mine which can not be worked in a smiling, sportive, half-contemptuous spirit, but only in the sweat of the brain and with every mental nerve and sinew strained to its uttermost."

PLACE OF BULWER-LYTTON IN ENGLISH LITERATURE.

WHILE America is celebrating the Emerson centenary, England is not unmindful of a centenary of her own which comes on the same day, that of Edward Bulwer, Lord Lytton. There is a world of difference between the literary impress made by the two men upon posterity; but if the question of literary reputations alone be considered, the case of Bulwer presents facts of much more romantic interest. "He invariably found the direct road to the great heart of the public," says one critic, "even when he wrote anonymously; and the house of Routledge is well known to have laid the foundation of its fortunes by giving £20,000 for the right to issue a sixpenny edition of his works."



EDWARD BULWER, LORD LYTTON.

His centenary and Emerson's fall on the same day. His personality "fascinated the million for the greater part of fifty years."

His reputation was not with the critics. As to them, Mr. Francis Gribble, in *The Fortnightly Review* (May), writes:

"They have denounced him as a writer who must have been insincere because he was adaptable, who followed the fashion instead of trying to guide it, and who cultivated the Criminal, the Beautiful, the Historical, the Supernatural, and the Respectable in turn with equal devotion, in compliance with popular demand. Imagine an author trying to write on Monday like the author of 'Jude the Obscure,' on Tuesday like the author of 'The Vultures,' and on Wednesday like the author of 'Three Men in a Boat,' and you have a fairly accurate idea of Lord Lytton as he has appeared in the eyes of hostile and contemptuous reviewers."

It is not with this class of critics that Mr. Gribble agrees, for he finds that "versatility is not incompatible with individuality, and individuality limits the possibilities of artistic insincerity." It was Bulwer's personality that fascinated the million for the greater part of fifty years. Mr. Gribble's description of the novels of Bulwer is as follows:

"The fact that instantly strikes every mature reader of Lord Lytton's novels is their close resemblance to those works of fiction known collectively as novelettes, sold at one penny each, mainly perused in the kitchen or the servants' hall, but occasionally picked up by graver students for the satisfaction of their curiosity. The characters are taken from the same select upper circles, and are characters of pretty much the same sort. You generally have a beautiful heroine, the conventional model of all the virtues; a wicked baronet; a foreign adventuress whose heart is better than her behavior; a foundling with talents and manners above his apparent station; and a good but gloomy man with a past who turns out to be the foundling's father. And things happen just as we are accustomed to see them happen in novelettes. Virtuous housemaids are betrayed; heirs are kept out of their rights; marriage certificates get lost, and are found at the critical moment in the secret drawers of escritoires that have changed hands; well-brought-up young women are decoyed from their happy homes by perfect strangers who give no proper account of themselves; rich men 'get into the hands of the Jews,' instead of obtaining advances at the current rate of interest from their bankers; and British tars spring from dark hiding-places to confute the theory that, when once aboard the lugger, the heiress and her inheritance are the property of the nearest villain."

Lord Lytton, we are told, became the model *par excellence* for all the subsequent horde of novelette writers and his qualifications were almost ideal, for he knew things first hand which the ordinary novelette writer had to guess, and he treated them with a "superior condescending snobbishness" that led a writer in *Fraser's*—possibly Thackeray—to say: "Twaddle, Bulwer, twaddle; I think you a deserving young person, whom Nature intended for a footman."

His excessive vogue was coincident with the latter part of the period when sentimentalism ruled in the higher realms of literature. Having grown up in the shadow of Byronism, he adopted the Byronic pose in early life, tho he afterward claimed to have killed it with the rival pose of "Pelhamism." To have been one of the inciting causes of "Sartor Resartus" is sufficient to establish a permanent place in literary history. Says Mr. Gribble further:

"A second secret of his success may be sought in his adroit use of melodramatic effect. A typical case may be found in the scene 'Night and Morning,' in which the long-lost marriage certificate is found in the secret drawer of the writing-desk, and the rightful heir of the disputed marriage enters just as the first and second villain are discussing how they shall make away with it. Not less typical is the scene in 'My Novel,' in which the resourceful Harley L'Estrange, having secretly bought the yacht on which the foreign adventurer has arranged to abduct the heroine, and concealed an English crew on board, springs from his hiding-place to confound the machinations of iniquity at the eleventh hour. These are scenes that would have brought down the house at the old Adelphi, or anywhere on the Surrey side, and they show us the fame of Lord Lytton resting partly upon the same foundations as the fame of Mr. George R. Sims."

The latter part of Bulwer's career is treated by a writer in *Blackwood's* not as an exhibition of versatility, but as a regeneration. "Had he died in 1845," says this anonymous writer, "we might have been wondering to-day why he and his age took the sentimental cly-fakir as a fair example of the Beautiful and the True." "And then—in 'The Caxtons'—he produced a work which deceived all the prophets," for, casting aside his twaddle about Art and the Ideal, and bidding his tearful murderers step aside, "he made a frank return to the best traditions of English literature." We quote again:

"Of course the result was neither Goldsmith nor Voltaire; but, when all deductions are made, Lytton presents the unaccustomed and happy spectacle of a writer who achieved his best work at the end of his career. And the achievement is the more remarkable in his case because he started life as a jaded miracle of precocity. He had published the verses which he wrote at fourteen, and he was in the thick of the *mêlée* at an age at which most men are merely sharpening their pens. Yet he was fresh enough after twenty years of incessant toil to evolve a new style, and to paint a new world. It is this quality of regeneration which seems to us far more brilliant than his over-praised versatility. To do many things badly is not the high accomplishing of a successful career. As he says himself, in 'The Caxtons': 'In the mind, as in yonder chimney, to make the fire burn hot and quick, you must narrow the draft.' And this is what he forgot to do in the old fearless days when he was 'throwing off' his popular romances—he forgot to 'narrow the draft'; and the little heat that there was in his mind was so widely diffused that it lost all power to warm either heart or head."

SCIENCE AND INVENTION.

A SCIENTIFIC STUDY OF LYING.

THAT lying is an evil permeating all classes of society and that it must be combated by education, not by precept, are the conclusions of a recent psychological investigator of the subject. This student, M. G. L. Duprat, who has just issued in Paris a book entitled "The Lie: a Study in Pathologic and Normal Psychosociology," asserts that lying is the result of tendencies that must be overcome by developing opposing social forces; but he apparently rejects direct moral and religious training such as is now chiefly relied upon for this purpose. Says a reviewer of M. Duprat's work in the *Revue Scientifique* (May 2):

"The lie extends through all civilizations, into all classes of society, through all ages and both sexes. In spite of the diversity of its forms it may be defined in general, according to M. Duprat, as 'a means of suggesting error—what one knows or believes to be false.' It is a psychophysiologic fact, as is shown by the neuromuscular modifications observed especially among untruthful children, and it is also a psychosociologic fact, as shown by lies due to social causes.

"It is specially connected with the imaginative function, but as this mental function is always dependent on conscious tendencies or on desires and dislikes unknown to the subject, the lie ought to be studied particularly in its relations with the affective phenomena. Now these phenomena may involve an abnormal activity of the mind, and this is why the lie may often be a pathologic fact otherwise than from the social point of view; for from this latter standpoint it is almost always the effect of a collective morbid condition. The lie is consequently always immoral, and we can not admit that liars may be approved, no matter what their motives.

"M. Duprat has shown that lying may arise spontaneously, apart from all imitation or vicious training, solely from the play of the imagination and of tendencies that are imperfectly satisfied by the natural course of events. Of course, education, imitation, fashion, habit, strengthen the tendency to untruthfulness; weakness, illness, physiological or mental incapacity, the absence of the higher feelings, the arrest of intellectual development, or degeneracy, may favor the development of lying. Finally, social causes such as war, persecution, popular enthusiasm, violent repression or coercion, render lying almost inevitable.

"M. Duprat, in summing up all the influences favorable to the development of lying, formulates the following laws: Untruthfulness tends to develop in any social environment as this environment becomes more complex; individuals are more prone to lie when they are deprived of generous feeling, esthetic or social. . . . Habit renders lying easier by making less and less painful the neuromuscular inhibition inseparable from dissimmulation of the truth, which must take place at the same time as the invention of the lie.

"While showing that the lie depends on tendencies that are themselves closely allied to character, temperament, physiological constitution, and neuromuscular activity, the author also shows the vanity of the pretensions made by moralists and teachers, for whom the strife against untruthfulness reduces to the enunciation of a precept to be inscribed in churches or schools. Since we have here to struggle against appetites or dislikes that are often hidden, and even more difficult to overcome than they are to discover, we must have recourse to the removal of tendencies—not of artificial tendencies, but of those desires that belong to human nature normally and that enter into the constitution of the highest sentiments that can honor humanity.

"The fight against untruthfulness is, in fact, a phase of the fight for morality. Now we shall form moral beings not by formulating commands, but by favoring the development of the higher sentiments. There are social forces that impel to lying as well as psychological forces that excite it. To social and mental forces, then, we must oppose, by a proper education, other social forces that are perhaps of slower growth, developing more slowly in individuals and in communities, but whose appearance and evolution will aid the best of men—the true educators.

"To bring about the moral education of the people by developing scientific instruction and by arousing the critical sense at the same time as generous feeling—this is the sole means of striving effectually against the forces of untruthfulness. The worship of truth demands no more martyrs; it suffices to have an increasing number of the faithful. The people, after being brought by science to the possession of well-being and peace, will be won over by it to the love of truth; the pacific extirpation of untruthfulness, as beneficent as the bloody extirpation of pretended heresies was maleficent, will be the effect of the scientific education of all classes of society."—*Translation made for* THE LITERARY DIGEST.

MUST FOUR-FIFTHS OF OUR MEDICAL SCHOOLS GO?

THE medical school that is conducted for commercial reasons must go. So says Dr. Frank Billings, president of the American Medical Association, in his address before that body at its recent annual meeting in New Orleans. In this address, which is printed in full in *Science* (May 15), Dr. Billings calls attention to the facts that medicine has made enormous strides in the past few years; that the old proprietary medical school can not keep up with the procession, since modern instruction requires costly laboratories and apparatus; and that we must rely in future on a few large endowed institutions that are not run for pecuniary gain. This reduction in the number of schools will be a benefit to the country, he thinks, for we now have too many and their graduates are notable for quantity rather than for quality. In 1877 there were 65 medical schools in the United States; now there are 156, turning out annually over 5,000 graduates who are supposed to be ready to practise medicine. Do we need them all? Says Dr. Billings:

FRANK BILLINGS, M.D.,

President of the American Medical Association, who says 2,000 surplus physicians are graduated yearly.

Courtesy of *The International Journal of Surgery* (New York).

"It has been estimated that there is an average of 1 physician to 600 of the population of the United States at the present time. The natural increase in the population of the country, and the deaths in the ranks of the profession, make room each year for about 3,000 physicians, based on the proportion of 1 physician to 600 of the population. With 5,000 or more graduates each year, a surplus of 2,000 physicians is thrown on the profession, overcrowding it, and steadily reducing the opportunities of those already in the profession to acquire a livelihood. The evil of an overcrowded profession is a sufficient cause of complaint, but the cause thereof is the important point for us to consider and, if possible, remove. To correct the evil, the ease and facility with which a medical degree may be secured in this country must be diminished. As before stated, there are now 156 medical schools in the country. . . . In most instances the teachers of the fundamental branches are physicians who devote but a part of their time to teaching. They teach without a salary, or for a nominal one only. Their remuneration is obtained by private practise, to which they must devote their best energies, to the detriment of their value as teachers. The clinical department of these schools is, in most instances, wholly inadequate. The majority of such schools depend on the general hospitals situated near them for the privilege of the use of clinical material. . . . .

Ninety-eight of the medical schools in the country are private corporations, organized, maintained, and, as a rule, owned by the faculty. If, in earlier years, these institutions were sources of direct financial profit to the owners, they have ceased to be so now—at least most of them. The evolution of medicine has made it necessary to extend the laboratory method of teaching. As these schools attempt to teach the whole curriculum, the erection, equipment, and maintenance of the necessary laboratories have so increased the cost of conducting the schools that they are usually no longer self-supporting. The temptation is in such schools to conduct them on a plane which shall just comply with the minimum requirements of the various state bodies which regulate medical practise in the several States. They are maintained ostensibly to teach medicine, but in reality for the prestige which a professorship affords the teacher in his private and consultation practise. Proprietary schools depend on general hospitals and dispensaries for clinical material. What was said of the status of clinical teaching of the medical departments of the universities is true also of the proprietary college. These schools can not hope to improve their present standards. The majority attempt to maintain laboratories and other expensive means of teaching which a modern medical education demands. But in how many are the laboratories worthy of the name? What kind and variety of instruments and apparatus do they afford? Are their teachers of the sciences of the fundamentals of medicine capable? They can not hope for better conditions, because the time when a student's tuition will pay the school for his instruction, if he is properly taught, will never return. Medical education of the future must be based on the status of medical science. That basis is recognized now, but is attempted in the great majority of our medical institutions in a very superficial way."

The review of the recent progress of medicine that occupies a large part of Dr. Billings's address is a striking one and shows, he believes, how hopeless it is for the majority of our medical schools to attempt longer to teach it adequately. The great and important discoveries of Pasteur and the subsequent development of bacteriology, the evolution of aseptic surgery, the brilliant researches that have thrown such light on the propagation of infectious diseases—all these are chiefly due to the introduction of experimental methods into medical science. The modern medical student must therefore be trained largely in the laboratory, and, besides this, his preliminary college training must be carefully adapted to his chosen profession, that no time may be lost. Dr. Billings concludes:

"To-day medical science demands primary instruction to fit a man as an investigator and scientific physician. If not properly educated, he can not grasp the great problems which medicine presents to-day as he did the more simple clinical facts which comprised the art of medicine and surgery a few years ago. In the future, medicine must be taught in the large universities of the country and in the state universities which are situated in or near large cities, where an abundance of clinical material may be commanded.

"The state university and the college which desires to teach medicine, and is so situated that it can not command clinical material, should confine itself to teaching the sciences fundamental to medicine. These should be taught as pure sciences, and should be included in the course for the degree of S.B. A college or state university ambitious to teach the medical sciences can do so without great cost. To attempt to teach applied medicine without proper and adequate hospitals, and with an insufficient number of patients, would be irrational, nor can they command the necessary funds with which to do it. From such colleges and state universities the students could go to the larger institutions which are able to furnish the proper facilities for teaching applied medicine and surgery.

"The general hospitals of many of the cities, now used by proprietary schools, could be utilized as clinical schools for both undergraduate and post-graduate teaching, conducted by the clinical teachers in the existing proprietary schools. Indeed, these hospitals could be utilized as university extension clinical courses. Necessarily, they would have to be under the control and direction of a university medical school.

"How many schools may be necessary to educate the number of doctors of medicine required annually in the United States? The question one can not answer, but it is safe to say that 2,500 graduates annually will fully supply the demand. This would imply about 10,000 to 12,000 matriculates. A minimum number of twenty-five and a maximum number of thirty-five medical schools should offer sufficient facilities to educate 10,000 students. The various state universities and the colleges which offer adequate science courses would educate a great number of students in the fundamental branches or in the first two years of the medical course."

As may be seen, Dr. Billings's program involves the discontinuance of at least 121 medical schools. What these institutions will have to say to the proposition remains to be seen.

THE ODORS OF ANIMALS.

THAT the strong odors emitted by many living creatures may play a protective rôle in their lives has been often suggested. A writer in the *Revue Scientifique* (April 25) takes up this point, and concludes that, altho this is the case with some animal odors, others have different functions. Says this writer:

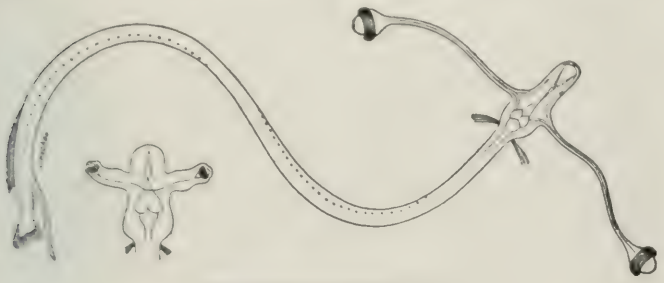
"A considerable number of animals, as is well known, emit strong odors, which are generally unpleasant, at least to man. And naturalists have often considered these odors as playing an important part in the biology of the animal; the odor protects it and serves to drive away possible enemies. It is certain, for example, that the skunk—whose disagreeable odor is so strong that it remains from autumn to spring in a place where one of the creatures has been killed—is very generally respected by carnivorous animals. But some other odors are hardly protective. It is true that they then play another part. They constitute a secondary sexual characteristic, often limited to one sex, by which the males and females find each other out at the mating season, and which disappears when this is over. There are some moths that exhale an odor of musk; only the males have it, and these only at the mating season. An Australian duck emits a marked odor, which is restricted to the male and is strongest in spring. . . . . .

"But with many animals there are strong odors that seem to have no sexual character and to confer no particular protection against other animals. In addition, it would seem that certain odors attract enemies. Crows seem to have a special liking for insects with a strong odor. Certain birds have a taste for those myriapods that exhale a marked odor of prussic acid. Perhaps we must conclude from these facts that the tastes of animals, so far as smells are concerned, differ sensibly from ours. There are also marked differences of taste between the different races of men. Many savages like odors that civilized man regards as repulsive. The odor of a dead crocodile is delectable to the nostrils of the Kroos, the Koreans regale themselves with *kmichi* (turnips, pimento, dried fish, and vinegar, mixed and fermented), and a thousand such examples could be cited. Even civilized persons like, or at least tolerate, the odor of 'high' game and of cheese. On the other hand, animals sometimes show strange dislikes. . . . The conger-eel will eat fish soaked in turpentine, iodoform, or camphor, but he will refuse cooked meat. This shows that it is with odors as with tastes and colors—there is no disputing about them."—*Translations made for* THE LITERARY DIGEST.

Fishes with Telescopic Eyes.—The deep-sea explorations of the last few years have exploded the notion that the depths of the sea are in total darkness, as earlier explorations disposed of the assumption that they are devoid of life. Says *Umschau*, in an article on this subject:

"It is true that not a ray of sunlight illumines the gloom that reigns at great depths in the sea; but the denizens of the deep, or some of them, make their own light by phosphorescence. It is a very feeble light, to be sure, and therefore the deep-sea fishes are provided with eyes of a peculiar sort. They are called telescopic eyes, not because they are much like a telescope, optically, but because they are so arranged in many cases that they

closely resemble an opera-glass. They are more or less projecting tubes, cylindrical or conical, and have very large pupils and lenses. They are not placed on each side of the head as in other fishes, but are close together and point upward or forward, so that they have the power of binocular vision, as in man. There is a great difference in the appearance of these telescopic eyes in different deep-sea fishes. Some project but slightly, while others are placed on the ends of long stalks. But in all cases the eye itself is much elongated, not spherical like most eyes. These variations can be followed in the embryo, whence it appears that these peculiar fishes have been gradually evolved from ordinary



FISH WITH TELESCOPIC EYES.

types and have acquired organs necessary to life in their gloomy home. It is probable, too, that they dwell near the surface when young. The retina of this singular form of eye is divided into two parts, one for ordinary vision, the other for the purpose of catching any stray ray of light that may strike from the side. There are also some other peculiar arrangements similar to those which give to birds their remarkably keen sight and which are also found in whales. In short, the telescopic eye, the pupil of which is always wide open, is constructed with the view of utilizing the feeblest glimmer of light."—*Translation made for* THE LITERARY DIGEST.

IS NERVOUS ENERGY ELECTRICAL?

THE hypothesis that the nervous current and the electrical current are identical is almost as old as our knowledge of electricity. It is one that would naturally occur to an investigator and has died hard. In *The Journal of the American Medical Association*, Dr. J. E. O'Brien maintains that it is still valid and that in this matter the simplest explanation is the best. It will be remembered that the latest theory of the nervous impulse —that of Drs. Loeb and Matthews—altho it brings in electricity, is far from regarding the transmission of that impulse as identical with a simple electric current. Dr. O'Brien, however, apparently thinks that it may not differ much from this. The question, he says, deserves to be taken up anew in the light of our modern conceptions of the structure of the nervous system, and of our greatly increased knowledge of electricity. An abstract of his views appears in *The Medical Record* (May 2), from which we quote as follows:

"Respecting the objection supposed to be derived from the difference in rate of transmission of nerve energy and electricity, the author says that no very decisive experiments as to the speed of nerve impulses have been made since those of Du Bois Reymond and of Helmholtz, and since then we have learned much on the electrical side, especially as to the properties of cables. Further, no laboratory experiments so far made upon the question of the rate at which nerve energy travels are above criticism, and they can not be held to give an accurate measure of it. Such experiments are, indeed, relatively coarse and inaccurate. O'Brien gives some calculations, based upon the maximum of rapidity of muscular contraction attained by telegraphers, to show that a greater (and not impossibly a much greater) degree of rapidity is attained than that usually assigned—namely, thirty meters per second. Further, the speed of electricity is, he thinks, much slower than its well-known maximum velocity, for there is a lag in cables due to capacity, inductive static charge, and the electric reaction of armor. . . . He concludes that the construction of nerves has been closely, tho unconsciously, imitated in electric cables. Experiments on nerves should be interpreted according to the electrical peculiarities of cables, and not as if they were bare conductors. Nerves are insulated, distributed, and arranged like fine electric conductors. Their purpose and use are the same as the purpose and use of electric conductors —namely, communication from point to point. They convey some form of energy, and there is not such a gulf between its velocity and that of electricity as has been supposed. This force must be electricity because: (1) electricity is always present when nerves act; and (2) electricity is the form of force which would do the work required, and it is the form of force which would work with such construction; (3) because the terminal and central mechanisms connected with the nerves correspond to the terminal and central mechanisms connected with electrical systems of communication and do similar work in sending, receiving, relaying, switching, transforming, accumulating, retarding, distributing, and translating impressions; and (4) because electricity, with such construction of conductors and of terminal mechanisms, is the only form of force that we know of that would do all the work required."

RADIUM, THE WIZARD METAL.

THE facts regarding radium are capable of being stated in so sensational a way that the new metal is generally regarded as something of a hitherto unknown kind. This is not true. Ever since Becquerel discovered that certain metals give off continuously a form of radiations resembling Roentgen rays, the problem of the source of the energy so given off has pressed for solution. The radiation from radium is more energetic than any hitherto known, that is all. The probability that many, if not all, of the most familiar substances and articles possess the same property in a small degree does not detract from the interest of the problem. The latest contribution to its solution is contained in a signed editorial in *Nature* (London, April 30), by Prof. J. J. Thomson, perhaps the leading authority on matters of this kind. Referring to the question that has been stated above, Professor Thomson says:

"The discovery by Monsieur and Madame Curie that a sample of radium gives out sufficient energy to melt half its weight of ice per hour has attracted attention to the question of the source from which the radium derives the energy necessary to maintain the radiation; this problem has been before us ever since the original discovery by Becquerel of the radiation from uranium. It has been suggested that the radium derives its energy from the air surrounding it, that the atoms of radium possess the faculty of abstracting the kinetic energy from the more rapidly moving air-molecules while they are able to retain their own energy when in collision with the slowly moving molecules of air. I can not see, however, that even the possession of this property would explain the behavior of radium; for imagine a portion of radium placed in a cavity in a block of ice; the ice around the radium gets melted; where does the energy for this come from? . . . . .

"Another suggestion which has been made is that the air is traversed by a very penetrating kind of Becquerel radiation, and that it is the absorption of this radiation that gives the energy to the radium. We have direct evidence of the existence of such radiation. . . . To explain the heating effect observed with radium, the absorption of this radiation by radium must be on an altogether different scale from its absorption by other metals. As no direct experiments have been made on radium, it is possible that this may be the case; it is not, however, what we should expect from the experiments which have been made on the absorption of this radiation by other metals, for these experiments have shown that the absorption depends solely upon the density of the absorbing substance, and not upon its chemical nature or physical state; if this law holds for radium, the absorption by it would be on the same scale as the absorption by lead or gold, and altogether too small to explain the observed effects. We are thus led to seek for some other explanation. I think that the absence of change in the radium has been assumed without suffi-

cient justification; all that the experiments justify us in concluding is that the rate of change is not sufficiently rapid to be appreciable in a few months. There is, on the other hand, very strong evidence that the substances actually engaged in emitting these radiations can only keep up the process for a short time; then they die out, and the subsequent radiation is due to a different set of radiators."

This evidence, Professor Thomson believes, is furnished by experiments such as those recently described in THE LITERARY DIGEST, where thorium, a radioactive substance, was separated into an active and an inactive part, which after a time exchanged properties. He goes on to say:

"This seems as clear a proof as we could wish for that the radioactivity of a given set of molecules is not permanent. The same want of permanence is shown by the radioactive emanations from thorium and radium, and by the induced radioactivity exhibited by bodies which have been negatively electrified and exposed to these emanations or to the open air; in all these cases the radioactivity ceases after a few days. I have recently found that the water from deep wells in Cambridge contains a radioactive gas, and that this gas, after being liberated from the water, gradually loses its radioactivity; the radioactivity of polonium, too, is known not to be permanent.

"The view that seems to me to be suggested by these results is that the atom of radium is not stable under all conditions, and that among the large number of atoms contained in any specimen of radium, there are a few which are in the condition in which stability ceases, and which pass into some other configuration, giving out as they do so a large quantity of energy. . . . . .

"It may be objected to this explanation that if the rate at which the atoms are being transformed is very slow, the energy liberated by the transformation of a given number of atoms must be very much greater than that set free when the same number of atoms are concerned in any known chemical combination. It must be remembered, however, that the changes contemplated on this hypothesis are of a different kind from those occurring in ordinary chemical combination. The changes we are considering are changes in the configuration of the atom, and it is possible that changes of this kind may be accompanied by the liberation of very large quantities of energy. . . . . .

"Another point to be noted is that the radiation from a concentrated mass of radium may possibly be very much greater than that from the same mass when disseminated through a large volume of pitchblende; for it is possible that the radiation from one atom may tend to put the surrounding atoms in the unstable state; if this were so, more atoms would in a given time pass from the one state to the other if they were placed so as to receive the radiation from their neighbors than if they were disseminated through a matrix which shielded each radium atom from the radiation given out by its neighbors."

Is a Submarine Voyage to the Pole Possible?—The statement which crops up at intervals in the daily press, that some one is shortly to start for the north pole under the ice in a submarine is ridiculed by an editorial writer in *The Marine Review* (Cleveland, April 23). Says this paper:

"There are degrees in nonsense as in all things else, but undoubtedly the most preposterous nonsense of all is the constantly reiterated report that the north pole is to be searched for in a submarine boat. Think of it! There is no reservation of statement at all. The announcement is made from Berlin that a novel polar expedition is projected by two German explorers who rely upon a specially constructed submarine boat to overcome the difficulties hitherto encountered in reaching the north pole. The only thing supporting equanimity in viewing this statement is the fact that it comes from Germany. It was Ingersoll who said that one could give two German professors a box of matches and a bushel of shavings and they would be unable to start a fire. The leaders of the expedition, it is related, are Herr Scholl of Munich and Dr. Anscheutz Kuempfe. There is no proof whether these are the two gentlemen Ingersoll referred to or not, but it would not be surprising if they were. Dr. Kuempfe, it appears, has received sufficient financial support for the construction of a novel submarine boat to travel beneath the icebergs of the Atlantic. Undoubtedly Dr. Kuempfe has latent powers as a promoter, which in a fruitful soil like the United States would enable him to organize companies to extract green cheese from the moon. Herr Scholl, however, is not to be outdone by Dr. Kuempfe. He has organized a separate expedition to erect a wireless telegraph station between latitudes 78° and 80° to keep in constant communication with the submarine, which also is to be equipped with wireless apparatus. It is not stated how the submarine is to receive messages or send them while under the ice, but that is doubtless a mere detail. All this is gravely published in the newspapers and introduced with sober headlines."

Light from the Human Body.—It is announced in the daily papers that Prof. Arthur W. Goodspeed, of the University of Pennsylvania, has succeeded in taking photographs by light emitted from the human body. These rays seem to be secondary disturbances caused by allowing the radiation from a Crookes tube to fall on the body; but care was taken to avoid confounding direct or reflected rays from the tube with the body rays. Says a despatch to *The Sun* (New York):

"Professor Goodspeed pointed out that all matter absorbs radioactive energy in waves of varying length and emits this same energy in waves of a definite and altered length. The energy that has thus been transformed is characteristic of the matter from which it emanates. The rays or waves of this energy are given out by the human body with comparative force and freedom.

"The Crookes tube enabled Professor Goodspeed to make his discovery by its production of exaggerated wave conditions and their consequent absorption and diffusion with unusual force by the human body. In making his experiment he did not permit the *x*-rays emanating from the Crookes tube to flow toward the photographic plate, and the unusual wave disturbance created in this way was absorbed by his own body.

"Professor Goodspeed also ascertained by experiments that the rays from the human body pass with difficulty through glass and with ease through aluminum."

It is also suggested by Professor Goodspeed that the rays given out by different persons may be different and in some way characteristic of their sources, so as to furnish a new means of personal identification.

SCIENCE BREVITIES.

APROPOS the recent article published in our columns (April 25), in which the general notion that the floods in rivers are largely due to the destruction of forests is termed a fallacy, Mr. G. M. Muller, of Baltimore, writes as follows: "Forests do regulate the flow of rivers, but not in the manner described in your issue of April 25. It is a well-known fact in Western river navigation that rivers commence to rise as soon as the snow and ice commence to thaw on the mountains and prairies of the great West and Northwestern States. Should the weather become quite warm with heavy rains, there is nothing to prevent a flood except a sudden fall of temperature. Such weather conditions occur frequently, not only in the West, but all over our country. Another well-known fact is that an open, clear country accelerates the thawing because the sun's rays are directly on the surface of the ice and snow. It is needless to say that forests form a great shade which prevents the sun's rays from acting on the surface, and therefore the process of thawing is much slower than it is in the open country. The process is gradual, so that the rivers do not receive the same quantity of water."

PROF. M. W. WRIGHT, who holds the chair of anatomy at Birmingham University, has recently made an interesting investigation, says the *Revue Scientifique*, of the teeth and jaws of a series of prehistoric skulls from Yorkshire. "These belong to two types; there are 47 of the Neolithic and Bronze ages and 20 others belonging to the early part of the Iron Age. These last are principally dolichocephalic [long-headed], and very probably Teutonic; the first are principally brachycephalic [short-headed], and must belong to the Celtic and Iberian races, pure or mixed. Both are noticeable for their excellent condition as regards the number, regularity, and condition of the teeth. With the skulls of the Bronze Age, the teeth are generally complete and perfect. Only one has a decayed tooth, but in four of them are found signs of alveolar abscess. In none of them have been found signs of complementary or supernumerary teeth. The second inferior molars seem to be invariably quadricuspid and the canine fossas are generally very deep. One lower canine was bicuspid, an anomaly very frequent in prehistoric man, but rare in modern civilized races."—*Translation made for* THE LITERARY DIGEST.

THE RELIGIOUS WORLD.

PAUL AND THE CHRISTIANITY OF CHRIST.

MODERN biblical scholars have made a sharp distinction between the original Christianity as proclaimed by Christ and the form that Christianity assumed in the hands of the apostles, especially in the hands of the Apostle to the Gentiles. The question has actually been raised as to who is the real founder of Christianity. For instance, Professor Schell (who as a member of the Roman Catholic faculty of Würzburg several years ago attracted attention by his criticism of Jesuitic theology and his remarks on the "scientific inferiority of Catholicism"), in his work entitled "Christus," asks: "Who is it that can lay claim to being the Founder of the Christian church? Is it Christ or is it Paul? Who is it that established the ruling religion of the world, the Christianity of the church, with its doctrines and dogmas on Faith, of Vicarious Atonement, of Salvation by Grace, of the Sacraments, of the Holy Offices? Is it Paul or is it Jesus?"

This emphasis now put by biblical critics upon the influence of Paul in early Christianity is in marked contrast to what Professor Schell considers a lack of appreciation by the church at large. Professor Schell says on this point:

"And yet Paul, this most religious man in the most eminent sense of the word, this firebrand of a God-seeking soul, has not even become an object of veneration in the church in the sense in which this is true of Mary, the mother of Jesus, or of Joseph or of St. Anthony or St. Aloysius. The Apostle Paul has always remained a stranger to the soul of the church at large."

In modern theology there is seen at times a disposition to place Paul's influence above that of Jesus in establishing what has become the historical Christian church. Dr. Weimel, of the University of Bonn, one of the most gifted of the younger theological teachers of Germany, is a leading defender of this view, and in an article entitled "Paulus," in the *Christliche Welt* (No. 16), he discusses the importance of this apostle substantially as follows:

Among the Christians of the first generation, Paul is by far the most prominent and truly gifted man. When Jesus and the faith of his first disciples had won the victory over Saul, their most active opponent, it was the most decisive victory which Christianity has ever gained. It was an event that was epoch-making in the history of the world. It is more than a rhetorical expression to say that the great missionary tour of the apostle from Antiochia to Rome was an inverted Alexander the Great march of victory. The great mission of Christianity, in the conquest of the new type of faith and civilization, is really the work of Paul—of that man who boldly and proudly claimed but one title, namely, that of Apostle of Jesus the Christ. It was preeminently his work that Christianity won the day.

But equally epoch-making was the influence of Paul on the history of this new religion inwardly. He created a natural transition of the theological views which had for their purpose the organization of the people through a system of legal paragraphs according to prophetical ideals. This organization finally became antagonistic to all that was prophetic in the people, as is evidenced by the relations of John the Baptist and Jesus of Nazareth to the Scribes and Pharisees. Paul is that one among the Pharisees upon whose mighty soul the pressure of the Law was so great that it burst the fetters and turned itself in destructive antagonism against the Law, and against everything legal in all religion. Paul is the great discoverer of the fact that God and Law are mutually contradictory and exclusive; and that the Law can lead to God only in this sense, that it becomes a torment and awakens a desire for something better in us. That which in Jesus was the self-evident life of the child of God in the love for the Father, Paul had to win for himself in a bitter hour of struggle. But it was then defended by him against all attacks and in this way was saved for mankind. Only once again did the religion of nature, in the form of Roman Catholicism, try to take it away from the church, until Luther, in unequal struggle and through the teachings of Paul, rediscovered it.

Paul, by virtue of his religion, was the first Protestant, and, by virtue of his theology, the first Catholic. Jesus occupied a much more lonesome position in his day, however much he became a part of the world around him. Paul has also worked more effectively for the Gentile world than did Jesus, who only through Paul became an active factor for the Gentiles in their desire for mysteries, sacraments, and philosophies. It remains true that Paul and Jesus, in the innermost kernel of their religion, agree; that both recognize in true religion not the service of a slave of God nor a service of the Law, but a freer service of the heart. Nevertheless, it is to be regretted that the complicated form in which Paul possessed the gospel, interspersed as it was with the elements of the piety and wisdom of the antique world, still possesses more influence over the Christian world than does the more simple form in which Christ proclaimed the gospel.—*Translation made for* THE LITERARY DIGEST.

AN ANGLICAN MARRIAGE SENSATION.

A PROMINENT citizen of New York who was divorced from his first wife married an American lady in London recently. The ceremony was performed by a clergyman of the Church of England under conditions, it is claimed, of "clandestine caution" for fear the proper authorities would hear of "this infringement of the marriage law in the diocese." It is also declared that "the first secretary of the American Legation went out of his way to show contempt for the whole Church of England and the Primate and the Bishop of London in particular." To quote *The Pilot* (London), an organ of the Church of England party in Great Britain:

"It is hard to say which of the little group which succeeded in getting Mr. Vanderbilt and Mrs. Rutherford married behind locked gates and barred doors comes worst out of the business. Dr. Tristram is chancellor of the diocese of London, and he knows that the Bishop of London has done all he can to prevent the issue of licenses to divorced persons and to stop their being married in church. His claim to a jurisdiction independent of his bishop does not make it incumbent on him to exercise that jurisdiction against that bishop's known will. He alleges, we believe, that if he had refused the license Mr. Vanderbilt would have applied for a mandamus. Judging by the latter gentleman's desire to be married unseen, this seems highly unlikely. But even if he had any such intention, to make application for a mandamus is not the same thing as getting it, and Dr. Tristram might at least have waited to give his action the superficial respectability of submission to legal pressure. Mr. Hadden [the clergyman who performed the ceremony] can not plead even this transparent excuse. No mandamus would have been applied for against him; he disobeyed his bishop and lent himself and his church to the hide-and-seek performances of last Saturday for the mere love of the thing. Mr. Vanderbilt must, we suppose, have the credit, such as it is, of a desire to be married in church rather than in a registrar's office. But we question whether a citizen of the United States is seen to advantage in making himself the accomplice of an English clergyman in defying the command of his bishop. We understand, however, that Mr. Vanderbilt has the excuse—if it be an excuse—that no clergyman of the Episcopal Church of the United States could have been found to play Mr. Hadden's part."

"Sacrilegiously performed," the "church's blessing" upon this union could only be "surreptitiously obtained," asserts *The Church Times* (London), an Anglican organ, which uses these scornful phrases:

"The noble duke and duchess, who were also present, set an example which society will not be slow to follow. And all of them appear to have enjoyed the fun of stealing a march upon those who would certainly have availed themselves of the right to state cause or just impediment why the proceedings should not go forward. It is not surprising that one of the clergy of St. Mark's has made himself conspicuous in bringing accusations of disloyalty against the so-called Ritualists. That gentleman

would strengthen his case if he identified himself only with those who in all points uphold the church's law.

Dr. Tristram, Chancellor of the Diocese of London, has added to the sensation of the case by a long letter in the London *Times*, in which he says he had no alternative but to grant a license for the marriage. The British daily says editorially that an "error of judgment" occurred, but it refrains from saying whose error it was.

EMERSON AS A RELIGIOUS INFLUENCE.

NO recent contribution to the interpretation of Emerson has attracted more attention than that of Dr. George A. Gordon, himself an alumnus of the university from which the sage was graduated and a listener to the address before the Divinity School at Harvard. Emerson's influence, thinks Dr. Gordon (*Atlantic Monthly*, May), "has been a religious influence," and "greater than Emerson the poet, than Emerson the man of letters, is Emerson the prophet." First of all, Dr. Gordon points out that Emerson's influence over his religious contemporaries was surprisingly small, altho he explains this by the nature of the collegiate education which Emerson's contemporaries had received. The sage's influence, however, has been "potent over three classes of men":

"The first is composed of men of genius, like Lowell, a small class indeed, but one great in power. The second class consists of the large body of persons who stand outside of institutional religion, who are eager followers of the modern seers, whose beliefs are formed out of contemporary opinion, and who look upon all ancient thought and faith with grave suspicion, if not with distinct distrust and aversion. To this order belonged the acute and amazingly interesting graduate of Yale College, and a Wall Street broker, who remarked to the writer that Edmund Burke and Daniel Webster were outgrown, and that their writings were not worth reading. This type of person is wholly contemporary. He adores the man who advocates revolt from the past. He will join no man in building the sepulchers of the fathers; he will follow as master any one who appears with a new program. Over this large and interesting order of persons Emerson has had an immense influence. Indeed, they have owed to him whatever of salvation they have been able to attain. The third class is made up of men of catholic temper, who learn from the wise and good of every denomination, who take all human leaders with generosity and reserve, and who are not seriously disturbed by false doctrines, heresy, and schism in those who bring them substantial aid. Still another class should, perhaps, be designated, into which are gathered the popular imaginative or poetic minds, who do not care for definite doctrine, or who feel that definite doctrine is unattainable, who with a minimum of religious belief seek a maximum of spiritual strength, and a personal attitude toward existence brave, beneficent, serene, joyous, and fed from the sense of a mysterious but sustaining universe. For this body of our people Emerson has been an influential leader."

REV. GEORGE A. GORDON.

This distinguished Congregational clergyman of Boston thinks that neither Emerson nor Carlyle ever seriously studied Christianity.

Dr. Gordon hastens to say that "the proper limitation of Emerson's field of influence does not mean that the field is not large and that the influence is not of a high order." But there is reason to conclude that Emerson never "seriously studied Christianity," a respect in which he resembles Carlyle. Of both men the observation is made:

"One can hardly read the correspondence of Carlyle and Emerson without the feeling of their excessive consequentialness in the presence of the immense historic achievement of spiritual genius; in the presence of the spirit, the teaching, and the influence of Jesus. Both were essentially modest men, and yet they lived in the sense of a uniqueness and an importance which they do not possess. They are both frequently oracular when uttering with literary distinction only the commonplace moral wisdom of the Christian world. It is a valid criticism upon Carlyle and Emerson that they failed to recognize the rock whence they were hewn, and that they did not exhaust the quarry; that they were oblivious of the pit whence they were digged, and that the precious metal remained, after they were taken out, in boundless abundance."

We are assured further that "there is a doctrinal uncertainty about Emerson's writing that makes his teaching unsatisfactory to all but a significant minority among the religious people of his time." He is "too vague, too uncertain." "Emerson's Deity is vague and uncertain in personality, and does not bow the heavens to console and comfort man":

"The attitude of Emerson toward the Founder of Christianity was for two generations of religious Americans an insuperable barrier against extensive influence. Again the question is not whether this attitude was right or wrong; it is enough that it deeply offended the vast majority of the religious people of this country. It is not forgotten that Emerson said some deep and precious things about Jesus; here is one: 'Europe has always owed to Oriental genius its divine impulse: what these holy bards said or sang, men found agreeable and true. And the unique impression of Jesus upon mankind (whose name is not so much written as plowed into the history of this world) is proof of the settled virtue of this infusion.' This might pass for the hazy Christology of a representative of progressive orthodoxy, but elsewhere Emerson makes an interpretation of this kind impossible by remarking: 'No historical person begins to content us; there are no such men as we fable, no Jesus, nor Pericles, nor Cæsar, nor Angelo, nor Washington such as we have made. We consecrate a great deal of nonsense because it is allowed by great men; there is none without his foible.' In another mood we have from Emerson this genuine appreciation of Christ: 'Jesus Christ belonged to the true race of prophets; he saw with open eye the mystery of the soul. Drawn by its severe harmony, ravished with its beauty, he lived with it and had his being there. Alone in all history he estimated the greatness of man. One man was true to what is in you and me. He saw that God incarnates Himself in man, and evermore goes forth anew to take possession of His world.' Yet it is only in 'a jubilee of sublime emotion' that Jesus can say, 'I am divine. Through me God acts; through me speaks.' 'Churches are not built upon his principles, but upon his tropes.' Again there is permanent wisdom in Emerson's disregard of the fear of degrading the character of Jesus by representing him as a man; but the meaning of the perfect humanity of Jesus Emerson does not consider. Here is another appreciation of Jesus: 'Jesus always speaks from within, and in a degree that transcends all others.' To this it may be replied that the question is not whether one speaks from within or from without, but whether what he says is true. To speak from within in a sovereign way is, however, Emerson's highest praise, and yet he offsets this praise of Jesus by a peculiarly unfortunate sentence: 'This one fact the world hates; that the soul becomes; for that forever . . . shoves Jesus and Judas equally aside.'"

The plain truth is that "Emerson puts Jesus on a level with other great servants of the spirit; he sees limitations in his service, he looks for the coming of another and a greater teacher." Consequently, as our critic thinks, it is impossible that Emer-

son's "influence should be wide or deep, at least within the pale of organized Christianity. Emerson is foreordained to this limitation of influence by his attitude to one who stands in the thought of his disciples supreme among the sons of men." But the sense of the over-soul and of the human soul are strong in Emerson:

EMERSON'S GRAVE.

VIEW OF THE OLD MANSE, EMERSON'S HOME AT CONCORD.

The bronze plate on the quartz boulder on the grave reads line by line:

RALPH WALDO
EMERSON.
Born in Boston, May 25, 1803.
Died in Concord, April 27, 1882.
THE PASSIVE MASTER LENT HIS HAND
TO THE VAST SOUL THAT O'ER HIM PLANNED.

Courtesy of *The Booklover* (New York).

"Emerson's confession of the divine soul of the universe, omnipotent, self-revealing, open to the heart of man, is a religious idea never long absent from him, and uttered by him on many occasions, in many forms, and always with the insight of a seer and the rapt speech of the lover and worshiper. He walks in a spiritual universe. Nature is a transparent veil; human society and human history are a translucent order. The Over-Soul, the divine beauty of the universe, is all and in all, and in the presence of this eternal mystery of loveliness men wake and sleep, work and play, live and die, and carry forward all human interests and industries. This pervading soul of the universe hallows the world, hallows humanity, fills nature with beauty, fills society with radiant meaning, and overwhelms all finite forms, natural and human, with infinite life, light, significance, beauty, and joy.

"In Emerson the sense of the human soul is equally strong. 'Son of man, stand upon thy feet and I will speak to thee!' might serve as a text for at least half of Emerson's work. Man is called upon to speak face to face with God, to allow the divine soul to awaken the dormant faculties within him, to educate his whole being in science, in duty, and in worship. The Emersonian doctrine of man is as hard to define as the Emersonian doctrine of God; but if we say that God is the Soul of the universe and that man is the soul that answers to it, that is capable of entertaining its appeals, of climbing up into truth and goodness and beauty by its inspiration, we shall not be far astray. These two visions—the vision of the Soul of the universe penetrating all, making all opaque things luminous with its presence, and the vision of man's spirit in fellowship with the absolute Spirit, and living and growing in this total order ablaze with divinity—are surely religious, and they constitute part of the fascination which Emerson has wielded over the religious mind of many people."

His call "to look at all reality immediately at first hand," has enabled Emerson to exert "another and a yet more fundamental influence." The "great note" in the first volume of his collected writings is found when he says: "Yourself a new-born bard of the Holy Ghost, cast behind you all conformity, and acquaint men at first hand with Deity." Emerson is pleading here, thinks Dr. Gordon, "for the immediate vision of a divine universe":

"He is the inaugurator of an era of the first-hand and original treatment of all human interests. Emerson's wholesomest influence is against the prevailing and blinding power of mere tradition. 'Instead of that reliance which the soul suggests on the eternity of truth and duty,' men are forever inclined to lean upon institutions which are to the spirit as the imperfect effect to the transcendent cause. Nothing is finer in Emerson than this war against second-hand politics, art, philosophy, and religion."

However, "the best thing that Emerson has left us is his spirit, fine and high, stern and sweet. He took life in a royal way, and bore himself toward the eternal mysteries with serene courage and dauntless hope. . . . That Emerson speaks so often and so royally for men is his great distinction; that he speaks so frequently for the idiosyncratic, the isolated, and the vain, is his chief fault":

"On the whole, and in conclusion, it may be said that Emerson's influence is like that of a mountain upon the local climate—the clouds that gather upon it, the storms that rage round it, which find it immovable, mean the refreshment and renewal of the beautiful world in which it stands; and when it lifts its untroubled head toward heaven it is an object of wonder and love, and sheds into the air that men breathe at work and at play the invigorating tonic of its own exalted being. Such was Emerson—a man of towering moral stature, he kept a majestic silence while the elemental sorrows that come to all swept round his stable manhood, one whose meetings with the upper world and its awful powers carried beauty and peace to the wide fields of human society, and whose lofty spirit put into the common religious atmosphere of the time a tonic and an inspiration of priceless worth and of enduring delight."

THE POPE, THE KING, AND THE PROTESTANTS.

CERTAIN religious susceptibilities were aroused in one quarter and soothed in another by the recent visit paid by Edward VII. to the Pope. English papers in general regard this, the first encounter face to face of Roman Pontiff and British King since the days of the first Edward, as a matter of historical interest, but involving no discernible peril to religion or the realm. The London *Times*, which thinks some late ultra-Protestant resolutions an "impertinence," congratulates the British empire upon the fact that the visit took place at all. As for that authoritative organ of the Roman Catholic Church in England, *The Tablet* (London), it observes:

"It was left for English Protestantism to display in full force a prejudice that seems strangely misplaced in these days of enlightenment. The belief that the Pope is Antichrist we should have thought had long ago been relegated to the museum of obsolete superstitions, had it not been brought forth and newly burnished up to hurl at the head of Edward VII. as a reminder of his duty to the principles of the Reformation. For the good people who thus cling to their antiquated formulas of objurgation, the world must have stood still, or they could not fail to see that the spent fury of intolerance finds an echo now only among the lowest and most ignorant classes of the population. The cry of 'No-Popery' is dead, and it is with other forces than those of Rome that the Church of England has most seriously to reckon at the present day. Far different was the view of the situation taken by the better-instructed public opinion of this country. As

one of our non-Catholic contemporaries put it, the omission of the King to pay a visit of courtesy to the Pope would have been felt 'as little short of a disaster.' That the royal tour should have been made the occasion of putting a public slight on one so exalted in office as to be regarded as the Vicar of Christ by the majority of Christians throughout the world, and so venerable by years as to stand on the dim borderland between the worlds of the seen and the unseen, would indeed have been felt as a grievous mischance by others than Catholics. By all, moreover, save by the handful of fanatics who made themselves so conspicuous by their intolerance, the King is viewed as the representative, not of one creed alone, but of his subjects of diverse faiths and religions throughout the empire. From all he claims allegiance, and to all he owes a duty in return, the duty not merely of protection, but of public recognition of the respect due to their feelings and susceptibilities."

The view of the so-called "anti-Popery" element is not less emphatic on the other side. Its organ, *The Rock* (London), denounces the King's advisers for permitting the visit to the Vatican of the successor of Henry VIII. and Queen Elizabeth, and adds:

"Ours has been from the days of the Reformation, nominally at least, a Protestant country, and our sovereigns, ever since the Act of Settlement, have occupied the throne on condition of a public profession of the Protestant faith. King Edward VII., following in the steps of his revered mother, made and signed the prescribed declaration at his accession before Parliament, in which he protested against the doctrine of Transubstantiation, the invocation or adoration of the Virgin Mary, or of any other saint, and the sacrifice of the mass. This was followed at his coronation by the solemn promise on oath 'to maintain the laws of God, the true profession of the Gospel, and the Protestant Reformed Religion established by law,' etc., etc. All this, we feel sure, was done *ex animo*, and with perfect sincerity. And yet, with the utmost respect for his person and throne, we fail to see the consistency between these sacred pledges and this uncalled-for interview in the Vatican with the aged Pontiff, the personal representative of the Roman Church. Our King is always and everywhere our King, nor can he act as a private individual. He is, moreover, the temporal head of the Protestant Church of England. The Pope, on the other hand, boasts himself to be the infallible head of the corrupt Roman Catholic communion and the supreme governor of all princes. The one is the antithesis of the other, and under all the circumstances we can not conceive of a really harmonious meeting between these two potentates."

EMERSON'S RESPONSIBILITY FOR CHRISTIAN SCIENCE.

MR. PAUL E. MORE, after paying tribute to Emerson's personal character, his "absolute and undeceived sincerity," and to the "perpetual instigation to the strong" and "noble promise to inspired youth" of Emerson's message, proceeds (in *The Independent*, May 21) to describe what he considers some of the baleful results of Emerson's transcendental philosophy. Mr. More writes:

"It would be indiscriminating to lay at Emerson's door the whole evil of a faded and vulgarized transcendentalism. He was but one of many; others—some, as Channing, even before his day—had taught the same facility of the spiritual life. Yet in him the movement came to its beautiful flower; we are justified in holding him mainly responsible for the harm that flowed from it, as we honor him for the glory that lay therein. And, alas, even in his own day the doubtful influence of this fatally easy philosophy began to make itself felt. Hawthorne, the most stalwart observer of all that group, tells us how many bats and owls, which were sometimes mistaken for fowls of angelic feather, were attracted by that beacon light of the spirit. It was moreover impossible, he avows, to dwell in his vicinity without inhaling more or less the mountain atmosphere of Emerson's lofty thought; but in the brains of some people it wrought a singular giddiness. And if Emersonianism was mischievous to weak minds then, what shall we say of its influence in New England to-day—nay, throughout the whole country? For it is rampant in our life; it has wrought in our religion, our politics, and our literature a perilous dizziness of the brain.

"There is a mysterious faith abroad in the land, which, however we grudge to say it, is the most serious manifestation of religion discoverable in these days. We call it Christian Science, or faith healing, or what not—the gospel of a certain Mrs. Baker-Eddy; but in reality it does not owe its strength to the teaching of an ignorant woman in New Hampshire. It is a diluted and stale product of Emersonianism, and the parentage, I think, is not difficult to discern. To Emerson, as to Mrs. Baker-Eddy, sin and suffering had no real existence; a man need only open his breast to the random influences of heaven to lead the purely spiritual life. Nor is it correct to say, as some fondly suppose, that Christian Science or Emersonianism has any vital connection with Oriental mysticism. True, both Emerson and the sages of the East taught that spirit was the only reality and that the world of the body and of evil was a deception. 'Life itself is a bubble and a skepticism and a sleep within a sleep,' said Emerson, and the Hindu summed up the same thought in his name for the creator, Mâyâ, illusion. But there is a radical difference in their attitude to this truth. Tho the material world was in one sense illusion and unreality to the Hindu, yet in another sense it was tremendously real. Over the misery and insufficience of mortal existence he brooded in a way that to us is inconceivable; we call him a pessimist, and from our ordinary point of view rightly. He was haunted as with an infinite sadness by the vision of endlessly recurring birth and death, of ceaseless unmeaning mutation. To escape this life of unspeakable sorrow he labored at vast systems of philosophy, he was ready to undergo, if needs were, a lifetime of crushing asceticism. He could no more have understood the jaunty optimism of Emerson than we can understand what we style his pessimism. There is a story—how authentic I do not know—that when Emerson was visiting Carlyle, the gruff Scotchman, who certainly believed heartily in evil and damnation, carried his guest to the slums of London and pointed out to him one horrible sight after another. 'And do you believe in the deil, noo?' he would say; and always Emerson would shake his head in gentle denial. The story is at least *ben trovato;* it sets forth clearly the facile optimism out of which Christian Science was to spring. Such a creed, when professed by one who spoke with the noble accent and from the deep insight of an Emerson, was a radiant possession for seeking humanity forever; it is folly and inner deception when repeated parrot-like by men and women with no mental training and, visibly to all the world, with no warrant of spiritual experience. To suppose that you and I and our neighbor can at our sweet will cast off the impediments of sin and suffering is a monstrous self-deceit. So has the very lack of system in Emerson's message become a snare to mankind more deadly than the hardening systems of other philosophies. These are at least virile."

RELIGIOUS NOTES.

"THE prime cause of the childless church," says *The Outlook* (New York), "is the prayerless home."

"WE do not need new religious institutions, but we do need a new Christian public opinion," asserts *Christendom* (Chicago). "Men may fear the dominance of a church or of a theology; they can never fear the dominance of the Golden Rule."

"IN order rightly to understand the past or reasonably to conjecture the future history of England one must remember that the British empire has been created not mainly by the intellectual, but rather by the moral, qualities of the English." Thus writes Henry Childs Merwin in *Harper's Magazine* (New York). "Upon this point one finds writers the most diverse expressing themselves in words nearly the same. 'The English did not calculate the conquest of the Indies,' said Emerson; 'it fell to their character.'"

"THE attitude of mind in which many pupils of the Sunday-schools receive Bible instruction is either that of dull indifference or frivolous disrespect," according to John T. Prince in *The Educational Review* (New York). "This criticism applies mainly to pupils of early adolescence or pupils from twelve to sixteen years of age. I may put too high a value upon the spirit of reverence, but I go so far as to say that while the purely secular work now performed by the Sunday-school may justify present methods of organization and teaching, the evident failure to secure an interest in the Bible and a sacred regard for its teachings is warrant sufficient either to excuse from attendance all pupils that are not willing to give a cheerful attention to the work, or to entirely change the organization and methods of teaching now pursued. I believe that it is far better to have little knowledge of the Bible, with reverence for its teachings, than to have much knowledge without reverence."

FOREIGN TOPICS.

THE ANTI-JEWISH UPRISING IN RUSSIA.

EUROPEAN opinion has been literally overwhelmed by the massacres of Jews at Kishineff, the first impression being that the stories of outrage were too ghastly for belief. Certain newspapers in Germany have taken the trouble to verify the particulars, and in every case they report that the truth is darker than first reported, and that nothing could exaggerate the atrocities. Babes in arms were hurled from the upper windows of houses, according to the *Frankfurter Zeitung*, while Jewish maids and matrons were dishonored in the open streets, the police and soldiers looking on and not lifting a finger to protect them. The German newspaper points out that it is difficult for civilized human beings to credit all this, but there is unimpeachable testimony in confirmation of the worst. It proceeds:

"Small groups of half-drunken plunderers stormed the residences of the Jews. Money and valuables were demanded. When everything had been handed over that could be handed over, young Jewish men were slaughtered by means of blows on the head. The women and young maids in the houses were next outraged by the members of the band in turn. If the females offered the slightest resistance, they were struck down without remorse. Babes were torn from their mothers' arms, carried to the upper stories, and thence hurled from the windows down to the streets below. . . . Some of the Jews betook themselves to the governor and besought his protection. He answered with great coolness that he could do nothing because he had not yet received his orders from St. Petersburg. Emboldened by this almost incredible but well-authenticated response, the mob continued its deeds of infamy."

Ultimate responsibility for these scenes, declares the German paper, rests upon the Russian Government, "which has made it a principle of administration that the Jew has no rights"; but the direct cause of the fact that the horrors assumed so serious a phase "even for Russia" is "the absolute indifference of the local authorities." It adds:

"Not once did the representatives of the law interfere to suppress the disturbers. Not a single effort was made to protect the Jews. Indeed, another feature of police action must be noted. They ordered the Jews in the streets still free from disturbance to remain within doors. That is, they prevented the Jewish population from assembling in order to concert measures for their mutual defense. And that the barbarians could easily have been brought to order is evident from the fact that no force whatever was necessary to restore peace. As a matter of fact, the plundering and murdering were accomplished in the presence of the inactive police. Another circumstance must be noted in regard to the attitude of the authorities. They arrested the rioters in large numbers, the mere fact of disturbance of the peace being alleged against them, but no measures have been adopted for the relief of the victims of the massacres. Victims of peasant plunderings last year were paid the amount of damages awarded them, but the pillaged Jews are left to private benevolence. And now comes the mocking announcement of the Kishineff chief of police: 'Whoever voluntarily restores the stolen Jewish property within the next few days will not be punished.' Could better evidence be asked of the unprotected state of the Jews in Russia?"

The Russian press gives numerous details, and the comments thereupon are severe. Several leading papers have been punished by the Russian Government for boldness in discussing the Kishineff tragedy. The St. Petersburg *Novosti* (punished by the prohibition of its street sales) distinctly hints at official responsibility. It calls attention to the fact that the six or seven regiments of troops stationed in and around Kishineff were absolutely idle during the three days of the murderous reign of the mob. It says that the Government ought to compensate the victims for the losses sustained through the inefficiency or worse of the police and troops. Another paper, *Boudoustvost*, declares that these disorders had peculiar features, such as were unknown at any previous outbreak of the same sort. It alleges that there was evidence of organization, method, and preparation; that several separate bands operated in the various sections of the city; that the duration of the disturbances was unprecedented, and that for weeks there had been open talk of the coming troubles. No preventive measures of any kind, it charges, had been taken by the governor of the province, notwithstanding earnest requests of the leading Jews of the city.

Several papers, including the antisemitic *Novoye Vremya*, which has not paid the matter any editorial attention, reprint a long account of the "crusade" from the *Viedomosti*, supplied by its Kishineff correspondent, who claims to have witnessed the outrages. Not one street, he says, inhabited by Jews, was permitted to escape. Even the synagogs were invaded and ruthlessly pillaged and desecrated. Of the attitude of the police and troops the writer avers:

"Many thought that the disorders would be quickly ended, since there were mounted military patrols, infantry, well-armed police all over the city. . . . Assuredly all this was calculated to terrify the mob! Not in the least. The rioters were armed with axes, hammers, sticks, etc., and operated in various sections, paying no attention to the troops and police. The latter very loudly shouted at the rioters. The soldiers, with rifles on their shoulders, with equal severity called the disturbers to order; but these protests were vain, and the destructive work was continued with increased fury and frenzy. . . . . .

"The cultured Christian public behaved most dreadfully. Not a finger was lifted to stop the terrible campaign. It very quickly paraded the streets, looking on in complete indifference. In carriages, on every side, richly dressed persons rode back and forth in holiday fashion."

Finally, says the correspondent, there were rumors that the patrols had received orders to use extreme measures against the rioters, and the disturbances were not renewed. The Jews at first could not believe that protection would be given them, but gradually they recovered confidence and began to venture into the streets.

The *Novosti* demands an investigation into the conduct of the local authorities, and the trial of every one of them before an impartial court. It is not necessary, it says, to argue such elementary propositions as these—that it is the duty of any orderly Government to protect peaceable citizens, that mob violence is disgraceful, and that the authorities who wink at it are guilty of criminal neglect of duty.

In a separate editorial, the *Novosti*, referring to the talk of Jewish exploitation and economic oppression, suggests that the courts, in trying the rioters, should ask each prisoner as to the motives and reasons of his attack on the Jews. It expresses the conviction that an honest inquiry along these lines would establish the entire baselessness of the "economic" explanation of the apologists of the mob. Besides, such an inquiry, it says, would point to preventive measures, which are infinitely more important than punitive ones.

The *Kievlianin*, the leading paper of that center of ancient Russia and of orthodoxy, Kieff, writes strongly on the massacre. It says:

"The blood of the murdered and maimed cries to heaven. These outrages are not merely a calamity to the Jews, but a disgrace and misfortune to the Christian population. . . . . .

"It is not improper to observe even at this time that the Jews, on whom all sorts of accusations are lavishly poured, are not, as a mass, responsible either practically or morally for those objectionable qualities which characterize many of them, as they characterized the Christian peoples. Taken as a mass, the Jews of southern and western Russia form an energetic, enterprising class of artisans and tradesmen, a class which is satisfied with a very modest scale of earnings. The great majority of them, in spite of endless toil, sobriety, and thrift, are hardly able to make both ends meet.

"And we see that western and southern Russia, and Russian

Poland, to which the Jewish population of Russia is confined, not only do not grow poorer, but are in an economic condition vastly superior to that of other parts of the empire. With the development of credit, railway communication, and internal commerce and competition, the question of exploitation of the Christian population by the Jews loses its significance more and more. Indeed, even in commerce it is not easy nowadays to make a living.

"When in the masses of the people the wild passions for violence and destruction are thus excited, it becomes the duty of all honest men to resist manifestations of malignity and hatred, and to testify that the Jews are not merely our fellow citizens, but useful coworkers whose energy and industry are valuable to the country."

Another leading provincial paper, the *Youjny Kray* (Kharkoff), says:

"We had thought that even the lowest elements of the population were incapable of such general exhibitions of inhuman cruelty and malignity. We had thought that anti-Jewish riots were a thing of the past. But, alas! even to-day there are wicked and depraved people who appeal to the worst instincts of the ignorant, debased, and superstitious mob, and these have taken advantage of weakness, holiday intemperance, and the desire for illicit gain to inflame and incite the populace."

This paper holds the intelligent classes responsible for the outbreak. Their bigotry, intolerance, and fanaticism, it says, are translated by the mob into slaughter and pillage and robbery. What, it asks, is the trouble with the churches? The Russian peasants and laborers are religious, and they would not commit such atrocities if they realized their awful character. What sort of religion and morality do the clergy teach and preach? Reform, the paper concludes, must first come from the churches, which can do more to prevent wrong and crime than the governmental authorities. But the *Bessarabyetz* (Kishineff), a paper long noted for its attacks upon the Jewish element in Russia, declares that the Jews "deserved to be punished," and that there is nothing in the recent events to call for special action. It adds that the Jews "will misrepresent and play upon the feelings of the foreigner," and it insinuates that "ritual murders" committed by Jews in Kishineff aroused the alarm of the population. The London *Times* claims that the utterances of this anti-Jewish organ in Kishineff are directly responsible for the outbreak. "An explanation is urgently needed for the inaction of the authorities," it remarks, "who appear to have played the part of disinterested spectators." The French press is roundly denounced by the eminent publicist Roland de Mares, writing in the *Independance Belge* (Brussels), who says that the leading journals in Paris are afraid to denounce the outrages for fear of giving offense to the "ally and friend," Russia. He writes:

"Throughout these few days, when the terrible details of the excess of which the Kishineff Jews were victims poured in, we paid special attention to the newspapers whose humanitarian instincts are well known, which regard it as their special mission to protest against infamies everywhere, to denounce all persecutions to the civilized world. Here, we thought, is a thing to provoke a violent explosion of anger. Here is something that must let loose a perfect tempest. All the reproaches heaped upon the Ottoman Government at the time of the Armenian massacres will now be heaped upon the Russian Government. The St. Petersburg cabinet will find it no easy matter to withstand the storm, to quiet the emotions of a violently excited European opinion. But, to our great stupefaction, these journals maintain a strange silence. They publish despatches relating to the massacres, but they have not a word of editorial pity for the victims, not an impulse of anger against the responsible authors of these crimes."

This authority declares that it is "prodigious" to note "the lamentable situation of the Israelites in Europe's east," to reflect that "it has not yet provoked one of those vast movements of opinion which impose upon governments a respect for elementary justice":

"When one remembers that there are in Russia at this beginning of the twentieth century millions of men who are goaded as if they were wild beasts, upon whom the last humiliation is inflicted, who are looked upon as the scum of humanity, one may well ask if all that is said about social progress, all that is written about the freedom of the mind, all that is uttered regarding the emancipation of mankind, be truth or falsehood, and if it be not with words that are vain that our souls are soothed with hopes of a brighter day. . . . In Russia the Jews are permitted to reside only within certain specified districts. They are forced to pay an enormous tax if they wish to go into business. A thousand difficulties are placed in their way if they try to enter a liberal career. As for a public career, such a thing is forever closed to them. Exceptional governmental measures weigh heavily upon them. They are kept wholly down, reduced to the most wretched helplessness, exposed to every aggravation. They are reproached especially with their manipulation of money and charged with exploiting the Russians financially as the Armenians exploit the Mussulmans. They are said to seek to concentrate all wealth into their own hands. But it would be well to find out the proportion of rich Jews in the entire Israelite population, to ascertain if the very fact of their isolation does not inspire the anxiety for wealth in them, since money is the only final guarantee they have against evil fate. For they can expect no protection from the laws. . . . Since so many efforts are now making to free from the tyranny of odious laws men who are deemed sufficiently enlightened to merit a liberal government, let representations be made for the Jews of Russia with the rest."—*Translations made for* THE LITERARY DIGEST.

GERMAN ATTACKS ON A GERMAN DIPLOMATIST.

BARON SPECK VON STERNBURG, the diplomatic representative of the German empire in Washington, has for some time past been the object of a series of attacks in various German newspapers. These attacks indicate deep-rooted discontent with his conduct of German-American relations. He is said to misconceive his position radically and even to be responsible for an alleged contempt of Germany in the United States. Criticism of his German diplomatist in German newspapers covers a very wide ground and is personal as well as political. One objection urged against him is that he does not sufficiently appreciate the traditions of Bismarckian diplomacy. Another is that he causes the Americans to entertain too exalted an estimate of themselves. Still another is that he conceives it to be part of his mission to work for the interests of the country to which he is accredited while striving to further the interests of his native land. In these and other attacks upon the diplomatist the *Hamburger Nachrichten* takes the lead. It has all sorts of objections to the baron, one of which is that President Roosevelt calls him "Speckie." It asks: "Whom do the Americans wish to fool? Baron Speck von Sternburg? They may succeed with him—but not with us." It observes with reference to another matter:

"He would appear to have said among other things that it was his firm conviction that, as Ambassador in Washington, he should serve not only his own country, but also the country to which he is accredited. Hence he would strive so to establish the mutual relations of both nations that all the world would wonder at them. This utterance sufficiently denotes that there must be a mystification somewhere."

Baron von Sternburg "did not exaggerate," thinks the *Zukunft* (Berlin), "when he said that in Germany people would be surprised when they saw him get down to work." It continues:

"We have been surprised for quite a while, and are quite indignant at the ungenerous critics who advised that the Yankeefied husband of an American woman should not be sent as Ambassador to Washington. Could any ambassador accomplish more in so short a time? No. Do the Lascelles, Szogyenyis, Osten-Sackens [diplomatists stationed in Berlin] go to the railway station when William II. journeys to Copenhagen or Rome? No. Are they greeted by mocking nicknames in the presence of

assembled military men? No. Do they go out horseback riding with the Emperor? No. Must not the position of a great Power be sensibly lowered when its representative pays homage at the railway station, is called 'Speckie, and, during the period when the head of the Government is off on a tour of his country, rides about on a wretched borrowed horse? Why, of course. Hence we may see at a glance how palatable this American Speck is."

The German paper says much more in condemnation of the German Ambassador for consenting to accept the loan of the

Copyright, 1903, by Clinedinst, Washington, D. C.

BARON SPECK VON STERNBURG,

The German Ambassador in Washington, who is denounced in various German newspapers for assuming too cordial an attitude toward Americans.

President's horse and for going to the railway station to see him off on a journey. The *Deutsche Agrar-Correspondenz* observes "that the delusion is entertained in Berlin that President Roosevelt felt a special pleasure in the assignment of von Sternburg to Washington, whereas in reality the President, as well as those about him, were little flattered and much astonished" at the event. The reason given by this authority is that "in free America there are decided class distinctions," and the best society in the United States has "reasons" for being dissatisfied with the appointment. "These objections to Speck are openly urged in American society," proceeds this authority, which professes to repeat them upon the assurances of "influential political persons" in Washington and New York. Still another complaint against the diplomatist is thus put by the *Schlesische Zeitung:*

"He smoked incense to the American press, American institutions, land, and people, the yacht club, the ladies, the President—in short, to everything that has a name, until finally we could only think: 'In Heaven's name, are the American people really so childish as to take serious pleasure in that sort of thing?' Perhaps the Speck game is a good one for the great masses of the American people. It can scarcely be successful with the finer intelligences among them. In Germany, anyhow, it evokes more sarcasm than applause. . . . Our new Ambassador in Washington may be very satisfactory to the Americans, which is perhaps the main thing. Here he produces an ill effect upon his countrymen's nerves, especially upon the nerves of those who think that the Americans must grow the more insolent the more abjectly they are courted."—*Translations made for* THE LITERARY DIGEST.

EDWARD VII. AS "A GREAT AMBASSADOR."

NEWSPAPERS in England are now recording their general impressions of the continental tour of Edward VII. which has terminated in a blaze of editorial rhetoric. "A great ambassador," an American newspaper called the King, in commenting on his tour, and the phrase has been cabled to Europe and hailed in London, prompting the London *Times*, indeed, to make the assertion that citizens of the United States "discover in a monarchy a diplomatic advantage in this respect that is lacking in their own Constitution, which forbids a President, while President, to travel abroad." The London organ traces the royal progress with comprehensive view not from China to Peru precisely, but from Portugal to Paris, and it sees no escape from the conclusion that "in the course of his journey the King has been brought into touch with very various interests, and the recollections on which he can look back are of considerable diversity." Beginning with the Portuguese, we read that "they are not slow to recognize the moral demand it [the King's visit] seems to make of them." In Italy there was "mutual cordiality," and the King's visit to the Pope was "equally welcome to the King of Italy himself." In Paris the King got a reception which was "the most striking of tributes to the personal prestige of His Majesty."

Thus a great organ of British opinion. In a somewhat different spirit, *The Daily News* (London) takes note of discordant elements. "The division between England and France," it says, "is unhappily one of the oldest and deepest cleavages that separate any two sections of the human race. No two peoples have fought so many wars, or been so long divided by prolonged race hatred":

"The worst of these mutual misconceptions—and France probably misunderstands us quite as much as we misunderstand France—is that they may at any moment become the ground of mutual hatred and possible war. The King is laboring to remove that danger, and we bid him Godspeed. The sort of feeling that sprang up on both sides of the Channel during the Fashoda incident—fanned quite as much by our Nationalists as by the Nationalists of France—showed that the old hatreds were only buried a foot deep."

An Irish organ of Home Rule finds itself unable to take such a pessimistic tone. We refer to *The Freeman's Journal* (Dublin), which declares that "King Edward's success in Paris" was "even more remarkable than his success in Rome." "France had been smarting under the humiliation of Fashoda, and it was thought that the echo of that unfortunate incident would have been heard in the streets as the English King passed by. There was nothing of the kind," a fact which the Dublin paper interprets as, if not a "political victory," at any rate "a great personal one." We quote further:

"King Edward did two very courageous things during his journey. His visit to the Pope was calculated to give rise to very great opposition in ultra-Protestant circles in England, and his visit to Paris was regarded by many thinking Englishmen as a very hazardous experiment. In both cases the courage of the King was amply rewarded. The protests of the bigoted Protestants, so far as the visit to the Pope is concerned, have been simply overwhelmed by the common sense of the British people, who have come to recognize the fact that the head of the Catholic Church is at present one of the greatest influences in the world on the side of law and order and good government, and

that it makes for law and order and good government for the sovereign of the British empire to meet such a man."

Many persons "would have scarcely believed that a King of England at the present juncture would have become an object of acclamation in Paris as well as in Lisbon and Rome," remarks *The Standard* (London). "They remembered that within the last three years a wave of anti-English feeling surged across the continent of Europe and beat upon the shores of the southern as well as the northern countries. It is true that among the Latin nations the abuse to which we were subjected never quite reached the virulent heights that it attained elsewhere." *The St. James's Gazette* (London) contributes the view that "there has been no hostile thought or intent toward any Power in the world in the King's pilgrimage of peace, and if any affect to find such they may be left to chew the cud of moroseness alone." To *The Westminster Gazette* (London) the King's tour suggests the question, "Is a French alliance possible?" and it feels constrained to answer in the negative.

THE CLERICAL CRISIS IN FRANCE.

SENSATIONAL as has been the long contest between church and state in France, it now seems destined, unless European press opinion is totally misled, to enter upon a phase which the Vatican can scarcely be expected to ignore. Only a few months ago the best-informed organs in England and Germany expressed the opinion that neither the ministry in Paris nor the authorities in Rome would venture to carry the controversy to lengths involving a possible separation of church and state. This view was based upon the evident unwillingness of Premier Combes to face the logical conclusion of his own anti-clericalism. The French people, moreover, were deemed averse to shouldering individually burdens now borne for them by the state. Finally the influence of the women, so potent in a question of this sort, was thought too great to permit going to extremes. But the very papers which thus expressed themselves last winter are now predicting "a fight to a finish." The recent vote of confidence won by the Premier from an eager Chamber is accepted as almost the doom of the Concordat, that famous pact between France and the Vatican, now over a century old. Nor is the attitude of the Vatican less uncompromising. The *Politische Correspondenz* (Vienna) vouches for that. In this situation the more important papers of Paris counsel moderation to the Government. The *Temps* has even gone the length of attacking the bill for separation of church and state brought before the Chamber by M. de Pressensé, the distinguished Protestant son of a more distinguished Protestant father.

This bill has received the approval of the anti-clerical combination now in power, and Premier Combes has in plain words threatened the Vatican with its passage. As published in the *Temps*, it begins with a religious bill of rights, next nullifies the Concordat, pensions some of the present clergy, makes the police responsible for the orderly character of public worship, declares most of the cathedrals, churches, and pastoral residences state property, suppresses stipends to ministers of religion, and prescribes conditions for the consecration of cemeteries. This legislation is pronounced drastic by the *Temps*. It is deemed entirely inadequate by the anti-clerical *Lanterne* (Paris), which consents to accept it, nevertheless, as "preliminary." The clerical *Soleil* (Paris) professes to understand that the Premier hesitates to take up the bill, but feels compelled to do so by the so-called "rebellion of the bishops." An unnamed Italian ecclesiastic is quoted in the *Temps* as saying:

"Some minds not ordinarily of a pessimistic turn contemplate the possibility of a rupture between France and the Vatican. That would be a grave event. In some political quarters, too much stress is placed upon the difficulty in which the Vatican would find itself without the Concordat. It is thought that, rather than see things go to such lengths, the Pope would make every concession. That is a mistake. The French Government has transferred the contest to a field which is the more unfavorable because the Pope's position can not be shaken. . . . But prudence is not submission. Leo XIII., whatever may happen, will do his duty, his whole duty. If there must be a rupture with France, the Holy See will take its rightful stand."

On the other hand M. de Pressensé, author of the bill for separation of church and state, asserts, according to an utterance of his published in the *Temps*, that "the present legislative body will not expire, or, at any rate, another general election will not take place, without republican France signifying, in a manner to command obedience, that this great and urgent reform must be consummated." The French legislator ridicules the idea that church and state are so inextricably blended that separation is impossible, and observes:

"In the United States, which is, so to speak, the native land of separation of church and state, this system was not always in operation and it would be the gravest of errors to suppose so. What prevailed there, on the contrary, at first—except in the little State of Rhode Island—was a sort of Puritan theocracy, more especially in New England, where the state was in some measure absorbed by the church for a long period. It was only during the first and second decades of the last century that there occurred any loosening of the rigid and firmly knit bonds uniting civil society, in the South to Anglican Episcopalianism, and in the North to Calvinistic Congregationalism. It is only just to acknowledge that the multiplicity of sects, the natural harmony of the Protestant mind with the forms of liberty, and the relative weakness of Catholicism have singularly facilitated in the great republic across the sea a reform which other conditions may complicate in France. It is none the less true, however, that this enfranchisement of a great democracy affords an encouraging precedent for the accomplishment of a like divorce elsewhere."

The anti-clerical press in Paris is heaping ridicule upon the claim that France will be embarrassed if the Pope transfers the protection of Catholics in the East to Germany. The *Intransigeant* (Paris) ironically felicitates the German Government upon any privileges it may be able to extract from the Pope. The *Petite République* (Paris) understands that Emperor William, during his recent visit to the Vatican, failed to secure from the Pope any right to a protectorate over Christians in the East. The *Action* (Paris) professes to be amused at this aspect of the anti-clerical situation. It expresses dissatisfaction with the reluctance of the Premier to press the separation of church and state. This reluctance, it says, "is the great political weakness, and, let us add, the greatest moral weakness of M. Combes, otherwise so loyal, so courageous." He clings to "the old conception of a religious state holding down the church," instead of to "the new conception of the free-thinking state." And "in this M. Combes obeys not merely the oscillations of a mind half-deist and half-rationalist. He is misled by the errors of his predecessor, who is hypnotizing him":

"In fact, M. Waldeck-Rousseau [the former Premier] was not, in this great duel between dogma and reason, so much a forerunner as a laggard. M. Waldeck-Rousseau thought it a very great thing to have applied to the present conflict the methods of the former kings of France in combination with the methods of Napoleon. To-day universal suffrage and the progress of events have flowed past his law in a wave so great as to render that law a mere dike of no further use. M. Combes, in his turn, will be overwhelmed by this very wave if he knows not how to press into service all its strength, all its current."

The attitude of the peasant population of France will determine the outcome of the struggle, in the opinion of the Paris correspondent of the London *Times*. "Everything turns on the question whether the bulk of the French peasantry is ripe for so momentous a change as the separation of church and state."—*Translations made for* THE LITERARY DIGEST.

CURRENT POETRY.

Ralph Waldo Emerson, 1803-1903.

[*Born, May 25, 1803. Died, April 27, 1882.*]

In the May *Success*, Edwin Markham writes:

"In Emerson's genius we see the mystic flowering of the Puritan tree. In his word and deed are the bud and the blossom of the Puritan root—its austere self-reliance, its unbending rectitude. He calls men away from the coarse carnalities that they may find room for the free life of the spirit. He rejects the religions and cultures of other ages, and takes his stand upon the primary rectitudes as revealed in the individual soul. His gospel comes not in finished codes of ethics, in splendid architectonics of morals. He is content to illumine some arc of truth caught in his cosmical survey, trusting to the stable verities of the inquiring soul to show the full round of the circle."

We quote two characteristic poems of Emerson's, as follows:

BRAHMA.

If the red slayer think he slays,
Or if the slain think he is slain,
They know not well the subtle ways
I keep, and pass, and turn again.

Surround your business with

SYSTEM

"For the only things that succeed are those that are systematized."

That's what President H. H. Vreeland of the Metropolitan Street Car System says in the April number of SYSTEM. And it's true—absolutely.

It's the reason why YOU should read SYSTEM—the 96-page magazine. Don't waste time trying to think out systems for yourself. Don't experiment with your business. The methods that have failed with others will fail with you. Beware of them. The systems that others have found successful will help you to success. Make use of them. Learn of them in SYSTEM. There is no other way.

The man of experience gets in SYSTEM the experience of other men. To the young man beginning business, to the clerk, bookkeeper or student, SYSTEM is more than a business college.

To enumerate SYSTEM'S contributors is simply to name the foremost system experts and the strongest business men.

The general articles they write will help any man—business or professional. The special articles for one's own work no man can afford to miss.

Systems actually used in large successful factories, offices, stores, banks, publications, professions, are described in detail. And experts show how these same systems can be adapted to your business or profession—no matter what it is—how large or how small.

Far or forgot to me is near;
Shadow and sunlight are the same;
The vanished gods to me appear;
And one to me are shame and fame.

They reckon ill who leave me out;
When me they fly, I am the wings;
I am the doubter and the doubt,
And I the hymn the Brahmin sings.

The strong gods pine for my abode,
And pine in vain for sacred Seven;
But thou, meek lover of the good!
Find me, and turn thy back on heaven.

THE RHODORA:

On being asked, Whence is the flower?

In May, when sea-winds pierced our solitudes,
I found the fresh Rhodora in the woods,
Spreading its leafless blooms in a damp nook,
To please the desert and the sluggish brook.
The purple petals, fallen in the pool,
Made the black water with their beauty gay;
Here might the red-bird come his plumes to cool,
And court the flower that cheapens his array.
Rhodora! if the sages ask thee why
This charm is wasted on the earth and sky,
Tell them, dear, that if the eyes were made for seeing,
Then Beauty is its own excuse for being:
Why thou wert there, O rival of the rose!
I never thought to ask, I never knew:
But in my simple ignorance, suppose
The self-same power that brought me there brought you.

The following occur in current magazines:

EMERSON.

By RICHARD LE GALLIENNE.

O wise man from the West who traveled East,
And brought strange stars to light your western lands;
Among the urns American there stands
Your urn of alabaster not the least.

You taught us that the West is not the whole,
That the old East is needed by the West.
You taught us the long lesson of the Best,
You taught us that the body is not the soul.

—In May *Success*.

EMERSON.

By THEODOSIA GARRISON.

Through his own heart, as through a seer's clear glass,
He watched the mighty host of mankind pass,
And confident, serene, assured, his pen
Pointed the path for wildered souls of men.

What matter in what place may rest, to-day,
The crumbling, toppled temple of his clay!
The unhoused spirit, strong, alert, and free,
Still lifts the voice that thrilled humanity.

—In May *Success*.

RALPH WALDO EMERSON.

By EDNA DEAN PROCTOR.

Monadnock calls the winds from peak to sea—
The clarion north wind and the full-choired west—
And bids the streams their cliff-born melody
Blend with the airy chants above his rest;
And I wake the pines to hymn his hundred years

MR. WANAMAKER AND "THE PRUDENTIAL."

There appeared in *The New York Tribune* on April 26th the following item:

"The Prudential Insurance Company, through its Philadelphia agents, has insured L. Rodman Wanamaker, son of John Wanamaker, for $1,000,000.00. The premium on the insurance is over $[illegible] a year. This makes Mr. Wanamaker one of the most heavily insured private individuals in the world, as he carries policies for $[illegible]."

In another column will be found a fuller announcement by the Prudential Insurance Company showing that Mr. Wanamaker's selection of this Company is a striking illustration of the high esteem and the confidence felt in it by the global business men.

..SEASON 1903..

The first Imperial Limited Train of the CANADIAN PACIFIC RAILWAY will leave Montreal and Toronto on June 7th, and on each succeeding Wednesday, Friday and Sunday during the season. Its equipment will be superb and up-to-date in every respect. It is scheduled to reach Banff in 72 hours, and Vancouver, B.C., in 97 hours. This service will be in addition to the daily Pacific Express, thus giving ten through trains weekly from ocean to ocean.

The C. P. R. Rocky Mountain Hotels

have been enlarged to double their former capacity, and provision has been made to accommodate a large additional volume of travel. The Châlet at Emerald Lake is ready, and now forms a convenient base from which to visit the unrivalled waterfalls, forests and glaciers of the Yoho valley. The popular Châlet at Lake Louise has been added to and improved.

Land and Live Stock.

Just stop and think for a moment. Do you know of anything which will furnish a more sure, regular and secure investment than these two? We offer to select investors, stock in the famous Camp Stool Ranch in S. E. Wyoming. Good ranch land, good location, good water, two railroads and good stock. Paid 10 % last year. 500 cattle and 6000 sheep now on ranch. Room for 2000 cattle and 20,000 sheep. All the money to go into stocking the ranch. Wyoming Cattle and Investment Co., *Prospectus free.* 420 E. Locust St., Des Moines, Ia.

May 2.—Cuba celebrates the first anniversary of her independence.

The first British Transvaal Parliament is opened at Pretoria.

May 21.—The Croatian revolt spreads and the kingdom is on the eve of a revolution.

Venezuelan government troops capture Barquisimeto, which was occupied by revolutionists.

May 22.—The permanent treaty between Cuba and the United States, incorporating all the provisions of the Platt amendment, is signed at Havana.

May 24.—The first stage of the race of automobiles from Paris to Madrid results in twelve men being killed or injured and many machines being wrecked. The French Government forbids the continuance of the race over French territory.

Prince Henry of Prussia visits the King of Spain at Madrid.

Paul Blouet, "Max O'Rell," dies at Paris.

Domestic.

THE PRESIDENT'S TRIP.

May 18.—President Roosevelt leaves the Yosemite Valley and resumes his journey.

May 19.—The President spends the day in Nevada, speaking at Carson and Reno.

May 20.—The President passes through Northern California on his way to Oregon, making brief stops and speeches at several towns.

May 22.—President Roosevelt arrives at Tacoma, Wash.

THE POST-OFFICE SCANDALS.

May 18.—Postmaster-General Payne calls upon officials accused of irregularities by ex-Cashier Tulloch to explain the charges.

May 19.—Postmaster-General Payne says that the New York Post-Office had been investigated and the accounts found straight. Captain Henry A. Castle, auditor for the Post-Office Department, replies to Tulloch's charges affecting his office.

May 21.—Postmaster-General Payne announces that a deficiency of about $230,000 exists in the free delivery service; A. W. Machen is severly criticized.

May 23.—The replies of Auditor Castle and Controller Tracewell to the charges of postal irregularities filed by Seymour W. Tulloch are made public.

OTHER DOMESTIC NEWS.

May 18.—The labor mayor of Bridgeport is induced by citizens to promise to keep his hands off, and let the police handle strike riots in the future.

May 19.—The State Department announces that the United States will insist on trade privileges in Manchuria equal to those of other nations, including Russia.

The United States Government starts an inquiry into the importation of wine alleged to be adulterated.

May 20.—Celebration of the centennial of Ohio's admission to the Union begins at Chillicothe.

May 21.—A claim for $2,000,000, in behalf of the heirs of Charles Brown, an American, whose lands were taken by the Boers before the war in South Africa broke out, is presented to Great Britain by the State Department.

The *Reliance* beats *Columbia* in the first of the trial races.

A Fair Rate for Money Invested is 5%

RELIABILITY is rightly the first consideration, but ask also for fair returns. This Company's funds are secured by real estate worth 60 per cent. more than the amounts loaned. Its patrons receive five per cent., and its strength increases year by year.

Write for the facts in detail.

Five per cent. per annum paid quarterly by check. Withdrawals at pleasure without loss of dividends. Under supervision of New York Banking Department.

THE HONOR-ROLL.

All the Tourney-problems were solved by: M. W. H., University of Virginia; the Rev. I. W. B., Bethlehem, Pa.; M. Marble, Worcester, Mass.; the Rev. G. Dobbs, New Orleans; F. S. Ferguson, Birmingham, Ala.; H. W. Berry, Boston; A. C. White, New York City; K. Kentino, Newark, N. J.; J. C. J. Wainwright, Somerville, Mass.; the Hon. Tom M. Taylor, Franklin, Tex.; "Malvern," Melrose, Mass.; J. J. Burke, Philadelphia; A. G. Massmann, Newark, N. J.

In addition, since award was made, 732 and 734 were solved by R. H. Renshaw, University of Virginia; A Knight, Tyler, Tex.; G. Patterson, Winnipeg, Can.; D. H. Wiltsie, Jamestown, N. Y.; O. C. Pitkin, Syracuse, N. Y.; W. T. St., Auburn, Grosse-pointe Farms, Mich.; "Twenty-three," Philadelphia.

732: Dr. A. F. Fuchs, Loyal, Wis.; Dr. H. W. Fannin, Hackett, Ark.; "Uncle Jiles," Franklin, Ky.; N. Kahan, Holyoke, Mass.

Additional comments (732): "Attractive as a beautiful queen"—A. K.; "Great"—"Twenty-three"; "Excellent"—Dr. H. W. F.; "The best 2-er I ever tackled. Worked at it three days"—"Uncle Jiles"; "A great problem"—N. K.

734: "An immortal Frenchman"—A. K.; "Splendid variations"—"Twenty-three."

Concerning 732, the two "tries" that caught so many solvers are Q—R 4 and Kt—R5. The first threatens mate by Q—Q 4, but this is stopped in a superb manner by 1 ——— . Now, 2 Q x Q is Q Q R 5

not mate, for 2 ——— . If 2 ——— . The P Q 4 ch

K—Q 3 Q x P

answer to the second "try" is none the less beautiful and masterful: 1 ——— ; if 1 ——— .

Kt R 5 P x Kt

Q—B 5, mate.

2 ——— and "any other" seems to bring about a mate bp 2 Kt—B 4. But this is stopped by Q—R 5

1 ——— Now the Kt can not move; mate can not be given by Q or P. The answers to these "tries" are, in some respects, the most wonderful features of this problem. The key R—R 5 is simply to allow the B to go to R 6.

In addition to those reported, T. H. M., Nashville, Tenn., got 832, and M. Almy, Chicago, 831.

Manhattan Beats Havana.

The Manhattan and Havana Chess-clubs recently played a game by telegraph. Manhattan was represented by S. Lipschutz, E. Hymes, E. Delmar, J. Finn, O. Roething, and H. M. Phillips. The Havana team was composed of J. A. Blanco, R. Capablanco, E. Corzo, J. Corzo, E. Delmonte, A. Fiol, and Marques Sterling.

An Alarming Increase of Dangerous and Trashy Literature.

It is noticeable that never before were so many boys, shop girls, and clerks seen eagerly devouring the cheap and sentimental yellow-covered literature, which, if it is not positively dangerous and corrupting in its influence, is in almost every instance certainly trash. The problem of checking this omnivorous consumption of harmful books is a serious one. The best antidote is not to prohibit, but to counteract evil with good by actually placing in the hands of the misguided readers quantities of wholesome literature. We have made it possible for LITERARY DIGEST readers to carry out this good work, and we offer at practically the cost of manufacture a long list of standard books—any eight, only $1.00; eighteen, $2.00; thirty, $3.00. See the advertisement "Many Books for Little Money," on another page of this number of THE LITERARY DIGEST.—Funk & Wagnalls Company, New York.

every man is benefited by wearing an O-P-C suspensory

If every man knew of the value, the help, the benefits, to be derived by wearing an O-P-C suspensory, there would be very few men without them.

An O-P-C suspensory will help every man as much as any one thing can. Not because it will develop his brain or his muscle, but because it will do away with the one strain which every man experiences—a little strain at first, but when multiplied by the number of seconds in a day, means a big loss of nerve energy.

Ask any vigorous, right-minded man, who wears an O-P-C, what he thinks of it. His answer will be a revelation to you.

Your druggist has O-P-C suspensories and can give you a copy of our booklet, "The Struggle for Supremacy." It tells why, under the rush and grind of modern life, every healthy, normal man should wear an O-P-C suspensory.

If your druggist does not have our book send us his name for a free copy.

No. 2 O-P-C lisle, $1.00.
No. 3 O-P-C silk, $1.50.

Every druggist is authorized to refund the money if purchaser is not entirely satisfied. Ask for O-P-C and "Get the Right Brand."

VOL. XXVI., NO. 23 NEW YORK, JUNE 6, 1903. WHOLE NUMBER, 685

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given**.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

AMERICAN VIEWS OF MR. CHAMBERLAIN'S TARIFF PROPOSALS.

"ENGLAND for sixty years has been free-trade in tariff and policy; Secretary Chamberlain proposes to make it a protection country." This, in plain language, is what appears to the Philadelphia *Press* as the real significance of the tariff proposals made by Mr. Chamberlain in a speech at Birmingham on May 15, reaffirmed by him in the House of Commons on May 28, and practically indorsed, upon the second occasion, by the British Premier. The New York *Mail and Express* expresses the opinion that the position assumed by the Colonial Secretary "may mean more to Great Britain than any step since the repeal of the corn laws, and perhaps work more immediate harm to the United States than all the hostile European tariffs of a generation."

The extraordinary political situation in England which evokes this comment is set forth by the New York *Commercial Advertiser* as follows:

"For considerably more than half a century, both Conservatives and Liberals have in practise agreed that protection was the grossest of economic fallacies. There have always been a number of fine old Tory squires whose acres have dwindled in the value of their products, who loved to look back to the golden days before Sir Robert Peel 'betrayed' his followers and opened wide the English markets to foreign grain. And there have been those who, like Lord Randolph Churchill, sought to make protection palatable by giving it the specious name of fair trade. But, on the whole, since 1850 no responsible leader has heretofore dared to advocate for England a return to the old-time policy of taxing breadstuffs and thereby raising the cost of living for the immense artisan population of Great Britain. . . . . .

"Last week at Birmingham, which next to Manchester has been the very heart and home of the free-trade propaganda, Mr. Chamberlain, a life-long advocate of Cobden's theories, startled the whole world by proclaiming his belief that the British fiscal system should be substantially revolutionized, and that a tariff should be enacted which would discriminate in favor of the British colonies and against all countries which taxed colonial products. Only thus, he boldly said, could the different members of the empire be firmly held together by the strong ties of a definite material interest. Only thus could the imperial fiction be converted into a solid and enduring imperial fact.

"The unexpectedness of such a speech as this from Mr. Chamberlain was as remarkable as its audacity. It had been supposed that he had given up political ambition for the future. He had himself expressly stated that he regarded his mission to South Africa as the climax of his political career. He took no part in the debate upon the Irish Land Bill. It was believed that his health had failed and that he was a man weary of public life and willing to enter upon a period of rest. That he should at such a moment spring suddenly to the front, and with all his old-time masterful aggressiveness force a new and almost revolutionary issue upon the nation, was startling and dramatic in the extreme."

Mr. Chamberlain pleads not merely for preferential trade within the British empire; he asks, in addition, for a "mandate" to tax foodstuffs, and for power to engage in a tariff war with Germany on Canada's account and to fight the American trusts. The seriousness with which the United States is impelled to regard his proposals is thus indicated by the Philadelphia *Public Ledger*:

"In a general way it is known that a very large percentage of our exchange of commodities goes on with Great Britain; perhaps few are prepared for the statement that during the last fiscal year, our exports to all the world being valued at $1,355,481,861, the part that went to the United Kingdom amounted to $542,001,128—40 per cent. of the total. Nor was this year phenomenal; for the year previous, ending June 30, 1901, the total exports being $1,460,000,000, the share of the United Kingdom was $624,000,000—nearly 43 per cent. of the total. The largest items in which England is our heaviest buyer are grain, for which in 1901 she paid us about $175,000,000; cotton, buying of us that year to the value of $160,000,000; hams and bacon, $65,000,000; beef, $35,000,000; cattle, $35,000,000; tobacco, $20,000,000; petroleum, $13,000,000; and machinery, $12,500,000.

"The last-named amount is so inconsequential in comparison that it destroys the theory that the 'industrial invasion' of her territory could move England to the proposed action. The prime consideration in Mr. Chamberlain's argument is undoubtedly the fostering of agriculture in Canada, enforced as that cause has been by persistent Canadian appeals and German attacks upon the Dominion's commerce.

"But what part of England's food could Canada furnish? The Board of Trade returns compiled the British imports of Canadian wheat, wheat flour, and maize; in 1901 these amounted to $16,500,000. The same authority puts the British imports of wheat, flour, and maize from the United States for that year at $140,600,000. What part of the British appetite could be satisfied by Canada? Consider all available British grain-growing areas and the possibility of their development; how could England feed herself without importing from non-British, and chiefly American, grain-growing lands? No matter what the tariff imposed, all American grain that can be spared will continue to be needed in England. So it will be also with beef, cattle, cotton,

tobacco, and the rest. The Englishman will have to pay a higher price for them—that is all. Were the tariff policy to be persisted in, in the course of years the produce of various parts of the empire might be so largely increased as to destroy the English market for the American farmer; but it is fairly inconceivable that Englishmen will submit to the great hardships that they would inevitably have to endure until that time could come."

The New York *Journal of Commerce* thinks it most unlikely that the people of Great Britain will "enter upon the perilous experiment of reversing the policy that has created their world-wide commerce and their national wealth and power"; while the Boston *Herald* remarks: "This is the biggest undertaking to thwart trade and coerce nature in one direction while it attempts to cosset nature—if we may so phrase it—in another yet made. It would have been difficult fifty years ago; it is simply wild now." The New York *Evening Post* comments:

"The financial and fiscal bearings of Mr. Chamberlain's grandiose but vague schemes will be much discussed. We can only allude to them now. In general, the argument against them is, first, that they are inconsistent with each other. He proposes, seemingly, to protect English manufacturers, yet would do it by making their cost of production higher by means of taxes on raw materials and on food. In the second place, statistics show that England's stake in the trade with foreign nations is about three times what it is in colonial trade. In 1902 she imported from foreign countries goods to the value of $2,105,000,000; from the colonies, only $530,000,000. The exports were, respectively, $870,000,000 and $545,000,000. What shall it profit England to increase her colonial trade if she hazards the other? Mr. Chamberlain is a very adroit man and a most skilful politician; but we do not believe that he can persuade hard-headed Englishmen to embark on these uncharted seas. They will listen to him, they will admire his restless energy and his fertile resource, but they will be apt to say, in the end, 'Let us stick to our well-tried policy of free markets.'"

NEW YORK CITY'S QUARTER-MILLENNIAL.

"THE largest American city, the largest Irish city, the largest Jewish city, one of the largest German cities, and the most cosmopolitan city in the world," as the New York *Tribune* describes it, New York presents, upon its two hundred and fiftieth anniversary as a municipality, a spectacle so striking as to elicit comment all over the country. The small population of two hundred and fifty years ago, 1,120 in number, equaling less than half the number of immigrants who now land at New York every day, the rivalry of Philadelphia, Boston, Baltimore, and Charleston up to the time when the Erie Canal gave New York its first great impetus, and its growth, by leaps and bounds, since then, form an inspiring theme, and not a few writers make free to predict that within fifty years New York will lead the cities of the world in population. In 1753, the first centennial anniversary, the population was only 25,000. By 1800 the population within the present area of the city was nearly 80,000, by 1820 it was 150,000, by 1840 it was 390,000, and by 1860 it was 1,175,000. In the next twenty years it leaped to 1,900,000, and between 1880 and 1900 it advanced to 3,500,000. To-day the population is reckoned at 3,800,000, twice what it was in 1880. William C. Hunt, chief statistician for population in the twelfth census, who gives the above figures in an article in the New York *World*, predicts that New York City will have a population of 6,000,000 in 1920 and 10,000,000 in 1940.

But it is not the size of the city alone that commands attention. As Mayor Low said in his address at the anniversary exercises:

"In a city where the old gives place so rapidly to the new; in a city where the population grows more rapidly from the outside than from within; in a city whose especial function it often seems to be, so large is the scale of immigration, to welcome the emigrant from abroad and to make him into an American citizen, it is not always easy to realize how very deep down in to the soil of American history run the roots of the life that flourishes here. And yet there is great inspiration in the city's long and interesting past. Here great events have happened; here great deeds have been done; here great men have lived and labored; and here the fascinating story of the country's material growth and development can be read in epitome. Founded by a commercial company, the city of New York has been singularly true to its origin; and nowhere in the world has it been more splendidly illustrated that commerce is the handmaid of civilization. No city of recorded time has more grandly acted up to the old teaching, 'Freely ye have received, freely give.' The needy and stricken of every land have heard the name of New York, and call it blessed.

"To-day we wish to remind ourselves that even the life of a great city does not consist in the multitude of the things that it possesseth; that its true life, its higher life, depends upon the capacity of its people for self-sacrifice, and upon their willingness to serve one another and mankind. Because the history of the city of New York, checkered tho it be, as is the story of all human life, is still so full of everything that is inspiring and of good report, we love to turn to the story of our city's part in the development of this continent and of the United States. For, after all, our especial pride is that we are an American city; and our chief ambition to show how the greatest American city can greatly serve the world."

A picturesque contrast between the New Amsterdam of two hundred and fifty years ago and the New York of to-day may be made by quoting descriptions of the two as presented in the Brooklyn *Eagle* and the New York *Sun*. *The Eagle* says of the New Amsterdam times:

"In 1653 New Amsterdam was a village of a thousand people, with a little fort, a windmill, and a gallows as its conspicuous appurtenances. The hamlet of Breukelyn was reached from this ruffling metropolis by a sailboat, and if the breeze died out the tide was apt to land the passengers at the Wallabout or Gowanus. Far away among the groves of Madison Square, the misty reaches of Chelsea, and the *terra incognita* of Inwood and Fort Washington the red man was learning the goose-step in the march of progress, attiring himself in the cast-off petticoat breeches of the settlers for the purpose. Occasionally in later times he made forays upon New Amsterdam, but was checked by the stone wall at Wall Street and its guard of two bottle-nosed citizens with musketoons and pikes.

"Simple days, those. People worked with their hands. There was no captain of industry except the man who raised more kraut and potatoes than his neighbors. For amusements there were bowls, played on Bowling Green in a tranquil fashion. So-

WHEN NEW YORK WAS NEW AMSTERDAM, 1679. JUNCTION OF BROADWAY AND THE BOWERY (CHATHAM SQUARE), 1831.

VIEW OF PRESENT-DAY NEW YORK.

ciety sat on the front steps and smoked long pipes in the calm of the evening, and watched the fisherman trying to catch his supper at the Battery. No restaurants, no theaters, no stock exchange—but they had the stocks, and the occupant thereof was willing to exchange them for even the pillory, especially when little Klaas and Hendrick tickled his feet with sticks. There was no asphalt, for there were no bicycles and automobiles. When peppery Stuyvesant walked in his Bouwery to cool his mind, he never winced at the thought of six-car trains racketing through the atmosphere above his head. The illumination was candles, for even Standard Oil was not. And the honest burghers assumed no airs, for they did not know that the knickerbakkers, the humblest folk among them, were the fathers of the most resplendent Four Hundred that ever lorded it through the society columns. For there weren't any society columns."

Now for the New York of to-day, as *The Sun* sees it:

"Here is the Babylon and Bagdad of the West, the capital of pleasure, the chief city of the pride of life, the magic magnetic island that draws all the talents and fascinates all the adventurers. The pioneers of fortune come here from everywhere. All the roads to wealth lead here. The makers and the enjoyers are here. Here are the mighty armies of strangers and sojourners, whose motto is: 'Money is good to burn, and we are good to burn it.' These miles and miles of costly homes, hotels, apartments, these other miles of carriages and coachmen, these shops rich with the spoils of the world—where does all the money come from? So everybody asks and nobody but the sociologist cares much. It is good to be rich in this town, but where else outside of Italy is it so good to be poor?

"All countries, all religions, all contrasts, all conditions, are visible in this able-bodied microcosm and mirror of the world. The perpetual free show is in the streets. Light, change, the procession of strange faces, the panorama of crowds, are ever present, a continual invitation to curiosity. The infectious movement of the multitude, the influence and spirit of crowds are in themselves a stimulation and nervous excitement. The hubbub, the frequent dangers, the constant rush, may be deplored by the countryman or the commuter, but they are an unconscious satisfaction to the New Yorker. He grumbles at them, but he would miss them. He feels that he is in the race and not lagging behind."

More than one editor finds gratification in the thought that the American metropolis is governed by a reform administration. "Imagine our feelings if we had been called upon to unfurl bunting and illuminate our houses because, after two hundred and fifty years of life, we were living under the benevolent despotism of Richard Croker!" exclaims the New York *Commercial Advertiser;* and the Philadelphia *Press* says:

"The best thing in the celebration is New York's success in a reform city government. It had two years ago the worst and most rotten municipal administration in the country. This is true no longer. The vast corrupt vote which bred corruption was defeated in November, 1901. The rascals were turned out. The police has been cleansed of blackmailers. Devery himself is on the sidewalk. 'Al' Adams, the policy king, is in Sing Sing. Canfield, the city's boss gambler, awaits trial. The Charities Department has been reformed. The Board of Health has been made efficient. Corrupt, scandalous leases have been routed out of the Dock Department. The streets are cleaned as never before. Public works are honest and efficient. The schools have been improved. Teachers' salaries have been raised. Honesty is to the front. The Tammany machine has for the present lost all its power. The death-rate is lower. Systematic levies on all licenses have been stopped. City promotions are by merit. The civil-service reform law is enforced.

"A civic triumph like this for sound, honest administration closes two hundred and fifty years with glory. It is coming elsewhere. Corruption and plunder based on the indifference of the intelligent and the bought votes of the ignorant can not last. Croker and Tammany looked secure in power in New York from 1890 to 1900. Six months ago their return to power looked not only possible but probable. It does no longer. The chances of fusion strength grow. At the two hundred and fiftieth anniversary of its founding New York not only leads the land in wealth and population, it leads all our cities in municipal reform, which is more"

What of the future? Says the Baltimore *American:*

"Ere another century shall have gone to join the eternity of time New York will be the capital of the world in all the word capital implies. What she has accomplished in two hundred and fifty years—and in considering her accomplishments we must remember that the greatest of them date back no farther than the last half-century—is but her beginning. She is just rounding into that form which will enable her to bring to the Western Hemisphere and center about her busy thoroughfares the reins by which all the tangible and intangible affairs of men are managed, and once she holds those reins she will dictate the fortunes of the globe, commanding in all those matters which make for the temporal, spiritual, and intellectual enrichment of mankind. New York is to-day, at her two hundred and fiftieth anniversary, upon the threshold of that era of greater power and influence. Because of her achievements the nation is proud of her; for her greater development it looks with keen interest, rejoicing that a people so young have had it in them to work wonders at sight of which all other peoples stand aghast."

THOSE Italians in New York who are striking for $2 for eight hours' work evidently are determined to show that there is no excuse for making immigration laws to exclude them on the theory that they tend to lower the standard of labor.—*The Buffalo Express.*

ARRESTS FOR POSTAL BRIBERY.

WHEN rumors of serious irregularities in the conduct of the Post-Office Department began to be noised abroad about a month ago, Postmaster-General Payne took the attitude that the charges made were of slight importance. He challenged his accusers to "make good their hot air," and expressed the opinion that the pending investigation "amounted to nothing." In view of later developments, these flippant remarks are regarded as strangely inappropriate. No less than five arrests have been made during the past few days, and, according to press despatches, "most sensational disclosures are promised." An assistant attorney of the Post-Office Department, Daniel A. Miller, is charged with having taken a $5,000 bribe for procuring a decision favorable to the interests of a St. Louis "get-rich-quick" concern. He was arrested on May 25, and with him an Indiana lawyer, Joseph M. Johns, who is implicated in the charge. A second prominent official, A. W. Machen, superintendent of the Free Delivery Division, is also accused of accepting bribes, to the amount of $22,000, from Diller B. Groff and Samuel H. Groff, manufacturers of patent fasteners used on letter-boxes. All three men have been arrested, and their case is to be tried early in June.

The Philadelphia *Press*, the organ of ex-Postmaster-General Charles Emory Smith, comments on these arrests as follows:

"The arrest of Mr. Machen on the charge of receiving a commission on a postal contract is the most sensational development of the investigation which has been proceeding for many weeks in the Post-Office Department.

"This is a most serious accusation and, if well founded, justifies and requires the step which has been taken. Mr. Machen has been superintendent of the Free Delivery system since President Cleveland's administration. He has been an able and efficient officer, and has been largely trusted, with full confidence in his fidelity. If he has been unworthy of that confidence and has been faithless to his trust, his condemnation and punishment justly follow. He denies the charge and is entitled to the suspension of judgment to which every accused person is entitled until trial has determined the question of guilt. But Postmaster-General Payne and Assistant Bristow are cool and careful men, and have not proceeded to this action without evidence which they regard as conclusive.

"The arrest of Miller in the assistant attorney-general's office on the charge of accepting a bribe to procure a decision favorable to a company doing a fraudulent business through the mails may lead to further important developments in that direction. Miller has been in the department only since last summer. For some months there have been suspicions of crookedness in that office, and it is fortunate that it has been traced out. The wrong there involves no reflection on the Postmaster-General's administration, since the questions concerned are of a legal character and the conduct of the office is essentially independent.

"Full confidence may be reposed in the investigation which is going on. General Bristow is an honest, thorough, and fearless officer who will go to the bottom of things. Postmaster-General Payne is standing right behind him with full support. When the report shall come to be presented it may be unhesitatingly accepted."

The Philadelphia *Record* (Ind. Dem.) is far from ready to accept this rather complacent view of the situation, and its attitude toward Mr. Payne is severely critical:

"The Postmaster-General is the ideal politician. To him the chief object of the Government is to provide occasion for the existence of the Republican party, and the end of all politics is not good government, but party success. When he was proposed as a member of the McKinley Cabinet the leading Republican newspaper of his State (the Milwaukee *Sentinel*) protested on the ground that he was, in politics, wholly unscrupulous. That the Civil Service reformer now at the head of the Government should have appointed him to the office of Postmaster-General has been explained as due to the President's eagerness for the nomination next year and his real or fancied need of such practical party workers as Payne and Clarkson. No one, however, has ever questioned the honesty of Mr. Payne in his business affairs, and there is no doubt that an actual instance of money corruption in his department must lead him to a relentless investigation and prosecution of the guilty. Only this development could prevent him from attempting to make light of the scandal of collusion between officials and contractors, the appointment of unfit persons to places because of their party work, the carrying of the relatives of politicians on the pay-rolls without exacting service from them, and the like. The scandal has now reached a stage where it must hurt the party more to attempt to blind the people than to make a full revelation and prosecute all who are concerned in it."

The New York *Evening Post* (Ind.) says:

"We think it is time that a vigorous word were heard from President Roosevelt. Even the stolid Grant was moved by the frauds of his day to exclaim, 'Let no guilty man escape.' Are we not en-

titled to as much from President Roosevelt? Everybody knows, of course, that he loathes such malfeasance in office, and would see it given the limit of the law; but it would be a great help, and a public reassurance, if he would say so openly in some phrase which would 'fetch away both skin and flesh' from rogues in office, and 'penetrate the hide of a rhinoceros'—or even of a Postmaster-General."

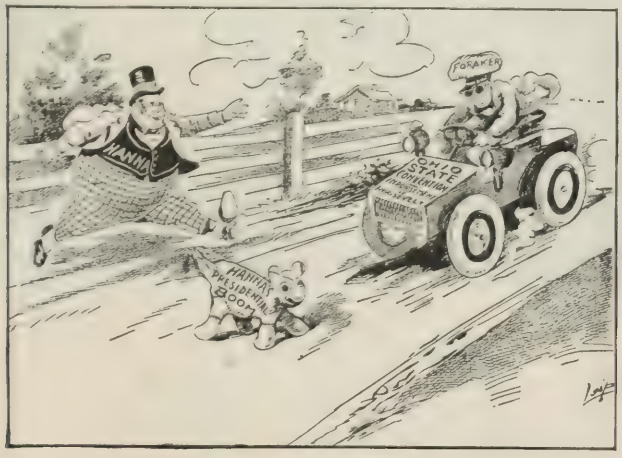
THE HANNA-ROOSEVELT EPISODE.

WHAT is treated by the press as the most picturesque and significant incident of the year in Republican politics occurred last week, when the President made a remarkably frank announcement of his desire for a renomination, and Senator Mark Hanna made a vigorous and spectacular "leap for the band-wagon," as some of the papers call it. The affair began some time ago, with a controversy between Senators Hanna and Foraker, of Ohio, over the proposed declaration by the Ohio Republican convention in favor of a renomination for President Roosevelt. Senator Hanna opposed such a declaration on the ground that it was customary for the Ohio Republicans to keep their indorsement for some "favorite son." The Senator did not say whether he had any particular "favorite son" in mind, and denied that he was himself a candidate, but there has been a widespread belief that a Hanna "boom" for the Presidency has long been in preparation. The Senator's attitude was interpreted as opposition to President Roosevelt's candidacy, at any rate. When the matter was brought to the President's attention, he made this statement, which is considered strikingly "Rooseveltian":

"I have not asked any man for his support. I have had nothing whatever to do with raising the issue as to my indorsement. Sooner or later it was bound to arise, and, inasmuch as it has now arisen, of course those who favor my administration and nomination will indorse them, and those who do not will oppose them."

That was on Monday. On Tuesday Senator Hanna gave out the following:

"I am in receipt of a telegram from President Roosevelt which indicates to me his desire to have the indorsement of the Ohio Republican State convention of his administration and candidacy. In view of this I shall not oppose such action by the convention. I have telegraphed the President to that effect."



"DON'T KILL MY DOG!"

"ACROSS THE CONTINENT CAME THE OX-DRAWN, WHITE-TOPPED WAGONS BEARING THE PIONEERS'. . . WHO ENTERED INTO THIS COUNTRY TO POSSESS IT."—PRESIDENT ROOSEVELT'S SPEECH AT PORTLAND, ORE.
—*The Detroit Free Press.*

Some think that the Senator showed a little malice in making public the fact that the President had sent him such a message, but the main fact that the newspapers find in all this is the disappearance of the Hanna boom and the assured renomination of Mr. Roosevelt. Thus the New York *Commercial Advertiser*, a strongly Republican paper, says:

"Senator Hanna, with really marvelous agility, considering his years and his rheumatic afflictions, stepped to his seat on the Roosevelt band-wagon yesterday, side by side with Senator Foraker, and immediately behind Senators Platt and Quay, remarking as he settled into his place that he was uncommonly glad to join the company, and should have done so before had he known that the band was about to begin to play and the procession to move.

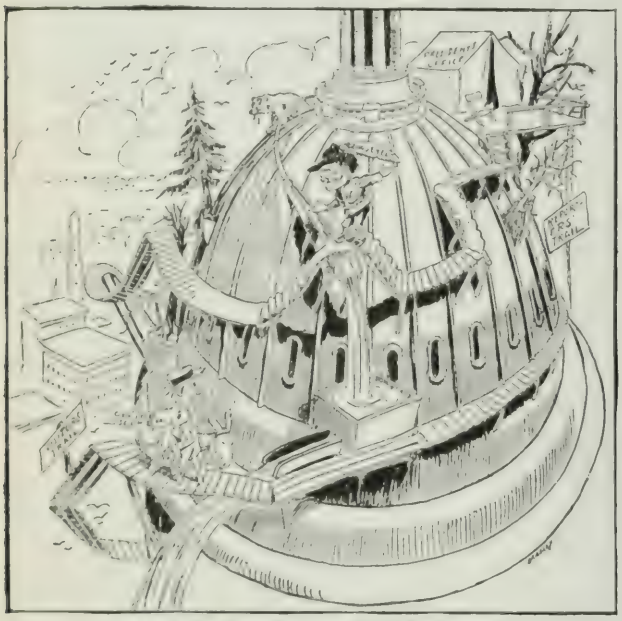
"The seats on the band-wagon are now all filled, and the company is a cheerful and smiling one as the wheels begin to go round. There are several persons who would like to be passengers scurrying for places on the tail-board, and there is likely to be a good deal of hustling presently for eligible points from which to hitch on. Behind shrubbery and lying in gulleys along the line of march there are discernible a few sour-visaged persons with mud balls and squirt-guns in their hands who are threatening various kinds of disaster to the wagon and are saying to one another: 'You just wait! We'll upset the thing yet!' But they have little faith in their own predictions, and will be extremely careful about getting themselves in front of the vehicle."

More satirical is the comment of the New York *Evening Post* (Ind.), which remarks:

"There is no lightning-change artist like your political boss. Senator Hanna whipped about yesterday with such startling suddenness that even his most trusted lieutenants were caught napping. Poor old Grosvenor was still mumbling that he was for Roosevelt, of course, but that it was bad politics to urge his renomination at this time, since it would only lead to a 'factional quarrel' in the convention. But the astute Hanna perceived the rumblings of the coming cyclone and fled incontinently to the

cellar. He who on Monday was going to take the floor and fight the resolution calling for President Roosevelt's renomination, on Tuesday was meekly saying, 'I shall not oppose indorsement, and I have telegraphed the President to that effect.' By the time the convention meets, Senator Hanna will be posing as the original advocate of Roosevelt's renomination—just as he was of his nomination for the Vice-Presidency in 1900, after finding that he could not possibly beat him. It is the true boss strategy. He must ever be strong upon the stronger side. His most crushing defeats he has to explain as victories—after the manner of John Phœnix's account of his castigation of a rival California editor: 'We inserted our nose firmly between his teeth, and held his knees rigidly against our abdomen, as we lay on our back upon the floor,' etc.

"As for the President himself, he has again acted successfully upon his favorite motto, '*toujours de l'audace.*' He smashes political precedents as if they were so many eggshells. Other Presidents have sought a renomination, but none of them ever came out so boldly a year in advance of the national convention and said openly, 'He that is not with me is against me.' No smug and secret placing himself 'in the hands of his friends'; no subterranean campaigning. Mr. Roosevelt is his own campaign manager, and with astonishing directness and self-confidence, seeing what he wants, asks for it. Needless to say, he could not do it without feeling the rank and file of the party at his back. That is the thing which makes his startling tactics so disconcerting to bosses like Hanna. They know how to keep their fingers upon the very pulse of the political machine, but here is a President who has his hand upon the pulse of the people. Their hearts he steals away, and then nonchalantly invites the bosses to try conclusions with him if they dare. Senator Hanna has now a perfectly good excuse for urging the Ohio State convention to indorse President Roosevelt's renomination. He had said that such action was never taken except in the case of a 'favorite son.' Well, Mr. Roosevelt has shown that he is Ohio's favorite son."



PROBABLE ALTERATIONS AT THE CAPITOL.
Why shouldn't the President have a "Sierran solitude" nearer home?
—*The Chicago News.*

The President's renomination, adds the same paper, in more serious vein, is "as certain as any future event can be. The disappearance of prosperity might defeat his reëlection, but not even that could now prevent his renomination."

Seventeen States, with a total of 428 delegates, not counting Ohio, have declared for Mr. Roosevelt's renomination, and the chairmen of the Republican state committees of California Florida, Kentucky, Maine, Montana, Louisiana, Tennessee, and Texas, with 152 delegates, have telegraphed the New York *World* that their delegations will be solidly for the President. These States will give Mr. Roosevelt the nomination, with 87 votes to spare. The States that have already indorsed the President's renomination appear in the following table:

Alabama	22	Missouri	34
Colorado	10	Montana	6
Connecticut	14	New Hampshire	8
Delaware	6	New York	78
Iowa	26	Pennsylvania	68
Kansas	20	Texas	30
Massachusetts	32	Utah	6
Michigan	28	Washington	10
Minnesota	22		
		Total	428

CHOOSING THE CUP DEFENDER.

DURING the recent trial races of *Shamrock III.* on the other side of the Atlantic, a number of our newspapers felt justified in predicting that the *Columbia*, which has twice defended the cup successfully, could also beat the new British yacht. Now, however, it has been proved to the satisfaction of a good many that we have two boats, the *Reliance* and the *Constitution*, that are even better than the *Columbia*. The magnificent performances of the *Constitution*, which was discarded in favor of the *Columbia* in the last contest, have "once more sustained the suspicion," remarks the New York *World*, "that we may after all have beaten *Shamrock II.* with our second-best boat." The *Reliance*, however, seems to be distinctly the best boat of the three, and on May 30 easily outdistanced both of its rivals. Says the New York *Times*:

"It may almost be said, in the language of Dogberry, to be 'proved already' that *Reliance* is a better boat than *Columbia*, 'and it will go near to be thought so shortly.' Seven minutes in twenty-five miles, which was the new boat's margin yesterday, is a more plausible figure, as representing the respective comparative merits of the craft, than the quarter of an hour by which she beat the old one on two previous occasions. Upon the first beating we took occasion to point out that half of a quarter of an hour in thirty miles would be quite enough to justify the building of *Reliance* and to justify a serene confidence in our keeping of the cup.

"SHAMROCK III." OFF WEYMOUTH.
Courtesy of the New York *American*.

"A little better than that is yesterday's record. Luck is by its

nature an inconstant factor, and it does not appear that *Columbia* had the worst of it yesterday. In fact, she ought to have gained while *Constitution* and *Reliance* were enjoying a lulling match which took them off the course, while she was going over it about her business. 'Handling' is a constant factor, and it seems to be agreed that *Reliance* has the better of that. But these uniform defeats can not be reasonably explained upon any other supposition than that the winner is the better boat. The interest of the last two races has lain between *Constitution* and *Reliance*, up to the time that the former was unluckily disabled in yesterday's race. And between them the interest of the remaining trial races is likely to lie."

THE PARIS-MADRID AUTOMOBILE RACE.

THE automobilists who started out to lower the speed records in the race from Paris to Madrid, a distance of 821.5 miles, not only succeeded in their intentions, according to the Philadelphia *Ledger*, but also established a record for mortality. Never before, says that paper, had automobiles run so fast or killed so many people in a given time. Seven killed and eight injured is the result of a series of accidents caused by uncontrollable machines, collisions, excessive speeds, and recklessness on the part of both operators and spectators. It is estimated that two million persons witnessed the first stage of the race and that the average speed outside of towns was 62 miles an hour. One car is said to have attained a speed of 88 miles an hour at La Bourdinère. The race began at 3.30 on the morning of May 24, when 216 of the 300 entries started from Versailles. Soon after the contestants were sent off, at intervals of one minute, reports of many serious accidents along the route were received. At Mont Guyon Mr. Stead ran his car into the machine ahead of him in trying to pass it, overturning both automobiles and seriously injuring himself and his machinist. Near Angoulême M. Tourand ran into two soldiers and a child, killing all three. The machinist and M. Tourand were seriously injured. At Libournet Mr. Barrow overturned his car in trying to avoid a dog, and his chauffeur was killed. Mr. Barrow is in a hopeless condition. Marcel Renault, in passing a competitor, near Couhe-Verac, ran into a tree. Both Renault and his machinist were badly hurt, and Renault died three days after. At Ablis a car ran into a woman crossing the road and killed her instantly. Porter's car was overturned and caught fire. Porter was badly burned and his companion, Nixon, was killed. These are the more important of the casualties which caused Premier Combes to issue an order prohibiting the continuance of the race on French territory. At that time the leaders in the race were just beyond Bordeaux, about 350 miles southwest of Paris. Following the action of M. Combes, the Spanish Government also prohibited the continuance of the race from Bordeaux to Madrid. The race was stopped and most of the contestants dispersed at Bordeaux. The prizes offered for the race will be returned to the donors.

AMERICA'S NEWEST CUP YACHT.
The "Reliance" sailing on the wind off New Rochelle.

The newspapers that comment on the incident bring out the necessity of the enactment of stringent laws regulating the running of automobiles in rural as well as urban districts, and they argue that such contests should be held on special tracks. For instance, the New York *Tribune* says:

"The effect of this disgraceful episode will be to array public sentiment on both sides of the Atlantic more strongly than ever against any approach whatever to racing on common highways. Speed competitions should be permitted only on special racetracks or speedways, from which all other types of vehicle are rigidly excluded, and to which even pedestrians should not be admitted. Contests between automobiles should be conducted only under substantially the same conditions as between horses. The restrictions should be even severer, because the former involve the public in far greater peril than the latter. It is a nice moral question how far the law should interpose to stop suicide. Perhaps the opinion is heartless, but it sometimes seems as if society would be the gainer if the propensity to self-destruction were encouraged. However that may be, tho, the people who ride at reckless speeds in horseless carriages are not the only sufferers. The law steps in to prohibit that form of sport which sacrifices the life of pigeons. Why should it not more scrupulously protect human being from so hazardous an amusement as automobile racing?"

At the time of the Paris-Berlin automobile race in July, 1901, when a child was killed by one of the chauffeurs, a crusade was begun in France against these exhibitions. Prime Minister Waldeck-Rousseau in that year announced that no more races would be allowed on public highways, but two races had been authorized since then. It is believed that this last race has given a heavy blow to motor racing in France, for M. Combes, French Premier and Minister of the Interior, has announced that no more will be held. He declared that the Government could not be held responsible for the accidents, which were due to the frightful speeds, defects in the route, and the imprudence of the racers. He added that if the Automobile Club wanted speed tests, it should carry them out on its own track. M. Combes

warned the Chamber of Deputies against too severe restriction on automobiling, which might ruin a very prosperous French industry. But W. K. Vanderbilt, Jr., who with several other prominent automobilists abandoned the race because of accidents to their machines, says that the organization of the race was pitiably defective. All along the route the spectators were quite close to the racers and at some places there was hardly anybody to keep them back. Nowhere, he says, were there enough police. Joseph Pennell, in his account of the race in the London *Chronicle*, also censures the French officials for neglecting to protect the course. Some papers, however, do not think that the number of accidents is unduly large, considering the speed, the number participating, and the distance traversed. "If as many men had ridden horses the same distance at the very highest speed possible," says the Florida *Times Union* (Jacksonville), "there would probably have been more fatalities, and probably as many if the same number of railroad trains had run the same distance, each driven at the greatest possible speed." None of the papers, however, believe that the use of the automobile will be affected by this latest incident, but that it will be a warning against its abuse. The Chicago *Tribune*, Boston *Advertiser*, and the New York *American* take this view.

The result of the Paris-Madrid race will probably not interfere with the international automobile races to be held in Ireland in July, but will warn the authorities to take extra precautions. The officers of the Automobile Club point out that the course in Ireland, being only 93 miles, will be guarded by 7,000 police and club stewards, and that the contestants, numbering only twelve, will be run at intervals of two or three minutes. This minimizes the risk of collisions.

EXCLUSION OF ADULTERATED IMPORTS.

GERMAN shippers are said to be in an unpleasant frame of mind over the paragraph in the Agricultural Appropriation act which has just been brought to public attention, providing for the exclusion of adulterated foods, drugs, and liquors from this country. This paragraph, which will take effect on July 1, gives the Secretary of the Treasury authority to open suspected packages and deliver samples to the Secretary of Agriculture for analysis, and it is provided that

"the Secretary of the Treasury shall refuse delivery to the consignee of any such goods which the Secretary of Agriculture reports to him have been inspected and analyzed and found to be dangerous to health, or which are forbidden to be sold or restricted in sale in the counties in which they are made or from which they are exported, or which shall be falsely labeled in any respect in regard to the place of manufacture or the contents of the package."

Thus the German agrarians will be "given a dose of the medicine which they have prescribed for the American producers," remarks the Seattle *Post-Intelligencer*. But the Germans are not the only ones who will feel the new restriction. French and Italian wines and English jams and jellies will share with the German products the attentions of our authorities. Dr. W. H. Wiley, chief of the Bureau of Chemistry of the Department of Agriculture, is reported as saying:

"After July 1 you will hardly be able to buy in this country any frankfurters imported from Germany. Germany objects to the borax in our meats, and we will object to the borax in her sausages, for we have found that they all contain borax. Then, too, the French wines that come into the United States will receive their dues. There is probably not a wine sold in this country under the label of 'pure French wine' that is not a mixture or blend of French and Italian and other light wines. We intend to make these people tell on the label the truth about what is in the bottle."

The Washington correspondent of the New York *Tribune* says:

"There is another class of goods which it is most desirable to exclude from commerce, however, both for the health of the public and for the reputation of American manufacturers. In this may be included the various 'fruit jellies' made from apple pomace, the refuse of the cider-mills, with perhaps three raspberries to the jar of 'raspberry jam,' three strawberries to the jar of 'strawberry jam,' etc.; also the fruit-butters made from saccharin, glucose, etc., and which are sold to the poorer trade, labeled to suit the demands of the individual customer. None of these products perhaps contain substances actually injurious to health, but all are frauds, purporting to be other than they are, and, apart from the injury they may do to a weak or immature digestive apparatus, they almost invariably command a larger price than they are worth from a nutritive point of view.

"Of all food products, if such they may be termed, there is no class so extensively nor so injuriously adulterated as beverages. In fact, many liquors contain no trace of the product they purport to be, and these will be especially affected by the standard which will be promulgated by the Secretary of Agriculture. That the promulgation of the standard of purity will be followed by the enactment of adequate and comprehensive pure food laws in States where such do not now exist is the confident prediction of those interested in the subject, and that prosecutions will be more frequent and convictions more easily obtainable is the firm belief of the officials who have the matter in charge."

Germany has treated American imports so severely that some of our papers are glad to see a little "reciprocity" in this line. The Louisville *Courier-Journal*, however, remarks that neither party has a right to complain of laws against adulteration:

"Germany has discriminated largely against our products, and at times has assigned reasons for it that did not commend themselves to our people as well founded. But at least the appearance of an arbitrary restriction of imports from America has been avoided. It is not to our interest to inaugurate a tariff war because Germany furnishes us a better market than we are giving to her. But this does not apply to the case of keeping out adulterated goods. Germany has enacted radical legislation on that subject, and we can not complain of its enforcement. Equally the Germans have no right to complain when their exporters are required to send us honest goods, free from injurious adulterations."

LETTERS AND ART.

A DUEL BETWEEN DRAMATISTS AND LITERARY CRITICS.

THE question of the relation between the acted drama and literature comes up for periodical discussion. Such a discussion has been going on in England between the "professional" playwright and the man who holds the brief for literature, and has been waged with brilliancy if it has not resulted in conclusions that are final. Mr. Pinero and Mr. Henry Arthur Jones have both had interesting things to say of late regarding the literary aspirants for dramatic honors.

The accusation against the professional playwright, that to him stagecraft is the all-important element in modern drama, Mr. Jones seems to admit, in an article in *The Nineteenth Century* (April). He also admits that "literature is a far greater art than mere stagecraft"; but, he adds, speaking for himself and other playwrights, "what we are seeking to produce is not stagecraft, but stagecraft that shall be also literature." Then "for the benefit of English literary men who wish to write plays and of English literary critics who wish to discuss them," he enumerates the following eight conditions under which English literature can be seen on the English stage:

HENRY ARTHUR JONES,
Author of "The Case of Rebellious Susan," "The Liars," "The Manœuvres of Jane," "Mrs. Dane's Defence," etc.

"(1) The writer must have some natural instinct for the stage, some inborn gift for the theater.

"(2) He must patiently learn the technique of the stage, a technique I believe to be far more difficult and exacting to-day than that of painting, which every one will allow is not to be acquired without years of study and practise.

"(3) His literature must inform and exhibit a strong, moving, universal story; and must do this in a casual, unsuspected way, as if the writer were unaware and unconcerned about it.

"(4) His literature must be so broad and human that it can be instantly apprehended and digested by the boys in the gallery; who else will begin to hoot him, and prevent his play from being heard at all.

"(5) His literature must be so subtle and delicate that it will tickle the palates of literary critics in the stalls; who will else proclaim him to be a vulgar mountebank and impostor, practising the cheapest tricks of money-making.

"(6) His literature must exactly fit the mouths, and persons, and manners, and training of the various members of the company who are to deliver it; or it may appear to the audience in some inconceivable guise or disguise of quaint imbecility.

"(7) His literature (in a modern play) must be of that supreme quality which is constantly and naturally spoken by all classes of English men and women in every-day life; it must be obviously and frankly colloquial; or the writer will be instantly convicted of artificiality and unreality in a matter where everybody is an expert.

"(8) His literature must be of that kind which will immediately bring at least eight hundred pounds a week to the box-office, in addition to the costs of production; or his manager will be hastily advanced to the bankruptcy court."

The case for the side of literature is put with much spirit by an anonymous writer in *Blackwood's*, who gives his views in the department "Musings Without Method." In this case, it is Mr. Pinero who is dealt with (see LITERARY DIGEST, May 30), tho the writer's shaft is barbed for the whole class of English dramatists, who, he affirms, "take themselves with portentous gravity, and hang out their banner as bold as brass or as a French novelist." We quote further:

"The *obiter dicta* of Mr. Pinero are not without interest since he states the case of the professional playwright with an ingenuous candor. He declares with some truth that there is scarcely a poet or a novelist of the nineteenth century that has not 'failed' in his attempt to write for the stage. Even where the poets have succeeded, Mr. Pinero hastily puts their triumph down to actors and managers. 'Some of Byron's plays were forced, by fine acting and elaborate scenic embellishment, into a sort of success; but how dead they are to-day!' (Are they so dead, we wonder, as the plays of the real Byron, the author of 'Our Boys,' who, we take it, did not rely for his success upon scenic embellishment?) Nor has Lord Tennyson fared any better. Two of his plays 'were so admirably mounted and rendered by that great actor, Sir Henry Irving, that they enjoyed considerable prosperity in the theater.' The prejudice is evident which assigns all the credit for the success of Byron and Tennyson to actor and stage manager, and let us conclude, for instance, that 'Dandy Dick' owed nothing to John Clayton and Mrs. Wood. But, prejudice apart, it is evident that for Mr. Pinero success means the appreciation of the people, and the failure of the poets is not quite so disastrous as he thinks.

"In what, then, have they failed? Not in art, for the terms 'success' and 'prosperity' put that out of the discussion. They have failed to arouse to enthusiasm an after-dinner audience, which detests poetry and has no ear for fine English. They share their failure with all the great playwrights, who have thrown the brightest luster upon our literature. Shakespeare makes but a fitful appearance; but the rest, where are they? Suppose a manager were rash enough to choose for representation not one of the austerer masterpieces, but such an enchanting comedy as Heywood's 'English Traveler'; would it hold the stage a single week against 'The Best of Friends,' let us say, or 'The Country Girl'? Of course it would not; and Mr. Pinero must find a cause for the failure of Byron, Tennyson, and the others which is not quite so flattering to his vanity as the incompetence of the poets."

The writer turns for a moment to speculate on the fact that responsibility for the modern drama may not unlikely lie with the modern audiences, and that they prefer "a common jargon to the exquisite speech of literary craftsmen," whereupon "failure is distinction and success a comfort to nothing save the pocket." The blame, then, while being shared, is compounded of misconception and conceit on the dramatist's part, who mistakes the legitimate and praiseworthy ends of his profession. The writer continues:

"The truth is, our dramatists have long since forgotten that the English language is still the medium of the English drama, and that no branch of literary art is worth a word of praise that wantonly divorces itself from literature. The foolish dramatist who was once loquacious concerning what he was pleased to call 'the literary drama' condemned his own craft in a single phrase. No doubt, prosperity being essential, the audiences of our theaters must share the blame with their favorites. Too idle to listen to exquisite prose or splendid verse, they prefer the quick antics of comedians, and in their ear, as in Mr. Pinero's, 'theatrical' has a far more splendid sound than 'dramatic.' To sum the matter up: that poets have failed upon the stage is no compliment to the professional playwrights, who believe themselves the vessels of an esoteric inspiration. It merely means that literature and the drama travel by different roads, and they will continue to travel by those roads so long as the actor is master of the dramatist, so long as the merits of a drama are judged by the standard of material prosperity. After all, to get your puppets on and off the stage is not the sole end of drama, and mod-

esty might suggest that it is better to fail with Tennyson than to succeed with the gifted author who is at this moment engaged in whitewashing Julia."

SOME ESTIMATES OF "MAX O'RELL."

PAUL BLOUET, well known in this country and in Europe by his pen name of "Max O'Rell," died in Paris on the night of May 24. It is generally admitted that his writings, light in manner as they are, have done much to make the people of at least three countries view one another's peculiarities with more tolerant eyes. The outline of his life is briefly as follows. Born in Brittany, March 2, 1848, of French parents, he was educated in Paris, where he took his B.A. degree. Having chosen the army as his profession, he saw active service in the Franco-Prussian war, and afterward in the war of the Commune. During the latter he received wounds which compelled him to abandon the career of a soldier, and he went to England. There he made his home for many years, taught French in St. Paul's School, London, lectured, and wrote for the Paris papers. Fame came to him with the publication of a little book called "John Bull and His Island." He visited America in 1887, and since that time has become well known in this country as a lecturer and journalist. Among other books from his pen may be mentioned "John Bull's Womankind," "Jonathan and His Continent," "A Frenchman in America," "John Bull and Company," "Jaques Bonhomme," and "Her Royal Highness, Woman." The Philadelphia *Inquirer* (May 26) says: "For nearly thirty years he has kept three nations smiling, and in all that time has never leveled a shaft that had a poisoned point." From the Philadelphia *Press* (May 26) we quote as follows:

MAX O'RELL,

A satirist who made no enemies. His death occurred in Paris on May 24, 1903.

"Paul Blouet, the French literary soldier of fortune, was the product of modern conditions which make it possible for a man to have more than one country. . . . He was a man of detachment, with the capacity for seeing not merely differences, which is a stupid thing to do, but contrasts, which are amusing. It is an inconsistent world. Who of us does not do things for which he has no excuse or no explanation? No land is logical. Least of all 'John Bull and His Island.' To its description 'Max O'Rell' brought the style of the Paris feuilleton. He had a wife who could translate it into epigrammatic English. His double-barreled humor, which amused either of two peoples at the expense of the other, gave him a run of editions in France, England, and this country. Once devised, this racial satire by comparison went on indefinitely. His contrasts and conceits filled volume after volume. The American reading public, like the English, saw itself as a Frenchman saw it, and found it most amusing. The step from this to writing daily in a snappy way on men, women, and moralities was easy, and the social satirist became a daily journalist."

Henri Pene du Bois, writing in the New York *American* (May 27), speaks of Max O'Rell's unfinished mission, which was to create, by means of his wit, gaiety, and clear outlook, a more friendly and intimate understanding between the peoples of Europe. "He cherished Hugo's ideal of a United States of Europe." We quote from M. du Bois:

"Max O'Rell studied at his ease the world of the arts and the corridors of politics, the drawing-rooms and the streets, the Stock Exchange and Temple Bar. We know here what he made of them better than they do elsewhere. He made of them small talk. It seemed superficial in his lectures and in his essays, written to amuse rather than to instruct or to moralize. But they and his books—'John Bull and His Island,' 'Jonathan and His Continent'—were united in a graver mission than the one they let appear. He had intensely the wish to destroy the national prejudices that make national enmities. To attain that end he used anecdotes. They are a sort of current coin wherein history verifies the effigies of its medals."

THE UNSOLVED PROBLEM OF WORDSWORTH.

A RECENT volume on Wordsworth written by Prof. Walter Raleigh brings out from Mr. W. E. Henley (in *The Pall Mall Magazine*) a complaint that, tho Mr. Raleigh has had an eye on the real problem of Wordsworth, he evaded or at least failed to reach its solution. Mr. Henley states his conception of the case of Wordsworth in the following style:

"Obviously no man can write some fifteen to sixteen hundred columns of close-printed verse without lighting, if but by accident, on the expression of what seems to him a fundamental truth; and any such man, especially if he be built on Wordsworth's lines, and inspired by Wordsworth's ghost, can do no other than give the best of his part in Time and Eternity to the imposition on his fellows of the master-thoughts which have shaped his own destiny, and which, inasmuch as they are the individual and essential elements in his spiritual composition, he feels compelled, as every strong man must, to impart to the race at large. . . . Wordsworth did something of the kind; and the world at large, it is safe to say, is still scarce conscious of his fateful and enormous presence, and after all these years has but begun to concern itself blindly and fumblingly with his true meaning, his secret, what he said to himself in the privacy of his soul, but was not poet enough to express in the right authentic terms of poetry, excepting now and then and here and there."

The reason that Wordsworth has stood so long outside the apprehension of the world at large is explained as an inherent misfortune of his nature; "for it has to be admitted that a poet who wrote poetry only now and then, who grappled with conceptions which he could not adequately express, and who sent his mind into regions where it found nothing but an *O altitudo!* or the necessity of a retreat by the way it had come—it has to be owned, I say, that a poet-seer thus badly served by his inspiration, his prophetic fury, and his talent as a writer, is none of the luckiest of mankind." Mr. Henley says further:

"'He pressed onward,' Mr. Raleigh says, 'to a point where speech fails, and drops into silence, where thought is baffled, and turns back upon its own footsteps.' That is finely, evenly, heroically, said; and one may do far worse than accept it as final. For myself, I believe that there is but one way to Wordsworth, and that is the way you find 'upon instinct,' as Falstaff found Prince Henry's royalty. Given that sense, you go to the heart of Wordsworth blindly, and you stay there worshiping, also 'upon instinct,' and finding comfort, encouragement, new meanings in things, new culminations in life, where others, who have gone before you—(poor Byronists and Keatsites they!)—find only bad verses and a halting, fumbling sense of rhythm and an anything but inevitable mastery of one's 'oracular tongue.' Blessed indeed are they that can thus cry quits with Destiny! I can not; nor am I sure that I envy them that can, blessed as past all question they are. 'I do not compare myself, in point of imagination, with Wordsworth—far from it; for his is naturally exquisite, and highly cultivated from constant exercise. But I can see as many castles in the clouds as any man, as many genii in the curling smoke of a steam-engine, as perfect a Percepolis in

the embers of a sea-coal fire.' Thus Sir Walter Scott; and tho these are conditions of spirit and mind in which I rather envy those who are content to get their Percepolis and their genii ready made, or (worse still) believe they see them when they are told they are there, and that if they do not see them they lack that 'inward eye, which is the bliss of solitude,' on the whole I had far rather be damned with Scott than saved with 'the amiable Bard of Ryedale.'"

Mr. Henley proceeds until he ventures to bring out something that seems like a pathological hint for the solution of the mystery. We quote again:

"Why did Wordsworth 'break off short in the middle' (so to speak), and comparatively early in life become no more than the shadow of his older self? So far as I know, his is the sole case in literary history of a Great Man's suddenly becoming a Small Man. Was it that he realized that the outcome of his broodings on the intimate Vast was beyond his gift of speech? I think not; for, had that been, he had scarce gone on writing. But I can suggest no other solution of the difficulty except that, at a certain moment, Wordsworth was gripped by, as it were, an intellectual locomotor ataxy. That his mind had pushed so far into the empirics of speculation that it could bring nothing home but the best of his verse, and that it had reached a point at which it found nothing to report in the terms of human language: this we know, and on this Mr. Raleigh insists in words of gold. But the problem remains a problem; and I wish that Mr. Raleigh, who has certainly had an eye on it, had thought it worth discussing in this book of his."

THE PASSING OF LITERARY PROVINCIALISM.

ACCORDING to Mr. John Bell Henneman, the conspicuous characteristic of literature at the beginning of the twentieth century is its tendency "to break down all barriers of speech and race and become a world literature." In other words, our standards are growing, our conceptions are widening. "The best, the brightest, the truest, is what the world asks for—nothing false in fact, weak in sentiment, unreal in imagination, untrue in art." This tendency to cosmopolitanism of appeal he does not claim, of course, as peculiar to, but only more accentuated in, recent years. The first great conscious cosmopolitan in modern literature, we are told, was Goethe. Of Americans "who have provoked countercurrents of thought and art in Europe," he names Fenimore Cooper, Edgar Allan Poe, and Walt Whitman. But now, he argues (*Sewanee Review*, April):

"There has become one standard of comparison and thought everywhere—a breadth of view which is coextensive with that of humanity itself. The test is more and more growing to be the truth to common human impulses and living. It is as characteristic of our literature as of our life—our social experience, our dress, our manners, and our habits. The cosmopolitan is at home everywhere; he feels intuitively the demands the occasion makes, and finds it a natural delight to respond to them. Therefore the passing of all purely provincial literature, whether in Europe or in America, in the New England or the Southern States. Not that literature may not be located anywhere, and derive from any source; but, however seemingly local in origin and provincial in outward aspect, its ultimate appeal must be the wider reaches of a common humanity and that of truth itself. . . . . .

"We do not think of Ibsen and Björnson as isolated in their Scandinavian peninsula, and as provincial from writing in a comparatively unknown speech. They are soon translated and read of mankind. A critic like Dr. Georg Brandes, recalling the days of Sainte-Beuve and Taine, tho belonging to as infinitesimal portion of the globe as Denmark, may have his opinions remarked upon at the antipodes. It may be affirmed of both the young Hauptmann and Sudermann that they belong in common to Europe as well as specifically to the new German empire. And Nietzsche, demoralizing and upturning as his doctrines seem to be, has had to be reckoned with by the thinkers and moralists of every race. The vogue of the Belgian Maeterlinck is as marked in the salons of Paris as of his own Brussels, and the echoes thereof are not wanting in London and New York. The appearance of a book by the late M. Zola in France was a world occurrence, and we are not yet done discussing the finer art of Daudet and de Maupassant."

Mr. Henneman finds most strongly marked in the French, Scandinavian, and Russian literatures the tendency to fulfil the broad conditions of a world literature.

WHEN SARDOU "ARRIVED."

THE presentation of Sardou's latest play, "Dante," by Sir Henry Irving, carries as an inevitable consequence a penumbra of journalistic notes and anecdote involving both Dante and Sardou. The story of the first years of effort of any successful man is interesting in detail proportionately to the amount of the man's unrequited effort. Some years before his death, M. Antoine Leandre Sardou, father of the dramatist, wrote a sketch of Victorien's early struggles, which *To-Day* (May 6) has had translated. It runs in part as follows:

"My son Victorien was born on September 6, 1831, in the Rue Beautriellis, Paris. I myself was his first tutor in our home; peace, order, and work were ever before his eyes. When nine years old we nearly lost him through scarlet fever. He recovered, however, and I then took him to Le Cannet in the South of France, to my old father's, to let him breathe the invigorating air of the country and regain his strength.

"The child found some odd volumes of Molière at Le Cannet, which he eagerly devoured, learning whole passages by heart and reciting them, to the great joy of his grandfather. It was marvelous to see the boy-actor playing entire scenes from 'Tartufe,' 'L'Avare,' or the 'Misanthrope,' in the marketplace, surrounded by an appreciative audience of villagers and residents."

VICTORIEN SARDOU,

Author of "Dante." He was decorated with the Legion of Honor in 1863, and elected a member of the French Academy in 1877.

The boy returned to Paris at the end of a year, and in 1846 the father established a private school in the Rue des Postes and seemed on the way to fortune, when the Revolution of 1848 brought ruin upon him. Victorien meantime had become a *Bachelier ès Lettres*, and entered the School of Medicine, but at the end of six months informed his father that he had learned all he wanted to know of the science of Æsculapius. Writes the father:

"I could have obtained him an appointment as usher in a country government school, or placed him in the Ministry of Public Instruction, but he refused all my proposals. When I asked his kind and indulgent mother what her son intended doing, she replied: 'Don't worry about your son; he works hard and will succeed in the end.'

"'But what does he do?'

"'He writes for the stage.'

"'For the stage! Why, there is not a single collegian who has not a comedy or a tragedy up his sleeve. And young men who have the right to expect recognition only succeed with the greatest difficulty, after having knocked in vain at the doors of theatrical managers for ten or fifteen years! However, let him show me some of his work.'

"The next day Victorien brought me a comedy in two acts,

entitled, 'Les Amis Imaginaires.' It was utterly unsuitable for the stage, but two or three scenes were well done, the dialog was natural, and the verse good. I returned the play with one word, which at once expressed my approval and encouragement—'Continue!'"

The elder Sardou removed to Nice, leaving Victorien in Paris, who obtained a small income from tutoring. In 1854 his play "The Tavern" was produced at the Odéon, but was badly received by the students of the Latin Quarter:

"The young author, full of illusions, had meanwhile speculated on his success, and indulged in extravagance which he could not afford. . . . He set to work again, and wrote a drama in verse, called 'Bernard Palissy,' which he hoped to see played on the same stage that had witnessed his failure. The play is still, I think, lying in a box stowed away at the Odéon. He continued to plan other dramas, frequented theatrical circles, obtained credit, and contracted enormous debts.

"One year after his failure he was on the brink of an abyss. As soon as I heard of this—not through him, however, for his pride prevented him from applying to me—I resolved to leave Nice and reluctantly returned with my family to Paris. With great difficulty we managed to live and satisfy my own and my son's creditors. Victorien worked hard, but his pen brought him nothing. No matter how he tried, he could get neither novel nor play accepted, and this went on for four years. At last a kind lady who had great faith in Victorien's future and was a friend of Mademoiselle Déjazet suggested he should write a play for this celebrated actress. My son then wrote 'Candide,' a vaudeville, the subject and title of which were borrowed from Voltaire. This may be the reason for the extraordinary fact that it was condemned by the censor soon after its production. Thus the unfortunate author, now in his twenty-eighth year, found himself further than ever from the realization of his ambition. Happily, however, Mademoiselle Déjazet took, at about that time, the theater which now bears her name. A good play was wanted to inaugurate the opening. Vanderbuch suggested one with the title 'Les Premières Armes de Figero,' and even made a scenario; but did not feel himself competent to write the piece. It was no easy matter to take the characters from Beaumarchais and preserve the original language. Several well-known authors were invited to do the work, but, like Vanderbuch, they declined to undertake so bold a venture. At last Mademoiselle Déjazet bethought her of the author of 'Candide,' and, giving him Vanderbuch's scenario, told him to write the piece and she would play it. Eight days after, the whole work was terminated, and on September 27, 1859, for the inauguration of her theater, the incomparable Déjazet added to her triumphs 'Les Premières Armes de Figero.' The production proved, however, more a literary than a financial success; but from that moment Victorien took his place among dramatic authors. The play 'Les Gens Nerveux,' first written for the Gymnase Theater, and subsequently arranged by Théodore Barrière for the Palais Royal, only obtained a *succés d'estime*. But 'Monsieur Garat,' played at the Déjazet Theater April 30, 1860, and 'Les Pattes de Mouche' ('A Scrap of Paper'), produced on May 15, 1860, brought the name of Victorien Sardou in the full light of publicity, and secured the good graces of all theatrical managers to the young author, now on the high road to fame."

A DEFENSE OF THE LITERARY PATRON.

MR. EDMUND GOSSE urges, in defense of the practise of patronage that flourished in England in the eighteenth century, that "in its most consistent form it was a kindly mode of protecting what would without it have been helpless." He thinks it time that some one took up the cause of the "much-despised, much-miscomprehended patron," our modern prejudice against whom he accredits to Dr. Johnson's celebrated letter to the Earl of Chesterfield. Johnson's anger, it will be remembered, was roused by the fact that Chesterfield neglected to offer him his patronage.

Mr. Gosse refers to the seventeenth-century custom of dedicating books to powerful noblemen, as having evolved the later type of patron. He writes (*Harper's Magazine*, June):

"What particularly distinguished the true eighteenth-century patron was that he lifted the whole burden of life off the shoulders of his protégé and gave him the comforts of a home. . . . .

"The only alternative between a 'place' and death in a garret after a wretched life of incessant begging was, in the case of many of the poets, an invitation to reside with the patron. This was recognized as a sort of profession; and the curious thing is that it seems to have involved hardly any responsibility or duty. It is to be supposed that the patron enjoyed the distinction of having a man of genius under his personal charge. He was a man of taste himself, and it was delightful in his hours of ease, stretched in a chair on one of his espaliered terraces, to listen to new works by his own private Gay or Thomson or Tickell. As Pope says in a cancelled couplet—which is supposed to refer to Bubb Dodington—

> To bards reciting he vouchsafed a nod,
> And snuffed their incense like a grateful god.

How the protégé employed himself in relation to the patron with whom he resided is not always quite clear. Sometimes he occupied his ample leisure in preparing an edition of one of the classics for the press. This book would ultimately be produced, by subscription, with a glowing tribute to the nobleman 'by whose indulgence I had both the time and ammunition to perform it.' The protégé was expected to apply his vacant hours to his own favorite study. He entered into learned or witty correspondence of a semipublic nature, which redounded to the glory of the patron."

Among many famous men of that period who did not think it undignified to avail themselves of patronage, Mr. Gosse mentions George Berkley the philosopher, the poets Prior, Congreve, Gay, and Thomson, and Fielding the novelist. Such an attitude toward the custom as that taken by Pope was so rare, he tells us, as to be almost unique. It was Pope who wrote:

> "Oh, let me live my own, and die so too! . . . . . .
> Maintain a poet's dignity and ease,
> And see what friends, and read what books I please;
> Above a patron, tho I condescend
> Sometimes to call a minister my friend."

But in the majority of cases, such was the feeling of the times, men of the finest intellectual gifts and equipment seem not to have found it irksome to be installed in a nobleman's house "like a cat or a parrot or a maiden aunt." It is to be noted, says Mr. Gosse, as a not very amiable trait in eighteenth-century literary life, "that the personal character of the patron was not allowed to weigh in the balance against the advantages of his patronage." He concludes:

"Johnson showed that it was possible, by a tremendous effort, to finish a work without the aid of a patron, and patronage went out of fashion. Fifteen years later it was already so discredited that Chatterton died for the lack of it. But from 1710 to 1750 it was in full vogue, and whatever we may think of the propriety of personal independence and of the good fortune of the democratic authors of to-day, we do a cruel wrong to the unselfish and enlightened noblemen whose hospitality permitted the higher literature to exist in the earlier part of the eighteenth century, if we grudge the admission that in the main they were generous, unassuming, and tactful in their beneficent action."

NOTES.

THE extension of the elective system in so conservative a university as Yale is significant. For entrance, Greek will be no longer compulsory; and throughout the four years the student will be free to select five courses annually out of a set of eight.

A WRITER in the London *Daily Mail* comments on the pronounced difference of public taste in the matter of periodical literature in England and in America. London, he says, is flooded with "weeklies," a class which in New York is comparatively sparsely represented, particularly in the field of literature and criticism. In monthly journalism, America leads, he admits, in the matter of illustration, but falls slightly behind in purely literary quality. In the matter of heavy reviews and quarterlies he easily claims the lead for England. Are these facts, it may be asked, really indicative of a difference in public taste?

SCIENCE AND INVENTION.

IS HYPNOTISM WRONG?

ONE way of looking at hypnotism is to regard it as a heaven-sent means of accomplishing all good ends. According to this view we are to be educated, trained, reformed, and cured of disease by it. The opposite view sees in it only a device for committing crime and doing injury; in fact, some recent European Catholic writers have seriously affirmed that it is the invention of the evil one. Looked at in a common-sense way, the question is reduced to that of the use or abuse of a very powerful method. This middle view is taken by Dr. Leon Meunier in an article on "Hypnotism in its Relation to Morals and Religion," contributed to *Cosmos*. Says Dr. Meunier:

"A subject in the hypnotic state loses control of his acts. Thoughts may be suggested to him that are forced on his mind; on waking, he may be made to commit acts that his conscience condemns. Every one is not hypnotizable to the same extent. In general, to enter the hypnotic state one must submit and consent to certain manipulations that facilitate it. But this is not universally true; certain subjects are very easily hypnotizable and suggestionable; they may be put to sleep when alone; there are even subjects in whom natural sleep may be changed into the hypnotic state.

"This state of suggestibility is not without inconvenience for the health. Its frequent repetition brings on various mental troubles, among which may be noted a tendency to psychologic disaggregation—to spontaneous or easily provoked states of hypnosis. Frequent convulsive crises have also been noted among such persons.

"These are certainly inconveniences, but they can be foreseen, avoided, or lessened. Should they involve the complete interdiction of these practises in the name of morals and religion, if not of the law? The problem has been propounded by jurists, physicians, and theologians.

"Is hypnotism immoral? In itself, evidently not. A hypnotized subject is for the time being deprived of his liberty, but it is right that he should consent to this if he does it that he may in the end recover his liberty and his reason, which have been more or less enslaved by his malady. A person narcotized by chloroform is deprived of his consciousness and his liberty, and may become the victim of violence and abuse; but is the use of chloroform therefore illegal?

"It is moral, says Erasset, to accept or even solicit a temporary diminution of the moral and personal life, if it is done with the object of increasing, or of rendering possible or easier, the ulterior working of this same life.

"It thus hardly seems necessary to insist that hypnotism has nothing immoral about it if its aim is moral; medical and therapeutic hypnotism, therefore, is moral.

"It is evident that as the hypnotic state may have its dangers and its serious inconveniences, public exhibitions of hypnotism for amusement ought to be forbidden. It is not the same with scientific experiments in hypnotism. We need not enter here into the discussion of the lawfulness of scientific experimentation on human beings. All dangerous experiments should be forbidden. . . . . .

"The question of the morality of hypnotism has been much agitated in the religious world, and it has been blamed and condemned by a number of Catholic writers, among whom is Father Franko, S.J. His memoir on the question is most radical and at the same time most complete. He considers hypnotism as supernatural in its causes and its effects, and as both immoral and maleficent. It is satanic, and the devil is always concerned in it, if not as direct agent, at least as inspirer. This thesis has been upheld by [a great number of ecclesiastics], . . . especially by the Bishop of Madrid in a celebrated proclamation which has been the cause of many polemics.

"The Roman curia has not upheld this condemnation. It condemns the abuse, but allows the use of hypnotism when it consists in the simple employment of physical means, lawful in themselves and in their operation."

Dr. Meunier gives a long list of Roman Catholic authors for and against hypnotism. The action of the papal authorities settles the question so far as the Roman Catholic Church is concerned, but there are many Protestants with whom it still remains open. Dr. Meunier apparently goes to neither extreme. He says in his closing paragraph:

"We do not believe in the utility of hypnotism as a means of education. In this case it would appear to be injurious. But its use seems to us legitimate as a curative agent in certain cases, not very numerous, where maladies can not be treated successfully by other means."—*Translation made for* THE LITERARY DIGEST.

A STATISTICAL FORECAST OF THE COLLEGE SPECIES.

APROPOS of the recent widespread interest in the question of the growing decrease in the size of American families and the particular case of the graduates of Harvard College, Prof. Edward L. Thorndike, in *The Popular Science Monthly* (May), cites statistics gathered from three other colleges, namely, Middlebury, Wesleyan, and New York University, to show that "the failure of Harvard graduates to produce their share of the present generation is but a single example of a widespread condition." His conclusion that the social or racial group to which college men belong is beginning to die off from old age will meet with incredulity, but it is plausibly maintained. In seeking the explanation of the existing conditions, Professor Thorndike first advances two hypotheses. To quote him:

"The most plausible explanation attributes the change to the custom of conscious restriction of offspring. Greater prudence, higher ideals of education for children, more interest in the health of women, interests of women in affairs outside the home, the increased knowledge of certain fields of physiology and medicine, a decline in the religious sense of the impiety of interference with things in general, the longing for freedom from household cares—any or all of these may be assigned as the motive for the restriction. The only other explanation which to the present writer seems adequate assigns the decreased productivity of college men to real physiological infertility of the social and perhaps of the racial group to which college men and their wives belong."

Arguing on the assumption of conscious restriction, the professor affirms that "the result will be the appearance in the statistics of late decades of two species of families, one showing the natural tendency and in every way comparable to the species shown in the first decades, the other a species of restricted families with a range from 0 to 3 or 4 [children] and a preponderance of 2's and 0's." By a method of graphic representation the professor shows that from 1803 to 1834 the largest group of families were those of six children, with a variable decrease in the three decades of families beyond that number. From 1835 to 1854 the largest group was that of four children; from 1855 to 1864, three; and from 1865 to 1874 the two largest groups were those of none and of three children. From the decade following 1835–44 the ten-children group decrease to a minimum, after which they cease to be a calculable quantity. "The conclusion is," says the writer, "that the changes in distribution actually found decade by decade have far more likeness to those that would result from a decrease in fertility, than to those that would result from restriction." To quote further:

"So far as our general mental prepossessions go, however, a real decrease in fertility seems at first sight a preposterous doctrine. One can well imagine the sneer of the physician whose experience emphasizes the frequency of restriction, and the pitying smile of the biologist who discerns that a progressive decrease in fertility of a species is a flat contradiction of the doctrine of natural selection. . . . . .

"But I venture to assert that the experiences of metropolitan physicians will not serve to prophesy the social psychology of

the species we have studied, that their opinions may here be as wide of the mark as the common belief that unwillingness is the main cause of the failure of the women of the better classes to nurse their children. As to the contradiction of natural selection, I may suggest that the existence, amount, and results of the elimination of types by their failure to produce their kind is after all a problem which only statistical inquiries can settle, and that if the doctrine is to be used as an excuse for evading certain obvious facts in human history it is perhaps time that it should be questioned.

"The issue is clear. The more fertile members of a race produce of course a larger measure of the next generation than do the less fertile. So also do their children, if fertility is inherited. There should, then, according to present-day biology, be a quantitative evolution of fertility. Absolute sterility would needs be the first trait to be eliminated from a species. It should have disappeared from human stock eons ago. And so long as there are variations in fertility and a transmission of these variations, the fertility of a race must keep up to the racial type and ought to increase. It makes no difference whether the type can change only by sudden extreme variations or by a gradual change of its center of gravity. Of whatever sort the effective variations are, the ones that must needs win in the case of fertility are variations on the plus side. But what we actually find is good evidence of a decrease. . . . . ."

In conclusion, the professor says:

"So far as the present facts go the probability is against natural selection in the case of fertility in man. The contrary hypothesis, that a stock like an individual has a birth, growth, senescence, and death; that, apart from the onslaughts of rivals or the privations of a hard environment or the suicide of universal debauchery, races die a natural death of old age, lends itself very well to the interpretation of human history and perhaps to the history of animal forms as well. It leaves the causation of this race life and death a mystery. But a mystery is less objectionable than a contradiction."

QUEER ARGUMENTS AGAINST THE METRIC SYSTEM.

IN a recent discussion of the metric system of weights and measures, aroused by a paper in favor of the system read before the British Institution of Electrical Engineers, some arguments were advanced that excite the mirth of *The Electrical World and Engineer*. That paper says editorially:

"The conservatives in debate clung not only to British measures, but also to the British pound, shillings, and pence, and in the main for the same reasons. This to Americans will be a flaw in the armor, for practically every American admits that the decimal United States currency is far more simple, logical, rational, and scientific than the guinea, pound, crown, florin, shilling, penny, farthing, mite system. It is quite true that an American who writes down his wealth as ten thousand dollars can by an accidental shift of the decimal point make himself appear a millionaire. Nevertheless, such errors are very uncommon in good faith. Since then the devotees of the league, mile, furlong, pole-or-perch, rod, link, fathom, yard, foot, inch, mil, barley-corn system advocate the retention of the British coinage for substantially the same reasons as for the grand old linear jumble, and since we all know, on this side of the Atlantic, that the decimal coinage is incomparably better, is it not reasonable to suspect that the arguments for the retention of the linear jumble, which we, too, retain as a national fetish, may be similarly unsound?

"One gentleman is reported deprecating the use of decimals in currency as compared with the pound, shilling, pence system, because the decimal system 'gets rid of a perpetual opportunity of doing a little mental arithmetic.' This seems to have been spoken in earnest, and not as a joke. The dollar, cent system is too easy, it would seem. What a blissful example of the principle of 'how not to do it,' and how beautiful a realization of the majesty of needless labor. Let us make things hard, and keep them hard, that we may have to take extra time to do them, and make education burdensome to every succeeding generation. Wonderful, indeed, is the influence of conservatism! There is no fallacy or superstition so gross that conservatism will not enshrine it. Taken as a whole, the discussion seems to show that there is a large and growing section of electrical engineers in Great Britain who favor the advent of the international metric system."

NEW FORMS OF ELECTRIC ARC LAMP.

AMONG various recent attempts to improve the arc lamp, perhaps the most interesting is that which has resulted in the use of carbons impregnated with metallic salts, producing the so-called "flame-arc." In the ordinary arc the principal light is from the white-hot carbon terminals, the arc itself contributing little; but when the carbons are soaked in salts of barium or lime, these produce vapors that render the arc highly luminous. Furthermore, their conductivity is high, so that a much longer arc can be used; whence the name of "flame-arc" or "flame-lamp," already mentioned. In a paper read before the Berlin Electrical Society, Herr J. Zeidler recently described some of the later forms of this lamp. An abstract from *The Engineering Magazine* (May) runs, in part, thus:

"Two forms of lamp are described by Herr Zeidler, one being similar to the ordinary arc lamp, the carbons being placed vertically above one another. The principal modification necessary with this form is that due to the increased length of the arc, since it is necessary to arrange for the movable carbon to be drawn back further after the current is started than is done with the ordinary carbons. In practise it is found that the steadiness of the light is improved by the use of this carbon, presenting a small surface at the points. For this reason, and also because of the presence of the impregnating salts, the carbons are consumed more rapidly than are those of the ordinary form. This is partially provided for by making them as long as practicable, besides which double-carbon lamps, similar to those originally introduced by Brush in the United States, are employed, one pair of carbons being thrown into action only after the other is consumed.

"The other form of lamp is called by Herr Zeidler an 'intensive' flame arc lamp, and is constructed with the two carbons arranged side by side, forming an acute angle with each other. A forward movement of both carbons thus brings them together, while they are separated when retracted. This arrangement permits both carbons to be placed above, the arc being formed below, no shadow of the carbons being thrown down. The lamp may thus be suspended, with the enclosing globe below, being especially well arranged for the useful distribution of the light. With this arrangement it is also practicable to maintain the arc in the focus of a concave reflector, so that a large portion of the light is effectively utilized. . . . . .

"Some interesting experiments are related as to the effect of a magnetic field upon the arc, this acting to spread the arc and make it larger. Photometric measurements show, however, that no increase in illumination is produced thereby, and hence no useful purpose is served.

"The economy obtained by the use of impregnated carbons is well shown in the photometric tests made with the new lamps as compared with those using the ordinary carbons. . . . For 220 volts and 9 amperes the hemispherical intensity with the flame arc lamp was from two to three times that of the ordinary arc, while the intensive flame arc lamp gave fully four times the hemispherical intensity, using alternating current.

"The color of the light may be controlled to a certain extent by the preparation of the carbons, these being provided to give either a yellow or a milk-white light, according to the character of the impregnating material. Those for a white light, however, are not so steady as the yellow ones. The latter are best suited for indoor illumination, the former show windows and similar public uses. Neither lamp, however, is adapted for photographic purposes, the greater actinic power of the violet rays of the ordinary arc lamp being preferable.

"The paper of Herr Zeidler . . . is disappointing for what it does not say, and is incomplete in that it withholds any account of the materials and methods used in the preparation of the car-

bons. Secrecy in matters of this sort is rapidly disappearing from the work of the more progressive manufacturing establishments, dependence being placed upon legal protection for the guarding of proprietary rights, while methods are disclosed with true scientific frankness. In any case the activity of interested investigators may be depended upon to develop identical or similar processes, so that the publicity can only be delayed."

HOW LONG HAS RADIUM BEEN RADIATING?

IT will be remembered that according to one theory the mysterious new metal radium is continually exhausting an original stock of energy by its radiation; so that at some time or other it must stop. As the molecular changes that are supposed to give rise to the radiation are slow, this time may be very far off. A correspondent of *Nature*, however, Mr. R. J. Strutt, suggests that instead of looking into the future, which is unattainable, we inquire about the past. And first he reminds us that radium, as radium, does not exist in nature; it is extracted from a mineral called pitchblende. This mineral has undoubtedly existed in its present state since the earth cooled down from incandescence. Has it been giving out heat all this time? The thing to be ascertained first, of course, is whether pitchblende possesses the properties of its derivative radium. Says Mr. Strutt:

"I think . . . that it would be of great importance to determine, if possible, whether radium, as contained in pitchblende, emits as much energy as the same amount of the material in the form of an artificially concentrated product. The mineral must be supposed to have been in existence, in its present condition, for a period of time comparable with the age of the earth—perhaps fifty million years. It is certainly more likely to have lost than gained activity during that time. We may therefore reasonably assume that it has been liberating energy at not less than its present rate for fifty million years. A determination of the amount of energy thus emitted would carry us much further than the most careful and protracted observations on powerful radium preparations.

"Such a measurement would, no doubt, be difficult, but not, I think, altogether impracticable. A very large block of pitchblende might be used, and a thermocouple inserted in the center of it. Something might be gained by careful heat insulation of the block."

Mr. Strutt calculates that, supposing pitchblende to contain one part of radium in 100,000, the interior of a large slab of the mineral ought to possess a temperature one-fifth of a degree higher than the outside, which is a measurable quantity. If experiment shows that this difference of temperature exists, we may calculate the minimum amount of energy emitted since creation by a mass of pitchblende or radium ore, and see whether this is consistent with the theory that the substance is simply giving out its own energy without compensation from some outside source.

More Rays.—The physicist who does not discover a new kind of radiation in these days is "out of the procession" indeed. The latest is thus described editorially in *The Electrical World and Engineer:*

"A recent discovery which is of very great interest seems so far to have attracted less than its due share of attention. We refer to the discovery by M. Blondlot of an entirely new set of radiations derived from an ordinary focus tube and capable of penetrating thin wood, paper, aluminum foil, and the like. The striking feature of the newcomers is the fact that while possessing a fair amount of penetrative power they are unmistakably to be classified with ordinary light, and yet do not affect the photographic plate. They can, however, be reflected and refracted, are in themselves plane-polarized, but can be given elliptic polarization or rotary polarization by the usual means, and can be brought to a focus by a lens and be deviated by a prism. M. Blondlot, using a tiny spark for an indicator, demonstrated all these properties and finally obtained a rough measure of the index of refraction through a quartz prism. It proved to be in the neighborhood of 2.0, altho the radiation evidently covered quite a range of refrangibility. This would indicate that the Blondlot rays, as they deserve to be called, are allied to the extreme ultra-violet rays of the known spectrum. Ordinary metallic spectra rarely show anything beyond a wave-length of about 200 micromillimeters.* By putting source and apparatus in vacuo, wave-lengths down to about 100 micromillimeters have been found by photography; but beyond this, atmospheric absorption or failure of the photographic plates has blocked further progress. Now from the index of refraction observed Blondlot's rays are likely to be very much shorter in wave-length even than 100 micromillimeters, so that at first glance the discovery would look as if we had passed beyond a great atmospheric absorption band and reached a new region one step nearer to the debatable ground held by other mysterious radiations. Each year we are getting material for the study of generalized radiation in place of our previous fragmentary knowledge, and sooner or later the time will be ripe for a general clearing up of the subject. Just now we are fumbling around rather in the dark and making very hard work of things that will probably turn out to be simple."

LORD KELVIN ON RELIGION AND SCIENCE.

A RECENT utterance by Lord Kelvin (Sir William Thomson), at the close of a lecture on "Present-Day Rationalism" by Professor Henslow in London, has attracted wide attention as being a sort of religious confession of faith by England's foremost man of science. Says the London correspondent of the New York *Tribune* (May 15), describing what occurred:

"Professor Henslow had stated that modern science neither affirms nor denies creative power in the origin of life. Lord Kelvin replied that science positively affirms creative power and makes every one feel a miracle in himself. It was not in dead matter, he added, that men lived, moved, and had their being, but in a creative and directive power, which science compelled them to accept as an article of belief. Modern biologists were coming once more to a firm acceptance of something, and that was a vital principle. Agnostics they might be in science, but they only knew the Creator in His works and were absolutely forced by science to admit and to believe with absolute confidence in a directive power. Lord Kelvin made a rigorous application of the logical law of excluded middle, and contended that there must either be scientific belief in creative power or acceptance of the Ciceronian theory of a fortuitous concourse of atoms. Because biologists could not escape from the conclusion that there was original creative power when they studied the physics and dynamics of living and dead matter, science was not antagonistic to religion, but a help to it. 'A million of millions of millions of years would not give them a beautiful world like ours.'

"Lord Kelvin had put this incisive inquiry: 'Is there anything so absurd as to believe that a number of atoms by falling together of their own accord could make a crystal, a sprig of moss, a microbe, or a living animal?' On reflection he perceived that a crystal was an unfortunate illustration, since in structure it differed from the cellular formation of which plants and animals were made. He accordingly hastened to admit that a crystal might result from a fortuitous concourse of atoms, but contended anew that a similar explanation could not be offered for the origin, existence, and growth of plants and living beings, for which scientific thought was compelled to accept the idea of creative power. Lord Kelvin closed his brief but weighty confession of faith with this striking passage: 'Forty years ago I asked Liebig, walking somewhere in the country, if he believed that the grass and flowers which we saw around us grew by mere chemical force. He answered: "No! no more than I could believe that a book of botany describing them could grow by mere chemical forces." Every action of a human free will is a miracle to physical and chemical and mathematical science.' This is emphatic testimony from the foremost man of science in

*A micromillimeter is a millionth of a millimeter, or about 0.00000004 inch.

England respecting the creative mind as the only possible source of life. It differs widely from the scientific atheism of Darwin, Tyndall, Huxley, and Spencer, which was accepted a quarter of a century ago as the highest wisdom of the educated world."

In an editorial comment on Lord Kelvin's remarks, *The Evening Post*, New York, says:

"As it stands, this utterance by one who is, in many respects, the greatest living scientist will attract wide attention. It will be claimed, tho, of course, it is not, as a reversion to the crudest form of creationist theory before Darwin. We shall doubtless see a certain class of apologists hailing Lord Kelvin as believer in the fixity of species, in special design, and the Mosaic cosmology and chronology. Obviously, he is nothing of that. All that he has really done is to admit, along with all the other great scientists who were correspondingly modest, that life's bases rest beyond the probe of chemic test, and that the mystery of its ultimate beginnings is inexplicable to him. Science but pushes the mystery farther back. It does not alter its essential nature."

POWER FROM CITY REFUSE.

SEVERAL years ago much interest was aroused by experiments in Europe going to show that much of a city's waste might be made a source of revenue as a combustible instead of having to be disposed of at considerable expense. Major Woodbury, New York City's commissioner of street-cleaning, has been trying experiments along this same line, but *The Western Electrician* does not share his rosy views regarding their possibilities. It asserts that the European tests have not turned out well and that for those begun in New York no better fate can be expected. Says the writer:

"About once in so often the public is regaled with a story setting forth that a zealous official of some American city has discovered a 'mine of wealth' in the street refuse now going to waste, but which might, instead, be utilized as fuel under the furnaces of an electric-light plant, by which miles of streets might be illuminated, practically without cost. The latest of these prophets appears to be Mr. Woodbury, the commissioner of the Department of Street-cleaning in New York City, who has made a prediction, it is said, that in five years New York will be able to light half of its area, or nearly so, by energy divided from the incineration of waste material picked up in the streets, which until now has been thrown into the sea. 'Mr. Woodbury has turned into fuel the material heretofore regarded as the most worthless of all the waste products of the city,' says the pleasing account. 'While it has cost the city from nineteen to thirty cents a cubic yard to dispose of it in the past, bids are now being made for its purchase by the Manhattan Elevated and the Metropolitan Street Railway companies. Commissioner Woodbury has demonstrated that he has opened a "mine" which will produce the equivalent of 19,036 tons of the best anthracite coal annually, and the cost will be reduced to a minimum.'

"It is a pity to throw a damper on such glowing prospects, but, unfortunately, in England, where experiments with refuse destructors in electrical generating-plants have been exhaustively carried out, the results have been unsatisfactory. The refuse can be destroyed in the incinerators all right, but the process is not economical from the steam-raising point of view. Of course, Commissioner Woodbury may have something new up his sleeve, but the probabilities are that his bright anticipations will never be realized."

Why is It Harder to Back than to Pull a Train?—A writer in *Popular Mechanics* answers his question by reminding us that it is a difficult feat to balance a walking-stick on end on the finger, for the reason that the base of support has to be constantly moved in order to keep it approximately under the shifting center of gravity. He says:

"This illustration is, in a way, analogous to what an engine tries to do when it backs a train of cars along the track. If one tries to push a cart along the roadway one will find that it takes a lot of steering to do it. In the case of railway cars there can be no such intelligent steering, as the push is only delivered through the coupling, and as this can not be moved to the right or left, it happens that the necessary 'steering' has to be done by the rails, with additional flange friction. If the balancing of one stick on the finger be a difficult task, the balancing of a second on top of the first would be still more difficult, and when the analogy is applied to the case of a long train it is easy to see that in order to keep the backing train straight without the aid of the track and flange friction the engine would have to do such an amount of 'steering' as would be quite out of keeping with its dignity as a steady-going locomotive in good standing."

A Fossil Egyptian Monster.—The skull of a gigantic mammal, hitherto unknown to science, has been unearthed from the sands of Fayum, Egypt. It was described recently by E. Ray Lankester to the Paris Academy of Sciences, as we are informed in *Cosmos* (April 11), which also gives the following description:

"The remains were found by officers in the service of the Egyptian geological survey. The name of Arsinoïtherium has been proposed for the animal, after Queen Arsinoë, who had her palace near the region, now a desert, where the interesting fossil was discovered. The head is nearly a yard long. On the nasal region is found a double bony horn of enormous size. Near the eyes is also found a pair of smaller horns. At first sight the entire skull recalls that of the rhinoceros. But the resemblance is quite superficial, since the horns are solid bony masses and the teeth bear no resemblance to those of the rhinocerotides. Mr. Lankester is disposed to regard the Arsinoïtherium as descended from the primitive stock of the elephants."—*Translation made for* THE LITERARY DIGEST.

SCIENCE BREVITIES.

"CONSIDERING the articles which fairly inundate the newspapers and magazines regarding the submarine boats, one would think that this type had achieved success," says *The Marine Review*; "but really the submarine is not worth the space that has been given to it. It would be difficult indeed to outline any points upon which the submarine has been a success, except, perhaps, the single point that it has successfully remained stationary on the bottom of a body of water for a few hours. But even this is a doubtful honor: the crew suffered great physical and mental fatigue, and it is a foregone conclusion that they were not in a warlike mood at any time during the experiment. It isn't the things that are on the outside of the submarine that need to be worried about it; it is those which are on the inside. The submarine is without practical maneuvering power, and all the experiments which have been held so far justify this statement. To flounder about is not to maneuver. It has no defensive qualities whatever in itself and its offensive qualities are largely imaginary."

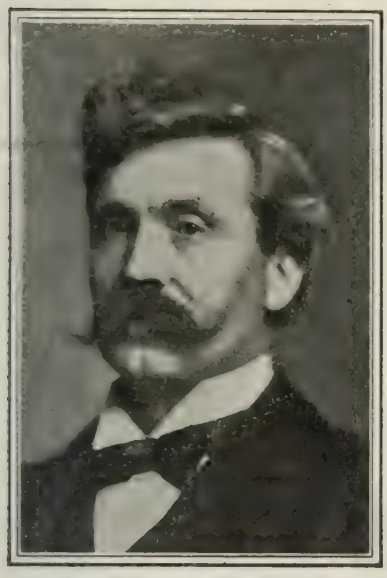
THE great cut-off on the Southern Pacific Railway crossing Great Salt Lake, Utah, which was described some time ago in these columns, has recently given much trouble by portions of the embankment sinking out of sight. Says *Engineering News*: "The bottom is covered with a thick and hard crust of salt, tho at some points exceedingly soft and treacherous bottom was encountered. These latter points gave much trouble during construction and required constant filling in as the roadbed sank in the lake. The first engine to be run over the completed line was thrown into the lake by the sinking of the track at the worst section; this was on March 24. On April 2 a train was proceeding toward the gap, and had reached a stretch of about 500 feet of trestlework near the gap when the trestle sank under the load and threw the train into the lake. A thorough investigation is being made of the treacherous ground. It is thought that the channel of a former river, filled with mud to great depth, exists at the points where the sinking took place."

"SILK is known to be the secretion of two glands of the silkworm alongside of the digestive canal," says *Die Seide*, as quoted in *The Scientific American*. "These glands, which consist of tubes in numerous coils, terminate in the spinning-wart, and open in a common orifice from which the secretion, of the consistency of honey, issues forth, promptly hardening into a thread on exposure to the air. Usually the silk is colorless on leaving the body of the silkworm, but sometimes it is straw yellow or greenish. There has been a dispute of long standing between the savants as regards the origin of this coloration. Some claimed that the larva itself produced the color, others ascribed it to impurities which it acquired upon secretion, and still others were of the opinion that the green color of the leaves of the mulberry-tree was the cause of the coloring. The last-named opinion seems to be the correct one. Latterly, Levrat and Conte fed silkworms on mulberry leaves which had been saturated with non-poisonous aniline red and aniline blue. The result was that not only the silkworms turned red or blue, but they also secreted silk of the respective colors. Injections of the above-named dyestuffs into the anal organ of the silkworm produced the same result."

THE RELIGIOUS WORLD.

SIGNIFICANCE OF THE PRESBYTERIAN GENERAL ASSEMBLY.

PRESBYTERIANISM will become an aggressive religious force in the United States as one outcome of the Presbyterian General Assembly, according to the animated comment which its labors at Los Angeles, Cal., have inspired in the religious press. Creed revision is now an accomplished fact, the Twentieth Century Fund has passed the $12,000,000 limit, and harmony is the prevailing "note" in the denomination. Such are the features of the situation as brought out by the Presbyterian organs. Creed revision, altho the foremost topic before the commissioners, "excites comparatively little interest," says *The Herald and Presbyter* (Cincinnati and St. Louis), "because of the unanimity of the church." The negative vote on revision, it remarks further, was "comparatively small." The prediction is made in the Presyterian press generally that the church will now adopt an energetic policy to counteract what *The Christian Work and Evangelist* terms "the prevailing religious decline, which affects all religious bodies, and from which, in common with them all, the Presbyterian Church suffers":



REV. ROBERT F. COYLE, D.D.
Moderator of the Presbyterian General Assembly.

"As we have previously noted, this matter has been emphasized in various quarters, and notably at the recent meeting of the Presbyterian Union in this city, where it was shown that during the last twenty years Presbyterianism has not kept pace with the growth of the large cities. But in part this is explained by the great volume of immigration that is pouring into the great cities and settling there. . . . It may be assumed that the Assembly will give the matter attention; and we may add that the very fact that the Assembly and the presbyteries as well realize the situation and are giving it attention furnishes cause for belief that all that can be done to remedy the condition will be: the peril in such condition lies in ignoring the seriousness of the situation; this peril assuredly does not confront the Presbyterian Church, which was never more aggressively awake than at the present time."

The same authority has confidence in the outcome of the work planned by the Assembly among the foreign population of the country. *The Presbyterian Banner* (Pittsburg) likewise regards a revival of Presbyterianism among the indifferent and a spread of it among those who have not been brought under the influence of religion hitherto as a reasonable inference from the existing harmony. It thinks the present practical unanimity regarding creed revision a most hopeful sign, observing:

"The movement for revision that started at St. Louis in 1900 comes to its culmination and conclusion at Los Angeles in 1903. The movement seemed unexpected and unpromising at first, but it has steadily gained in mass and momentum as it advanced, until it now arrives at its goal with the almost unanimous approval of the presbyteries. The differences between the advocates and opponents of the present revision are not serious, and the result will leave no sore feelings behind it, but will be loyally accepted by all parties. No partizan note of triumph should be sounded over the outcome, for we all are brethren and equally interested in and devoted to the welfare of the church. It falls to the present Assembly to close up the work of revision and then set the face of the church forward to the practical needs and large issues of the future."

It is not overlooked in the Presbyterian press that the church is raising a Twentieth Century Fund, and that, too, on a scale commensurate with the undertaking of the Methodists. The latter reached the $20,000,000 mark, and the Presbyterian fund has now attained a total exceeding $12,000,000, which prompts *The Interior* (Chicago) to assert that "all Presbyterian heads" should "lift up"—all Presbyterian heads, at any rate, "that have been hanging down since the great success of the Methodists in raising twenty millions was announced."

JEWISH PRESS ON THE KISHINEFF OUTBREAK.

WHAT impresses the Jewish press most in connection with the Kishineff atrocities is the fact that the nation responsible for permitting what *The Jewish Chronicle* (London) terms "a murderous bout of maddened savages," prides itself upon its orthodox Christianity. "Not even the women and children were spared by the 'Holy Russians,'" remarks the organ of British Judaism, which fears that the twentieth century of the Christian era is no great improvement, morally, upon the first. The Jewish press in this country indulges in a very similar train of reflections, *The American Israelite* (Cincinnati) declaring:

"The massacre commenced without the slightest warning, and was distinctly a religious crusade. On Easter Sunday several priests of the established church preached inflammatory sermons, denouncing the Jewish religion and those who professed it. After the service they put themselves at the head of their flocks, and, crucifix in hand, held on high, led them, calling on them to destroy the synagogs. Robbery, arson, butchery, and rape followed, and lasted for three days before the authorities gave the permission, without which the victims of brutalism in Russia dare not even defend themselves. It was only on the fourth day that an attempt was made by the police and soldiers to restore order, when the mob, having done all the harm possible to the Jews, were becoming dangerous to the well-to-do Christians."

The attempt of the Russian Government to conceal the truth from the world "is an example of moral turpitude that excels, if possible, the cruelty of the murderous assault itself," thinks *The Jewish American* (Detroit). The Russian Minister of the Interior has been guilty of "an attempt to foist upon the defenseless Jews the blame for the horrible outrage perpetrated against them":

"If the historian or the moral philosopher seeks for an illustration of the depths of cruelty and utter shamelessness to which religious bigotry can lead a people, he will find it in the attitude of indifference assumed by Russia toward the atrocious anti-semitic outbreak that occurred the day following Easter at Kishineff, Bessarabia. The fact that hundreds of Jews were killed outright, or brutally injured, that their homes were looted and burned down over their heads, scarcely perturbed the placidity of the Russian police officials. But now comes the official report on the whole occurrence, by the Minister of the Interior, which shows on the one hand the miserable depths to which Russian bigotry has sunk the empire, and on the other the absolute consciencelessness of those in power. . . . Attributing as he must the animus for the attack to the century-old lie that the Jews commit 'ritual murder,' he wishes to make the world believe that the actual outbreak was caused by the mistreatment of a Christian woman by a Jew. And the remarkable part of the matter is that many enlightened Christians outside of Russia seem ready to accept this version of the outrage without question or comment."

"The Jewish people are called upon to 'pay the piper' in the horrible Kishineff affair," notes *The American Hebrew* (New York.) "The violence of the mob will not be paid for by the

Russian Government, but as soon as we are informed, gradually, of all the anguish and despair created by the rioters, the cowardly Government whose negligence is the cause of the misery will abjectly permit the Jews of the world over to step in to assuage the wounds of their brethren."

A MODERN JEWISH ESTIMATE OF CHRISTIANITY.

THE Messianic promises have not been fulfilled. This is the most radical feature of the general estimate which twentieth-century Judaism passes upon Christianity. So much we learn from Rabbi Kaufman Kohler, Ph.D., of Temple Beth-El, New York, who has now become president of the Hebrew Union College in Cincinnati, and who is a leader of the "progressive" wing of American Judaism. Under the title "Christianity in its Relation to Judaism," he writes in the newly issued fourth volume of "The Jewish Encyclopedia," and opens the subject in these words:

"Christianity is the system of religious truth based upon the belief that Jesus of Nazareth was the expected Messiah, or Christ, and that in him all the hopes and prophecies of Israel concerning the future have been fulfilled. While comprising creeds which differ widely from one another in doctrine and in practise, Christianity as a whole rests upon the belief in the God of Israel and in the Hebrew Scriptures as the word of God; but it claims that these Scriptures, which it calls the Old Testament, receive their true meaning and interpretation from the New Testament, taken to be the written testimonies of the apostles that Jesus appeared as the end and fulfilment of all Hebrew prophecy. It furthermore claims that Jesus, its Christ, was and is a son of God in a higher and an essentially different sense than any other human being, sharing in His divine nature a cosmic principle destined to counteract the principle of evil embodied in Satan; that, therefore, the death of the crucified Christ was designed by God to be the means of atonement for the sin inherited by the human race through the fall of Adam, the first man; and, consequently, that without belief in Jesus, in whom the Old-Testament sacrifice is typified, there is no salvation. Finally, Christianity, as a world-power, claims that it represents the highest form of civilization, inasmuch as, having made its appearance when the nations of antiquity had run their course and mankind longed for a higher and deeper religious life, it regenerated the human race while uniting Hebrew and Greek to become the heir to both; and because it has since become the ruling power of history, influencing the life of all nations and races to such an extent that all other creeds and systems of thought must recede and pale before it."

JEWISH STRENGTH IN NEW YORK CITY.
Courtesy of *The Federation* (New York).

This, it will be noted, is "advanced" Judaism's estimate of Christianity's historical place in the world. In explaining the causes responsible for the place won by Christianity, Rabbi Kohler remarks:

"That the movement did not end with the crucifixion, but gave birth to that belief in the risen Christ which brought the scattered adherents together and founded Christianity, is due to two psychic forces that never before had come so strongly into play: (1) the great personality of Jesus, which had so impressed itself upon the simple people of Galilee as to become a living power to them even after his death; and (2) the transcendentalism, or other-worldliness, in which those penance-doing, saintly men and women of the common classes, in their longing for godliness, lived. In entranced visions they beheld their crucified Messiah expounding the Scriptures for them, or breaking the bread for them at their love-feasts, or even assisting them when they were out on the lake fishing. In an atmosphere of such perfect naiveté the miracle of the Resurrection seemed as natural as had been the miracle of the healing of the sick. Memory and vision combined to weave the stories of Jesus walking on the water, of the transfiguration on the Mount, and of his moving through the air to be near the divine throne, served by the angels and the holy (not 'wild') beasts ('hayyot'), and holding Scriptural combats with Satan. The Messiahship of Jesus having once become an axiomatic truth to the 'believers,' as they called themselves, his whole life was reconstructed and woven together out of Messianic passages of the Scriptures."

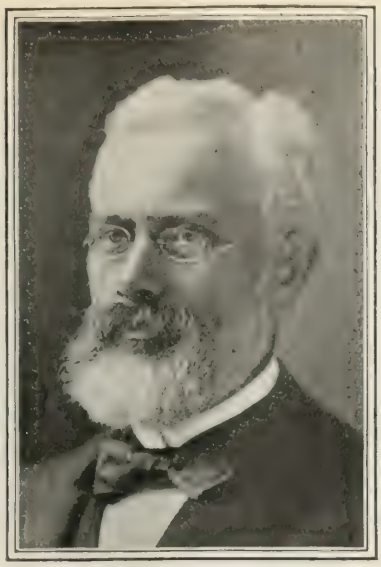
The further fact which Christianity must face, Dr. Kohler thinks, is that the Messianic promises have not been fulfilled:

"On the contrary, the medieval church divided men into believers and unbelievers, who are to inherit heaven and hell respectively. With the love which she poured forth as the fountain of divine grace, she also sent forth streams of hatred. She did not foster that spirit of true holiness which sanctifies the whole of life—marriage and home, industry and commerce—but in Jewish eyes seemed to cultivate only the feminine virtues, love and humility, not liberty and justice, manhood and inde-

pendence of thought. She has done much in refining the emotions, unfolding those faculties of the soul which produce the heavenly strains of music and the beauties of art and poetry; but she also did all in her power to check intellectual progress, scientific research, and the application of knowledge. Her tutorship sufficed as long as the nations under her care were in the infant stage; but as soon as they awoke to self-consciousness and longed for freedom, they burst the shackles of dogma and of ecclesiastical authority. Thus the church was broken up into churches."

If we consider, finally, the relative position of Christianity among the world's religions, we find:

"Christianity is not an end, but the means to an end; namely, the establishment of the brotherhood of man and the fatherhood of God. Here Christianity presents itself as an orb of light, but not so central as to exclude Islam, nor so bright and unique as to eclipse Judaism, the parent of both. Moreover, room is left for other spiritual forces, for whatever of permanent value is contained in Brahmanism, especially its modern theistic sects, and in Buddhism and in the theosophic principles derived from it, and for all religious and philosophical systems that may yet be evolved in the process of the ages. In fact, whatever constitutes humanity and bears the image of God, whatever man does in order to unfold the divine life—that helps to make up the sum of religion."



RABBI KAUFMAN KOHLER,
Newly elected President of the Hebrew Union College, Cincinnati.

A FRENCH VIEW OF EMERSON'S THEOLOGY.

AN exposition of Emerson's thought is a task of singular delicacy, thinks M. Victor Basch. M. Basch, it is proper to explain, has won special eminence in France as an elucidator of every form of religious thought. His analyses of the religious philosophy of Nietzsche, of Renan, of every thinker along modern lines, have attracted extraordinary attention, not only because of what is considered his sympathetic insight, but because of the learning which enables him to estimate comparative values. He has done more than any one individual, it is claimed, to convey to the French mind a due sense of the significance of Emerson, whom he deems "the greatest man of letters America has produced." To him, however, Emerson is primarily the creator of a theology born of the soil from which he sprang. Writing in the *Grande Revue* (Paris), he says:

"Emerson never let his thought crystallize into a body of coherent doctrine. His work—except a volume of poems in which recur all the themes he treated in prose enfeebled rather than invigorated by rhythm and rime—is comprised in some hundred essays of unequal length, importance, and tone, embracing the most varied subjects from metaphysics to rural economy, from the philosophy of nature to history, art, politics, and every form of social life. And each of these essays constitutes a complete and self-contained microcosm. In it Emerson touches upon so many problems, looks at them from such numerous points of view and under such unexpected aspects, covering them with such a rich embroidery of anecdotes, of citations gleaned from every literature, of facts borrowed from all sciences, all arts and all trades, that it becomes very difficult to follow his thought, while to reduce it to unity would amount to its mutilation."

With the aid of patience and of sympathy, however, we finally distinguish, amid this network of entwining paths, two avenues leading up to eminences whereon it becomes possible to gaze over the pulsating and, as it were, tropical vegetation of Emerson's ideas. These two avenues we may term respectively "Nature" and "the Individual." Of these two avenues, critics have usually chosen the second, because it is wider. Our critic begins with the first—"Nature." To quote anew:

"Emerson is an idealistic and mystic metaphysician, a disciple of Plato, of Plotinus, of Jacob Boehme, of Swedenborg, and of the modern Platonists, Schelling and Novalis. . . . When we contemplate the generality of things, we are led to distinguish absolutely between external Nature and the soul which we feel active within us. On the one side is that which exists outside of ourselves, that which it is out of our power to modify, that which our eye sees, which our hand touches, distinguishes. On the other side is Thought, incapable of externalizing itself, one, identical, elusive to all our ordinary methods of investigation, known by a unique and unparalleled process, which is without dimensions, that we can neither see nor touch, which evades, apparently, all definition and all formula. Between this Nature and this Thought there are beyond doubt uninterrupted relations, since Thought forms itself upon Nature and Nature submits to be penetrated, in her superficial manifestations at any rate, by Thought. But an untraversable abyss divides them in their inward and true essence, and all the bridges by which science and philosophy have striven to connect them have been swept away one after another.

"Now this dual conception of the universe is wholly expedient and erroneous. To him who can see more clearly and more deeply, the fundamental identity of Nature and of Mind is revealed with striking evidence. Nature and Mind are but the two aspects of one and the same essence, are but the rigorously parallel manifestations of a single and identical Absolute, of one and the same Soul of things, of a one and only God. Every phenomenon of Nature corresponds to a state of Mind, and *this* state of Mind can be represented only by *that* natural fact. Man can no more be understood without Nature's objects than can those objects without himself. All Nature is as a gigantic metaphor of the human Mind, and the whole human Mind is as a vast symbol of Nature. The laws of moral nature correspond as necessarily to the laws of material Nature as does a countenance looked at in a mirror to the image reflected therein. Every object in Nature, if we know how to look at it rightly and penetrate it, appears to us the copy of some faculty of the soul, and every faculty of the soul copies an object of Nature. Mind necessarily manifests itself under material aspects, and reciprocally all material forms embody themselves in human thoughts. A Newton, a Linnæus, a Huber, a Dalton, a Berzelius create a new Nature by their thought. Every man is bound by a secret sympathy to some section of Nature whereof he is the representative and the interpreter."

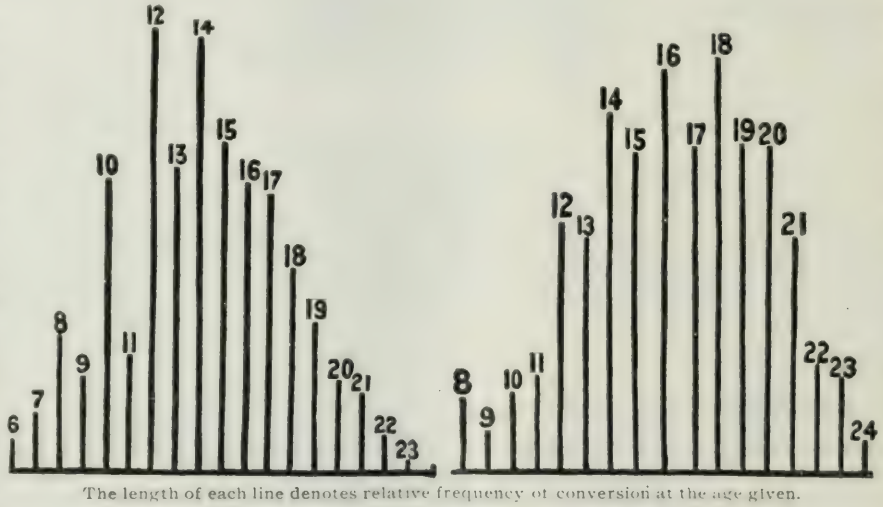
This is the eminence we reach, says our guide, when we have traversed the first great avenue of Emersonian theology. We are next invited by M. Basch to take as our point of departure, "not the Soul of the world and its correlative, Nature, but man himself, the individual." The French expounder proceeds:

"First of all, contrary to all we had a right to expect from the metaphysical essays, we learn that individual souls are separated from one another by barriers invisible, eternal, insuperable. It seems, Emerson tells us, that God has clothed the souls He sends into the universe with qualities incommunicable to other souls, that He has inscribed upon them: 'Not transferable. Good for one trip only.' Nature never duplicates her children, she never creates two men the same. The law of individuality speaks with inexorable voice, 'I am I, you are you, thus we shall remain' (Representative Men). Hence the supreme law imposed upon every soul is to remain itself, to believe in itself, to trust in itself. Emerson's self-reliance is the assured confidence that every created being should have in itself. . . . Always act, preaches the great prophet of energy, in accordance with your own personal inspiration. It matters little whether this inspiration proceeds from above or from below. If you are the son of God you will live according to God, and if you are the son of the

Devil you will live according to the Devil. The only thing that can be required of you is to live in accordance with yourself. How can you be impeached by what others call living according to the Devil, by what they term good and what they term evil?

"There is for you but one good and one evil—that which you pronounce to be such. You are your own legislator and your own prophet. There is but one approbation that need matter to you: that which you allow yourself or which you deny to yourself. Everything that is outside of yourself must to you appear factitious, ephemeral, nothing. Do not let yourself be retained by any tie, by any consideration, by any circumstance. When your genius calls you you must abandon without remorse your father, your mother, and your brothers and sisters."

Thus speaks Emerson, asserts M. Basch. "The theology of Emerson," he continues, "merits the profoundest study." M. Basch is confident of being able to demonstrate, if the opportunity were afforded him, that Emerson, "true to the philosophy of Schleiermacher, taught that there is within us a special faculty, thanks to which we can directly seize spiritual realities; that we possess, outside of all experience and all external pointing out, a revelation of the existence of God." This is how Emerson became "founder and one of the masters of that transcendentalism which so profoundly altered the religious life of America." But M. Basch can only permit himself to explain "how Emerson regarded the religious life of the individual." We quote once more:



The length of each line denotes relative frequency of conversion at the age given.

AGE OF RELIGIOUS INTEREST. AGE OF CONVERSION.

Courtesy of *The Ram's Horn* (Chicago).

"It is clearly manifest at the outset that the religion of the individual confident in his individuality, sole artisan and master of his destiny, can not be that which is taught by the priests of revealed religions. Prayer, to which these priests attribute such prime importance, is a low and vulgar thing whenever it is not contemplation of the phenomena of life from the summit of the supreme eminence to which man may attain—whenever it is not the soliloquy of a soul full of joy, but simply a means of attaining a particular end. From the moment man feels himself truly one with God, he will pray no more."

There are thinkers, says M. Basch in his summing up, "who inspire neither dread nor love, but austere, sublime respect. It is no matter that their voices grow familiar, for they are voices of deep and distant resonance wherein vibrate the organs of temples and the innumerable murmurs of forest and of plain. They seem all reason and they are all sentiment. That is because their sensibility is illumined and clarified by reason precisely as their reason is tempered and humanized by their feelings. Whatever profession they may make they are, and they remain the priests of an unknown gospel, and all their utterances, as the beautiful phrase of Carlyle has it, are 'the soliloquy of a true soul.' It is among such true souls, conquering only through the loftiness of their own unchangeable purity, irradiating all about them the serenity with which they are filled, that we must place the great American individualist, Ralph Waldo Emerson."—*Translation made for* THE LITERARY DIGEST.

THE WAVE OF CONVERSION IN CHILDREN.

AN "enormous proportion" of those who pass the age of twenty-one "irreligious" are "never converted at all," according to that competent authority, Dr. Cuyler; and Mr. Spurgeon is often quoted as having said that "the most healthy Christians in his church were commonly those who began to serve Christ when they were young." *The Ram's Horn* (Chicago), from whose columns we extract these items, also publishes the diagrams herewith, prepared by Mr. Charles T. Kilborne, who says in the columns of that publication: "If people recognized the truth set forth in the diagram showing religious interest, it would not be long before the figures in the second diagram would be decidedly changed, and of course the application of this is so plain as not to require comment." Mr. Kilborne says also:

"I may say briefly that the one showing 'Age of Conversion' was the result of a very careful investigation made among a large group of grown young men, the number being sufficiently large to get a fair average, and they being of sufficient maturity to understand the importance of careful and accurate responses. These results, as disclosed by the responses and manifested in the diagram, are closely identical with other tests made by careful and trustworthy men at other times. The other chart, 'Age of Religious Interest,' was made up from returns received from a similar group under similar surroundings, and its great value is found in this, viz.: It shows that if the same pressure had been brought to bear on these young men at the earlier age, they would have responded just as readily as they did at a later period."

The wave of conversion in childhood differs considerably in the two sexes, notes *The Church Quarterly Review* (London). According to statistics which it has consulted, the age of conversion "belongs almost exclusively to the years between ten and twenty-five," and of the "motives of conversion," especially in tender years, it is given to understand that "fear of death or hell" is present in "fourteen per cent. of cases of both males and females." Our authority adds:

"'Hope of heaven is nearly absent.' Only two per cent. mention love for God or Christ as leading them to the new life. The commonest motive of all is social pressure, the being urged by others (nineteen per cent.). Conviction of sin and the following out of a moral ideal are also of great power (sixteen to seventeen per cent.). Altruistic motives are apparently of slight importance, and response to teaching is a less frequent motive than that of example. Example, in fact, is better than precept; tho only by about three per cent. . . . The statistics relating to the two sexes are compiled separately, and the inference is drawn from their comparison that males are controlled more from within while females are controlled more from without. It may be doubted, however, whether, so far as the converse motive goes (restraining from conversion), the fear of one's fellows does not tell much more powerfully in the case of boys and young men than in that of girls. Most Sunday-school teachers would, we think, be ready to subscribe to the opinion that boys, as a rule, are much less able to withstand ostracism or ridicule than their sisters."

FOREIGN TOPICS.

EUROPE'S CONCERN IN THE FUTURE OF THE PACIFIC.

MR. ROOSEVELT'S ability to inspire animated comment in the European press does not rust in him unused. Following the example of Cortez in Keats's perfect sonnet, he "stared at the Pacific," as many a newspaper has pointed out, but instead of being "silent upon a peak in Darien," he made a speech at Watsonville, Cal., amplifying it later elsewhere. The presidential pronouncement had an instant effect in Europe, occasioning in the Paris *Temps* the reflection that "President Roosevelt undoubtedly has a rather cavalier way of coloring the world's map to suit himself, and he puts his hand upon an ocean with some of the coolness of Bilboquet in the celebrated play, saying unconcernedly: 'This baggage ought to belong to me.'" The interesting organ of the French Foreign Ministry thus pursues its train of thought:

"The German press shows that it is passably moved by the language which President Roosevelt recently made use of regarding the Pacific Ocean. . . . The chief magistrate of the great republic of the New World thought it his duty to affirm that the vast body of water upon whose shores he found himself was destined to fall under the dominion of the United States. To this grandiose assertion he added an exhortation to the American people, whom he implored to rise to the height of their destiny and whom he reminded that a nation renders itself worthy and capable of greatness only by continuous effort and by unceasing labor. Such is the speech which has disturbed the calm of the augurs on the banks of the Spree. . . . American slang, that picturesque jargon which fears neither familiarity of utterance nor vulgarity of expression, has a special phrase with which to characterize such grandiloquence: 'It's a large order,' something equivalent to our own 'Excuse the trifle.' And if the civilized world still remembers the protests evoked by the unfortunate expression of a too ambitious statesman who spoke of making the Mediterranean a French lake, it is beyond dispute, and all the evidence indicates, that the infinitely more exorbitant pretension of making the Pacific Ocean a Yankee lake will arouse opposition elsewhere than in Berlin. Australia, that vigorous commonwealth which has grown up under the protection of the British crown, and which remains, beneath the far-away sovereignty of the king, a loyal and patriotic member of the British empire, Australia will certainly have a word to say on this subject, and it is doubtful if she will resign herself easily to recognizing American supremacy over those vast seas and to permitting the Washington Government to substitute throughout these regions for the proud 'Rule Britannia,' an impertinent 'Rule Columbia.' On the other hand, the powers which have a boundary on the Pacific Ocean are numerous. There is, in addition to England, France, Germany, Russia, Holland, and it is not likely that great states, after having made such great sacrifices for centuries either to acquire colonies or to extend their influence and commerce throughout these remote latitudes, will bow at once before the pretensions of the United States and give way to this new and latest comer."

No doubt the American republic has rights, and very valid rights, in the ocean now under discussion, proceeds the Paris organ. It has a great Pacific coast line, with cities of importance upon it. It has gained a footing in the Philippines. The treaty with Colombia, when ratified, will promote the completion of "that gigantic work, the piercing of the Isthmus of Panama, to which France gave such a powerful impulse." Thereafter the United States will have a direct route and a shortened one, between its two coast lines, and a new hold over the Pacific. "Altho this explains it does not quite excuse President Roosevelt's outburst of prophetic pride." But the authority we are quoting surmises as follows:

"It is quite possible that, true to the plan he has marked out, the orator merely wished to release a current of enthusiasm in favor of his schemes for the creation of a great American navy. He may have thought it advisable to accompany this idea, so dear to himself, with one of those little flourishes about the manifest destiny and future greatness of the republic to which American audiences are so partial. Perhaps, too, he thought it would not be a bad thing for his candidacy in the coming presidential election to vibrate one of those chords in the popular soul which quiver like an Eolian harp at the lightest breath of conquering nationalism."

The exponent of Parisian official thought can not resist the opportunity afforded by this subject to become historically philosophical. "History moves on ceaselessly," it muses, "and hourly

BETWEEN WHILES.
THE CZAR—"And now for the next five minutes I'll work for world-peace."

GERMAN POLITICAL CARTOONS.

the centers of interest, of struggle, and of life are changed. This evolution is accomplished from east to west. After the eastern basin of the Mediterranean, seat of the civilization of remote antiquity, comes the western basin of the same sea, the theater of Helleno-Italian history. Next the Atlantic serves as a vast sphere of action for the nations of the Middle Ages and of the modern era. And now the almost infinite Pacific is about to present its immense stretches for the battles of to-morrow." This order of ideas is not suggested to the German press. The "highstrung words" of President Roosevelt, says the *Hamburger Nachrichten*, "sound the true American note," and for them "only Prince Bismarck would have found the right characterization." They constitute "a challenge to other sea-going nations which leave far behind the recent pretensions uttered by Lord Lansdowne with reference to the Persian Gulf." The Bismarckian organ adds: "It is a fortunate thing that the Atlantic Ocean remains as an apple of discord between England and America, so that until the great, inevitable decision of the freedom of the seas we are free to move about the Atlantic without obtaining gracious leave." The *Kreuz Zeitung* (Berlin), which is credited with peculiarly close relations with the Berlin Foreign Office, observes:

"We are at the beginning of a century and at the same time at the beginning of an epoch of decisive struggles of the nations. The more time lessens space, the greater is the extent to which the oceans become the arena for the display of the strength, the endurance, and the far-sightedness of the nations. Every people that wishes to have a future must give thought to this. As the greatest of the world's stages appears the Pacific Ocean, which the United States is already calling its own. . . . The North American Union has the will to make good its claim to first place in the Pacific, and it is adopting far-sighted measures for the to-morrow that is already being transformed into a to-day."

President Roosevelt's utterance prompts the *Weser Zeitung* to assert that he is "a clever and thinking man, but he is, none the less, the representative of imperialism." "But with the claims to a dominant influence over the Pacific Ocean, the prompt retreat before the will of Russia in the matter of Manchuria is really not in harmony." "North America, to be sure, places before Russia a demand for the open door in Manchuria, but when the Czar does not heed or when he gives a few meaningless assurances, Mr. Hay folds up his protest and sticks it in his pocket."—*Translation made for* THE LITERARY DIGEST.

TURK AGAINST BULGARIAN.

IN the opinion of the *Revue des Deux Mondes* (Paris), foreign affairs present to the intelligent observer nothing of greater interest than that which is attached to the state of the Ottoman empire. Things that would never be tolerated elsewhere, it observes, "and which have all the characteristics of a violent crisis, continue indefinitely without seeming to occasion any special anxiety. Every- body is waiting with wonderful patience for the Porte to carry out the promised reforms in Macedonia":

"Is there really a Macedonian revolution? It is doubtful. But there are in Macedonia revolutionists who have come into the land from outside—from Servia and in larger numbers from Bulgaria. They have put themselves at the head of the movement and determine its character. The despatches never speak of Macedonians in the true sense of that term. It is always Bulgarians who are to the front, who do everything and lead everything. It was the Bulgarians in particular who were guilty of the outrage at Salonica that so greatly moved the civilized world. . . . But the outrage at Salonica was not altogether unexpected. For some days the directors of the imperial bank had been apprised of the danger, and precautions had been taken to avert it. But one can not foresee everything and danger is apt to take unexpected forms. The branch office of the bank had been undermined. Certain Bulgarians had rented a shop some months previously on the other side of the street. They dug a tunnel beneath the surface and filled it with dynamite. On the appointed day at dusk they blew up the city's gas-mains. The darkness was profound. This was the signal. Bombs began to rain over the city and the branch of the bank was blown up. In a few moments it had been reduced to a heap of ruins. But the funds, which were in the vault, escaped capture. The number of victims was considerable, to all appearances, altho no list has officially been published. The Salonica outrage was synchronous, as might have been expected, with a renewal of revolutionary activity in all Macedonia. Bulgarian bands on one side, imperial troops on the other, came into collision and there was fighting everywhere. Sometimes one side won and sometimes the other. The disorder was general. The most recent serious incident took place at Monastir. The details are imperfectly known. Blood flowed. The Turks say the Bulgarians began it. The Bulgarians aver that it was the Turks. Both are equally capable of having done so. Ottoman troops are not patient, especially when they have not received their pay."

Responsibility for all this rests mainly upon the Porte, thinks the great French review. Its detestable government gives a pretext to the revolutionaries. "The Porte might have repaired to a certain extent the evil it has wrought or that it has permitted to be wrought, by executing the promised reforms. Perhaps there would have been an outbreak in Macedonia anyhow. But none the less it would have given evidence of its own good faith and Europe could not fail to note that. Inadequate as the reforms may be, they might have been looked upon as a beginning, accepted as a hope of better things with a sequel to come in the future. But nothing has been done." This is why the revolutionaries have been so exasperated, we are assured. To quote further:

"A secondary responsibility rests upon the Bulgarian Government itself. Prince Ferdinand would, no doubt, have asked nothing better than to place himself at the head of a Macedonian movement, and he would probably have done so had he received the least encouragement from abroad. But he turned to the Powers in vain. He received from all directions the same counsels of prudence and moderation. The Prince is a politician. He understood very well that there was nothing for him to do, at any rate for the present. He gave Europe and the Porte pledges of his good faith by arresting some of the leading revolutionists and by breaking up a few of their clubs. But he saw at once, what he must assuredly have foreseen, that in satisfying Europe he was displeasing his own subjects, and that is a dubious alternative for a prince."

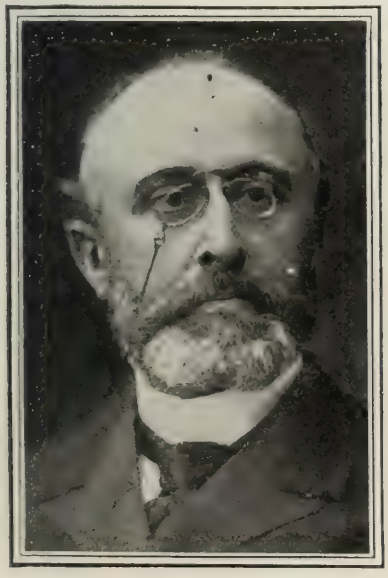
But Bulgaria is making a great mistake in letting Europe see how intimate is the connection between herself and the revolutionary movement in Macedonia, concludes this commentator. "We would also add a word concerning the presence of European war-ships at Salonica. Perhaps the sending of those ships was necessary. Order, or at least public safety, has been restored in the city, and the Ottoman Government is making efforts to maintain it that ought to be efficacious. Yet anything may happen. It is natural for the Powers to take measures to protect their subjects, but it is to be deplored that they did not come to some agreement beforehand. Austria and Italy thought proper to send their vessels to Salonica itself. They are the two Powers most concerned from a geographical point of view, and for that very reason they might have dispensed with the measure. Russia and France were content to send their ships to the vicinity. Our own went to Milo. The inconvenience of this situation is very great. None the less, it would have been best had Austria and Italy refrained from emphasizing their belief that their interests are special or that they have particular views regarding this region of the Balkans. If every one had gone to Salonica, there would have been no occasion to ask why some had done so and why others had refrained. This gives occasion for suspecting that the Powers have not all the same object in view, and in not striving for the same end there appears a defect in the international armor. It has often been said that Austria has

designs upon Salonica and Italy upon Albania. If that be true we have no reason to take offense, but the moment was ill chosen to reveal these things. Let us hope there was a warning in it for the Porte." To this French view the semi-official *Fremdenblatt* (Vienna) presents a counterblast in the shape of an authorized interview with the Bulgarian statesman, Dr. Danef, the center of more than one recent cabinet crisis at Sofia. That more or less warm friend of Russia says the Bulgarian Government means to do nothing that may lead to hostilities between Turkey and Bulgaria. "I admit," he is made to say, "that we have aspirations as regards Macedonia." He proceeds:

"We desire only that better conditions shall prevail in Macedonia, of a character to make life for our countrymen there endurable. We are working for reform, especially the carrying out of the provisions of the Treaty of Berlin. For this reason we regard the Macedonian question as one for the Powers to settle, as a question that our people alone can not solve. We trust that the united action of the Powers will result in the realization of the reforms now absolutely necessary in Macedonia. But how and when this shall take place is a question I am unable to answer. The disturbances in Macedonia I attribute to the fact that the reforms urged by Austro-Hungary and Russia and accepted by Turkey have not been put into effect. As regards the sanguinary events at Salonica, there is throughout Bulgaria a universal feeling of regret and abhorrence. I believe the dynamite outrage was the work of the impassioned, extreme wing of the Macedonian committee, over which the so-called 'inner organization' has lost control."—*Translations made for* THE LITERARY DIGEST.

REPUBLICAN SUCCESSES IN SPAIN.

SEÑOR SILVELA, the Spanish Premier, has not emerged in satisfactory shape politically from the first general election held under the reign of the young King, Alphonso XIII. Every newspaper in Europe that has paid attention to the subject takes this view. The Republicans have made gains which, while not threatening to the dynasty and not important enough to disturb the equilibrium of the Cortes, may at any moment cause an awkward tangle. The Premier's majority is 57, he having 228 votes in the Chamber of Deputies against a combined opposition of 171. The Republicans number 28, but they will be reinforced, in certain contingencies, by ten followers of Señor Canalejas, the radical leader, and there are other elements, not numerous, however, which threaten to vote with the Republicans upon occasion. The *Journal des Débats* (Paris) has paid a good deal of attention to the Republican party in Spain, and when the result of the election became known it remarked:



SEÑOR FRANCISCO SILVELA,

The head of the present Spanish ministry, who faces Republican gains in the Cortes.

"Are we to conclude from this revival of the republican element that republican ideas have made proportional progress among the people? To our thinking the result of the election is to be ascribed to the reorganization of the Republican party. This party, so far as concerned the leadership and the rank and file, had fallen into a state of decomposition that prevented it from rallying all the forces disposed to march with it. But from the day that the party was reorganized under the sole leadership of Señor Salmeron (a distinguished Republican speaker and agitator), this source of weakness disappeared. The dynastic parties realized this so thoroughly that Conservatives and Liberals ceased to oppose one another in districts where Republicans might win, and presented to the common enemy the united front of what is known as monarchical concentration. This concentration of opposing parties, both, however, dynastic, was one of the characteristic features of the elections that have recently taken place."

SEÑOR SIGISMUNDO MORET,

The statesman who is thought likely to become Spanish Premier in certain eventualities.

Just before the elections, this authority made an editorial analysis of the state of the Republican party in Spain, and reached the following conclusions:

"The prolonged effacement that led to a belief in the disappearance of the republican element can be explained on various grounds. The chief one, and the one most serious to the Republican cause itself, was the unhappy experience that Spain had of republican government during the interregnum between the rule of Amadeo and the Alphonsist restoration. Notwithstanding the adhesion of men of great talent and devotion, and notwithstanding the respect which Emilio Castelar inspired even in his opponents, this Spanish republic was as unedifying in its aspect as it was ephemeral in duration. The disorder, anarchy, and impotence under which it was extinguished had brought the country so close to a precipice that the Alphonsist restoration must have seemed like a deliverance. Here then was the prime cause of weakness and discredit in a party from which great things had been expected. Thus was it condemned to effacement during the reign of Alphonso XII. Subsequently, during the minority of Alphonso XIII., there was brought about a sort of truce among the parties to render easier to the Queen Regent the arduous task that had been forced upon her. Moreover, it would have offended the chivalry of the Spaniards to undertake the overthrow of the throne of a boy king. The Republican party would consequently have been discredited, in all probability, had it failed to keep the truce among the parties. Hence Emilio Castelar himself, without renouncing his ideal, retired from active political life and advised his supporters to become reconciled with the monarchy. Finally, the strong organization of the two dynastic parties, Conservative and Liberal, still further impeded the work of the Republicans, as of all parties composed of 'outsiders.' As long as Canovas and Sagasta were alive, firmly leading the two great parties that were the props of the throne, the antidynastic groups could have no chance of succeeding."

To-day, however, the situation has changed very much, if the analysis of the Paris paper be correct. Not only is the King of age and reigning with effect, but various circumstances, and particularly the last reconstruction of the ministry, show plainly that His Majesty does not propose to play the part of a figurehead "without intervening in the affairs of the Government." For this reason, "those of his subjects who had submitted to the child-king now feel themselves in a position to resume their freedom of speech and action. Besides, the disappearance of Canovas and of Sagasta has brought about a state of affairs which the Republicans think may prove advantageous to themselves":

"The Conservatives, it is true, have found a leader in the per-

son of Señor Silvela, now Premier. But something very like anarchy prevails in the Liberal party, where disintegrating tendencies are very manifest, such, for instance, as the democratic movement led by Señor Canalejas. Such being the case, it is not impossible that the Republicans may profit from the break-up by winning over to themselves the most dissatisfied among the Liberals. Thus it was very natural that, as the elections drew near, the Republicans should make a tremendous effort to regain all their lost ground."

This aspect of the Spanish situation has not occurred to the European press generally. The Paris *Temps* points out that the Republican victories are "a serious warning to the monarchical parties," but at the same time the Republicans are by no means numerous enough to count for much. The Spanish press interprets the situation from the point of view of party principle. The Republican organ, the *País* (Madrid), speaks of "the great regeneration," and rejoices that Spain may soon begin to tread the paths along which France, in its opinion, is walking so gloriously. The independent *Imparcial* (Madrid) attributes the present confusion of parties to the "incapacity of the ministry," and it severely arraigns Señor Silvela for permitting the Minister of the Interior, Señor Moret, to assume the prominence in affairs that has been accorded him. The Liberal *Globo* (Madrid) attributes the disgust of the country with the ministry, as it terms it, to the absolutism with which the students were treated during the recent manifestations of popular discontent at Salamanca and elsewhere. The *Dia* (Madrid) notes that many of the voters remained away from the polls on election day, a fact which explains Republican victories in Madrid. The *Heraldo* (Madrid), the organ of the democratically inclined Señor Canalejas, an anti-clerical leader, says that if the Government does not divorce itself from reactionary influences, the most dire results will ensue. It charges the judiciary with being in the service of the enemies of freedom, and it thinks that popular discontent may speedily assume dangerous forms. The dynastic *Epoca* (Madrid) warns the ministry against trifling with the dangers presented by "Republican passion," and it advises a combination of all the monarchical elements against the "common enemy." The military and more or less reactionary *Correspondencia* (Madrid) declares that the throne must be supported at all costs, while the *Diario Universal* (Madrid) hints at a coming reconstruction of the ministry. The Minister for Finance recently resigned because he could not approve of the expenditures upon the army and navy. The *Correo* (Madrid) sees reason to think that Silvela's own tenure is not too strong at present. The *Liberal* (Madrid) has been given to understand that Señor Moret, whom it deems clerical, may, in certain contingencies, be called upon to form a new ministry composed of monarchists. Throughout the Spanish press there is more or less veiled allusion to misunderstanding of the constitution "in exalted quarters," which seems to be a euphemistic way of saying that the young King has extreme views of his own prerogative.—*Translation made for* THE LITERARY DIGEST.

THE CROATIAN UPHEAVAL.

CROATIA is an important region officially included within the Hungarian portion of the dominions of the Emperor Francis Joseph. But the Croatians proper are of opinion that they should not play second fiddle to Hungary in the Hapsburg monarchy. They hate Magyar rule and aspire to such a position of comparative independence as Hungary herself enjoys. The Croatians have gone to the length of addressing Francis Joseph as "King of Croatia" at times. There is in Croatia, however, a Servian element equally opposed to Hungarian rule, but separated by differences in religion and in political aims from the Croatians proper. The result has been a tendency to bitter feuds, which have called for military intervention, altho just now, in the opinion of the *Frankfurter Zeitung*, the outbreak is directed against Hungarian rule, and it thinks that the situation "must seriously concern the dynasty." "Of the many complicated problems before the Hapsburg monarchy," it observes, "the Croatian problem is certainly one of the most complicated." And the *Journal des Débats* (Paris) remarks: "Here are new complications arising in the direction of Croatia, where grave disturbances are reported, as if the internal situation of Hungary were not sufficiently complicated by the parliamentary anarchy reigning in Budapest." The Paris paper adds:

"It is all a new phase of the quarrel of nationalities in Hungary, which is itself in turn but a phase of the far more general conflict of Austro-Hungarian nationalities taken in its entirety. When one remembers that it is upon the issue of this conflict that depends the fate of the dual monarchy, it will be seen how great an interest attaches to each of its manifestations. For a long time the attention of the outside world has been drawn only to the quarrels among the Austrian nationalities, in particular to those of the Czechs, the Poles, the Germans, and the Italians of Cislithania, to speak of the principal ethnical elements inhabiting this half of the monarchy. The fact was lost sight of that something very similar, on a less scale, goes on in Transleithania, where the Magyars have succeeded in establishing their supremacy, altho they comprise only a minority of the population. The agitation among the Rumanians of Transylvania did, it is true, reveal at one time that Transleithanian harmony was more artificial than real. But the storm was stilled and we again grew accustomed to seeing the Magyars, a gifted people, well organized politically, dominant in a land where their right to conduct themselves as masters is disputed. Little by little, however, the non-Magyar nationalities regained their self-consciousness. At the last election for members of the Diet they brought forward nationalist candidates. Some among them were even elected and thus was constituted in the Parliament the so-called nationalist group, a little band of protesters against the Magyar rule."

As regards Croatia, continues this commentator, the "anti-Magyar agitation manifested there is the more surprising because that portion of Transleithania enjoys, as regards Hungary, very great autonomy, by virtue of the compromise of 1868, modified in 1873. Croatia has its Parliament or Landtag, which sits at Agram, such as the Czechs would like to see in session at Prague. It is only for the consideration of mutual commercial, financial, and military interests that this Croatian Landtag sends forty deputies to the Hungarian Chamber, and three to the House of Magnates, in which sit also Croatian magnates. A minister for Croatia is connected with the Transleithanian ministry. As for the Ban of Croatia, he represents the King far more than he governs the country." The *Indépendance Belge* (Brussels) declares that "the violent events reported from Croatia merit the most serious attention," adding:

"A nationalist campaign is going on there that has been in process of organization for months past and which now seems ripe for some kind of action. The priests have absolutely fanaticized the peasants, and have made them swear to kill all who manifest Magyar sentiments. Manifestos invite the population to form bands, to cut the telegraph lines, to blow up the railway lines, that the Hungarian authorities may thus be precluded from interfering. . . . Premier Szell is vainly declaring that the despatches exaggerate the gravity of the situation. He can not completely reassure public opinion, for the facts are there to attest the gravity of the movement. The Premier also thinks that the Croatians are not impelled by an unquenchable hatred of the Hungarians. M. Szell, it appears, has strange delusions and his optimism may be dangerous."

One of the causes of the disturbance, and indeed the principal cause, according to the *Pester Lloyd* (Budapest), is the Croatian demand for greater independence of Hungary. This demand can not be granted, it thinks, because the Croatians are not capable of a greater degree of self-government than they now enjoy. "Highly developed Austrian peoples," it remarks, "who in civilization and in political maturity far excel the Croatians, would deem themselves fortunate if anything like such an extent of self-government were accorded them as is possessed by the Croatians."—*Translations made for* THE LITERARY DIGEST.

NOTABLE BOOKS OF THE DAY.

A GREAT HUMAN DOCUMENT.

THE STORY OF MY LIFE. By Helen Keller. With Her Letters and a Supplementary account by John Albert Macy. Illustrated. Cloth, 5¾ x 8¼ in., 441 pp. Price, $1.50. Doubleday, Page & Co.

THIS is a remarkable human document, and the most remarkable thing about it is the cheerful, winsome, wholesome spirit that shines out in all the pages. There is no morbidness and self-pity. There are sad incidents to relate—the incidents of childhood before Helen Keller had in a measure broken down the barriers that kept her in the world, yet not of it; the incident of "The Frost King," a little story which she unconsciously plagiarized almost *in toto*; and others; but all these are told so simply and have evidently left behind them so little bitterness of sorrow, that they serve only to heighten the lights of the picture by contrast.

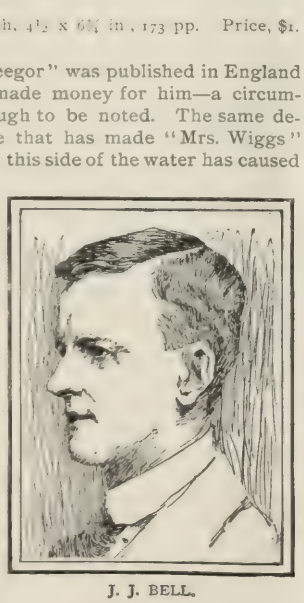
HELEN KELLER.

The work is divided into three parts: I., the story; II., the letters; III., the supplemental account including letters of Miss Sullivan, Helen's teacher. We get the story thus from several different angles and in all its interesting minutiæ. It is like living with the little deaf, dumb, and blind girl, and witnessing every step in the process of her education, and sharing all her feelings—her joy at the discovery that everything has its own name, her perplexity in understanding the meaning of abstract terms such as *think* and *love*, her determination to learn to talk by feeling the muscles of the mouth and throat of others and imitating them, her elation when she succeeded in passing the regular examinations for entrance into Radcliffe College. From the wilful, spoiled little despot who had to be removed from all but her teacher for two weeks until she had learned the lesson of obedience, to the Radcliffe junior, studying higher mathematics, philosophy, and science, and on friendly terms with many distinguished men and women, such as Joseph Jefferson, Senator Hoar, Dr. Edward Everett Hale, Mrs. Grover Cleveland, Charles Dudley Warner, and others, was a long distance to travel; but it is all too short in the telling. It is one of the rare books of the world, not because of supreme literary excellence, tho the literary quality is excellent; but because of its uniqueness. We get an intelligent view of the world from a new angle; and of how very few books that can be said!

A LITTLE SCOTCH BOY.

WEE MCGREEGOR. By J. J. Bell. Cloth, 4½ x 6¾ in., 173 pp. Price, $1. Harper & Brothers.

WE understand that "Wee McGreegor" was published in England at the author's expense and made money for him—a circumstance which is unusual enough to be noted. The same delight in homely and humorous people that has made "Mrs. Wiggs" and "Lovey Mary" such successes on this side of the water has caused the success of "Wee McGreegor."



J. J. BELL.

It is fairly safe to predict that the people in this country who enjoyed the prattle of the dwellers in the "Cabbage Patch" will also enjoy the talk of the little Scotch boy. There is no plot, no sequence of events of any kind. There is no motive and no moral to the book. It is merely the perfectly natural talk of a little boy and of his parents, who spoil him abominably.

There is no note of exaggeration or burlesque; it is merely a very unpretentious page out of real life. Drama, romance, plot, and style are all very well in their way; but when all is said and done, the thing which touches every one's heart and pleases every one is simple and kindly human nature. It was the homely wisdom of "David Harum" which people cared for, in spite of its bad construction. "Lovey Mary," who "answered so well to primming," has won more hearts than any other of this year's heroines. So "Wee McGreegor," who is a little glutton and no hero in any way, will find people by the thousands to be amused with his commonplace little doings, so well described by the author.

There is another reason for the popularity of such books. They are easy to read. They do not tax one's attention. They neither bore one nor excite one, yet there is enough going on to keep a contented smile on one's face. In a country where people work so hard, they want from books what they demand from the theater—a little gentle amusement.

MORE LETTERS OF CHARLES DARWIN.

MORE LETTERS OF CHARLES DARWIN. A Record of His Work in a Series of Hitherto Unpublished Letters. Edited by Francis Darwin, Fellow of Christ's College, and A. C. Seward, Fellow of Emmanuel College, Cambridge. In two volumes. Cloth, 5¾ x 8½ in.; vol. i. 494 pp., vol. ii. 508 pp. Price, $5 net. D. Appleton & Co.

IN these new letters of one so long and well known, no one expects any new revelation or startling development. They afford rich biographical material for those who have leisure for the patient, continuous study of a great character. They show how consuming a passion scientific study had become with Darwin, so that he utilized for it all his working time, sick or well, at home or abroad. He was perpetually studying science, not because he must, nor because he had resolved to, but because he loved to. This correspondence thus affords us one of the finest possible examples of what a man can do who gives his whole soul to a single pursuit. We see also how he utilized all his friends for his chosen study, suggesting to every one in the world who could help just what help he wanted, and what observations or experiments would meet the need, by this means immensely widening his own range of research. It is interesting to see how his imagination went on in advance, forecasting the minutest details of experiments which he could not personally oversee. Thus he writes to Mr. A. D. Bartlett:

CHARLES DARWIN.
Courtesy of D. Appleton & Co.

DOWN, Feb. 16 (1867 ?).

I want to beg two favours of you. I wish to ascertain whether the Bower-Bird discriminates colours. Will you have all the coloured worsted removed from the cage and bower, and then put all in a row, at some distance from bower, the enclosed coloured worsted, and mark whether the bird at first makes any selection. Each packet contains an equal quantity; the packets had better be separate, and each thread put separate, but close together; perhaps it would be fairest if the several colours were put alternately—one thread be of bright scarlet, one thread of brown, etc., etc. There are six colours. Will you have the kindness to tell me whether the birds prefer one colour to another?

Numberless similar instances might be collected from these volumes. These letters are for the most part to (occasionally from) eminent men, as Huxley, Lyell, Müller, Owen, Wallace, Asa Gray, and others. It is pleasant to note the good-fellowship and mutual helpfulness prevailing among this company of masters, and the kindly feeling pervading their intercourse, as in the case of A. R. Wallace, the co-discoverer with Darwin of evolution, where between smaller souls there might have been jealousy and hostility. Personal allusions of great interest with regard to the life of the eminent naturalist are scattered through the work. The compilers have wisely divided the letters into classes according to chief subjects, as Evolution, Geographical Distribution, etc. The volumes are beautifully printed, and illustrated by portraits of exceeding interest.

THE LOQUACITY OF MAXWELL GREY.

RICHARD ROSNY. By Maxwell Grey. Cloth, 5 x 7½ in., 507 pp. Price, $1.50. D. Appleton & Co.

IT is a somewhat unflattering comment on the quality of this novel by "Maxwell Grey" (Mrs. M. G. Tuttiet) that the reader should be primarily impressed by its length. A work of fiction that "drags at each remove a lengthening chain" and costs its author nearly two hundred thousand words for its expression would need to be a gigantic scheme not to deserve censure as almost wantonly prolix. The novel of this English writer which incited most interest was "The Silence of Dean Maitland." In this last one, too, the silence of the hero is an undercurrent. Where reticence is so alluring as a motif, or general color, it is amusing to find wordiness a fault of the story based upon it. His biography happily includes the vicissitudes of infancy and earliest childhood, since Richard is first presented as a tall boy of nine, violently wrathful over his mamma's second marriage. But from then on to middle-age, he forges ahead through page after page as a Man of Sorrows. In a world not so full of joy as to lend to unhappiness charm as relief to satiety, one is prone to resent such wholesale largess of harrowing grief. It seems a mistake to offer it as a recreation!

"MAXWELL GRAY."

Maxwell Grey's style is not bad, but neither is it so exquisite or fas-

cinating as to "carry-off" half a thousand octavo pages. Rosny is a noble and manly fellow; but if he had been endowed a trifle more with "horse-sense," many of his hardships would have had no place in his life. He is too good, in the main, yet not good enough in some very important, tho almost commonplace, duties.

Arlo Bates says that "books overloaded with description do indeed please the unimaginative, who like to soak in warm, shallow pools of epithet and to suppose that they have been thrilled." In which case, this is eminently a book for folk with numb fancy. But Stevenson's remark is more in order here. "No human being," he says, "ever spoke of scenery above two minutes at a time, which makes one suspect we hear too much of it in literature." This is certainly true of Richard Rosny, pages of which will be blithely skipped by the majority of its readers.

The character-drawing is also labored and not too consistent. Mrs. Rosny's second marriage results in a brood of children, and the whole family, including the step-son Richard, find life a burden, thanks to the worthless man she has taken for a husband. He finally becomes an opium fiend and is gratifyingly killed off midway in the book. Then Richard gives up his position in the navy to "go into business," at which he proves a phenomenal success. All the family shift their natures and begin to prey on him for luxurious living. He has a disastrous love affair; then, several years later, marries another girl, whom he neglects from that time forth through his engrossing sense of duty and philanthropy! The consequences are natural enough, and lead to a climax more bourgeois than tragic. The author's sense of humor is not pervasive enough to lighten the ponderous narrative, just as her force is not sufficient to make of Rosny a convincing hero.

AN AUTHORITATIVE WORK ON COLUMBUS.

CHRISTOPHER COLUMBUS: HIS LIFE, HIS WORK, HIS REMAINS. By John Boyd Thacher. Vol. I. Illustrated. Cloth and parchment, 8 x 11½ in., 670 pp. Price, $9 net. G. P. Putnam's Sons.

THIS elaborately planned work really comes within the class which Charles Lamb describes as "biblia abiblia," or, in other words, books that are no books. It is designed to contain all the raw materials that throw light upon the career of Columbus. The materials are in many instances very raw indeed. Not content with giving everything relating to Columbus himself, Mr. Thacher in the present volume even goes the length of biographies of his biographers. The first accounts of the epoch-making voyages were given by Peter Martyr and De las Casas, consequently we have as prolegomena to the life itself very full accounts of Peter Martyr and the Bishop of Chiapas. This appears to be outdoing the zeal of the amateur Othello who blacked himself all over.

JOHN BOYD THACHER.

When we get to the life itself, Mr. Thacher is just as thorough, and discusses all the suggestions that have ever been made as to the birthplace and date of birth of his hero. He gives full accounts—and this for the present is the most interesting part of this work—of the equipment and cost (amounting, he reckons, to about $7,200) of the three tiny vessels which carried Columbus and all our fortunes, and he provides us with a translation of the journals in which Columbus wrote down his experiences, and hopes, and fears. The scale upon which the work is conceived may be judged from the size of the first instalment, which takes nearly seven hundred pages to get Columbus safe back to Barcelona from his first voyage, without any discussion of the problems which the journals raise, and which Mr. Thacher will doubtless attempt to solve.

The chief difficulty with regard to Columbus's plans is to determine how far they were suggested by the letter of Toscanelli. As is well known, Columbus's descendants made a great point of the influence this letter had upon the navigator's mind, in order to convince the world that the discovery was no mere chance, but the outcome of deliberate inquiry and scientific investigation. Mr. Henry Vignaud has recently attempted to prove that this letter was a later invention and forgery, and that no such wide, deep-laid plans were in Columbus's mind. As might be expected, Mr. Thacher does not accept this belittlement of his hero, and attempts to prove the authenticity of the Toscanelli letter by the well-known transcript, claimed to be in the very handwriting of Columbus. Unfortunately he does not in the present volume give the promised comparison of the handwritings, and the question still remains before the courts.

Altogether, while Mr. Thacher's work can not claim to be readable, the thoroughness of its apparatus and the completeness of its presentation of all the facts of the case will necessarily make it for a long time to come the authoritative work on the great discoverer.

THE UNDER-WORLD.

THE RISE OF RUDERICK CLOWD. By Josiah Flynt. Cloth, 5 x 7¼ in., 370 pp. Price, $1.50. Dodd, Mead & Co.

RUDERICK CLOWD is the biography of a criminal. It tells how the boy began his life, what that life was in the reform school, how he became a first-class pickpocket and thief, who his companions in prison were and how he lived there, of the different kinds of graft and crookedness he went in for, and how he settled down at last, when he came to the end of his tether, into a perfectly respectable member of society. The thing that no reader can help remarking in this story is that Ruderick Clowd, in spite of years spent in debauch, throughout his life was an honorable man, upright and straightforward, brave, willing to take his punishment like a man—in fact, in his way, as admirable a character, if not so picturesque, as Galloping Dick on his famous mare.

JOSIAH FLYNT.

Mr. Josiah Flynt Willard has made a life-study of the ways of crooks and tramps, and there is no one in the literary clan who can arise and contradict his statements with any authority. So when he makes his hero turn out an agreeable philosopher, practising all the domestic virtues, after this hero has spent fourteen years in various prisons and the rest in practising his "profession," we can shrug our shoulders, but we are not in a position to say that such an outcome is impossible. If as a character-study the book seems dubious, as a picture of the under-world it is certainly fascinating. Mr. Flynt has the faculty of showing this life from the point of view of those who live it. "Graft" is respectable, successful thieving admirable. Thieving itself is a legitimate profession, with as many social grades as law or medicine. One of the most striking things in the book is the relation of the police to the lawbreakers—these "unprofessional thieves," as Ruderick Clowd calls them, crooked detectives, police captains, and officers, who stand in with the thieves themselves. The pictures of prison life, and especially of life in the reform school, are extremely interesting and suggestive. It is unfortunate that Mr. Flynt is not a more skilful writer. Whenever he branches out into fiction, the fiction becomes melodrama, and he has enough dramatic contrast in the material at his command without inventing artificial dramatic incidents. For instance, it was very unnecessary that Ruderick should save his half-brother's life.

WHOLESOME AND HELPFUL.

THE BETTER WAY. By Charles Wagner. Translated by Mary Louise Hendee. Cloth, 5 x 6½ in., 260 pp. Price, $1.00. McClure, Phillips Company.

THOSE who have read "The Simple Life," by this same author, will find in the present volume much the same sort of precept and counsel toward ways and means of living the life of the spirit as was found in the former volume, to which President Roosevelt called attention. The little book is most intimately helpful, and makes reading which may with truth be called delightful.

CHARLES WAGNER.

The diction is of limpid clearness. One feels that the original French in which it first appeared must have been as a mother tongue to the one who turned it into English. The contents are arranged in sections, with headings showing the reader where to look for counsel in every crisis of life that may assail him.

There is much in the whole tone that reminds one of that time-approved volume, "The Layman's Breviary." The thought, while of the highest, is too impersonally spiritual—or, rather, too laic—to give offense to the most bristling sect or creed. Its tone and phraseology is quite distinct from that employed by teachers of "The New Thought"—so called; yet its ethics are essentially the same as those held by New-Thought advocates at their highest and best. This spiritual breadth and height, this large catholicity, ought, and doubtless will, commend the book to widely diverse readers. It is more than a tonic; it is daily bread.

Classic Library of Famous Literature

A high-sounding title, I hear you say. The collection of a hundred MASTERPIECES from the literature of the world is no easy task, to be sure—no boy's play by any means. No scrap pile, no "extracts," but the whole of each selection in its entirety, save three,—viz., the "Iliad," the "Odyssey," and the "Æneid,"—which are, undoubtedly, better for abbreviation. A splendid selection for anybody's library, whether he be the President of the United States or not; but the President of the United States has said:

WHITE HOUSE,
WASHINGTON.

March 12, 1903.

My Dear Mr. De Berard:

I have greatly enjoyed your very handsome edition of Classic Tales. I think it an admirable collection. I shall at once give it a prominent place in my library.

With regard, I am,

Sincerely yours,

Theodore Roosevelt

Mr. Frederick B. De Berard,
Merchants' Association of N. Y.

Weigh these words, for they were not idly written. Many other letters might be produced, but space costs money. Dr. Albert Shaw, Editor of the REVIEW OF REVIEWS, says to Mr. De Berard: "Accept my compliments upon the rare literary taste and discrimination you have shown in editing these volumes." What a service to separate for you the wheat from the chaff! The work was done by the well-known literary critic, Frederick B. De Berard and others of THE BODLEIAN SOCIETY, by and with the advice and co-operation of Dr. Rossiter Johnson. The book has been approved after the most searching investigation by the INTERNATIONAL LIBRARY BUREAU. It was made to sell at $70.00 for the set in 20 volumes. It IS SELLING for that. You may have been canvassed for the work at this price. I convinced the officers of THE BODLEIAN SOCIETY that it would be good business for them to sell an edition at less money—much less money, for the sake of introduction. I convinced them, I say. This announcement is proof of the fact. Not to burden you with details, the short story is, that I have, for a consideration, undertaken the task or pleasure—call it what you like—of collecting a list of purchasers to take the edition at a GREATLY REDUCED PRICE. The Library contains a goodly supply of handsome and truly illustrative pictures. Among them is a careful reproduction of the celebrated classic painting "LIFE AND LOVE," by F. G. Watts, R.A., which was BANISHED FROM THE WHITE HOUSE during the Cleveland Administration and RECENTLY RESTORED. Since it seems to be customary to give away SOMETHING FOR NOTHING, I shall take pleasure in sending you a copy of this classic painting, suitable for framing, with my compliments, while sending you the table of contents and special offer.

If you be interested, send this coupon:

MR. JAMES S. BARCUS,
111 Fifth Avenue, New York City.

Please send to me, without cost, a copy of the careful reproduction of the classic painting, "LOVE AND LIFE," by F. G. Watts, R.A., WHICH WAS BANISHED FROM THE WHITE HOUSE during the Cleveland Administration and recently RESTORED.

Also send me, by mail, table of contents of "Classic Library of Famous Literature," of which the above picture is one of the illustrations.

Yours truly,

CURRENT POETRY.

The New Colossus.

By Emma Lazarus.

[A bronze tablet was placed inside the pedestal of the Statue of Liberty a few days ago bearing the name of Emma Lazarus and the following sonnet written by her in 1883.]

Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch, whose flame.
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon-hand
Glows world-wide welcome; her mild eyes command
The air-bridged harbor that twin cities frame,
"Keep, ancient lands, your storied pomp!" cries she
With silent lips. "Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door!"

Song.

By Wilfrid Wilson Gibson.

Is there no ending of song?
Will time forever unloosen
New birds of singing for flight—
Gold-plumed, broad-pinioned and strong
To waken the heart of the night
With singing and showering light?

Is there no ending of mirth?
Will time forever unloosen
Fresh founts, clear-bubbling and bright,
From the drainless youth of the earth
To spray all the heart of the night
With laughter and showering light?

Is there no ending of grief?
Will time forever unloosen
Gray buds that wither to white
And fall as the fading leaf,
And sigh in the heart of the night
Or shiver in showering light?

Yes, mirth and grieving will end?
But song will upgathering mingle
Their perishing beauty and might,
And tears and laughter will blend
To shatter the heart of the night
With singing and showering light.

—*The Saturday Review* (London).

On the Hill.

By James Herbert Morse.

Eleven o'clock! The Sunday bells
Have slowly tolled the parson in.
A lively tan-ta-ra-ra tells
The house is hushed, the hymns begin.
Sweet old-time scene, when multitudes
On multitudes thus sat apart,
And heaven in happy interludes
Descended on the human heart!

Now I outside upon the hill
Lie level with the dial-plate,
And memory turns the hands, until
They point me to a golden date:—
The belfry and the bells the same;
The day, the very hour,—eleven,
When through the open windows came
Those harmonies that rang to heaven.

When Lyde's voice, of all the choir,
Came rounded, rich, and full and sweet,
The sunbeams danced upon the spire
With all their little silver feet.
Across the spicery of flowers
The very birds leaned down to see,
And while she sang, withheld their powers,
Which, other times, were heaven to me.

O Lyde, thou art singing still;
Thine upward eye, and sunny hair,
That once made heaven of this hill—
I doubt not they make heaven elsewhere.

Why "Steel" Office Equipment?

But I, with thanking quiet prayers,
With winter in my heart, abide,
And now, as then, on Summer's morning,
A far-off listener, lie outside.

—In *Lippincott's Magazine.*

A May Morning.

By FRANK DEMSTER SHERMAN.

What magic flutes are these that make
Sweet melody at dawn,
And stir the dewy leaves to shake
Their silver on the lawn?

What all-[illegible] wrought
In shallowed [illegible]
All ecstasy of sound upcaught,—
Song's apotheosis!

The dreaming lilies lift their heads
To listen and grow wise;
The fragrant roses from their beds
In sudden beauty rise:

Enraptured, on the eastern hill,
A moment, halts the sun;
Day breaks; and all again is still:
The thrushes' song is done!

—In May *Atlantic Monthly.*

The Passer-by.

By CHARLOTTE ELIZABETH WELLS.

I passed a house one summer day,—
The busy street in sunshine lay:
I heard a song, so sweet and gay,
Like that of some bright maid at play;
I smiled as I went on my way.

And when upon that summer day,
The somber street in shadow lay,
I heard a moan, a sob, a cry,
My soul was sad in sympathy;
I wept as I went on my way.

A smile, a tear that summer day,
And what their meaning, who shall say?
For some were bright and some were gay,
And some in darkest shadow lay;
The world, unheeding, went its way.

—In May *Harper's Magazine.*

PERSONALS.

Secretary Moody as a Waiter.—A good story is told in the Philadelphia *Public Ledger* of Secretary Moody while he was visiting San Juan, Porto Rico:

While the *Dolphin* was in the harbor of San Juan, she was visited daily by the natives. One of them, feeling thirsty, turned to a man in white and wearing a [illegible] naval captain and said, "I'll have a drink of water." The man hurried away without a word, and soon returned with the water, which the native drank. The man in white then took the glass back to the cabin.

While he was gone an American, who had seen the whole procedure, said to the native, "You ought to have tipped that fellow." The native fumbled in his pocket for a coin, but mildly protested, "Why should I?" And the American said, "Because that was Mr. Moody, the Secretary of the Navy."

It was true, and when the Secretary emerged from the cabin the native's profuse apologies were made as only one of the Latin race can make them, while the Secretary laughingly tried to put the Porto Rican at his ease.

Why Salvini Played — John S. Crellin, an actor of long experience, who played leading parts with Tommaso Salvini, relates the following anecdote in an appreciation of the great actor in a recent number of *The Outlook*:

At the opening of our three weeks' engagement in San Francisco Salvini was taken with a severe throat difficulty which prevented his public ap-

pearance for a time. While thus suffering, he received a cablegram from Italy apprising him of the sudden and unlooked-for death of a beloved brother. Our manager *pro tem.*, who was less reflective than excitable, gave to the public as a reason for Salvini's failure to appear, not that he was ill, but that his grief over the death of his brother was so deep as to prevent his playing. This was placarded before the theater, and the shrewd local manager, taking advantage of the error, insisted upon having every cent of the receipts which were realized during the remainder of the engagement to compensate him for the non-appearance of the star. In this position he was upheld by the courts, which assumed that while a sore throat or other physical disability was a sufficient excuse for an actor's failure to appear, grief, in and of itself, was no bar to a performance, tho illness superinduced by such grief would be.

I met the manager one day during this halt in our affairs, and, noticing that he was excited, asked him the reason for it.

"I have just received a terrible shock from Salvini," he said. "I went," he continued, "to the Signor's room to inquire after his health. I prayed all the way upstairs that a decided change for the better had taken place. But as I approached his door, I heard him groaning most awfully, as he paced to and fro like an elephant, yes, like a menagerie. I stopped outside, overcome with despair and fright. But the situation was desperate. Salvini's contract called for a thousand dollars a night and a third of the gross receipts. It had taken thus far all the surplus money realized from Madame Nevada's concert tour, under the same management, to keep us on our feet, and if Salvini should fail to appear during at least the last week of the engagement, it would be a problem how to get the company home. Two-thirds of the subscription for seats have been withdrawn. The world at large might recover even from the death of the maestro, but the company not so easy, three thousand miles from home—as well as a million. Well, I waited at the door, trembling, but as the groans seemed to increase rather than diminish, I took the liberty of entering the room without knocking. Salvini ceased his pacing—he was at bay. 'Alas!' I stammered, 'what is it? I know you are worse. You will not be able to play. What shall we do?'

"'No,' said Salvini, 'you are wrong. I shall play, must play for you, the company, the public, myself.'

"'Ah, then you will play!' I exclaimed, rubbing my hands together, for I dared not applaud, as I felt prompted to do, so great was my relief.

"'What shall hinder?' growled Salvini, as he eyed me dubiously.

"'But you are in pain!' I hesitated, as I thought, not of the pain, but of a way to escape from him and vent my gratitude outside.

"'Pain,' he responded, 'yes here,' and slapped his hand, not on his anatomy, but his purse. 'The doctor has just been here and has ordered me more medicine.'

"'But that is no great calamity,' I ventured.

"'No,' he grumbled, 'the medicine is no calamity, but the price is; it's a dollar a bottle.'"

Hetty Green's Retort.—Mrs. Hetty Green, of New York, even in her youth, had a way of taking care of her own, says the New York *Times*. A Vermont neighbor relates that while she was living on her New England farm she had for a neighbor a particularly unneighborly old bachelor.

One day, while the threshers were at work on her wheat crop, the winnowing fan broke and she sent over in great haste to borrow her neighbor's machine.

"Certainly," was the reply. "Mrs. Green may use the fan, but I make it a rule never to allow my implements to be taken from my farm. The machine is in the barn, and she may bring her grain there to be winnowed," an offer it was manifestly impossible to accept.

Mrs. Green had not forgotten the implied re-

usual when the old bachelor sent his hired man over one morning to borrow her side-saddle for the use of a visiting relative.

"I shall be only too glad to favor him," was the word sent back by the astute Mrs. Green, "but I never allow anything I own to be carried off the farm. My saddle is hanging across a beam in the barn loft. Tell Mr. Browne to send his aunt over. She may ride there as long as she likes."

How Du Chaillu Foiled the Plotters. — While the late Paul Du Chaillu was teaching French in the Carmel School, Carmel, N. Y., says Helen Evertson Smith in *The Independent*, he was often ridiculed by the boys and girls, and also by other teachers, for his queer English, his diminutive size, and his acts of kindness. Some of the boys once organized a plot against Du Chaillu, but he tactfully frustrated its execution:

The design had been to take him from his bed, tie him in a blanket, and toss him from hand to hand, like an apple in a handkerchief, down four long flights of stairs, out upon the snow, and then down the steep hillside, until he should be finally soused in the icy waters of Lake Glenida. Long afterward this was told by one of the youngest of those implicated.

Boys love a feast. Fifty years ago, and in the then gone-to-pieces condition of this school, "treats" of any kind were rare. Whether by accident or design, no one ever knew, on the evening before the bitter February night on which the most unjovial trick was to have been played, Mr. Du Chaillu appeared at the seminary's door in a wagon laden with stores of the good things which boys love—turkeys, pies, tarts, cakes, fruits, and candies, all ready for the table. The feast was held with great jollity in his class-room in the top story of the building, and, of course, nothing more was heard of the plot. The boys were heartily ashamed of themselves and the abetting teachers ought to have been so, if they were not. This kindly and apparently (and it may have been really) unsuspecting act of kindness turned the tide. I left the school not very long afterward, but have been told that from that time onward "the little Frenchman" received a good measure of the formal respect and a great deal of the genuine affection which were justly his due.

Carnegie Won the Race. — When Andrew Carnegie's parents first came to America from Scotland, says *Success*, they went to East Liverpool, O., to stay with some relatives. Their son was about fourteen years old at the time, and was an object of considerable interest to the boys of the neighborhood.

On one occasion, when he was sixteen years old, he went with his cousin to visit William and Michael Fisher, who lived on a farm about half a mile from the town. The four boys spent some time in examining the pet rabbits and other objects of interest, and, at length, when they were all standing at the top of a grassy slope, William Fisher challenged Carnegie to a foot-race. "Well," said Andrew, "you're a lot taller than I am, and your legs are longer, and I believe you can beat me, but I'll race you just the same."

The two boys started, and, as Andrew had foreseen, the Fisher boy easily outran him. The little Scotchman was by no means discouraged because the chances seemed all against him, but kept running. About half-way down the slope the Fisher boy stopped, considering it useless to run further. To his surprise, Carnegie continued his race, and arrived at the bottom far ahead of him. "That's not fair," said Fisher, "because I stopped."

"Yes, I knew you'd stop," said Carnegie in reply, "and that's the reason I kept on running. Have you ever heard the fable of the turtle and the hare?"

Sky Cleaning. — "A new 'AWNING (just over). "'Ow is it the sky is so much cleaner in New York than hit is in Lunnon?"

NIGHTE HAWKE. "Oh, we have sky-scrapers in New York."—*Brooklyn Life.*

MORE OR LESS PUNGENT.

A Pastoral Lilting. (Or the literary results of the poet's vacation at Halls Corners, N. Y.).

Oh, for a life in the country free,
Where the sighing wind in the sweet-corn tree
Mingles its music, drowsy and low,
With the song of the milkmaid, as, to and fro,
Threugh the sunny pastures she skips about,
Milking the milk weeds with many a spout.

How sweet are the wee white leghorn lambs,
That scamper about with the half-grown hams,
Barking in glee at the farmer's lad
As he wades in the brooklet, fishing for shad,
While out through the barnyard come strident notes,
For the farmer is busy a-shearing the shoats.

The drowsy sound of the husking bees
Drifts in at noon on the scented breeze,
The farmer's men all cease their toil;
No more they cultivate the soil,
Nor educate the sheep; no more
Swap ancient puns at the country store.

For 'tis the festive dinner hour,
And they gather round and eke devour
Enough of the juicy buckwheat cake
To make their rural bellies ache.
But back to the orchard at one they go,
For the strawberry bushes they now must sow.

Oh, a country life is the life for me,
Where the neighing calves go frisking free;
The swallows cackle at sunset hour,
As they sip the dew from the whole wheat flower,
And early to roost the ravens go,
For at morn they must flap their wings and crow.

—FREDERICK ARTHUR PALMER in *The Journalist.*

Impatient.—RECRUIT (on guard): "Advance and give the countersign!"

MESSENGER: "I've forgotten it."

RECRUIT (impatiently): "Well, say 'Lincoln' and pass on. I'm not goin' to wait all day fer yez t' tink av ut."—Princeton *Tiger.*

Unnecessary.—YOUNG HOUSEKEEPER: "What are you doing to the fish, Norah?"

NORAH: "Sure, mum, I be washin' thim."

YOUNG HOUSEKEEPER: "How foolish! Don't you know they lived in water all their lives?"—Brooklyn *Life.*

Relieved. SHE glided into the office and quietly approached the editor's desk. "I have written a poem," she began.

"Well!" exclaimed the editor, with a look and tone intended to annihilate.

But she calmly resumed: "I have written a poem on 'My Father's Barn,' and——"

"Oh!" interrupted the editor, with extraordinary suavity, "you don't know how greatly I am relieved. A poem written on your father's barn, eh? I was afraid it was written on paper, and that you wanted me to publish it. If I should ever happen to drive past your father's barn, I'll stop and read the poem."—*Tit-Bits* (London).

He Knew.—SUNDAY-SCHOOL TEACHER: "How many commandments are there, Willie?"

WILLIE: "Ten."

SUNDAY-SCHOOL TEACHER: "And suppose you were to break one of them?"

WILLIE: "Then there'd only be nine."—Chicago *Chronicle.*

Corroborative.—THE PROFESSOR: "A collector, you say? Did you tell him I was out?"

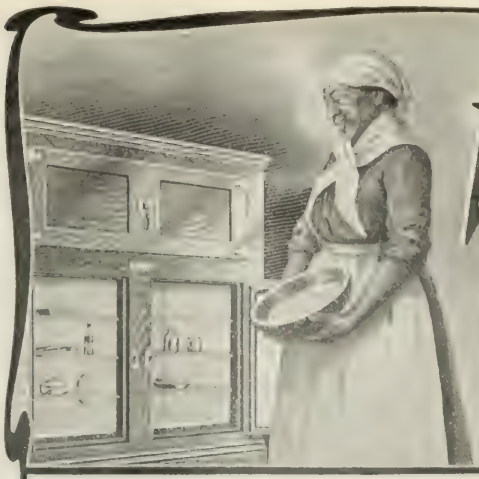
THE FACTOTUM: "Yes sir, but he wouldn't believe me."

THE PROFESSOR: "Humph! Then I suppose I'll have to go and tell him myself."—Brooklyn *Life.*

Oh, Never Mind.—MRS. SCHOPPEN: "Blackberry jam thirty cents the jar! My, isn't that jam jear?"

MR. SANDS: "Isn't it what?"

MRS. SCHOPPEN: "I say, isn't that dam jear-er—I mean, isn't that dam dear. Oh, never mind."—*Philadelphia Press*



THE MONROE PORCELAIN REFRIGERATORS. SOLD BY MAIL DIRECT.

From Factory to You

The MONROE is a high-grade refrigerator for family use. Unlike, and better than others, its food compartments are molded, single pieces of solid white porcelain ware—without joint or seam—strictly sanitary.

An order will bring the MONROE at once to your nearest railway station, freight paid. You can have the satisfaction of examining and proving it in your home. If after a reasonable time it is not satisfactory in every respect, write us and we will take it back, and refund your money.

The only way to obtain a MONROE is to order it direct from us. We have no agents.

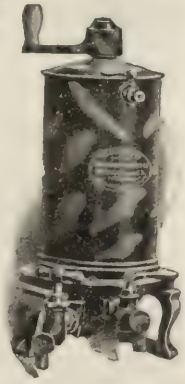
New York Office, 42 Cortlandt St. **Lockland. Ohio**

Catalogue "J" gives your discount.

PURE WATER AND GOOD HEALTH GO HAND IN HAND.



In everything pertaining to health the nearer we get to Nature and to Nature's ways the better we are. Perfect filtration is absolutely necessary to make water the true, wholesome solvent it is intended to be.

The National Filter

is patterned closely along natural lines and is based strictly upon Nature's methods. The finest quality of tripoli stone is the filtering medium used, and its construction and action are such as to positively remove every trace of bacterial and animal matter. Hence absolutely pure water is the result. The National Filter never needs taking apart for cleaning—there is no removal of the stone, and anybody can clean it thoroughly in three minutes.

Made in all sizes for the home, the office and large institutions. Installation is direct with the supply pipe and in no way interferes with water drawn direct from faucet. Write for illustrated booklet, "Pure Water in Nature's Own Way"—it's free.

NATIONAL FILTER CO., FISHER BLDG., CHICAGO.

1257 Broadway, New York. 1015 Pine St., St. Louis, Mo.

Poor Richard Junior's Philosophy.—A position in hand is worth a dozen in prospect.

Love is a monopoly—but it is not always a trust.

The egotist uses only one I—and that a capital.

One pair of yellow shoes does not make a summer.

A ventilator is a small closed window in an American street-car.

Moving is almost as bad as getting married—and most people have to do it oftener.

You can not take your money beyond the grave, but it will pay for a large, nice epitaph.

It is seldom that a man is as good as his wife tells others he is or as bad as she tells him he is.

All can not play golf, but the humblest may carry a few sticks in a canvas bag and look solemn.

—Philadelphia *Saturday Evening Post.*

Domestic Euclid.—The following is an excerpt from what the students of Vassar College call "The Domestic Euclid." It would seem that even the pupils of our most fashionable female college have the landlady and boarding-house troubles which have been a feature of college life from time immemorial:

Definitions:

1. All boarding-houses are the same boarding-house.

2. Boarders in the same boarding-house and on the same flat are equal to one another.

3. A single room is that which hath no parts and no magnitude.

4. The landlady of the boarding-house is a parallelogram—that is, an oblong angular figure that can not be described, and is equal to anything.

5. A wrangle is the disinclination of two boarders to each other that meet together, but are not on the same floor.

6. All the other rooms being taken, a single room is said to be a double room.

Postulates and propositions:

1. A pie may be produced any number of times.

2. The landlady may be reduced to her lowest terms by a series of propositions.

3. A bee-line may be made from any boarding-house to any other boarding-house.

4. The clothes of a boarding-house bed, stretched ever so far both ways, will not meet.

5. Any two meals at a boarding-house are together less than one square feed.

6. On the same bill and on the same side of it there should not be two charges for the same thing.

7. If there be two boarders on the same floor, and the amount of side of the one be equal to the amount of side of the other, and the wrangle between the one boarder and the landlady be equal to the wrangle between the landlady and the other boarder, then shall the weekly bills of the two boarders be equal. For if one bill be the greater, then the other bill is less than it might have been, which is absurd.—Kansas City *Journal.*

"Why do you sleep on hair?"

DR. EGBERT GUERNSEY, one of New York's most famed physicians, writes us January 21st, 1902:

180 Central Park, South, New York City.

Messrs. Ostermoor & Co.

Gentlemen: After twenty-seven years' use, it is my opinion too much cannot be said in praise of Ostermoor Mattresses. In point of contrast they are equal to the best curled hair, infinitely more durable and far superior in cleanliness.

Yours truly, EGBERT GUERNSEY

Why not try an Ostermoor?

An Ostermoor Patent Elastic Felt Mattress is softer and more elastic than hair—and this elasticity is everlasting—it never mats or packs, loses its shape or spreads. An occasional sunbath keeps it in perfect condition. The filling made from a vegetable fibre, purity itself originally, made germ-proof by sterilization, is repellent of all impurities and an everlasting comfort.

Hair is an animal fibre, filthy, unclean and uncleanable, a constant source of expense for renovation, it is unhealthy, porous and dirty, absorbent of germs of all kinds, a disease breeder and menace to health

Why not send for free book?

We have a 96-page book, "The Test of Time," which we mail free. It tells all about the best mattress ever made, and our offer of 30 Nights' Free Trial — money returned if it is not all you even *hoped* for. It tells about unscrupulous dealers who offer worthless stuff as "felt"—fraudulent substitutes do not bear **the name Ostermoor & Co., which is on every genuine mattress.** It is not a "felt" mattress if it is not an "Ostermoor"

A SOUND BUSINESS INVESTMENT BASED ON FACTS.

The only opportunity ever offered the small investor to become interested in a typewriter building company, doing a large business and making substantial profits. This enterprise has none of the features of speculation attached to it, as the demand for the machines is thoroughly established and their merit proven. While there is no difficulty in interesting a few capitalists to subscribe for the entire amount of the new stock, we prefer to interest a large number of small investors, each of whom will use his influence to further the popularity of the Chicago Typewriter and cause financial advantage to accrue to all stockholders through personal advertising. This proposition is not experimental, the business being already established upon a firm foundation and the machines being unconditional leaders wherever superior typewriters are required. The machines are already introduced in every part of the world, and are giving unequaled satisfaction. You have doubtless heard of this splendid mechanism, which was the first standard machine upon the market sold at a fair price, and breaking the $100 combination upon high-grade machines. The marvelous success of the Chicago Typewriter, unapproached by others as to value, has induced us to enlarge our facilities in all branches to meet the great demand for a standard machine, sold at a just and popular price. We offer for sale at par 7,500 shares at $10.00 each of our $200,000.00 capital stock. Profits have been over 10 per cent. each year. The cash value of assets of the business is more than equal to the amount of stock issued. The money realized from sale of stock now offered will be used partially to increase manufacturing and selling facilities, and partially retained as a cash surplus. Each dollar's worth of stock adds a dollar to the business, and as the assets remain active in the business each dollar's worth of new stock issued will be covered by assets having cash value equal to the amount of the stock.

With Your Foot on the Button, One Mile or a Hundred

is reeled away with luxurious ease, safety and comfort, and the same simple method of

PERFECT SPEED CONTROL

enables you to thread a way quickly and safely through a crowded city street, or run at exhilarating speed on the boulevard or country road, when you travel in the

Winton

One of the cardinal virtues of the Winton is that it is always "well in hand." By the simplicity of its operating mechanism it enables the driver to be at perfect ease under all conditions, without burdening his attention with this or that gauge or lever. The speed is controlled by the spring "governor-button" under the driver's right foot. (See illustration below.) By simply increasing the pressure on this button, speed of car increases; relieve the pressure, the car slows down. No exertion—no effort—no distracting of attention.

The Winton "Governor-Button"

When, in addition to the mechanical reliability of the Winton, you consider its luxurious appointments and beauty of construction, you will appreciate its wonderful popularity.

Price of the 20 horse-power Winton Touring Car, complete with full brass side-lamps, horn, tools, etc., is $2,500. Visit any of our branch or agency depots in all leading cities and the excellence of the Winton will be fully demonstrated.

Solution of Problems

No. 711. Second-Prize Two-er.

Key-move: R—K sq

No. 718. Second-Prize Three-er.

Key-move: Q—K B 2

In addition to the names on "The Honor-Roll," reported since award was made: A Knight, Tyler, Tex.; "Twenty-three," Philadelphia; G. Patterson, Winnipeg, Can.; R. H. Renshaw, University of Virginia; O. C. Pitkin, Syracuse, N. Y.; E. N. K., Harrisburg, Pa.; D. H. Wiltsie, Jamestown, N. Y.; E. A. Kusel, Oroville, Cal.

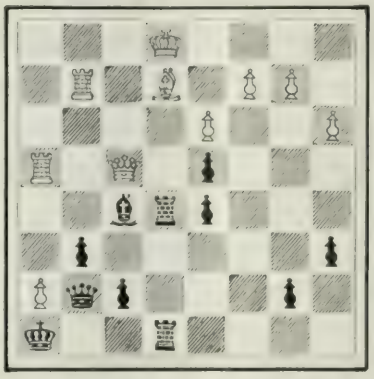
711: Chess-Club, Ouray, Col.; the Rev. P. D. Thompson, East New Market, Md.; Dr. J. L. Cardozo, Brooklyn, N. Y.

Additional comments (711): "Very beautiful, and quite difficult"—A. K.; "A corker"—"Twenty-three."

718: A great problem. Looks simple; but is very difficult"—A. K.

In addition to those reported, "Chess-club" got 732 and 754; G. M. A., Halifax, N. S., 831.

An Ending from Actual Play.



White had just played R from R 2 to R 4, in order to capture the Q P, when Black's game would be hopeless. Black, however, made a move by which he won a piece. What is the move?

From the Monte Carlo Tourney.

This game shows that even Masters sometimes make blunders that an amateur might avoid. Pillsbury gave a B for two Ps. This sacrifice, probably, would not give him anything better than a Draw.

Ruy Lopez.

For Garbage.

Garbage standing around in open cans or pails is offensive, unsightly, unsanitary.

Witt's Corrugated Can

has close-fitting lid which shuts in odors, makes scattering of contents impossible. So strong it will not dent or bend in a lifetime. Good housekeepers use it. Imitations are worthless. See that "Witt's Can" is stamped in the lid.

For sale by Hardware and House Furnishing Dealers.

The Witt Cornice Co., Dept. K, Cincinnati, O.

MODENE

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. **It Cannot Fail.** If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

Modene supersedes electrolysis.

Used by people of refinement, and recommended by all who have tested its merits.

Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of **$1.00** per bottle. Send money by letter, with your full address written plainly. Postage stamps taken.

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

THE PRESIDENT'S TOUR.

ONE of Mr. Roosevelt's best-known books, "The Winning of the West," describes the conquest of the Western States by the pioneers of an earlier generation. Considered in connection with the Presidential tour that has just come to a close, and the comment on it, the title of this book takes on a new significance. Says the Baltimore *Sun* (Ind.):

"There seems to be good ground for the assumption that Mr. Roosevelt had in contemplation another 'Winning of the West' when he traveled toward the Pacific Coast and stopped at various points along his route to 'talk politics' with his fellow citizens. When he discussed the tariff, expansion, trusts, international questions, and local topics, he appeared as the most distinguished advocate of a great political party, which will be called on next year to defend its title to another lease of power. Mr. Roosevelt is convinced that the claims of his party merit favorable consideration by the people of the West. Evidence is not lacking that he regards himself as the strongest and most available standard-bearer his party can put forward in the contest of 1904 for national political supremacy. It is but just to him to say that a majority of the most influential politicians of the President's faith are in full accord with him on the question of his availability. It also seems to be true that the mass of Republican voters concur with their leaders in this view. Hence 'The Winning of the West' by Mr. Roosevelt in the year preceding the Presidential election appears to be an accomplished fact, judging by the confidence displayed by personal friends of the President who accompanied him on his tour and sounded the sentiment of the Republican masses."

"It is as a conquering hero," declares the Philadelphia *Telegraph* (Rep.), "that President Roosevelt returns to Washington. Five years ago this very month he had just retired from the assistant secretaryship of the navy to take his place as second in command of a regiment of 'Rough Riders' in the Cuban campaign. His career since then reads like a romance, seldom, if ever, paralleled in American history." The St. Louis *Globe-Democrat* (Rep.) says:

"The tour by President Roosevelt which will end a few days hence will be notable for many reasons. It will be the longest ever taken by a President of the United States or the head of any other great nation. By June 6, when he reaches the national capital, he will have passed through or touched twenty-two States, and will have traveled in the neighborhood of fourteen thousand miles. The journey has stretched from the Atlantic to the Pacific, and has, besides, covered many degrees of latitude between New Mexico, Arizona, and Southern California up to the northern part of the State of Washington. While most of the tour has been through the States and Territories west of the Mississippi, it has, or will have, extended through many of those east of the river also. No other President has ever, on a single stretch, passed through anything like so many States. . . . . .

"Of course, the head of no other important country would have mingled with the people to anything like the extent which President Roosevelt has done. No sort of discrimination was made by him for or against any element of his countrymen. Every community which he entered, wherever the railroad schedule permitted, had a chance to see and greet the President. No caste distinctions of any kind were thought of on the tour. All elements, employments, and races were on a precise equality in their intercourse with him. Necessarily this trip must benefit both people and President. The people have had a chance to greet the chief magistrate. They have seen that he is a plain, earnest, industrious man like themselves, who puts in his regular stint of work every twenty-four hours. They have seen, in fact, that he is a harder worker than most of his countrymen, and that he puts on no airs of superiority over any of them. To the President himself the tour has been of vast advantage. He has seen more of the country than any other President or than almost any other American has on a single trip, and he has seen it under conditions which have enabled him to learn much about the people, their ideas, and their requirements. No man in the United States has been better acquainted with the country as a whole, its history, resources, and capabilities, than was President Roosevelt before he started on his present tour, but he has gained on the trip new knowledge which will be of immeasurable benefit to him and to his countrymen throughout the whole of the remaining years of his service."

The tone of comment in the Democratic press is naturally of a very different kind. The Chicago *Chronicle* (Dem.) takes the view that the Presidential tour, while it may have increased Mr. Roosevelt's reputation in the West, has weakened his influence in the East. It says:

"So far as the far West is concerned, we may reasonably assume that the President is popular. But was he not popular there before? Had he anything in particular to gain by 'stumping' a section of the country which was admittedly favorable to him? Had he not, rather, something to lose by delivering a series of bellicose speeches which, however they might excite the delighted whoops of a population familiar with the lariat, picket pin, and Winchester, were calculated to cause uneasiness in that section of the Republican party which, from its industrial and financial interests, deprecates all talk of war—that section of the party, moreover, which furnishes campaign funds and names presidential candidates?

"That is the question which the managers of the President's political fortunes may well ask themselves. They will undoubtedly recall the fact that Colonel Roosevelt's predecessor, a much

more adroit politician, so far from talking of the glories of war, was always deprecating it. They will remember that the same influences control the Republican party now that controlled it when President McKinley, at their dictation, postponed war with Spain as long as he possibly could. These interests are not fond of talk about big sticks and 'guns' when such talk is aimed at international neighbors somewhat susceptible and capable of making a hard fight.

"They are not likely to regard with favor a President and Presidential candidate who continually preaches a crusade against anybody and everybody—who desires that this nation shall go about with a chip on its shoulder and its coattails trailing on the ground as an invitation to the whole world to come and fight.

"Colonel Roosevelt's knowledge of war is really very small. He forms his ideas of it from the few skirmishes in which he participated in Cuba. He knows of the horrors of the Civil War only by hearsay. The men who control his party are older. Many of them were participants in the struggle between the States. These men, aside from their merely material interests, may not readily indorse a man whose mind runs somewhat too easily to the idea that war is a thing to be lightly discussed on festive occasions and who has little else to say that is worth while."

The President started West with six carefully prepared addresses, written at Washington. This material "formed the backbone of his oratory," as one paper remarks. He spoke more than one hundred and fifty times altogether, for the most part in impromptu fashion on subjects suggested by special places and occasions. In regard to the "spoils" of the Presidential trip, the Springfield *Republican* (Ind.) has the following to say:

"The enlarged White House will be none too ample for the storage of all the gifts received by President Roosevelt during

CLEAR THE TRACK.
—*The Chicago Inter Ocean.*

his whirl around the great circle he has encompassed. Almost every town and city visited during the past sixty days has added its quota to pile in the baggage-car, and no good New England housekeeper will envy the mistress of the White House her task of disposing of this spoil of a conquering journey in the Presidential museum and the Presidential menagerie. Nor is this all, for while the President has been smiling pleasantly and making pretty little thank-you speeches to open-hearted Westerners, others, who were doomed to give unseen, have been shipping their gifts to Washington, and a wonderful assortment of samples of Western life and industry await the returning executive. Perhaps Roosevelt now holds the record so far as quantity goes, but Grant retains that for quality, as the gifts which he received in his tour of the world were more valuable than those received by any other President or ex-President."

THE CONSTITUTION AND THE FLAG AGAIN.

ANOTHER decision sustaining the principle that the provisions and restrictions of the United States Constitution do not extend of their own force over territory newly acquired by the United States has recently been handed down by the United States Supreme Court. The present decision grew out of the conviction of murder of a Japanese named Osaki Mankichi, in Hawaii, by a majority vote of a trial jury and without indictment by a grand jury, according to the law of the Hawaiian Republic. An appeal was taken to the Supreme Court against the conviction. The defendant maintained that the transfer of the islands to the United States brought them at once under the Federal Constitution, and that his conviction by less than twelve jurymen was contrary to the American rule that the jury must be unanimous. The islands were annexed to the United States under the Newlands resolution in 1898. This resolution provided that none of the laws of the territory of Hawaii must be in conflict with the Constitution of the United States, and that laws not contrary to the Constitution should remain in force until Congress provided a Territorial government. The Territorial government was not created until 1900. It was between these two dates that the trial and conviction of Mankichi occurred.

The majority of the court, including Justices Brown, Shiras, McKenna, White, and Holmes, held that the conviction is valid, on the ground that at the time the territory of Hawaii was in a state of transition, during which it was the duty of Congress to make all needful rules and regulations for its government. They maintain that the language of the annexation resolution was manifestly against the intent of Congress, and that if the Newlands resolution were to be taken literally, Mankichi would be entitled to his discharge. This, it is claimed, would work confusion in the administration of justice in Hawaii. The minority of the court, composed of Chief Justice Fuller and Justices Harlan, Peckham, and Brewer, hand down a vigorous dissenting opinion. Justice Harlan declares that the decision of the court "would mean that the United States may acquire territory by cession, conquest, or treaty, and that Congress may exercise sovereign dominion over it, outside of and in violation of the Constitution. . . . It would mean that if the people do not retrace their steps, . . . there will be engrafted upon our republican institutions a colonial system entirely foreign to the genius of our government and abhorrent to the principles that underlie and pervade the Constitution."

The Brooklyn *Eagle* (Ind. Dem.) declares that since it is admitted that Mankichi was guilty and that his punishment is just, no moral injury was done to him, and that the "rights of authority and the actuality of justice were vindicated by his conviction." The Chicago *Inter Ocean* (Rep.) comments:

"Undoubtedly the constitutional hair-splitters in and out of the legal profession will debate this decision for months as another ruling upon the academic question 'whether the Constitution follows the flag,' and will seek to cast doubt upon its accuracy because it was given by a bare majority of the court.

"Practical men who are not constitutional hair-splitters will not be troubled. They know that in all its essential guarantees of liberty the Constitution does follow the flag. As for the particular method by which these guarantees shall be applied, they will recognize that one which works well is as good as another.

"When a criminal commits a crime knowing that a majority of a jury may convict him, no injustice is done when a majority of a jury does convict him. To sustain that conviction when there is no doubt of his guilt is common sense."

The Springfield *Republican* (Ind.), voicing the sentiments of the anti-imperialist papers, says:

"According to the position of the majority judges, the Constitution is wholly without force or effect upon Congress in dealing with any territory or people under the jurisdiction of the United States and not embraced in the regular States of the Union, and

VIEWS OF FLOODED DISTRICTS IN KANSAS CITY.
Photographs taken for the New York *World*, and used by special permission.

an imperial system of colonies or dependencies can be engrafted upon the republic, subject to a government as absolute and despotic and arbitrary as that of the Czar. To say that this is in harmony with the principles and system of government intended to be established by the Constitution of the United States is to violate the dictates of common reason and common sense."

The Philadelphia *Record* (Ind. Dem.) remarks that this decision, as well as its predecessors, "does not reach the question whether after the close of the transition stage of a ceded or conquered territory the Constitution goes into full effect and vigor within its limits without action of Congress." The same paper adds:

"In this case the Supreme Court has simply followed the rule acted upon from the beginning of its great judicial history, of deciding nothing beyond the case brought up for its determination. The court is not a political tribunal, and can decide political questions only when called upon to adjudicate the rights of parties in actual causes involving the constitutionality of federal, state, or territorial laws. Here the court simply decided that Osaki Mankichi was legally convicted of murder in Honolulu without a trial by a full jury. This was all that was before the court; and why, then, should its decision have traveled beyond this to determine an abstract question as to the innate vigor of the federal Constitution?"

RECENT RAVAGES OF FIRE, FLOOD, AND STORM.

THE havoc wrought in Western and Southern States within the last few weeks by floods and tornadoes has furnished a leading news topic, and elicits expressions of surprise, as well as sympathy, in view of the very different atmospheric conditions prevailing in other parts of the country. For while the West has been devastated by floods, the Eastern States and cities have been parched by drought and darkened by the smoke of forest fires.

The first three months of the year, as is pointed out by the Chicago *Tribune*, were unmarked by any serious disaster in this country. It was not until April that the first records of fatality began. In that month storms and floods swept through Arkansas and Alabama, destroying some forty lives; and these continued during the month of May in Kansas, Nebraska, Missouri, Iowa, and Oklahoma, adding forty more to the list of fatalities. Then came more floods west of the Mississippi River, involving millions of dollars in industrial losses at Des Moines and Ottumwa, Iowa., Lincoln and Beatrice, Nebr., Topeka, Lawrence, and Salina, Kas., and Kansas City. At North Topeka upward of thirty people were killed, several thousand were dispossessed from their homes, and a million dollars' worth of property was destroyed. This is the "first real disaster," declares the Topeka *Capital*, that has ever befallen the city. In Kansas City, too, the damage inflicted is of the most serious character, and at one period twenty thousand of its people were homeless.

Following close upon the Western floods, in point of time, came a tornado which attacked the city of Gainesville, Ga., on June 1. The storm, according to the Augusta *Chronicle*, was the "worst in its death-dealing results that ever visited the State." Houses were "torn into fragments." Roofs "sailed like leaves in the air," and many persons were picked up by the wind and carried over trees and houses for long distances. Eighty-five people, mostly women and children working in the cotton-mills, were killed, and about $300,000 worth of property was destroyed.

On June 6 Pacolet and Clifton, important manufacturing centers in South Carolina, were swept away by terrific floods. The valley in which these villages are situated was "submerged by a whirling stream of water," which rose in places above the roofs

THE UNBIDDEN HARVEST HAND.
—*The Detroit Journal.*

of the houses. Nearly a hundred people were killed, and the property loss will probably be not less than $3,500,000.

The "lessons" that should be learned from these calamities are discussed by newspapers throughout the land. Such disasters, remarks the Philadelphia *Inquirer*, furnish an impressive illustration of human helplessness in the presence of the elemental forces. "Man's vaunted domination of nature goes only a very little way. It does not get much below the surface of things."

The Brooklyn *Eagle*, however, points out that there are certain practical measures which can, and should, be taken, to protect cities against sudden floods. Low grounds along the rivers can be diked; the woods in which the rivers have their rise can be restored; and reservoirs can be built along the upper reaches of these waters. The Memphis *Commercial Appeal* says:

"When the country was young and covered by trees and when the great prairies were not scarified by gulches and ravines; before drainage was introduced to carry the water off the land, the soil was loose and porous and it absorbed and drank up the

rain as it fell, holding it imprisoned and preventing its concentration at particular points. Its escape to the creeks and rivers and old-time channels was slow and gradual, and the resultant inturgescence which filled the basins and low places was not sufficient to overwhelm. Since the ax and the forest fires have denuded the hills, and since the ditchers and drainers have aided the flood-grooved earth in carrying off the liberated rains that fall on the broad-spreading watersheds, all impediments have been removed, and the scattered waters leap together and rush downward to the valleys in torrential force, carrying everything before them. Annual overflows have been greater than ever before, to minimize which efforts are being made to have the Government build a system of dams, as the English have done on the Nile at Assouan, to control the volume and prevent disaster.

"But it would seem to be the necessary work of the future to protect exposed localities against the sudden appearance of local rains which concentrate rapidly and carry destruction in their wake. To do this the aid of the engineers, topographers, geodesists, and scientists must be invoked and large sums of money must be spent by communities that occupy a low plane. Towns and cities in the lower valley have learned from experience what to expect, and provision more or less ample has been made against disaster. Higher up the danger does not seem to be as well understood or at least as effectively met."

The Buffalo *Express* pays tribute to the sturdy independence of the Western towns affected by the storms, and their unwillingness to appeal for outside aid. It goes on to say:

"If the floods did not give the country at large cause to show its generosity, plenty of opportunity was afforded for individual heroism. Men who had themselves escaped from danger procured boats and labored for hours in rescuing imperiled persons. The hero seems always to be at hand when needed. He comes from every calling and risks his own life without a thought. One day an unimpressive, bald-headed clerk or tradesman or bookkeeper, the next a hero by virtue of battling in angry waters for the safety of some fellow creature. It is one of the marvels of life, this transformation, and something that speaks well for the human race in spite of all its weaknesses and follies."

NEW LIGHT ON THE KISHINEFF MASSACRE.

THE New York *Christian Herald* recently addressed a cablegram to the Czar, asking for an official report of the occurrences at Kishineff. It has received a reply from the Director of the Russian Police Department, in which the statement is made that the real cause of the massacre lay in the "constant antagonism" existing between Russians and Jews and fomented by what were believed to be the Jewish "ritual habits." The same document declares further:

"The Minister of the Interior has issued a circular to governors all over Russia, authorizing them to make immediate use of firearms in cases of anti-Jewish disturbances. The Russian Government is the first to disapprove of such horrid acts of violence, but it can not, in compliance with the requests of a radical and revolutionary press, give the Jews new rights of citizenship, as this would be sure to drive the Russian population to new excesses against the Jews, who are hated by the peasants with such extraordinary force."

The official circular above referred to is printed in the *Journal de St. Petersburg*, and is discussed as follows by the New York *Times*:

"It is stated in the circular that 45 persons were killed at Kishineff, 74 seriously wounded, 350 more or less injured, and 700 houses and 600 shops of the Jews pillaged. The work of murder, violence, and pillage was carried on during the afternoon of Easter Sunday and into the evening and during the whole of the next day and evening. The police patrols were 'insufficient in number,' and even when the troops were called out, 'they failed at first to repress the disorders, because of the defective measures taken by the police, who had evidently not received the required instructions.' And it was not until 'the troops were distributed in systematic manner in the various districts that the disorders ceased.' . . . The circular proceeds to say that the Emperor has 'deigned to repeat to the chiefs of provinces and cities the injunction that it is their duty, on their personal responsibility, to take all requisite measures to forestall acts of violence and tranquillize the populace so that it can have no fear as to life or property.' Then follow the specific instructions for attaining this end urged by the Emperor. They do not impress an impartial observer as either logical or effective. They are confined to orders to the officials in the first place to tolerate no organization (*groupe*) for defense; in the second place orders are given to the civil authorities not to call on the military save as 'an extreme measure for the restoration of order.' One might infer from these instructions that the Jews of Kishineff had been the aggressors and wrongdoers, and that the military had been prematurely and needlessly called in, which is quite the contrary of the facts as stated in the circular itself."

"Since the circular is published for the information of the public and, presumably, for that of the outside world," concludes *The Times*, "it is deeply to be regretted that it is not more reassuring."

Even more damaging to the Russian Government is the report made by Mr. Michael Davitt, the Irish leader, who was commissioned by the New York *American* several weeks ago to visit the scene of the disorders and "get the absolute truth." His statements, indeed, are pronounced by the Brooklyn *Times* "more horrible in their details, more terrible in their indictment of the complicity of the Russian authorities than the worst that has been told heretofore." His account of the origin of the disturbances follows:

"The only daily paper in Kishineff is the *Bessarabyetz*. It is violently antisemitic, and the chief editor, Kroushvan by name, is of Moldavian origin, and he has systematically inflamed the popular feeling against the Jews, as the foes of Russia, as the propagandists of socialism, and as the enemies of the Christian religion. Kroushvan's attacks have been continuous for the last six years. Merchants and employers giving work to Jews were held up to public odium, and the expulsion or extermination of the race was openly urged. The *Bessarabyetz* has a circulation of 20,000, chiefly among the police, municipal employees, and workmen generally.

"Two events occurring shortly before Easter were seized upon by Kroushvan to incite the mob to murderous violence. One was the murder of a boy belonging to the village of Doubbosary, situated between Kishineff and Odessa, by his relatives for gain. The other was the sui-

MR. MICHAEL DAVITT,
Commissioned by the New York *American* to visit Kishineff.

cide of a girl at the Jewish Hospital of Kishineff. The *Bessarabyetz* declared them to be both ritual murders by the Jews, and summoned the Russian Christians to punish the authors of the alleged crimes.

"The chief rabbi of Kishineff, fearing the results of these appeals, hastened to the Greek bishop and implored him to calm the popular mind by giving an episcopal assurance that no such ritual was practised. The bishop's reply was that he feared there was some Semitic sect which really did indulge in the use of Christian blood in the Paschal ceremonies, and he refused to intervene.

"About the same time a body of representative Jews visited the governor and warned him that Kroushvan's incitations would lead to murder unless restrained. General von Raaben assured the deputation that precautions would be taken, but no attempt was made to stop the appeals of the *Bessarabyetz* to the popular antisemitic hatred.

"Chief of Police Ichanzko was also requested to act in the interest of peace and curb the diatribes of the *Bessarabyetz*. He replied that it would 'serve the Jews right if they were driven from the city for encouraging the propaganda of socialism.'"

On the day of the massacre, we are told that Ichanzko "drove through the city, smoking a cigarette," and that the bishop "passed in his carriage through the mob, giving his blessing to the crowd." While the case against the local authorities seems to be complete, Mr. Davitt admits that he has discovered no evidence implicating the Government at St. Petersburg. He is of the opinion, however, that "Minister von Plehve must have known that the outbreak was contemplated, but, thinking that the affair would not culminate in massacres, took no steps to meet the emergency until too late." This impression seems to be confirmed by press despatches to the London *Times* (June 6), which state that General von Raaben "telegraphed three times to the Minister of the Interior, asking permission to use force against the rioters, before he received any reply."

The American Ambassador at St. Petersburg, Mr. Robert S. McCormick, who is now visiting this country, takes a very complacent view of the present situation in Russia. Questioned by newspaper reporters as to the Government's responsibility for the massacre, he replied: "I have no idea that the Government in any way whatsoever fathered the outbreak. If the authorities had condoned it, why should they have removed the governor and then issued a manifesto that the laws must be enforced?" Of the indignation meetings held in the United States, Mr. McCormick spoke with ill-concealed disdain: "Th

—*The St. Paul Pioneer Press.*

situation is similar to that of a few years ago when a number of Austrian citizens (Hungarians) were killed in the Pennsylvania region. Mass-meetings to express the indignation of the people were held all over Austria, and their resolutions of indignation

A NEW PORTRAIT OF M. VON PLEHVE,
The Russian Minister of the Interior.

were sent to this country, but there was no official action and the matter ended in talk. That is the way indignation meetings about this Kishineff affair will end—in talk. They will accomplish nothing."

This rather flippant attitude finds no echo in the American press. The Philadelphia *Inquirer* twits Mr. McCormick with being "in a trance," "hypnotized" by the Russians. And the Rochester *Democrat and Chronicle* declares that "if Russia cares anything for the friendship of the United States—and it is believed she does—it will not be wise for her to furnish many more such occasions for mere 'talk' as that of the massacre at Kishineff."

ALLEGED NEGRO SLAVERY IN ALABAMA.

THE United States Secret Service officials have for some time been investigating an alleged system of slavery imposed upon unfortunate negroes in Alabama, and their revelations to date have brought out considerable comment in both Northern and Southern newspapers. One Robert N. Franklin, of Goodwater, Ala., has been arrested on the charge of being a party to the system, and the officials have secured evidence and indictments against a large number of others. Under the guise of conviction and punishment for petty offenses—and sometimes for no offense at all—it is charged that negroes have been sent to convict farms or turned over to contractors for convict labor. They have been induced, and at times compelled, to sign agreements to work as peons for a certain length of time. They have been flogged, hunted with bloodhounds, starved, and sold by one contractor to another, which is in direct violation of the law. Just how the system is being worked is shown in the case of Joseph Patterson, who became the prey of the authorities at Goodwater, Coosa County, Ala. Joseph C. Manning, of Alexander City, Ala., in a letter to the New York *Evening Post*,

quotes a Montgomery correspondent of a Memphis newspaper as writing as follows on that incident:

"Patterson borrowed $1 on Saturday, promising to pay it the following Tuesday morning. Patterson did not get to town at the appointed time, when, it is said, he was arrested and carried before a justice of the peace, who found him guilty of obtaining money under false pretenses, without giving the negro an opportunity of getting witnesses or a lawyer. A small fine was assessed. The negro had no money, nor was he given an opportunity to get any with which to pay the fine and costs. He was at once sold to a man named Hardy for $25, who worked the negro for about one year, when Hardy sold the negro to Pace for $40, it is claimed.

"The negro worked a while for Pace, and in trying to escape cut a boat loose from its moorings. Upon his recapture he was tried and given six months more for this offense. The negro then entered into a contract for an additional year to pay a doctor's bill. In short, for the $1 originally borrowed the negro would not have gotten out until the year 1906. The negro was originally arrested in Coosa County and kidnaped into Tallapoosa County, where he was sold, according to the report."

Mr. Manning declares this is only one case in ten thousand, and that there has been for years a "system of practical peonage in the black-belt counties of Alabama, but it has been only in recent years that the hearts of men in the mountain counties of Alabama have come to be hardened to depriving men of liberty and justice through the forms of law."

The Charleston *News and Courier* admits that the hardships of the negroes in Alabama are "altogether exceptional," but it declares that their lot is not at hard as that of some of the Northern wage-workers. We quote further:

"Outrageous as the treatment of these people has been, and however barbarous the so-called peonage system in Alabama, there are hundreds of thousands of witnesses who might be called in from the mines and sweat-shops of the North and East who would testify that compared with the hell in which they live the stockades and convict camps of the South must be Paradise. Here and there, now and then, a strong voice speaking from the Northern stage or through the Northern press will be heard condemning the horrible cruelties practised upon the defenseless white women of the Northern States, but the clergy, the capitalists, the large majority of the newspapers, and an army of political economists in that section keep their mouths shut and their tongues still while the massacre of the working people goes on day after day to satisfy the greed of their highly Christianized employers. The sins of the South are black enough, but by comparison they are as white as wool."

"We may swallow as best we can the practical nullification of the fourteenth and fifteenth amendments," says the Chicago *Post*, "but we shall not allow any man, woman, or child, of any color, to be held in bondage on the free soil of this republic." The New York *Evening Post* asks: "Why has it been left for federal officials to bring these horrors to public notice for redress? Has not Alabama thousands of humane and public-spirited citizens who loathe such injustice?" *The Post* goes on to say:

"Honest men dare not protest against what they know to be cruel wrongs to the negro, lest they be at once accused of being disloyal to their section or even of being willing to encourage 'social equality' with colored men. That is the taunt which dries up the protests of Southern men against outrages upon the negro. Privately they writhe under the blot upon their State, but publicly they lift no voice. Hence it is that such a stain upon our civilization as the wholesale forcing back of negroes into slavery could be perfectly well known in the South, yet no attempt was made to wipe it off. Who shall say, in view of these facts, that the nation has not a duty in the premises? When its citizens are imposed upon and maltreated, in clear violation of federal laws, as also when their solemnly pledged political rights are trampled upon, it is for the Nation with a big N to assert its majesty and its power. What comes of listening to the lotos-eating cry, 'Let us alone,' we see from the frightful wrongs of which Alabama to-day stands confessing herself guilty, tho powerless to redress them."

Several Alabama papers admit that the state of affairs described exists there, and punishment of the guilty parties is called for. The Montgomery *Advertiser* remarks that "such a system as seems to be practised in some parts of our fair State can only be possible through the indifference or fear of a considerable part of the white men in a community." The same paper demands punishment of those responsible for the peonage system, but condemns the Department of Justice at Washington for making use of the official reports "to play politics in this direction" and holding "Alabama up to scorn in the eyes of the country." The Montgomery *Journal* is even franker in its admissions. It says:

"Law-abiding people all over Alabama are looking to the federal courts to do what the state courts have tried for many years to do and failed—failed because the witnesses were either bulldozed or were prevented from testifying before the grand juries for some other unknown reason. Certain it is, with full knowledge of the traffic that has been carried on in certain sections of Alabama in what is practically and to all intents and purposes human slavery, and the cruelties that were being practised upon the poor unfortunates, the courts have been unable, after years of effort, to bring the culprits to justice."

Representative William Richardson, of the eighth Alabama district, however, maintains that the charges are "slanderous and false, gotten up to bolster the 'black-and-tan' faction of the [Republican] party in my State. . . . Slavery is no more tolerable in Alabama to white people there than it is to the people who live in Massachusetts."

CLARENCE DARROW'S WARNING TO TRADE-UNIONISTS.

MR. CLARENCE S. DARROW, the lawyer who appeared before the Strike Commission as counsel of the United Mine Workers, recently delivered an address in Chicago on "The Perils of Trade-Unionism." His speech is described as a "note of warning" to organized workmen, and coming, as it does, from a man who has been so prominent as an advocate of labor's claims, it has aroused unusual interest. Mr. Darrow said, in part:

"The phenomenal growth of trade-unionism throughout the last two or three years, altho unparalleled in any other period of the world, is perhaps not unlike the growth of the Knights of Labor some twenty years ago. It does not follow that trade-unionism will live because it is so strong to-day. When adversity comes, as it must come under our present system of production; when large numbers of men are thrown out of employment, then the great strain upon trade-unionism will be felt. It is comparatively easy to organize workingmen while all are employed or while work is plentiful. It is difficult to sustain this organization while many men are living on the verge of starvation or want.

"The great growth of trade-unionism has caused the workingman to feel his power; it has necessarily made many of them arbitrary, unreasonable, and unjust in their demands. This has, in many places, awakened a sense of resentment among a large class who otherwise would be sympathetic toward the unions. For instance, in the late strike of the anthracite coal workers, the sympathy of the whole country was with the strikers. This was due not to any special knowledge on the part of the public of the condition of the striking men, but to their hatred against the coal trust, which had monopolized and put up the price on a necessary product. The growth of these great industrial monopolies, whose business has been to take as much from the public as the public would stand, has set against them the great mass of the common people. These people have been sympathetic to trade-unions, not so much because they understood trade-unions, as because they hated the monopolies.

"At best, only a small proportion of the real workingmen are

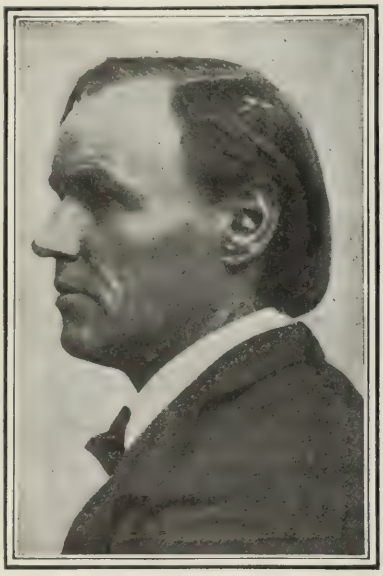
reasonably eligible to trade-unionism. Farmers, small merchants, and many others composing the great middle class do not belong to the unions and can not reasonably be expected to belong to the unions. This great middle class, which really creates the sympathy for the common people, which, in fact, is the common people, have believed that they were plundered by the trusts and corporations, and have given aid to the trade-unions. When they imagine that the trade-unions are making unreasonable demands or unfair conditions, their hostility will be turned against trade-unionism as it is turned against the corporate control."

Continuing, Mr. Darrow observed that the majority of trade-unionists to-day devote their whole time to the raising of wages. This he characterized as "a delusion and a snare," on the ground that a rise in wages is almost always followed by a rise in the price of commodities. Above all things else, he said, "trade-unionism should turn its attention to political action, not necessarily this party or that, but toward the solution by law and industrial changes of the problems of the day."

He concluded:

"The energy now directed toward simply organizing men and seeking to better their condition by raising wages, must be more largely turned toward the political and economic questions of the day, upon which labor, capital, and wages depend.

"This great energy can not be always kept in the narrow channel in which it is directed at the present time. It is for the trade-unionists of the world to show their ability and generalship by directing this great army of workingmen toward the substantial and permanent change and improvement of the laws and industrial institutions of the world."



MR. CLARENCE S. DARROW, OF CHICAGO,
Who appeals to trade-unionists to pursue a broader policy.

The Philadelphia *North American* deems this speech of special significance, and comments:

"Mr. Darrow's address on 'The Perils of Trades-Unionism,' delivered before the Henry George Association, in Chicago, is not a 'blow' at organized labor, as some have been over-quick to hail it. It is the earnest remonstrance of a thoughtful man against the follies into which workingmen have drifted and which menace them and the social structure with disaster. It needs courage for a friend of the laborer to rebuke his selfishness, ignorance, and recklessness, and only a true and wise friend, an unselfish friend, could dare so much and speak so plainly.

"What Mr. Darrow says will be misunderstood, distorted, and resented by the ignorant and denied by the selfish and designing, but the men of brains and heart at the head of labor organizations know that he speaks words of wisdom and truth, and that his warning comes none too soon. . . . . .

"A crisis in the life of organized labor in the United States is impending. It is foreshadowed in aimless strikes, in irrational unrest, in the seething turbulence of masses of men who can give no lucid reason for their turmoil, in the defensive drawing together of harassed employers, in the growing hostility of public opinion to purposeless disturbers of business. The need for sane counsel, sharp rebuke, and earnest remonstrance against foolish action is great, and the man who supplies that need takes his courage in both hands if he values the friendship of those whom he would save from their own folly. Clarence Darrow has dared greatly. Will organized labor understand him and heed him? Will its leaders stand by him and tell their followers that 'faithful are the wounds of a friend'?"

The Springfield *Republican* says:

"Viewed philosophically, it is inevitable that a riot of inexperience and inefficiency should characterize the early stages of labor's organization. No state of society is ever inaugurated with people already perfected for its coming. When the Confederates of Charleston, in the Civil War, set out to sink the Federal gunboats in the harbor by submarine torpedo-boats, they sacrificed the lives of many a crew before one gunboat was sent to the bottom. Republican institutions were not deferred on earth until a people were found entirely capable of running perfect republics. Democracy did not await the advent of a population already fully trained in the arts of self-government. All these things come, and the people most concerned have to develop up to them. Such is the lesson of history. Labor-unionism came also, and, in the same way, its adherents have had to discipline themselves by experience in the best methods of organization and conservative management. On the whole, taking into consideration the enormous increase of unionism, it is no more than fair to say that it is constantly gaining in equilibrium and sanity. Relapses here and there are to be expected; bad years are inevitable. But the leadership far and wide is the more touched with the shrewd sense and moderation of the best class of sober-minded wage-earners, as the accumulation of experience enforces the lessons of rashness, hot-headedness, stupidity, malevolence, or ignorance."

STOCK DEPRESSION AND THE LACK OF PUBLIC CONFIDENCE.

IS the market for industrial and railway securities at its lowest ebb? Have the astounding liquidations of the past four or five months been the result of a wise equalization of prices and values, or were they simply the outcome of an unwise lack of public confidence? Were prices too high then, or are they too low now? These are questions that business men and financiers all over the country are asking themselves and each other. As to actual trade and finance, the New York *Commercial* has been seeking information from leaders who keep in close touch with both, and it claims to have established the fact that "the actual volume of business, generally, is so great that it taxes trade capacity." But perhaps this may be what is the matter. Indeed, one of *The Commercial's* informants, a leader in the iron and steel industry, says:

"It is an unfortunate situation for any country to be in—to be doing more business than it can take care of. We have been trying this for a few years. This is shown by our neglect of much-sought foreign trade. Business done in this high-pressure manner is at extreme cost and without attention to natural safeguards. It is better to have a large number of small customers than a small number of large customers—better to have a small profit from many than a large profit from a few."

But if this be an objectionable feature, other leaders of great industries do not recognize it as such, and, as far as appears on the surface, the feeling is extremely optimistic. It is claimed that even the labor troubles have not interfered with work as might be supposed, and the New York *Journal of Commerce* remarks that "after all that has been done and endured, it behooves both [capital and labor] to be on their good behavior." This remark is made anent the threatened coal strike, which has been given in some quarters as a reason for security liquidations, and on the same subject the Philadelphia *Press* feels called upon to administer a rebuke to the coal operators for their refusal to accept the first choice of the miners on the conciliation board. It maintains that public opinion is against the course of the operators, and adds that "no interest in this country is stronger than public opinion."

Possibly, as is intimated in several of the financial journals, public opinion, and public opinion alone, in the shape of a lack

of confidence, may be responsible for the continued mysterious depression in securities, since it is hard to find that it is due to lack of business, or of profits, or to labor disturbances. With fair prospects of a good corn crop, with a big wheat crop practically assured, with the largest acreage of cotton ever known, and with high prices for them all, can a better reason be ascribed for the stock-market depression than that powerful entity, lack of public confidence?

THE GERMAN LANGUAGE IN MUNICIPAL POLITICS.

GERMAN-AMERICAN newspapers throughout the country have paid great attention to the struggle over the German language in the public schools of New York City. The decision to divest German of its obligatory character as a branch of study is denounced in some of the German-American organs. "A blow at the Germans," the *Abend Presse* (Chicago) calls it, and the *Deutsche Correspondent* (Baltimore) condemns the superintendent of public instruction in New York City for what it deems "prejudice" against "a third of the inhabitants of the city," who, it declares, are German. It ridicules the assertion that the public-school course in German has given poor results linguistically. "That," it thinks, "shows that the educational authorities either did not do their duty or did it inadequately." The *New-Yorker Staats-Zeitung*, organ of the aggressively German element in the United States, sees reason to fear that the dropping of German to a subsidiary place in the school course was primarily the outcome of anti-German prejudice, and denounces the new decision as "an insult and an injury" to the Americans who happen to be of German birth or parentage. This, however, is ridiculed by the *Volks-Zeitung* (New York), which says that German has not been discriminated against in any way, and that the complaints of the ultra-German papers "are unjustified." It proceeds:

"When the situation, as it now exists, is looked at calmly and without prejudice, one fails to understand why all the hubbub arose. The instruction in the German language given in our public schools has failed to yield satisfactory results. Those Germans who wanted to be sure that their children would learn German sent them to the free German schools or to private schools or procured the services of a language teacher. Besides, the relative numbers of the foreign populations in New York City have greatly changed in the last ten years. The motives for a change of the German-language feature of the public-school course had begun to operate forcibly for some little time past. When instruction in the German language was made obligatory in the public schools the Germans were the most numerous element in the city population that spoke a foreign language. Plausible arguments could be offered for the position given to the German language, and the political side of the case was by no means the least important. Things have changed since then. Italians, Jews, and Slavs are coming to the front. Their numbers and importance grow every year greater, whereas German immigration can not hold the pace at any such rate. But must Italian, Slavonic, and Yiddish be made obligatory studies in the public schools? It is because our citizens of German birth or origin thoroughly well understand the merits of the situation that they have remained cool and collected in the face of efforts to excite them over this question."

This view of the case seems to be shared by the English press. The Washington *Post* thinks that "the moral right to force taxpayers to pay for the instruction of children in foreign languages is more than doubtful and would not be clear if all the courts should affirm the legality of such taxation." And the New York *Times* says:

"As to the 'insult' involved in deciding not to teach German in the public schools, that, we confess, quite passes our comprehension. If all other modern languages were taught and German alone were neglected, there might, of course, be some ground for offense, but there is no such discrimination nor any thought of it. The children are given the chance in the last year of the elementary schools to study German, French, Latin, or stenography. Thus German is put on a level with the only other modern language taught in these grades, and also on a level with the chief ancient language. Our own impression is that in offering it as an alternative to stenography it is more flatteringly treated than is either of the other two studies, and that it would be far better for the pupils to know stenography as thoroughly as it can be taught at their age than to learn the little that they can learn of any language, living or dead, other than their own. From no point of view that we can possibly imagine, however, is there involved the slightest consideration of dignity or any cause for reasonable sensitiveness to 'insult.'

"The simple fact is that the action of the Board of Education was taken for the best interest of American children, and we include in that class the children of the Americans who happen to be of German birth or descent. It is the duty of the board to provide for all children the best schooling possible to fit them for the life of American citizens and for the opportunities that will present themselves as they grow to manhood or to womanhood. The time in school is short at best, and it is shortest for the children of the poorer families. The amount and the variety of what can be taught in this limited time must be sadly inadequate, measured by the highest standard of education. The greatest good of the greatest number is the object to be kept steadily in view. That demands the selection of the most useful studies, and no foreign language is among these."—*Translations made for* THE LITERARY DIGEST.

TOPICS IN BRIEF.

THE members of the Presbyterian General Assembly who voted against abandoning the doctrine of infant damnation were probably flat-dwellers.—*The Washington Post.*

THE much-lauded spectacle of "Venice in New York" would, doubtless, prove an unpopular attraction to people of the Missouri River Valley just now.—*The Baltimore American.*

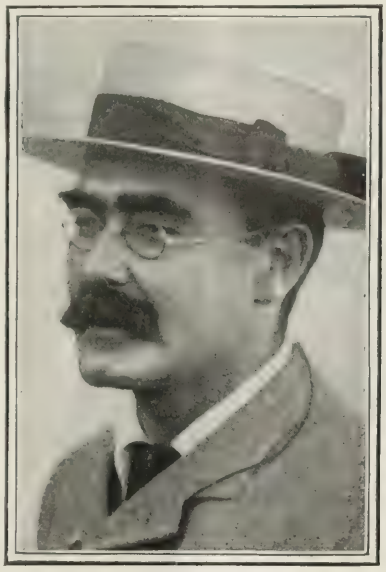
AN ambitious young man writes to *The Tribune* from May Keg, Ky., asking: "Would you like to have telegraph reports from this place of shooting affrays or of killing, etc.? If so let me know by return mail. I can furnish all you need, as I am interested." The offer is handsome, but the writer ought to have explained more fully what he contemplated doing.—*The New York Tribune.*

LETTERS AND ART.

IS THE CULT OF KIPLING DEAD?

NO one can have forgotten the height to which popular enthusiasm and interest in regard to Rudyard Kipling surged in this country a few years ago, when that author lay at the point of death. He had then achieved a vogue that was nothing less than phenomenal in the case of so young a man. To-day, says a Chicago critic, Rudyard Kipling, "prophet of blood and vulgarity, prince of ephemerals, and idol of the unelect," is dead. Mr. Jack London, the young Californian novelist and story-writer, who in *The Reader* (June) champions the cause of Kipling, admits that as far as his influence with "the class of whim and caprice, of fad and vogue, the unstable, incoherent, mob-minded mass," goes, the statement is true. "A fluttering, chirping host of men, little men and unseeing men, have heaped him over with the uncut leaves of 'Kim,' wrapped him in 'Stalky & Co.' for winding-sheet, and for headstone reared his unconventional lines 'The Lesson.'" But when the future centuries, says Mr. London, look back to the nineteenth century to find what manner of century it was, "to find, not what the people of the nineteenth century thought they thought, but what they really thought; not what they thought they ought to do, but what they really did do, then a certain man, Kipling, will be read—and read with understanding." For, the writer continues, only those artists live who have spoken truly of their own age, and of the number of these is Kipling. More than this, he is the interpreter of the Anglo-Saxon in the nineteenth century. We quote further:



RUDYARD KIPLING.

"What the Anglo-Saxon has done, he has memorialized. Anglo-Saxon stands for the English-speaking people of all the world, who, in forms and institutions and traditions, are more peculiarly and definitely English than anything else. This people Kipling has sung. Their sweat and blood and toil have been the motives of his songs; but underlying all the motives of his songs is the motive of motives, the sum of them all and something more, which is one with that which underlies all the Anglo-Saxon sweat and blood and toil, namely, the genius of the race. Both that which is true of the race for all time, and that which is true of the race for all time applied to this particular time, he has caught up and pressed into his art-forms. He has caught the dominant note of the Anglo-Saxon and pressed it into wonderful rhythms which can not be sung out in a day and will not be sung out in a day."

Mr. London's account of the Anglo-Saxon, of whose race-genius he considers Mr. Kipling the voice, is as follows:

"The Anglo-Saxon is a pirate, a land-robber and a sea-robber. Underneath his thin coating of culture, he is what he was in Morgan's time, in Drake's time, in William's time, in Alfred's time. The blood and the tradition of Hengist and Horsa are in his veins. In battle he is subject to the blood-lusts of the Berserkers of old. Plunder and booty fascinate him immeasurably. The schoolboy of to-day dreams the dream of Clive and Hastings. The Anglo-Saxon is strong of arm and heavy of hand, and he possesses a primitive brutality all his own. There is a discontent in his blood, an unsatisfaction that will not let him rest, but sends him adventuring over the sea and among the lands in the midst of the sea. He does not know when he is beaten, wherefore the term 'bulldog' is attached to him, so that all may know his unreasonableness. He has 'some care as to the purity of his ways, does not wish for strange gods, nor juggle with intellectual phantasmagoria.' He loves freedom, but is dictatorial to others, is self-willed, has boundless energy, and does things for himself. He is also a master of matter, an organizer of law, and an administrator of justice.

"And in the nineteenth century he has lived up to his reputation. Being the nineteenth century and no other century, and in so far different from all other centuries, he has expressed himself differently. But blood will tell, and in the name of God, the Bible, and Democracy, he has gone out over the earth, possessing himself of broad lands and fat revenues, and conquering by virtue of his sheer pluck and enterprise and superior machinery."

Here, again, is Mr. London's impression of the century which he considers that Kipling has helped to make imperishable:

"The nineteenth century, so far as the Anglo-Saxon is concerned, was remarkable for two great developments: the mastery of matter and the expansion of the race. Three great forces operated in it: nationalism, commercialism, democracy—the marshaling of the races, the merciless, remorseless *laissez faire* of the dominant bourgeoisie, and the practical, actual working government of men within a limited equality. The democracy of the nineteenth century is not the democracy the eighteenth century dreamed of. It is not the democracy of the Declaration, but it is that which we have practised and lived, that which reconciles itself to the fact of the 'lesser breeds without the Law.'

"It is of these developments and forces of the nineteenth century Kipling has sung. And the romance of it he has sung, that which underlies and transcends objective endeavor, which deals with race-impulses, race-deeds, and race-traditions. Even into the steam-laden speech of his locomotives has he breathed our life, our spirit, our significance. As he is our mouthpiece, so are they his mouthpieces. And the romance of the nineteenth-century man, as he has thus expressed himself in the nineteenth century, in shaft and wheel, in steel and steam, in far-journeying and adventuring, Kipling has caught up in wondrous songs for the future centuries to sing."

What author, asks Mr. London, is more representative of the age and the race? Kipling has sung of "things as they are." He stands for the doer, as opposed to the dreamer. "He has, above all, preached the gospel of work." He has sung "the hymn of the dominant bourgeoisie, the war-march of the white man round the world, the triumphant pæan of militant commercialism and imperialistic nationalism." And because of these things, says Mr. London, his fame will live.

THE PRAYER-BOOK AS LITERATURE.

"REGARDED from the strictly literary point of view as an anthology of devotion, the Prayer-book of the Church of England is probably unsurpassed in any language," says a writer in the London *Spectator* (May 16). He admits that in judging of devotional literature, as in judging of sacred music, the critic is apt to be carried away by the force of association; but he proceeds to instance passages to justify his claim:

"Take this invocation of God at the beginning of the 'Forms of Prayer to be Used at Sea': 'O Eternal Lord God, who alone spreadest out the heavens, and rulest the raging of the sea; who hast compassed the waters with bounds until day and night come to an end.' Could anything be better worded or more suggestive of the empty landscape of sky and ocean unchanged but by light and darkness? One phrase out of this prayer has passed into the language, 'such as pass on the seas upon their lawful occasions,' a sentence which suggests that the writer's mind had flown to pirates and sea-rovers, and that all the romance of the sea rose before his eyes as he composed his prayer. . . . Perhaps among the collects and the 'Prayers and Thanksgivings, upon Several Occasions,' we encounter the finest passage in the whole book—if we except the 'Te Deum' and the two rhapsodies ap-

pointed to be 'sung or said' during the Communion Service. The first of these begins, 'Therefore with Angels and Archangels, and with all the company of heaven,' than which there is no better example of the pomp of words in the language; the second with the angelic apostrophe, 'Glory be to God on high, and in earth peace,' etc., which breaks from prayer to praise and from praise to prayer without the slightest breach of literary continuity. So far as actual writing goes, the greatest of the collects, to our mind, is the one for the first Sunday in Advent, in which the church prays for grace 'that we may cast away the works of darkness, and put upon us the armor of light, now in the time of this mortal life in which thy Son Jesus Christ came to visit us in great humility; that in the last day, when he shall come again in his glorious Majesty to judge both the quick and the dead, we may rise to the life immortal.' Perhaps from a religious point of view some of us may prefer the less gorgeously worded collects—for instance, the one in which the people pray 'that they may be cleansed from all their sins, and serve thee with a quiet mind'—but as literature there can be no doubt which is the best. The prayer to be used at any time of dearth or famine is a good example of the use of alliteration to produce a startling effect—to seize the attention and, if possible, stir the hopes of depressed worshipers: 'O God, merciful Father, who, in the time of Elisha the prophet, didst suddenly in Samaria turn great scarcity and dearth into plenty and cheapness.' Again, the collect for St. Luke's Day is a fine instance of the way in which an atmosphere can be thrown around a bare statement by an apt allusion: 'Almighty God, who calledst Luke the Physician, whose praise is in the Gospel, to be an Evangelist, and Physician of the soul.'"

BRET HARTE'S AMERICANISM.

IT has fallen to the lot of at least two American men of letters to need apologists for their impugned Americanism. Lowell and Bret Harte lived so much of their later life in England that accusations became rife that they had outgrown their affection for the land of their birth and preferred the older civilization of England, where they became more or less the favored guests of the upper classes. Lowell was fortunate in having so loyal and generous a friend as George William Curtis to speak in his vindication at one of the Ashfield dinners. In behalf of Bret Harte, Madame Van de Velde, wife of the councilor of the Belgian Diplomatic Corps, wrote some earnest words that were first published in 1895 in the New York *Sun* and are now included by Mr. T. Edgar Pemberton in his recent life of the author. Madame Van de Velde wrote:

"It is difficult for an observant stranger to pass even a short time in Great Britain without becoming aware of a distinctively characteristic trait in the inhabitants; and it is impossible for any one who has lived a number of years there not to be absolutely convinced of its dominance. The Englishman, in his cold, undemonstrative fashion, is intensely patriotic; in his heart of hearts he firmly believes that in the scheme of creation he was formed out of special clay, while the remainder of human beings have been molded from a much inferior material. He is equally sure that no effort of grace can ever raise the alien to his own level; but while he is piously grateful for this dispensation of Providence, he recognizes and appreciates the right of the outsider to maintain an exalted opinion of his own country and nationality; he respects him for it even when he endeavors to prove it erroneous; nay, more, should his arguments successfully establish a recognition of his own superiority, he immediately ceases to entertain regard and toleration for the too easily persuaded stranger. This thoroughly English and so far honorable peculiarity is one of the reasons, apart from his merits as a literary celebrity, why Bret Harte is so extremely popular in England and has always been so.

"Before he took up his residence in London, his genius and originality had won him admirers, but when he gave them the opportunity of becoming acquainted with the man, independently, as it were, of the author, they promptly ascertained that no more uncompromising American had ever set foot among them. Time has not dulled Bret Harte's instinctive affection for the land of his birth, for its institutions, its climate, its natural beauties, and, above all, the character and moral attributes of its inhabitants. Even his association with the most aristocratic representatives of London society has been impotent to modify his views or to win him over to less independent professions. He is as single-minded to-day as he was when he first landed on British soil. A general favorite in the most diverse circles, social, literary, scientific, artistic, or military, his strong primitive nature and his positive individuality have remained intact. Always polite and gentle, neither seeking nor evading controversy, he is steadfastly unchangeable in his political and patriotic beliefs. He has frequently been heard to express himself frankly on the vexed question of Anglo-American marriages, severely satirizing those of his fair compatriots who, dazzled by the luster of lordly alliances, have too closely assimilated with the land of their adoption, and apparently forgotten their own country. To such he has not hesitated to apply the term 'apostates.'

"Bret Harte has maintained in his maturity the complete simplicity of manner which, coupled with extreme refinement of thought and speech, so deeply impressed those he met on his first arrival in England. Nor is it inconsistent with the distinct personality revealed in his writings, however dissimilar the man of the world must necessarily be to the creator of stirring romances, which frequently are but the records of personal experience. Yet it has been several times remarked that the appearance of Bret Harte does not coincide with the preconceived expectations of his readers. They had formed a vague, intangible idea of a wild, reckless Californian, impatient of social trammels, whose life among the Argonauts must have fashioned him after a type differing widely from the reality. These idealists were partly disappointed, partly relieved, when their American visitor turned out to be a quiet, low-voiced, easy-mannered, polished gentleman, who smilingly confessed that precisely because he had roughed it a good deal in his youth he was inclined to enjoy the comforts and avail himself of the facilities of an older civilization, when placed within his reach. He also gently intimated that days on the top of a stagecoach, or on the back of a mustang, and nights spent at poker, would not materially assist in the writing of stories which are never produced fast enough to meet the demand."

BRET HARTE.

"No more uncompromising American had ever set foot among them."—the British

His unwillingness to be interviewed during his London life seemed to pique curiosity, we are told, and gave rise to a quantity of apocryphal and contradictory statements about the way that life was conducted. Mrs. Van de Velde continues:

"Singularly enough, many of Bret Harte's countrymen in London did not take the trouble to verify these statements; they accepted them blindly, and thus they may have been reproduced in some American newspapers together with the account of the last début of a brilliant New York belle in London or the detailed description of some millionaire's festival. . . . . .

"When the day comes at last on which Bret Harte, after a long period of fruitful labors, realizes his ardent wish of revisiting America; when New York and San Francisco hail his return, and the whole nation opens its arms to its long-absent and distinguished son, the friends he has made in the old country will not forget him; and we are sure he will remember how they have

cheered the time of his self-imposed exile, and how honestly patriotic Englishmen can care for a truly patriotic American."

Death intervened, however, before the time came for putting to the test of personal contact his affection for his native land. But the statements which are made here by Madame Van de Velde are quite fully borne out by the testimony of the letters of Bert Harte himself that Mr. Pemberton has freely introduced into the body of his narrative. They show to almost a surprising degree that the standards he employed in bringing almost everything that he met in Europe to the test, were those of his own original and almost uncompromising Americanism. One only must answer for quotation. He wrote in 1895, while on a visit to Switzerland:

"The weather here is lovely—almost too lovely and luxurious to be bracing; the views beautiful—almost too beautiful, for the terraced lake Villeneuve on to Territet, Montreux, and Vevey, with the river and mountain background, are so unconsciously like a picture, and nothing else, that you doubt it all. So to 'brace' myself and realize, I went up to Geneva by the 'lift' railway, and thence to Caux, and thence to the Rochet, about 6,000 feet, and came back to dinner, but not 'braced,' and not entirely convinced either.

"Yours always,
"Bret Harte.

"P.S.—I wouldn't give a mile of the dear old honest virgin Sierras for 10,000 kilometers of all Switzerland."

THE CENTENARY OF AN IRISH POET.

WHILE the literary folk are reading numberless articles inspired by the centenaries of Emerson and Bulwer, here and there a brief but earnest claim is made for recognition of the centenary of James Clarence Mangan. "If we desire to commemorate real genius," writes Clement Shorter in *The Sphere*, "that Promethean spark that has no relation whatever to mere success, to prompt recognition, or to a nation's praise—the centenary of James Clarence Mangan will be more interesting for us than that of Emerson or of Lytton." Mr. Shorter continues:

"Who was Mangan? I hear some of my readers ask. His biography may be contained in a nutshell. He was born in Dublin on May 1, 1803, and died in that city on June 20, 1849. His life was one long succession of misfortunes; he was born into abject poverty and he was brought up under similar circumstances. His whole temperament was the negation of anything in the way of 'getting on,' and opium and alcohol in succession completed his destruction."

An anonymous essayist in *The Academy and Literature* (May 16) has called him a "bewildered poet." His case is suggestive of that of one or two other poets, but always with a difference. Alfred de Musset is named; "but de Musset lived his hour, and could always remember that once the wine of life had tasted sweet." Poets like Baudelaire and Poe "turned consciously aside from the mental grooves of their generation, and sought from art not the healing consolation which should be common to all, but rather a personal enjoyment, exclusive, exotic, dangerous." Since neither Poe nor Baudelaire could have regretted the exchange, the writer avers, neither are they to be pitied as those whose destiny was placed outside their own control. Herein lies the difference in the case of Mangan. To quote further:

"The Irish poet was not at all a rebel in any sense of the word. He came into the world incongruous and alien, and he lived and died incongruous and alien. Sensitive, imaginative, beautiful, he was the son of a Dublin grocer. Then, after a few years of study under an erudite Irish priest, necessity turned him into a breadwinner for his family. He worked at a scrivener's for seven and at an attorney's for three years. They were long years for Mangan. They were long years and bitter years, for his fellow clerks knew well that this strange figure was such as no other clerk had ever been or ever could be. And their subtle intelligences resented the incongruity, and for ten years it was driven home to Mangan that it is a hard world for those who do not fit into the settled niches. But Mangan never fitted in, could not fit in after any fashion. It was as tho one were to initiate the Faun of Praxiteles into the mysteries of Wall Street, this molding of a dreamer to the mental standpoint of a scrivener's office. It may have been discipline in realities, but Mangan was incapable of learning from realities—that was the secret of his temperament. But he was very sensitive, and between them all they knew well how to handle him; he was their butt for ten difficult years. Mangan came out of it all more confused by actuality than ever. It was still necessary, apparently, to remain in this odd world, and so, after trying two or three other phases of employment, he took definitely to journalism. His past, incidentally, had not driven him mad, but it had driven him to the hopeless relief of alcohol. Mangan the poet-dreamer, who sought vaguely from life the fleeting illusions of a lost poetry, had become a 'case' for well-meaning philanthropists. It was certainly an odd world, but they never drove him mad—he died at forty-six."

Mangan seems to have touched reality, at least, for the brief period when he found his love encouraged by a lady beyond him in station. But even she, we are told, added one more to the bewildering forces that life set against him when she cast him down from the position to which he thought he had attained. The very bewilderment which nature had thrown over his practical faculties seems to have been an antidote for some, at least, of the suffering which such natures receive from life. "Sometimes the poet in him, so much greater than the man, burst out. Then he spoke as one who had peered into the depths of life. But these were only glimpses, for Mangan the poet, as well as the man, was baffled by reality."

He wrote considerable prose and poetry of very little value; he translated from the German when Carlyle and the Taylors of Norwich were about the only ones so employed. His inferior critical faculty is shown by the fact that he preferred Schiller to Goethe. "None the less," says Mr. Shorter, "Mangan wrote some twenty or thirty poems which are among the most beautiful things in the English language, and which will, I have not the faintest doubt, be considered in years to come to have a very definite and honored place in that greatest of all possessions of the English-speaking race—its poetry."

NATURE-STUDY AND THE LITERARY SPIRIT.

THE criticism which Mr. John Burroughs recently bestowed upon the writers of nature stories, especially upon Mr. Ernest Thompson Seton and Rev. William J. Long, brought forth a prompt but partial response from the last-named author (Literary Digest, April 4). In *The North American Review* (May) Mr. Long returns at greater length to the defense of the "School of Nature-Study," and not only attempts to vindicate himself and Mr. Seton from the charge of purveying "sham" natural history, but insists that the strict scientific method is inadequate in the study of living creatures and brings us to misleading results. He makes an issue between the literary spirit and the scientific spirit somewhat similar to that which Matthew Arnold made between literature and dogma. "I study facts and law; they are enough," the scientist is represented as saying. "We know the tyranny of facts and law too well," the nature-student answers; "give us now the liberty and truth of the spirit." The point is concretely illustrated as follows:

"Let me illustrate this difference clearly and simply by reference to two animals that I have followed, under difficulties, for many years. They are the beaver and the otter, both wonderful swimmers, more at home in the water than on the land. The beaver uses only his hind feet in swimming; the otter, except when playing on the surface, uses only his forefeet for the same purpose; when chasing a trout under water, the hind legs are

trailed behind him with his tail. Why this difference in two powerful swimmers of the same waters? Again, both these animals are unusually peaceable at all seasons. Of all the woodfolk that mind their own business, the beaver is the most exemplary; and the otter, tho a powerful fighter and belonging to the quarrelsome weasel family, is gentle and playful, lets the other animals severely alone, and makes the most docile of pets when you catch him. Yet these two peaceable animals fight like Kilkenny cats whenever they cross each other's path. Why?

"Science has no answer here. It is not her field; and long ago she classified both animals and finished with them. The work of the nature-student, on the other hand, has hardly more than begun. Following these shy animals summer and winter, entering into their struggles, he has learned to interpret how, in their dim way, they think and feel, and how their interests are bound to clash. And he understands perfectly both their swimming and their animosities; for he sees the individuality which the scientist, with other interests, must always miss.

"In a word, the difference between nature and science is the difference between a man who loves animals, and so understands them, and the man who studies zoology; it is the difference between the woman who cherishes her old-fashioned flower-garden and the professor who lectures on botany in a college class-room.

"The second thing to remember is this: that the field of natural history has changed rapidly of late, and in the schools and nature clubs the demand is for less science and more nature. Formerly, the writer of natural history, working on the scientific plan, simply catalogued his facts and observations. Animals were assumed to be creatures of instinct and habit. They were described in classes, under the assumption that all animals of the same class are alike. Style and living interest were both alike out of place; for it was, and still is, asserted that a personal interest destroys the value of an observation.

"The modern nature-student has learned a different lesson. He knows that animals of the same class are still individuals; that they are different every one, and have different habits; that they are not more alike than men and women of the same class, and that they change their habits rapidly—more so, perhaps, than do either governments or churches—when the need arises. When a student at the Theological Seminary, I watched a toad that lived under the stone door-step. Now, toads are not supposed to have much individuality; yet, tho I have watched toads since I was a child, when I made pets of them, I recorded a dozen things of this one toad that I had never seen before, and that have never been observed, so far as I know, by any other naturalist.

"The truth is, that he who watches any animal closely enough will see what no naturalist has ever seen. This is the simple secret of the wonderful cat story, or the incredible dog story, to be heard in almost every house. It means that, after you have catalogued dogs perfectly, you still have in every dog a new subject with some new habits. Every boy who keeps a pet has something to tell the best naturalist."

Another point in which Mr. Long takes issue with his critics is the importance of literary style:

"There is one other thing that the modern nature-writer has learned, namely, that in this, as in every other field of literature, only a book which has style can live. And style is but the unconscious expression of personality. Not only may the personal element enter into the new nature-books; it must enter there if we are to interpret the facts truthfully. Every animal has an individuality, however small or dim; that is certain. (I know not how much farther one may safely go in the line of Leibnitz's philosophy and find the development of individuality below the animal.) And the nature-student must seek from his own individuality, which is the only thing that he knows absolutely (this is the center of the philosophy of both Hume and Descartes), to interpret truthfully and sympathetically the individual before him. For this work he must have not only sight but vision; not simply eyes and ears and a note-book; but insight, imagination, and, above all, an intense human sympathy, by which alone the inner life of an animal becomes luminous, and without which the living creatures are little better than stuffed specimens, and their actions the meaningless dance of shadows across the mouth of Plato's cave."

Mr. Long repeats his criticism of Mr. Burroughs, to the effect that the latter (1) overlooks the individuality of animals and the adaptiveness of nature, and (2) weighs the universe with the scales of his own farm and barnyard.

MAETERLINCK'S NEW ROMANTIC-SYMBOLICAL DRAMA, "JOYZELLE."

"LOVE triumphant over fate" is the theme of the new drama from the pen of Maurice Maeterlinck, just produced at the "Gymnase" in Paris under the playwright's own direction. The literary and artistic circles of the French and Belgian capitals have displayed keen interest in the new work, which Maeterlinck himself declares to be more imaginative, poetic, and symbolical than "Monna Vanna." In an interesting interview with a *Figaro* writer, he described "Joyzelle" as an intermediate work in tendency and artistic purpose, one that will be placed between his first dramatic productions and his realistic "Monna Vanna." Asked to characterize the play in a brief formula, Maeterlinck said: It represents the triumph of will and love over destiny or fatality, as against the converse lesson of "Monna Vanna."

In order to illustrate the possibility of such a result of the struggle between environment and personality, Maeterlinck continued, it was necessary to place the chief personages of the drama in very peculiar circumstances and to invoke the aid of myth and symbolism. The story is briefly summarized as follows:

Merlin, the enchanter, desires to insure the happiness of his son, Lanceor. But his instinct, or his subconscious clairvoyance (personified in Arielle, a creature visible to Merlin alone and to none of the other characters of the play, so that Arielle's presence is unknown to Merlin's associates, tho of course known to the audience), has revealed to him the awful fact that a premature death awaits his son at the end of the month unless he be saved by the love of a woman. The love must be marvelous, yet natural; simple and pure, yet all-powerful; heroic, yet sweet and gentle—a love which dares all, claims all, and shrinks from nothing. Such a love, should he find it, will make Lanceor's life happier and more beautiful than that of other men.

Lanceor does love, and is loved in return by a beautiful girl, Joyzelle; but is that love the perfect one which alone can save Lanceor? Arielle believes in Joyzelle, but Merlin doubts. He decides to submit Joyzelle to several trials or ordeals. She must prove the intensity and strength of her devotion. He separates the lovers, and the trials ensue.

Joyzelle is forbidden, on pain of death, to visit Lanceor in Merlin's castle. She disobeys, at the risk of her life. A wild beast attacks, wounds, and poisons Lanceor; Joyzelle throws herself upon the beast and saves her lover. Lanceor is tempted by the ethereal Arielle and yields to her charms; he even scorns and repulses Joyzelle; but she patiently endures this and forgives him. Merlin, after this episode, assures her that Lanceor is treacherous and unfaithful, and he bids her look behind and see her lover in the arms of another woman. She refuses to turn her head; she has faith and will accept her lover's word. Finally she is told that, to save Lanceor from death, she must dishonor herself. She appears to consent, but brings a dagger to kill the pretended seducer—Merlin himself. This convinces the enchanter, and the lovers are made one.

The dramatic critic of the *Figaro*, Emmanuel Arène, says that this play, while neither so tragic nor so significant as "Monna Vanna," is of high literary and poetic value, full of beauty, tender emotion, and elevated thought and sentiment. Its philosophy is noble, and it is written in the most exquisite prose. Catulle Mendes, in *Le Journal*, expresses a similar opinion in the main, while regretting the absence of movement and vitality. The symbolism of the work, he says, is either too profound or too obvious and devoid of originality. He admits, however, that it met with distinguished success at its first production, before an audience composed of literary men, artists, and critics from more than one country. — *Translations made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION.

FLIES AS CARRIERS OF BACTERIA.

AN interesting laboratory study of this subject has been made by Eva May Shoemaker and Alvin Waggoner, two students in the Eastern Illinois Normal School, under the direction of W. H. Manwaring, of Johns Hopkins University. To determine "the part flies may play in the transmission of bacteria," they constructed a piece of apparatus consisting of a box divided into two compartments. In the first compartment they exposed food material infected with an easily recognizable species of harmless bacteria, and in the second compartment they placed an open dish, containing agar, a substance used as a culture medium. Flies were placed in the first compartment, and, as soon as a sufficient number of them had been seen to walk upon or eat of the infected material, they were allowed to pass through a small door into the second compartment, where they had a chance to come into contact with the agar. Bacteria deposited on the surface of the agar multiply there and form characteristic colonies. To quote a review of the experiment in *School Science:*

"In the preliminary experiment, . . . a yellow bacterium was used. Molasses mixed with a growth of this was spread on a plate in the first compartment, and a dozen flies put into the apparatus. Half an hour later, the door between the two compartments was opened and the flies allowed to pass through. As soon as six of them had been seen to come in contact with the agar in the Petri dish, the dish was covered and put away to develop. A few days later there had grown on the agar over a hundred colonies of yellow bacteria."

This experiment was repeated with red and with violet bacteria, and characteristic red and violet colonies were obtained. To prove that the germs from which these colonies grew came from the infected material in the first compartment, and not from accidental sources, control experiments were made with other groups of flies, but with no infected material in the first compartment. In no case, however, did the dishes used in the control experiments develop yellow, red, or violet colonies. To prove that the flies were the only means of transmitting the bacteria, experiments were made with infected material in the first compartment, but with no flies in the apparatus. The Petri dishes from these experiments also developed no colonies. "The germs that grew into colonies in the first experiments, therefore, came from the infected material in the first compartment, and were carried to the dishes by flies." From their results the more general conclusion was drawn that "flies are capable of carrying bacteria from one place to another, if they have a chance to come in contact with material containing these organisms." The experimenters next undertook to determine whether flies in nature actually do carry bacteria with them.

"To determine this, test-tubes of sterile agar were melted and then cooled to 40° C., a temperature a little above that of the human body. At this temperature the agar still remains liquid, but is not hot enough to kill bacteria. Flies were caught with sterile forceps and washed in this melted agar. The agar was then poured out into sterile dishes, where it solidified. . . . It is reasonable to suppose that if bacteria were present on the flies, some of them, at least, would be washed off by this process into the agar, where they would multiply and form colonies."

The dishes obtained from these experiments varied greatly, but all of them developed colonies, the number ranging from fifty to over two thousand. "Flies in nature," therefore, "probably always do carry bacteria with them." The writer continues:

"From the standpoint of public hygiene, these conclusions are very significant; for, admitting that flies can carry harmless bacteria, there seems to be no reason why they can not carry disease-producing bacteria as well. In fact, it has been a general belief among scientists for a number of years that they are active agents in the transmission of many diseases. Recent studies by Dr. L. O. Howard on the breeding habits of these insects furnish good evidence that they occasionally play an important rôle in the transmission of typhoid fever. It is probable that they can, and do, carry the germs of any disease which offers them an opportunity to come in contact with infected material."

In a concluding comment on these experiments, *School Science* says:

"Their work is of value not only on account of its scientific interest, but also because it points the way to a new field of effort open to secondary students—a field whose development would have an important influence on educational methods, as well as on public-health problems."

CAN OBJECTS FLOAT DOWN-STREAM FASTER THAN THE WATER?

THIS apparently absurd question is seriously answered in the affirmative by Howard A. Coombs, a correspondent of *The American Machinist*, and the editor of that paper, after weighing his arguments, pronounces them sound. The fact that objects floating in running water may move faster than the water itself was first noted, according to Mr. Coombs, by an officer in the British army, Gen. Sir Samuel Bentham, and his account of how the matter was brought to his attention is to be found in his letters, published after his death. Says Mr. Coombs:

"When he happened to be at a river town in Siberia, he heard the statement made that some iron, which was to be sent down the river, would arrive at its destination sooner if large and heavy barges were employed in place of lighter and smaller boats.

"Sir Samuel maintained that it would make no difference in the time whether large or small boats were employed; but he failed to make any impression upon the Russians, eminent engineer tho he was, because they said they knew better from experience. Both parties were obstinate, and Sir Samuel left without an opportunity of putting the matter to a test.

"About a year later, however, it happened, while he was descending the river Angora, that he noticed that the bark he was in, which was being propelled by the current only, was traveling much faster than the pieces of wood and other débris floating on the surface of the stream. He says: 'I was astonished at this phenomenon, and presently recollected my dispute with the people at Nigni Faghil.' He then proceeded to experiment, embarking himself in a small boat, for one thing, which was rapidly left behind by the larger vessel. The cause of the difference in speed was not in the depth of the draft, for the barge or 'bark' was very shallow, being flat-bottomed. He finally reasoned as follows: 'Rivers consist of water running down an inclined plane by the force of gravity. Were it not for the resistance the water meets with in the bed of the river, as well at the bottom as at the sides, the water would run down infinitely faster. Bodies floating on this running water are acted upon also by the force of gravity; they have a tendency to move with as great a velocity as that which the water itself would have, had it met with no resistance against the bed of the river. These floating bodies do not touch the bed of the river; their motion is not impeded, until we come to consider the resistance they meet with in the water itself. But they meet with none till their motion exceeds that of the water. Their motion then must exceed that of the water, and that the more so the less they are affected by that resistance; hence the better their shape is adapted to divide the water and the greater proportion their gravity bears to their surface of resistance, the quicker they will be impelled by their gravity through the medium which tends to retard their motion. They would acquire, were it not for the resistance they meet with from the water, precisely that degree of velocity which the water itself would acquire, were it not for the resistance it meets with from the land.'

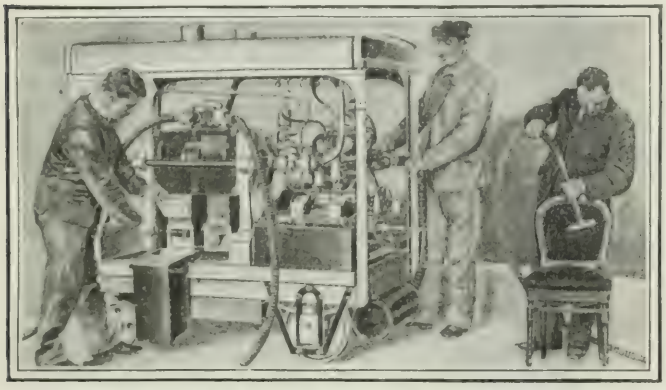
"This conclusion is, of course, incontrovertible, and shows that every object floating in running water of a sufficient depth would travel at least as fast and generally faster than the average speed of the water itself were it not for the resistance offered by the atmosphere."

The editor of *The Machinist*, in reviewing the writer's argu-

ment, notes that if a wheeled weight were placed upon an inclined plane it would move down the plane regardless of whether the plane were in motion or not. This, he says, is substantially the condition of the body floating down-stream, and the position taken by Mr. Coombs is therefore pronounced to be incontestable. Mr. Coombs, in closing, suggests that the fact to which he has called attention may be utilized to test the relative resistance to passage through the water of yacht hulls of different shapes. All other things being equal, he asserts, the yacht or model which had the best lines would show its superiority by forging ahead of the others.

CLEANING WITH THE VACUUM PUMP.

THE new method of "cleaning house" with a vacuum pump which literally sucks the dust from all surfaces and stores it away in a receiver, instead of distributing it through the surrounding atmosphere, has already been mentioned in these columns. We now translate an illustrated article from *La Nature* (Paris), showing exactly how the process is carried on. Says the writer, M. G. Richon:



APPARATUS FOR SANITARY CLEANING BY MEANS OF VACUUM.

"The cleansing of carpets, curtains, and upholstery constitutes a great difficulty, not only from the point of view of the perfection of operation, but also, and particularly, from that of the danger that it may cause in thickly populated places. It is, in fact, indispensable that the dust should not be set in motion, but should be collected, to be properly disposed of. This desideratum is now satisfied by several methods, so far as carpets are concerned. One of these consists in passing compressed air through the carpet and thus blowing the dust into a ventilator, which disperses it. In others, a closed drum is used, furnished with beaters that raise the carpet and let it fall. The dust, as in the preceding case, is raised by a powerful ventilator in communication with the interior of the drum.

"These processes give good results, but they are inconvenient in that they require the transportation of the carpet to a special factory; besides, and especially with the beating machine, it can be used only with strong articles. A slightly worn carpet is sensibly deteriorated after passing several times through such a machine. Finally, none of these systems can be used with upholstered furniture. . . . . .

"The vacuum cleaning machine . . . is composed, as shown in the illustration, of a motor that runs an exhaust-pump, of a condensing filter that collects the dust, and of a flexible tube having an aspirating nozle, whose form varies with the pieces to be treated. The whole is carried on a four-wheeled cart and is easily transportable.

"The essential part is the condenser, which is a closed chest containing a metallic mushroom-shaped piece against which the air is projected and leaves its coarsest particles. It is then filtered through a double linen bag and is not discharged into the atmosphere till it has been relieved of all its suspended dust."

The condenser has at its lower end two dust-chambers, which can be cleaned while the machine is working, without stopping the motor. The cleansing of the filtering-cloths can also be effected in a few seconds by opening the proper stop cock. In practise two kinds of motors are used. In a stationary plant, an electric motor is employed, which is easily connected with the street mains; in a private house, a naphtha-motor is used, as shown in the illustration. We quote furfher:

"In these conditions the pump may run two tubes at once and dispose of 165 cubic meters an hour, which corresponds to the enormous velocity of 40 meters (131 feet) per second in the tubes.

"As has been said, the aspirating nozles vary in form according to the pieces to be treated; for carpets a flattened cone is used, whose edges, tipped with rubber, are about 1 cm. ($\frac{3}{8}$ in.) wide and 25 cm. (10 in.) long. For furniture, the length is reduced to 10 cm. (4 in.). These forms enable the nozles to be applied closely to the surfaces to be cleaned, so that a good vacuum can be obtained in the condenser. The vacuum can also be regulated at will; it is made strong for carpets, weak for chairs. Quite recently the inventors have devised an aspirator with jointed handle that can be used with all furniture, without replacement, and always fits exactly on the surface to be cleaned, no matter what may be the position of the handle or its movements. . . . When it is desired to clean surfaces impermeable to the air, such as walls, cornices, boards, etc., there is fitted to the aspirating cone a small brush worked by electric power, which detaches the dust and enables it to be sucked up.

"The chief advantages of vacuum-cleaning, as it has been described, are the following: (1) Absolute cleansing of the objects treated, since no dusty nook escapes the action of the aspirator; (2) no displacement of carpet or furniture is necessary; (3) no injury such as takes place when carpets are beaten, the objects regaining their proper colors after being relieved of dust; (4) complete condensation of the dust—an important point from the standpoint of hygiene, since it is thus removed as a whole without being suspended in the surrounding air.

"A final advantage that is not to be overlooked is that of speed; three or four days are sufficient to clean completely the seats and hangings of a theater of ordinary dimensions.

"It need not be said that the dust collected in this way contains not only mineral substances, the débris of wool, etc., which make up its greater part, but also all sorts of microbes. The dust that has been taken from the chairs of one of our most important theaters contained notably many virulent bacilli, including those of tuberculosis, of putrefaction, of blood-poisoning, etc. It may be seen what services may be rendered to hygiene by a process capable of expelling dust from inhabited places without sending it into the surrounding atmosphere."—*Translation made for* THE LITERARY DIGEST.

Stealing Electricity.—A hotel-keeper in the City of Mexico has just been condemned to a year's imprisonment and has been fined $33.70 for stealing from the electric light company the current with which his hotel was lighted. Says *The Electrical World and Engineer*, from which we quote the tale:

"The landlord who attempted to evade the electric company's charges wired his house and made a connection with the company's cables, with the intention, as he pleaded, of calling at the office of the company and explaining the matter at a later day. He also declared that he had used the current for 'only a month.' The company had its suspicions aroused, and applied to the court for authority to make an examination of the hotel lighting system, which was granted, with the result of revealing the fraud. The legal point of interest involved in the case hinged upon the definition of the word 'robbery,' which the district code thus elucidates: 'He commits robbery who possesses himself of a movable thing belonging to another, without right and without the consent of the person entitled by law to dispose of it.' The judge's ruling was as follows:

"'By things or properties (for in legal phraseology these two words are synonymous) are understood all the objects that constitute the patrimony of man; and if it is plain that electricity, whether it be called a fluid, a current, an energy, or any other name, at present forms a part of human wealth; that, thanks to the prodigious progress of the times and to his own activity, man has succeeded in harnessing it and using it as a commercial article; it is unquestionable that the electric current forms part

of men's commerce, and is, therefore, capable of being appropriated; and as it is also unquestionable that this fluid can be transmitted and transported from one place to another, whatever the means employed to that end, it must also be regarded as a movable thing; and, therefore, there will assuredly be no difficulty in allowing that the clandestine tapping of the fluid constitutes the crime of robbery as it fits exactly the terms of the legal text which comprises and defines it.'

"In view of the summary punishment inflicted in this, the first case of the kind which has come before the courts of Mexico, it is believed that the 'thing' dealt in by the electric light companies, the illuminating current, to wit, will hereafter be carefully avoided by individuals who desire to economize at the expense of others."

"SPRING FEVER" AND ITS TREATMENT.

WHAT is the cause of the feeling of lassitude—the "tired feeling" of the newspaper paragraphers—that is so familiar in spring? In *Good Health* (May) Dr. J. H. Kellogg writes of it as follows:

"The poetic figure which represents life as a candle which is being slowly but surely consumed, expresses not simply a poetic idea but a scientific fact. The body is in reality a living furnace in which fuel (food) is constantly burning, and sometimes the furnace itself is in part consumed when the supply of fuel is insufficient or the demand unusually great. During the winter season the vital fire burns at a more rapid rate than during the warm months, the purpose being to create the amount of heat required to make good the daily losses by exposure to an atmosphere much below the temperature of the body.

"To maintain this rapid rate of combustion greatly taxes the digestive powers and all the vital forces. Only the very strongest constitutions can endure continual exposure to a low temperature. In other words, the extraordinary effort required by the forces of the body to maintain animal heat during the winter season makes a great draft on the vitality, and when spring comes nature recognizes the necessity for rest and opportunity for recuperation of the vital powers. The advent of warm weather lessens the demand for heat, hence the vital fires are diminished in intensity, the wheels of life are slowed a little so that the expenditure of energy may be lessened, and thus an opportunity be afforded for recuperation. . . . . .

"From the above facts it is evident that instead of undertaking by artificial means to produce a fictitious feeling or appearance of health and vigor, one should, on the contrary, seek to follow nature's suggestion by refraining from violent exertion and by the adoption of such means as will conserve the vital forces, avoiding an undue expenditure of energy. In other words, one should never force and stimulate the system when nature says plainly that rest, recuperation, and refreshment are required, and wise is he who heeds her commands.

"On the other hand, there are many cases in which the spring depression may be traced directly to overfeeding, a very common practise in the cold months of the year on account of the natural increase in appetite, the excessive use of sweets, rich foods, confectionery, and various other unwholesome articles. Such digressions are often tolerated during the winter months, but with the approach of spring, when there is a general letting down of the vital tone, the evil consequences become painfully apparent."

In any case, the writer warns us that the customary "spring tonic" is quite unnecessary and is apt to do more harm than good. A cold bath every morning is tonic enough for most people.

A LIGHTNING-PROOF GARMENT.

THE protective garment or envelope invented by Professor Artemieff, director of the Electrotechnical Institute at Kieff, Russia, has already been mentioned in these columns. As will be remembered, it is a dress of metallic gauze which enables the wearer to stand without danger in the path of very high-tension electric discharges. The theory of its action, its construction, and some of its uses are set forth by M. Émile Dieudonné in *La Science Illustrée* (May 2), which also prints an illustration of this curious garment. Says the writer:

"At the outset, Professor Artemieff was guided by no commercial interest, but was solely anxious to protect his students against the danger of discharges when conducting investigations on high-tension currents. The results obtained with his protecting tunic were so happy that it has been introduced into industrial use.

"The idea of the device was inspired by Professor Melsens, the Belgian scientist. . . . It is well known that the fundamental idea of the Melsens system of protection against lightning is to enclose the object to be protected against atmospheric discharges in a sort of metallic cage, covered with aigrets of iron with multiple points. If any one wants to escape the danger of lightning during a storm, he has only to take refuge in an iron house, or, since this would be rather costly, in a sort of iron cage. Such a metallic structure can be subjected to violent discharges without being penetrated by them. It is a well-known fact that the electric current always seeks to travel by the way of least resistance; in other terms, by the best conductor that it meets, and that it avoids the poorer conductors. If, then, we envelop the body of a man who is working amid high-tension currents with an excellent conductor, the danger is lessened, because his body is a poorer conductor than the other. In place of insulating the human body with rubber shoes and gloves, which have often been employed in workshops, Professor Artemieff envelops it in a thin tissue of copper, which covers it from head to foot, including face and hands, as shown in the illustration.

ARTEMIEFF'S ELECTRO-PROTECTIVE SUIT.

"The experiments tried by M. Artemieff on himself and his wife, clad in these tunics, were sufficiently conclusive.

"The professor then entered into relations with the house of Siemens & Halske, and trials were made in their shops at Charlottenburg, which succeeded wonderfully. Clad in his protective armor, Professor Artemieff handled conductors traversed by high-potential currents of 150,000 volts, from which sprung sparks a yard long.

"He grasped in his hands the two opposite poles of a circuit traversed by a current that passed through him, or rather through his garment, which thus formed a short-circuit, to use the technical expression. When a very intense current passed through the protecting garment, the metallic tissue of which it was made was slightly warmed. The experiments prove that the wearer can bear currents of very considerable intensity, as high as 200 amperes, during quite an interval of time, and even intensities three times as great for a few seconds. The experimenter felt a slight sensation of heat in

the hands and elsewhere, where the garment was not perfectly made. . . . . .

"The electric resistance of the garment is less than 0.01 ohm, while that of the human body, tho variable, is always more than 2,000 ohms, measured from one hand to the other. Consequently the production of a short circuit for an intensity of 1,000 amperes will determine a difference of potential of 10 volts between the two hands, and the derived current traversing the body will have an intensity of only 0.005 ampere, which is quite harmless. Again, the garment prevents the discharge from penetrating the body. . . . On the other hand, the protective covering is not exempt from certain accidents due to the formation of short-circuits in large installations. As long as the contact between conductor and envelope persists, there is positively no danger. . . . . But if the fuses act slowly and if the separation of the garment from the conductor takes place before the interruption of the circuit, an arc will form, whose heating effect may destroy the tissue and burn the skin.

"A very interesting result appears from experiments undertaken to see to what limit the formation of an arc may proceed without risk of burning. Professor Artemieff held in each hand one of the poles of a 1,000-volt machine; then he suddenly broke the circuit by letting go with one hand. An intense arc arose, and the metallic tissue that covered the hand was burned through in several places; but the hand remained quite uninjured.

"Professor Artemieff's garment is also susceptible of rendering signal service in case of a fire's breaking out in an installation where there are high-tension currents. A fireman with a hose, if he wears the garment, may approach as near as possible to the fire without exposing himself to danger from the current's traversing the stream of water."—*Translation made for* THE LITERARY DIGEST.

ACTIVITY AND EDUCATION IN CHILDREN.

OWING to the wonderful activity of children, says Prof. Sandford Bell, of Clark University, in *The Outlook*, it is almost impossible to give a child too much to do, provided—and here is the important point—the tasks imposed upon it are of the right kind. There may be some justification, he thinks, for the cry that has gone up during the past ten years about overwork in our schools, but it is his conviction that it is not the *amount* of work but the *kind* that is killing our children. Says the professor:

"The harm lies in giving the child a kind of work that it is not ready for. As bad or worse than this is the school custom of suppressing the child's activity. It is much more fatiguing for the child not to act than it is for it to act. The most difficult, unnatural, and exhausting thing which a vigorous, promising child can be forced to do is to be quiet.

"One of the things which particularly interested me was the marvelous recuperative power of a child in a brief period of time. It would play with all zeal, intensity, and abandon until apparently 'tired out,' then cut the rate of activity down—never to absolute quiescence—for a few minutes, and afterward resume it at concert-pitch as fresh as new. This was kept up throughout the day, with slightly diminished ability to rally toward nightfall. Such is true of a healthy, vigorous child. . . . . .

"We may say that this enormous activity in the child is the essential means which nature has supplied for its education. Activity means educability. It means the multiplication of experiences. The number of experiences is one of the matters of first importance in the education of the child. Everything else being equal, that being is best educated who has had the greatest number and greatest variety of experiences. But we know that everything else is not equal, and that a child can have experiences of a kind that are ruinous and can also have more of any one kind than he can stand, and a greater variety than is good for him. Nevertheless the point holds that, whatever of education the child gets in extent and in quality is obtained by means of his activity. Activity is his educational capital. It is the purpose of nature and the duty of the parent and teacher rightly to invest it."

The part played by nature, according to Professor Bell, is the endowment of the child with certain activities, both general and special, and to bestow upon it instincts that are general indications of the lines of activity that have, through generations, proved advantageous. These, says the writer, "are very powerful and conservative, and often defend the child against the stultifying and unnatural restrictions of parents and teachers." It is the business of the teacher to supplement and guide these instincts; but Professor Bell believes that education should consist of training along their lines rather than of systematic efforts to repress them. We should work "in harmony with nature, instead of thwarting her purposes and doing violence to her laws in the child." The writer's thought seems to point in the direction of increased manual training.

Future of the Timber Supply.—According to the statements of Director Fernow, of the New York State College of Forestry of Cornell University, the timber supply available in the United States will be exhausted in thirty years if the present rate of consumption continues. Professor Fernow has discussed this subject in detail in a recently published work entitled "Economics of Forestry." He also spoke of the prospective timber famine before the American Association for the Advancement of Science during the session held last winter at Washington. As reported in *The Manufacturer's Record* (January 8), he said:

"An estimate of the present stand of virgin timber in the United States ready to supply the demand for lumber, altho admittedly on slender basis, brings out the improbability, if not impossibility, of meeting the increasing demand for another thirty years under present methods of utilization. Even if the entire forest area of 500,000,000 acres were supposed still fully stocked with the average stand per acre, as reported by the census in the holdings of lumber-men—an absurd proposition—the stock on hand would be exhausted within that period. The possibilities of securing the requirements from the reproduction in the natural forest are discussed on the basis of European experiences and with proper reference to the damaging forest fires. It is shown that, even under good forestry practise, the present increasing demand could from the present area be supplied only for a limited time. Hence the efforts to secure such forest management and greater economy in the use of timber are not too early, but rather too late, and the dallying with the problem by the legislatures fatal."

SCIENCE BREVITIES.

A LONDON despatch to the New York *World* states that the complete cessation, without explanation, of Marconi's promised daily transatlantic service to the London *Times* by 'marconigraphs' is causing much unfavorable comment there. "When the inventor," says *The Western Electrician*, "refused the challenge to demonstrate the practicability of his system to two leading electricians there, he stated that Lord Kelvin was to accompany him to Poldhu for a few days' test of his system. Nothing further having been heard of this test, *The World* correspondent asked Lord Kelvin if it had been made, and received the reply: 'I was obliged to postpone the visit to Poldhu on account of an unexpected engagement. I was not going for the purpose of making any tests, but to see it as a matter of scientific interest. So far Marconi, says the correspondent, has given no demonstration to independent scientists of the transmission of wireless messages across the Atlantic, but has, in fact, refused to give any to what he calls 'unfriendly critics.'"

"WHILE as an engine of war the submarine is of doubtful expediency, it would seem as tho it might be of some service in the prosaic business of salvage," says *The Marine Review*. "Beyond a certain depth, and a very limited one at that, there is at present no practical means of recovering vessels or their cargoes. So enormously does pressure increase as one descends below the surface of the sea that vessels become mere shattered hulks. Occasionally imaginative or optimistic wreckers endeavor to salvage vessels at unusual depths, but the story is one of unbroken failure. Cavaliere Pino is the first submarine inventor to discard the submarine for purposes of warfare and to turn his energies to essentially practical lines. If all accounts are to be believed, he is pursuing some very interesting experiments in the Gulf of Genoa with what he calls his 'under-water working-boat.' He has designed a boat to resist the enormous pressures that accumulate with depth, and has been so successful as to have descended in [illegible] depth of [illegible] feet. The hull is spherical in form with a diameter of 10 feet, and has accommodations for a working crew of two persons. Its practicability lies in the fact that it is equipped with arms passing into the boat through universal water-tight joints and possessing powerful gripping qualities."

THE RELIGIOUS WORLD.

GROWING FAMILIARITY WITH THE BIBLE.

THE Bible was never known so well nor was its influence ever so great as at the present time, in the opinion of one of the most influential publications of The University of Chicago Press, *The Biblical World*, which sees the best of reasons for doubting the many recent statements that popular knowledge of the "Book of books" is on the wane. "People sometimes speak now as tho the Bible were receiving less attention than formerly," it declares. "This, however, is not the case. The number of Bibles which are printed every year has increased enormously, and the number of persons who read the Bible has also increased." The same authority adds:

"The difference is not so much in the amount of attention which the Bible receives as in the way in which the Bible is used and viewed. Family worship is not so common as a generation or two ago, but this is not because piety has declined, or the Bible become less valued; rather it is due to the changing customs in family life and the modern 'rush' of business, school, and society. The committing of Scripture to memory is also less frequent than formerly, but this is not because the Bible is thought to be superseded by other religious literature; rather because 'committing to memory' is in these days a disputed pedagogical method. Undoubtedly there is a loss that comes from the decline of family worship and of Scripture memorization. Both should be reestablished.

"This loss, however, has been more than compensated by a better way of reading and applying the Bible. Whereas formerly it had been the custom to use the Bible almost wholly as a devotional book, and as a sort of mystical guide to conduct and belief, the rise of the modern historical spirit has brought thinking people largely to view the Bible from a historical standpoint, and to study it in a historical way. Not that the Bible has come to be regarded as antiquated and having no present value, but that its value for the present must be ascertained by an intelligent understanding of its origin and characteristics, and its meaning to those who wrote the several books. In other words, there are principles of interpretation which must be applied to the Scripture in order to obtain their meaning *for us*. To know what these principles of interpretation are, and to apply them competently, requires ability, knowledge, and training.

"The total gain from this change is very great, altho as yet it fails to be appreciated by many people. Those who noted the decline of the former use and view of the Bible, but do not perceive the ascendency and superiority of the modern use and view, think that the Bible has suffered eclipse. Yet nothing can be farther from the fact. The better understanding of the Bible which has now come to prevail improves the use and extends the influence of the Bible in a way never before attained."

But great as is the use of the Bible in the homes of the people, intimate as is the present popular knowledge of it, according to the authority we are quoting, "its fullest influence," we are assured, is "yet to come." "The Bible has not yet accomplished its full mission. In God's providence it has existed and now exists for the purpose of guiding and inspiring men to true religion and morality. It has in part performed this mission, as we well know, because the Bible more than any other body of literature has made the religion and morality of the present time. But true religion and true morality have been as yet only partially achieved, and the greater part is still to come. The fullest influence of the Bible is therefore still in the future." In the same number of *The Biblical World* Dr. Edward Everett Hale observes:

"I see in the speeches of public men adroit and significant instances which show that they are curiously well read in Scripture. I was at a very brilliant dinner party of politicians a year or two ago, where two senators of the same name were spoken of. One of the wittiest of the guests, speaking of one of the two, said 'not Iscariot,' and the point was instantly taken by every one of the twenty statesmen at the table.

"It seems to me that the scriptural points made in Congress are very promptly accepted and taken. And, while it is certainly bad form, either in the Senate or House, or lately in the English Parliament, to quote Latin, it seems to me that the quotations from Scripture are accepted with pleasure in Congress or the state legislatures."

Fifty years ago the outward form, the phraseology, the body of the Bible, was more familiar than now; but "the present generation has a grasp and appreciation of its soul, its spirit, its life, and its light vastly better than that of fifty years ago," asserts Dr. Theophilus P. Sawin, of the First Presbyterian Church, Troy, N. Y., who likewise contributes to *The Biblical World's* symposium on this subject. And Dr. William Ingraham Haven, secretary of the American Bible Society, declares that "to our own and all peoples the Bible is better known in all that relates to its form and setting. . . . There abides also a more intimate knowledge of the Bible on the part of the leaders of the people than some are ready to admit. Orations like that of Mr. Hay on President McKinley, President Roosevelt's public addresses, and similar utterances take many of their most striking figures and allusions from the Bible."

THE WESLEY BICENTENNIAL.

ON June 28, the bicentennial of the birth of John Wesley will be celebrated. June 17 was the date of Wesley's birth, but allowance has to be made for the difference caused by the change of time reckoning from old to new style. In anticipation of this celebration, Prof. William North Rice, of the chair of geology of the Wesleyan University, Middletown, Conn., contributes to *The North American Review* (June) a paper giving an estimate of the character of Wesley and of his relation to the movement which resulted from his preaching. The most remarkable aspect of that relation was his attitude toward the founding of a new sect, to which his followers were brought by the logic of events. Says Professor Rice:

"It is one of the curious contradictions of history that the founder of one of the most numerous denominations of the modern church had no thought of founding a new sect. The great religious revolutionist remained at heart conservative to the end of his life. No neglect nor persecution could dampen the intense affection which John Wesley felt for the Church of England. Between his conservatism and his loyalty to the Established Church on the one hand, and his practical sense of the exigencies of the great religious movement on the other hand, he fell into inconsistencies; but it is doubtful whether any great practical reform was ever carried to its completion on a plan logically consistent. As late as 1787 Wesley wrote: 'I still think, when the Methodists leave the Church of England, God will leave them.' Yet three years before Wesley had ordained Coke as superintendent of the work in the United States—an action which resulted in the organization of the Methodist Episcopal Church; and only two years after this utterance of deprecation of withdrawal of the Methodists from the Church of England, he took the still more revolutionary step of ordaining Alexander Mather as superintendent for England. It was in 1787 that he adopted the plan of protecting his chapels from liabilities under the law by having them all licensed under the provision of the statute 'for exempting Protestant subjects, dissenting from the Church of England, from the penalties of certain laws.' Before this date, he had allowed some chapels to be licensed in what seemed to be cases of necessity. But he had opposed the general adoption of the policy, on the ground that it savored of separation from the Established Church. The new policy was adopted in 1787, in accordance with the views of his legal adviser. The Reformation had indeed outgrown the designs of its leader."

The formation into an establishment apart from the Church of England became an easy thing for the American Methodists through the agency of the Atlantic Ocean and the Declaration of Independence. In England no definite or formal act separated the Methodists from the mother-church, but there came to them

a gradual recognition of the fact that a real separation had been imperceptibly accomplished. What the movement stood for and what the church has regarded throughout its history as its chief glory, says Professor Rice, is that it has emphasized, not dogma, nor polity, nor ritual, but Christian life. He continued:

"The Wesleyan movement was not the development of a new theology. Its inspiring principle was essentially the Pauline and Lutheran doctrine of justification by faith. John Wesley himself was certainly not a great theologian. His tendency was practical rather than theoretical. Apart from the fervor of his Christian life and the intensity of his evangelistic zeal, the qualities that contributed most to the success and permanence of the Wesleyan movement were the qualities of the man of affairs rather than those of the thinker. Macaulay ascribes to John Wesley a 'genius for government not inferior to that of Richelieu.' Buckle characterizes him as 'the first of theological statesmen.' Leslie Stephen says of him: 'No such leader of men appeared in the eighteenth century.' Coleridge characterizes Wesley as more logical than philosophical, and Isaac Taylor characterizes him as more intuitional than philosophical. Both these statements seem to be just. His opinions were formed, sometimes by a sort of intuitive common sense, sometimes under the influence of some particular line of argument which appeared to him conclusive. Opinions which he had adopted he could defend with incisive logic. But his was not the philosophical temper, which surveys the whole field of coordinated subjects, judicially weighs all kinds of evidence, and develops broad and consistent systems of thought. In these qualities and the limitations which they involve, Wesley reminds us of those two earlier reformers who constituted his spiritual ancestry, St. Paul and Luther. Wesley's exposition of the doctrine of sanctification, or Christian perfection, which may be considered, perhaps, his chief contribution to dogmatic theology, involves some pretty bad psychology and equally bad exegesis. If he had been a deeper thinker, he would have realized that the Arminian theology is not, any more than the Calvinistic, a complete solution of the problems and mysteries of the ages. But Wesley's theology, if not very profound nor very philosophical, had at least the merit of being practical. It was a theology that could be preached. It presented the great characteristic truths of Christianity in such shape as to make them intelligible to the common people, and serviceable as the inspiration of Christian life. 'Our main doctrines,' said Wesley, 'which include all the rest, are repentance, faith, and holiness. The first of these we account, as it were, as the porch of religion, the next the door, the third religion itself.'"

Some of the practical results of the movement are stated, such as the subordination of creed to life in all branches of the Christian church; the arousing of the religious activity of the laity, carried out in the formation of Sunday-schools and auxiliary religious societies; and especially the development of the spirit of philanthropy. This latter point is thus amplified by the writer:

"Nor was it alone in matters professedly religious that the effect of the Wesleyan movement was seen. Priestley declares: 'Methodism has not only Christianized but civilized that part of the nation which had been overlooked by a clergy too careful of its dignity.' The spirit of the Wesleyan movement may be characterized, as the brilliant author of 'Ecce Homo' has characterized the spirit of Jesus Christ, as 'the enthusiasm of humanity.' When the Methodist evangelists were excluded from the pulpits of the Established Church, they preached in jails, they ministered to the victims of a Draconian penal code on the way to the gallows, they carried the message of forgiveness and peace and hope where sin was vilest and where sorrow was most intense. In the progress of the revival the public mind was awakened to a profound sympathy with the oppressed and the degraded. This 'enthusiasm of humanity' soon worked a reformation in that murderous penal code which had served, not to curb, but to render more ferocious the evil passions of man. John Howard was the friend of John Wesley, and gratefully acknowledged the inspiration received from Wesley's words and life. His noble career of philanthropy was an expression of one phase of the spirit of the great revival. The legislative reforms by which the physical and moral welfare of the poor and the helpless has been protected against the greed of capital and the temptations of vice, the regulation of hours and conditions of labor, the safeguarding of those engaged in perilous occupations, the restriction of the traffic in intoxicating liquors, are among the fruits of the philanthropic spirit which sprang to life in the great religious revival. The 'good men of Clapham' not only organized Bible and tract and missionary societies, but achieved the suppression of the African slave trade and the abolition of slavery in the English colonies. Their influence was felt in multitudinous minor reforms in industrial, social, and political life. The last letter written by the trembling hand of John Wesley, the aged, was a letter of encouragement to William Wilberforce in his struggle against slavery."

A SCOTCH DISPARAGEMENT OF EMERSON.

EMERSON'S mind had as its "master quality" an "archpedantry." His "whole career" amounted to "a glorified penny-reading." The "lack of fitness" displayed in his pages is "deplorable." In one sentence he alluded to "Pindar, Rafael, Angelo, Dryden, and De Staël," but "it is safe to conjecture that none of the names had any meaning for him." "He was of those who could speak of Zoroaster as tho the name meant something; and this coxcombry betokened the parvenu in literature." These are some of the estimates of Emerson placed in the introduction of an anonymous disparagement of him in *Blackwood's Magazine* (Edinburgh), from which it would appear that the American thinker who now forms the subject of studies from so many pens was "a fly assaulting a fortress." We quote further:

"His anarchy both in life and letters is plain for all to see, and it may best be qualified by Matthew Arnold's excellent epithet—provincial. Emerson, in truth, was apt to think that Concord was the universe, and that law and the past had no firmer grasp upon old cities than upon that youthful and respectable parish. Once upon a time he 'opened' to Carlyle 'the dogma of no government and non-resistance,' and we can not but wonder at his temerity. But it was a dogma very near to his heart, and not even the fear of the Sage availed to silence it. And as in politics, so in philosophy and literature he would have every man an anarchist—coming from nowhere and going nowhither. Thus easily he forgot his Pindar and his De Staël. 'Insist on yourself; never imitate,' says he, and he did not realize the absurdity of the maxim. Nothing has ever been created without imitation. As the elder Dumas said, 'When God made man, He made him in His own image.' Nine-tenths of every art are tradition; and even Emerson himself, despite his anarchical protests, was the child of the past. He wrote a prose which was not invented at Concord, but which had been fashioned through centuries of effort by the masters of English literature. He dealt in the common counters of philosophy, stamped by the impress of Plato and Bacon; and if he dealt in them unsuccessfully, his ill-success did not make them his own."

Our anonymous iconoclast quotes Emerson as saying that a man "is weaker by every recruit to his banner," and then asks: "Why . . . did Emerson deliver his lectures? Was he not betraying his own sacred cause by every word he uttered?" Emerson's "brightest hope," we are told next, "was to see the soil of this world 'clean from all vestige of tradition,' and he does not tell us how a world can be 'clean' from that whence it sprung, and which remains the best part of it." Again "like the true anarchist he was," he fails to see "the true grandeur of self-comprehension." "He champions the 'cleanliness' of his own soul with so fierce an egotism that he can not allow with patience that the ancient masters should keep their names." Having assured us that "it is characteristic of Emerson that he would impose his phantasy upon all the world as a solemn, irrefutable fact," this writer proceeds:

"Emerson could never look toward the past without one eye cast upon Concord, and he explains the universal interest which Greek history evokes by declaring that 'every man passes through a Grecian period,' that 'all history is to be explained

from individual experience.' This theory was doubtless comforting to the vanity of a philosopher who believed that to go to Europe was 'mendicancy,' who would defy his dearest friends, saying, 'Who are you? Unhand me: I will be dependent no more.' But, comforting as it was, it was none the less nonsense, especially since it was illustrated by 'facts' which have no link with truth. The Grecian period, for instance, in Emerson's eyes is single and uniform. The time of Homer is the same as the time of Xenophon, a period of plain and fierce manners, in which 'luxury and elegance are not known.' Thus does the philosopher of Concord stride across the centuries, accounting them as nothing, and deeming the golden civilization of Athens no different from that of Homer's heroic age. But the argument merely demonstrates the prophet's lack of the historic sense, and justifies his own boastful question, 'What have I to do with the sacredness of tradition, if I live wholly from within?'"

That Emerson has sunk to depths even lower than these in the estimation of the critic we are quoting appears from the statement that "he could not sustain an argument," that "he lived so narrowly from within that he understood the spectacle of life as little as he understood the march of history," that "the splendors of the past were a paltry experience" to him, and that "when he traveled, in defiance of his cherished principles, he saw nothing more than he might have seen at home." At the same time this critic frankly confesses that he can see one form of ability in Emerson, notwithstanding that "his 'superiority' is too often the superiority of the Mechanics' Institute." Emerson was, we are assured, "an excellent hand at a maxim":

"Indeed, he tumbled aphorisms out upon his pages with prodigal fertility. They are not all true, and they follow so closely one upon another that they make his works a trifle tiresome to read. But some of them have passed into our common speech. There are few which would not appear admirable in a birthday book. 'Hitch your wagon to a star.' Do not these words contain the whole gospel of progressive America? Here is another, which has already done excellent service in controversy: 'To be great is to be misunderstood.' 'He that writes to himself writes to an eternal public.' 'Every man alone is sincere. At the entrance of a second person hypocrisy begins.' 'Heroism feels, and never reasons, and therefore is always right.' Each of these aphorisms contains a well-stated truth, and they illustrate with perfect clarity Emerson's peculiar talent. He outraged on every page the consistency which he held in light esteem; he quoted with an easy freedom countless authors whom he imperfectly understood. With a light baggage of Platonism, he fancied himself a mystic; and, having scoffed for twenty years at human greatness, he is best known by a course of lectures upon great men."

STATUS OF THE MOSLEM WOMAN.

THE condition of women in Mohammedan lands has been regarded in Europe and America as most deplorable and in sad contrast to that of women in Christian lands. From time to time this view is called in question by Occidental scholars. The latest challenge of this kind comes from Baron von Fabrice, a traveler and a specialist in Oriental life, and from the *Daheim* (Leipsic, No. 30) we translate and condense his views as follows:

It must be acknowledged that, in comparison with the high ideal of womanhood that finds expression in the Christian Scriptures, the Koran stands on a low level. History, however, shows what remarkably excellent results have been achieved through the teachings of the Koran in this respect, even among the barbarian peoples of Asia and Africa, and to the present day the spread of Islam is an important factor of progress for the negro tribes in Central Africa, so that the Mohammedan propaganda there is by no means an unmixed evil. The Koran itself, properly interpreted, does not prevent the social and economic advancement of women. Charges made in this direction against the Arabian prophet and his book are largely based on ignorance. The deplorable condition in which women are found in many sections of the Moslem Orient, and which are often no worse than can be found in the Christian lands along the Mediterranean Sea, is not the outcome of the teachings of the Koran, but rather the result of the traditions of half-civilized peoples going back to a period that antedates the introduction of the Moslem religion. It is a significant fact that the flourishing period of Mohammedan power, when the Arabs were masters of Spain, and when Islam culture and civilization flourished as never before or after, was marked by the beginning of chivalry—the special service and love of women that characterized the Middle Ages.

Throughout the Orient the Koran has not advanced but has curtailed polygamy. The book nowhere commends polygamy; the Prophet even declares it to be meritorious if a man have but one wife. He indeed permits a man to take more than one wife, but on conditions which, if strictly observed, make polygamy almost impossible. Mohammed orders that the husband must be equally gentle and just to each of his wives, must be entirely impartial and show no favoritism. It is noteworthy that the Prophet himself could not keep his own command in this respect. At the present time, the majority of the Moslems of higher rank practise monogamy. Polygamy is widely spread only among the wealthier middle classes, where the wife is at the same time the servant, doing the housework.

Again, the exclusion of women from the world outside of the house is not a command of the Koran, which directs only that she shall be veiled. Only recently a Turkish lady, Alihe Hanum, published a brochure in which she attempts to prove that the Prophet in giving his command intended that women should cover their hair only and not their faces with veils, as is still the custom among women of the nomad tribes. Legally, indeed, the Mohammedan girl can be compelled to enter upon a marriage; but orthodox commentators on the Koran are unanimous in condemning the father who compels his children to marry against their will, just as they condemn the careless and causeless divorcing of a wife, which, according to the "Hadets," or traditions of Moslem dogmatics, is an act most offensive in the eyes of Allah. The directions of the Koran in this line, separated from casuistic additions of later periods, would make such a divorce almost impossible.

There is, however, no denying that, notwithstanding the dark side to the status of women according to the Koran and the civilization of Mohammedanism, the Eastern woman has some advantages that must make her an object of envy to her Western sister, especially to the latter when left alone and without support. The orthodox Moslem regards the state of celibacy as sinful and a disgrace; and it is seldom that a Moslem girl is compelled to struggle for her own support. As a rule, such girls all marry and found families. The husband must make a settlement upon his wife, in order to furnish her support in case of his death. Then, too, all the possessions that a woman brings with her when she marries remain her own and are kept separate from the property of her husband. Many a rich heiress keeps after marriage the manager of her property which she had before marriage, and the independent control of a woman's possessions is as much a feature of Moslem law as it was of the Roman. Indeed, Moslem women are so independent in the management of their own property that they often become the victims of unscrupulous usurers.

The Koran further directs that the son shall show the greatest respect for his mother, and the husband is directed to treat her with kindness. The Koran, however, makes the husband the absolute master of the wife and gives him two means of enforcing his authority, namely, the law and the stick. According to the former, he can divorce her; and the Koran contains a long list of instances under which the husband is permitted to whip his wife, and these directions are given by the angel Gabriel. There is not the shadow of a doubt that great abuses in this direction occur constantly in Moslem lands; but we can not make Mohammed or the orthodox commentators responsible for these. The very inferiority of the women is made the basis of a large number of enactments for their benefit in the Koran, especially their support. While the father has absolute sway over his daughter, yet he is directed rather to starve himself than to permit her to suffer. The same command is laid on the husband in behalf of the wife and on the children in behalf of a widowed mother. The law of inheritance gives a daughter only one-half as much as a son, but even this is better than in many older legal codes of Christian nations.

No law forbids the Moslem woman to engage in literary or

scientific pursuits, and the rich harems of the Orient harbor many finely educated women, who are well acquainted with the social conditions of the West and do not envy their sisters in other lands. Fortunately that most disgusting feature of modern "culture," so characteristic of the West, namely, feminism, has no advocates in the Orient, not even among the "Young Turk" party. It is really a blessing that the women in the Orient are not educated as are the women in the West. What would become of them in the fixed and traditional type of life and thought in the East? Lady Dufferin tried to introduce such education in East India, and after her example French ladies attempted the experiment in Tunis. All these attempts have failed and their leaders were glad to abandon them, except in so far as they make the Eastern woman a better housekeeper.—*Translation made for* THE LITERARY DIGEST.

OUTLINES OF A PREACHABLE THEOLOGY.

THE Holy Spirit, the Scriptures, the person of Christ, the kingdom of God, the Christian church, and the Christian doctrine of God comprise the outlines of a preachable theology, the points which the Christian preacher and teacher must make clear. Such is the conclusion, after "a wide and exceedingly varied Christian experience," arrived at by Dr. A. A. Berle, recently installed as pastor of the Union Park Congregational Church in Chicago. A "profound spiritual impression," says the *Bibliotheca Sacra* (Oberlin, O.), has been made by Dr. Berle's statement, which can be accepted "as indicating in a fairly representative way the trend of thought in the Congregational churches." We are indebted to the same religious quarterly for the statement itself, which is in part as follows:

DR. A. A. BERLE,

Who is deemed an authoritative exponent of contemporary Congregational thought.

"The doctrine of the Holy Spirit, I hold to be the first and most fundamental of doctrines for the Christian preacher to know and teach. . . . I believe in the Holy Spirit of God as the immanent God who is in all things, over all things, through all things; and that the supreme quest of the spirit of man is to find and commune with the Holy Spirit; and that such communion is the first and the last requisite of peace with God and power in life. I believe that this Holy Spirit is a Person, not merely a power not ourselves that makes for righteousness."

The next great doctrine in the outline of a preachable theology is that of the Scriptures, of which Dr. Berle says:

"The human spirit liberated from the law of sin and bondage, instructed by the Spirit of God, immediately begins its divine career of growth in grace and knowledge of the kingdom of God. The records of such growth constitute the Holy Scriptures. . . . Scripture . . . does not become the word of God till it is illuminated by the Holy Spirit, and by him interpreted to the spirit of him who seeks its guidance and direction."

This brings us to the person of Christ. "Christ," says Dr. Berle, "is the Door":

"This is his own figure, and it accurately represents his mission. He is the last and completest provision of God by which men may come into fellowship and communion with Him, and see, in terms of their common and untechnical life, what the life of obedience and service to God is like. Thus the person of Christ becomes a matter of supreme interest in the task of the Christian preacher and teacher."

So much stress is laid upon the kingdom of God by Christ himself that "its nature and its methods must necessarily constitute a most important part of the ministry of the Christian preacher":

"It is a kingdom where law is dominant, but the law is the law of love. It is to exercise brotherhood and practise charity. It is to seek first life in Christ, and then grow under the tutelage of the Spirit of God. It is to be a prophetic rather than a priestly kingdom, and its sacrifices are to be the sacrifices of service rather than those of ritual and offering. Its great desire is righteousness and its unfailing yearning is love. . . . Only the social teaching of Jesus can rescue us here from spiritual tyranny on the one hand, or material tyranny on the other. The one emerges in spiritual princedoms, culminating in a papacy; while the other arrogantly tells the world it has 'nothing to arbitrate,' when thousands are freezing to death."

Dr. Berle further announces his belief in "the Holy Catholic Church" thus:

"I hold this church to be a democracy in form and in government; that its authority lies solely in its collective voice, and that its collective voice, when that can be ascertained, is likely to be the path of wisdom and of power; that it can not delegate its authority to any individual or individuals, but that the preservation of the truth of God and the glory of Christ alike require that we should constantly do our utmost to discover what the Spirit saith to the churches."

Finally, "when the communion with God has reached the stage of stability and unfluctuating serenity, the knowledge of God is characterized by the filial relation":

"It is standing on this summit of spiritual life and power that Jesus is enabled to say, 'I and my Father are one.' In a less powerful sense, but in a not less real sense, the Christian, liberated, trained, and chastened into harmony with God's law, and lifted into God's life, may also say with Christ, 'I and my Father are one.'"

RELIGIOUS NOTES.

"THE Westminster Confession is to stand unaltered," says *The Public Ledger*, referring to the labors of the Presbyterian General Assembly, "but a new working manual of doctrine is to be supplied in a declaration which interprets the old formulas in terms of modern thought."

"IN addition to the bust of Charles V.," wrote Emperor William, in sarcastic comment upon a recent rumor regarding the new Berlin cathedral, "there will be erected statues of Diocletian, Nero, Torquemada, and Alva. It has been proposed to add Lucifer, but it has not been decided yet whether it would be better to place him in the pulpit or in the imperial pew."

THE King of Italy has decorated a Methodist Episcopal missionary in Rome, Rev. Dr. William Burt, with the badge of the order of St. Maurice and St. Lazarus. *Leslie's Weekly* speaks of this occurrence as "almost unique." According to the same journal, the King, at a recent audience given Mr. Burt, "expressed cordial sympathy with the endeavors of the missionary and his associates." One form of his work is the organization of a Boys' Brigade, of which Marconi is honorary president.

"IT is the instinct of 'escape' which we find in Jean Jacques Rousseau, in Louis Stevenson, in vagabonds and runaways and eccentrics of every shade of respectability and disrespectability," says the London *Spectator*, —"the determination to save one's own soul at the cost of losing the whole of what the world calls 'the world.' Natures of this complexion do not renounce joy for pain, riches for poverty, or largeness for narrowness. But the reverse. They rush o exhilarating joy by the way of pain; they free their hands of the burdens of a little more or less of material wealth in order to embrace the unlimited wealth of their ideals; by renouncing all claims upon society, they emancipate themselves from all society's claims upon them. Saint or sinner, Christian or infidel, a man with the temperament and the virility of Francis was bound to be some sort of impassioned Bohemian."

"IT appears to me that only those who take names for things can believe that Europe is Christian," E. R. Bevan writes in *The Monthly Review* (London). "Certainly the main principles of our public life and our public virtues are less Christian than Hellenic. Christianity forbids a man to live [illegible] gratifies [illegible] to give a corrupt judgment. But are there not thousands of Europeans whose private life is irregular, whilst they would laugh at a bribe and abide at their post in the face of death? It was the motive of commercial advantage which took us in the first instance to the East, and our empire has extended from the necessity to safeguard what we had won. Those Europeans who pass east of Suez are especially apt to drop even the externals of Christianity, and the frequent opposition to missionary propaganda evinced in official circles no doubt often uses the plea of native sensibilities to cover a heartfelt shrinking from the religion itself."

FOREIGN TOPICS.

MR. JOSEPH CHAMBERLAIN'S LATEST IDEA.

ON a memorable day last month Mr. Joseph Chamberlain was the center of a political demonstration in Birmingham. It happened to be the first visit paid by this interesting man to his constituents since he returned from South Africa. The whole city turned out, Mr. Chamberlain made a speech, and, in the course of it, precipitated a sensation throughout the world. The Colonial Secretary began by saying that his trip to South Africa had greatly enlarged the range of his ideas. The British empire must be one. It must never be "dissolved into its component atoms." The British colonies are doing their best to promote this desirable unity. England must work with them. What means must England adopt? Mr. Chamberlain answered his own question by pronouncing the words "preferential tariffs." Canada, according to Mr. Chamberlain, originated the preferential tariff as an instrument of imperial unity because she gave to England, some years ago, a preference of twenty-five per cent. on all dutiable goods. "In 1900 she increased that preference, also freely of her own accord." But at this point Germany stepped in, threatening retaliation if Canada persisted in this policy of preference. Mr. Chamberlain laid great stress upon this action of Germany's. It is the clew to the situation. We quote on this point his exact words:

"You and I are agreed that we absolutely refuse to look upon any of the states that form the British empire as in any way excluded from any advantage or privilege to which the British empire is entitled. We may well, therefore, have supposed an agreement of this kind by which Canada does a kindness to us a matter of family agreement concerning nobody else; but unfortunately Germany thinks otherwise. There is a German empire. The German empire is divided into states—Bavaria and, let us say, Hanover, Saxony, and Wurtemberg. They may deal between themselves in any way they please. As a matter of fact, they have entire free trade among themselves. We do not consider them separate entities; we treat the German empire as a whole. We do not complain because one state gives an advantage to another state in that empire and does not give it to all the rest of the world. But in this case of Canada Germany insists upon treating Canada as tho it were a separate country, refuses to recognize it as a part of one empire, entitled to claim, as I have said, the privileges of that empire, regards this agreement as being something more than a domestic agreement; and it has penalized Canada by placing upon Canadian goods an additional duty. Well now the reason for that is clear. The German newspapers very frankly explain that this is a policy of reprisal, and that it is intended to deter other colonies from giving to us the same advantage. Therefore it is not merely punishment inflicted by Germany upon Canada, but it is a threat to South Africa, to Australia, and to New Zealand; and this policy, as a policy of dictation and interference, is justified by the belief that we are so wedded to our fiscal system that we can not interfere, that we can not defend our colonies, and that in fact any one of them which attempts to establish any kind of special relations with us does so at her own risk and must be left to bear the brunt of foreign hostility. In my mind that is putting us in a rather humiliating position."

The only escape from this humiliating position, according to Mr. Chamberlain, "is that we should insist that we will not be bound by any purely technical definition of free trade," and while the teachings of Mr. Cobden and Mr. Bright regarding free trade must never be forgotten, nevertheless England can not be hoodwinked by "an entirely artificial and wrong interpretation which has been placed upon the doctrines of free trade by a small remnant of Little Englanders of the Manchester school who now profess to be the sole repositories of the doctrines of Mr. Cobden and Mr. Bright." "I leave the matter in your hands," concluded Mr. Chamberlain. "I desire that a discussion on this subject should be opened."

Now on the very day that Mr. Chamberlain said all this at Birmingham, his official chief, Prime Minister Balfour, made a speech in London, during which Mr. Cobden and Mr. Bright were mentioned in a way to suggest a conception of their teachings totally different from that tentatively advanced by the Colonial Secretary. A great deputation of members of Parliament and agricultural magnates had waited upon Mr. Balfour and begged him to retain the duty on corn. This duty had been imposed in the financial stress of the Boer war. It had helped the farming interests in England, and the news of its coming repeal had brought a protest to the Ministry. Mr. Balfour listened to the deputation and told them the corn tax must go because it was protective. "You can not introduce protection silently, as it were by accident, without a deliberate indorsement on the part of the people at large in favor of so great a change," he said. Further:

"If it is ever done it must be done, not at the initiation of the particular class benefited by protection, but from the impulse of the whole people of this country, rural and urban alike. I am not one of those who can flatter themselves that our existing fiscal system is necessarily permanent. New conditions of things have arisen since the old free-trade policy was fought out; and I can imagine contingencies under which, not so much by way of protection as by way of retaliation, it might conceivably be necessary for this country to say that it will no longer remain a passive target for the assaults of other countries living under very different fiscal systems. The old idea used to be—and it is perfectly sound—that the world would be wealthier, that capital and labor would be more productive, if a universal system of free trade existed in all countries. That, I think, is not only true, but obvious—axiomatic; but that is not the world we live in. The world we live in is one in which every civilized country is highly protective except one—our own."

So the deputation went away disappointed, but the sensation created by Mr. Chamberlain's speech was heightened by the contradiction which the opposition press claimed to discover in it to all that Mr. Balfour had said. *The Spectator* (London) explained the contradiction by saying:

"He [Mr. Chamberlain] clearly thought, and with his matchless powers of persuasion induced his chief for the moment to think so too, that there was nothing incompatible or inconsistent in the Prime Minister and the Chancellor of the Exchequer facing an angry mob of protectionists in London and declaring that the corn tax should not be reimposed, while he was preaching protectionist imperialism in Birmingham—a system the first step in which must be a corn duty with a protectionist bias for the empire."

Such was the state of affairs which led up to the great scene in the House of Commons two weeks later, when Mr. Chamberlain said he would make reciprocal trade between the mother-country and the colonies the question of the hour, and when Mr. Balfour made remarks interpreted in many quarters as a surrender of the free-trade principle. On the Chamberlain idea in general, *The Spectator*, which warmly opposes it, says:

"We are imperialists first and free-traders afterward, for free trade is but a counsel of economic perfection, while the imperial union is, in our view, vital to the race. If, then, we thought that by abandoning the policy of the free and open market, under which we have grown so great, we could prevent the decay of the empire, or could maintain it in increased 'health and wealth long to live,' we should not hesitate to sacrifice the principle of free trade. But would Mr. Chamberlain's proposals do this? Would they found the empire on the rock? Would they pronounce the fateful words *esto perpetua?* Would they bind the empire together and secure its future? We believe, nay, we are sure, that they would, if carried, do none of these things. Instead, they would bring with them the seeds of ruin and of political decay, of strife rather than of brotherhood, of political trouble, and of material injury and waste. For a moment it is possible, tho even this is by no means certain, that the patent medicine we are urged so persuasively to take might bring an apparent prosperity and strength to the empire. But the bright color would be a hectic flush, not the glow of health, and we

should find all too soon that the national and imperial constitution had been shattered, that our vitality had received a deadly blow, and that the empire had begun to die at the heart."

The free-trade argument is not the only one that can be urged against Mr. Chamberlain, thinks our authority. It says the preferential tariff will produce disunion and thus break up the British empire by creating sectional jealousies. The London *Times*, which has hailed Mr. Chamberlain's great idea from the very first, says:

"It is a pity that more of our rulers can not be sent abroad to learn something of the empire which parochial accidents set them to govern, tho we could hardly, even then, expect all their minds to admit of similar expansion. Mr. Chamberlain's ideas were imperial before he started, and what travel has done for him is to impress their importance upon him more strongly than ever, as well as to give him a keener appreciation than before of the obstacles that stand in the way of their realization. He sees an empire whose consolidation is the paramount condition of this nation's prosperity, in presence of other consolidations and combinations now being effected before our eyes. He sees that in fact it is bound together at present only by a sentiment fortunately as strong as it is beautiful, and by hope that the future has better things in store. That is a good beginning, an indispensable beginning; but he knows very well that other bonds must be devised if the work of consolidation is to go on, or if the sentiment itself is to escape disastrous enfeeblement. How to accomplish this consolidation is the problem that occupies his mind, a problem so vitally affecting the dearest interests of the people of this country that, in comparison, the paltry squabbles of party sink into insignificance."

The example of Bismarck occurs to the same London daily:

"He [Mr. Chamberlain] asks himself where the bond [of imperial union] is to be sought, and his answer is the same that the creators of modern Germany made to themselves when they conceived the great idea of national consolidation which Bismarck carried into execution. Prussia laid the foundation of the German empire in establishing a fiscal alliance which grew into fiscal unity, in giving all the German states common commercial interests, in breaking down all the barriers of divergent commercial policy, and in presenting a solid fiscal front to the outside world. That is what Mr. Chamberlain wants to do for the British empire, and he starts with the enormous advantage of knowing that no blood-and-iron policy will be needed to complete the work."

At the opposite pole of thought on this subject we find the London *Daily News*, which alludes to Mr. Chamberlain's idea as "the great Birmingham imposture." We quote:

"If Great Britain was living at the present moment under a protective tariff, we could give preference in the same way as Canada. But how any man with a reasonable modicum of common sense can call it reciprocity to put taxes on foreign produce in order to take them off again in the case of the colonies is beyond our comprehension. Yet this is the scheme which Mr. Chamberlain expounds in the face of his defeat on the corn tax, and which appeals to Lord Rosebery as something august and majestic. A more claptrap idea never entered the mind of the Shallows of English statesmen."

Opinion in the English press divides itself along these two lines, a noteworthy fact being the opposition of many Conservative papers, including *The Standard* (London), which last-named sheet can not see what Great Britain is to gain from a loss of her world market even if she gains the colonial markets. As regards the colonial press we must first of all express our indebtedness to the London *Times* and the London *Standard*, from whose columns we have extracted the Australian press opinion which follows. Australian papers generally seem to dislike the Chamberlain idea. It means, to them, a surrender of that policy of protection to which the great commonwealth is attached. *The Daily Telegraph* (Sydney) says: "Mr. Chamberlain has been significantly careful to abstain from a direct suggestion as to what changes in the tariff should be sanctioned." It adds: "The conception of Mr. Cobden proposing a protectionist tariff for the empire requires either a heroic imagination or a fine contempt for facts." *The Morning Herald* (Sydney) thinks Mr. Chamberlain's imperialism "transcends local considerations," and it looks for some success for his idea. *The South Australian Register* (Adelaide) comments: "Mr. Chamberlain is apparently dealing in chimeras"; his plan would "work out badly." *The Courier* (Brisbane) says: "The present unity and affection between the motherland and the colonies and the promise of the future will be lessened if an attempt is made to forge iron chains of commercial and political restrictions." *The West Australian* (Perth) remarks: "The cable leads one to believe that Mr. Chamberlain misunderstands the situation and the policy of Australia, which, for the development of the people, goes even so far as to place restrictions on imports from the mother country. Why exclude America and Germany if England is to swamp our markets and destroy our nascent manufactures?" The Melbourne *Argus*, the most important newspaper in Australia, says:

"We can only conclude that exigencies of British rather than of imperial politics have raised the question of imperial trade relations to such prominence. We think Mr. Chamberlain wishes to divert attention from domestic matters, which are unsatisfactory, and disperse it over the empire, where the Government has done well. That astute statesman virtually admits this. . . . Imperial trade is only a small portion of the whole trade, and it is unlikely that Great Britain is prepared to penalize the major portion for the sake of the lesser. Mr. Chamberlain knows that the empire is not ripe for the reception of his imperial views, which he is evidently using in the humble function of a red herring across the trail of the domestic hunt."

But if disparagement is the feature of Australian comment, whole-souled enthusiasm is the characteristic of most press opinion in Canada. Such absorption in a topic has not distinguished the Dominion newspapers for years. *The Mail and Empire* (Toronto) thinks Canadians who have worked for imperial preferential trade will now "work for it with renewed vigor," and the Montreal *Gazette* says "the discussion of imperial preferential trade" is "nearer the realm of practical statesmanship." The Toronto *World* says: "It is to be hoped that the Laurier Government will seize the moment and commit the Dominion Parliament to a strong expression of approval of the action of the Colonial Secretary." And *The News* (Toronto) observes:

"Mr. Chamberlain has plainly intimated that if he carries his point he will expect further tariff concessions from the colonies, and more especially from Canada. Are we prepared to give them? The question may soon have to be faced by both of the Canadian parties. The situation will be extremely difficult, and Canada may yet see advantages in a concession to the British point of view, in a defense contribution of some sort or other. Absolute free trade with Great Britain is out of the question. We have committed ourselves too deeply to certain enterprises to permit us to expose them to ruin."

A Peace Outlook for Macedonia.—Prince Ferdinand of Bulgaria has a new Prime Minister, arrangements have been made to get on a friendlier footing with Turkey, and in European newspapers the prediction is made that the Macedonian question will grow steadily less acute. The Prince dismissed his former cabinet nominally because one of its members had left his presence "disrespectfully"; but there is much unwillingness to accept this version of the affair. What the Prince really wanted, according to the French papers, was a peace policy. The *Nov Vek* (Sofia), organ of a member of the new cabinet, denounces the Macedonian revolutionaries who have been guilty of dynamiting and lawlessness. The attitude of this paper is deemed significant as foreshadowing some arrangement with Turkey to mitigate the severities of the existing sit-

uation. The *Mir* (Sofia), organ of the aggressive Bulgarians who have clamored for war from the first, is now likewise denouncing the dynamite patriots. General Petroff, the new Premier, held the same office some two years ago, and should not be confused with M. Petkoff who is his Minister of the Interior. The *Neue Freie Presse* (Vienna) notes that both M. Petroff and M. Petkoff have brought about some slight improvement in the situation, so far as Macedonia is concerned. In the same paper is published an interview with an unnamed Bulgarian statesman who says:

"The Petroff Ministry will bring about improved relations with the Government of Turkey. . . . Petkoff, the associate of Petroff, has, however, but a small following in the legislative branch of the Bulgarian Government, and for this reason, among others, it is doubtful if the present cabinet will last very long. It must be confessed, nevertheless, that the cooperation of General Petroff with M. Petkoff is conducive of harmony throughout Bulgaria and must promote peace and a harmonious settlement of the Macedonian question."—*Translations made for* THE LITERARY DIGEST.

EVE OF THE GERMAN ELECTION.

BEFORE many days the general election will have taken place in Germany, bringing to an end, unless the reballots prove unexpectedly numerous, one of the hottest contests of the kind the empire has yet known. In France and England it is predicted that the Social-Democratic party will make large gains, increasing its votes in the Reichstag considerably. In Germany a different view prevails, altho the Socialist organs, especially *Vorwärts* (Berlin), predict great accessions of strength. The *Kreuz Zeitung* (Berlin), organ of the Conservative and agrarian element, anticipates disappointment for the Socialists, basing its opinion upon the effect of the secret ballot law, which will bring the huge stay-at-home vote to the polls. It points out that in the last general election, that of 1898, the total number of those entitled to vote was 11,441,094, of which number only 7,752,693 went to the polls. The stay-at-home vote, it declares, reached the large total of 3,654,380, of which but an insignificant proportion was Social-Democratic, for the reason that "the party of overthrow" brought every one of its adherents to the polls. It infers that the secret-ballot law, by bringing out the stay-at-homes, will benefit every anti-Socialist organization. The *Konigsberger Hartungsche Zeitung* says the key to the coming struggle is the stay-at-home vote, which it terms "the party of the partyless," with more adherents than any other.

Before quoting any further German opinion it may be well to append the following analysis of German parties from *The Nineteenth Century and After* (London), but it should be noted that there is a slight error in addition in the first column total of votes cast, which differs by a few hundreds from the total named in the *Kreuz Zeitung*:

"How enormous is the disproportion between votes and representatives in the Reichstag, and how this disproportion works in favor of the two Conservative parties and of the Conservative Clerical party, and to the disadvantage of the Liberal parties and the Social-Democratic party, may be seen from the following table:

RESULT OF THE GENERAL ELECTION OF 1898.

	Votes	Members in Imperial Diet	Average Number of Votes per Member
Social-Democrats	2,107,100	57	36,966
Center (Roman Catholic Party)	1,455,100	102	14,266
National Liberals	971,300	47	20,666
Conservatives	859,200	52	16,523
Freisinnige (People's Party)	558,300	27	20,677
Free Conservatives	343,600	22	15,618
Antisemites	284,000	10	28,400
Nine parties and factions	1,173,800	76	14,129
Total	7,752,900	393	19,727

"The consequence of this disproportion of votes to members in the different parties is that the Social-Democrats, who command 27.18 of the votes, have only 14.11 of the seats in the Reichstag, while the Conservative party, with only 11.08 of the votes, has 13.23 of the seats, and the conservatively inclined Center party, with 18.77 of the votes, has no less than 25.6 of the seats. Based upon the same proportion of votes to members which obtains with the Center party, the representatives of the Social-Democratic party in the imperial Diet should have numbered 148 and not 57."

The issue of the election, declares the militarist and Bis-

COUNT BALLESTREM, President of the Reichstag. THEODORE MÖLLER, Prussian Minister of Commerce. COUNT VON BÜLOW, Imperial Chancellor. AUGUST BEBEL, Socialist Leader. —*Kladderadatsch* (Berlin).

CARTOON PORTRAITS OF GERMAN POLITICAL LEADERS.

Bismarckian *Hamburger Nachrichten*, is "the Social-Democratic peril." All other considerations must be held in abeyance in order that the Socialists may not "overwhelm the Fatherland." It severely condemns the National Liberal party for not perceiving this. The last-named party, it thinks, should "urge upon the Government to undertake the energetic repulse of the Social-Democracy upon Bismarckian principles." It says further that the Clerical Center party must be energetically fought, for it is "the foe of the German empire," and it derives some consolation from the unwillingness of the agricultural laborers in certain parts of South Germany to vote with the Center any longer. The Center organ, *Germania* (Berlin), is quite confident that the Clerical party will make material gains, and it insists that every voter should "above all things else protest with his ballot against the unrighteous Jesuit law," which places the members of the great religious order under special disabilities in the matters of residence and teaching. This, it thinks, is one of the great issues of the campaign. Another issue it describes as "the Social-Democratic peril," but it predicts confusion to that party as a result of its efforts to wean away the clerical voters in the southern portion of Germany. Like all other party papers, this organ expects much from the stay-at-home vote, which, it declares, will be brought out by the new secret-ballot law. It agrees with the *Kreuz Zeitung* that the Social-Democrats have little to expect from this vote, which it describes as an unknown quantity to a great extent, but which the Center is hopeful of influencing. It notes the reserve of the Government in the elections and argues that in imperial quarters the Social Democrats are expected to lose.

In reply to this, *Vorwärts* says that the Social-Democratic party polled over twenty-seven per cent. of the votes at the last election. It will poll an even larger percentage this month, because of the general dissatisfaction with the tariff situation and the growing burdens of militarism and the naval expenditures. It claims that there is a split in the Roman Catholic Center, caused by the discontent of the South German peasantry, which means Socialist gains. It claims that the secret-ballot law will make it impossible for the Prussian rural aristocracy to terrorize their tenants, while the liberal parties will not gain because their Liberalism is only of the sort that finds favor with the Government. It claims further that the attacks of the imperial Government upon the Socialists have disgusted many liberal-minded clerks, tradesmen, and corporation employees. The National Liberal *Vossische Zeitung* (Berlin), which might with more correctness be described as the organ of the middle classes in the empire, remarks:

"There is an impulse of energy in the ranks of Liberal citizenship. The reports from the various election districts justify hope. The radical party groups may safely count upon repelling the onslaught of the Social-Democrats and even upon winning some of their seats. The movement against the Clerical Center and that against the Agrarians is progressing favorably. A decisive defeat for the reactionary element seems assured if every one does his duty."

It is only when the foreign press is consulted that anything like a clear notion of the situation is presented, altho, of course, that notion is non-German and its accuracy can be gaged only when the result of the struggle is known. The *Indépendance Belge* (Brussels), a Liberal organ, noted for its hostility to Emperor William, thinks that there can be no doubt of Socialist victory. "It is evident," says the Belgian paper, "that public opinion was mostly favorable to the political groups which fought the new tariff. It is feared, consequently, that the Socialists will gain enormously":

"It is even feared that the Socialists will win over certain radical elements that were disagreeably impressed when the Liberal factions did not warmly oppose the protectionist tendencies of Count von Bülow. It must also be acknowledged that the unfortunate words spoken by the Emperor regarding the incidents that led to the death of Herr Krupp offended those democratic elements which, while not supporters of the Socialist program, nevertheless think that the working classes have just grievances, and that it is a serious mistake on the part of the Government to show a systematic hostility to them and to drive them into violent opposition. It is thus foreseen that the result of the election will prove a success for the radical elements, and the Socialist group will return in greater strength than ever to the Reichstag."

In order to prevent this consummation, proceeds the paper just quoted, there was formed a plan for "a combination of all moderate parties, but this move, from the nature of the case, failed to have appreciable results, for it is certain that the great mass of moderate Liberals have not followed their leaders and have drawn perceptibly nearer to the progressives." The alarm felt by the well-to-do regarding the Government's policy in the matter of commercial treaties, soon to be negotiated with various governments, has added to the difficulty of the Liberals. "It is also said that the Government intends to free itself for good from the tyranny of the Agrarians, but the Government must reckon with the Emperor here, and he means to rest his personal power upon the Prussian aristocracy." Our authority concludes:

"In short, the situation is very obscure, and the fierceness of the contest makes it impossible to foresee the general result of the coming elections. What may be regarded as probable is that the more radical groups will not lose strength, in spite of every effort in official circles."

The political situation in Germany is involved in such confusion that the outcome of the election defies prediction, thinks the *Journal des Débats* (Paris). "To sum the situation up in a few words," it says, "parties which until now have been deemed antagonistic are trying to form a combination, but each one is eager to prevent its own absorption by its neighbor and to retain the dominant part in the coalition. This double tendency to effect a union of party with party, and to be suspicious one of the other, is the leading feature of all the political groups. It says further that there is "a fairly close union of Protestant Conservatives and Center Catholics."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

INCONSISTENCY.—A prominent Chinaman, conversing with a correspondent of the London *Times* in Port Arthur, thus summed up the inconsistency of the European concert in China: "One day talkee flee port, next day wantchee custom-house."

AN ANGLO-AMERICAN WAR CONTINGENCY.—"If Britannia is to continue to rule the waves she will have to keep a sharp lookout in the Pacific as a probable scene of any future naval warfare," says *The Quarterly Review* (London). "Further, in the event of our being at war with the United States, the Canadian-Pacific telegraph, passing, as it does, close to the American frontier, could be interrupted at many points with comparative ease; and Mr. McGrath has shown that the cutting of its wires would leave Canada at the mercy of her powerful southern neighbor."

ENGLAND'S MONROE DOCTRINE.—The announcement of the British Government that it would resist the establishment of a naval base or a fortified harbor on the Persian Gulf by any Power of continental Europe is hailed in the London press as "England's Monroe Doctrine." The *Vossische Zeitung* (Berlin) sees in the announcement a warning to Russia. This whole subject was exhaustively considered in these columns in our issue of April 11 last. British comment on the topic being, in the main, a repetition of what we have already quoted. In Germany the feeling is that, as the *National Zeitung* (Berlin) puts it, "England seems resolved to proceed to extremes if necessary."

A LIBERAL VIEW OF BALFOUR.—"The truth is, there is no room for whiffling people like Balfour in the stern business of politics," says an anonymous writer in *The New Liberal Review* (London). "His arts and graces and elegancies amused at first. At present they excite other emotions. In vain his friends claim that he is the most lovable of men. Popularity among politicians is an evanescent quality, and Mr. Balfour has drawn very heavily on his store during the last year or two. A reputation for urbanity can not be allowed to cloak ignorance of detail, reckless inaccuracy of statement, and slothfulness in the discharge of the nation's business. His posturings are beginning to disgust, and it is now discovered that his lounging mental attitude is the only part of his nature, as it is publicly revealed, that is not an elaborate affectation. He is a spendthrift heir living on Mr. Chamberlain's savings."

BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

CURRENT POETRY.

Poems by Richard Henry Stoddard.

Born July 2, 1825—Died May 12, 1903.

BIRDS.

Birds are singing round my window,
Tunes the sweetest ever heard,
And I hang my cage there daily,
But I never catch a bird.

So with thoughts my brain is peopled,
And they sing there all day long:
But they will not fold their pinions
In the little cage of Song!

THE FLIGHT OF THE ARROW.

The life of man
Is an arrow's flight,
Out of darkness
Into light,
And out of light
Into darkness again;
Perhaps to pleasure,
Perhaps to pain!

There must be Something,
Above, or below;

HAVE YOU FIVE OR MORE

Somewhere unseen
A mighty Bow,
A Hand that tires not,
A sleepless Eye
That sees the arrows
Fly, and fly;
One who knows
Why we live—and die.

ARAB SONG.

Break thou my heart, ah, break it,
If such thy pleasure be;
Thy will is mine, what say I?
'Tis more than mine to me.

And if my life offend thee,
My passion and my pain,
Take thou my life, ah, take it,
But spare me thy disdain!

THREESCORE AND TEN.

Who reach their threescore years and ten
As I have mine, without a sigh,
Are either more or less than men—
Not such am I.

I am not of them: life to me
Has been a strange bewildered dream,
Wherein I knew not things that be
From things that seem.

I thought, I hoped, I knew one thing,
And had one gift, when I was young—
The impulse and the power to sing,
And so I sung.

To have a place in the high choir
Of poets, and deserve the same—
What more could mortal man desire
Than poet's fame?

I sought it long, but never found;
The choir so full was and so strong
The jubilant voices there, they drowned
My simple song.

Men would not hear me then, and now
I care not, I accept my fate.
When white hairs thatch the furrowed brow
Crowns come too late!

The best of life went long ago
From me; it was not much at best;
Only the love that young hearts know,
The dear unrest.

Back on my past, through gathering tears
Once more I cast my eyes, and see
Bright shapes that in my better years
Surrounded me!

They left me here, they left me there,
Went down dark pathways, one by one,—
The wise, the great, the young, the fair;
But I went on,

And I go on! And bad or good,
The old allotted years of men
I have endured as best I could,
Threescore and ten!

THE TENT.

(*Persian.*)

When my bier is borne to the grave,
And its burden is laid in the ground,
Think not that Rumi is there,
Nor cry like the mourners around
"He is gone—all is over! Farewell!"
But go on your ways again.
And forgetting your own petty loss,
Remember his infinite gain;
For know that this world is a tent
And life but a dream in the night,
Till Death plucks the curtains apart,
And awakens the sleeper with light

The Earth and Man.

By Stopford A. Brooke.

A little sun, a little rain,
A soft wind blowing from the west
And woods and fields are sweet again,
And warmth within the mountain's breast.

So simple is the earth we tread,
So quick with love and life her frame,
Ten thousand years have dawned and fled,
And still her magic is the same.

A little love, a little trust,
A soft impulse, a sudden dream—
And life as dry as desert dust
Is fresher than a mountain stream.

So simple is the heart of man
So ready for new hope and joy;
Ten thousand years since it began
Have left it younger than a boy.

Modern Beauty.

By Arthur Symons.

I am a little torch, she saith, and what to me
If the moth die of me? I am the flame
Of Beauty, and I burn that all may see
Beauty, and I have neither joy nor shame,
But live with that clear light of perfect fire
Which is to men the death of their desire.

I am Yseult and Helen. I have seen
Troy burn, and the most loving knight lie dead.
The world has been my mirror, time has been
My breath upon the glass; and men have said,
Age after age, in rapture and despair,
Love's poor few words, before my image there.

I live, and am immortal; in my eyes
The sorrow of the world, and on my lips
The joy of life, mingle to make me wise;
Yet now the day is darkened with eclipse:
Who is there lives for beauty? Still am I
The torch, but where's the moth that still dares die?

PERSONALS.

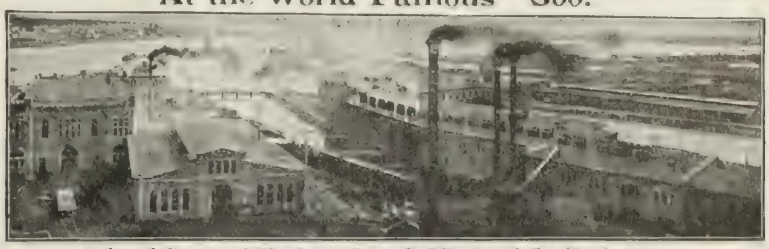
Beaten for Office by a High Hat.—"When I was elected to the Forty-seventh Congress," says Representative William P. Hepburn, of Iowa, in *The Saturday Evening Post*, "a good friend of mine, who had assisted in managing my campaign and knew the sentiment of the people in the Eighth Iowa District, said:

"'Hepburn, I've got only one piece of advice to give you, and that is: don't get the big head there in Washington and come back here with a high hat. Stick to your slouch, and your chances for reelection are excellent.' Acting on his suggestion I shunned high hats and was sent to two Congresses.

"During the session of the Forty-ninth Congress, however, I was chosen with others to escort the body of a deceased member to San Francisco. As a mark of respect I wore a high hat with the

Make Money in Real Estate

At the World Famous "Soo."



A few of the many Mills (Brown Stone Buildings) and St. Mary's River.

No other place in America is so magnificently enterprising and promises such great future prosperity. Backed by the gigantic "**Allied Companies**" **with a capital of $117,000,000.00** (and subsidized by the Dominion Government) which builds, owns and operates such immense institutions as the following: The largest Pulp Mills in the world; Steel Rail Mills, employing 1,000 men; Blast Furnaces, Sulphide Mill, Iron Works, Reduction Works, Machine Shops, Veneer Works, Alkali Works, Charcoal Works, Tube Works, Nickel Smelter, Saw Mills, Steamship Lines, Ferries, Railroads, Electric Street Car Lines, Water Works, Electric Light Plant, Water Power Canals, fabulously rich Iron, Nickel, Gold and other mines, and many other immense industries in project, in which limitless millions are already invested and are to be invested in the development of the "Soo" into a mighty industrial center, making it verily the "**Pittsburg of the North.**"

Note the marvelous record of the Canadian Soo's recent growth. Population for 1900 was 5,000, in 1903 is 18,000. Assessed Real Estate value in 1900 $1,700,000, in 1903 $7,000,000 (with bulk of industries exempt from taxation). Number of Manufacturing Plants in 1900, 5; in 1903, 20. Number of employees in same in 1900 was 500, in 1903 over 5,000, with annual pay-roll of $2,500,000, and when improvements now projected are complete 25,000 men will be employed. *Most of this great increase has been in the past 18 months.*

The "Soo" is the literal power-house for the world. On both sides of the river there are water power canals built and under construction that develop 110,000 horse-power. **Our cheap power brings the factories.**

Real Estate Values are Doubling

at the "Soo," from the actual growth of the industrial interests and the population—not from speculation. Last year **500 houses** were built here and **more than that** will be built this year. Good building sites are limited and will never be so cheap again. The "Allied Companies" do not own property, except as needed for their own uses, and do not deal in real estate in any way.

The great "Soo" Locks through which 25,000 vessels pass annually

Send $10 and Secure a Lot.

We own the very choicest tracts of building property in the "Soo." Our Highland Park addition has beautiful location overlooking the river. Good houses built on and around it. Half of these lots have been bought by "Soo" residents and visitors, and many are building. To interest investors and those seeking an ideal home-site, or a growing field to locate in, we offer remaining lots cheap and on easy terms. Lots run 38x105 ft., to lane. Only **$10 down and $6 a month** buys these choice lots. Price, if you buy now, only $200, but they are worth more, and on September 1st unsold lots will advance to $225 each. We will return all payments in full with 6% interest to anyone who purchases a lot from us and who visits the Soo within two years of the date of purchase and is not fully satisfied with his investment. If purchaser dies after one year's payments are made we will deed the property with clear title to his estate or heirs. Send without delay, or this tract will be sold out. *All orders entered in rotation as received.*

Highland Park has graded streets, shade trees and strict building restrictions. It promises to fully triple in value by 1905.

Our "Soo Books" Free describe in detail by photograph and phrase, maps, etc., the wonderful "Soo," its marvelous growth and promises for the future. Those in search of a location with promising prospect for the investor, the labor- and home-seeker, the opportunity-seeking professional man or manufacturer, are requested to write to us for particulars in detail. Address,

rest of the conventional attire. On the way back, still wearing that hat, I stopped off at Iowa.

"'See here, Hepburn,' exclaimed my political adviser, 'that hat won't do. It will ruin you here.'

"I ventured to believe that my constituents would not turn me down merely on account of the style of hat I wore. But I was wofully beaten at the next election.

"I promptly discarded my offending head-gear, and altho it was too late to redeem my reputation for that year, I managed in time to live down my indiscretion and was reelected to the Fifty-third Congress. Since then I have been honored by the confidence of my constituents, and no occasion has tempted me to forswear the slouch hat."

How He Keeps Contented.—W. H. Truesdale, president of the Delaware and Lackawanna Railroad, says *Success* (June), was discussing the question of happiness with a friend, not long ago. Various arguments were advanced as to the best way to find contentment. Said Mr. Truesdale:

"I was greatly impressed with a little talk I recently had with the president of one of the largest banking institutions in the country. I met this man about six o'clock one night, on an elevated train in New York City, and expressed surprise that he should have been working at his office so late in the day. 'This is nothing unusual for me,' said the bank president; 'I am downtown as late as this every day, and very often I remain until seven o'clock. I have tried a good many ways to find contentment in my life, and have decided that the only thing that brings it is good, hard, steady work, day in and day out.'

"These words have stayed with me ever since. There are many people in this country whose one aim in life seems to be to get money by 'hook or crook,' without working for it, and there are many others who inherit large fortunes. These persons spend their lives in dawdling in this corner and that corner of the world, trying to spending their time without doing anything in particular, and they fail utterly to find the peace and happiness of which they are in search.

"Young men, and old men too, should learn the truth that the only real, lasting pleasure in life comes from being actively busy at some work every day: doing something worth while, and doing it as well as you know how. The more we appreciate this fact the more will we be able to make the most of our lives."

The President of the St. Louis Fair.—Mr. David R. Francis, president of the Louisiana Purchase Exposition Company, has sprung into national prominence within a very short time. His tour of Europe, in which he visited all the great European rulers, with the exception of the Czar, with a view of interesting them and their people in the fair, attracted considerable attention. Mr. Francis since his return home has been mentioned as a possible Presidential candidate on the Democratic ticket next year. The following

Joseph Dixon Crucible Co. Jersey City, N. J.

appreciation of him was written by William Marion Reedy, editor of the St. Louis *Mirror*, for *The New Yorker*:

"Mr. Francis is an iron man. He never wearies. He never utterly neglects his own business. He will buy or sell a million bushels of wheat in the midst of a discussion in the executive committee as to the kind of gargoyles that ought to decorate the Fisheries Building. He jumps out of town at the drop of the hat, and doesn't know when he's coming back, and he banquets at least once every evening, with telegrams, cablegrams, and long-distance 'phone messages punctuating the courses. He receives delegations from all the ends of the world. He soothes the angry concession seeker. He consults the architects and then turns to deliberate with the board of Lady Managers. He sees men who want police jobs on the grounds, and then he dictates a cablegram to a representative of the French Government who has complained that the Bourbon lilies appear in the Fair banner or emblem instead of the tricolor. And he does it all with a smile. He is never ruffled, to outward seeming, at least. He does not appear to be conscious that he is doing a giant's work. He can talk with three men about three different things at once. He never forgets a man's name, or when or where he met that man. He appears to consult everybody, but the consultation usually ends in the decision being that for which Francis has contended. He has sat down on the national commission and squelched it into unmitigated secondariness in the management of the Fair, and yet to see him with the national commissioners one would think that he was all deference to them and only wrought their wills. He has absolutely 'corked up' all the big papers in St. Louis, so that never a line of criticism has appeared in them concerning his management of the Fair. He is the only man in St. Louis who has any 'influence' worth speaking of with the city administration. It is his when he wants it for any of the purposes of the Fair, and this was just what a great many people did not think would be the case when the present city administration came into power. . . .

"It is said he is always out for 'Number One,' but his 'Number One,' even his enemies must admit, is the success of the Fair. Mr. Francis is not a man given to giving away his money, but he gives himself completely to a cause, and his time is worth more than most people's money. Mr. Francis is cautious with every one, but he can not afford to carry himself too much on the open. He does not take many into his confidence, but too many cooks spoil the broth, even if two heads are better than one. One thing all must admit. He 'gets there,' and he does it with fine aplomb. He is the man who knows his job. He aggrandizes himself, but he does not crush others. If he dominates his town and that town's greatest undertaking, he does it by virtue of his character. The men in St. Louis who have given him his free hand and his supreme authority, even while they resent some of the results of their surrender to him, agree that it is the best thing they could have done."

Stuart Robson's Jocularity.—One of the late Stuart Robson's most disastrous theatrical failures, says the San Francisco *Argonaut*, was the dramatization of "The Gadfly," which he produced for two weeks in New York several years ago.

"The Saturday night when the play had its last production," says an actor who was in his company, "he was in a very jocular mood. 'Think of it,' said he, as he stood in the wings preparatory to going on; 'think of it! It has cost me $1,000 every time I played this part. [The loss for the three weeks was $20,000.] Talk about your public-spirited citizens! Where do I come in? Where is my monument? And look how calm and indifferent those fourteen of the lost, strayed, or stolen are out there in the audience over the honor that is about to be conferred upon them. You'd think from the way they sit that they didn't know that it costs me about $100 apiece to entertain them. Look at that fine sample of respectability over there, with the red whiskers and Edam cheese-head—think of spending $100 to entertain him.' All through the *entr'actes* he was in the liveliest of moods. 'I have a good mind to make a speech,' he said, after the first act. He assumed a mock threatening attitude. 'Yes, sir, I've a good mind to go out and tell them that they don't know anything about art—*à la* Mansfield. What

Self-Instruction

in the **Law of Commercial Paper, CHECKS, NOTES, DRAFTS, etc.,** made practicable for business men and students by a **Bank Examiner** of 69 Wall Street, in "McMaster's Irregular and Regular Commercial Paper." 121 full size facsimile illustrations; 121 pages of indorsements, assignments, guarantees and explanatory and cautionary matter; 322 Questions (which are answered in the book); 50 pages of financial forms; 56 pages additional text. Express paid. **$3.50**

"I am sure that it will be of great value to us in the work in the Tuck School."—**Dartmouth College.**

"I am using your text in class and it is the best thing I have ever found for the work, not only to arouse interest on the part of students, but as a matter of interest to me. I have read a great deal of business law but no book has ever aroused the interest that McMaster's texts have. Send us twelve copies."—**Nevada State University,**

"It strikes me that the plan is a most excellent one. I found that Professor Bunker had already secured a copy and that he was very much pleased with it."—**University of Michigan.**

"It impresses me as the most original, perspicuous and meritorious work of the kind that I have seen in years."—**University of Notre Dame.**

"It hits the spot."—**Third National Bank, Atlanta, Ga.**

"Got $3.50 worth out of it in 5 minutes."—**Peden & Anderson Banking Co.**

"Find it in every particular just the thing we need."—**Mechanics' Savings Bank, Richmond, Va.**

"We think that it is the real thing."—**Randolph Co. Bank, Elkins.**

"A few of the object lessons are worth several times the cost of the book."—**First National Bank, Bellaire, O.**

"Valuable addition to a business man's library."—**First National Bank, Columbiana, O.**

"It contains more important information in the most practical form than any publication we have seen."—**Bank of Glade Springs, Va.**

"It has appealed to us as a very unique and effective manner to treat this subject. We feel that we should have your book on our shelves."—**Edgemoor Iron Company.**

"Like it very much—best work of the kind I know of."—**Cleveland Steel Company.**

"We think it is one of the most complete books of this kind we have ever seen, and would be a handy thing for any manufacturing concern."—**The Detroit Steel and Spring Company.**

"We find that it is very explicit and convenient in form, and believe that we can make good use of it."—**Hoosier Drill Company.**

SEE THAT CLIP?

THE NIAGARA CLIP holds securely from the thinnest sheet of paper up to ¼ in. in thickness, and can be used over and over again. Better than pins for filing letters, records, cards, etc. Avoid unsightly pinholes in attaching second letters, business cards, checks, drafts, invoices, etc. Put up in boxes of 100 especially for desk convenience. Sample box 15 cents, postpaid.

NIAGARA CLIP COMPANY, 123 Liberty St., N. Y. City

Land and Live Stock.

Just stop and think for a moment. Do you know of anything which will furnish a more sure, regular and secure investment than these two? We offer to select investors, stock in the famous **Camp Stool Ranch** in S. E. Wyoming. Good ranch land, good location, good water, two railroads and good stock. Paid 10% last year. 500 cattle and 6000 sheep now on ranch. Room for 2000 cattle and 20,000 sheep. All the money to go into stocking the ranch. **Wyoming Cattle and Investment Co.,** *Prospectus free.* 430 E. Locust St., Des Moines, Ia.

If afflicted with sore eyes use **Thompson's Eye Water**

they look too innocent.'"

Coming Events.

June 17.—Iowa Democratic State Convention, at Des Moines.

June 22–24.—Convention of the National Electrotypers' Association, at Atlantic City, N. J.

June ——.—Christian Workers' Convention, at Chicago.

June 25–27.—Convention of the Woman's National Single-Tax League, at New Haven, Conn.

June 29–30.—Convention of the American Chemical Society, at Cleveland, Ohio.

June 29–July 4.—Central Conference of American Rabbis, at Detroit, Mich.

Current Events.

Foreign.

THE BALKANS.

June 1.—Further details of the massacre at Smerdesh are received.

June 2.—Advices from Sofia say the situation is improving; many Bulgarians have been released from Turkish prisons.

June 4.—Bashibazouks massacre a Turkish village and kill 200 inhabitants.

June 6.—Four Bulgarians are convicted of the dynamite outrages at Salonica and sentenced to death.

June 7.—Bulgarian revolutionists are defeated by Turkish troops in a six-hours' fight on the Servian border.

CHINA.

June 1.—The rebellion in Southern China is spreading; Linanfu, it is reported, has been retaken by the Chinese troops.

June 4.—One hundred and fifty thousand people are reported destitute and starving because of the famine in Kwang-Si province and that children are sold for money to buy food.

June 5.—Reports from Manchuria show that Russia is making every preparation for permanent occupation.

June 7.—Minister Conger asks Secretary Hay to inquire into the authenticity of the alleged utterances of Count Cassini in regard to the correctness of Mr. Conger's statements as to Russian demands on China.

OTHER FOREIGN NEWS.

June 1.—Negotiations for the Cuban loan of $35,000,000 are opened in London.

The Colombian Congress is called to meet in extra session on June 20.

Premier Prior, of British Colombia, is dismissed from office.

June 2.—Troops are called out in Agram, Croatia, to quell the rioters.

The French defeat the Algerians at Figuig and enter the town.

Cooperative societies of England protest against Joseph Chamberlain's preferential tariffs scheme.

June 4.—Iona Island, on the Hebrides, is sold to the Carthusian monks expelled from France.

How to Make Money
IN THE CATTLE AND SHEEP BUSINESS.

The Montana Co-Operative Ranch Company of Great Falls, Montana, is a co-operative company organized under the laws of the State of Montana with a capital stock of $100,000. It now owns 16,000 acres of rich land with the finest range in Northern Montana.

The principal business of the Company is to take care of sheep, cattle, hogs and Angora goats belonging to its shareholders. There are now over 400 shareholders, scattered over the country, over 88 of whom are ladies, while many are doctors, bankers, merchants, etc. Every shareholder who had sheep on the ranch last year, received 61 cents per sheep for their share of the wool, and 64 cents for their share of the lambs, making fully 40 per cent. interest on their investment. The Company issues an illustrated paper called The Montana Co-Operative Colonist, containing pictures of the ranch and telling all about the Company. This paper is sent free to all who address

MONTANA CO-OPERATIVE RANCH CO., Great Falls, Mont.

DIAMONDS ON CREDIT

Fire destroys the state pawnbroking establishment at Naples; the loss is estimated at $2,400,000.

June 4.—Japan is reported to be massing troops in Korea, preparatory to an advance into Manchuria.

Australian colonies indorse Colonial Secretary Chamberlain's plan for a preferential tariff.

June 5.—The Cape Colony Parliament is opened.

June 6.—Reports state that the Pope's health is steadily declining.

June 7.—One hundred persons are drowned in a collision of two steamers near Marseilles.

The Czar authorizes the giving of instruction in the Catholic religion in the middle-class schools of Poland in the Polish language.

Domestic.

THE PRESIDENT'S TRIP.

June 2.—President Roosevelt enters Iowa, speaking at Dennison.

June 3.—The President is enthusiastically received in several cities of Illinois.

June 4.—The President makes the last speech of his tour at Danville, Ill., and starts for Washington.

June 5.—The President arrives in Washington.

THE FLOOD SITUATION.

June 1.—Kansas City is the center of the flood peril; it is estimated that twenty thousand people are homeless; the situation in Topeka is improved.

June 2.—Topeka appeals for outside aid; the Mississippi River rises and passes the danger point at St. Louis.

June 3.—Conditions at Kansas City, Topeka, and Des Moines continue to improve.

June 4.—The flood subsides at Topeka sufficiently to show the damage wrought; at St. Louis the Mississippi continued to rise.

June 6.—The Mississippi breaks through the Sny levee, below St. Louis, entailing great loss.

June 7.—The Mississippi at St. Louis reaches the highest point since 1858, doing still further damage.

THE POST-OFFICE SCANDALS.

June 2.—Perry S. Heath, former assistant postmaster-general, replies to the charges of S. W. Tulloch.

June 4.—The case against A. M. Machen, charging bribery in connection with postal contracts, is presented to the United States Grand Jury in Washington.

June 5.—A. M. Machen is indicted on the charge of accepting bribes; T. W. McGregor and C. E. Upton are arrested, charged with defrauding the Government.

June 6.—President Roosevelt instructs Postmaster-General Payne to make the investigation of the Post-Office Department sweeping and thorough.

OTHER DOMESTIC NEWS.

June 1.—A tornado strikes Gainesville, Ga., killing more than a hundred people.

The United States Supreme Court decides that the conviction of Mankichi of murder in Hawaii, by a majority vote of the jury, is valid on the ground that the old laws of Hawaii were in force at the time; it refuses to grant a writ of habeas corpus for Whitaker Wright, the London promoter.

June 2.—The United Mine Workers threaten another anthracite strike unless the district presidents are recognized as members of the conciliation board.

Secretary Hay agrees to receive a committee of Jews, who will present testimony on the Kishineff massacre.

June 3.—The mine operators issue a statement defining their position; a miners' convention is called to meet on June 15 to vote on the strike question.

June 4.—The Ohio Republican State Convention indorses President Roosevelt for nomination next year; Myron T. Herrick is nominated for governor.

Forest fires rage in New Jersey, Long Island, New England, the Adirondacks, and Canada.

June 6.—Considerable damage is done by a cloudburst at Clifton, S. C.; eighty lives are lost.

A. J. Ditman, 41 Astor House, N. Y.

every man has more endurance if he wears an

O-P-C suspensory

A prominent manufacturer, whose wares are known the world over, once said: "If it were in my power to do so, I would insist upon every man in my employ from the general manager down to the day laborer, wearing an O-P-C suspensory. It would increase their value to me. It would increase their value to themselves, because of the greater vitality."

Every man experiences at times, that tired-out, worn-out feeling. That is when an O-P-C suspensory will help him most, simply because it relieves the strain, which, in a large measure, is the cause of his trouble.

Try an O-P-C suspensory. You will be surprised at the result.

Every man should wear one. A great many do.

Your druggist has O-P-C suspensories and can give you a copy of our booklet, "The Struggle for Supremacy." It tells why, under the rush and grind of modern life, every healthy normal, man should wear an O-P-C suspensory.

If your druggist does not have our book send us his name for a free copy.

No. 2 O-P-C lisle, $1.00.
No. 3 O-P-C silk, $1.50.

Every druggist is authorized to refund the money if purchaser is not entirely satisfied. Ask for O-P-C and "Get the Right Brand."

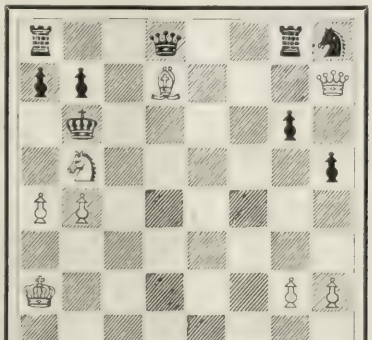
A Fine Ending.

In a recent game between M. W. H., of the University of Virginia, and Miss Nannie Humphreys, a student of the Randolph-Macon Woman's College, Lynchburg, Va., the former (White) by sacrifices forced a position essentially as follows:



By what move does White force a win? And in how many moves can he mate?

THE GLEN ADJUSTABLE Steel Lawn Fence

is strong, light, durable, cheap. For a substantial durable fence, easily put up, and that stays put up there is nothing "just as good." Suitable for Lawns, Cemeteries, School Yards, Churches and other enclosures, it meets every condition. Graceful in appearance, it can be adjusted to run up and down hill. Strong in construction, it stands every reasonable test. Send for free circular.

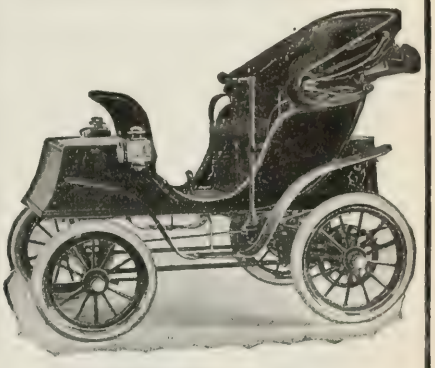
GLEN MANUFACTURING CO., Box 106, Elwood City, Pa.

Columbia

AUTOMOBILES

Electric and Gasoline

Vehicles for Touring, Pleasure Driving, Private Carriage Service and all kinds of business uses.



Columbia Electric Victoria

Presenting the most effective combination of art and utility to be found in a single-seated electric automobile. Its comfort, elegance and ease of control adapt it admirably to ladies' use.

Our New Catalogue will be mailed on request

In print and illustration this catalogue is the most artistic book of its kind ever issued. The pictures and description cover the full line of Columbia automobiles, including electric Runabouts, Victorias, Phaetons, Surreys, Tonneaus, Cabriolets, Coupes, Broughams, Hansoms, Busses, Special Service and Delivery Wagons, Trucks, and the new 24-H. P. Columbia Gasoline Touring Car.

☞ *Orders for Broughams and Coupés for September delivery should be placed immediately.*

THE ANGLE LAMP COMPANY, NEW YORK

Read the following and be cured of scepticism regarding my methods.

MY DEAR FRIEND:—Perhaps you would like to know what results I have been accomplishing in other cases by my means of treatment. Of course, I would not have time to tell you of the wonderful results which I have accomplished by my simple instruction, but I will enumerate a few cases simply to let you see what would take place in your case if you would follow my directions with the same tenacity and determination that others have shown. Naturally I will enumerate my best cases. There have been some failures but the failures have been where the persons were too weak mentally to carry out my instructions thoroughly.

I suppose you have read of the case of Mr Ellis M Harris, of Minneapolis, who in sixty days gained 15½ pounds of good solid flesh.

The case of Dr. S. V. Young, 613 Fourth St., S. W. Washington, D. C., was very much like his, with the exception that Dr. Young had been sick for years. He recovered his health very rapidly, gaining 42½ pounds in four weeks. His wife also gained very rapidly in flesh and health. Since his recovery Dr. Young has devoted much of his time encouraging others to take my treatment.

That of Mr. A. Pearson, 1217 Wellington Ave., Chicago, was of great interest, as he was a broken-down athlete. He came to me for treatment, and with very little exercise and bountiful feeding, I increased his weight most wonderfully, he gaining in all 65 pounds of good solid muscle. He is now training for a ring contest.

One day a young man by the name of Mr. J. C. Watson, 317 E. 30th St., N. Y. City, entered my office. He was about as thin a young fellow as could be found. He said that all of his people had been thin; that not a single one of them had ever been stout. At that time he weighed 100 pounds. He now weighs 165 pounds and of course he looks like an entirely different human being. He says that no amount of money could make him change his diet back to devitalized food.

Mr. Samuel Betts, of Norwalk, Conn., took treatment by mail. In filling out the blank which he sent to me, he described himself as being in a most deplorable condition, with stomach disorder. His stomach was so bad that his entire system looked as if it would go to pieces, and yet, in spite of this, he has made the most phenomenal recovery of any one I have ever seen, having gotten rid of all his troubles and gained 71 pounds of solid flesh. He, like the others referred to in this letter, is a walking advertisement for my system of cure.

Mr. George Cuthbert, of 3716 Wallace St., Philadelphia, had been taking physical culture lessons from a noted professor. He was about trained to death, weighing 103 pounds. The professor was trying to diet him and came very near killing him. Mr. Cuthbert is now a young giant weighing 160 pounds.

Mr. C. T. Armstrong, of Woodsfield, O., is another remarkable case. When he started my treatment, he was in anything but a good condition. His body was very thin and emaciated. Now he weighs forty pounds more and looks the picture of physical development. Throughout his treatment his friends had discouraged him, in spite of his rapid recovery, but this did not deter him in his set purpose to build a body. His friends are now taking my treatment.

One of the most wonderful cases of recovery has been that of Mr. W. E. Henderson, of Springfield, Ill., agent for the N. Y. Life Insurance Co., who made his recovery in spite of the fact that he was traveling all over the country, using up his force in trying to get others to protect themselves against death. He has gained some forty pounds of good solid flesh, and finds his mental and physical powers so much increased that it is an easy matter for him to induce others to join his company and also to take better care of their health. Mr. Henderson sends me two or three patients each week, being so full of new life that he is only too glad to spread the new gospel of health.

Mr. Charles W. Wallower, of 134 Broad St., Bethlehem, Pa., is another wonderful case. He was a young college man, having to work in the summer as a telegraph operator. In spite of these facts, he has increased his weight fifty pounds and now has one of the most beautiful bodies that I have ever seen. In spite of the fact that he was a weak man when he started treatment, he says that no man can now withstand his rushes in a football team.

The remarkable recoveries enumerated above have been those of men, but some of the ladies have improved almost as quickly, if not more so, than the men. As a rule, they improve more rapidly, but they hardly ever need as much flesh. It is a very easy matter for them to gain from 2½ to 4 pounds per week.

Mrs. Ruth Pruden, of 38 Mulberry St., Newark, N. J., gained from 103 to 150 pounds in a few months, making an entirely new body and becoming in appearance twenty years younger.

Mrs. J. F. Gray, of 246 W. 114th St., New York City, has gained forty-eight pounds of good solid flesh, equally distributed over her body, making an unusually perfect form. Her husband has also gained very rapidly.

Miss Katharine Fallon, of the Union Traction Co., Chicago, gained fourteen pounds the first week. She continued her gain until she had made an ideal form.

When my wife and myself started this treatment we were both extremely thin. She has gained fifty-one pounds of good solid flesh and I have gained forty-seven pounds of good muscle.

If space permitted, I could go on enumerating cases of this kind until I had filled a small book, but I judge the cases enumerated are enough to interest you and stimulate you to activity.

By my system of treatment, almost any one can gain from two to two and a half pounds at least each week.

Mr. Louis Altwater, No. 220 Pratt St., Baltimore, Md., gained thirteen pounds the first week he took treatment.

Mr. Harris gained nineteen pounds the first week.

These cases were, of course, exceptional, very exceptional. I have seen one man gain ten pounds of good solid flesh in four days. Of course he was consuming enormous quantities of food.

Mr. Louis Chafer, of West Groton, N. Y., considered himself an expert in food before he took my treatment, but he found by substituting MY KNOWLEDGE for his, it enabled him to gain forty pounds of good healthy tissue in a few months.

Mr. William A. Burnett, of Amherst, Mass., gained thirty pounds in a few weeks. The change in him was so great that although I had seen him several times, I did not know him when he called to see me a few weeks after starting treatment.

Mr. C. W. Crosby, No. 708 Main St., Dubuque, Iowa, is another case that has improved most wonderfully, so changing his body that it is almost impossible to believe one's eyes when they look at his comparative pictures.

The cases of Rev. Father Me—, of Harrison, N. Y., and Mr. Chas. B. Towns, 60 Broadway, New York City, were of unusual interest, as they improved so fast in spite of the fact that they had made so many failures in trying to build their bodies under the care of others.

I have had many persons so change their appearance that their former friends did not know them. In each and every case enumerated the patients have greatly increased their mental and physical powers.

I have certificates from all of these people explaining their cases in detail.

Yours for health,

Julian P. Thomas M.D.

IMPORTANT I undertake only such cases as I can cure in a reasonable time. I will not undertake any case that I cannot cure, neither will I undertake any case for less than three months time. If the patient is not cured in three months time I will look after him without further charge until he is cured. My terms for treatment are $25. The payments can be made $10 the first month, $10 the second, and $5 the third.

Send for my interesting booklet "Symptoms and Complications of Mal-Assimilation," just published—free.
LET ME DIAGNOSE YOUR CASE. Send for measurement blank and I will give my opinion of your case free.

Dr. Thomas' Uncooked Bread cures Constipation, Obesity, Lack of Vitality and Indigestion. Send in coin or money order, 10 Cts. for sample, or 50 Cts. for 24 cakes. Wholesale rates on application.

If you have written me and have not received a reply, your letter has not been received. Try again.

JULIAN P. THOMAS, M.D. DEPT. K. 26 W. 94th ST., NEW YORK

Dyspepsia,

indigestion, catarrh of the stomach, congested liver and kidney troubles generally spring from weak, bound up bowels. Don't make them weaker and worse by using irritant cathartics or purgatives. Instead tone, build up and strengthen them into healthy and natural action with

The Literary Digest

VOL. XXVI., NO. 25 NEW YORK, JUNE 20, 1903. WHOLE NUMBER, 687

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

TOPICS OF THE DAY.

THE SERVIAN REVOLUTION.

THE midnight massacre of the King and Queen of Servia, and of the Servian Premier, the Minister of War, and the Queen's two brothers, has created a world-wide sensation. This bloody tragedy hardly finds a parallel, as the New York *Evening Post* remarks, in any civilized country, unless it be in the later years of the Roman empire or in Russia in the century following Peter the Great. The murders were committed by members of the Servian army, headed by Lieutenant-Colonel Mischics, who forced their way into the palace at Belgrade on June 11. Immediately after the death of the royal couple, a new Cabinet was constituted, and Prince Peter Karageorgevitch was proclaimed King of Servia. The details of the massacre are furnished in press despatches as follows:

Army officers to the number of ninety having formed a project of a revolt, among them being delegates from almost every garrison in Servia and the majority of the officers of the Sixth Regiment, Lieutenant-Colonel Mischics invited his comrades to meet on Wednesday evening at 11 o'clock in the Helimagdan Garden, and there the immediate carrying out of the intended deed was organized.

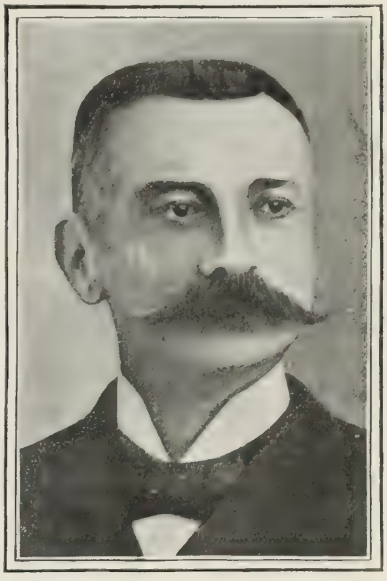
At 1:40 A.M., the officers, in eight groups, went to the Konak, the royal palace. Each had a cue and special directions regarding his part in the revolution. In the palace itself the revolutionaries had two important partizans in the King's body-guard—Col. Alexander Maschin (Queen Draga's cousin) and the King's personal adjutant, Lieutenant Naumovics.

The revolutionaries forced their way into the palace, shooting all who attempted to bar their passage. Suddenly the electric lights went out. All stood in darkness. In the greatest excitement and feeling their way, the revolutionaries climbed the stairs and got into the dark anteroom to the King's apartment. Here they found candles, and lit them. This seemingly slight circumstance was decisive to the whole action. Without light they could not have found the victims, who fled in their nightclothes from their sleeping apartment through corridors and numerous rooms. After a long search a small door leading into an alcove was discovered, but was found locked. It was broken in with an ax, and here the royal couple were found. The older officers first intended to force the King to abdicate, but the young officers were in no mood to be held back, and shot at the King and Queen. Nobody knows in the excitement who shot first, but it is generally said it was Lieutenant Kistics. The King received thirty shot wounds, many of them deadly. Queen Draga had numerous shot and sabre wounds. The doors and floors of the royal apartments were shattered and the ruins drenched with blood.

All the servants of the royal couple fled when the first shots were heard, with the exception of Queen Draga's servant. At twelve minutes past two o'clock all was over. Colonel Maschin appeared from the gate of the Konak, around which great crowds had collected, and made a speech saying:

"We have now destroyed the dynasty of the Obrenovitches and have got rid of the dishonorable woman who was the King's evil spirit. Long live Servia!"

The people responded: "Long live the army!"



PRINCE PETER KARAGEORGEVITCH,
The newly proclaimed King of Servia.

The history of the two contending Servian dynasties, between whom power has alternated for a hundred years, is outlined by the Springfield *Republican* as follows:

"It has been Servia's unhappy fate to suffer from the misrule of her kings and princes since the yoke of the Turk was finally cast off. From one cause or another, indeed, the country has been unfortunate in its political arrangements since it lost its independence to the Ottoman empire in the fourteenth century. There was a long night of eclipse and servitude, lasting until early in the last century, when a Servian peasant, Kara George, organized the people in rebellion, and, aided by Russia, won the independence of the country. That remarkable man was the ancestor of the present prince, who, after years in the rôle of a pretender, is now proclaimed king by the revolutionists. Kara George, however, having reigned until 1813, was himself assassinated by a swineherd, Obrenovitch, who founded the royal family of which the late King Alexander was the last survivor. It is a singular fact that the two houses, both sprung from the peasantry within a century, should alternately rise and fall, and fall and rise, by the process of assassination.

"The founder of the house of Obrenovitch, however, made good his claim to the leadership of the Servian people by fifteen years of desperate resistance to the Turks, who began to overrun the country again in 1814–15. Finally he secured Russian support and, in 1830, compelled the Porte to acknowledge him as the

hereditary prince of Servia. From that time the country has kept intact, altho the rash attack on Turkey in 1876 would have ended in the complete absorption of the principality by the Turkish Government had not Russia again intervened. Another foolish attack on Bulgaria in 1885, after the principality had become a kingdom, would have brought Servia to destruction had not Austria-Hungary intervened. To these two great Powers Servia undoubtedly owes its very existence. The country's government became a constitutional monarchy in 1869."

QUEEN DRAGA.

KING ALEXANDER.

Whose deaths at the hands of revolutionists have terminated the Obrenovitch dynasty.

The same paper goes on to discuss the causes of the present revolution:

"Ever since King Milan, the father of the late King, ascended the throne, there has been bad government in Servia, and the personal responsibilities of these two rulers can not be evaded. Both were morally weak, Milan's passion for gambling and his troubles with his estimable Queen, Natalie, scandalizing Europe for years. The wilful young Alexander, who reached the throne when in his teens, committed an indiscretion, which ruined his reign, in marrying a former lady-in-waiting to his mother, now known as Queen Draga. This woman has weighted heavily the Obrenovitch house in the esteem of the Servian people by seeking to have her brother made heir-apparent, has antagonized the army by her schemes to place her relatives in command of it, and not long ago made the dynasty ridiculous before the world by the premature announcement of an heir to the throne who never materialized in the flesh. Alexander and Draga assiduously courted the favor of the Czar and intrigued for an invitation to the Russian court, but this never came."

The situation is summed up by the New York *Times* in much the same spirit. "That the sordid farce which the Government of Servia under its late ruler had become," observes *The Times*, "should be concluded by a horrible tragedy was not unnatural, nor was it unexpected by those who were in the best position for forecasting the future." It continues:

"The unspeakable Milan was luckier than he deserved in being allowed to get out alive. His equally unspeakable successor has met a fate more consonant with poetical justice. A kingdom is in a bad way which, with about two-thirds of the population of Greater New York, keeps on foot and theoretically under pay an army of something over a hundred thousand in time of peace, an army more numerous than the pupils of the public schools, altho education as well as military service is compulsory. From a human and domestic point of view, the uxoriousness which characterized Alexander was almost a redeeming trait. But politically it was the worst of his faults, and precipitated his ruin. Solemnly to proclaim a 'constitution' in obedience to popular clamor which you find irresistible, and, within two years, to proclaim the suspension of it for a few hours, while you rearrange the Government to suit yourself, afterward proclaiming again that it is in full force and effect—this is a series of procedures which would excite the scorn and wrath of the most patient tribe of slaves on the face of the earth. These proceedings were taken, it appears, at the instigation of the Queen, who has expiated her folly with her life. She had made herself odious to the Servian people by a course of nepotism as tactless as it was shameless, resulting in gross favoritism in every branch of the public service, and culminating in the attempt to have her brother declared heir to the throne. . . . That the low-born Queen should have undertaken to exert an influence which would have been shameful on the part of a queen born in the purple was more than the Servians could stand. They seem to have taken their revenge not only by murdering the offending woman, but by extirpating her whole race, and thus making sure that none of her plots for the benefit of her kindred could be successful."

THE ROYAL PALACE AT BELGRADE.

Prince Karageorgevitch, the newly proclaimed King of Servia, has been living in exile for twelve years in Geneva. He is reported to have been "greatly astonished" upon receiving the news from Belgrade, and denies any implication, direct or indirect, in the assassination. According to the New York *Tribune*, however, this "wily intriguer" has for many years been working to get the Servian throne. The same paper continues:

"To further his interests, he has made himself a protégé and practical vassal of the Russian Czar, and he is a son-in-law of the Prince of Montenegro, a close friend of Russia. Russian influence has therefore been largely exerted in Prince Peter's favor. Prince Peter, whom we may now speak of as the new King of Servia, is probably no more estimable in morals than the Obrenovitches have been. But he is a man of much ability and great wealth. He was educated at the French Military College of St. Cyr, and served with credit as a captain in the French army in the war with Germany. He is possessed of great personal courage, and will probably make a strenuous and self-willed king. It is noted as a striking coincidence that King Alexander was murdered on the thirty-fifth anniversary of the murder of his great-uncle, Prince Michael Obrenovitch. It is equally interesting to recall that the father of Peter Karageorgevitch was convicted of complicity in that former murder, as an accessory before the fact."

There are already rumors that the army is not united on the choice of the new King, but the prevailing sentiment seems to be in his favor. Prince Karageorgevitch is nearly sixty years old. In an interview granted on June 12 he made the following interesting statement of his views of the revolution and of the

policy that he expects to pursue:

"My opinion of the execution of the King and Queen of Servia is this: I deeply regret that it has been thought necessary to shed streams of blood. I formally disapprove of the violent measures, and I especially deplore the fact that the army has had recourse to such measures—an army which has nobler tasks to accomplish than assassination. It would have sufficed to force King Alexander to sign his abdication. He could have been bound, as has been done in other circumstances. It is a horrible thing to shed blood.

GENERAL VIEW OF BELGRADE, THE SERVIAN CAPITAL.

"You ask what will be my attitude when I am in possession of the crown—we will assume that I am called to the throne. I shall not fail to take inspiration from the admirable institutions of Switzerland, which I have learned to appreciate highly. I am in favor of the absolute liberty of the press. I hope to see Servia prosper under the Constitution of 1889, which is very liberal.

"Regarding foreign relations, it has been alleged that I am systematically hostile to Austria. That is false. Maybe I am in special sympathy with Russia, to which country I sent my boy in the hope that he would take service there."

A question of immediate interest, and one that is being discussed in the newspapers of all the leading countries, is that which turns upon the recognition of the new Servian Government. Can Christian Powers, it is asked, admit the legitimacy of a régime built upon slaughter? To this the New York *Evening Post* replies:

"The duty of one Government toward a change of rule in another country is exhausted, so far as the matter of recognition is concerned, when it has been ascertained that the latter is securely a *de facto* government. If it holds the capital, has the backing of the army, and exercises governmental functions throughout its territory, then there is nothing for other nations to do but recognize it, no matter if its credentials are blood-stained. We may think what we please, or must, of the new rulers, but if they are the real rulers of the land, then it is with them, officially, that all our public dealings must be had. Even the September massacres did not make the French republic any the less supreme *de facto;* and tho they shocked the friends of France and of humanity, like Fox and Romilly, did not alter the diplomatic situation. No more can the murders at Belgrade really affect the status of the new Servian Government in the eyes of international law.

"There is, nevertheless, a possibility of interference on other grounds. Any Power that is able to make out a vital national interest in the Servian situation is entitled to intervene—at its own risk, of course. . . . Servia does not stand alone. Her fate is inextricably bound up with that of Bulgaria and Macedonia. And it must not be forgotten that the whole Turkish question was considered to be pressingly acute even before the massacre at Belgrade burst upon the world. The program of Macedonian reform, extorted from the Sultan by the joint representations of Austria and Russia, has apparently been lost in the Danube. All that series of military and fiscal reforms upon which so many hopes were pinned—foolishly, as we thought—has, at any rate, dropped out of sight. Will the allied Powers now make even sterner demands of the Turk? Will the Macedonian revolutionists be spurred to fresh activities? These are only a few of the questions which spring to every one's lips, but which few will undertake to answer. All that is certain is that nothing is certain in the present state of the troubled Balkans."

The parents of the murdered King.

AMERICAN VIEWS OF THE CHAMBERLAIN PROGRAM.

THE view generally expressed in the American press is that Mr. Chamberlain has made a serious political mistake and one that imperils his future career. This view is brought out by the debate, June 9–10, in the House of Commons, on Mr. Chaplin's amendment proposing to retain the wheat duties imposed last year for war revenue, and the repeal of which was provided for in the budget. The amendment did not, under the ruling of the speaker, throw open Mr. Chamberlain's preferential tariff to general debate, but it brought out, nevertheless, many incidental expressions of opinion on the subject, and the emphasis with which all members of the Government who took part in the debate declared in favor of free trade, and the large vote (424 to 24) by which the Chaplin amendment was defeated, are interpreted by American editors as a moral defeat for Mr. Chamberlain's proposition. Mr. Balfour, in closing the debate, frankly admitted the differences of opinion in the Cabinet, but insisted that such differences are admissible and inevitable, and that as long as the Cabinet *acts* in harmony all essential unity is preserved. He did not commit himself unreservedly to Mr. Chamberlain's "advanced program," but expressed a conviction that the new industrial conditions that confront Great Britain—

the high tariff walls erected by other nations, the growth of great trusts behind those walls, and the desire of the British colonies for closer fiscal union with the empire—called for a reconsideration of the present industrial system, tho he disclaimed any belief that this reconsideration would ever result in a return to the old protective policy.

"The clear logic of the situation, with a man of Mr. Chamberlain's pride," says the Springfield *Republican*, "is his resignation;" and the Philadelphia *Ledger* can not see how Mr. Chamberlain "can retain a position in a cabinet which disclaims his pet policy." The New York *Journal of Commerce* remarks:

"It was made plain that the Colonial Secretary, who has been credited with so much political astuteness, had made a prodigious blunder, and that the head of the responsible ministry had been led by his overpowering mastery into a dreadful snare, from which it would be difficult to extricate himself. So strong and so evident is the sentiment against any departure from the policy under which Great Britain has gained its wealth and power that under ordinary circumstances a fall of the Cabinet and an appeal to the country would be expected. But evidently the Cabinet is not with the Prime Minister and the Colonial Secretary in this matter, and their own party will not support them. The logical sequence of such a situation would be their withdrawal, but this is not a direct issue before Parliament or before the country at present, and doubtless they will try to stave it off with soothing words and a yielding attitude, and so allay the commotion they have so unwittingly raised. . . . At all events the prestige of Mr. Chamberlain and Mr. Balfour is so seriously damaged that it is hard to see how it can be repaired, while it is made very clear that those who calculated upon Great Britain's abandoning the policy of free trade were reckoning for the colonies without the English host."

A NEW PORTRAIT OF JOSEPH CHAMBERLAIN.

Some papers believe that Mr. Balfour has made as great a mistake as Mr. Chamberlain. "The usefulness of Mr. Balfour as Premier," says the New York *Herald*, "is seriously impaired if not destroyed, by close association with the ever-meddling and muddling man from Birmingham."

In other quarters the view is taken that even the defeat of Mr. Chamberlain would not necessarily involve the ruin of his principle. "It is certain that the British electorate is not yet prepared to reverse the present free-trade policy of the country," says the Brooklyn *Eagle*, "but it is equally certain that some such scheme as that suggested by Mr. Chamberlain must be accepted before long if the British empire is ever to enjoy political and economic homogeneity." The New York *Press*, a strong protection paper, says:

"Beyond the sensation of a Cabinet divided against itself and a Government indorsed by the opposition on a proposition which, by inference, negatives the policy of the Premier and his strongest colleague, the present debate in Parliament means little. . . .

"The question which Mr. Chamberlain has raised can not be smothered by Parliament. It will grow in interest and will demand a verdict from the voter, and will lose none of its force merely because Mr. Chamberlain may not remain a member of the Cabinet. A new party in England formed to cope with new situations, viewing conditions of trade and labor as they actually exist, and regarding the empire as something the unity of which is essential to England itself, is among the very probable happenings of the immediate future."

DEVELOPMENTS IN THE POSTAL SCANDAL.

THE latest developments in the postal investigation at Washington lead very generally to the conclusion, voiced by the Hartford *Times* (Ind. Dem.), that the whole service is "seriously demoralized." The report of the Civil-Service Commission on an investigation conducted at Postmaster-General Payne's request into S. W. Tulloch's damaging charges against the Post-Office (see THE LITERARY DIGEST, May 30) was made public on June 13, and in many essential points sustains Mr. Tulloch's accusations. Says the New York *World* (Dem.):

"The report of the Civil-Service Commission shows conclusively that Postmaster-General Payne's laborious efforts to discredit Tulloch were simply a part of his policy of 'hushing up' the postal scandals in the supposed interest of the party. The Civil-Service Commission reports, in substance:

1. That for several years past the Washington Post-Office has been used as a dumping-ground for large numbers of unnecessary employees.
2. That the Civil-Service law has been evaded as to its letter and violated as to its spirit by transfers from outside offices to the Washington Post-Office of persons not entitled to Civil-Service positions.
3. That most of these unlawful appointments and transfers 'were directed by the department or requested or suggested by high department officials.'

"In short, this report of the Civil-Service Commission fully justifies the charge that, under the administration of First Assistant Postmaster-General Perry S. Heath, the vast patronage of the Post-Office Department was practically put at the disposal of Mr. Hanna for political uses. In the city of Washington alone four hundred persons, the report declares, were improperly appointed to office while Heath was presiding. There are fourteen larger cities in the country than Washington, and the same unlawful use of the postal patronage as spoils was going on under Heath in all of them."

One phase of the scandal touches Postmaster General Payne himself, who is charged with bringing to Washington a "confidential secretary," for whom a special salary was "fixed up." Postmaster Van Cott, of New York, is also held responsible for sundry "irregularities," and it is said that his son, who holds a position as superintendent of delivery, is likely to be compelled to resign.

The President has actively interested himself in the postal investigation since his return from the West, and, according to press despatches, will insist upon a complete reorganization of the divisions in which there has been robbery. It is announced that he will also make some recommendations to Congress for the passage of laws designed to prevent the recurrence of dishonesty. Says the Washington correspondent of the Boston *Transcript* (Rep.):

"It is generally believed in Washington that, altho a wrong-doer here and there may still be brought to book, the department has got through the worst of its purging. Nothing like a 'network of conspiracy' has been discovered, or is likely to be. A few unprincipled or overambitious men have had their individual flings in places of authority. There has been in the postal service, as there is in government business always and everywhere, considerable needless waste. The pending investigation will, where it is possible, correct this for the future; and for some years to come we shall see good discipline, a highly concentrated responsibility, and a more careful enforcement of checks and balances than heretofore, in all the Federal offices, as a result of the airing given to a few abuses of power in this one."

The Philadelphia *Record* (Dem.), however, is not so sanguine as to results. It says:

"There is brave talk in Washington about excluding politics from the Post-Office Department and running it on business

GETTING TO THE BOTTOM OF IT.

—*The Baltimore Herald.*

principles. Nothing will come of it except to get the present rascals out. While the department is officered by politicians, and goes to a Congress of politicians for its appropriations, and is capable of exerting an influence in favor of the head politician of all—the gentleman who happens for the time being to occupy the White House—the department will be run primarily for political purposes, and only incidentally for the purposes its name suggests. This will go on until the people shall take such an

interest in a reformed civil service—a public service that shall serve the public rather than the party in possession of the Government—that it will be unpopular to use any of the departments for political purposes."

CHARLES EMORY SMITH ON THE PENNSYLVANIA LIBEL LAW.

A NOTABLE contribution to the discussion of the recently enacted Pennsylvania libel law (see THE LITERARY DIGEST, May 23) is made by ex-Postmaster-General Charles Emory Smith in the pages of *The Independent*. Mr. Smith handles the questions at issue with unusual candor and vigor, and his position as editor of one of the most influential Pennsylvania newspapers, the Philadelphia *Press*, gives his words a certain authority. His version of the facts of the case follows:

"Judge Samuel W. Pennypacker was elected governor of Pennsylvania last November. During the preliminary campaign he had been keenly criticized and caricatured in a few quarters. His quaint personality and certain conspicuous mental traits and tastes lent themselves to caricature in peculiar degree, and tempted the caustic pencil of the clever cartoonist. His bucolic appearance, his disheveled hair, his phlegmatic face, his negligent attire, his eccentricity of wearing boots, all invited picturesque portraiture.

GOVERNOR PENNYPACKER, OF PENNSYLVANIA,

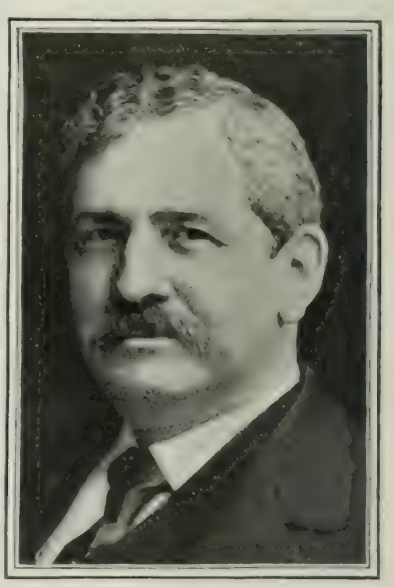
Who is described as the victim of "the greatest outburst of criticism and caricature which has overwhelmed any man within public memory."

"His intellectual qualities and exhibitions gave special zest to the delicious opportunity. He is a man of rugged honesty and inherent rectitude of character. He has considerable learning and marked taste for historical study and antiquarian research within limited lines. But with them he has a guileless simplicity, an unsophisticated ineptness, and a curious mental twist which lead him into ludicrous displays that afford an unbounded theme for satire. It is enough to refer, as examples, to his famous sayings that Senator Quay, a cousin in a remote degree, is a greater man than Clay or Webster, and that Pennsylvania, reeking at the time with political corruption, had no ills worth mentioning.

"All these elements made him the butt of jest and picture. He was portrayed as a perverse parrot and a flustered farmer. It was a new, surprising, and painful revelation to him. He had lived a tranquil and serene life on the bench and amid his musty volumes. To be held up day after day to criticism and ridicule was an unwonted and harrowing experience. Unhappily, with his other good and bad qualities he has no more sense of humor than a clam. The cartoons did him no harm beyond the delineation of his own folly, and if he had laughed them off that would have been the end of it. But they wounded and pricked and stuck like chestnut-burrs. He writhed under their sting; they not only hurt his pride, but offended his exaggerated sense of the reverence due to authority; and as he brooded over them he studied what he conceived would be the appropriate remedy."

The result was that, in his inaugural address as governor, Mr. Pennypacker dwelt on what he considered the abuses of journalism and urged more restrictive legislation. His personal grievance and desire, remarks Mr. Smith, "chimed in with the feelings and purposes of the politicians." They, too, "had been caricatured, and, what was still more annoying to their less sensitive but more practical natures, their schemes of spoliation had been exposed, denounced, and, in some cases, defeated by the inconsiderate and audacious press." And so, with plans well laid, the new libel bill was introduced and "rushed through both Houses in four days, without any hearing and in utter disregard of the constitutional safeguard requiring three separate readings on three separate days in each House." Mr. Smith continues:

"In the face of the most earnest protests, the governor signed the bill and filed it with an explanatory message, which, it is safe to say, is the most remarkable paper that ever emanated from an executive. In its blending of honest resentment, of personal venom, of misleading half-truths, of unaccountable misstatement, of fantastic reasoning, and of unconscious buffoonery, it is unparalleled among official documents. It was immediately followed by the greatest outburst of criticism and caricature which has overwhelmed any man within public memory. The governor instantly became the target of a thousand shafts of denunciation and ridicule. Not only in Pennsylvania, but all over the country his act and his reasons called down such a storm of condemnation as no other single performance of our time has brought upon any public man. The futility of the law for its avowed object of suppressing cartoon and criticism was attested in the most general and vigorous cannonade of both in the whole history of journalism."



CHARLES EMORY SMITH,

Who declares that the new libel law is "one of the most infamous measures ever enacted by an American legislature."

Of the law itself, Mr. Smith speaks in no uncertain terms. He quotes with approval the statement of the New York *Sun* that "it bears on its face the aim of preventing criticism of state officials," and continues:

"This is undoubtedly its design. The object was openly avowed by its authors and sponsors. They sought to stifle criticism and prevent exposure. But, so far as can now be judged, their skill was not commensurate with their purpose. The constitutional safeguard for a free printing-press in dealing with public affairs stood in their way, and they did not know how to evade it. But in framing their bill their clumsy hand put in provisions of the most serious character, and a critical examination does not justify the claim that it only codifies the law as it already was. It introduces the new principle of making an article actionable where there is no libel, provided it can be shown that there was 'negligence in the ascertainment of facts'—that is, that there was any mistake at any point. The obvious intent is to make a newspaper punishable for publishing the essential truth, and to surround the publication with such hazards as to deter it altogether. If this object could be carried out it can readily be seen how it would serve and shield wrong-doers throughout the State.

"With this understanding of the import of the law, it is no exaggeration to characterize it as one of the most infamous measures ever enacted by an American legislature. . . . The viciousness of the new Pennsylvania law is that it is a backward step, flying in the face of the whole course of libel legislation in other States; that it is a deliberate attempt to terrorize the press and stifle public criticism; and that it is the joint product of personal pique and public piracy. The struggle over it in the courts

DEMOCRATIC TROUBLES CARICATURED.

and before the people and in the legislature will be one of the most interesting and important chapters in the history of political progress."

MR. BRYAN AND THE PROBLEMS OF DEMOCRATIC REORGANIZATION.

THE future of the Democratic party is a subject of wide interest in political circles just now, and seems likely to remain so for some time to come. Who is to be the next Democratic nominee for President? Will the conservative Democrats, represented by Mr. Cleveland, or the radical Democrats, represented by Mr. Bryan, win the reins of party supremacy during the months ahead? Is it the part of wisdom for the Democratic party to pursue a more radical or a more conservative policy? These and similar questions are being warmly discussed by papers of every political hue. The Springfield *Republican* (Ind.) is impressed by the fact that "the nation needs now more than ever an opposition leader of youth, aggressiveness, and power, who may serve as a foil to Mr. Roosevelt"; and in a recent issue it pleads with Mr. Bryan to abandon "free silver" and adopt the "sane opportunism" which might give to him that position of leadership. It declares:

"The Nebraskan holds to the cadaver of free silver with all his might. This means that either in success or defeat at the next national convention of his party, Mr. Bryan will continue to be bound to that issue. If successful in dominating the convention, he would make free silver a body of death in the Democratic policy. If thrown out, by the final authority of the convention, from party leadership, Mr. Bryan would find himself in a desperate position in American politics, which has never yet shown tenderness to dead issues or to leaders who have demanded the impossible. By every testimony which the world affords, the rehabilitation of silver is out of the question, for at least a generation. . . . . .

"The only vital political radicalism of our time has aspirations and programs in which the bimetallic question has no place. Search Europe, and where is there a popular leader who gives a moment's thought to free silver? There are men of brains among the Social Democrats of Germany and France. Bebel and Jaurès are men of large intellect and wide reading. Silverism forms no part of their policy. It is well known, too, that the free-silver cause in America has never made headway among the wage-earners of our cities; and they are the men who give strength to labor-unionism and must be reached by any party of political radicalism that craves a future in America. It is a fact whose significance George Fred Williams, at least, must appreciate, even if Mr. Bryan can not, that downright socialism has shown more capacity for growth in Massachusetts than ever free silver did. Now political radicalism in this country, if it is to make progress, must be able to enlist the support of those wage-earners who throng the cities and towns of that great Northern belt, stretching from Massachusetts Bay to the Mississippi River. The South, which is becoming more and more aristocratic and dominated by caste ideas on account of the race question, must be left largely out of the equation. The radical Democracy of the future, as a political force, must find its proper field in the populous North, and it must be less agrarian and more purely industrialist in its appeal to the voters."

To this Mr. Bryan replies (in *The Commoner*):

"While the editor of *The Commoner* appreciates the generous advice given him, his respect for *The Republican* compels him to answer with the same frankness with which it has spoken. He is not seeking leadership. Neither is he concerned about his 'political position in future years'; no man is in position to do his duty who is controlled by the ambition to be a leader or who is always looking out for his own political future. Leadership is not secured in that way, neither can one insure his political position in future years by centering his thoughts upon his own interests. Nominal leadership in a party is determined by the action of the convention, but leadership in thought and in political action is entirely independent of caucuses and conventions. He leads who proposes the wisest measures and defends them with the strongest argument. No one can see the truth who constantly gazes at himself. Those find truth who seek for it—who seek not casually or carelessly, but earnestly and constantly. The best evidence that one can give of his faith in a truth is to be willing to suffer for it. Christ gave utterance to a principle of wide application when He said: 'He that findeth his life shall lose it, and he who loses his life for my sake shall find it.' So it may be said of truth. He whose only object is to save his own political life will lose it, and will deserve to lose it, but he who is willing to lose his life for the sake of a cause or a principle, triumphs with the cause or principle to which he adheres; he grows with it and enjoys the confidence of those who are wedded to it. The advocates of the Chicago and Kansas City platforms have shown their willingness to suffer for their convictions. Why should they pretend a confession of error when they believe that they were right? Why pretend that the issue is past, when

it is still upon us, and must remain? Why ignore, for the sake of a few offices, a fierce conflict between money and manhood? Why delude ourselves with the belief that a real or even a nominal victory can be won by a sacrifice of the people's interest to the cold, cruel, and merciless dictation of monopolists and magnates, in whom love of money has extinguished the feeling of brotherhood. . . . . .

"Opportunism is a good or bad word according to its definition. If it means a willingness on the part of one to change his principles in order to compass individual success, it is a most offensive word; if it means that one employs new facts, new incidents, and new conditions to give expression to his principles, it is an entirely proper word. Every man and every party must utilize circumstances and conditions to advance principles, but no man or party can justify the abandonment of principles for selfish gain."

BLACKMAIL BY WALKING DELEGATES.

AN astonishing amount of corruption in the New York labor movement seems to have been revealed by the investigations of District-Attorney Jerome. Several weeks ago, Mr. Jerome declared before the Central Federated Union that evidence was in his possession showing that more than one "walking delegate" in New York City was using his position to line his own pockets. He has followed up his statement by securing the arrest of Samuel J. Parks, business agent of the Housesmiths and Bridgemen's Union, and of Richard Carvel, business agent of the Derrickmen, Riggers, and Pointers' Union. Both men are charged with "extortion" in accepting checks to call off strikes. It appears that Parks himself admits the receipt of $2,000 from the president of the Hecla Iron Works, Brooklyn, as the price of a strike settlement in April, 1902; but he claims that the money was used for union purposes. The district attorney, on the other hand, alleges that this is "but one of a number of similar transactions in which we have reason to believe that the defendant has been involved," and declares that Parks has accumulated wealth on the strength of his trade-union leadership. Mr. Jerome further instances the case of a recent strike during the erection of the Union Club building in New York, charging that about $17,000 was subscribed by employing cabinet-makers and decorators, and by the club itself, and was turned over to five walking delegates, who "deliberately sold out" the Amalgamated Painters and Decorators' Union.

These revelations have aroused considerable interest throughout the country. The Chicago *Evening Post* says:

"What the public is chiefly concerned with is the moral certainty that extortion, bribery, and graft are altogether too common in the sphere of union activity. In the words of District-Attorney Jerome, who is certainly not an enemy of organized labor, 'the bulk of labor men are honest and desirous of doing the right thing. The trouble is that the executive machinery of organized labor is operated for the benefit of a few only.' Unfit, rash, bigoted, and even corrupt men are too often elected to office and entrusted with extraordinary power. Under these circumstances, blackmail and extortion are almost inevitable. . . . Is Chicago free from this evil? One likes to think so, but the facts forbid, and some employers could doubtless tales unfold which would astonish and disgust many a faithful and honest unionist. Labor must learn to beware of the glib tongue and to elect none but conservative and fair men to office. It must likewise shackle the walking delegate and deprive him of a considerable amount of his present 'discretion.' To give him the power to call a strike is to invite corruption and tyranny."

The New York *Journal of Commerce* comments:

"What is conspicuously shown by this revelation is the need of reform, not only in the methods of labor-unions in this city, but in the methods of employers in dealing with them, and it is time for honest and fair-minded men on both sides to join their forces to put down the abuses which are costing both so dearly and inflicting immense loss upon the whole community. The unions must discard the aggressive and arrogant leaders who have forced themselves to the front, and put in their places men of intelligence and reason, capable of dealing with the business questions involved in their relations with capitalists and disposed to be fair and just. They must seek to avoid conflicts and not to cause them, to promote the processes of industry and interchange and not interrupt and hinder them, to preserve the conditions of prosperity and not destroy them. On the other hand, it is useless for employers to seek to extirpate the unions and to prevent labor organization. But they must insist upon dealing with them only on sound principles and take a firm stand against unreasonable demands and illegal and unjust methods."

The Philadelphia *Record* takes the view that, on the whole, the labor movement is singularly free from corrupt influences. It says:

"Why should more be expected of the walking delegates, often needy workingmen, than is expected of other men in a like representative or judiciary capacity? Is their temptation to succumb to corrupting influences any less than that of members of state legislatures and city councils? When a workingman acquires influence as a leader and organizer among his fellows, it has long been the policy of industrial corporations to win him over to their own service by hook or by crook. A few years ago John Jarrett was a prominent organizer of the iron and steel workers in Pittsburg, but he soon obtained more profitable employment under the Tinplate Association, which made him a useful agent to distribute campaign funds where they would do the most good in Congressional districts represented by Democratic opponents of spoliatory duties on tin-plate. There are other instances of the same kind, but they are a good deal more rare than is imagined. The betrayal of the cause of labor is so rare, in fact, that there is an evident purpose to give as much éclat and dramatic effect as possible to this case of Walking-Delegate Samuel Parks."

LETTERS AND ART.

THE OLD EPIC AND THE NEW.

THE latest addition to the "English Men of Letters Series" is the biography of Robert Browning, written by G. K. Chesterton. The book is likely to make something of a literary sensation. People will either greatly admire or greatly condemn, for the writer has not bound himself by any of the old-time judgments. What he has brought to view is the fact that literary material is endlessly rich when to it is brought a mind capable of seeing new things.

A number of quotable subjects might be taken from the book, but perhaps the freshest and at the same time the most comprehensive, as revealing both the character of Browning's genius and the resultant character of his greatest achievement, is the biographer's comment on "The Ring and the Book."

Mr. Chesterton asserts that the essence of "The Ring and the Book" is that it is the great epic of the nineteenth century, because it is the great epic of the enormous importance of small things. The supreme difference that divides "The Ring and the Book" from all the great poems of similar length and largeness of design is precisely the fact that all these are about affairs commonly called important, and "The Ring and the Book" is about an affair commonly called contemptible. Homer says:

"I will show you the relations between man and heaven as exhibited in a great legend of love and war, which shall contain the mightiest of all mortal warriors and the most beautiful of all mortal women." The author of the Book of Job says: "I will show you the relations between man and heaven by a tale of primeval sorrows and the voice of God out of a whirlwind." Vergil says: "I will show you the relations of man to heaven by the tale of the origin of the greatest people and the founding of the most wonderful city in the world." Dante says: "I will show you the relations of man to heaven by uncovering the very machinery of the spiritual universe, and letting you hear as I have heard the roaring of the mills of God." Milton says: "I will show you the relations of man to heaven by telling you of the very beginning of all things, and the first shaping of the thing that is evil in the first twilight of time." Browning says: "I will show you the relations of man to heaven by telling you a story out of a dirty Italian book of criminal trials, from which I select one of the meanest and most completely forgotten."

Browning is taken by Mr. Chesterton to be the supreme embodiment of his time—a time, by the way, in all of whose movements may be discovered the apotheosis of the insignificant; that is, insignificant in its most general sense. In line with him are others, such as Maeterlinck, Zola, George Meredith, and Bernard Shaw, who have "ceased to believe certain things to be important and the rest to be unimportant." The author proceeds with some humor to assert that "they all have become terribly impressed with, and a little bit alarmed at, the mysterious powers of small things; their difference from the old epic poets is the whole difference between an age that fought with dragons and an age that fights with microbes." The following paragraph amplifies and illuminates this idea:

"This tide of the importance of small things is flowing so steadily around us upon every side to-day, that we do not sufficiently realize that if there was one man in English literary history who might with justice be called its fountain and origin, that man was Robert Browning. When Browning arose, literature was entirely in the hands of the Tennysonian poet. The Tennysonian poet does indeed mention trivialities, but he mentions them when he wishes to speak trivially; Browning mentions trivialities when he wishes to speak sensationally. Now this sense of the terrible importance of detail was a sense which may be said to have possessed Browning in the emphatic manner of a demoniac possession. Sane as he was, this one feeling might have driven him to a condition not far from madness. Any room that he was sitting in glared at him with innumerable eyes and mouths gaping with a story. There was sometimes no background and no middle distance in his mind. A human face and the pattern on the wall behind it came forward with equally aggressive clearness. It may be repeated, that if ever he who had the strongest head in the world had gone mad it would have been through this turbulent democracy of things. If he looked at a porcelain vase or an old hat, a cabbage or a puppy at play, each began to be bewitched with the spell of a kind of fairyland of philosophers; the vase, like the jar in the 'Arabian Nights,' to send up a smoke of thoughts and shapes; the hat to produce souls, as a conjurer's hat produces rabbits; the cabbage to swell and overshadow the earth, like the Tree of Knowledge; and the puppy to go off at a scamper along the road to the end of the world. Any one who has read Browning's longer poems knows how constantly a simile or a figure of speech is selected, not among the large, well-recognized figures common in poetry, but from some dusty corner of experience; and how often it is characterized by smallness and a certain quaint exactitude, which could not have been found in any more usual example. Thus, for instance, Prince Hohensteel-Schwangan explains the psychological meaning of all his restless and unscrupulous activities by comparing them to the impulse which has just led him, even in the act of talking, to draw a black line on the blotting-paper exactly so as to connect two separate blots that were already there. This queer example is selected as the best possible instance of a certain fundamental restlessness and desire to add a touch to things in the spirit of man. I have no doubt whatever that Browning thought of the idea after doing the thing himself, and sat in a philosophical trance staring at a piece of inked blotting-paper, conscious that at that moment, and in that insignificant act, some immemorial monster of the mind, nameless from the beginning of the world, had risen to the surface of the spiritual sea."

A second great distinction pointed out by Mr. Chesterton between the older epic poet and Robert Browning is that in one the poet did all the talking and in the other the people of the epic are the speakers. "The poet in his ancient office held a kind of terrestrial day of judgment, and gave men halters and halos. Browning gives men neither halter nor halo; he gives them voices." To state this leads logically to the statement of the second aspect in which "The Ring and the Book" is the great epic of the age. Says Mr. Chesterton:

"It is the great epic of the age because it is the expression of the belief, it might almost be said of the discovery, that no man ever lived upon this earth without possessing a point of view. No one ever lived who had not a little more to say for himself than any formal system of justice was likely to say for him. It is scarcely necessary to point out how entirely the application of this principle would revolutionize the old heroic epic, in which the poet decided absolutely the moral relations and moral value of the characters. Suppose, for example, that Homer had written the 'Odyssey' on the principle of 'The Ring and the Book'; how disturbing, how weird an experience it would be to read the story from the point of view of Antinous! Without contradicting a single material fact, without telling a single deliberate lie, the narrative would so change the whole world around us that we should scarcely know we were dealing with the same place and people. The calm face of Penelope would, it may be, begin to grow meaner before our eyes, like a face changing in a dream. She would begin to appear as a fickle and selfish woman, passing falsely as a widow, and playing a double game between the attentions of foolish but honorable young men, and the fitful appearances of a wandering and good-for-nothing sailor-husband; a man prepared to act that most well-worn of melodramatic rôles, the conjugal bully and blackmailer, the man who uses marital rights as an instrument for the worst kind of wrongs. Or, again, if we had the story of the fall of King Arthur told from the standpoint of Mandred, it would only be a matter of a word or two; in a turn, in the twinkling of an eye, we should find ourselves sympathizing with the efforts of an earnest young man to frustrate the profligacies of high-placed paladins like Lancelot and Tristram, and ultimately discovering, with deep regret but unshaken moral courage, that there was no way to frustrate

them, except by overthrowing the cold and priggish and incapable egotist who ruled the country, and the whole artificial and bombastic schemes which bred these moral evils. It might be that, in spite of this new view of the case, it would ultimately appear that Ulysses was really right and Arthur was really right, just as Browning makes it ultimately appear that Pompilia was really right.

"But any one can see the enormous difference in scope and difficulty between the old epic which told the whole story from one man's point of view, and the new epic which can not come to its conclusion until it has digested and assimilated views as paradoxical and disturbing as our imaginary defense of Antinous and apologia of Mandred."

A DRAMATIC INVASION THAT FAILED.

IT would appear that certain preconceived and deeply rooted ideas in regard to things artistic coming from America possess the popular mind in Germany to such an extent that a German critic who would praise an American play or picture must do so in the rôle of an apologist. At least this is the impression conveyed by Christian A. Luhnow, in a letter to the Boston *Transcript* (June 3), dated from Berlin. Mr. Luhnow makes the recent failure, on the Berlin stage, of David Belasco's play, "Du Barry," the text for what he has to say on more general subjects. But, first, we quote concerning the fate of the play:

"With much flourishing of the advertising trumpets and with the feuilletons of the daily newspapers devoting columns to the 'Sensationsstücke' produced on the American stage, the Theater des Westens boldly produced David Belasco's 'Du Barry' the other night, with Frau Helene Odilon, a talented actress, in the leading rôle of Countess Du Barry. It was David Belasco's début upon a Berlin stage, and, in fact, 'Du Barry' is the first genuine American dramatic product, supposed to represent the highest standard of dramatic development in young America, which has found its way to the continental European stage.

"By common consent, Berlin's critics agreed the following morning that dramatic art in the United States is still in swaddling-clothes, and that when the dramatic situations are not ludicrous they are pathetic—but not the pathos that the author intended to convey. Whereas the management of the Theater des Westens had promised itself crowded houses and an avalanche of gold as the fruit of its enterprise in opening its doors to the 'American dramatic invasion,' there was an empty void of seats. At one fell swoop the Berlin critics, whom Sudermann characterized as barbarians and raw, dealt a deathblow to the American drama on the German stage."

The following apology, published in its program by the management of the theater even before the storm of denunciation had been let loose, is significant and illuminating:

"We still cherish a prejudice against American art. As a matter of fact, we can hear them say, 'And must this come too,' when we recall the sky-scrapers of Chicago, the ugly architecture of the cathedral on Fifth Avenue, and the transatlantic theatrical pieces with which we have already become acquainted. On the other hand, we have been aroused to enthusiasm in this very playhouse but a short time ago when Miss Sarah Duncan, of California, appeared before us and succeeded in elevating to ideality and the esthetic the most sensual of all forms of art-dancing. It showed us that even in the country across the ocean, with its enmity for all fine forms of art and its dilettanteism in art, they are beginning to awaken thoughts and ideals which are new to even the old lands of culture on this side. Does it not seem as fitting for an old Prussian squire to immigrate to the United States in order to teach the cowboy there how to manipulate the lasso? Yet it is true that former Prussian guard officers and lieutenants grace New York restaurants as waiters to-day. Perhaps the spirit of culture is conveyed to the United States and grows there just as the steer is raised in the far West and we receive canned beef from the New World. We wish to say herewith that whoever wants to portray art in America may do it without much effort. Do they not avail themselves over there of the extracts of our labors in art and culture? For they are standing upon the shoulders of ten thousand years of old-world culture. That explains the fact that we may see a Miss Duncan reviving the Hellenic terpsichorean art and the Greek ideals, and also explains the fact that in David Belasco America may boast of its own Victorien Sardou."

Even this did not soften the hearts of the Berlin critics, who could see in the play only an example of "American sensationalism." Further, we are told that Mr. Charles Frohman, about a year ago, closed a contract with a local theatrical agency for the right to produce American dramatic triumphs upon the German stage, but that nothing ever came of the scheme:

"None of the acknowledged first-class, much less the second- and third-class, playhouses of Berlin would sacrifice its renown by opening its portals to American sensationalism. Grave councils were held by the directors and their assistants. But they agreed that the German public looked upon America not as a country from which to import dramas and high-class plays, but as the country from which Germany obtained its lard, preserved meats, petroleum, and Yankee notions."

Even Miss Duncan's dancing, already referred to, suffered at last, Mr. Luhnow tells us, from the popular incredulity in regard to anything artistic from America:

"Miss Sarah Duncan, who achieved her triumphs recently on the stage of the Theater des Westens, is a Californian by birth. Graceful and willowy in action, Miss Duncan succeeded in exhibiting her new terpsichorean art, her dance interpretations of Chopin and other masters of musical composition, with such refinement and grace that she was proclaimed the creator of a new art. The same Berlin critics who denounce Belasco's 'Du Barry' went into ecstasy over Miss Duncan's art. For three hours Miss Duncan danced before them and was able to hold and sustain their interest and admiration. But to-day there is hardly a low-class music hall or burlesque theater in Berlin which is not producing 'Duncan-can' dances, and there is no comic paper which has not poked its rather vulgar cartoons at Miss Duncan. 'An American teaching us anything ideal, or revealing to us a new art! Banish the thought.' That was finally the sum and substance of Berlin public opinion of Duncanism."

This year, for the first time in the history of the Berlin Annual Art Exhibition, there was a corner devoted to American pictures. In the opening address, this exhibit was "spoken of in awed tones as a new infant arrival and as something to be carefully nursed and tolerated." Turning again to other phases of art, the blind prejudice of the public is in some instances justified, writes Mr. Luhnow, by "the examples displayed here as typical":

"Last night, for example, Philip Sousa and his band appeared at the Philharmonic Hall for an engagement of ten concerts. There may be those who know that a Boston Symphony, a Theodore Thomas Orchestra, and other high-class musical institutions exist in the United States. But the vast majority are made to labor under the impression that Sousa typifies the highest development of American musical standards. Even such a distinguished body of musicians as the committee of the Wagner Memorial Association shares this impression. For Sousa has been invited to interpret American musical standards at the international festival. At the local theaters where the 'cake-walk' is the rage just now, this is gravely described as the national music of the Americans, and 'coon songs' are advertised in the show-windows as the shrine at which the best American talent worships and draws inspiration."

To quote again:

"There is always a ring of condescension when German commentators or critics dwell upon American artistic institutions or invasions. The feuilletons bring spicy stories intended to illuminate the ludicrous features of American artistic endeavors struggling in an aroma of illiteracy, factory smoke, and the scent of lard.

"The greatest Americans in the popular German eye are J. Pierpont Morgan, Thomas Edison, Roosevelt, Buffalo Bill, and the march king Sousa. Mark Twain is very much quoted as the greatest humorist. The bookstalls are filled with trashy 'Amerikanische' novels full of excitement and wild-West adventure.

For public taste here demands such products and looks elsewhere for its higher intellectual food. The only recognition accorded the American stage are the 'knock-about' and acrobatic 'turns' at the Wintergarten, the Apollo, and Passage theaters. From these the masses here obtain their judgment of American theatrical standards and amusements. It is no wonder, therefore, that not one of the critics could summon up enough courage to say a word in praise of Belasco's 'Du Barry' as a work of dramatic strength and strong situations."

TOLSTOY ON LITERARY TOPICS.

A WRITER in the St. Petersburg *Novoye Vremya* gives an interesting account of a visit to Count Tolstoy's country home and a conversation with the famous author on literary topics of the day. Of the new dramas of Gorky and Chekhoff, the literary disciples and followers of Tolstoy, the master had a very unfavorable opinion. He is quoted as saying:

"'At the Bottom' [Gorky's latest play, of which a summary has appeared in THE LITERARY DIGEST] did not appeal to me. I have told Gorky that for a drama one must have a dramatic situation, while in his pieces this essential element is wanting. In fact, I can not comprehend the contemporary theater. I do not understand Chekhoff's plays, for example. Why should he undertake to show us on the stage how three young women find life dull and tedious? I have been reading about Octave Mirbeau's new play, 'Business is Business' ['Les Affaires sont les Affaires']. Here we have a truly dramatic situation. I rate this writer very highly. He reminds me of Maupassant. His is a bold, strong, and genuine talent, in which you feel the quality and the spirit of the Gaul. The French have not a little sentimentality and sensuality, but they also have vigorous, brilliant thinkers, who indeed guide and control the currents of Western thought and literary activity. I may name Anatole France, whom I admire greatly."

Count Tolstoy was led to discuss the types of the tramp, beggar, and semi-criminal outcast to which Russian fiction now assigns so important a place. He found fault with Gorky's one-sided characterization of this genus. Cruelty is not, he said, the chief trait of these gentry. He had studied them and had found them good-natured, frank, and philosophical. He had urged Gorky to emphasize this quality and to show that these people are wholly free from the sense of false shame or irrational fear—that they can rise without much difficulty, having firm ground under their feet. Tho "at the bottom," they never lose their equanimity, and realize perfectly that their destiny is in their own hands. They may be pitied, says Tolstoy, but to help them unduly is to encourage them to remain at the bottom, which is good neither for them nor for society.—*Translation made for* THE LITERARY DIGEST.

The Main Argument Against Realism.—In a favorable review of Prof. Bliss Perry's book, "A Study of Prose Fiction"—a review in which Professor Perry's judgment as a critic is spoken of as "generally unerring"—*The Athenæum* (London) says:

"The main argument against such work as Zola's, and that of others of that school who exactly conform to its philosophy, is somewhat deeper than any brought forward by Mr. Perry. It is that the art of fiction is not analytic, but synthetic. In a novel we are not invited into a dissecting-room or a laboratory, a point which the author evidently sees when he states that such analytical work 'fails to give us the image of palpitating, radiant life.' Art is creative, and we require for it not a scalpel, but a brush or a pencil—a pen, if you will. No doubt before the synthetical part of the writer's work analysis is often necessary; but with the great masters this is not so. The synthetic process of evolving, building up, and sustaining a character is obviously instinctive. One can not suppose that Thackeray first took to pieces Becky Sharp, or Dickens Pickwick. It is the unconscious exercise of the imagination that has produced the best works of fiction."

THE STORY OF COLERIDGE'S ELDEST SON.

A PERSONALITY of which fleeting glimpses are caught in various volumes of memoirs, such, for instance, as those of Tennyson, is that of Hartley Coleridge, the eldest son of the great poet and philosophizer. A pathetic interest has always attached to the son, and in making public some hitherto unpublished letters and verses of his, Mr. J. K. Hudson recounts the facts of his brilliant but ineffectual career.

Hartley was born near Bristol in 1796, but his boyhood was passed at Greta Hall, Keswick, his father sharing the house with the Southeys. Mr. Hudson writes (in *Temple Bar*, April):

"Physically, Hartley Coleridge was of diminutive and awkward appearance, scarcely more than five feet high, with unusually small head, clumsy shoulders, and small hands and feet. He had, however, beautiful hair and brilliant, flashing eyes. His hair grew prematurely gray, and was quite white before his death in 1849, in his fifty-third year. His brother tells us that he early acquired the gait and appearance of advanced age. His later portrait shows a broad forehead backed by a mane of abundant silver hair, strongly marked brows, and alert eyes. The face is somewhat marred by the wide nose and broad weak mouth.

"Wilkie's portrait of him at the age of ten shows a shapely head, with dark hair, delicate ears, oval face, rather high eyebrows, and wide-open pensive eyes. The prevailing expression, which gives the portrait its value and charm, is that dreaminess which above all characterized the child Hartley."

We are told that he was of a sensibility so extreme and beyond his control that he "could not open a letter without trembling." His father speaks of him at the age of seven as follows:

"A strange, strange boy, an utter visionary; like the moon among thin clouds, he moves in a circle of light of his own making; he alone is a light of his own. He has no vanity, no pride, no resentments; and tho very passionate, I never yet saw him angry with anybody. Tho seven years old, he is the merest child. His dispositions are very sweet, he is a great lover of truth and of the finest moral nicety of feelings, yet *always dreaming*."

During his early childhood, Hartley's mind was tormented by subtle metaphysical problems. At the age of five, he used to be "in an agony of thought, puzzling himself about the reality of existence." He soon displayed a surprising eloquence and effectiveness in conversation, and a wide grasp of facts. Yet always, we are told, the fantastic world of his imagination tended to eclipse for him the world of reality. When describing this waking dream-world in which he delighted, "he appeared absolutely convinced of the reality of his narratives and unconscious of the process of invention."

He went to Oxford in 1815, where his "downward declension" was dated. Rev. A. Dyce's description of him at this time is quoted:

"I remember him as a young man who possessed an intellect of the highest order, with great simplicity of character and considerable oddity of manner. His extraordinary power as a converser (or rather, a declaimer) procured for him numerous invitations to what are called at Oxford "wine parties." He knew that he was expected to talk, and talking was his delight. Leaning his head on one shoulder, turning up his dark bright eyes, and swinging backward and forward in his chair, he would hold forth by the hour (for no one wished to interrupt him) on whatever subject might have been started—either of literature, politics, or religion—with an originality of thought, a force of illustration, and a facility and beauty of expression which I question if any man then living, except his father, could have surpassed."

Continuing his own account, the writer in *Temple Bar* says:

"He was dowered with the melancholy of the artistic temperament, and was subject to fits of unreasoning despondency. He said once, 'I have even heard a voice, yes, not like a creation of the fancy, but an audible and sensuous voice, foreboding evil to me'; in such a mood his youthful poem 'Presentiment' was composed. His failure to win the Newdigate induced a depres-

sion altogether disproportionate to the occasion; indeed, he dated from this event his 'downward declension, impotence of will, and melancholy recklessness.' He confesses, 'It was the first time I sought relief from wine.'

"The Oriel Fellowship was as usual granted in the first instance for a probationary period of twelve months. During this time Hartley, shy and diffident yet proud and defiant, felt under a kind of espionage against which he weakly rebelled. His Bohemian habits offended the clerical decorum of the Common Room, and were deemed highly undesirable in a resident Fellow. None of his new associates appear to have welcomed him with the sympathy which might have broken down the barrier of his supersensitive shyness, or to have read his character or felt his winning charm, or had any inkling of his inherent purity and religious feeling.

". . . His faults were glaring enough, from unpunctuality and disregard of the niceties of college etiquette, to occasional intemperance, failure as a tutor, and views on politics, religion, and university discipline, which were certainly liberal and appeared at times revolutionary. The very brilliance of his intellectual and conversational gifts made the possible influence of this reputed *enfant terrible* all the more dangerous; and the result of the whole matter was that at the close of the year of probation Hartley was deprived of his Fellowship, mainly on the ground of intemperance, while receiving a solatium of £300."

The remainder of his life is described as a record of brilliant beginnings and promise unfulfilled:

"The little rift within the lute—that infirmity of will which he inherited perhaps from his father—became increasingly apparent. Literary works were projected and begun, but soon abandoned; an attempt at schoolmastering at Ambleside proved, as indeed he foresaw from the first, a failure; the thought of taking holy orders was abandoned as presumptuous. In many respects he was admirably qualified for the work of a country clergyman, but he very rightly judged himself precluded by his besetting infirmity from entering upon it. For neither reason nor religion availed to shake off permanently the tyranny of the habit of intemperance which had been allowed to grow on him. Yet the sweetness and purity of his nature remained undimmed; he was deeply, unaffectedly religious; and herein lies the pitiful tragedy of his life. . . . He lived with the greatest simplicity and economy, spending his time largely in reading, meditation, and writing. Of the literary outcome of these quiet years—alas! too scanty—it is no part of the present sketch to attempt any elaborate criticism. In poetry his performance was sadly inadequate to his gifts. Unstable as water, the curse of Reuben lay on him. The lines on November, displaying a Shakespearian fancy and beauty of diction, and the fragment of a drama on Prometheus prove him to have acquired early a mastery of the technique of verse; but he was deficient in constructive and dramatic power, and above all he lacked the strenuous, persistent application without which the greater achievements of poetry are impossible."

THE IRISH LITERARY REVIVAL.

CERTAIN plays, representative of the Celtic revival in literature, have recently been produced in New York. This leads an anonymous writer in *Harper's Weekly* (June 6) to say some-thing in definition of the neo-Celtic movement, of which "we have as yet no clear idea in this country," altho in England it has "for some time been recognized as one of the strongest and most vital forces in the literature of our common language." We quote:

"The work of the neo-Celtic school has certain elements of the highest value, which we have almost lost the habit of associating with literature: enthusiasm for pure beauty, a sense of the invisible, the spiritual significance of life, and a keen feeling for the life revealed through nature, as an intimation of divinity. It would be almost ludicrous to speak of these qualities in connection with anything which is at present being written in this country; and we are at least as far from the high excellence of style which, more even than its spiritual content, has drawn attention to the work of the neo-Celtic school. Both for purity of form and fineness of substance the work of these Irish writers stands alone in English literature to-day."

The poets of this school, the writer claims, excel in the quality of subtle verbal music, beside which "most of the modern verse produced in England and America seems crude and rhetorical, lacking the genuine poetic transmutation." He continues:

"Again, the nature-sense of the neo-Celtic school is pure and penetrating. We know how the nature-sense rose and fell in English poetry, beginning with the sweet freshness of Chaucer, the close and profound observation of Shakespeare, and gradually crystallizing in the mere formalism of the Augustans, whose nature was painted at second-hand, and largely from imported models. A genuine nature-sense was restored by Burns, and developed by Wordsworth. Tennyson is full of the love of wild things, full of minute and curious observation. Along this line also, the young Irish writers have attained great truth and depth, their feeling of nature being quickened by the loveliness and pensive sadness of their native land, where there is a delicacy of life in growing things, and a poetic quality of atmosphere not quite like anything else in the world.

"Even more characteristic is the sense of the spiritual in life, the intuition of man as an immortal, which everywhere inspires the work of these Irish writers. The poems of G. W. Russell are full of a fervor that is apostolic, an aspiration recalling Saint Francis or the 'Imitation,' and yet worlds away from the conventional religious poetry, let us say of the type of Wordsworth's 'Ecclesiastical Sonnets.'"

Altho the myths of Greece and Rome have been worn threadbare as literary material, and Wagner has exploited the old Norse Sagas, there remains in Gaelic legendry, it is claimed, material no less rich, which is gradually being woven into the woof of modern writing by the neo-Celtic school. "Poems like the 'Wanderings of Ossian' are but songs before sunrise of this Gaelic renascence, ores from a rich and nearly untouched mine."

NOTES.

REVIEWING a new "Life and Letters of Edgar Allan Poe," by Prof. James A. Harrison of the University of Virginia, Miss Jeannette L. Gilder writes (in *The Critic*, June): "Edgar Allan Poe is the most interesting and picturesque figure in American letters; Hawthorne comes next; Whitman follows. These three great writers struck out on original lines and made their own audiences. Of the three, Poe is decidedly the most picturesque, because of his weaknesses and misfortunes."

A WRITER in *The Pilgrim* (June) expresses surprise that Emerson should have aroused the intellectual enthusiasm that he has among his contemporaries, considering the aloofness of his attitude toward the stirring practical questions of his day. "He touched the great question of human slavery but vaguely, and expressed for the devoted men like Garrison and Phillips, who had consecrated their lives to its destruction, only the amused toleration with which a well-paid professor of Greek to-day might look out upon the war against monopoly, wage slavery, or child labor."

A WRITER has recently called attention to the number of names well known in current literature to be found on the list of the Princeton faculty. He mentions, among others, Prof. Walter A. Wyckoff, President Woodrow Wilson, Rev. Henry Van Dyke, Profs. George McLean Harper, Winthrop More Daniels, John Huston Finley (now president of the College of the City of New York, and the youngest college president in America), Howard Crosby Butler, and Mr. Laurence Hutton. He also notes the fact that "most of the members of the Princeton faculty who write literature were students under Dr. McCosh."

SHERIFF GUTHRIE, K.C., contributes to the *Scots Law Times* some reminiscences of Robert Louis Stevenson as a lawyer, and also of his early college days. The sheriff writes: "None of us who were his companions at college, in and out of the Speculative Society, prognosticated Stevenson's great future. Shame on us! Yet, in mitigation, I may urge, first, our knowledge of his delicate health; second, our ignorance of his capacity for hard work; and, third, the mask of flightiness and flippancy, in talk and conduct, which Stevenson loved to assume. 'To shirk, not to strive,' was his own description of man's chief end at college.'"

A CHICAGO school principal named Watt has been mercilessly exposing the intellectual and literary deficiencies of William Shakespeare. Here is a part of his indictment: "His [Shakespeare's] wit is of a slim order. He is cheap; coarse, and I hate punsters. He makes his jokes of a shady character. His language is behind the times. Students are misled and injured by the bad grammar, bad spelling, and bad morals set forth in his books. His plays are full of what we now recognize as errors of speech." Moreover, Mr. Watt would incite the Dutch, the Irish, the French, and the Scotch against the use in the public schools of the works of this "much overrated" playwright, who, he tells us, has gratuitously insulted these races.

SCIENCE AND INVENTION.

FIRST IMPRESSIONS OF A CURED BLIND MAN.

THE gift of sight to a man born blind is rare enough to be of interest to all, and the first acts and impressions of one who has thus newly gained the use of his eyes have always been studied with special eagerness by physiologists and psychologists. Of a recent case in Scotland, the operating surgeon, Dr. A. M. Ramsay, has contributed a very full account to *The Lancet* (London), which is abstracted as follows in *The Scientific American* (June 6):

"The patient, aged thirty years, blind from birth, was brought to the Glasgow Ophthalmic Institution on February 24, 1903. He had been allowed to run about as he pleased, no attempt to educate him having ever been made. He became, however, so familiar with the country district (a few miles from Glasgow) in which he resided that he could go about without the slightest fear; and his hearing was so acute that he knew at once if there was anything unusual on a road along which he was walking, and thus he never had any difficulty in keeping himself out of danger. As he passed along a road he could tell a wall from a hedge by the sound of the air coming through the leaves and branches of the latter. He could easily go on an errand to any house in his native village, for the resonance of his footfall—quite different in sound when he was passing a building from what it was when he was opposite an open space—enabled him, perfectly familiar as he was with his surroundings, to count the houses as he passed, and thus to turn corners and finally to stop at the one which he wanted. . . . . .

"The patient was quite unable to distinguish objects, altho he could tell day from night and could easily perceive a light and locate it accurately; he seemed to have had no perception of bright colors. . . . . .

"For about ten days after the operation on the left eye the patient appeared to be quite dazed and could not realize that he was seeing. The first thing he actually perceived was the face of the house surgeon. He said that at first he did not know what it was that he saw, but that when Dr. Stewart asked him to look down, the sense of hearing guided his eye straight to the point whence the sound came, and then, recalling what he knew from having felt his own face, he realized that this must be a mouth, and that he must be looking at a face. Once he properly understood what vision meant he made very rapid progress, and his extraordinarily retentive memory enabled him to take full advantage of everything that he was told. He was quite ignorant of color, but learned to distinguish hues very quickly. . . . Unlike Locke's blind man, who imagined that 'scarlet was like the sound of a trumpet,' he does not seem to connect any distinct ideas with particular colors, except that he said that red gave him a feeling of pleasure and that the first time he saw yellow he became so sick that he thought he would vomit. The latter feeling, however, has never recurred.

"He rapidly learned the letters of the alphabet and figures, and he will soon be able to read and to reckon. From the very first he saw everything in its actual position, showing that the retinal inversion of a picture is interpreted psychically without any education.

"He could count accurately after he had looked at objects one by one, and seemed to derive much help in his calculations by pointing with his finger. Here again he seemed to translate touch into vision and to arrive at a perception of the whole through the perception of the individual parts. He can not take things in at a glance. He does not see the passers-by on the opposite side of the street quickly. He looks most intently and moves his head backward and forward and from side to side, as if trying to get a view of them all round before he can make up his mind what he is seeing; in a room, however, he can distinguish things much more quickly. With any complex outline, however, or group of outlines, he still has considerable difficulty, tho pictures are no longer to him, as they were at first, mere masses of confused color.

"He was able to estimate size and distance more readily than might have been anticipated, altho he said that he felt that if he were out of doors by himself he would be 'wandered.' From the time he got out of bed after the operation he could guide himself with ease through a doorway and walk about on the level, but he had considerable difficulty in ascending a stair, because the steps seemed so high that to begin with he raised his foot much farther than was necessary and without meaning to do so went up two steps at a time. . . . Before the operation he could guide himself fearlessly through a ward without coming in contact with the beds or any other obstacle that might be in the way; but since he has been able to see he says that he has lost all that feeling of confidence, and when his eyes are shut he is afraid to move and is impelled to open them to ascertain where he is going—so much so that he does not know what he would do if he again became blind.

"When he is requested to look in any particular direction, he is unable to cause the ocular muscles to do what he wishes, and the balls oscillate and one or the other turns inward. . . . . .

"The functional activity of the optic nerve since the cataracts were removed is very remarkable and is in striking contrast to the purposeless muscular movements. Disuse has crippled the function of the latter, but seems to have had but little effect on the activity of the former."

DOES WEIGHT DEPEND ON TEMPERATURE?

THE daily press tells us of a series of experiments carried on in Madison, Wis., by Professor Babcock, of the State University there, which, if the report be true, will revolutionize our ideas of gravitation. He is said to have proved, among other things, that the weight of a body increases as its temperature falls. Professor Babcock is a chemist of repute, but it should be added that he makes no authoritative statement of his results or inferences, so that we must rely for our information solely on the statements made by the newspaper correspondents. Few scientific men will consider, therefore, that the matter is in such form as to warrant much serious comment. However, altho Professor Babcock has not yet spoken officially, he is, we are assured, responsible for the following interview, which appears in *The Sun*, (New York, May 17):

"'My discovery will not change the practical work of chemistry, tho it affects it, and my conclusions and data depend upon certain differences in weight between ice and water when the ice is melted.'

"In explanation of the reason why Dr. Babcock engaged in the experiments which led to his scientific discovery, he said: 'In chemistry and physics there are a great many discrepancies in the constants, places where the theory does not explain the fact; and this led me to a series of experiments that indicated that bodies change weight when their molecular structure changed.

"'In order to demonstrate this to my satisfaction, I carried on these experiments for a period covering over twenty-five years. For a long time the results were most unsatisfactory, but three or four years ago I commenced working with ice and water and then found that my theory was well founded. I believe that the elements all have a common origin, and the difference in atomic weights is due to the difference in the amount and kind of energy they possess.

"'The lighter elements are endowed with the most energy. Hydrogen, for instance, has the greatest amount of energy, and is the lightest element. I believe further that the ether represents one extreme; that is to say, is matter endowed with practically an infinite energy and has no weight; at least it is so light that we do not know how to weigh it.'"

Professor Comstock, director of Washburn Observatory, is reported to have said:

"By means of experiments of greater accuracy than has been possible to obtain hitherto, Professor Babcock has shown that half a ton of ice weighs more than the water obtained from melting this quantity of ice.

"This is a fact of first-rate importance in our ideas of physics and chemistry. In endeavoring to estimate its exact bearing upon chemical theory, Professor Babcock has advanced the view that what he has shown to be true for water in solid and liquid

states is generally true for other substances, and has built upon this generalization some far-reaching theories."

Another of Professor Babcock's colleagues, Prof. H. L. Russell, is reported to have expressed confidence that there could be no doubt as to the correctness of the experiments so far concluded. He said:

"I believe his discovery to be fully as important as the Newtonian law of gravitation and even broader than the law of the conservation of energy. The exactitude and accuracy of his experiments so far can not be questioned. When the data of Dr. Babcock's discovery are given to the world, as they will be during the summer, they will command the attention of scientists and chemists."

ART AND INSTANTANEOUS PHOTOGRAPHY.

THE average artist has no love for the ordinary photograph, and as for the instantaneous print, it makes him metaphorically foam at the mouth. And yet it seems probable that while instantaneous pictures will never replace the idealizations of the artist, they are well worth his study. His pictures must be so put together that they will produce a certain degree of illusion in the mind of the spectator, and while, of course, this illusion may simply be the result of long practise on the artist's part, it may also be heightened by scientific observation and analysis. And in the instantaneous picture we may observe natural facts that are hidden from the unaided eye. These points are well brought out in a recent lecture on "The Photography of Movement and its Relations with Art," delivered before the French Association for the Advancement of Science by M. Etienne Wallon, and reviewed in *Cosmos* (May 16) by M. E. Hérichard. Says this writer:

"The instantaneous photograph, by fixing a transient attitude that the eye can not seize, constitutes for the scientist a document of the highest importance; but it is in general a picture absolutely devoid of attractiveness, except in the case of quiet attitudes. For these, the character of instantaneousness is minimized; while in the contrary case we have before our eyes the 'odious instantaneous picture,' suspending movement—making immobility by combining movement with what we may term 'contra-movement.' It then certainly merits the scorn that the artist feels for photography. . . . . .

"In the beginning, the pictures obtained in this way caused surprise, as they appeared to be out of harmony with what the work of the artists had taught us, especially regarding the attitudes of the horse in motion. The ideas once accepted were not based on observation. When a running horse passes, we see, not a definite image, but an *ensemble*. . . . The images of motion that satisfy our visual instincts are furnished by memory, as the painter has fixed them on his canvas. . . . At the present day the exact attitudes are more generally adopted. . . . A curious fact is that tradition was not uniform among the artists of antiquity; for instance, Phidias, in the frieze of the Parthenon, has represented horses whose attitudes are perfectly in accord with the result furnished by the scientific observation of movement. In like manner, certain figures on Trajan's column and some of the runners ornamenting an antique vase are, according to Dr. Marcey, exactly represented. . . . . .

"So far as human movements are concerned, the discordance between the representations of art and scientific observation is less. It exists only in the adaptation of the subject to his surroundings. Dr. Paul Richer remarks that artists do not represent men walking simply and naturally; they show them to us walking with some determined purpose. The movements of their sowers or runners may often seem to us improbable; but the artist answers that these movements have been adapted to a special act. . . . All phases of motion are not good to take for models; those that are too transitory must be avoided.

"The partizans of photography—of rigorous representation—would be very wrong to deny to painters the right of interpreting and idealizing nature; and the latter, on the other hand, ought not to deform movement to the point of formally contradicting the truth; the wonderful means of instruction furnished them by chronophotography must not be disdained. The artist must fix on his canvas the unconscious synthesis made by our eyes of the motions that they perceive. . . . Judiciously employed, instantaneous photography is far from being the menace to art that some people believe. . . . . .

"The photograph can in many cases give the illusion of movement . . . if the position chosen is precisely that selected by artists with so much care. M. Wallon concludes that the apparent conflict between the arts of design and photography will soon be at an end."—*Translation made for* THE LITERARY DIGEST.

DISEASE IN METALS.

CHANGES in hardness, strength, or elasticity in certain metals may be due to conditions analogous to disease in organic tissues, according to some German metallurgists. According to *The American Inventor*, the theory of the disease of metals has been so far accepted in Germany that the imperial navy-yard at Wilhelmshafen sends metals regularly to the 'autopsy room and dissecting tables' of Professor Heyn, one of the leaders in the new investigation. That paper goes on to say:

"'Who knows,' asked Dr. Bechhold in summing up his studies, 'if metallurgy will not soon create a new and vastly important branch for itself—the branch of producing inoculating material for metals, which shall change their temper and form swiftly instead of waiting for the slow processes of forging and tempering that obtain to-day?'

"Professor Heyn has been studying the changes in iron under all grades of temperature, and he holds that the metal passes through various stages of disease that produce structural changes just as cells change in form, size, and position in the forms commonly called organic. He heated copper in order to find why that metal suffers from overheating, and his conclusion is that it becomes poisoned with copper protoxid, which so sickens it that its structure changes and partially breaks down.

"The metallurgists have joined the chemists in erasing the line which divides all substances into organic and inorganic—just as the line between animal and plant life has been expunged. The German metallurgists have come to speak as a matter of course of the life that unfolds itself in steel under various temperatures that are applied to it in working it.

"Poison this steel with hydrogen or hydrogenous matter and you sicken it so decidedly that it gets into a condition where it is as brittle as if it had been ruined in tempering.

"Pure glycerin can not be frozen by ordinary means, even if they produce a temperature as low as 20° below zero, until a bit of glycerin that has already been frozen is introduced. But as soon as this crystal of frozen glycerin is in, the rest of the glycerin begins to freeze. This process is nothing more or less than inoculating an inorganic substance with crystals in order to breed in it the condition of crystallization.

"Professor Bredig found the point of infection in the crumbling tin roof of the Council House at Rothenburg, and that the disease, now known as tin pest, had spread to a near-by roof. If some of the gray powder of tin that has happened to disintegrate should attach itself to the sound tin, the disease then communicates itself rapidly to all parts of the metal."

A Crab's Queer Weapons.—A curious habit of a crab of the Maldive Archipelago is noted by a recent writer, M. Borradaile, whose book on this region is reviewed in the *Revue Scientifique* (April 18). This creature uses live sea-anemones as weapons, or perhaps as traps to secure its food—the exact purpose is as yet obscure. Says the writer, describing this interesting crustacean:

"It is a small crab of the genus *Melia*—a new species, having been described in 1900 by M. Borradaile under the name of *Melia tessellata*. This crab lives among the branches of coral, and, as Richter noted in 1880, it is never seen without a small sea-anemone in each claw. Invariably, when met, it is provided

with its two anemones, one in the right claw, one in the left, and it moves about in this way, with its double burden. Why? We do not know. We do know, however, that the crab holds the anemone voluntarily; it is held in the claw, not fixed on it. And when it is taken away, the crab seizes it again if it can; otherwise it goes and finds another. It appears to be satisfied only when its two claws are thus occupied, altho occasionally a *Melia* is met with empty claws. What is the reason for this curious habit of the species? Does the crab use the anemones as a means of defense? May not the stinging cells of the anemones protect it against some enemy? Or does it use them as devices for fishing, causing them to grasp victims that come in contact with their tentacles? We do not know. It is certain, however, that the crab's claws are weak and frail; they could hardly serve unassisted as means of defense. And when attacked he defends himself by stretching out the anemones in the adversary's direction. Here is an ancient habit whose origin and exact object are not apparent. It is worth noting; we know few cases of animals that use tools, especially living tools."—*Translation made for* THE LITERARY DIGEST.

HOW WAS PETROLEUM FORMED?

UNTIL recently, it was almost universally believed that petroleum was, like coal, derived from fossil vegetation or possibly from animals or fishes of some long past age. Now it is asserted by many scientific men that it may not be of organic origin, but may be due to subterranean chemical action. Some recent chemical experiments appear to lend support to this new theory. Says *Cosmos* (May 23):

"On May 26, 1902, Messrs. Sabatier and Senderens reported to the Academy of Sciences a series of investigations the results of which showed that, starting with acetylene and hydrogen, we may, by the aid of finely divided metals—nickel and its related metals—obtain liquid similar to petroleum.

"These syntheses have led the authors to give a very simple explanation of the formation of natural petroleum. It is only necessary to admit that in the depths of the earth are found, diversely distributed, alkaline or alkaline-earthy metals, as well as the carbids of these metals. Water, coming in contact with the former, sets free hydrogen; with the latter, acetylene. The two gases, in variable proportions, meet nickel, cobalt, and iron—metals widely diffused in nature—and give rise to reactions that furnish the various known kinds of petroleum. This explanation is in harmony with the theories of Berthelot and Mendeluff.

"The theory that asserts the organic origin of petroleum is opposed also by M. E. Coste. It does not, he believes, rest on a single well-established geologic fact, nor on the observation of present phenomena. His arguments are thus summed up in *Le Génie Civil:*

"The distillation of organic matter may have produced deposits such as those of coal and the bituminous schists, since these deposits were contemporaneous with an intense degree of plant-life; but it is hard to explain why deposits of petroleum and of natural gas, if they have the same origin, are not abundant in the rocks of the same epoch and are found oftenest, on the contrary, in strata earlier than the carboniferous epoch, when vegetable life was less flourishing. On the other hand, as life has been continuous on the earth since the carboniferous period, we should find petroleum in all the later strata, and we even ought to be able to observe its formation at the present time. Now this is not the case. To-day, in all cases where decomposition of organic matter takes place, it is so complete and so swift that it is ended before its burial in the earth and the mineral part alone remains—ashes, shells, bones. It must have always been so; we find in certain strata, it is true, shells containing petroleum, but this is in quantity much more considerable than that which corresponds to the living organic matter that they once contained, and in this case the surrounding rock is also strongly impregnated. Rocks and shells have been impregnated at the same time and later than the deposit.

"The formation of coal is the only process that can be followed by organic matter; it has taken place at all times, even before the Carboniferous Age, as is proved by the small deposits of carbonized matter found in the Devonian and Silurian strata; and it may also be observed at the present day in lignite and peat.

"It is not easy to maintain that petroleum comes from the destructive distillation of coal, altho the two are sometimes found in the same place; such distillation would produce deposits of coke or ashes, which have never been observed.

"To sum up, the volcanic origin of the petroleums is demonstrated by the impossibility of the conclusions to which we are led by asserting their organic origin."—*Translation made for* THE LITERARY DIGEST.

HOW THE EUCALYPTUS STORES UP ENERGY.

ALL trees and plants are storers of the sun's energy, but all do not possess this property in an equal degree. The eucalyptus appears to have it in greater measure than other trees, as was first noted in 1882 by D. E. Hutchins, of Cape Colony, and Sir A. Brandis. Mr. Hutchins has been again directing attention in *Nature* to this feature of the tree, which he believes will make it more valuable as a fuel than coal. Says *The Scientific American Supplement*, in an abstract of his article:

"According to Mr. Hutchins, a eucalypt plantation in tropical mountains, such as in South Africa, under favorable circumstances, stores up about one per cent. of the solar energy received on the unit of area, and it is considered much cheaper in some parts of Cape Colony to plow up the land and plant a forest of quick-growing trees than to import coal.

"In 1882 Mr. Hutchins and Sir A. Brandis, as result of their experiments, discovered that eucalypts planted on tropical mountains produce fuel at the rate of 20 tons—dry weight at 60 pounds per cubic foot—per acre per year in perpetuity. The eucalypt plantation reproduces itself when cut without further expense, and its dry timber, heavier than coal, has an equal or a higher thermal power, bulk for bulk, than coal. This result was obtained as a measurement of the maximum yield of Eucalyptus globulus on the Nilgiris, Southern India. If a chance tree on a chance mountain in a chance soil can produce the equivalent of 20 tons of coal per acre per year, it seems not unreasonable to suppose, Mr. Hutchins suggests, that by selection double this, or 40 tons, can be produced. A powerful sun, a heavy rainfall, and a very rapid forced growth are the essentials of such a production of wood fuel. A glance over the rainfall map of the world shows these conditions are fulfilled over about 8,000,000,000 acres of its surface, which is between one-fourth and one-fifth of the total land surface of 35,200,000,000 acres. One-half of this area under forest might thus yield the equivalent of 160,000,000,000 tons of coal yearly, which is more than 288 times the world's present consumption of coal, assuming that coal and eucalypt timber are of approximately equal heating power. On the basis of the actual forest yield of the present day, we have half of this, or the equivalent of 80,500,000,000 tons. In Germany, one-fourth of the total area is under forest, and taking the Germany standard of one-fourth forest, on the basis of the present maximum yield we should obtain 40,250,000,000 tons; while if the maximum forest yield be converted to an average forest yield there would still remain a yearly product of 20,175,000,000 tons, which is rather more than thirty times the world's present consumption of coal. Thus it is seen that the yield of firewood from the world's tropical and extra-tropical forests, wherever they are fully stocked and scientifically worked, will yield the equivalent of from 30 to 122 times the present consumption of coal, or even up to 243 times the present consumption, if by cultivation the present timber yield be doubled, as it might be without difficulty."

Another Waste Product Utilized.—As industrial evolution goes on, we have fewer and fewer "waste products." One by one these are discovered to have value, and sometimes they turn out to be more valuable than the primary product. A very important advance along this line is in the utilization of the waste gases of the blast-furnace, which is described by a writer in *The*

Electrical Review as probably the most promising field for economizing in power-production. Says this paper:

"The enormous amount of waste from the blast-furnaces indicates a field for exploitation that is revolutionizing. It is claimed by all who have studied the question closely that the blast-furnaces may in the near future be great gas-producers, while the production of pig-iron will be only of secondary importance. In other words, the gas which was formerly wasted is now considered, when collected and burnt in the gas-engine, of more value than the pig-iron product. The different methods employed in the past for using this gas by burning it to make steam were always inadequate, and the amount recovered in this way did not figure conspicuously.

"Our production of pig-iron has steadily increased in the past year, and a number of new large blast-furnaces has been erected. Each one of these groups may become the center of electrical manufacturing industries which will be of prime importance. . . .

"In Europe the utilization of the waste blast-furnace gas has been more active than in this country, and according to a recent report there were upward of 175,000 horse-power of blast-furnace engines in successful operation in continental Europe. Germany has led all other nations in this respect."

FLOATING ISLANDS IN LOUISIANA.

A RECENTLY formed crevasse on the Mississippi just above New Orleans has been pouring water into the great Des Allemands Swamp, which, with its network of lakes and waterways, extends for more than one hundred and fifty miles toward the Gulf. The result, according to a recent letter to the New York *Sun*, has been to multiply the so-called "floating islands" for which the swamp has long been noted, until they constitute a menace to the inhabitants and to the railroads. Says *The Sun* correspondent:

"Most of the swamp is what the Creole swampers call *prairies tremblantes* (trembling prairies). It is land, but floating land, built up over the water by the accumulation of centuries, of logs, branches, leaves, and vegetable mold. It is light enough to float but strong enough to support men and even cattle. It trembles when walked on.

"The earth is held together by the intertwining branches of the plants or trees, for frequently very large trees grow on these trembling prairies. Occasionally some of the land is torn away and becomes an island. Such islands are known as *flottants* or floaters, by the Creoles, and are among the most picturesque sights of these Louisiana lakes, sailing upon them, borne hither and thither by the winds or currents.

"In old days, there were dozens of these floating islands, some of them acres in extent. This year the rush of the Mississippi through the Hymelia crevasse has torn up the trembling prairies, and created floating islands by hundreds.

"They are to be found in all the many lakes and bayous of that region, and are most confusing to visitors and even natives. The landscape changes, not every day, but every hour, and the land and forest shifts from one side of the river, bayou, or lake to the other in a night.

"The natural tendency of the islands is to drift toward the Gulf, and when the Hymelia crevasse begins to empty its full force into the Gulf of Mexico, ship captains navigating that body of water are likely to be confused by discovering new lands and tropical islands where the charts show none.

"For the present, however, the *flottants* are proving most troublesome to the railroads by threatening their bridges. So many islands have floated down Bayou Des Allemands as to endanger the big bridge of the Southern Pacific over that stream.

"The railroad company has a large force of men near the bridge. They have driven piles and built up a network above it to catch the floating islands, which are blown up, cut up, or otherwise destroyed, so as to prevent them from floating against the bridge and wrecking it.

"The soil is found to be from six to eight feet deep, with the intricate entanglements of vines, grasses, and trees, and the islands are very picturesque. They would be handsome ornaments in a pleasure lake, and they are attractive even in the Louisiana swamps; but the railroads and the settlers there say that they are a nuisance, as they frequently run aground in the network of smaller bayous, act as a dam in the stream, and help to overflow the neighboring lands, even when they do not carry away the railroad bridges."

Why is Morning Air Fresh and Sweet?—Every one recognizes the sweetness and freshness of the early morning air, and knows that these attractive properties disappear as the day advances; but, so far as analysis goes, the composition of early morning air is not different from that of air at any other time. Why is this? Says a writer in *The Lancet* (April 25):

"It is well to remember that during the passing of night to day and of day to night several physical changes take place. There is a fall in temperature at sunset and a rise again at dawn, and consequently moisture is alternately being thrown out and taken up again, and it is well known that change of state is accompanied by electrical phenomena and certain chemical manifestations also. The formation of dew has probably therefore far more profound effects than merely the moistening of objects with water. Dew is vitalizing not entirely because it is water but because it possesses an invigorating action due partly, at any rate, to the fact that it is saturated with oxygen, and it has been stated that during its formation peroxid of hydrogen and some ozone are developed. It is not improbable that the peculiarly attractive and refreshing quality which marks the early morning air has its origin in this way. . . . The difficulty of inducing grass to flourish under a tree in full leaf is well known and is generally explained by saying that the tree absorbs the nourishing constituents of the soil or that it keeps the sunlight away from the grass and protects it from rain. It is doubtful whether any of these explanations is true, the real reason most probably being that the vitalizing dew can not form upon the grass under a tree, whereas as a rule both rain and light can reach it."

SCIENCE BREVITIES.

THE manufacture of quartz glass is rapidly developing in Germany, writes Richard Guenther, United States consul-general at Frankfort. The product consists essentially of melted quartz, which is made into tubes and other articles. It is perfectly translucent. The initial experiments in the manufacture of the new glass were made in England, but a firm at Hanau, a few miles from Frankfort, was the first to place quartz-glass apparatus upon the market. "Everybody who knows the properties of quartz glass admits that it will soon replace ordinary glass for many uses. It is only a comparatively short time since German manufacturers revolutionized the manufacture of optical glasses and obtained a monopoly of this important industry, and there is reason to believe that this will be repeated with quartz glass."

A RECENT newspaper despatch quoted in *The Electrical Age* states that Sherman Hobson, a railroad man of Pueblo, Colo., has just perfected an appliance which, if all proves true that is claimed for it by its inventor, will greatly reduce railroad collisions and save thousands of lives annually. "The new appliance is a sort of looking-glass to be hung on each side of an engine to enable the engineer and fireman to see the roadbed for six miles, both in front and in the rear. The chief value of the invention is that it does not make any difference if the road is curved or straight. The instrument works on the principle of a mirage, and it has been named by its inventor the 'miragescope.' It has been tested from Denver to Grand Junction on the Denver and Rio Grande and the Colorado Midland, and also passed favorable tests on the Colorado Southern and Missouri Pacific."

ON a recent proposition to introduce vertical penmanship into the English schools, *Nature* (London) says: "There can be no doubt that sloped writing necessitates a strained and asymmetrical posture, and has contributed to the production of countless cases of lateral curvature of the spine and of eye-strain, while upright writing is compatible with a natural and healthy posture. This fact alone constitutes a sufficient and, indeed, urgent, reason for the teaching in all schools of upright in place of the old-fashioned sloped writing. But it seems that some of the advocates of upright writing claim as one of its principal advantages the fact that it can be easily executed with the left hand. They propose to form an association to promote the teaching of upright writing with both hands, believing that the child taught to write equally well with both hands will easily acquire left-handed skill in all other manipulations. This belief is probably well founded, but there is at present no sufficient ground for the assumption that a child's mental development will be aided by the training of his left equally with his right hand. The balance of probability seems to be against it. It is further proposed to teach children to write different matter simultaneously with the two hands, a feat which appears to have been accomplished in one or two instances. If this proposal should be carried into practise the results should be of great interest to psychologists, but the process may be prejudicial to the development of strong and sane personalities by the subjects of the experiment."

THE RELIGIOUS WORLD.

STARVATION OF THE COUNTRY CHURCH.

IN the country, says Mr. G. T. Nesmith, the redemptive power of the church is nothing whatever because her message is forgotten and marred, the result being that "the spiritual condition of the community falls correspondingly lower." "With no broad, rich social life, no general intellectual activity, no religious inspiration, no initiative to political self-consciousness and community action, life in the rural districts tends toward idleness, vulgarity, animality, and drunkenness." Such, we are told, is the problem of the rural community, "with its highest factor for good an object for apology and pity." We quote further from Mr. Nesmith's article, which appears in *The American Journal of Sociology* (Chicago):

"So we witness in our rural communities a vast destitution of religion. We hear annually long reports of dead and dying churches; we behold churches barely alive, with no settled pastors; we see churches having settled pastors giving their entire strength in a mere fight for existence, and having no money or energy left for community interests and philanthropy. Thus the conception of the church in the rural districts has come to be something to be kept in existence rather than something to be kept on the increase; something to be ministered unto rather than something to minister; something to be built up out of the community rather than something to build up the community out of it; 'a humble pensioner upon the people, hat in hand, begging for support, rather than a divine institution which is to bestow upon men the gift of God in Jesus Christ.'"

The writer quotes Josiah Strong as having said that during the thirty years ending in 1893 thousands of churches died from exhaustion in the rural districts of the United States. And according to an investigator of the New England region: "It is a pathetic sight to see a church, firm in its aims and ideals, yet gradually decaying because its best blood is going to the cities; but it is more pathetic to see churches that have locked their doors, not because there was no one to attend, but because no one would attend." Mr. Nesmith reflects thus upon these things:

"It would seem that a village, with its many church-spires pointing to the sky, would be the center of growing civic and religious life. On the contrary, the ethical and religious condition of the rural community seems to be very low. Idleness, vulgarity, and drunkenness seem to be on the increase, while the churches appear to be gradually dying for lack of community interest.

"The causes leading to this sad condition are many. Migration has deprived the church of its best element. Immigration has brought into the farming districts a class of people not friendly to the church of Puritan ideals. Denominationalism has subdivided the small community into organizations too weak to do anything but barely to live; while its fierce strife and contentions have created a feeling of disgust and religious indifference. Irregular and inefficient ministers, narrow in theology and weak in personality, have added to the growing indifference. A lack of means to carry on the work has put the church in a begging attitude, depriving it of its spiritual aggressiveness. The preaching of dogma and the emphasis of creed above character have deprived the church of the sympathy of the people. An undue worship of cherished ecclesiastical traditions compels the use of a polity inefficient and untimely. An illogical application of successful urban methods to rural problems wastes energy and delays the solution of the problem. A conception of religion which emphasizes its defensive agility instead of its aggressive qualities deprives the church of its inspiration and leadership. An undue exaltation of the clerical office and of the functions of public worship draws away the sense of divine agency and appointment from other offices and functions, and tends to divorce religion from the people, who feel that the clergy is exalted instead of the church, and that the community is sacrificed for the church instead of the church for the community."

We are also assured by the writer of this article that a false conception of the world-order as "permanently and necessarily corrupt" deprives the church of a large part of its proper influence. "This view causes the church to neglect the general interests of society and makes religion something external, to be gotten by special experience, a system of dogmas to be accepted, and of forms to be regarded, instead of consecrated devotion to the best interests of the community. . . . Finally, the cause of low ebb of church influence in the rural districts is the failure to study the problem scientifically and to adapt its program of reform along sociological lines instead of the traditional polity of the apostolic fathers."

ANGLICAN RIDICULE OF THE NON-CONFORMIST CONSCIENCE.

PASSIVE resistance on the part of non-conformists to the payment of the school tax levied under the new English Education Act has assumed the proportions of a "tremendous" movement, according to the London *News*. "Since the abolition of church rates," remarks the great Liberal organ, "there has been no principle more firmly established in England than that the upholders of one creed should not be called upon to pay for teaching another." It adds:

"This 'passive resistance' movement has received no support from the Opposition press, or from the opposition leaders. It has been a people's movement. There was probably no politician who was not taken by surprise when last week the first beacon-fires glowed from Oxford and the Isle of Wight! The wiseacres had put the thing out of sight and memory. The materialists, both Liberals and Tories, had decided that this was not an age in which any man would put himself to stress or trouble over a religious conviction. If the fight had been for wealth, privilege, or power, then this might have been credible. In such contests, the only surprise is nowadays if a man does respect the law; and the surprise is even greater if the law dares to vindicate itself. But the idea that a non-conformist should ever take strong measures because he is forced to pay for having his children proselytized, and to support a school from which they are excluded as teachers, has seemed even to many Liberals an incredible and improbable thing. And yet, lo! it has happened."

The religious organ of the non-conformists in England, *The British Weekly* (London), has warmly supported this passive resistance movement. "When," it says, "we declared that it was a matter of conscience with us to refuse the payment of rates for sectarian schools, we bound ourselves to abide by the consequences, whatever they were. It was and is for us a matter of life and death." This last sentence, retorts *The Church Times* (London), the official Anglican organ, "is splendid in its humorous suggestiveness." It continues:

"It conjures up a picture of Dr. Clifford being led to the scaffold by those arch-sacerdotalists, the Prime Minister and Sir William Anson, while the whole bench of bishops gloat over the horrid deed. At the same time, the actual price of martyrdom seemed likely to be extraordinarily low. The average martyr, let us suppose, occupies a house rated at £40. The majority, perhaps—so unappreciative yet is Britain of its greatest men—occupy more humble dwellings. But let us put the ratable value at £40. On a 6d. educational rate, the half-yearly payment demanded will be ten shillings. Not all of this is to be withheld. 'It is for local leagues of citizens, acting with the National Passive Resistance Committee, to fix the sums to be refused. It will always be easy to know within a little what proportion of the rate is paid for sectarian schools.' (Is a Wesleyan school, one wonders in parenthesis, a sectarian school?) In other words, the total amount which our typical martyr will refuse to pay may be about five shillings. But even as regards this sum he must be careful. Martyrdom is very desirable, but he should not pay a penny more than is necessary in order to secure it."

The Anglican organ next quotes from the non-conformist organ the following, which it calls "delicious irony":

"The demands of conscience are satisfied when the goods of

the ratepayers are taken out and sold. It is not necessary, and it is not wise, to allow them to be sold at a ruinous sacrifice to furniture dealers."

"This presumably means," says the Anglican organ, "that a sympathizer is to fill the rôle of purchaser." It adds:

"A vast concourse of 'free churchmen' will assemble with banners and trumpets. One of Dr. Clifford's henchmen will deliver an impassioned speech. Then a minion of the law, loathing his task, and his utterance well-nigh choked by sobs, will proceed to put up to auction the martyr's kitchen coal-scuttle. The scene will be one of huge emotion. But a friend will purchase the coal-scuttle for five shillings, amid rapturous applause, and will restore it to its tearful owner. Whereupon the procession will reform and the drama will be complete. Never before, we are convinced, has so striking and effective a martyrdom been obtainable at so very modest a price."

FASTING AND THE CAUSE OF LEPROSY.

ACCORDING to Dr. Jonathan Hutchinson, who has long been recognized as one of the first experts on leprosy, the institution of fasting, or rather the use of fish on fast-days, is the cause of the growth of that disease in certain parts of the Orient. "Wherever Catholic missions are successful," writes Dr. Hutchinson in the London *Times*, with particular reference to India, "there is increase of leprosy." He continues:

"The facts which I have brought forward are such as to impose a duty upon the authorities of the Roman Catholic Church to reconsider their fast-day ordinances. The facts seem to show conclusively that in all districts where leprosy occurs—in other words, in all places where there is risk of obtaining unsound fish—the use of fish on fast-days ought to be forbidden. I have long ago and many times expressed the opinion that neither contagion nor the crusades, but Christianity, was responsible for the prevalence of leprosy in Europe during the Middle Ages. It now appears that what occurred then is being repeated now in India, and, it is to be feared, in many other parts of the world. . . . A convert from Hinduism to Roman Christianity incurs at once an enormously increased risk of becoming a leper. In most of the Indian asylums 'native Christians' abound, and by far the larger proportion are Catholics. Conversion to any of the Protestant sects incurs some risk, because it removes the prejudice to animal food which, to some extent, is natural to the Hindu mind; but conversion to a creed which imposes the use of fish on one or two days at least of every week increases that risk immensely. My calculation is that the risk to a Catholic convert is twenty-fold that of one who remains in the Hindu faith. If I dare trust my figures—chiefly those of the last census—it may possibly in Bengal amount to ninety-fold."

Dr. Hutchinson admits that figures are deceitful and "statistics are often fallacious," but "the margin which may here be allowed for error" throws no doubt upon "the general bearing of the facts." To resume:

"Similar conclusions are suggested whether we examine the statistics of Bengal, Bombay, Madras, or the Punjab. Respecting the Chota Nagpur district of Bengal, the census compiler writes: 'The great center of Roman Catholic missionary enterprise in this province is Ranchi, where its converts exceed 54,000, or about three-fifths of the total number in the province.' The increase during the last decennium was 15 per cent. Now it is in precisely this district that leprosy also has increased (from 4.5 to 5.8 per 10,000), while in all the adjacent districts it has diminished. A fallacy which may possibly to some extent diminish the force of my estimates is that in some instances lepers who have been registered as 'Christians' may have been converted subsequent to the development of their leprosy. I have no means of knowing whether or not this has been the case to any large extent, and certainly it does not invalidate the records of the Bombay asylum at which the expression 'Salsette Christian' means a descendant of those who were converted more than three centuries ago by St. Francis Xavier and his devoted colleagues. Most willingly do I bear my testimony to the temporal advantages which have accrued to these by their conversion; and it is because fish fast-days are no essential nor even important part of Christian ritual that I feel entitled to urge that they ought to be done away with. It may not be out of place here to point out that this preponderance of the disease among Catholic converts gives the *coup de grâce* to the belief in the contagiousness of leprosy."

GOD AS A CONSTITUTIONAL MONARCH.

AT the time when the books of the Bible were written, monarchs were absolute. There were no Magna Chartas, no declarations of the rights of man, no constitutions, written or unwritten. Man instinctively, therefore, invested God with the attributes of despotism. He was the King of kings. Nowadays we tend, without being quite conscious of the fact, to make a constitutional monarch out of God. This explains some of the drifting of doctrine which characterizes our age. So, at any rate, thinks that brilliant Irish clergyman and scholar, Prof. J. P. Mahaffy, who brings the point out quite clearly in *The Hibbert Journal* (London and Oxford). "If the Deity be recognized as a constitutional monarch," he declares, "who in His wisdom has laid down the best laws for the world to obey, the notion of caprice or special legislation, or exceptions for any particular reasons, becomes more and more inconsistent with the perfection of His wisdom":

"Hence, even among the most religious people, the importance of miracles as a proof of divine power, or of special interpositions to please particular people, can not but wane and pass into the background, as being suited to a ruder age and less developed people, and not perfectly consistent with the establishment of wise laws by an omniscient power. The appeal to miracles becomes less and less frequent, and they no longer play a prominent part in the spiritual life even of those who faithfully receive the truth of the Gospel. The fact that they have disappeared gradually, and are even still asserted among the more superstitious branches of the Christian church, shows that it is not by controversy but by the drifting of opinion that the change has taken place."

Without going so far as to imply the further modification of God's system along republican lines, the Irish thinker anticipates that the tendency which he points out will remain active. Hence he sees no escape from the conclusion that the modern mind, tinctured with notions of the consent of the governed, may view "the eternal pains of hell" accordingly. We quote:

"With the lapse of centuries a new ideal came into the world—that of a constitutional monarch, far greater and wiser than the legitimate despot. Men came to understand the wisdom and humanity of a fixed code of laws, which even the sovereign would not infringe, by which he bound himself voluntarily, and of which a violation, owing to anger or caprice, would be a lowering of his own perfection. Such a monarch was quite ready not only to create subjects, but to give them rights; and the disregarding these rights would not only be harsh or even cruel, it would be positively *unjust*."

Dr. Mahaffy does not mention the devil, but he fears that the conversion of hell into a poetical expression may make us suspicious of "the inexpressible joys of heaven." We quote once more:

"The fact is, that with the faith in hell the faith in heaven was more closely bound up than was suspected; and when the faith in the one has faded, the faith in the other seems to be fading also. I do not hear, as I used to do, pious old people comforting themselves with the hope that very soon they will find again those of their family whose loss was the bitter trial of their lives. They seldom speak about it, they do not disbelieve it, but the faith of the religious world is drifting away from it, to that worst form of despair—

> "'When I shall meet him in the court of heaven
> I shall not know him; therefore, never never
> Shall I behold my pretty Arthur more.'"

RIVAL MESSIAHS IN A PROPOSED PRAYER DUEL.

MIRZA GHULAM AHMAD, of Qadian, Punjab, India, is "the promised Messiah," according to statements made over his own signature. He has challenged Dr. Dowie, of this country, to a duel, the weapon being prayer and each side to petition the Almighty "that of us two whoever is the liar may perish first." The person who issues this challenge, according to *The Review of Religions* (Gurdaspur, India), is "the Promised Messiah" sent "for the reformation of the world exactly at the time fixed by calculations based on biblical prophecies as the time of the advent of the Messiah," and he has a following of over a hundred thousand members, "rapidly growing." The teaching of this Messiah is that Christ was a mere mortal, a good man, without divinity. Mirza Ghulam Ahmad further declares in the organ already named:

MIRZA GHULAM AHMAD.

He has challenged Dr. Dowie to a prayer duel to the death.

"Dr. Dowie should further bear in mind that this challenge does not proceed from an ordinary Mohammedan. I am the very Messiah, the promised one, for whom he is so anxiously waiting. Between Dr. Dowie's position and mine the difference is this, that Dowie fixes the appearance of the Messiah within the next twenty-five years, while I give him the glad tidings that the Messiah has already appeared. I am that Messiah, and Almighty God has shown numerous signs from earth as well as from heaven in my support. My following, which already claims a hundred thousand souls, is making a rapid progress. The proof that Dr. Dowie furnishes in support of his extravagant claims is the very height of absurdity. He claims to have healed hundreds of sick men. But why did his healing-power fail in the case of his own beloved daughter, where it should have been exercised in the highest degree?"

John Alexander Dowie, writes the Messiah, "claims to have been sent by the son of Mary in his capacity of Godhead, that as his apostle he may draw the whole world to a belief in the despicable dogma of his divinity." The Indian claimant proceeds:

"Whether the God of Mohammedans or the God of Dowie is the true God may be settled without the loss of millions of lives which Dr. Dowie's prediction would involve. That method is that, without threatening the Mohammedan public in general with destruction, he should choose me as his opponent and pray to God that of us two whoever is the liar may perish first. I look upon the son of Mary as a weak human being, altho I recognize him as a prophet of God, while Dr. Dowie takes him for the Lord of Universe. Which of us is right, is the real point at issue. If Dr. Dowie is certain of the divinity of the son of Mary, he should publish the proposed prayer with the signatures of at least one thousand men affixed to it. Upon receiving it, I should address the same prayer to Almighty God and publish it with the signatures of the same number of witnesses. If Dr. Dowie has the courage to accept this challenge, he will thereby open a way for all other Christians to the acceptance of truth. In making this proposal, I have not taken the initiative, but the jealous God has inspired me upon Dr. Dowie's presumptuous prediction that all Mohammedans shall perish."

"An important discovery regarding Jesus Christ" has been made by the followers of the challenging Messiah, as we read in the Indian publication already named. This discovery is that "Jesus did not die upon the cross," but was "taken down alive and senseless." Subsequently the son of Mary "recovered, traveled eastward, and lived up to a good old age." His tomb, it is also stated, is "situated in the Khan Yar Street at Srinagar, Cashmere." Our authority opines: "The incontrovertible testimony afforded by the tomb itself, backed as it is by the unanimous oral testimony of hundreds of thousands of men, and by the written evidence of ancient documents, becomes in our opinion too strong to be resisted by the most determined of skeptics."

TRANSFORMATION OF THE QUAKER.

QUAKERS, "the people called Friends," have been greatly changed by time, according to Edward Gardner, himself a Quaker, who writes in *The American Friend* (Philadelphia). This transformation, according to him, is one of the significant religious phenomena of the day, and it should not be overlooked by those who would understand the moral forces now at work in this republic. A great future is predicted for the transforming movement. "It will be an aggressive church, not a passive one," he says. "Its work will be constructive as well as preservative." He gives the following details of the Quaker's transformation:

"For a century or more, Friends were known by their peculiar dress. At length it was discovered that simplicity of dress did not mean uniformity, and that the cut of the coat or the shape of the bonnet did not add to the spiritual life of the wearer. The Quaker of to-day is not known by his dress; if he dresses with taste, but not with extravagance, he is, no doubt, conforming more nearly to the spirit of early Quakerism than did his predecessor of a hundred years ago. George Fox himself, it is said, bought his wife a red mantle, and William Penn's dress did not at all conform to the Quaker ideal of a later period.

"Music, painting, and literature are now taking their rightful place among Friends. Congregational singing is recognized as being a part of true worship, and in many places instrumental music is also made a part of the devotional service.

"In the Quaker home of a century ago the sweet influence of song was unknown. The Bible and the writings of early Friends were the only books; no pictures adorned the walls, and Puritan austerity was the rule of life. In the Quaker home of to-day we find music, paintings, and an abundance of books; means of recreation abound, and a daily paper has become almost a necessity."

The Quaker home of 1800 "lacked somewhat in grace," thinks the Friend we are quoting, "in kindly sympathy, and in a broad view of life." Quaker "sternness" may have "repelled some." But there is reason to think that the Quaker home of 1900 has less of these faults. We read further:

"Closer interdenominational fellowship has become very prominent within the last few years. It is very gratifying to know that the Friends have entered heartily into the spirit of it. This agreement on the essentials of Christianity and hearty cooperation in active work gives great encouragement for the future. The sharp contrast between the bitterness of the church-members of one denomination toward those of other denominations in

the time of George Fox and the kindly spirit shown at this time, is evidence that Christianity is doing more for the world now than it did then.

"The total membership of Orthodox Friends in America at present is 93,204; in the world, 113,930. Notwithstanding there has been a slight decrease in membership during the last year, the Society seems to be on solid ground, with no serious dissensions likely to mar it."

WOMEN'S RIGHTS IN PROTESTANT CHURCHES OF EUROPE.

IT is evident that, in the various Protestant churches of Europe, the injunction for women to keep silent in the church is by no means a dead letter. Fräulein Paula Müller, in an address on the "Rights and Duties of Women in the Churches," delivered at the recent National German Social Congress, furnishes evidence of this fact. We condense as follows some of her statements:

The rights of women in the different Protestant state churches of Germany are few and far between, even fewer in the ecclesiastical than in the political field. Of the forty-eight Protestant state churches in the empire, there are only three, Hanover, Schleswig-Holstein, and Hesse-Kassel, that give to women the right to protest in the case of the election of a pastor. Even in these three churches she has no right to vote. In Bavaria and Würtemberg the law expressly denies her any right to protest. In all the other state churches, as also in the few independent churches, women have absolutely no rights in the churches except to participate in the services.

Christian women are beginning to feel the injustice of this legal status, because they are the most active in the work of the church. The only real exception to this denial of right is when a woman, as the owner of a large estate, has the right to select the pastor for the village church in which her dependants and workingmen worship. In the management of orphans' homes and other charitable institutions, it not infrequently occurs that there are women managers on the board, but nowhere in Germany have women anything like the rights they enjoy in the churches of America and Australia. In Norway and Sweden women have the right to vote in the selection of a pastor and in the selection of the church council. In the Free Church and the National Church of the Vaud Canton and in Geneva women have the franchise in the selection of a pastor. The same is true in Ireland and Scotland, and in the Presbyterian Church in England. Elsewhere in Europe their church rights amount practically to *nil*. In Germany at least there are as yet poor prospects that there will be any marked improvement in this respect in the near future.

Another speaker at the same convention, Fräulein Mellien, declared that the state has in principle already broken the rule that women shall keep silent in the church by the appointment of women as supervisors of women convicts.—*Translation made for* THE LITERARY DIGEST.

A "DECLARATION OF WAR" UPON "HIGHER CRITICISM."

ONE result of the radicalism taught by Delitzsch and others in Germany, who have denied that the books of the Old Testament contain any divine revelation, has been a renewed activity on the part of the conservatives. The most pronounced champion on the conservative side is doubtless Dr. Johannes Lepsius, a recognized scholar and vigorous combatant. In his own journal, the *Reich Christi* (No. 1), he publishes what he calls a "Declaration of War" against "the Hegel-Darwinian-Wellhausen" school. He says, in substance:

We are at the beginning of a new epoch in the life of the Church. The seventy-year war between mythology and theology in the domain of the Old Testament has seemingly ended in a complete defeat of the traditional views. The critical views practically control Protestant thought everywhere and have assumed international proportion. Not one university man in Germany holds to the Mosaic authorship of the Pentateuch, and all make concessions to the newer views.

And yet when a person coolly and deliberately looks at the so-called "certain results" of the critical investigation of the last century and a half, what are these "results"? Nothing else than the conclusion that most of the books of the Old Testament are literary frauds; that they do not correctly teach the historical development of the religion in Israel, and, to make matters worse, intentionally and purposely misrepresent this history, especially those books that have been "revised" in harmony with the spirit of the Deuteronomist. The whole Mosaic code, in its real essence, at any rate, is held to be a later fabrication, and its claim to have been given in the wilderness is regarded as an historical falsehood. Its whole historical background, it is asserted, is a fabrication, and the Law is but the outcome of a struggle between the advocates of the local cults and the hierarchical tendencies of the Jerusalem priesthood.

There is only one other religious book that, in its origin and development, can be compared with the Old Testament, as the critics regard it, and that is the Book of Mormon. A mere glance at this parallel must convince the earnest Christian that he can have no share in the radical criticism of the times. The strongest argument against the hypothesis is to state it in its simple and naked truthfulness.

The *Deutsch-Amerikanische Zeitschrift* greets this declaration by Dr. Lepsius with enthusiasm, and declares that he will prove himself a worthy antagonist. Dr. Lepsius has begun the publication of a series of investigations in the *Reich Christi*, in which he purposes to demonstrate that the reconstruction of the religious history of Israel by the modern hypothesis is substantially based upon a begging of the question in two directions, namely: (1) That the methods and results of the investigations of the sources of the Pentateuch are unassailable; and (2) that the archeological data in reference to the historical books of the Old Testament have been sufficiently investigated and have been correctly interpreted. Both claims, which are essential to the newer criticism, are false, he holds, and a reinvestigation from the very beginning is necessary. If this is done, the radical views can not stand.—*Translations made for* THE LITERARY DIGEST.

RELIGIOUS NOTES.

WE made a mistake according to Friar Paul, S.A., who writes to us from Graymore, Garrison, N. Y., in naming the Rev. Spencer Jones, M.A., author of "England and the Holy See," as the editor of *The Lamp*, organ of the Society of the Atonement. He contributes to *The Lamp*, but Friar Paul is the editor.

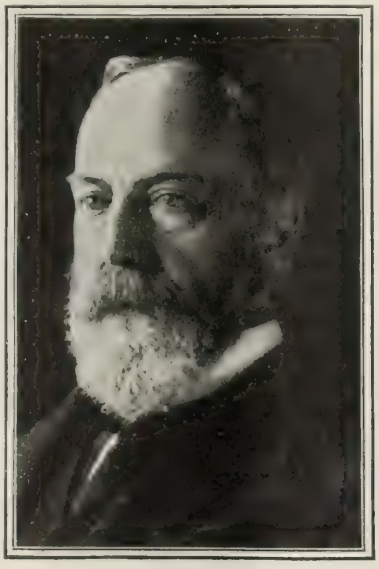
"EVERYWHERE and by everybody," says the New York *Times*, "the Devil is regarded as a comic personage, save only by persons of austere Puritan temper, who, never having had any fun themselves, are incapable of thinking the Devil funny. Millions of good men who, when they stop to think about it, know and feel that the Devil ought to be abhorred, have really given up trying to abhor him because they realize the absolute impossibility of doing him the awful justice which his immeasurable wickedness demands. He has been painted so black that he quite transcends human powers of abhorrence. So for some centuries there has been a reaction in his favor—not, to be sure, in favor of sin and wickedness, the things he stands for, but in favor of the image in which he appears to us."

THE publication in our columns (May 30) of an article from *The Independent*, by Paul E. More, on Emerson's responsibility for Christian Science philosophy, has elicited from Mrs. Eddy a personal statement which appears in the Boston *Journal* (June 8). Mr. More spoke of Mrs. Eddy as an "ignorant woman." Apparently to refute this, Mrs. Eddy writes: "I was early the pupil of Miss Sarah J. Bodwell, the principal of Sanbornton Academy of New Hampshire, and finished my course of studies under Prof. Dyer H. Sanborn, author of Sanborn's Grammar. Among my early studies were Comstock's Natural Philosophy, Chemistry, Blair's Rhetoric, Whateley's Logic, Watt's 'On the Mind and Moral Science.' At sixteen years of age I began writing for leading newspapers, and for many years wrote for the best magazines in the South and North. I have lectured in large and crowded halls in New York City, Chicago, Boston, Portland, and at Waterville College, and have been invited to lecture in London and Edinburgh. . . . I am the author of the Christian Science text-book, 'Science and Health' with Key to the Scriptures'; the demand for this book increases, and the book is already in its two hundred and seventy-fourth edition of one thousand copies each. I am rated in *The National Magazine* (1903) as standing the eighth in a list of twenty-two of the foremost living authors." She also quotes Judge S. J. Hanna, a Christian Science editor and lecturer, as follows: "Mrs. Eddy is from every point of view, a woman of sound education and liberal culture."

FOREIGN TOPICS.

MR. CHAMBERLAIN AND BRITISH OPINION.

MR. CHAMBERLAIN has asserted that were Cobden alive he would be an advocate of the preferential tariff idea. But such an event, according to the retort of Sir Charles Dilke in the House of Commons, would merely prove that, having lived to an advanced age, Cobden was suffering from softening of the brain. To this view of the case the British press, with a notable exception here and there, tends to rally. As topics of editorial comment, Ireland and the land bill, London and the education bill, the Established Church and the clergy discipline bill have, for the time being, been swept completely off the political stage. In their stead we have what are termed "Mr. Chamberlain's proposals"; but the English newspapers are not agreed as to the exact nature of these proposals. Mr. Chamberlain himself refrains from being explicit. "Somebody asked for a plan," he said in the course of one of the recent debates in the House of Commons. "If by a plan he means a detailed scheme of some new tariff or some new fiscal arrangement or reciprocity treaty, nothing of the kind can be produced at the present moment; and that is not the question I have raised. . . . I am bound to consider the possibility at any rate that the views of the nation may be in favor of some such change as is the subject of this discussion. Now in that event, when we have got the mandate—if we ever get it—then will be the time to produce the plan." At which, according to the parliamentary report, there was laughter.



SIR CHARLES DILKE.

His action in the House of Commons led to the Balfour-Chamberlain debate.

The Prime Minister has taken pains from the first to repeat that there is no lack of harmony between Mr. Chamberlain and himself. "I am certain," he said in the debate referred to, "—no, I am not certain that this scheme is practicable" (here there was an outburst of laughter) "—but I am certain that unless this scheme proves to be practicable, or unless some other scheme having the same results can be brought to fruition, and if the British empire is to remain as it is at present, a series of isolated economic units, it is vain for us to hope that this branch, at all events, of the great Anglo-Saxon race is destined to have the great and triumphant economic progress which undoubtedly lies before the United States of America." To this effect the Prime Minister expressed himself in every subsequent debate, even when almost every member of the ministry had repudiated all sympathy with Mr. Chamberlain. Whereupon the London *News*, the great Liberal daily, remarks:

"The best friends of Mr. Balfour will feel the profoundest compassion for him in the sorry figure which he cut in the House of Commons. . . . He is still nominally Prime Minister of this country. But his short reign is already, it would seem, near its eclipse. The shadow of a more powerful planet is falling across him, and Mr. Chamberlain is to add one more to his long list of betrayals. It is inconceivable that the present situation can continue long. . . . He deferred to Mr. Chamberlain in tones of whispering humbleness and apology, while that powerful electioneerer blustered and dictated for all the world as if he already wore the purple. It looks as if we were to see the tragedy of Richard II. repeated on the modern political stage. Mr. Chamberlain already speaks of a 'new mandate.' He tells us, with the air of the real king, that the Zollverein proposal has come to stay. He announces to the Opposition, with characteristic arrogance, that this is the question which they 'will have to discuss in the country.' They will be only too delighted. . . . During his visit to South Africa, Mr. Chamberlain seems to have imbibed every Protectionist fallacy. He throws at us the old consolation of a hypothetical rise in wages, ignoring the fact that Johannesburg at present is almost in a state of revolt against the high prices and low wages which have been the result of khaki in that part of the world. Really, it would have been less astonishing if a leading and respectable politician had suddenly run amok down Piccadilly."

The London *Times*, which has hailed the Chamberlain proposals from the first with enthusiasm, sees no discrepancy whatever in the respective positions of Mr. Balfour and Mr. Chamberlain. The idea "that there is a difference of opinion and conviction between Mr. Balfour and Mr. Chamberlain," it terms "the amiable theory of the Opposition," which has now been "totally demolished":

"In the next place, it is rendered perfectly clear that the particular sign for which the Opposition are hungering is not to be given them. Neither Mr. Balfour nor Mr. Chamberlain is going to produce a detailed fiscal scheme for them to tear in pieces. The Colonial Secretary showed very conclusively that nothing of the kind is so much as possible at this moment. There is an immense amount of work to be done before anything of that kind can be produced. Information has to be collected, principles have to be debated, the mind of the country has to be familiarized with the subject-matter, and the opinion of the country has to be crystallized upon the broad issues of the case. When all that is done, there will remain the work of negotiation with the colonies before anything in the nature of concrete proposals can be laid before Parliament. In the third place—and this is the most important point—it is made absolutely clear that a great question of principle is to be laid before the country without ambiguity and without reservation. . . . The question is not about the theoretical merits of free trade and protection, nor will its discussion be furthered in the smallest degree by the only process which some appear capable of applying—the vehement restatement of the formulas of an outworn controversy. On the contrary, the question is whether, in the actual conditions of the world, and in presence of economic reversal of the relative positions of this and other countries, this nation will be content to trust to the familiar incantations, or will carefully revise its arrangements in view of its actual needs and of the growing menace to its financial and political prosperity."

This brings out clearly the argument of the not very great number of papers supporting the Chamberlain idea. They insist that the question of free trade against protection is only incidentally involved, being swallowed up in the larger one of imperial unity. The London *Times*, whose support of the Chamberlain proposals is admitted to be powerful by the London *Spectator*, does not seem to anticipate insuperable difficulty in ultimately convincing the country of the practicability of such imperial conceptions. It makes no definite references to the rumor of a coming dissolution of Parliament, while intimating, nevertheless, that such a contingency enters into its calculations. *The Times* proceeds:

"It is said that we can not procure any means of dealing on equal terms with foreign Governments and trusts except by taxing foodstuffs. Mr. Chamberlain is not dismayed by this apparently conclusive deterrent. It is perfectly true, he cheerfully admits, and he is going to tell the workingmen that, if we are to hold the empire together, to keep the only neutral market left open to us, and to maintain any power of selling goods to the world at large, we must tax food. He is going to tell the workingmen with the utmost frankness just what the thing will cost

them in their weekly bills, and, on the other hand, what they will gain by it. He considers that there will be a heavy balance in their favor, and he believes that they are quite able to understand and very likely to approve the transaction. It is said, of course, that the democracy will never stand a tax on corn. But other democracies cheerfully pay taxes upon everything they eat and drink, generally twice over, once to the state and again to the local authority. Mr. Chamberlain does not prophesy, tho he holds that the prophecies of the other side are generally falsified by the event. Perhaps we had better all abstain from prophecy. The appeal is to Cæsar, and by the verdict we shall have to abide. One thing clear is that a very large issue is about to be placed before the constituencies of this country."

It is a noteworthy fact that nearly all the leading Conservative papers seem to take their cue from Mr. Balfour in commenting upon the Chamberlain proposals. They are not certain that the scheme will succeed, but they think some scheme is wanted.

"There are strong arguments for, as there are strong arguments against, the policy of tariffs and preferences," thinks *The Morning Post* (London). "It may be that we stand at the opening of a new economic era," says *The Standard* (London), an organ of the old-fashioned school of Conservatism, which has been doubtful from the first mention of the Chamberlain idea. "Before long," it continues, "the country may find itself involved in controversies which will make some of the political discussions of the past few years seem jejune and parochial." *The Yorkshire Post* says "the nation must count the cost fairly and squarely before entering upon the new policy." *The Saturday Review* (London) says the question is a hard one for a free-trader, but an imperialist "will have to make up his mind to give up either imperialism or free trade," because "he can not retain" both. The Conservative papers, as these extracts denote, are non-committal so far as regards Mr. Chamberlain. Nor is the Unionist press, upon which Mr. Chamberlain has special claims, much more outspoken, with the exception of the London *Times*. The Birmingham *Daily Post* says:

"They [the Chamberlain proposals] will, we believe, create a new dividing-line in political life, for the very indefiniteness of the policy foreshadowed will inevitably tend to confuse the issues. Already it has been proved that Lord Rosebery was right when he said that the country was threatened by a new classification of parties."

The Liberal papers for the most part profess to be bewildered by the indefiniteness of the Chamberlain scheme. "One thing only is definite in his proposals," asserts *The Daily Chronicle* (London), "namely, that the food of the people shall be heavily taxed." "The issue is certainly not less important to the country than when Mr. Gladstone launched his Home Rule scheme," thinks *The Westminster Gazette* (London), "and the dissentients may be expected to act with at least equal firmness." *The Daily Post* (Liverpool) thinks there is "no possible retreat" for the Colonial Secretary. "He must succeed, or end his great career with a colossal failure." *The Daily Independent* (Sheffield) says: "Great Britain and the empire must be saved from this ruinous scheme, and the Liberal party must save them." *The East Anglian Daily Times* pronounces Mr. Chamberlain's scheme "outrageous," and the Manchester *Guardian* declares:

"Some of the most effective trade advertisements are those which, with a fine robust air of openness, avow that the advertiser is not purely a lover of his kind, but just a business man who wants to make money out of you, but who asks you whether money can not be made out of you more to your advantage by him than by rival establishments. There is something of that note in Mr. Chamberlain's startlingly direct enumeration of the baits which he proposes to use. There is a fine obtrusive way of setting the net in sight of certain human birds which is not in vain at all, but often decidedly alluring; they are apt to think there must be something akin to benevolence in such a plain, blunt way of setting out to take you in."

THE FATE OF THE CANAL TREATY.

THE fate of the Panama canal treaty will soon be decided so far as the Congress of Colombia is concerned. There is, indeed, some discrepancy in the information upon which European organs base this idea of the subject, for we find the London *Times* stating that the Colombian Congress convenes this week in special session, while the Parisian press believes that the expedient of an extraordinary legislative meeting was abandoned. President Marroquin, we read, preferred to wait until next month, when Congress comes together in regular course, for he could not persuade himself that the majority favor the treaty to which he stands committed. Press despatches from Bogota have stated positively that the Congress convenes today.

Definite information, however, regarding the attitude of the executive branch of the republic of Colombia toward the interoceanic canal treaty is supposed to be afforded by a recent publication in the *Correo Nacional* (Bogota) over the signature of a statesman long honored with the confidence of President Marroquin. If we are to accept this authority, the canal concession to the United States is perfectly legal and binding as it stands. "The United States alone," we read, "is in a position to undertake the completion of the great work with any prospect of success." The statement that Colombia feels concern at the prospect of a diminution of her sovereignty in the Isthmus is scouted by the publication we are quoting. The sovereignty of Colombia is doubtful even now, it is added. "That sovereignty has never been absolute, since, by the treaty of 1846, the Americans may land troops whenever they deem it advisable." However, it is well, we are told, not to push this logic to extremes, out of deference to patriotic susceptibilities, "and because in a hundred years or in two hundred years, Colombia will perhaps have become a strong Power"; for which and for other reasons the South American authority thinks the United States should pay a little more than the sum agreed.

The European press was at first inclined to expect the failure of the treaty, owing to opposition when the Colombian Congress convened. Latterly, however, a less pessimistic view has been entertained, even the anti-American *Hamburger Nachrichten* deeming it inevitable that the United States must ultimately carry the day. The *Indépendance Belge* (Brussels) adheres still to the opinion that the coming session of the Colombian Congress may be marked by such irreconcilable opposition that the treaty will have to be postponed. It says further:

"Hostility to the Hay-Herrian treaty has lost nothing of its energy, and it is not easy to see how President Marroquin can secure a vote for the measure to which he is personally so favorable. Congress was to have been called in special session, but the idea was abandoned, it seems, because it was foreseen that a majority of the members would refuse to vote for the treaty with the United States. So the ordinary session of the Congress, which convenes in regular course on July 23 next, will be patiently awaited. In the mean time efforts will be made to win over a sufficient number of members to avoid complications. . . . We may reasonably conclude that the interoceanic canal, altho decided in principle, is not yet on the eve of realization, and that the advocates of the Nicaragua route, who are strongly supported by certain American financial interests, need not abandon hope, notwithstanding that their project is much less advantageous than the other. President Roosevelt, who has intervened personally to secure the adoption of the Panama route, will have to use all his influence to attain his end."

The statement of the Belgian paper regarding the date of the Congressional session is contradicted by *The South American Journal* (London), which states positively that the Colombian legislators have been summoned for the present week to decide finally upon "the ratification or rejection of the treaty," and this investors' organ adds:

"That it will meet with strong opposition is certain, and that it may even fail to receive ratification is not by any means im-

possible. Some object to it as wounding the territorial sovereignty of the republic, and others on the ground that the pecuniary compensations are not good enough. Whatever the result, there is talk of trouble in the country as a consequence—of a separatist revolution in the Department of Panama and occupation by the United States of the Isthmus. Again, it is said that President Marroquin, using the extraordinary powers conferred upon him during the revolution, and which still subsist, as well as the state of siege, will, in accord with his Cabinet, assume the responsibility of ratifying the Hay-Herrian treaty, just as he has taken that of prolonging the concession of the French Company from 1904 to 1910 without any intervention whatever on the part of the Congress. Such a proceeding would, no doubt, cause much disturbance throughout the republic, but the Government of the United States would probably have no hesitation in acting upon the President's authority, and, without further ceremony, protecting the rights so acquired."—*Translations made for* THE LITERARY DIGEST.

CHANG-CHIH-TUNG, YUAN-SHIH-KAI, AND PRINCE CHING.

YUAN-SHIH-KAI'S rapid rise to influence and high office at Peking surprised all who follow the political situation in China, with the exception of the very few whose sources of information are close to the Empress-Dowager and the Emperor. The rise of Yuan-Shih-Kai is suspected by *The Celestial Empire*, a British paper published in Shanghai, to be more or less connected with the decline of Chang-Chih-Tung's influence. Chang-Chih-Tung would be described in this country as "a statesman out of a job." He "is now being fooled with promises of an audience," we read in the Anglo-Chinese organ already quoted, while "his finances," according to the London *Times*, "have been recently exposed to severe criticism by Yuan-Shih-Kai." Nevertheless, Yuan-Shih-Kai has his political defeats, and the Empress-Dowager lately inflicted a public humiliation upon him by revoking the scheme of taxation which he had matured for the province of which he is viceroy. This is interpreted by the London *Times* as a setback indeed for this influential statesman, of whom it said editorially not long ago:

YUAN-SHIH-KAI,

One of the many rivals for the Empress-Dowager's favor.

CHANG CHIH TUNG.

In spite of his great age he leads the "reform" party.

"By the more enlightened and progressive of his own countrymen Yuan-Shih-Kai is regarded as the best hope of their cause. Chosen at the early age of thirty by the late Li Hung Chang to uphold, as Resident in Korea, the claims of China against those of Japan, when the court of Seoul was still regarded as a vassal court by the Peking Government, he showed the strength of his character by the vigor and resolution with which he carried out his instructions. He was not too old to learn the bitter lessons of the war to which his mission led. . . . He has had insight enough to see, and moral courage enough to recognize, that his country owes her disasters to the self-sufficient and intolerant ignorance which led her first to challenge Japan and then to defy Japan and all Europe together without in either case counting the cost. Like them, he has given the strongest of proofs that he is not blinded by the delusions which haunt the palace, the Manchu camp, and the examination-halls from which the ruling class of the oldest empire in the world emerge panoplied in vain and futile pedantry. During the anti-foreign movement he took the same wise and courageous course as they did. He stoutly refused to give the smallest countenance to the Boxers, in spite of the known wishes and even of the edicts of the court. He even anticipated their action, for in his then province of Shantung he made a clean sweep of the conspirators before the plot had fully matured in Peking. His conduct since he has taken up his new appointment in the metropolitan province of Chi-li has borne out his reputation. The foreign ministers express their satisfaction at his good faith and at the good faith shown by the court under his influence. The missionaries, who sometimes know more and see further than the diplomatists, are equally pleased. He transacts the business of his office with the punctuality and directness that belong to a strong man. He has restored order and tranquillity to the distracted capital. His foreign-drilled soldiers observe excellent discipline. The streets of Peking are crowded and busy, and foreigners can move through them without fear of molestation or of insult."

PRINCE CHING,

Raised to high office, it is said, because of his timidity.

Chang-Chih-Tung, represented sometimes as the friend and sometimes as the foe of the eminent Yuan-Shih-Kai, receives the highest praise from the Paris *Temps*. He prevented a general massacre of Europeans in the interior of China at the time of the Boxer outbreaks. He is a Manchu, a thinker, a man of letters, with a sharp wit. That he is a poet is shown conclusively by the English version of his ode to the Emperor of China, which appeared recently in *East of Asia*, an able Shanghai magazine. "So unswerving is his diligence," asserts Chang-Chih-Tung of the Emperor in the ode we have alluded to, "that he sleeps in his clothes," and from the foreigner the poet-statesman says his country derives great profit. "With equally kind and cordial hospitality we meet all aliens; may they live upon the borders of our sea, or on our distant mountains!" But the Empress-Dowager is thought to dislike Chang-Chih-Tung, either on account of the tone of his poetry or because he is a friend of the progressive party in Japan. To the great disappointment of the English, she did not appoint him to the post of Grand Secretary, which corresponds roughly to that of a Minister of Foreign Affairs in Europe, when the illustrious Yung Lu died last April.

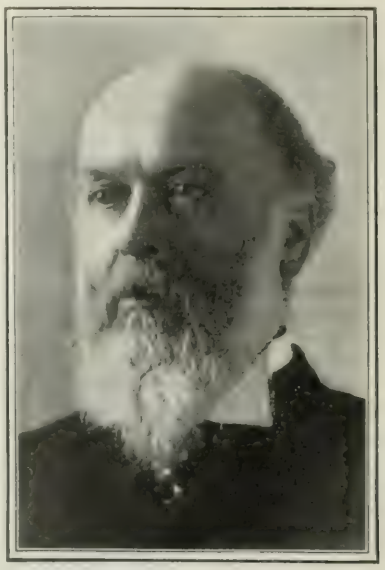
She appointed Prince Ching, whose name came into prominence during the recent Manchurian flurry with Russia. Prince Ching is a descendant of a former Emperor, and if we may accept the estimate of the *Giornale d'Italia* (Rome) he is a mere figurehead, a puppet in the hands of the Empress-Dowager, whose only positive trait is a tendency to deception. He has also cunning and much cowardice. As hatred of the foreigner is a passport to the favor of the Empress-Dowager, it is surmised by the *Figaro* (Paris) that Prince Ching is no friend to Europeans. According to this and other Paris papers there is much alarm in the royal palace at Peking regarding the health of the aged woman who rules China in fact, if not in name. The Emperor is a friend of reform; he is taking measures to outwit the Empress Dowager, who wants his deposition, and if the situation does not clear there will soon be exciting news involving the Empress Dowager, the Emperor, Chang-Chih-Tung, Yuan-Shih-Kai, and Prince Ching. The Powers can not very well interfere, it is conjectured by our French authorities. The *Journal des Débats* (Paris) actually insinuates that they may look on in the guise of spectators should any dynastic feud break out in the palace. It observes:

"In order to understand the situation clearly and to avoid going from one mistake to another, it must never be lost sight of . . . that the intention of the Powers was not to revivify this worn-out empire, to draw it out of its lethargy, to start it on the path of modern civilization, or to place it in the category of honestly and wisely governed states. Such an undertaking would have been almost indiscreet, for the Chinese ought to understand better than the people of the West or than even the Japanese what mode of government is best suited to themselves. . . . We are told that Prince Ching, the new Grand Secretary, a weak and devious character, will be the Empress-Dowager's puppet, and that she herself will be the real ruler. It is said also that this woman, regarding whose character there has been general agreement for a long time, continues hostile to all reforms, and that she has shown her hostility anew by abrogating the fiscal measures of Yuan-Shih-Kai. We are told that the officials continue their exactions, upon pretext of getting money with which to pay the indemnity to the Powers. The immorality prevalent at Peking since the return of the court to that capital is also denounced. In other words, nothing in China has changed since the insurrection of the Boxers. If all this be true, it is deplorable, but there is no reason to be surprised at it. The Powers have confined themselves strictly to obtaining redress for their own several grievances."

This attitude they will maintain so long as public order continues, says the pro-Russian organ of the French capital. As regards Manchuria, the Paris papers say that the Chinese masses know little about that question and would scarcely understand it even if they were supplied with the facts.—*Translations made for* THE LITERARY DIGEST.

INVESTIGATION OF ALLEGED KONGO HORRORS.

GREAT BRITAIN is about to invite the attention of the Powers to the so-called horrors of the Kongo Independent State, and, according to Mr. Balfour, a full and unprejudiced investigation will be made of what Sir Charles Dilke calls "a complete enslavement of the whole population," aggravated by monopoly and militarism. Sir Charles Dilke told the House of Commons lately that "the Kongo State had been spending money like water within the last few weeks in publishing denials" and in distributing "lying books." Sir John Gorst said he understood that President Roosevelt "had already taken steps to protest against the condition of affairs in Kongoland," altho the United States is not a party to the Berlin act by which the huge African domain is handed over to Leopold, King of the Belgians. In reply to allegations of this sort, the *Indépendance Belge* (Brussels) says "there is an international intrigue against the Kongo State." W. T. Stead, writing in the London *Daily News*, declares that the entire Belgian press has been "gagged," and that we are not to accept its judgment upon conditions in "that modern hell known as the Kongo Free State." The Paris *Temps* says:



SIR JOHN GORST,
Who inspired the Congo investigation.

"The Kongo Free State is accused of having duped the civilized world. A host of reports emanating from missionaries, traders, and officers openly accuse the Government of resorting to forced labor, of employing cannibals as troops, of hurling them in raids upon the peaceful population, of practising violence and cruelty in the collection of the excessive taxes levied upon the unfortunate savages. Horrible stories have dealt with nameless atrocities, with demoniacal acts perpetrated against the natives. Thousands of fugitives have abandoned the villages, seeking refuge in the forests or with the missionaries. In a single enclosure, according to an eye-witness, there were on one occasion as many as eighty amputated hands, sanguinary evidence of the activity of the tax collector. Such is the bill of indictment brought against the Kongo Independent State and its sovereign. . . . It is right to wait for the defense. Every accused, and particularly every accused state, is entitled to plead in its own case."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

EGYPT.—"A French politician the other day muttered something in his beard about the evacuation of Egypt," remarks *Blackwood's* (Edinburgh). "He ought to be told, and his countrymen ought to learn—if Fashoda has not taught them, as we believe it has—that even if Mr. Morley and Sir Henry Campbell-Bannerman were to contemplate so retrograde a policy, the whole empire would rise against them. Evacuation is impossible, and even Mr. Morley must now recognize this fact. Mr. Gladstone left many bad legacies. In Egypt he prevented a logical arrangement; and until we frankly assume the protectorate of that country, our position there will be anomalous, tho in no way insecure."

ALGERIAN COMPLICATIONS.—On the eve of the French President's trip to Algeria, the resignation of the governor-general of that province came like a theatrical sensation, says the *Illustration* (Paris). Governor-General Revoil, it continues, came to Paris to discuss Algerian interests before the Chamber of Deputies. He was preparing to return to his post and was twice refused an audience by the Premier. He did not think this an indication of confidence in himself, and resigned. The Premier, continues our authority, thought the governor-general was partly responsible for the charge in the *Petit Dauphinois* to the effect that the Premier's son had asked a million francs from one of the religious orders for the use of his political influence in its favor. As yet, concludes the Paris paper, the connection of ideas here is not evident to the public.

M. DE WITTE'S BOMB.—"On the declaration of the Anglo-Japanese alliance 'so runs the yarn' according to *The Kobe Herald*, an Anglo-Japanese organ, "the Russian generals were mad for war, and their only misgiving was lest M. de Witte should impose his usual veto. However, at the customary state council, presided over by the Czar, it was noted with satisfaction that the spoil-sport was absent. Indeed, he only put in an appearance after the Czar had been persuaded to adopt an aggressive policy against Great Britain. M. de Witte listened while it was all explained to him, and then, to the intense delight of everybody, he proceeded to praise the idea of the war in the most extravagant terms. His colleagues naturally inquired of him by what means he proposed to find the money, whereupon M. de Witte looked round him in pained surprise; 'Surely your Majesty does not expect *me* to raise the money?' he cried, laying especial emphasis on the word 'me.' 'The thing is impossible. The treasury is practically empty, and when I expressed approval of the war I never dreamt but that the generals who advised your Majesty so declare it had the money already in hand'—at which bombshell the council broke up in confusion."

NOTABLE BOOKS OF THE DAY.

A PROMISING FIRST NOVEL.

THE LEGATEE. By Alice Prescott Smith. Cloth, 5 x 7½ in., 324 pp. Price, $1.50. Houghton, Mifflin Company.

IN this her first book, Mrs. Smith proves herself mistress of the knack of story-telling. The workmanship is much above the average. Yet, after all is all told, one feels a vague sense of something wanting—a lack of that vital, human propulsion which compels some stories to write themselves out.

A young Southerner inherits through the death of his uncle a lumber-mill in a Wisconsin town, and with the mill he also comes in for the animosity felt by the people of that section toward the man departed. The animosity was largely political, the effect of the feud between North and South during the Civil War. Besides the Americans in the place, the mill hands were made up of French, Belgians, Scandinavians, and other foreigners, and among the latter flourishes a queer medley of Socialistic sentiment. Many complications arise, which culminate at last in a strike and in attempts upon the hero's life.

ALICE PRESCOTT SMITH.

The heroine is the youthful daughter of a local physician. Important parts are played by two other young girls, one Scandinavian, the other French. Many of the scenes are graphic and picturesque, and a climax of dramatic intensity is reached during the progress of a forest fire, which sweeps over all the region, destroying in its wake both property and people.

The dialog is always good, sometimes touching the brilliant. The hero and a picturesquely desperate Belgian—who could do credit to himself on any stage—succeed in rescuing many of the people. By means of this dramatic episode of the fire, all the cross-purposes of the story seem to be righted.

The narrative moves rapidly, the incidents are almost unflagging, the air of local color seems true, and the sincerity of aim unquestioned. Yet when all is done, one feels a sort of remoteness from the actualities of life—something of the unreality of a stage picture.

TWO STORIES OF THE CIVIL WAR.

BEFORE THE DAWN. By Joseph Altsheler. Cloth, 5¼ x 7⅞ in., 372 pp. Price, $1.50. Doubleday, Page & Co.

THE CAPTAIN. By Churchill Williams. Cloth 5¼ x 7¾ in., 439 pp. Price, $1.50. The Lothrop Publishing Company.

THESE two books, each dealing with phases of the Civil War, have been published almost simultaneously. In certain superficial traits, the two books are not unlike. Yet one, Mr. Altsheler's work, while it falls far short of being the great novel of the Civil War, is an excellent story, and the other falls only a little short of being a rather silly tale. In each, Grant plays an important part: in Mr. Altsheler's book, only as the victorious general, who by his victories affects the lives of the characters; in Mr. Williams's book, it is a domesticated Grant to whom we are introduced—Grant in his early and unsuccessful days before the war, and Grant on his way to being a great general. The author leaves him at the beginning of his great fame. It is very clear what the author has tried to do—that is, to give an intimate picture of Grant and to trace the various traits of character which ultimately made him one of the greatest of modern commanders, never permitting the picture of the hero to dim the picture of the man. Mr. Williams never in the course of his book calls Grant by name. He always speaks of him as "the Captain." He has resorted to many similar tricks to make Grant appear close to the other characters in the story and close to the reader. The author evidently studied his subject well and made a part for Grant which was more truth than legend. The only trouble with the book is that Mr. Williams was not quite a big enough man to write it. His sympathetic touch is apt to become a sentimental one at the least provocation. There is no doubt that he went at his subject with a sincerity almost reverent; nevertheless, "the Captain" is a poor story. One might easily make two stories out of it, so separate is the love interest, to which much space is devoted, and the chapters relating to the Captain himself. It reads as tho the author had first written his character-study of Grant, and some one had said to him: "My boy, books without love interest don't sell," whereupon the author wrote a number of chapters full of "love interest," in which three couples are neatly paired off.

JOSEPH ALTSHELER.

CHURCHILL WILLIAMS.

In Mr. Altsheler's book there is also much love-making that could be spared and the book be benefited thereby. When an author succeeds in arousing one's interest in anything so serious as our Civil War, a reader has scant patience with the needlessly prolonged misunderstandings of two silly young people whom we are sure will in the end marry and be happy ever afterward. Otherwise it is a stirring war-tale written with force out of a full knowledge of historical facts, and, one would judge, from a personal acquaintance with the country in which the action takes place. The story deals with the fall of Richmond and the Wilderness battles—a period which has been singularly neglected by the many novelists of the Civil War.

MARRED IN THE MAKING.

DARREL OF THE BLESSED ISLES. By Irving Bacheller. Cloth, 5¼ x 7½ in., 410 pp. Price, $1.50. Lothrop Publishing Company.

MR. BACHELLER is happier in the name of his latest novel than in his technique. The conception is a good one, rich in promise, but there is inadequate realization. "Darrel of the Blessed Isles" is a blend of the melodramatic and the ethically ideal, with the flavor throughout of that "North Country" out of which he has already gathered a golden harvest. You feel the artisan putting together material selected for effect rather than for wear. It is a "made" story, or, at least, has savor of the bibliofactory, altho Mr. Bacheller, in a preface, more than insinuates that there was an actual prototype of Darrel the tinker, and further declares, in a prelude, that the tale, in its nucleus at least, awaits the visitor to the "North Country."

A collie escapes from a childless couple up there in the primeval hills, and, after a month's absence, comes bounding back over the snow with a small red sleigh in which is a four-year-old youngster, who said "Anah jouhan" and other things in the same strange tongue, which, later, the reader is informed is Syriac. The Allens adopt him and a French farm-hand of theirs called the foundling Trove, a presumable corruption of *trouve;* and he grows up into an exemplary young man of mechanical virtue.

IRVING BACHELLER.

Altho such a good young man must needs be the hero, Darrel the tinker, bizarre absentee landlord of the "Blessed Isles," which he visits only in the spirit, is the dominating figure. His speech is whimsically rhetorical, he is eloquent in maxims of rectitude, and he knows the Bard of Avon by heart. Trove is a boy of fifteen when the tinker comes his way with a mare and a filly, an Arab barb, a rather strange outfit for a mender of clocks in the North Country! Trove is a "cute" youngster, for when Darrel tries to stick him with a riddle and asks: "How is it that the clock can keep a sober face?" he instantly replies: "It has no ears." He also goes fourteen miles, to Hillsborough, the next day and buys "The Works of Shakespeare," being no longer able to do without them after learning that the crisp, rhythmical remarks of Darrel are quotations from that bard.

Trove goes to school at Hillsborough soon after and runs across the tinker there. That worthy's small room, with many clocks ticking away the flight of time, becomes the boy's real academy and Darrel its Plato, tho his method is Socratic. Trove confides to him his desire to write tales, which gives Darrel just the opening for a stunning one about a banker who stole one hundred thousand dollars in order to ransom his kidnaped boy and forever after is a very repentant and unhappy thief.

Then Darrel tells the boy of the Blessed Isles. "Imagine the infinite sea of Time which is behind us. . . . Thou shalt see rising out of it the

Blessed Isles of the Imagination." There are a score of well-worn books of choice poetry on the tinker's shelves, and he reads from them to the boy in order to supply him with a passport to these same isles.

With a scheme like this, the author should keep it well in hand, tooling it briskly and with a firm grasp on the reins to its goal. But Mr. Bacheller's penchant for realism draws him away from the development of his romance, and he repeatedly dwells on things quite by-the-by, to the reader's no small annoyance. One is also confused as well as bored by the ever-emergent new countryman who has very little to do with the plot, but furnishes excuse for a "story." Everybody gets into trouble, and the tangled skein is not deftly straightened out, but is plucked at in rather a desultory and rambling fashion. After telling the story himself, Mr. Bacheller, without any special rime or reason, introduces an aged old man, in the last chapter, who gives the *denouement* to some unknown auditor. In a word, there is a lack of literary form in "Darrel of the Blessed Isles" as a whole, and the tinker himself is so laboriously *factus ad unguem* that he reeks of his creation. There is no real grip to the story anywhere.

JOYLESS IRELAND.

THE UNTILLED FIELD. By George Moore. Cloth, 5¼ x 7¼ in., 381 pp. Price, $1.50. J. B. Lippincott Company.

GEORGE MOORE is not, as many of his readers claim, "the greatest of living creators of fiction"; but he may with justice be called the greatest destroyer of fiction, for at one blow he has smitten into unrecognizable fragments an image of a nation which has been hallowed by time and tradition and fondly cherished even by those who had most reason to know that it was a sham.

Romantic Ireland, as shown upon the stage, is no more. Gone are the lovers strolling among beautiful old ruins by moonlight. In fact, after reading Mr. Moore's melancholy book, one wonders if the moon ever fulls in Ireland. Everything else, certainly, is on the wane.

Rollicking Ireland is no more. The lads of spirit and gaiety, the Con the Shaughrans and Handy Andys, have emigrated long ago—to the blessed isles of Avalon it must be, for the gossoons who land at Ellis Island do not answer to their marks of identification. And Kathleen Mavourneen and Nora Machree have swelled the maiden tribute, the twenty thousand virgins which, to use the rhetoric of Ned Carmady, Moore's type of the anti-clerical Irishman, Erin has immolated upon the altar of that monster which menaces not only the joy of the nation, but its very life—the church.

For, tho he is careful not to indorse the view editorially, the cause of Ireland's miseries which Mr. Moore expresses through the mouths of his characters with most cogency and fervor is not so much an economic as it is a psychical one—the Christian priests have killed the pagan joy of life which is Ireland's right by ancient inheritance. With the ascetic view of love, they have frowned upon the natural mating of the sexes through lovers' strolls and merry-makings. They have arranged marriages of convenience, and charged exorbitant fees for consummating them. They have discountenanced the natural and universal taste for little luxuries, and more or less costly pleasures, that contributions might be augmented toward the building of never-completed churches. The effect of this program Mr. Moore endeavors to show in its various phases through thirteen stories. The first and the last, "In the Clay" and "The Way Back," deal with the expulsion of art from Ireland as a natural, tho not designed, consequence of priestly asceticism. A young sculptor is given an order to make a statue for a church. He takes a young Irish girl as a model. Her little brothers, who intend to be priests, learning of it, break into his studio and destroy his work. The girl, who is a "pagan" by temperament, flees from her uncongenial environment to London, where good fortune alone saves her innocence from wreck on the coasts of Bohemia.

GEORGE MOORE.

"Some Parishioners" tells several tragedies of priest-made marriages, not the least of which is the spiritual agony of the conscience-stricken Father when he realizes the evil wrought by his meddling with nature.

In "The Wild Goose," the longest and strongest story of the collection, the situation of that "most distressful country" is set forth in all its phases. It is the tale of an adventurer, a wandering knight in the cause of the oppressed, who is stayed in Ireland by a woman who idealizes him as the destined redeemer of the country. She is an heiress and adds her fortune to his eloquence in the cause of restoring Ireland to its pristine glory. But her conception of this state is Catholic Ireland, and his goes back still farther, to pagan Erin. Their propaganda falls to the ground, their lives divide, and the husband leaves his wife and child with relief to fight unhampered for the cause of human freedom in the Transvaal.

"Home Sickness" is the tale of a returned emigrant, for whom life is so joyless in Ireland that he leaves his affianced sweetheart to return to the glad rush and gay company of the saloon.

"Julia Cahill's Curse" describes a desolate district upon which, the peasants believed, a ban had been placed by a coquette whom the priest, because she would not obey his command to marry, had hounded from the parish. All the young people who could imitated her example and, despite the efforts of the priest to detain them, left the country.

"'He has sent away Life,' I said to myself, 'and now they are following Life.'"

BEHIND THE SCENES.

A DAUGHTER OF THESPIS. By John D. Barry. Cloth, 5½ x 7½ in., 347 pp. Price, $1.50. L. C. Page Company.

THIS story sets forth the career of a young New England girl who, after training for a teacher, goes upon the stage, not from an innate propulsion toward that life, or toward art in general, but merely as a means of earning a livelihood. The story reads much like a transcript of the daily life of stage people, from the point of view of one who catches frequent, if scrappy, knowledge through having been admitted behind the scenes as observer or critic. There is scarcely anything like a plot. The interest is wholly sustained through the daily contact with other actors and through intimate conversations which air a great deal of "shop." But the conversations are bright and seem life-like, and will doubtless be read with interest by the large number of people who are fascinated more or less by whatever connects itself with the mimic life.

JOHN D. BARRY.

The tale is well told, after the leisurely and minute fashion of stories in which nothing in particular happens to disturb the reader's nerves. The diction is correct and smooth, but as a whole lacks virility. If this story has a message, it is to show that those born without dramatic fiber may through circumstance emit at times sparks of fire, but can never hope to retain more than mediocre place.

THE EXALTATION OF A "SHILLING-SHOCKER."

THE HOUSE ON THE HUDSON. By Frances Powell. Cloth, 5¼ x 7½ in., 416 pp. Price, $1.50. Charles Scribner's Sons.

THIS novel is a tremendously sensational one. The interest is absorbing. One gets early on the trail of the *denouement*, but when it comes there is an element of surprise in it.

The young woman in the story is her own biographer. Instead of a plain female who, later, is to exercise all the inebriating blandishments of Helen of Troy, the fair scribe sturdily dwells upon her ravishing charms. She had no bringing up to speak of, and her papa and mamma suffer dreadful reverses of fortune and launch the young Venus on a cruel world with the disagreeable need of making her own way. The book is extremely up-to-date in the athletic accomplishments of Athena Derohan (there is a name that *had* to be lived up to!); for her gay papa, with no prophetic foresight of how useful the lesson was to be, had trained his child to box like a professional! So when it is "up to her" to do the trick, she delivers a swinging blow and follows it up by a faultless *coup de grace*. That the gentleman survives and is afterward disposed of in a sinking yacht is probably only to leave the heroine without the stain of homicide on her young soul.

The character of the book is Madame Ferranti, the fascinating old lady in her dotage, who is extremely sensitive to thunder-storms, which make her see dogs and babble darkly of the final revelation of the mystery. She is a sort of blend of "the Honorable Mrs. Screwton" and "Miss Havisham." Philip is so fascinating and masterful and delightfully bad that you almost wish he could turn out noble. One is frankly more interested in him than in the nice young man who wins the lady in quite a casual way, and who, when he has the center of the stage, is like a poor relation at dinner.

The invention and atmosphere in the book are admirably sustained, and the style is one that takes its place with that of the late "Duchess" and Rhoda Broughton. Despite the feeling that it is "awfully sensational," the reader will shamelessly devour page after page. It is proof of the author's ability in the field she has chosen that, despite the feverish absorption her tale arouses, the incidents, for nearly the whole of the action, are restricted to a queer old house smothered in woods on the Hudson.

Frances Powell is clever, and she has written a briskly entertaining book with much imaginative force. But it is not the kind of one that takes root in a library and is known to successive generations.

BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

"The New Force."—W. I. Gordon. (Suggestive New Thought Publishing Company, Cleveland, $0.25.)

"A Gentleman of the South."—William Carrott Brown. (The Macmillan Company, $1.50.)

CURRENT POETRY.

After Love.

By ARTHUR SYMONS.

Oh, to part now, and, parting now,
Never to meet again;
To have done forever, I and thou,
With joy, and so with pain.

It is too hard, too hard to meet
If we must love no more;
Those other meetings were too sweet
That went before.

And I would have, now love is over,
An end to all, an end:
I can not, having been your lover,
Stoop to become your friend!

At Dusk.

By FLORENCE EARLE COATES.

Earth, mother dear, I turn, at last,
A homesick child, to thee!
The twilight glow is fading fast,
And soon I shall be free
To seek the dwelling, dim and vast,
Where thou awaitest me.

I am so weary, mother dear!—
Thy child, of dual race,
Who gazing past the star-beams clear,
Sought the Undying's face!
Now I but ask to know thee near,
To feel thy large embrace!

Tranquil to lie against thy breast—
Deep source of voiceless springs.
Where hearts are healed, and wounds are dressed,
And naught or sobs or sings:
Against thy breast to lie at rest—
A life that folds its wings.

Some time I may—for who can tell?—
Awake, no longer tired,
And see the fields of asphodel,
The dreamed-of, the desired,
And find the heights where He doth dwell,
To whom my heart aspired!

And then— But peace awaiteth me—
Thy peace: I feel it near.
The hush, the voiceless mystery,
The languor without fear!
Enfold me—close; I want but thee!—
But thee, Earth-mother dear!

—In June *Scribner's Magazine*.

The Mount of the Holy Cross, Colorado.

By ROBERT MACKAY.

Changeless as Horeb's ever-during rock,
Since Moses smote the water from its side;
Unaltered by the lashing of the tide
Of years, whose surges thy foundations mock;
Silent, serene, ringed round with massive towers,

View from our Property of Riverside Drive and Grant's Tomb, the Most Beautiful Section of New York City.

An Excellent Opportunity
For Those Seeking a Most Desirable Investment

High Class Real Estate in the vicinity of **Greater New York** is offered to conservative investors at an extremely low figure upon easy terms. A careful investigation of our proposition will commend it as an investment of safety and profit. **Our properties are at New York's threshold** 35 minutes from the great commercial and financial centers of the city.

GRANTWOOD-ON-HUDSON AND MORSEMERE

are directly opposite Grant's Tomb and Riverside Drive, the Geographical Center of Manhattan and but 15 minutes distant. Macadam streets, flag walks, curb, water, gas, unexcelled sewerage system. Beautiful parks completed and others in construction. Handsome schools and churches. $7000.00 new R. R. Station. Trolleys in operation and more contracted for.

65 new homes built in **GRANTWOOD** in the last 2 years and 22 at **MORSEMERE** within last 12 months. Lots similar to those sold in 1899 for $450.00 now selling at $950.00. Values have doubled and should double again in another 3 years.

Lots at MORSEMERE, $550 to $700. At GRANTWOOD, $700 to $2,000 (all lots 25 x 100); as desirable for residential purposes as those sold for same price in Harlem or Bronx (in the upper part of New York City) ten years ago, which now bring from $4,000 to $20,000 each.

EASY PAYMENTS: $15 down and $5 monthly, for lots under $700.

These properties have already proven their profit possibilities; but to demonstrate our faith in their future increase, we will guarantee that if the actual increased value within two years from your purchase is not equal to 15 per cent. per annum on your cash investment (as determined by the price at which we are selling similar lots at that time) we will refund the entire cash paid us, with interest at 6 per cent.

If interested we will give you a **FREE TRIP TO NEW YORK** paying your railroad fare both ways for the purpose of having you inspect our property. But don't delay. Reserve lots at once, and thereby secure them at present prices, as **all lots advance ten per cent. within a few weeks.** Write to-day for full particulars including testimonials from **buyers who have already sold at a profit,** photographic views, etc.

New York Bay at Dusk.

By MILDRED I. MCNEAL.

Now comes the grateful night in from the sea
And all her flowery purples soon unfolds,
Like April-countries, violet-sown, where we
May have the hush the eager time withholds,
Methinks heaven sometimes takes the world aside
And lends a happy ear to all it says—
Soothing its great unrest, and for its pride
Showing again the simple fields of praise.
This starry-lighted island is no more
The quick and restless city of my task:
It dreams with me and what may be in store
For either, we do neither know nor ask,
Leaving the dear fulfilment of our youth
In the safe care of thought and time and truth.

—In June *New Metropolitan Magazine*.

PERSONALS.

Dumas in Conversation.—Dumas the Elder was celebrated for his never-failing wealth of repartee in every-day conversation. To illustrate this, *Collier's Weekly* tells this story:

One evening Dumas was at a theater in Paris with a literary colleague, witnessing a play written by the latter. The author of "Monte Cristo" noticed that one of the audience in the parquet had gone to sleep during the performance. He

Write to DR. A. JUDSON BENEDICT, Medical Director, for information and pamphlet. *Box 240.*

The "Nordrach" Phoenicia, Ulster Co., New York

A CUSTOMER of mine recently gave a cigar to a friend—not an unusual circumstance, by the way, as men who smoke good cigars are very apt to impress their friends with the fact.

After lighting the cigar and smoking a little, the friend remarked: "Smith [and Smith wasn't his name], you smoke good cigars!"

"Think so?"

"Yes—I'll bet you a dollar I can name this cigar."

"Done."

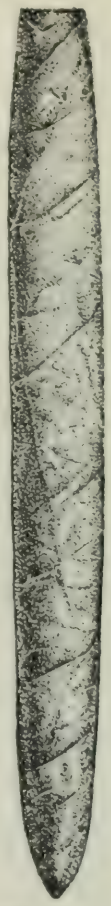
"It is a —— Panatella," naming a well-known brand of imported cigars.

"You've lost. This cigar is made in Philadelphia and it costs me five dollars per hundred."

"Will you order a hundred for me?"

"Yep."

And now the friend is my customer.



EXACT SIZE
EXACT SHAPE

My business is manufacturing cigars, and I sell the entire product of my factory direct to smokers by the hundred and thousand at wholesale prices. It costs me something to sell a man his first hundred—after that he orders of his own volition. Consequently the cost of selling is practically eliminated, and so are the wholesalers' and retailers' and travelingmen's profits and salaries. Of these profits I can and do give the major portion to my customers

My offer is this: I will, upon receipt of five dollars, send you by express, prepaid, one hundred Shivers's Panatellas "*on suspicion.*" Smoke ten of them; If you don't like the cigars, send back the remainder (I will pay return expressage) and your money will be returned at once and without question. Please state whether you prefer strong, medium or mild cigars. The publishers of this periodical will not insert offers of this sort from bogus concerns, and its appearance here is an evidence of good faith on my part.

Then again, think a moment what this means. I risk one-tenth of my cigars and expressage both ways for the mere chance of making a customer. Could I afford to take chances by sending out goods that would not stand this test? I don't know how to make a more convincing offer. However, if you smoke and will write me, I will send you some further facts. Address Herbert D. Shivers, 44 North Seventh Street, Philadelphia, Pa.

FUNK & WAGNALLS COMPANY, Pubs., New York

nudged his friend, pointed to the sleeper, and whispered: "That's the effect your plays have on people."

Soon after the same couple went to the same theater on an evening when a play by Dumas was being produced. Again there was a man asleep in the parquet. "Look," said Dumas's friend, "at the result of your dramatic works."

"Why, my dear fellow," was the reply, "that's the same man we saw asleep here the other night. He is not awake yet."

Depew Subsided. At a dinner given to a crowd of railroad men Senator Chauncey M. Depew was the star speaker. In the course of his remarks, says the New York *Times*, he told a story wherein a certain manufacturer, left practically alone in his factory through a lockout, was represented as pointing to the office clock over his desk and saying to his friend:

"There are only two hands in my office that never strike."

"Whereupon," said the Senator, "the clock struck two."

After the dinner one of Senator Depew's friends came up and congratulated him:

"Your speech was great," he said. "That story about the clock is a daisy."

The Senator beamed. "I think it is pretty good," he said modestly.

About five minutes later another friend came up who was not so eulogistic.

"Chauncey," he said, "I think that story about the clock better every time I hear it. I think to-night was the fiftieth time."

"Why, President Newell says that story is a daisy," expostulated Mr. Depew.

The other laughed. "You ought to study botany, Chauncey, and you would learn that a daisy is a hardy annual."

And thereupon the Senator subsided.

How Milburn Won His Spurs.—The death of William Henry Milburn, for many years famous as "The Blind Chaplain," recalls to *Everybody's Magazine* the incident that led to his first election as a chaplain of Congress in 1845. Says that magazine:

When Milburn was twenty-two, a very slight figure, his left eye entirely blind, his right eye having but one little transparent point not so big as the head of a pin, giving him but a glimmer of the outer world, he was traveling by Ohio River steamer from Cincinnati to Wheeling, W. Va. He was then entirely unknown to the world except to the little band of circuit riders among whom he had preaching in the backwoods for a year. To his great delight he found on the steamer a large number of Congressmen of both Houses, who were on their way to Washington for the opening of a session. Milburn expected great profit from their conversation, but was soon shocked at their profanity, their gambling, and their drunkenness.

The Ohio River was low, and fogs coming on, they were detained over Sunday. At breakfast a committee of passengers invited Milburn to preach, and he accepted. A congregation of three hundred persons assembled, the young preacher taking his place at the door between the ladies' and gentlemen's cabins; the Congressmen were seated immediately on his right and left. At the close of a brief sermon, to the astonishment of all, he bowed to the men before him and said: "I understand that you are members of the Congress of the United States, and as such you are, or should be, the representatives, not only of the political opinions, but also of the intellectual, moral, and religious condition of the people of this country. As I had rarely seen men of your class, I felt, on coming aboard this boat, a natural interest to hear your conversation and to observe your habits. If I am to judge the nation by you, I can come to no other conclusion than that it is com-

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

[illegible] swearers, card-players, and drunkards. Suppose there should be an intelligent foreigner on this boat, traveling through the country with the intent of forming a well-considered and unbiased opinion as to the practical working of our free institutions—seeing you and learning your position, what would be his conclusion? Inevitably, that our experiment is a failure, and our country is hastening to destruction."

The Congressmen were a plucky lot, and so admired the nerve and sincerity of the young preacher that they at once bestowed a purse upon him, and on arriving in Washington secured his election as chaplain. He held the position for fifty-eight years.

Three English Statesmen.—Mr. Justin McCarthy, in his book "British Political Portraits" (The Outlook Company), which has been recently published, pays considerable attention to the personalities of many of the most prominent workers in British public affairs. From his interesting accounts we glean the following concerning Mr. Balfour:

"Balfour is a man of many and varied tastes and pursuits. He is an advocate of athleticism, and is especially distinguished for his devotion to the game of golf. He attained at one time a certain reputation in London society, because of the interest he took in some peculiar phases of fanciful intellectual inventiveness. He was for a while a leading member, if not the actual inventor, of a certain order of psychical research whose members were described as 'The Souls.' . . . One sometimes came into social circles where Balfour was regarded chiefly as a man of literary tastes and somewhat eccentric intellectual developments. All this cast a peculiar reflection over his career as a politician and filled many observers with the idea that he was only playing at parliamentary life, and that his other occupations were the genuine realities with him. Even to this day there are some who persist in believing that Balfour, despite his prolonged and unvarying attention to his parliamentary duties, has never given his heart to the prosaic and practical work of administrative office and the business of maintaining his political party. Yet it has always had to be acknowledged that no man attended more carefully and more closely to such work when he had to do it, and that the most devoted worshiper of political success could not have been more regular and constant in his attention to the business of the House of Commons."

Very telling is the comparison Mr. McCarthy makes of Chamberlain and Balfour. He writes:

"For a long time there had been much speculation in these countries concerning the probable successor to Lord Salisbury, whenever Lord Salisbury should make up his mind to resign the position of prime minister. We all knew that that resignation was sure to come soon, altho very few of us had any idea that it was likely to come quite so soon. The general opinion was that the country would not be expected, for some time at least, to put up again with a Prime Minister in the House of Lords. If, therefore, the new Prime Minister had to be found in the House of Commons, there seemed to be only a choice between two men—Arthur Balfour and Joseph Chamberlain. It would be hard to find two men in the House of Commons more unlike each other in characteristic qualities and in training than these two. They are both endowed with remarkable capacity for political life and for parliamentary debate. . . . Balfour is an aristocrat of aristocrats; Chamberlain is essentially a man of the British middle class. . . . Balfour has gone through all the regular course of university education; Chamberlain was for a short time at University College School in London, a popular institution of modern origin which does most valuable educational work, but is not largely patronized by the classes who claim aristocratic positions. Balfour is a constant reader and student of many literatures [illegible]; 'Mr. Chamberlain,' [illegible]

UNABRIDGED REPRINTS OF MONAHAN'S "Truth about Elbert Hubbard," Oscar Wilde's "Reading Goal," Swift's "Proposal for Reducing Ireland's Population," Schopenhauer's celebrated "Essay on Women" (splendid translation), the sensational comparison "Schley, Dewey, Miles—and Roosevelt," the iconoclastic indictment "The Real Eugene Field," "Kipling is Dead" (a caustic criticism of Kipling's recent writings), and "The American Rejection of Poe" (one of the most interesting eulogies of Poe ever written). 20c each, or the eight for $1.60. Address Manager Goose-Quill Magazine, Chicago.

ing to a leading article in the London daily newspaper, 'to put it mildly, is not a bookworm.' Balfour loves open-air sports and is a votary of athleticism; Chamberlain never takes any exercise, even walking exercise, when he can possibly avoid the trouble. Balfour is an esthetic lover of all the arts; Chamberlain has never, so far as I know, given the slightest indication of interest in any artistic subject. Balfour is by nature a modest and retiring man; Chamberlain is always 'Pushful Joe.' Stamp and character of a successful and municipal politician are always evident in Chamberlain, while Balfour seems to be above all other things a university scholar and member of high society. I suppose it must have been a profound disappointment to Chamberlain that he was not offered the place of Prime Minister, but it would be hardly fair to expect that such a place would not be offered to the First Lord of the Treasury and Leader of the House of Commons, even if that First Lord did not happen to be a nephew of the retiring Prime Minister."

Varied has been the intellectual activity of Mr. John Morley, and it is with interest we read of the beginning of his political career. Mr. McCarthy gives an account of Morley's maiden speech in the House of Commons:

"What first impressed the House of Commons was the ready, quiet force of Morley's delivery. He had a fine, clear voice, he spoke without notes, and without any manifest evidence of preparation, every sentence expressed without effort the precise meaning which he wished to convey, and his style had an eloquence peculiarly its own. What most men expected of him was the philosophical discourse of a student and a thinker no longer in his fitting place, and what was least expected of him was just that which he delivered, a ready, telling, and powerful parliamentary speech. He had some unexpected difficulties to encounter, because he gave out his opinions so forcibly and so boldly that their utterance called forth frequent interruptions—an unusual event in the case of a maiden speech, which is generally regarded as a mere introductory ceremonial and is taken politely as a necessary matter of form. The House soon found, however, that John Morley's speech did not by any means belong to the ordinary category of maiden performances, and the very interruptions were therefore a positive tribute to the importance of the new member's argument. The interruptions were, in every sense, fortunate for Morley, because they enabled him at this very first opportunity to prove his ready capacity for debate. He replied on the spur of the moment to every interruption and every interjected question, and he showed all the composure, all the promptitude and the command, of a practical parliamentary debater. Every man in the House whose opinion was worth having at once recognized the fact that a new force had come up in parliamentary debate, and when John Morley resumed his seat, he must have known that he had accomplished a complete success."

PURE WATER AND GOOD HEALTH GO HAND IN HAND.

In everything pertaining to health the nearer we get to Nature and to Nature's ways the better we are. Perfect filtration is absolutely necessary to make water the true, wholesome solvent it is intended to be.

The National Filter

is patterned closely along natural lines and is based strictly upon Nature's methods. The finest quality of tripoli stone is the filtering medium used, and its construction and action are such as to positively remove every trace of bacterial and animal matter. Hence absolutely pure water is the result. The National Filter never needs taking apart for cleaning—there is no removal of the stone, and anybody can clean it thoroughly in three minutes.

Made in all sizes for the home, the office and large institutions. Installation is direct with the supply pipe and in no way interferes with water drawn direct from faucet. Write for illustrated booklet, "Pure Water in Nature's Own Way"—it's free.

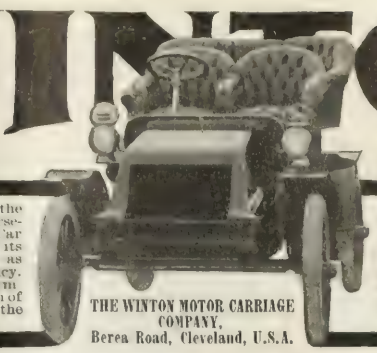
WINTON



It is safe to say that the possessor of a 20 horse-power Winton Touring Car is quite as proud of its handsome appearance as of its mechanical efficiency. The graceful lines, symmetry and correct finish of every little detail give the Winton that touch of grace, style and elegance so much sought after by the buyer of pleasure vehicles. You can realize the force of this by calling at any one of our branch or agency depots in all leading cities and examining a car. The price of the car completely equipped and ready to take the road is $2500.00.

THE WINTON MOTOR CARRIAGE COMPANY,
Berea Road, Cleveland, U.S.A.

I invite my pupils to ask questions, with the assurance that they will be clearly answered.

You Can't Fail
If There's Any "Go" in You

In a rut? Then get out of it. Learn advertising, the new profession; it's uncrowded; it pays well; competent men and women are in demand. The Helms course of ad-writing has been successfully taught by mail for the past two years. The graduates, without a single exception, endorse it. They're all quite willing to do this, because they're all in good positions, obtained and held because

They Know the Business

This course is not taught by "form letters." Every lesson is prepared and corrected by Mr. Helms himself, and is accompanied by a letter personally dictated to him. He has no assistants. Consequently, but two hundred pupils can be taught at one time. Only thirty more will be accepted now. If you're willing to give up about three hours a week, and to ask questions about whatever features of the work are not clearly understood, you may be one of the thirty, and you'll be equipped in four to six months. Only earnest men and women are wanted in this course. Their instructor will be no less conscientious in his work.

Interested? Write at once, for further details, to

Westbury, second honorable mention.

IT WOULD REQUIRE FORTY THOUSAND MEN
TO GATHER THE CROP

Of the Para Rubber Plantation Co. on its mammoth properties in Venezuela, which comprise the entire forest of "Heveas" located in that country.

TAPPING THE RUBBER TREE.

When one stops to consider that the work of 2,000 men will pay a dividend of 6 per cent. on the entire $5,000,000 capital stock of the company, it takes but a moment to figure the profits on the labor of 40,000 men.

This is the only rubber company in the world owning in fee its vast and valuable natural forests of virgin rubber trees, operating its Trading Posts and conducting its business on the same lines which made for the phenomenal financial success of the great Hudson's Bay Co., in the Northwest, the East and West India Company and the Astor fortunes. Supplying the laborers with all they eat, wear and use is another source of immense profit.

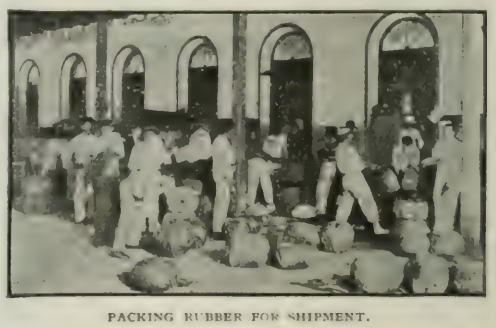
The personnel of the company includes names of men prominent in the largest rubber markets of the world, men of extensive and lifelong training and experience in the rubber industry and in finance, whose names are synonymous for stability, conservatism and integrity.

The stock of this company is all of one kind (common), sells for par $10.00 per share. There are no bonds. The company gives to the present and prospective stockholder no false idea of possible earnings, but rather underrates the possibilities, which at present are so vast as to be almost limitless.

It paid 6 per cent. to its stockholders in March, 1903, and will pay at least as much more in September. The stock, therefore, is without a peer as an investment, both sure and profitable.

Rubber is to-day the best-paying investment on the market, being a material absolutely essential to the world, the demand for which is growing faster than the supply. It yields an unusually large profit, bringing 90 cents per pound in New York or Antwerp as against a cost of 35 cents laid down.

The small balance of the treasury stock is now offered for public subscription for the purpose of further extending the great Trading Post System, and providing other facilities for the enlargement of the business.



PACKING RUBBER FOR SHIPMENT.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

VACATION NOTICE TO SUBSCRIBERS.

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice to us at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

PUBLISHERS' NOTE.

The Index of Vol. XXVI. of THE LITERARY DIGEST will be ready about July 15, and will be mailed free to subscribers who have previously made application. Other subscribers who wish to be supplied regularly with future indexes will please send request accordingly.

Publishers of THE LITERARY DIGEST.

TOPICS OF THE DAY.

NEW FEATURES OF THE POSTAL SCANDAL.

THE two most sensational developments in the postal scandal during last week were the dismissal of Superintendent Metcalf, of the Money Order Department, on a charge of favoritism in the awarding of government contracts, and the publication of Fourth Assistant Postmaster-General Bristow's report on the Tulloch charges (see THE LITERARY DIGEST, May 30), together with the reports of the inspectors on the investigations conducted in 1899 and 1900. These documents not only implicate First Assistant Perry S. Heath, and his former chief, ex-Postmaster-General Charles Emory Smith, but are even regarded by Postmaster-General Payne as damaging to the reputation of President McKinley himself. In his summary of the papers published, Mr. Payne is reported to have said:

"The charge of Mr. Tulloch is in its essence against President McKinley and Postmaster-General Smith. President McKinley is no longer living; Postmaster-General Smith, who carried out President McKinley's policy, has answered for himself."

The nature of the new revelations evokes scathing comment on all sides. The New York *Evening Post* (Ind.) says:

"General Bristow's report . . . proves the Tulloch charges up to the hilt. By the unimpeached evidence of government inspectors, by transcripts from the official records, it shows that systematic violations of the postal laws were practised at the direct orders of First Assistant Perry Heath and Postmaster-General Charles Emory Smith. It is mainly a story of petty thieving, infinitely base in conception, incredibly sordid in execution. Stealings of a few dollars here, illegal foisting of this and that name upon the payrolls for no services rendered, and the carrying of all kinds of suspicious favorites and impostors—the whole document reads like a brief abstract from the Newgate calendar or a fragment of a report on sneak thieves in the Bowery. But it is absolutely convincing, and is acknowledged even by the Postmaster-General to prove that Mr. Tulloch did not begin to tell all the disgusting truth."

And the New York *Times* (Ind. Dem.) comments:

"It is a surprise and a shock to the people to know that corruption has fastened upon the Post-Office Department and spread through the postal service until a condition exists which may without the least exaggeration be compared to that which existed twenty-two years ago, when the exposure of the Star Route thieves was begun. The conspiracy of plunder then unearthed was found to pervade the department. It struck its roots deep, and among the guilty were men high in place and power. These thieves were defiant and hard to conquer. Some of them survived the storm and held on in the Post-Office Department for years. Not one-tenth part of the number was ever punished. As the investigation of Postmaster-General Payne proceeds, he is very likely to discover new names, broader ramifications, and almost certainly here and there a stubborn and powerful resistance to his attempts to let in the light. The uncovering of Mr. Perry S. Heath as the center of this conspiracy points unmistakably to politics, Ohio politics, as the underlying motive of the irregular and corrupt doings. That means that high and mighty influences will be exerted to stop the investigation. If Mr. Payne does stop it or permit it to stop until the broad daylight illuminates every corner of the department, he will destroy himself and do an amount of damage to the Administration that next year may prove to be irreparable."

Postmaster-General Payne's reference to President McKinley is interpreted in some quarters as new evidence of his disposition to "hush up" the whole investigation, and as a hint that the lines of inquiry indicated by Mr. Tulloch should not be further followed, lest they reflect upon the late President. Mr. Payne's attitude, however, is characterized by the New York *Tribune* (Rep.) as one of "unnecessary solicitude"; and the Boston *Transcript* (Rep.) says:

"The words used by Mr. Payne may have been employed with no intention of throwing responsibility for irregularities upon the dead, who can not speak, but they convey to the general public the impression that that was the purpose of their employment.

"The utter lack of any force in these words as a defense of Mr. Payne becomes apparent when we consider that the 'policy' which Mr. Smith carried out as Postmaster-General under direction of President McKinley was to establish increasing usefulness of the department to the general public. The Bristow report on the Tulloch charges, now made public, is full of matter, mostly incidents of petty sharpness, of small evasions, of 'fixing' of payrolls so that some man drew salary as a laborer and 'expenses' as a mechanic. It would be nothing strange if Postmaster-General Smith knew nothing about these details of the pay of laborers, cleaners, and charwomen.

"It would be, on the other hand, very strange if President McKinley, in the midst of the consequences of the war with Spain, dealing with such tremendous questions as the assertion of our authority in the Philippines and the China crisis, could know that there were more charwomen than were needed employed in the Washington Post-Office; that somebody had obtained an irregular transfer, and somebody else paid $40 of the Government's money for a washstand. President McKinley had

THE POSTAL FRAUDS IN CARTOON.

to depend upon his Postmaster-General, and the latter upon his subordinates, just as President Roosevelt has depended upon Mr. Payne, and Mr. Payne upon his subordinates. Only a few weeks ago Mr. Payne expressed a high regard for Mr. Machen, who is now under arrest, and declared that Mr. Tulloch's charges, on which he now lays so much stress, were only 'hot air.' He, too, has been taught lessons as to the dangers and difficulties that attend a cabinet officer who, at the head of a great and complicated department, must depend from day to day more or less upon subordinates."

Papers of every political hue are already clamoring for the removal of the Postmaster-General. "The President would do well to let the Wisconsin politician go back to the environment whence he was taken," remarks the Springfield *Republican* (Ind.). The New York *Press* (Rep.) says:

"In view of the facts shown by the Bristow report, proving that the patronage of the Washington Post-Office and its revenues were used for the personal convenience of Hanna's man Heath and their parasites, and in view of the Postmaster-General's contemptuous reference to the frauds as 'glittering generalities' and 'hot air,' and his concealment of them in the face of a public demand for their exposure, the keeping of Mr. Payne at the head of the department is an impossibility. Without the incident of the Tulloch charges, which have been proved to the full satisfaction of the public by Mr. Bristow in spite of the Postmaster-General's intervention in behalf of the guilty men; there would have been little doubt that Mr. Payne was not the kind of official President Roosevelt could trust with the cleaning out of jobbery and graft in the department. . . . . But if anything was needed to show Mr. Payne's unwillingness as well as his constitutional incapacity to do the house-cleaning of the Post-Office Department, the papers on the Washington post-office frauds, which he hadin his desk when he said they contained nothing but 'hot air,' furnish a damning case against the man.

"Public confidence in the President's purpose to clean out the professional spoilsmen in the public service as well as the criminals who have plundered the Government under the protection of the officials 'higher up' is unabated. It will be increased as to the Post-Office Department when Postmaster-General Payne gets out. If he can not see that the logic of events demands the immediate offer of his resignation, President Roosevelt will have no course open to him but to compel him to resign."

Whose charges against the Post-office are now admitted to have been well founded.

AMERICAN VIEWS OF SERVIA'S FUTURE.

PUBLIC interest in the Servian *coup d'état* has been largely focused during recent days upon the attitude of the various European Powers toward the new Government. Great Britain's decision to withdraw its minister from Belgrade and to sever diplomatic relations for the present evokes commendatory comment in the American press, and is believed to have had considerable influence in determining the policy of France and Germany. Up to date King Peter has been formally recognized by the Czar, the Emperor of Austria, the King of Italy, and the Prince of Montenegro, but the communications from both Russia and Austria are coupled with grave reproofs. Says the New York *Tribune*:

"The British Government sets a good example in withdrawing its minister from Belgrade and declining to maintain ordinary relations with murderers. . . . . Considering the keen rivalry between Austria-Hungary and Russia in the Balkans, it was not to be expected that they would go so far. But even they have con-

demned the means through which the sovereign they are recognizing and congratulating has come to his throne.

"For the Russian Government has revised its first action in the matter. A few days ago the Czar sent to King Peter a note of greetings and good wishes, without a word or a hint of reprobation of the abominable crime by virtue of which Peter had become king. That message, with that omission, greatly surprised the world at large, and was in striking contrast to the message of the Austrian Emperor, which was no less cordial in its good wishes for Peter, but was, nevertheless, outspoken in its condemnation of the regicide. But the Czar's note gave great joy to the murderers at Belgrade, who cheerfully announced that bygones were bygones, and that all the world would have to follow Russia's lead in recognizing King Peter. Now, however, Russia thinks better of it, and issues one of the most vehement notes on record, offering an apologetic explanation of the former note, with its amazing omission, and almost demanding that King Peter shall rigorously punish the assassins of his predecessor.

"Leaving out of the question the motives of the Russian Government in pursuing this course, it is evident that this latest note confronts Servia, or rather King Peter, with a most embarrassing dilemma. If Peter is not to jeopard the favor of Russia he must 'mete out rigorous punishment to those traitorous criminals who have stained themselves with the infamy attaching to regicides.' Doubtless he ought to punish them, or ought to be able to do so. But how can he? Those 'traitorous criminals' have just received complete amnesty from the very body which elected him king. Their title to exemption from punishment is every whit as valid as his title to the throne. For him to deny the authority of the Servian Parliament would be to impeach his own standing as king."

"Every civilized Government on earth," says the Brooklyn *Standard Union*, "should refuse to recognize the blood-stained crown." And the Philadelphia *Public Ledger* declares:

"The Servian people are overwhelmed in a moral night so black, and the new king—whether or not he were an actual accomplice before the fact in the murder of his predecessor—now stands convicted of turpitude so base as to be without the pale of civilization. The action of the Skuptshina yesterday [in granting a general amnesty] made it impossible for any enlightened Government to recognize Peter without dishonoring itself.

"The United States Government should take the lead in disclaiming acquiescence in the Belgrade enormity. . . . Has the President or the Secretary of State no keener realization of the fact that the outraged conscience of humanity calls for official reprobation on the part of enlightened governments of an enormity which staggers belief, and, if allowed to pass unrebuked, will be an irreparable blow to civilization?"

AN APPROPRIATE UNIFORM FOR KING PETER.
—*The Brooklyn Eagle.*

BE SEATED, PETER.

PETER THE PRETENDER "They want an Independence Day, and it doesn't look much like a noiseless celebration."
—*The Minneapolis Journal.*

The Washington *Times*, however, thinks that this is "strange American doctrine." Whatever may be said of the atrocity of the crimes committed, they were "in their effect and intention purely political," it maintains, and as such "in no sense within the province of the United States to either condemn or redress." *The Times* continues:

"Disavowing, as we do, the doctrine of the divine right of kings, we have wisely refused to commit ourselves at any time to the theory that crimes like those committed at Belgrade deserve our political reprobation. Are we ready to pass retroactive resolutions 'disclaiming acquiescence' in the execution of Charles I. or of Louis XVI.? Are we ready to repudiate that treasured legend of our own Revolutionary days—'Sic semper tyrannis'?

"No, we have troubles enough of our own without going to hunt fresh fields for moral protest in the benighted Balkans."

All kinds of views are expressed in regard to the future of the new Servian Government. The Indianapolis *Sentinel* thinks that "if King Peter keeps his head, and the Servians show as much intelligence as he displays, his administration will probably be a very successful one"; and the New York *Commercial Advertiser* remarks: "The new king is admirably fitted to play a strictly constitutional rôle. . . . The fact that he has two sons would seem to assure the perpetuity of his line; and, so far as externals are concerned, Servia now possesses all that is needed for a régime more peaceful and more prosperous than any which she hitherto has known." In marked contrast with such opinions is that of the Springfield *Republican*, which says:

"The little tawdry 'prince,' who has spent most of his life in Swiss boarding-houses, now becomes a king—62 inches of him—and monarchical Europe will give him the grip and password. King Peter I. bows low and enters, the newest bargain-counter sample of royalty. As for us, give us Mr. Castro or any other South American dictator. Even Venezuela compares favorably with Europe's job-lot of Balkan kingdoms."

The Chicago *Evening Post* comments:

"The constitution just revived, it is said, makes Servia more democratic than ever, 'virtually a republic with a king at its head.' We fancy that the republics of the world are not congratulating themselves on this accession. Paper constitutions

are nothing where there is no real capacity for self-government and where murder, violence, plots, and counterplots are the regular methods of political 'reform' and settlement of dynastic conflicts. Eventually Austria or Russia will exercise sovereignty in the Balkan states, and the hope of the world is that the transition may be effected without a great European war. For the present, at any rate, the *status quo* is to be preserved. The king is assassinated; long live the king! Such is the way of the world—in Servia and elsewhere."

SIGNIFICANCE OF THE GERMAN SOCIALIST TRIUMPH.

THE large gains made by the Social-Democrats at the recent general election in Germany are very widely noted and commented upon in the American press. To the Baltimore *American* the success of the Social-Democrats appears as merely one phase of a spirit of "European unrest" which has manifested itself in England, Servia, Italy, and Spain; and the Brooklyn *Standard-Union* takes the view that the victories gained are but steps in the evolutionary progress of Germany toward "genuine constitutional government, ultimately leading to a veritable republic." The New York *Evening Post* says:

"Later figures only confirm the first reports of extraordinary Social-Democratic successes in Germany. So far from having gained only fifteen seats, they are admittedly in possession of twenty-five more than after the first balloting in 1898, and confidently maintain that their delegation in the Reichstag will number at least eighty. But their moral victory is far greater than appears from these figures. To have carried Saxony by 100,000 more votes than all other parties is an achievement which Liebknecht surely never dreamed to be at hand when he served his last term of imprisonment for *lèse-majesté* only four years ago. In the previous election, the Social-Democrats polled nearly 27.18 per cent. of the total vote of Germany. This year they are certain to have received about 3,000,000 votes, or considerably more than a third of all that were cast. The London *Times* correspondent puts it well when he interprets this result to mean that the empire 'is honeycombed with unappeasable discontent,' and this despite its great industrial progress of the last two decades. The pity of it is that the triumph of the Social-Democrats will mean no milder policy toward the party and no effort to reduce taxation and improve the condition of the masses. The losses of the Conservatives and the spectacular disappearance of the selfish Agrarian leaders will only sting the devotees of absolutism into strengthening the army for fear, not of France, but of Germany, and into insisting more vigorously than ever on high tariffs. But a radical wing of more than one hundred Liberals and Social-Democrats furnishes Von Bülow with a far more difficult parliamentary problem than he has yet had to face."

Attention is drawn to the fact that the Social-Democratic gains have largely been made at the expense of the Radical party, which occupies a position of "moderate constitutionalism." To the Radicals, declares the New York *Commercial Advertiser*, belong "some of the most enlightened men in Germany, among whom are numbered such men as Mommsen, Barth, and Richter"; and their losses seem to indicate that "the fundamental questions now underlying German politics must be settled either in favor of the autocratic principle or in favor of the uncompromising opponents of that principle." In this judgment the Springfield *Republican* concurs, observing that the Social-Democratic triumph "can hardly fail to be a staggering blow at the absolutism, militarism, and imperialism incarnated in the Kaiser." It continues:

"The result is a personal blow at the Kaiser by reason of his succession of tirades against the Social-Democrats during the past five years. Bebel, the Socialist leader in the Reichstag, in a remarkably caustic speech in answer to the Kaiser's attacks, said that every such utterance of the monarch was worth 100,000 votes to the Socialist candidates in the coming elections. And Bebel was evidently well within the truth. As a campaigner his majesty has not been a success. Note the result at Essen, where the immense Krupp steel-works are located. The town would have no existence but for the Krupp gun-factories, which in turn feed on German militarism. When Mr. Krupp died some months ago, the Kaiser embodied in a funeral eulogy of the dead gunmaker a furious assault upon the Socialists, who had severely attacked the Krupps as the leading embodiment of private capitalism in Germany. Special efforts were made to keep the Krupp workmen uncontaminated by the Socialist propaganda. Yet the election returns from Essen reveal an astonishing Socialist triumph, the increase of Socialist voting strength since the last election being from 4,400 to 22,705, or several hundred per cent. . . . . "

"The result of the general elections shows that republican

PRESIDENT ROOSEVELT AND THE CARTOONISTS.

rather than monarchical principles, that democratic rather than aristocratic principles, that anti-militarist rather than militarist principles, are gaining strength in Germany. Whether the pure collectivism of the Socialist theory has scored an advance in popular favor is the more open to doubt, because the Socialist party in recent years has grasped the opportunity of materializing the opposition to the autocracy of the monarch. The extreme collectivist program gave way, in the present elections, to a very moderate program, comprising such issues as these:

One vote for every man and woman; a holiday on election day; payment of members of Parliament.
Responsibility of the Government to Parliament; local self-government and the referendum.
Substitution of militia system for great standing army.
Freedom of speech and the press.
Legal equality of the sexes.
Disestablishment of the churches.
Free non-sectarian schools, with compulsory attendance.
Gratuitous legal proceedings.
Free medical attendance and burials.
Progressive income and inheritance taxes."

A somewhat similar view is expressed by the Philadelphia *Inquirer*, which thinks that the program of the Social-Democrats contains "nothing that is revolutionary and very little that has not already been realized in the United States." The American Socialist papers, however, protest against this tendency to regard the German Social-Democracy as a moderate "reform" party. Says the New York *Worker*:

"The Social-Democratic party of Germany is the revolutionary party it has ever been, teaching the same ideas and striving for the same ends advocated by the Socialist party or Social-Democratic party, as it is variously called, in the United States—that is, working for the overthrow of capitalism, the abolition of private property in the means of production, the elimination of profit, interest, and rent, the building up of the cooperative commonwealth.

"It is true that our German comrades make a special fight against militarism in its various brutal manifestations, against the colonial policy with its accompaniment of hideous cruelty and demoralization, against the 'hunger tariff,' in favor of laws for the immediate tho partial amelioration of the condition of the workers, and against the haughty pretensions of Kaiserism. So do we make use of immediate and partial issues in our campaigns, and legitimately. But we do not forget to make a Socialist campaign all the time, and no more—rather, much less—do our comrades in Germany.

"It is not the Kaiser alone, nor the aristocrats and army officers alone, that have reason to dread each election as it brings increased strength to the Social-Democratic party. Social-Democracy threatens the whole capitalist system, with all its agencies and adjunct abuses, and bids fair soon to sweep it away."

On June 25 a second election will be held in 169 constituencies in which candidates failed to receive a clear majority of the votes cast. The Social-Democrats are hardly likely to be as successful in this second balloting as in the first, for the reason that the other parties are expected to combine against them.

The Porto Rico Libel Laws.—Pennsylvania is not the only territory in revolt against what is deemed antiquated and arbitrary libel legislation. In Porto Rico, the newspapers are calling attention to the provisions of the new penal code which make it illegal to publish the portraits of living Porto Ricans, except with their written consent, and which, furthermore, forbid the printing of caricatures that "reflect in any manner upon the honor, integrity, manhood, virtue, reputation, or business or political motives of the person so caricatured, or which tend to expose the individual so caricatured to public hatred, ridicule, or contempt." In other words, as the Chicago *Record-Herald* remarks, "the cartoon as an agency for illuminating and interpreting the news of the day is absolutely barred." The same paper continues:

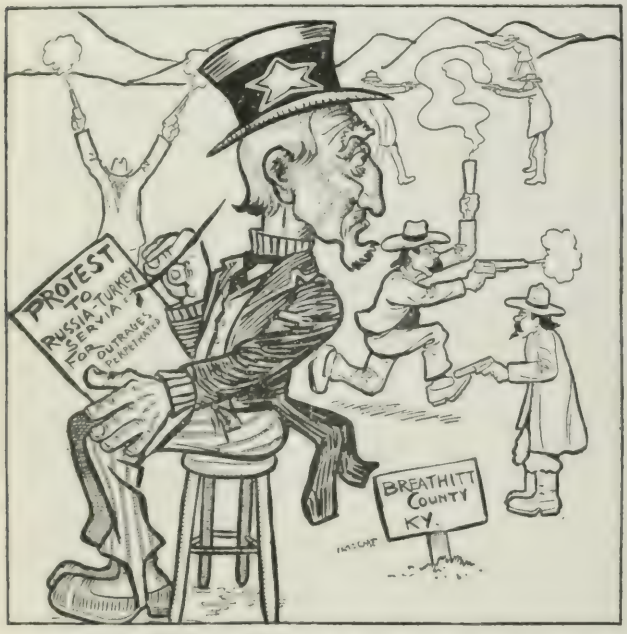
"Such a law seems out of place in any colony administered by a land of liberty. At its worst it would be a powerful instrument in the hands of a bad Government. At its best it will limit to some extent the means that Americans have for acquiring knowledge about the feelings and wishes of their dependent people.

"Our rule over colonies is still in the experimental stage. In the end judgment will be passed upon it, and action taken concerning it, not by any body of officeholders, however worthy, but by the people of the whole nation. It should be made a fundamental principle in dealing with the colonies to encourage freedom of expression under no limitations other than those that apply in our own land.

"The Porto Rico law approximates too closely to the Pennsylvania libel law, which is a burlesque that can never be enforced. The difference as regards the Porto Rico law is that it stands on the statute-books of an island in which it can and will be enforced. Congress has retained the power to annul the acts of the Porto Rico legislature, and this seems to be an excellent case in which to use it."

A "SYSTEM OF ASSASSINATION" IN KENTUCKY.

THE trial of Curtis Jett and Tom White, the alleged murderers of Attorney J. B. Marcum, of Jackson, Ky., which has been terminated for the time being by the failure of the jury to agree upon a verdict, has attracted national attention to a "reign of terror" existing in Breathitt county and other parts of Kentucky. It appears that for several years there has been bitter factional struggle in that State between the adherents of the Hargis and Cockrill families, and when Mr. Marcum was recently shot in the doorway of the Jackson court-house, the responsibility for the murder was laid at the doors of the former family. It is believed that Jett and White were hired to murder the attorney because he aided the political ambitions of a member of the Cockrill faction. Many are said to have witnessed the assassination, but only one man, B. J. Ewen, dared to denounce



UNCLE SAM'S BAD BOYS.

UNCLE SAM. "Here, here, you boys, keep quiet! How do you expect me to draft these protests?" —*The Louisville Post.*

the criminals. Friends of the Hargis faction offered him $5,000 if he would quit the country and fail to testify against Jett and White, but he refused, and his life was threatened. At the trial it became necessary for Governor Beckham to station troops in and about the court-house to prevent intimidation of the witnesses and the liberation of the accused, while Mr. Ewen had to be detained in camp, heavily guarded by soldiers. On June 14 the feudists set fire to Mr. Ewen's hotel and residence, which were situated near the camp, and his family and several boarders barely escaped with their lives. It is believed that the burning of Ewen's property was a plot to lure him away from the camp unguarded, and then assassinate him, but the commandant refused to allow him to leave until a detail of soldiers could accompany him. Mr. Ewen has lost all his possessions and the people of Kentucky are contributing to help him. This latest act of incendiarism, together with the murder of Mr. Marcum, helps to swell a total of fourteen cases of arson and five cases of assassination since the Hargis-Cockrill feud started less than three years ago.

"There is no feud in Breathitt," declares the Winchester (Ky.) *Sun Sentinel*, "but a regular system of assassination to get rid of people objectionable to a corrupt gang at present in control of affairs there." So, too, thinks the Louisville *Herald*. It says:

"The feud cry has been gotten up by the dominant gang to cover its own iniquity. Outsiders, when informed that the lawlessness in Breathitt is due to feuds, are likely to declare that one side is quite as guilty as the other, and that both must be wiped out to secure peace. But if Breathitt were rid of the one dominant murderous faction which has blackened its name there would be an end of trouble and of blood-letting. . . . . .

"Murders committed through feud hatreds are atrocious enough, but murders resulting from deliberate and systematic assassination are a hundredfold more abominable. The people of Kentucky will next November have an opportunity of declaring whether systematic murder is to be perpetuated in a section of the State whose people in overwhelming majority love order and believe in peace and justice."

Many of the papers hold Governor Beckham responsible for the existing conditions. They argue that he has over-exercised his right of pardoning, and that since he assumed office, three and a half years ago, he has pardoned a large number of criminals in Breathitt county, the majority of whom were convicted of murder or manslaughter. The papers disagree as to the number of pardons, because, it is declared, the governor has closed the pardon-book to the inspection of newspaper correspondents. The correspondent of the Louisville *Herald* has found that twenty-seven pardons were issued in Breathitt county alone, in the past three years. "He pardons the assassins to go back to Breathitt county," declares *The Herald*, "where, at this blessed moment, the armed power of the State is invoked and necessary to preserve peace and protect an investigation into other assassinations that have followed with such awful rapidity as to horrify and dishonor the State and the whole country." How long is this "reign of anarchy" to be permitted? asks the Louisville *Courier Journal*, and adds: Does not the governor "believe that it is time to demonstrate that the law, and not those who, charged with the local administration of the law, only use their positions for the encouragement and practise of lawlessness, shall be supreme?"

The Philadelphia *Public Ledger* observes:

"Tho the jury disagreed in the trial of Jett, accused of the heinous Breathitt-county assassination, it looks as if there would be a chance of eventually bringing the culprits to justice, even in barbarous Kentucky. The change of venue to another county and the postponement of the other trials to another term of court will give the State time to establish its evidence, to take better precautions for the protection of judge, jury, and witnesses, and to try the cases in a region where every participant in the case will not rest under the fear of a sudden and violent death. It must be plainly evident by this time that parts of Kentucky are in a state little short of barbarism, and that the conditions prevailing there are not one whit better than in Servia or other semi-civilized countries which we are in the habit of regarding with sovereign contempt and aversion."

Our Railroad Development.—The Interstate Commerce Commission's report of general railway statistics for the year ended June 30, 1902, has just been published, and shows that the steam railroad mileage of this country has passed the 200,000-mile limit, being in fact 202,471. The New York *Journal of Commerce* notes this great total, and goes on to summarize the other notable features of the report:

"The financial statistics are still more imposing, the aggregate capitalization amounting to $12,134,182,964, of which $6,109,981,669 consists of funded debt. Of the capital stock, $2,686,556,614, or 44.6 per cent. of the whole, still pays no dividends; but to no small extent this represents common shares, which in former times of construction and reorganization were issued to cover future earning capacity and distributed as a bonus to buyers of bonds. The railroads have not yet grown up to the capitalization put upon them, and vast and profitable as the transportation business has become, the earning capacity over nearly half the system is not equal to paying dividends upon stocks inflated years ago.

"The railroads give employment to more than a million per-

ons, the number for the last fiscal year being given as 1,180,315. These with their families constitute something like eight per cent. of the entire population of the country. The amount paid in salaries and wages for the year was $676,028,592, which was 60½ per cent. of the entire operating expenses. This indicates how important an element labor cost is in the business of transportation, and consequently in the charges for the service and the chances of income for the holders of securities. Nothing is more intimately connected with all the industries and business operations of the country, more dependent upon them or more capable of affecting them, than this vast network of 200,000 miles of railway."

OPIUM MONOPOLY IN THE PHILIPPINES.

FEW, if any, of our papers look with favor on the bill which is pending before the Philippine Commission, granting to the highest bidder a monopoly of the opium traffic in the islands. In fact, the bill has roused protests almost as vigorous as those that followed the forcing of the opium trade on China by Great Britain. Governor Taft and Secretary Root have approved the bill, but President Roosevelt is not yet committed to it, and he is earnestly called upon to veto the measure. The plan was devised by the Philippine Government in an effort to restrict smuggling in opium and to prevent its sale to and use by Filipinos and Americans. It forbids selling or giving opium for use "as a narcotic" to anybody save a full-blooded Chinaman. It permits Chinamen to smoke, eat, or otherwise use opium in their own houses, but makes it illegal to sell or give away quantities of the drug to other Chinamen or to Americans or Filipinos, or to allow Americans or Filipinos to use the drug in Chinese houses. Druggists, however, may import direct and sell to anybody on a physician's prescription. Heavy penalties are provided for violation of the law. The offenders shall be subject to a fine of $5,000 or imprisonment for three years, or both. It is estimated that the highest bid for the opium monopoly would be about $500,000, which would be devoted to Philippine educational purposes.

The Chicago *Evening Post* calls the plan "a grave mistake," and one "which the President should rectify as quickly as possible." And the Pittsburg *Post* denounces it in these terms:

"The pretext for this shocking scheme is that smuggling will be stopped, and Americans and other residents will be deprived of indulgence in the debauching and emaciating poppy. What kindergarten statecraft, what puerile notion this of preventing the noxious spread of the opium habit by confining its use to one addicted race! The moral agent relied upon to check the inclination of others to test the fantasies and sleep of the drug is the Chinaman, the slave of bribes from mandarins down, and the prince of elusive ways and connivance in criminal sneakiness. If the remainder of the inhabitants can be at all reformed, why can not methods be adopted to prevent the Chinese also from bodily and moral degradation?"

To enforce a measure forbidding the Chinese to give away or sell quantities of the drug, the New Orleans *Picayune* believes would require the "employment of a gigantic system of inspection for which the law makes no provision." It declares that the result will be that "all who want opium will get it." The Chicago *Chronicle* observes:

"It were deplorable to find the Government of the United States beginning its colonial policy where the British imperial Government is entreated to stop. The British opium monopoly is one of the foulest blots upon its Eastern career. After prolonged controversy, scientific and political, the conclusions unavoidable are that the poppy is, as a medieval poet called it, 'the flower of hell.' . . . . . .

"The moral degradation which the opium habit insures is the chief objection to its adoption by the Philippine Commission in the name of the people of the United States. Now it is little known in the islands away from the Chinese dens. If the Taft government sell the right to sell the drug and share in the profits, opium will acquire a dignity in the archipelago it has not hitherto enjoyed.

"A wiser course would be to check Chinese immigration, but the Chinese are in the islands by the hundred thousand. A heavy tax upon opium and prohibition of poppy culture would reflect more credit upon the Taft commission than encouragement of the drug by identifying its use with the sovereignty of the American flag."

The Evangelical Union of the Philippines and the Chinese Chamber of Commerce are also opposed to the plan. Wilbur F. Crafts, superintendent of the International Reform Bureau, which is vigorously opposing the monopoly scheme, declares, in a circular that he is sending to the press of the country:

"A curious situation surely that the Chinese Chamber of Commerce in an American colony must fight against such sophistries of American officials! The Evangelical Union asks that opium be entirely excluded from the islands. This is Japan's successful policy. Shall we fall short of it? If any persons in the Philippines will not stay without opium, their room is better than their company.

"As the President overruled the War Department in regard to the un-American certifying of prostitutes by American officers, so let the people ask him again to stand for American traditions in this case. We made a treaty not to send opium to Chinese in their own land. Shall we now promote its sale to Chinese and Americans in our new colonies?"

LETTERS AND ART.

ARE AMERICAN PROFESSORS "CAGED EMPLOYEES"?

IN a lecture delivered recently at the University of Chicago, Prof. Leopold Mabilleau, a French sociologist and director of the Musée Social of Paris, spoke with some bluntness in regard to the status of professors in American universities. He is reported to have said:

"If a professor is to do the highest grade of work and accomplish a maximum amount of good, he must be at liberty to think and speak as he pleases, even tho his thoughts and opinions may be contrary to those of trustees and founders. In America, unfortunately, this is not yet the case. In this country, educators are bound to respect certain interests, and failure in this respect on their part often results in enforced resignation. Numerous instances of this sad state of affairs have arisen in the past few years, and I have personal knowledge of several such cases. Professors in American universities are like caged employees. They may not speak, they may scarcely even think, as they please. They must respect the opinions and interests of the trustees who employ them and of the rich men whose millions make the institutions possible."

In this same connection, the following words from the pen of Prof. John Bascom, in *The Atlantic Monthly* (June), are of interest:

"Institutions which eagerly seek their resources from the commercial world must be lenient critics of its methods. Ethical, social, and economical truths can not be urged in antagonism to the source of supply. . . . The growth of expenses, the increase of salaries, the magnitude of endowments, all tend to make educators pensioners of the money power."

Professor Mabilleau's remedy for this condition of things would be, it appears, the support of universities by the state, instead of by private interests. Commenting on his criticism, the Springfield *Republican* (May 31) says:

"Perhaps the account of the situation in the United States is a little overdrawn. Perhaps, too, the state university system with us might not carry that assurance of perfect freedom of thought and utterance which it is said to do in France; for partizan politics has at times, in such state universities as we have, crept in with muzzle or club to control university teachings. But in a general way the director of the Musée Social of Paris has touched a great weakness, a great evil, of our system of higher education through privately endowed institutions. There is no sort of question that the sources of the endowment and the opinions, prejudices, and interests of donors, actual or possible, have a regulative and repressive influence upon the utterances of instructors in the departments of economics and sociology, and a more or less controlling power over the management of the institution. What the French sociologist tells us to our face is largely true and as humiliating as it is true. He is assured by President Harper of Chicago and President Eliot of Harvard that the United States is progressing toward, and will soon reach the ideal system which obtains, as he tells us, in France. But whether this means that American universities are to fall more and more under state support, or that private institutions are finally to declare complete independence from the prejudices and material interests of wealthy givers, is left in doubt."

According to the New York *Evening Post* (May 30), M. Mabilleau has over-accentuated the situation. It cites the case of Professor Atwater, of Wesleyan University, a Methodist institution.

"The Methodist Church is exceedingly strict in the matter of temperance, and requires its members to be teetotalers. When, therefore, Professor Atwater, after long and elaborate experiments, discovered that alcohol in small quantities may sometimes be a food, he was savagely censured by many clerical critics. They labored under the fantastic delusion that, in some way, he was advocating drunkenness; and, of course, they were not interested in getting the truth, but in upholding certain dogmas. The authorities of Wesleyan, to their credit, have thus far resisted all the silly clamor against Professor Atwater; for they realize that scientific research is impossible if the investigator is committed in advance to the theories of ignorant and prejudiced outsiders."

On the other hand, the same writer admits, there are facts in support of M. Mabilleau's contention:

"This matter of tolerance is in some aspects a local question. In the West and the South public opinion is less advanced than in the East. The temper in which the Populists wanted to make a clean sweep of the faculties of several state universities still exists, and will doubtless find opportunities for further display. The man who said, 'You may paint my house any color you choose, provided it be white,' is brother to those Southerners who charge their professors: 'You may think and teach as you like, provided you never run counter to our ancient prejudices.' A few years ago a student from a Southern college came to Harvard and saw on the shelves of an English professor copies of Matthew Arnold's 'Literature and Dogma' and 'God and the Bible.' 'For merely owning those books,' said the young man, 'one of our professors was discharged.' The recent dismissal of Professor Sledd from Emory College, Georgia, for heterodoxy on the race question is another case in point—proof that the South is still a land where the heresy-hunter is eager for his prey."

MIRBEAU'S TRAGEDY OF MODERN PLUTOLOGY.

UNDOUBTEDLY the most successful of the new plays of the late theatrical season in Paris was Octave Mirbeau's "Les Affaires Sont les Affaires" (Business is Business). French, English and Russian critics, including Count Tolstoy, have called it a masterpiece—a realistic yet finely imagined study of the modern disease of gold worship or thorough absorption in the pursuit of material gain for the sake of gain.

Mirbeau, who is the author of several social dramas, intended in this play to exhibit the effect of this all-consuming passion on character and the human affections. Some have accused him of inartistic exaggeration, but he insists that he has been severely logical, and Count Tolstoy agrees with him. The critic of *Le Figaro*, Emmanuel Arène, introduced his extended review of the play with the following observations:

"The audience, troubled at times, and, as it were, violated, realized that it was witnessing an exceptional achievement, a manifestation of loyal and honest art, a work of candor and sincerity. This combination of qualities is rare in the contemporary theater. The boldest reformers, the most spirited assailants of modern morals and manners, when choosing the stage as their medium, readily abate a little of their insurgency, political, literary, or social. They content themselves with middle tints: business is business. Mirbeau presents himself to the public as he is, whole and true to himself, with his hardness, his rudeness, his vigorous and personal way of thinking and saying things. As his fascinating acts unfolded themselves, as his scenes, so vivid and even startling, succeeded one another, with their clear-cut situations, the public, surprised and charmed, felt itself transported into that healthy and noble atmosphere of battle which was so familiar to our elders but which is no longer distinctive of the modern stage."

The critic goes on to speak of the high merit and originality of the play, its powerful "interior," its energetic form, and its accent of conviction. The theater has seen "men of affairs" before, but never has the realism of the portrayal been carried so far as Mirbeau carries it, and no other dramatist has so forcibly illustrated the dominant influence on man of the folly of money and financial power.

The plot, in mere outline, is as follows:

Isidore Lechat is a great man of affairs—a financier, manufacturer, speculator, and promoter. To advance his business

interests and intimidate the Government, he conducts a political newspaper, tho he has profound contempt for the journalistic profession and the literary fraternity.

His château, in the neighborhood of Paris, is seigniorial. It is always full of people having projects to propose to the host or business to transact. Mme. Lechat, a good, simple *bourgeois*, is hardly equal to her husband's scale of social operations and has little sympathy with his ambitious. But she is loyal, resigned, and indulgent. She knows Lechat's faults, but excuses him as best she can and even defends him against the by no means gentle criticisms of the daughter, Germaine, whose sentiments toward her father are the reverse of tender and affectionate.

There are two children in the house—a son, Xavier, and this daughter, Germaine. The former is a spendthrift, an idle, indolent, worthless youth, who merely wastes his father's wealth. The latter is an "intellectuelle," a "revolted daughter," a modern woman at war with her class and environment, who despises plutocracy and condemns the methods employed by her father in acquiring and using his millions. Indeed, she regards her father as a rascal, and her one desire is to leave his house and wash her hands of his iniquities. Her "emancipation" has gone so far that she has entered into an illicit union with one of her father's employees, a young favorite named Lucien Garraud. She presses her lover to take her away, to arrange at a distance a life of independent and honest labor, and of sincere affection. The young man, however, is timid and less scrupulous, hence rather slow to consent.

OCTAVE MIRBEAU,
Whose play, "Business is Business," was the dramatic sensation of the late theatrical season in Paris.

Lechat knows nothing of the situation in his household. His affairs absorb him completely, and everything else in life—family, honor, love, duty—has ceased to exist for him. He has, however, thought of arranging a marriage between his daughter and the son of his neighbor and debtor, a marquis named Porcellet. To coerce the Marquis into the affair, Lechat threatens him with absolute ruin. At the end of a brutal scene the poor old nobleman accepts the proffered bargain. His principles give way to the power of money.

Mme. Lechat and Germaine are sent for, and the Marquis, with humiliating solemnity, asks Germaine's hand for his son. She is astonished at the proposal, but promptly refuses. It is Lechat's turn to express amazement. He storms, demands to know the reason. Germaine finally confesses that she has a lover. Lechat would strangle her in his fury, but the mother intervenes. Forgiveness is impossible. For the first time in his career, Lechat is thwarted and defeated—and by his own daughter. He incontinently drives her out of the house. She must instantly depart with her lover.

But the blow is a severe one even for this inveterate materialist and man of affairs. He falls into a chair, head in hands, apparently unnerved for the time being. At that very moment another catastrophe occurs. He receives the news of the sudden death of his son in an automobile accident. This second and crushing blow so overwhelms him that a stroke of apoplexy is feared. He breaks out in sobs and tears, the crisis is over, and he is saved. He rises to go to receive the body of his dead son, but at this moment two promoters come in with a contract which they had been authorized to draw. They want Lechat to sign it at once. He suggests a delay of twenty-four hours, but they can not wait.

Accordingly—business being business—Lechat returns to the table, closely examines the contract, discovers an attempt to cheat him, to omit a vital clause upon which he had insisted, and turns in rage upon the swindlers. They had tried to take advantage of his misfortunes, but with Lechat business is business, and he never permits sentiment to obscure interest. The contract is duly revised, the affair carefully adjusted, and, business over, Lechat goes out to view the mangled remains of his son.

The *Figaro* critic praises the ending, brutal as it has seemed to some. Mirbeau himself says that he copied it from real life, and that he does not mean to represent Lechat as a monster at all, but simply as one enslaved by a passion. Lechat, he says, is an idealistic materialist. He idealizes money and its might and grandeur. Business has become his paramount object, second nature. Not he, but the social condition of the time, is responsible for his conduct.

Catulle Mendes, in the *Journal*, describes the play as a drama of modern manners, and the character drawing is perfectly firm and consistent. Prejudice and sentimentality may be shocked, but Mirbeau was determined to be strong, truthful, terrible. And in this, Mendes says, he has been entirely successful.

Some doubt is expressed as to whether he intended to make Germaine a sympathetic character. Some critics hold that if this was his intention he failed, for the public is rather with the father than with the doctrinaire, censorious, and hard-hearted daughter.

The drama, running at the Comédie Française, is said to be the sensation of the day. Its popular indorsement is as unmistakable as its literary and artistic success.—*Translation made for* THE LITERARY DIGEST.

A CHARGE AGAINST MODERN LITERARY CRITICISM.

"AN Ungrateful Author" has been girding against the present "extremely unsatisfactory" state of book-reviewing. The complaint is not, as might be expected, that the critics are harsh or indifferent in their attitude toward the literary output, but that they are too indiscriminatingly kind. We quote from his paper, which appears in the London *National Review* (June):

"Never, in the history of literature, have books received so much attention at the hands of critics as they do just now; yet, with it all, neither the public nor the authors have reason to be satisfied with the results of all this so-called critical writing. It is hard to say which suffer most—the authors who are injured by injudicious reviewing, or the public which is taught to read the wrong books; but one thing is certain, that both are grievously sinned against.

"Criticism, from being practised by the few and competent, has become a trade carried on by the many and singularly unfit. Every paper, however obscure, has its 'literary' column, and Heaven alone knows who the writers of these columns are—they are frequently much more illiterate than their readers. But it is not the decline of criticism as an art that is the deplorable feature of the case—for even the best and highest criticism is, after all, uncreative work such as the world can do without—it is more the disastrous effects of all this loose, fatuous criticism that we regret. These effects, as I have said above, are traceable both

in the writers and in their public; and the first and most glaring defect in modern criticism is its tendency to overpraise."

The writer proceeds to point out that it is quite as disastrous to spoil our authors by injudicious praise as to crush them by over-severity. "In either case, the goose that lays golden eggs for a greedy public may be killed; there is, however, a refinement of cruelty in the modern method of author-murder decidedly reminiscent of the butt of Malmsey." In the following quotation he aims to indicate the working of this method:

"Let any careful observer of the literary history of the last ten or fifteen years search back in his memory and see if he can not remember a score of authors who have come by their literary death in this way. We all know the steps of this tragedy: the first clever book, received with an outburst of intemperate praise, *from critics whose trade it is to over-praise*—then the quickly growing 'boom' in this particular author's books; the more and more slovenly work appearing year by year, the unpruned style confirming in all its vice till what was at first a mere accident becomes a vicious mannerism—and then cometh the end. For swift is the descent into the literary Avernus. Is it too much to say that many and many of these pitiful disasters are caused only by indiscreet criticism—or, rather, want of criticism?

"The moment that hundreds of critics tell a young writer that he has practically nothing to learn, that his art is perfect, his style mature, and so on, he will in nine cases out of ten believe their pleasant voices; he stops all effort, trusts to this 'genius' with which he finds himself credited on every side, and dashes on down that steep path which it is all but impossible to reascend. You will say that the man is a fool who believes all the pleasant things that are said about him; but human nature being what it is, man will always believe smooth prophecies, and can scarcely be blamed for doing so. The blame in such cases rests entirely with the false prophets, and it is at their hands that the blood of the author will be required."

EDWARD H. SOTHERN,

Who claims that women "sway the destiny of the theater in America."

The writer attributes this tendency to over-praise, not to any conspicuous kindliness of heart or reluctance to wound the susceptibilities of authors, but to a number of more sordid causes. For instance, it is pointed out that most of the present-day reviewers themselves write books, and it behooves them to bear in mind the Scriptural truth, *The merciful shall obtain mercy*.

Another charge against the critics is that they too generally urge an author to repeat himself:

"Why all this eagerness for similarity? Are the critics aware that self-repetition is a fault—that variety of range, diversity of subject, freshness of treatment, are the very blood and bones of live literature? It would seem that they are not, if we may judge by their strenuous appeals to authors to stick, each man, to the 'vein' in which he has made his first success."

That this advice is defensible from a trade point of view is admitted. "It is similarity that sells—for a few years." But even for this tendency on the part of the public to buy books of a kind with which it is already familiar, the responsibility is laid at the door of the reviewer:

"So widespread is the influence of the press just now that I suppose not one person in a thousand chooses his own books without having heard of them through some newspaper or magazine. This is quite natural, and, in the present state of the book-world, reviews form an indispensable bridge between the writer and the reader. But this only makes it more necessary that reviews should be trustworthy, for if the blind lead the blind we know that both will fall into the ditch. There is no ditch the public is more apt to fall into than this of the boomed book."

"An Ungrateful Author" further complains that modern criticism has largely abandoned the method of comparison with accepted standards of excellence—in short, that it is not criticism in the real sense of the word. He believes "that every good writer, if asked his opinion, would vote in favor of more truly *critical* reviewing."

WOMAN'S INFLUENCE IN RELATION TO THE DRAMA.

"TO my mind there is no question as to the fact that women sway the destiny of the theater in America," writes Mr. Edward H. Sothern in *Good Housekeeping* (June). Men who deal in plays, he says, know from experience that if a drama pleases the feminine contingent, the male will follow; they know, too, the truth of the saying, "The drama's laws the drama's patrons give." Mr. Sothern therefore appeals to the feminine portion of the theater-going public in the cause of a more elevated public taste. As it is, he urges, actors who wish to play great plays often can not, because the supply would meet no demand:

"The tremendous educational and moral force of the stage must be admitted when one reflects that in a great city each night more people attend the theaters than attend all the churches on a Sunday. The power of such an instrument for good or evil is simply tremendous. Every actor worthy the name is hungry to give all his energy and work to make his art an influence for the highest and the best—the control of the forces of the theater is entirely in the hands of our women. Their minds will crave certain things in the theater, and those things they will find, for good or evil. I want to declare that we actors as a class distinctly desire to play the great parts, and that desire is to a very great extent upheld or cast down by the taste of those communities in which we work. Recently it was remarked at a banquet I attended in New York that every important theater in that city was occupied by a musical comedy—an excellent class of entertainment—and the one person playing a play of Shakespeare's was congratulated for being able to hold his own. Here is food for reflection, if you please. This taste of the public as a mass is infinitely lower than the tastes of the actors. We know what we would like to do, but we are not able to do it always."

Were public taste to achieve this higher level of demand, there would follow also a change in the general tone of dramatic criticism, "which is now too often on a low plane of vulgar indifference or foolish levity." For, admits Mr. Sothern, it is of course right that a very high standard of excellence should be demanded in those who interpret the poetic drama. "Indeed, to accept a bad performance of a great rôle," he writes, "would argue a depraved or uncultivated taste quite as much as unenlightened de-

votion to utterly frivolous entertainments; but a more general desire to witness fine, elevating, poetic plays would cause a greater number to be written and produced." Mr. Sothern has something definitive to say as to the kind of play that may exercise a beneficent moral influence:

"The educated women then have it in their power to make our stage what it should be: the great power for the expression of all that is noble and true in the race; and here we come to the kind of plays. For what is noble and true can be expressed negatively. By showing the course of evil conduct, the road to right living is made clear. Here Ibsen is a great teacher, and here Pinero has done fine things—his 'Mrs. Tanqueray,' and, as I have lately argued, his 'Iris.' By pointing out in the latter play the ultimate fate of a weak nature, he teaches us the value of self-control and the cultivation of the moral force. That play also points out to those who can see that they who have strength owe it to their weaker brothers to hold them by the hand when they are falling and not to pick up their skirts and pass on."

ARE TERROR AND TRAGEDY ESSENTIAL TO GREAT FICTION?

MR. JACK LONDON, in a recent magazine article, considers the value of the terrible and tragic in fiction. When Poe was writing his stories, we are told, "editors did not like to publish nor people to read them, yet they were read universally and discussed and remembered, and went the round of the foreign newspapers." According to Mr. London, we are not honest with ourselves in our attitude toward the story of terror and tragedy. He writes (in *The Critic*, June):

"The conditions which obtained in Poe's time obtain just as inexorably to-day. No self-respecting editor with an eye to the subscription-list can be bribed or bullied into admitting a terrible or tragic story into his magazine; while the reading public, when it does chance upon such stories in one way or another—and it manages to chance upon them somehow—says it does not care for them.

"A person reads such a story, lays it down with a shudder, and says: 'It makes my blood run cold. I never want to read anything like that again.' Yet he or she will read something like that again, and again, and yet again, and return and read them over again. Talk with the average man or woman of the reading public, and it will be found that they have read all, or nearly all, of the terrible and horrible tales which have been written. Also they will shiver, express a dislike for such tales, and then proceed to discuss them with a keenness and understanding as remarkable as it is surprising.

"When it is considered that so many condemn these tales and continue to read them (as is amply proved by heart-to-heart experience and by the book sales such as Poe's), the question arises: Are folk honest when they shudder and say they do not care for the terrible, the horrible, and the tragic? Do they really not like to be afraid? Or are they afraid that they do like to be afraid?

"Deep down in the roots of the race is fear. It came first into the world, and it was the dominant emotion in the primitive world. To-day, for that matter, it remains the most firmly seated of the emotions. But in the primitive world people were uncomplex, not yet self-conscious, and they frankly delighted in terror-inspiring tales and religions. Is it true that the complex, self-conscious people of to-day do not delight in the things which inspire terror? or is it true that they are ashamed to make known their delight? . . . . . .

"Perhaps people feel that it is not proper to delight in stories that arouse fear and terror. They may feel instinctively that it is bad and injurious to have such emotions aroused, and because of this are impelled to say that they do not like such stories, while in actuality they do like them."

After a tentative examination of this bit of contradictory psychology in the make-up of the reading public, Mr. London asks the questions: "Can any story be really great the theme of which is anything but tragic or terrible? Can the sweet commonplaces of life be made into anything else than sweetly commonplace stories?" These questions he answers in the negative:

"The great short stories in the world's literary treasure-house seem all to depend on the tragic and terrible for their strength and greatness. Not half of them deal with love at all; and when they do, they derive their greatness, not from the love itself, but from the tragic and terrible with which the love is involved.

"In this class may be ranked 'Without Benefit of Clergy,' which is fairly typical. The love of John Holden and Ameera greatens because it is out of caste and precarious, and is made memorable by the tragic deaths of Tota and Ameera, the utter obliteration of the facts that they have lived, and the return of John Holden to his kind. Stress and strain are required to sound the deeps of human nature, and there is neither stress nor strain in sweet, optimistic, and placidly happy events. Great things can be done only under great provocation, and there is nothing greatly provoking in the sweet and placid round of existence. Romeo and Juliet are not remembered because things slipped smoothly along, nor are Abélard and Heloise, Tristram and Iseult, Paolo and Francesca.

"But the majority of the great short stories do not deal with love. 'A Lodging for the Night,' for instance, one of the most rounded and perfect stories ever told, not only has no hint of love in it, but does not contain a hint of one character whom we would care to meet in life. . . . The 'Fall of the House of Usher' depends upon all that is terrible for its greatness, and there is no more love in it than there is in Guy de Maupassant's 'Necklace,' or the 'Piece of String,' or in 'The Man Who Was,' and 'Baa Baa, Black Sheep,' which last is the most pitiful of all tragedies, a child's."

In spite of the conviction on the part of magazine editors that the public does not want stories of terror and tragedy, the steady sale of such books as Poe's "Tales," argues Mr. London, proves a demand for fiction of this class. Is there not room, he asks, in the otherwise crowded field, for a magazine devoted primarily to the terrible and tragic?

NOTES.

IT is not unnatural to think of post-graduate students at the universities as representing, intellectually, the surviving fittest of the student body. Yet we have from Prof. Hugo Munsterberg, of Harvard, the statement that the average graduate student "represents as to intellectual energy a lower type of man than the average undergraduate." This inferentially, because the men of greatest energy and stamina follow, as a rule, the more strenuous professions.

A LOAN collection of portraits by American painters of the colonial and later periods, ranging from 1720 to 1840, has been brought together at the galleries of the National Art Club, New York City. The New York *Times* says: "This little exhibition, put together from loans off the walls of a few people, is proof that retrospective loan exhibits might be make in New York with great ease and to great profit and advantage. It is well for modern artists to see what men in their line were doing from a hundred to a hundred and fifty years ago. It is certainly not uninteresting to see how Americans looked in those periods."

A WRITER in *Harper's Weekly*, speaking of the artistic temperament divorced, as it too often is, from that balance of intellectual powers which makes for true sanity, says: "Nothing in this world is such a spiritual mosquito as the violently aggressive artistic temperament, for, usually, it is the assumption of those afflicted by it that crises of the nerves, eccentric conduct, and ethical and social immoralities are to be pardoned by the merely wise and prudent, because the victim of the temperament, like the habitual drunkard, can not help it. This assumption exasperates the most of men, and while it may amuse the larger-minded, it often gives them trouble. The truth is, artistic temperaments to the contrary notwithstanding, that men and women who think straight are fairer and nobler than people who try to feel keenly, and that a well-balanced mind is better than an abnormal emotion."

AMERICAN views of the exhibitions this year by the Royal Academy and the French Salon are not enthusiastic. *The Sun's* correspondent cables of the former: "One of the Royal Academicians was asked the other day what chiefly characterized this year's exhibition. He replied: 'A high level of mediocrity.' The definition was pretty good. The average is a little higher than in 1902, but no picture emerges from the rest so far as to be called the picture of the year." *The Herald* has this to say of the Salon: "It is impossible to speak of the Salon of the Société des Artistes Français without indignation, for at every step one finds pictures marked only by effort and minute painstaking. It is impossible to speak of it in terms of praise, for there are not ten painters in it having a love of color and a delight in it." *The Tribune* correspondent, however, thinks that "the general level of excellence in the Salon approaches a high standard." Sixty-two American painters and ten American sculptors are represented in the Salon exhibition, and some of the papers speak of it as an "American invasion."

SCIENCE AND INVENTION.

THE RELATION OF GROWTH TO HEALTH.

THAT the weight of a growing child is the most important index to his general health that we can obtain, is asserted by an editorial writer in *The Medical News* (May 23). This fact enables a writer in *The Westminster Review* to make an interesting comparison of the physique of the modern English schoolboy with that of his predecessor of a quarter of a century ago, for careful records of height and weight of pupils have been kept during this period at Rugby and Marlborough schools. It is interesting to know that the advantage in both height and weight is with the modern boy—a fact that is believed by the writer to be "due to the greater care that our growing children shall have more outdoor air and exercise than was formerly considered advisable." He goes on to say:

"The method of computing the comparative physical conditions of the two generations is typical of an order of ideas that has come to have more and more weight with experts in these matters in recent years. While it is not usually recognized, the weight of growing children is a much more important sign of general health than any other set of objective or subjective symptoms that can be obtained. The family physician who can have placed before him a continuous record of the child's weight, taken at regular intervals, say two weeks apart for several years, has more definite information than any amount of personal observation as to the child's habits in eating and sleeping, complaints of tired feeling, and the rest that the mother can provide. If parents were instructed more carefully than at present to keep such a record, physicians would not be so much in the dark as to the real condition of children's growth and health as they are at the present moment, because of the absence of specific data as to the progress of the child's development.

"Needless to say, it is at the ages which have been noted especially at the public schools that this question of weight and health is most important. Just before and after puberty there are likely to be variations of weight that are significant of the conditions of the general health. If besides the fundamental natural change that is taking place in the organism there is a rapid growth, then there are likely to be calls on the child's nutrition that are very difficult for any but the extremely healthy natures to respond to satisfactorily. Rapid growth is of itself a very trying and exhausting process. When to it is added the demand made by puberty, then great care must be taken to see that school exactions and even exhausting exercise shall not interfere with the important evolutionary processes at work."

Children who are growing rapidly at this period are very likely, we are told, to present symptoms of lassitude, with disinclination to outdoor exercise and often also to study. It is, of course, incorrect to ascribe these to laziness. Not infrequently a capricious appetite accompanies these symptoms, with tendencies to eat large quantities at one time and little or nothing at another. The writer goes on to say:

"Careful inspection of the weight chart at these times will show that children or young folks are not gaining normally in weight as they should. When children are found to be below the standard of weight, then they should not be tempted either to play or study overmuch, but should be allowed to follow their inclinations without fear of establishing bad habits. Rapid growth is of itself as hard work as any ordinary human being can be expected to accomplish with any amount of comfort and without injury to the delicate organism.

"With regard to the standard of weight for growing children, that usually given by authorities in the matter is that at five years of age a child should weigh about as many pounds as it is inches high. As a rule this will not be much over or under forty pounds. Children who come of large families should weigh something more than that. The rate of increase should be about two pounds for every inch of growth, with a tendency for the weight to exceed this standard proportionately rather than to fall below it. When a child is rather heavier in proportion to its height than this standard, it is a sign of good health. If the child is growing rapidly, it should not be allowed to fall much below it, without being made to rest more than has been the custom before. A deficiency of weight in proportion to height is always an unfavorable sign. Any interruption in the progress of increase of weight, especially during the continuance of growth, must be a danger-signal that should not be neglected by those interested in the patient.

"Just at this season of the year, when the stress of preparations for examination and of competition for prizes are apt to be felt so much by growing children, the weight record should be carefully kept and frequently consulted. To be under the normal weight is to be especially liable to contract the infectious diseases, for the resistive vitality is considerably lower than normal. The large insurance companies now insist that even individuals who have attained their growth are much more dangerous risks in the matter of tuberculosis if they are twenty pounds under the normal weight than if they are the descendants of families with tuberculous heredity on both sides of the house, when not intimately associated with those who are actually suffering from tuberculosis. The scale then will have to be considered an instrument of precision for diagnosis and especially for prognosis in the obscure conditions that so often occur in growing children. That it has not been thought so up to the present time is a matter for surprise, and is rather due to the old-time tendency to adopt theoretical rather than practical aids in these important questions."

THE AGE OF RADIUM.

THAT no existing radium is more than one thousand years old is asserted by Messrs. Rutherford and Soddy, two English experimenters. They deduce this from a study of the emanations from this and similar metals, which they think shows that the rate of loss is great enough to warrant such a a conclusion. The experimenters publish their results in *The Philosophical Magazine* (London), in an article that is thus abstracted in *The Electrical Review* (June 13):

"Assuming that the emanations from radioactive bodies were vapors, they attempted to condense them, with marked success. A slow stream of hydrogen or oxygen or air was passed over the radioactive material, and then through a spiral tube which could be cooled by various cooling mixtures. This current of gas showed radioactive properties until very low temperatures were reached. Even solid carbon dioxid did not affect it, but when liquid air or frozen ethylene was used, the current of gas lost entirely its radioactive properties. By removing the refrigerating material and allowing the spiral to warm up slowly, a temperature was reached where the gas again became radioactive. This temperature was sharply defined.

"These experiments seem to prove that the emanations from radioactive materials are really vapors which are condensed at very low temperatures, altho the quantity condensed was too small to be perceived. This view is strengthened by the fact that the radioactive emanation can not pass through the tube if the temperature is below a certain point; but that which is caught in the tube can be removed entirely if the temperature is raised a few degrees. This would indicate that there is an actual condensation, and not merely an occlusion.

"The experiments prove that the boiling-point of the thorium emanation is $-120°$, and that of radium is $-150°$. There seems to be some connection with the difference in the boiling-points of the two emanations and the fact that thorium loses its activity in a few minutes, while radium requires as many days."

Messrs. Rutherford and Soddy's calculations concerning the "life" of these interesting substances are based on their own results and those of Prof. J. J. Thompson, from which they deduce a limit for the number of positive electrons each atom is capable of furnishing to the particles it projects. This limit they have placed at 200. Knowing the number of atoms in a gram of radium and the rate at which energy is given out, an estimate has been made of the length of time it will take for any given atom to exhaust its radioactivity. To quote *The Review* further:

"The results indicate that for one gram of uranium or thorium,

more than a million years will be required to change one milligram, but for radium the same change will take place in about one year; and that, therefore, any radium which exists is not more than one thousand years old.

"These conclusions suggest an interesting question—What becomes of this lost substance? This emanation is the radioactive body, but it loses its activity from contact with the air or other substances. However, some final product must be left. This, Messrs. Rutherford and Soddy suggest, may be helium. The study of radioactive materials has been fascinating the physicists, and it now bids fair to become equally attractive to the chemists, and to modify considerably some of our ideas of the immutability of the atom."

AN INSTRUMENT FOR MAKING THE DEAF HEAR.

THE acousticon, an improved form of ear-trumpet whose remarkable results have been widely celebrated in the daily press, is now described at length by a writer in *The Scientific American* (June 13). The explanation of the functions and working of the instrument leaves something to be desired, because, it is explained, certain patents are still pending and it would not do to be explicit. But the device is obviously an adaptation of the microphone and works on the principle of the ordinary telephone-transmitter. It is, of course, of use only to those whose hearing has not been entirely destroyed. Says the writer of the article:

"Many of those whom we are accustomed to regard as deaf are only partially deaf. The essential parts of the auditory apparatus are still present. It is only the subsidiary parts that are missing or defective. Your deaf-mute, so called, is really not in need of an instrument which will amplify sound enormously. What he really needs is something to take the place of the missing or defective parts of his ear. And this is the result which has been attained in some of the instruments devised by Mr. Hutchison. . . . . .

"It is the purpose of one of Mr. Hutchison's instruments (the 'acousticon') to take the place of the middle ear. The 'acousticon' is the outcome of a prior instrument, called the 'akouphone,' which has been abandoned for the reason that the new instrument better answers the purpose of transmitting articulate sound to the inner ear. . . . . .

"The 'acousticon' may broadly be considered a combined telephone and microphone. The principle underlying the construction of the mouth- and ear-piece is well shown in one of the accompanying diagrams.

"The essential feature of the invention is a cup-shaped body, into the open end of which the sound-waves enter, the bottom or inner end of the body being shaped to reflect and concentrate the sound-waves and finally direct them backward until they strike the center of a vibrating-diaphragm mounted in the cup at right angles to its axis.

"Besides the merit of compactness, the device is distinguished by the fact that there can never occur that interference of reflected sound-waves which is so grave a drawback to the use of tubes, trumpets, and horns. In addition to the mouth- and ear-pieces, an exceedingly small but powerful storage-battery, so small indeed that it can be slipped into the coat pocket, is employed.

Courtesy of *The Scientific American* (New York).

"It is one of the peculiarities of the 'acousticon' that the articulation of the spoken words is magnified, and not so much their sound-volume. In other words, the instrument talks inversely. A deaf-mute who has never heard sound must learn not only to know what sound is, but, what is of more importance, must learn the meaning of different articulations. For that reason the 'acousticon' has been designed not to amplify sound-volumes, but to emphasize articulation by magnification. So admirably has this result been accomplished that even a faint whisper is clearly heard by the deaf-mute."

WOMEN WHO DRINK WHISKY.

THAT physicians are responsible for a good deal of inebriety among women is charged by a writer in *The Hospital* (London). Of 679 cases treated during the past nineteen years in an English home for inebriate women, only 11 were beer-drinkers, and 36 habitually drank wine. The rest became drunkards through taking spirits, and especially whisky. The fact that so many of these women were whisky-drinkers is ascribed by the writer to the frequent prescription of this liquor by doctors. He says:

"While of late years doctors have very largely avoided recommending alcohol to their patients at all, when they do prescribe any it is whisky. If a man or woman of middle age feels twinges of gout or rheumatism, the medical attendant very often advises the giving up of the glass of sherry or claret which the patient has been in the habit of taking, and substituting a little whisky and soda-water. From the profession the public have learned to believe that whisky is the 'safest' of all spirits, with results very advantageous to distillers. These figures, which tell the temptation to which six hundred inebriate women succumbed, make one doubt if the advice is equally good for the public. It is true that the doctors recommend only 'a little' stimulant, and may even specify the quantity, but they have no guarantee that their limitations are adhered to. The warmth of the spirit not merely induces a pleasant sense of well-being, but may even give a temporary relief from pain. This tempts the patient to return to it when the pain comes back. The doctor is not told of this extra indulgence, and the patient consoles herself with the notion that whisky is 'so safe.' . . . Neither wine nor beer gives the temporary alleviation sought, but spirits do, and the notion that whisky is not

conducive to the development of any disease is a temptation to take it. This is a point which medical men might do well to consider. They may save their patients from falling if they can assure them that whisky-drinking will cause some disease. But it is of no use to warn them of the risk of acquiring the habit of inebriety. That only gives offense, and does little good, for no one realizes their susceptibility to that temptation until, unhappily, it is too late."

WILL THE PLANETS KEEP ON MOVING FOREVER?

ASTRONOMERS put the question in this form: "Is the solar system stable?" In an article in *Popular Astronomy* (June), Prof. F. R. Moulton, of the University of Chicago, tells us that we are not in a position to answer this question, and probably never shall be, tho the work of mathematicians makes it certain that the planets will move in the present orbits for a very long time indeed. Some possibilities not usually taken into account in his connection are thus stated by Professor Moulton:

"It is not known that the law of the inverse squares expresses *exactly* the way gravitation varies. We know that most of the celestial phenomena can be explained under it for the interval of time covered by our observations; but the true law may differ from it to so slight an extent as to have not yet led to appreciable results, but in such a way as to doom the system to ultimate destruction. There are certain phenomena in the kinetic theory of gases which point to the existences of forces among molecules varying inversely as the fourth power of the distances, and it may be that adhesion, cohesion, and chemical affinity are different manifestations of the same force under different circumstances of distance. . . . . .

"It may be that the planets are retarded to some extent by the ether. It may be that matter is slowly wearing out. For example, if an atom is a vortex ring in the ether, as Lord Kelvin supposed it might be, it may suffer some slight resistance which in the course of immense ages will destroy it. It has been found more recently from the researches of J. J. Thompson and others that the atoms are very complex affairs, being made up from a thousand to hundreds of thousands of electrons which under certain circumstances may break away from the groups to which they belong. In this way ordinary matter may become radically changed. On the contrary, it is not impossible or perhaps even improbable that what we ordinarily call matter is developing from some other state in certain other parts of the universe. And it may be that there are regions where the ether does not exist, for example surrounding the whole visible universe. Since light can not cross an etherless space, this would account for the seeming finiteness of the material world. There may be forces whose effects are of the utmost importance in the long run which are at present entirely unsuspected; the fact that known phenomena can be explained without them is not at all conclusive evidence against their existence.

"The fundamental difficulty in our speculations is that we are limited by a narrow experience extending over a very brief period. The lifetime of a man seems fairly long, and the epoch when Troy was besieged, or when the Pharaohs piled up the pyramids in the valley of the Nile, or when our Aryan ancestors separated on the high plateaus of Asia seems extremely remote; but these intervals are only moments compared to the immense periods required for geological evolution and the enormously greater ones consumed in the development of worlds from widely extended nebulous masses. We recognize the existence of only those forces whose immediate consequences are appreciable, and it may be that those whose effects are yet unseen are really of the highest importance. A little creature whose life extended over only two or three hours of a summer's day might be led, if he were sufficiently endowed with intelligence, to infer that passing clouds were the chief influences at work in changing the climate, instead of perceiving that the sun's slow motion across the sky would bring on the night and its southward motion the winter.

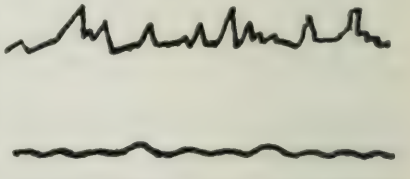
"We may epitomize by saying that there is no such thing as 'natural' motion of the planets, but that they move in obedience to gravitation in orbits which are nearly strict ellipses with the sun at a focus; that they are so nearly independent that no ordinarily noticeable change would take place if one were removed; that the mathematical difficulties are such that we can not yet say whether, under the hypothesis of the Newtonian force and no others, the system is permanently stable or not, altho we can affirm that it will remain in its present general condition for a long time; and, finally, that our limitations are such that we can never be sure that we have the data necessary for the discussion of the question of permanent stability."

Artificial Pulsation of the Heart.—A curious discovery, which may possibly be of interest in medicine, was recently made by Dr. Koulebko, of St. Petersburg, Russia. Says *The National Druggist* in a note about it:

"Having devised an apparatus that produced a circulation similar to that of the blood in warm-blooded animals, he attached to it the heart of a rabbit that had been dead for many hours and succeeded in producing a rhythmical pulsation in the viscera of the dead animal. Many other creatures were experimented with and the response was prompt in every case. Finally a human cadaver was attached to the apparatus, through the heart, and after a little delay the response was the same as in the lower animals. Dr. Koulebko writes that he does not attach much practical importance to his discovery; but, as it has demonstrated that hearts, dead even for as long a time as one hundred and twenty-nine hours, may be reanimated by the circulation of blood, he concludes that artificial respiration may be resorted to with hopes of success in cases of asphyxia, strangulation, etc., long after the period at which it has hitherto been deemed useful—as, for instance, in cases where persons have been found dead from asphyxia by illuminating-gas in hotels, etc. He concludes, too, that artificial respiration should be continued much longer than is the present practise, and that in cases of death from violence where the viscera are uninjured, artificial respiration is far more valuable and has far more chance to a restoration of the apparently dead than has hitherto been dreamed of. His experiments all tend that way, at any rate."

Motor-Car versus Carriage.—Persons disposed to call in question the easy-riding qualities of automobiles have their opinions disputed by the following from *Die Automobil-Welt*, as translated for *Popular Mechanics:*

"There is the motor in the front of the machine, with its easy, elastic vibrations. The vehicle itself swings with it, but so softly that you don't notice it unless it stands still. When going, these vibrations actually reduce the shocks from a rough road, which, with a horse-drawn wagon, hit the body suddenly and harshly, throwing it from one side to another, hard and rude, even if the wagon has good springs. The motor vehicle has not only good springs, but also a lower center of gravity, besides pneumatic tires, by all of which the shocks are very much softened. And what still remains of irregular jolting is bridged over and smoothed out by the soft, undulating, and uniform vibrations of the motor. You can imagine that you are sitting in a boat gliding over a rippling, slightly moved surface."



RELATIVE EASE OF TRAVEL IN A CARRIAGE AND AUTOMOBILE.

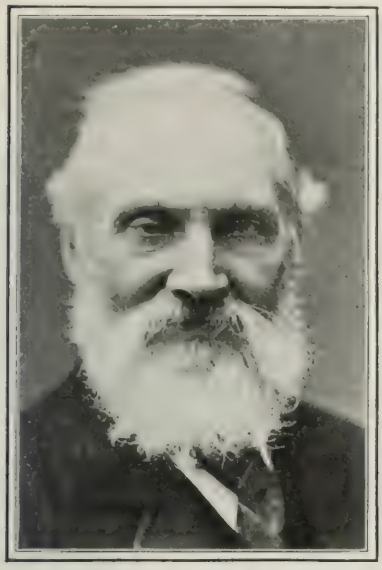
The relative ease of travel in a carriage and automobile, as set forth by the writer, is shown in the accompanying diagrams, of which the upper indicates the jolting motion of the carriage and the lower the relatively smooth motion of the automobile.

"FOR keeping tools bright and free from rust when out of use," says *The Medical Times*, "brush them with a preparation made by stirring enough red or black mineral paint into crude petroleum to make the mixture of consistency easy to spread. This can be applied with a brush made of a piece of sheepskin tanned with the wool on, or with any ordinary brush. It will prevent rust, and may be rubbed off readily, leaving the face of the tool perfectly bright."

THE RELIGIOUS WORLD.

LORD KELVIN ON CREATIVE PURPOSE.

THE recent statement made by Lord Kelvin (see THE LITERARY DIGEST, June 6) to the effect that a crystal, a sprig of moss, a microbe, a living animal, could not be produced by "a number of atoms falling together of their own accord," has provoked an interesting religious discussion in England. Lord Kelvin later modified his statement, in a letter to the London *Times*, admitting that "a fortuitous concourse of atoms" might account for the formation of a crystal from the purely scientific standpoint," but reasserting that it would not account for the "growth or the continuation of the molecular combinations presented in the bodies of living things," because "here scientific thought is compelled to accept the idea of Creative Power."



LORD KELVIN,
Who asserts that in the growth of living bodies, science "is compelled to accept the idea of Creative Power."

Prof. E. Ray Lankester, the famous biologist, writes a letter to the London *Times*, in the course of which he says:

"So far as I have been able to ascertain, after many years in which these matters have engaged my attention, there is no relation, in the sense of a connection or influence, between science and religion. There is, it is true, often an antagonistic relation between exponents of science and exponents of religion when the latter illegitimately misrepresent or deny the conclusions of scientific research or try to prevent its being carried on, or, again, when the former presume, by magnifying the extremely limited conclusions of science, to deal in a destructive spirit with the very existence of those beliefs and hopes which are called 'religion.' Setting aside such excusable and purely personal collisions between rival claimants for authority and power, it appears to me that science proceeds on its path without any contact with religion, and that religion has not, in its essential qualities, anything to hope for, or to fear from, science."

Regarding "a fortuitous concourse of atoms," Professor Lankester declares that he is unable to understand precisely what Lord Kelvin means by the use of such a phrase in such a connection. To quote:

"It seems to me impossible that by 'fortuitous' he can mean something which is not determined by natural cause and therefore is not part of the order of nature. When an ordinary man speaks of a concourse having arisen 'by chance' or 'fortuitously,' he means merely that the determining conditions which have led by natural causation to its occurrence were not known to him beforehand; he does not mean to assert that it has arisen without the operation of such determining conditions; and I am quite unable to understand how it can be maintained that 'the concourse of atoms' forming a crystal, or even a lump of mud, is in any philosophic sense more correctly described as 'fortuitous' than is the concourse of atoms which has given rise to a sprig of moss or an animal. It would be a matter of real interest to many of your readers if Lord Kelvin would explain more precisely what he means by the distinction which he has, somewhat dogmatically, laid down between the formation of a crystal as 'fortuitous' and the formation of an organism as due to 'creative and directive purpose.'"

Professor Lankester thinks Lord Kelvin "formed the conception of a creator who first of all, without care or foresight, has produced what we call 'matter' with its necessary properties," and then "allowed it to aggregate and crystallize as a painter might allow his pigments to run and intermingle on his palette." Whereupon he criticizes as follows:

"This conception of the intermittent action of creative power and purpose does not, I confess, commend itself to me. That, however, is not so surprising as that it should be thought that this curious conception of the action of creative power is of value to religion. Whether the intermittent theory is a true or an erroneous conception seems to me to have nothing to do with 'religion' in the large sense of that word so often misused. It seems to me to be a kind of mythology, and I should have thought could be of no special assistance to teachers of Christianity. Such theories of divided creative operations are traceable historically to polytheism."

This discussion has drawn forth various other letters to the London *Times*, some declaring that a "fortuitous concourse of atoms" was simply an old Greek expression, derived from Aristotle and used by Lord Kelvin in no sense sinister to science or religion. Mr. W. H. Mallock complains that Lord Kelvin "seeks to reinforce our confidence in religion, not by meeting our difficulties, but by ignoring them"; and the London *Spectator*, after noting that Lord Kelvin "has wisely left all criticism unanswered," remarks:

"The real issue is Lord Kelvin's declaration that science positively asserts Creative Power, that there is no middle path between a scientific belief in Creative Power and the acceptance of the theory of 'a fortuitous concourse of atoms,' and that science has a knowledge of a spiritual influence in the universe. Now this assertion can not be satisfactorily met by a flat contradiction."

"To the unprejudiced mind," the same journal adds, Lord Kelvin's position "appears impregnable":

"The attempt to trip up the great physicist over the use of the time-honored phrase 'a fortuitous concourse of atoms' with respect to the formation of crystals was merely an attempt to confuse the issue in the minds of the public. Again, Lord Kelvin in asserting that 'modern biologists are coming once more to a firm acceptance of something, and that was a vital principle,' never suggested the exploded doctrine which declared that the operations of life are controlled by special laws other than the laws of the inorganic world. To conceive of the existence of a vital principle need in no sense infringe the law of the conservation of energy if such principle is not introduced from without. It is the mechanical conception of God that some scientists are pleased to import into religion which creates the difficulty. Of course if a scientist premises that the God of the universe as conceived by religion is a God who 'sitteth above the waterflood' in a physical sense, who, in fact, exists outside of, and entirely apart from, the physical universe, then one may feel sorry for the scientist, but not, perhaps, surprised at conclusions logically evolved from his own limited and erroneous rendering of religious and philosophical ideas. He has still to learn that revela-

PROF. E. RAY LANKESTER,
Director of the Natural History department of the British Museum, who calls in question Lord Kelvin's recent statement.

tion asserts the kingdom of God to be within the universe, and to be neither external nor intermittent in its operations."

Sir Oliver Lodge, the noted scientist whose investigations into telepathy are believed by many competent judges to open a new and unexplored field in the domain of physics, makes this statement in the London *Times*:

"The adjective 'fortuitous' as employed by Lord Kelvin was evidently not selected by him as specially appropriate or illuminating, but merely used as part of a well-known phrase or quotation. It is clear that what our chief meant was that the formation of a crystal, and such like, proceeded in accordance with the unsupplemented laws of ordinary mechanics; whereas the formation of an animal or plant seemed controlled by something additional—viz., the presence of a guiding principle or life-germ, the nature of which neither I nor any other physicist in the least understands. I shall be surprised if biologists claim that they really understand it either."

NEGRO CHRISTIANITY IN THE WEST INDIES.

CHRISTIANITY in the West Indies has perhaps achieved less than it ought to have achieved, thinks *The Church Quarterly Review* (London). If such be the case, it continues, it is due to the fact that Christians have "aimed at more immediate results" and have failed to take into account "the dark past, clouded with ancestral proclivities and superstitions," of the negro. It is unpleasant, adds this organ of the so-called Catholic party in the Anglican communion, to dissipate illusions regarding the possibility of Christianizing the negro; but in the case of the West Indies, at least, the facts are "discouraging":

"It is absolutely essential to the advance of Christianity that facts should be faced with open-eyed fearlessness, realized, and grappled with. It is possible, it is only too easy, to depict in golden color the bright side of the subject; nor have we any desire to fail in doing justice to this. It is perhaps a less grateful task to portray the dark shadows which disfigure the physical, the ethical, and the religious conditions of the West Indian negro."

Lest its attitude be misunderstood, the London organ hastens to say that it knows of numerous examples of negroes who have proven in their own lives the advantages of Christian faith, and it cites the case of Booker T. Washington, as well as that of the late Sir Conrad Reeves, the first negro to be made a chief justice and a knight-bachelor. These men, we are told, afford "brilliant examples of high character and culture among the negroes"; but of racial differences in general we read:

"There are many physical characteristics distinguishing the negro from the white races which need not be dwelt upon here, except so far as to remark that no attempts to improve the physique or elevate the character of the negro can be successful which do not recognize these traits. One of the least of the differences between the negro and the white man is the difference of color, and the frequent failure of Christian teachers to impress the Christian virtues and morality upon the negro mind and conscience is due to the disregard of this fact. The negro has been treated as a specimen of human nature on the same plane, save for color, as the white man; whereas he is centuries behind the advanced races, and not yet emancipated from a mental childishness verging upon imbecility, from criminal instincts restrained only by a fear of bodily harm, and from a moral obtuseness that permits him to commit deadly sin on the way to and returning from the altar without suffering from any pricks of conscience. Negroes and negresses are guilty of the most abnormal forms of vice, which, tho namable, can not be named in this *Review*, but which are unassociated by them with any idea of sin. These vices are relics, or rather continuations, of old African tribal and family customs, and are taught by parents to their children at an early age. They exist in numberless cases which are unknown and undreamed of by many of the clergy. And yet, unless the fearful prevalency of these horrible moral diseases is known and recognized, a clergyman will be as helpless in dealing with large sections of his flock as a doctor would be who should attempt to treat his patients without any

"My children, you should know your friends, but you should likewise know your enemies."

"He who shoots Dumdum bullets at you and then offers you a Bible is an Englishman."

"If he tortures you or treats you cruelly he is a Belgian of the Kongo."

"If he tries to sell you goods at an exorbitant price he is a German."

"If he wants to borrow money from you he is a Russian."

"If he sells you as a slave he is a Portuguese."

"If he takes a foot while you are at your prayers he is a Frenchman."

"If he demonstrates to you that your territory is within the scope of the Monroe Doctrine he is an American."

—*L'Illustration* (Paris).

THE NATIONS AND THE NEGRO.

knowledge of anatomy and the maladies which attack the human frame."

No negro, we are next assured, has the slightest comprehension of the word virtue. Nor has any negro, in the opinion of the same authority, any better notion of truth or honor. "These are meaningless expressions; and because the negro can not connect words with ideas and ideas with realities, he lies with avidious readiness without undergoing the slightest remorse." "The negro has only the meagrest conception of the import of words and is influenced far more by sound than by sense in their use. This explains much of what is so terribly painful to reverent minds that are shocked beyond measure at the glib and utterly misapplied uses of Scriptural phrases by profane lips; and it also elucidates the monstrous dislocation between a life of grossest vice in secret and the devoutest behavior in church." In support of the burlesque character of negro Christianity, the London organ quotes the following, "addressed by a negro youth who had passed all the standards and was doing well as a carpenter, to another negro, the father of the girl he wished to espouse":

"Satisfaction which I have experienced in participating in these present proceedings has caused me to express my Benevolence or love in addressing you for your Majestic and Judicious Daughter having made my application Quite explicit to her She has me Consent to address you after a keen recognition of visits all appreciable to self and family with tranquillity therefore I have acquainting of Marriage not hastily but at some proper period which I hope will be suitable for us both for scripture saith he that seek me early shall find me therefore Sir Having troubled myself for the Principles and Qualities of your daughter I shall sancierly trust with Congratulation that my request shall come compliable to your respected self and family for I am sensiable of he who knoweth his master will and doeth it not shall be beaten with many stripes."

By way of comment upon the above, the organ of the Catholic party in the Church of England observes:

"Now the point to be observed here is, not the ridiculous spelling and grammar (which is far above the average for a negro of that class), but that the writer was anxious to use long words and to show that he knew his Bible. He therefore dragged in two utterly irrelevant texts, with absolute unconsciousness of the irrelevancy. Indeed as regards education the negro has no ambition to acquire the essential spirit of knowledge; he is satisfied only to imitate it mechanically, and he naturally only succeeds in caricaturing his model. He is essentially an imitator and never a creator. He is also always a creature of impulse; consequently he laughs or cries, not because the ridiculous excites him to merriment or because the pitiful stirs him to tenderness, but simply and solely because the vacuity of his mind is such that every passing sensation moves him to hilarity or tears."

All this means that the West Indian negro has not yet emerged from childhood. He exhibits "all the delinquencies of neglected and badly trained children—duplicity, falsehood, pilfering, a manner sometimes cringing and sometimes insolent, alternate timidity and recklessness," while his passions are violent and under no control. Of capacity for self-government, we are assured, he exhibits not a trace. "A race in its childhood, that is the best description of the African in the West Indies; a people not incapable of warm affections, not insensible to good; but volatile, unstable, thriftless, often ungrateful and irrational as a child." We quote further:

"No doubt the church's discipline can be applied in some degree, but the negro is only affected by, responsive to, and appreciative of open discipline—discipline that alters his status in the eyes of his fellow negroes. The 'open penance' desiderated in the Commination Service would exactly suit his case, but in mixed communities, such as are the churches in the various dioceses of the West Indies, it is very difficult to put this into practise.

"We agree with a writer in *The Guardian* that the chief hope for the elevation of the race centers in the careful training of the young. It will be necessarily the slow work of time and conscientious teaching to eradicate successively in rising generations the vices, one after another, which seem ineradicable in the adult. It is of the utmost importance to get hold of those who will be the parents of the next generation while the material is yet plastic, and to awaken or quicken or instil a moral sense in minds as yet ductile and pliant. Each generation thus influenced will be a stepping-stone to further improvement in the generations to come.

"But this task is rendered especially arduous by the dismal fact that the home influences are, as a rule, conspicuously unhealthy, and but very little lay help can be counted upon. Many of the planters, from selfish reasons, are not eager to see the negro elevated in any sense, and the general attitude toward those who would ameliorate the mental and moral condition of the masses is one of apathy, if not of hostility and disdain. Moreover, as Dr. Caldecott has noticed, that great source of Christian influence, the work of Christian women in visiting the poorer classes, is never easy in tropical countries, and in some cases it is impossible, for reasons which it is unnecessary to give in detail."

An Episcopalian bishop is quoted by this authority as having said that the negro in the Southern States was better off under slavery not only "physically and materially," but "morally and spiritually." However, concludes the London organ, "hope ought to prevail":

"Every prick given to the negro conscience must bear fruit some time and somewhere. And altho the mere onlooker may point to the deplorably high birth-rate of illegitimate children—some fifty to sixty per cent.—yet the Christian teacher will gratefully remember that the forty or fifty per cent. of legitimate births is all clear gain upon the state of things which existed before emancipation, when slave marriages were forbidden, or at least not legally recognized. And, by the grace of God, very many individuals have risen to a high standard of character and morals. Every clergyman can point to some negro members of his flock who exhibit Christian graces, sometimes in a manner such as to put to shame their white employers."

THE "CHANGE-OF-NAME" MOVEMENT IN 1904.

"A LOST cause" is the term used by the Boston *Evening Transcript* in characterizing the movement to change the name of the Protestant Episcopal Church to a designation in harmony with the "Catholic" tradition of the "Christian fold." Of the future of the movement we are told:

"While it may come up with a formidable front at the general convention, to meet in this city in the fall of 1904, it is now believed by the most conservative that the subject will be quickly laid upon the table. Not a few of the representative bishops have treated the matter indifferently, and argued strenuously that the church attend to 'vaster issues.' The unpopular side of this whole discussion has been disclosed in the fact that it is nothing more than an aspiration of a certain type of churchmen. These have considered the name in the light of a misrepresentation of their own claims. To get rid of the legal title and obtain a historical name would be the entering wedge to other changes. The so-called Catholic party in the Episcopal Church is not slumbering. Recent events have proved that it is well organized. Many of its number hold responsible positions and have increased their influence. But the conservative East is also shrewd and far-sighted. New Hampshire has voted positively for a change, while Maine has voted it down. This seems strange to one familiar with the tendencies in these respective dioceses, and yet it does not alter the conviction that the Eastern dioceses are the strongest opponents of the change. The matter may now be said to be settled, and the title of the church will certainly have a new lease of life for many years to come."

This is not the conclusion arrived at by the New York *Sun*, which has given the subject much attention in its editorial columns. The movement to change the name of the Episcopal

Church is, it says, a logical outcome of the Oxford movement, begun seventy years ago with the purpose of tearing away "every ligament of connection between the Church of England and Protestantism," and the movement will not end until this object is achieved, "even if the result shall bring about the disruption of the Episcopal Church as now organized." And in another editorial *The Sun* observes:

"The agitation for a change in the name proceeds from an impulse so revolutionary that the whole spirit of conservatism in the Episcopal Church, heretofore the most conservative of churches, must eventually be aroused against it. It is not the 'crazy scheme' the Newark rector calls it. It is an agitation which has been gathering force and increasing in intensity of conviction during the whole seventy years since its beginning in the Oxford movement. It may be called illogical, but it is not 'crazy.' It is a very serious movement, for it may be said to lead inevitably to the Roman Catholic Church, to which Newman, the guiding spirit of its start, at last rendered complete submission. In other words, it is a portentous uprising against Protestantism and in favor of Catholicism—an attempt to bring about a radical religious reaction which will not be stayed by any action next year's Episcopal general convention may take."

MISUNDERSTANDING OF CREED REVISION.

SOMETHING like a fundamental misconception of creed revision exists in the popular mind, so many religious and secular papers think, as one result of the labors of the last Presbyterian General Assembly. "It is a mistake to suppose that the adoption of the declaratory statement prepared by the revision committee involves the setting aside of the Confession of Faith," asserts *Christendom* (Chicago), which is anxious to have the subject clearly understood. This paper adds:

"Dr. Herrick Johnson puts the situation precisely: 'It is not to be a substitute for nor an alternative to the Confession. The old and fine form of subscription to the Confession remains without one iota's alteration in word or spirit. We shall still receive and adopt the Confession of Faith of our church as containing the system of doctrine taught in Holy Scripture. But this brief statement of the "Reformed" faith will help all men to a better understanding of what our doctrinal beliefs really are.'"

The task set before the committee on revision was twofold, according to the same authority. It had, first, "to make needful amendments to the venerable Confession of Faith"; and, secondly, to prepare "a brief statement of reformed faith," a statement "free from abstruseness and based upon the accepted doctrine of the church—a statement, in short, to inform and enlighten the people with regard to the significance and religious meaning of the reformed faith and not with a view of becoming a test of orthodoxy." Again:

"The revision committee did not recommend any change in the text of the third chapter of the 'Confession of Faith,' dealing with the matter of election, but contented themselves with adding a declaratory statement. It would have been better, however, if they had discarded that chapter altogether. If the Presbyterian Church does not believe in the unmodified doctrine of unconditional election as set forth in that famous chapter, this was the time to say so. No amount of euphemism can change the meaning of the words, 'By the decree of God, for the manifestation of His glory, some men and angels are predestined unto everlasting life, and others preordained to everlasting death.' The Westminster creed-makers were at least consistent, even if a dash of agnosticism would have made their theology more acceptable to men of less rigorous logic.

"So with regard to the article in the tenth chapter, which runs, 'all elect infants dying in infancy are saved.' The straight and simple way would have been to strike out the word 'elect,' and have made the article read, 'all infants dying in infancy are saved.' What the revisers did was to retain the old expression and to explain it, or rather explain it away, by saying that 'all infants who die in infancy are included in the election by grace and are regenerated and saved by Christ through the Spirit.' In other words, an early death is an infallible evidence of election."

The paper from whose columns we extract these comments thinks "many Christians by no means radicals would have preferred to see this old and honored creed explicitly replaced by a short and simple creed in harmony with the actual faith of the church to-day"; but "the great Presbyterian Church moves slowly, and its present accomplishment in the way of modification and revision may be taken as an illustration of the safe and cautious way in which it makes progress." "Without modifying the great truths for which Presbyterianism stands, the denomination has now protected itself from the charge of fatalism and the damnation of infants." To this the Chicago *Post* adds that "the Confession has not been revised even in the changing of a single word":

"The Presbyterians have abandoned no syllable of their ancient creed. To the strict Calvinist the articles remain as they have been from the first. But to the more modern Presbyterian is given the sanction of the church so to interpret the Confession that he may eliminate the doctrine of the elect, the theory of 'infant damnation,' and any other ancient interpretation which is not in harmony with the earliest, simplest, and most practical truths of Christianity and with the growing belief in the divine immanence in the world.

"Thus the creed of the church has not been changed; its meaning has simply been broadened. And in this fact lies the strongest probability that the Presbyterian, United Presbyterian, and the Cumberland Presbyterian bodies may soon come to such an understanding that they may unite into practically one body.

"There could be no stronger proof of the vitality of the Presbyterian Church than the adoption of these interpretative articles. The church is able to adapt itself to an age for which the original definitions of its creed were not designed, while not giving up an inch of the original foundations. And the result can not fail to be immensely beneficial not only to the church itself, but to humanity in general, for through this more liberal spirit the creed has become more vital, and a new relationship has been established with the daily experiences and broader religious views of mankind."

The agitation over creed revision assumed such proportions that "some thought the integrity of the great church was itself trembling in the balance," notes *The Tribune* (New York):

"Briefly stated, the Presbyterian creed now declares that no human being is damned because of God's desire or because of entailed sin, but only because of his personal and deliberate rejection of the means of salvation. That implies free-will, practically to the full Arminian extent. In the words of the Declaratory Statement adopted by the assembly, 'God has provided a salvation sufficient for all and freely offered to all; men are fully responsible for their treatment of God's gracious offer; His decree hinders no man from accepting that offer, and no man is condemned except on the ground of his sin.' Subtle metaphysicians may draw hairsplitting distinctions between that and the doctrine of free-will, but to the lay mind such will appear to be distinctions without differences."

The New York *Sun* goes so far as to say that "the Presbyterian agitation over revision during the past fifteen years may be said to have come to nothing deserving of respectful consideration":

"We are told that after the revision had been adopted so unanimously 'half an hour was spent in prayer and praise for the work accomplished'; but the accomplishment does not seem to have been enough to justify any such demonstration of satisfaction by an assembly of intellectual men. Dr. Van Dyke, speaking with great impressiveness, said he wished to make it clear, especially 'to the brethren of the press,' that 'this revision does not mean that the Presbyterian Church has changed her base one inch.' But 'the brethren of the press' who need any such assurance can not have read the text of the revision or they are incapable of drawing a reasonable conclusion. The changes made are purely verbal, superficial, sentimental."

FOREIGN TOPICS.

THE EVENTS IN SERVIA.

LIKE the chorus in a Greek play, the European press makes comments upon the tragedy in Servia with an eye mainly to dramatic effect. The midnight rush upon the palace at Belgrade, the hurried lighting of candles in the dark, the leaps from stair to stair, the shrieks of royal ladies, and the come and go of soldiers, conspirators, and victims present a situation that lends itself peculiarly to rhetorical effects, and editorial onlookers indulge in them freely. Nothing is easier than to transcribe the comment on "the personality of its chief actors," the result being the following newspaper estimates of the several personages in the catastrophe:

Draga, the late Queen of Servia, pronounced by the London *News* to have been "as ambitious as she was clever and beautiful."

Alexander, the late King of Servia, "hapless," according to the London *Times*, and "luckless from his birth, . . . the son of a blackguardly father and of a highly excitable mother."

Peter Karageorgevitch, the new King of Servia, whose various interviews in the *Neue Freie Presse* (Vienna) and the *Journal des Débats* (Paris) are appropriate to the mental condition of a person taken completely by surprise.

Brothers to the late Queen, slain, thinks the *Fremdenblatt* (Vienna), because "they were given the titles of princes. . . . They held receptions, spent money, and got into debt like royal persons."

Sisters to the late Queen, unassassinated, according to the London *Times*.

General Markovitch, late Premier, slain, was "no statesman," says the *Zastava* (Neustz, Hungary), organ of the new King of Servia's father. This newspaper predicted the fate of the late King and Queen of Servia just two weeks before their taking off.

Premier Avakumovitch, head of the present Servian ministry, whose advent to power, says the *Tribuna* (Rome), "would indicate an intention on the part of the conspirators to mask the atrocious crime with a show of sentimental patriotism."

Austria-Hungary, "a passive spectator," says the London *Times*, who regards the new King "with a benignant eye."

Russia, who will "advise" the new King, according to the *Sviet* (St. Petersburg), which says "that is necessary. . . . It is easy to slip where there is blood."

ALEXANDER AND DRAGA.

"Alexander did not know how to rule," says the Paris *Temps*. "Draga was unable to evoke one of those impulses of popular sympathy which sometimes clear an atmosphere. The people thought no more of her even if she had been wed by a king in robe and crown like a fabled shepherdess."

To these factors and personages may be added "the Powers," represented by the *Temps* (Paris) as "interested, but not involved spectators," and by the *Figaro* (Paris) as "having neither the right nor the duty to express an opinion." But the London *Times* remarks on this head:

"Prince Peter is strong in the moral support of Austria-Hungary. The *Fremdenblatt* is almost effusive in its optimism, and Austrians have, indeed, the best of reasons for regarding an accession of the Karageorgevitch line with complacency. Never have the relations of Vienna with Servia been more cordial than when, in the middle of the nineteenth century, the most prominent Karageorgevitch who has ruled Bulgaria, the father of Prince Peter, sat upon its throne. Austria then saw Bulgarian arms take the field on her behalf in the crisis of 1849, and naturally she is ready to augur the best from a return of the Karageorgevitch dynasty to power. Further, such a prospect bars the possibility of the accession of a Montenegrin prince, with its vista—to Austrian eyes at any rate—of a Greater Servia and the entanglement of the Slav populations ruled by the Austrian crown. But it is Russia which will probably throw the deciding weight into the scale."

But *The Times* anticipates no such series of Balkan complications as were at first predicted by the more pessimistic:

"The one thing that is to be deprecated is a civil war in Servia. If that is avoided, the country may probably escape interference at the hands of its two tutelary, but often inconvenient, great neighbors, Russia and Austria-Hungary. Twenty years ago a sudden crisis like this at Belgrade would inevitably have brought about not only interference, but intervention, with the reopening of the Eastern question as its certain consequence. Now, this is infinitely less probable. The Balkan states, tho still full of combustible matter, depend less for their tranquillity upon Belgrade than they used to do. The new Bulgarian Ministry is laudably endeavoring to come to terms with the Porte. Montenegro, by its matrimonial alliances (especially with Italy), has gone far to satisfy its earlier ambitions. Most fortunately, too, this Servian outbreak has not taken place till after the conclusion of the Russo-Austrian agreement, which, we may assume, covered not only the Macedonian question, but that of the Servian succession. For the present, then, Europe may look forward with hope to the settlement of a new Servian constitution without the employment of threats or force either from St. Petersburg or from Vienna."

At the same time there is an element of persistent pessimism in European comment on the situation, of which the following, from *The Standard* (London) is a fair specimen:

"We know that there is another rivalry behind the family struggle which has doomed all the rulers of Servia to hold their throne on the tenure of the 'ghastly priest' of Nemi—'the priest who slew the slayer, and shall himself be slain.' Russia and Austria contend for supremacy in the Balkan peninsula, and it is difficult to suppose that their strife has nothing to do with the final destruction of the Obrenovitch dynasty. It would indeed be an insult to the common sense of the world to suggest that either the Czar, or the venerable Emperor of Austria, or any responsible Minister, had cognizance of the approaching massacre at Belgrade. They are, no doubt, as much offended by it as the rest of the world. Military mutiny must always be odious to the chiefs of great armies. But the intriguers and assassins concerned have probably had some intention of forwarding the Russian or Austrian influence. The deliberation they have shown, and the exact preparation of the means they have used, prove that they have been working with some definite aim. The news of the next few days or weeks may be relied on

PETER KARAGEORGEVITCH.

"Mounts the throne by a savage and [illegible] passage," says the *Popolo Romano*, but "is in a position to rule better than Alexander."

KARAGEORGEVITCH COAT-OF-ARMS.

The new King's family, according to the London *Times*, may find its right to this armorial bearing disputed.

GEORGE KARAGEORGEVITCH.

The new Crown Prince of Servia, "educated," according to the Paris *Temps*, "along Russian lines."

THE NEW DYNASTY IN SERVIA.

to throw some light on a mystery of iniquity which is at present in darkness."

The political aspect of the tragedy has "yet to unfold itself," asserts the London *News*, which, after glancing sympathetically at "the undoing of the [late] King of Servia, . . . traceable to his passionate devotion to the remarkable woman he chose for wife," speaks thus of the political outlook:

"It is a little curious that one assured outcome of the situation will be to increase Russian influence at Belgrade. For years it has been known that Montenegro is a pawn of Russia. The Servian Pretender married a Princess of Montenegro. The Pretender's son is being educated at St. Petersburg. The army is furnished with Russian rifles, and this year it received a present of ammunition to match. It was the army which stormed the palace of King Alexander, while good citizens were asleep in their beds. Servia is bound to Austria by ties of trade and by a common frontier, which no Russian intrigue can undermine. But it is clear that Russia has been carefully establishing relations of most paternal character with the Karageorgevitch family. . . . King Alexander and Queen Draga have not perished thus suddenly without the previous formation of a deep and cunning national conspiracy, which may have unimagined sources."

The relation of Austria-Hungary to the Servian kingdom causes the comment of the Vienna press to be quoted widely in Europe. The *Fremdenblatt* says: "There is nothing in our former relations with the house of Karageorgevitch which would justify dislike to it. They have always been the best. Austria-Hungary only desires that the state of things may improve in Servia." The *Neues Wiener Tagblatt* says: "Austria and Russia have no objection [to the new King] so long as peace and order prevail." The *Pester-Lloyd* (Budapest) asserts: "Our monarchy will certainly keep a vigilant eye on events in Servia." In Russia we note the *Novosti* (St. Petersburg) declaring that the events in the palace "will not go unavenged," while the *Novoye Vremya* (St. Petersburg) says that none of the blood spilt will fall on the head of the Czar's Government.

"The European nations have no greater concern in this matter than to see that the tragedy of Belgrade does not become a tragedy for the great civilized Powers," thinks the *Vossische Zeitung* (Berlin), adding:

"The fate of the Obrenovitch dynasty is pitiable. The crime that was committed cries to heaven. But if these events were permitted to lead to political developments, involving the peace of the Powers, the result might be far-reaching beyond the boundaries of Servia. There would certainly ensue many complications that could not be smoothed out in a day. Such complications as there are will have to be dealt with and can be dealt with if the Powers concerned try to understand and make known the new situation in a serious, disinterested, and decisive spirit. Austria-Hungary and Russia are chiefly concerned. Their course will be watched with the utmost interest. . . . Germany has no political interests in Servia and can therefore let the other Powers take the lead."

JEWISH INFLUENCE ON RUSSO-AMERICAN RELATIONS.

"EVER since the politicians of the United States unfurled the banner of expansion and imperialism, it has become more and more the custom" in the American republic to "devote time and attention to the affairs of foreign countries, even when those affairs happen to be purely internal in character." This statement prefaces one of the many elaborate studies of American internal affairs which have become a regular feature of the *Kreuz Zeitung* (Berlin). At present, observes this Agrarian organ, the Jews happen to be the recipients of American imperialist attention. "The atrocities at Kishineff, naturally, afforded the occasion." We read further:

"The matter is highly interesting in more than one respect. We may gather from it what strength Judaism, reinforced by immigration, has gained in the United States. It is also the first time within our recollection that an American popular movement has been directed against Russia. At any rate, anti-Russian demonstrations of this intensity have never before occurred in America. According to the old Washington tradition, Russia and America were born friends, and the thought implied was that both nations had a common enemy in Great Britain. It was formerly an orthodox tenet of American policy that between Russia and the United States there existed many interests of a mutual character and not a single antagonism. As a pledge of this amity, Russia gave Alaska to the Union—of course, with the hidden desire of whetting the appetite of the Yankees for the intervening British America. As long as the Americans saw their hereditary foe in Great Britain, they sought to strengthen their friendship with Russia to the utmost. Attacks and reflections upon the Russian bear were carefully avoided, and in the

White House Russian friendship was kept as warm as possible. In the recent period that has witnessed the transformation of everything, this state of mind has likewise altered. The more intimate the friendship with Great Britain became, the cooler grew the sentiment toward Russia. Since America conquered the Philippines, which are termed the American gateway to the Orient, a gradual antagonism has grown up between the two nations, for the Americans do not want Russia to rule in the East, and if now they are openly striving for the dominion of the Pacific, that is an ambition directed even more against Russia than against Great Britain. The director of the Anglophile policy is principally the present Secretary of State Hay."

The authority we are quoting makes a parenthetical allusion to the jealousy which, we are assured, subsists between Mr. Hay and Senator Lodge of Massachusetts:

"If Mr. Hay has recently shown himself very anti-German, the antipathy is based, as those in touch with the situation think, mainly upon anxiety with regard to Lodge. The arch-Jingo Senator Lodge is not only the most intimate personal and political friend of the President, but also the chief inspirer of anti-German sentiment in Congress. It has often been said that Hay will have to retire and that Lodge will be his successor, but Mr. Hay has not been won over to the change. He wants to stay, and he tells himself that if Lodge is to replace him in order to accentuate the antagonism to Germany, he will demonstrate that he can bring such a thing about himself and thus render a change in the office of Secretary of State superfluous."

Having taken this side-glance at the situation in the President's official household, the German commentator returns to the subject of the Jews. Attention is called to the various mass-meetings to protest against the outrages in Kishineff. "The American people wish to interfere in a purely internal Russian concern," we read. ". . . Russia must promise never to act in such a barbarous way again. This demand is supported by Congressman Goldfogle—note this droll Anglicizing of a German name." Our commentator adds:

"The outcome of this agitation can only be that the individual American must fall more and more under the great delusion that his country is the arbiter of the whole world and he himself—Mr. Brown or Mr. Smith—as a particle of this all-embracing territorial jurisdiction becomes in a sense a co-ruler of all foreign states. The French in the spring of 1870 were not so inflated as the Yankees now are in the opinion of those who can speak from personal observation. When President Roosevelt, in the interest of his own reelection, constantly seeks to increase this national self-consciousness by his series of speeches, he can not have asked himself what the ultimate consequences of it all may be. It is possible that he has enough confidence in himself to think that he can control the wild steed, but this hope seems to us very dubious. No President yet, not even Congress, has been able to control public opinion when once aroused. Public opinion is not made by the framers of the laws, but by the press, which is in truth the ruler of the country. The Russian Ambassador, Count Cassini, therefore showed his astuteness when he received a reporter and imparted to him his views. To be sure the Count's conciliatory words have helped little, but he made a good impression by speaking through the newspapers."—*Translations made for* THE LITERARY DIGEST.

GERMAN VIEWS OF BRITISH POLICY.

A CLUE to British foreign policy, and the only clue, is "isolation of the German empire," asserts the *Deutsche Monatschrift* (Berlin). It says:

"British diplomacy insinuates into the ear of the other Powers that 'the German empire is so great solely because of the mutual dissensions of the remaining countries, and these dissensions must be done away with.' Suiting the action to the word, British statesmen began a series of negotiations with the other Powers by means of which they strove to settle their various differences with Russia, France, and the United States. What had scarcely ever happened before—that Great Britain should give up a right or a claim—was now brought to pass. Sources of irritation to the United States were removed, Russian aggressions were winked at, France received overtures, Italy, Austria, and even the Pope got honeyed words. From all of them the admission was sought that the rise of the German empire was prejudicial to them and that the fall of Germany would redound to their advantage. . . . What the end aimed at really is may be fairly inferred from Great Britain's conduct to Denmark in 1807. Is it in our case to go so far? Much will depend upon the impression which King Edward has derived from his recent European tour. More will depend upon the policy decided upon in St. Petersburg and in Washington. In some quarters a setback for the German empire or at any rate an Anglo-German war is deemed a God-send in prospect, a welcome, extraordinarily fortuitous outcome of the Boer War. Whether such a state of mind would persist during the course of such a war, whether the victory of Great Britain with all its dire consequences would be equally welcome, others may judge for themselves. Even in France the Government could not refrain from sending a ship to Morocco during the Anglo-French exchange of amenities, because disquieting accounts of the doings of the English friend came in from that part of the world. Centuries of mistrust can not be dissipated by a few words of improvised friendship. Still less can profound antagonisms of interest be swept away by mere acts of the will. Settlement of mutual differences is a thing to be praised when attempted in the interest of peace, but to make peace over trifles for the sake of war over great issues must be universally recognized as a contradiction. France undoubtedly received the over-

FAR AWAY.

THE CARTOONISTS AND THE BALKAN PROBLEM.

tures of English statesmen in a friendly spirit for the sake of her hopes with regard to Morocco. No doubt Russia will put no curb upon British eagerness for war, altho in thus proceeding she thinks less of the collapse of the German empire than of the impediment to the Bagdad Railway, the acquisition of Manchuria, and her own final arrival at the Persian Gulf. Great Britain must make good the sacrifices she had to submit to during the Boer War. If before a long interval Mr. Chamberlain makes a journey to America, as he did during the period prior to the African war, the German empire will certainly have every reason to be watchful. Whether the present of some Portuguese colonies or even certain sacrifices of British property, such as Jamaica or the Bermudas, would console the United States for the loss of so natural an ally as the German empire might be, is a matter open to doubt."

"It is difficult to believe," adds the same writer with reference to Mr. Chamberlain's recent proposals, "that Mr. Chamberlain did not previously sound President Roosevelt. At any rate, Mr. Chamberlain is playing a big game, and the Powers of the continent of Europe must strive to do away with their mutual dissensions if they do not wish to sink to the level of petty states. A great period is drawing near. May it find among us leaders great enough to rise to the level of coming events!" This aspiration is devoutly echoed by the militarist and Pan-German *Grenzboten* (Leipsic), which says:

"We must either renounce all our ambitions of becoming a world-power, or we must strive with all our might to win a position beside Russia, the United States, and Great Britain. We can have some prospect of success only in case we bestow upon the steady development of our navy the same pains we took to create our present peerless army. Those who try to render us uneasy regarding the cost in money must bear in mind that Prussia had to expend relatively great sums in order to attain the position of a great Power. And all the money expended will ultimately redound to the benefit of home industry, since it remains in the country."

The anti-British *Kölnische Zeitung* notes that when Mr. Chamberlain wished to win public opinion to his tariff proposals he harped upon the anti-German chord. "Germany is made the mischief-maker," it says, but it recommends an attitude of circumspection. "A far-reaching action, of serious portent for Great Britain's future welfare, is about to be taken, apparently. What the outcome is to be no one can predict."—*Translations made for* THE LITERARY DIGEST.

VIATCHESLAV VON PLEHVE.

NOT for years has the personality of a Russian statesman been exploited in the European press to the extent now witnessed in the case of the Czar's Minister of the Interior. M. von Plehve is as timely a topic as the great Mr. Chamberlain himself. According to the Paris *Temps*, the Russian statesman is entitled to all the credit, or discredit, for the initiation of the policy of Russification in Finland, while the London *Times*, in the most diplomatic of editorials, throws doubt on the evidence that he did not send the now famous secret despatch to the former governor of Bessarabia, which is held responsible for police neutrality during the Kishineff massacres. The expulsion of the St. Petersburg correspondent of the London daily has followed the publication of the editorial, in the course of which *The Times* felt warranted in saying:

"Our only surprise is that the Ministry of the Interior has not deemed it expedient to disavow the alleged despatch before, as M. de Plehve must, of course, be aware of the effect which it has produced upon the public mind among all civilized nations. We are, of course, sufficiently familiar with diplomatic usage to accept the *démenti*, now that it has come, in the usual way, as, for example, Mr. Hay accepted the formal contradiction issued by the Russian Ministry for Foreign Affairs to Mr. Conger's account of the proposed Manchuria convention with China, of which M. de Plançon, the Russian minister at Peking, had handed him a copy written out in his own hand. It is a curious and most unfortunate coincidence that, before and during the butchery of the Jews at Kishineff, the governor of Bessarabia conducted himself precisely as tho he had received this nonexistent letter, and as tho he were endeavoring to fulfil the orders which were not given him. It is regrettable, too, that many incidents have since occurred which seemed to confirm the 'inventions' contained in the alleged letter, and to show that the views which it expressed are those which the bureaucracy really hold."

Not less disparaging are the opinions which the *Neue Freie Presse* (Vienna) expresses of M. von Plehve and his methods. He is about fifty-seven years old, we read, and won the confidence of the bureaucracy by the energy with which he strove for Russification in Finland. He recommended himself to the Czar Alexander II. by his unaffected piety, according to the same authority, which speaks at length of his devotion to the saints and of his pious pilgrimages to noted shrines. Under the Czar Alexander III. he continued to rise in the public service. "He was always the advocate of reactionary measures against the Jews," and may be regarded as "the incarnation of the policy of Alexander III." When M. Sipiaguine, the former Minister of the Interior, was assassinated last year, M. de Plehve was appointed his successor as a recognition of his services in Finland and as a demonstration of the purpose of the bureaucracy to continue the policy marked out for itself. Nor does the *Kreuz Zeitung* (Berlin), notwithstanding its deference to Russian opinion, refrain from observations which seem to confirm all that is said elsewhere. "Plehve," it says, "is a Russified German," one who is "thoroughly permeated with Russian national and Russian religious ideas." It adds:

"Taking all these facts together, it seems beyond doubt that a dire misunderstanding is being brought about between Nicholas II. and his people. One feature of the situation is a deliberate and conscious purpose to enslave, and another feature is the constant dread of revolutionary tendencies. . . . But an actual revolution in Russia is unthinkable. What happens and what must continue to happen is a series of disturbances directed against unpopular officials, but not against the dynasty."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

TRAFFIC IN VOTES.—Democracy in the United States will be destroyed by traffic in votes, thinks an anonymous writer in the *Journal des Economistes* (Paris). "Well-to-do people contribute regularly to political funds devoted to the purchase of votes. The money received is considered by the voter a recompense for the time lost in going to the polls. Two dollars is the average price of a vote. Were the Democrats and the Republicans alike without money and were one side to offer a box of cigars, the voters would unhesitatingly decide in favor of the cigars."

PRINCE HENRY IN SPAIN.—The visit of Prince Henry of Prussia to Spain was a great success, thinks the *Liberal* (Madrid). It asserts that he is doubly welcome because of the sympathy of Emperor William II. for Spain during "the dark days at Manila," when Spain had few friends. The *País* (Madrid) asserts that it was "Prince Henry who, by his unequivocal attitude, revealed the side on which his sympathies lay." This commentator adds: "We must remember that during the Spanish-American war Germany manifested the liveliest sympathy for our side. Spanish sailors recall with gratitude the noble and fraternal conduct of the German sailors stationed at the Philippines during the melancholy period before Cavité."

SUBTLETY OF THE SULTAN.—"Abd-ul-Hamid has two characteristics that come in rather importantly here," says the London *Spectator*, speaking of the Sultan's prompt acceptance of Macedonian reform. "He is an Oriental, and he is Abd-ul-Hamid. He has all the subtlety that marks his race, and he has shown again and again by what methods this subtlety works in his particular case. He has learned that to seem to anticipate criticism, to be ready with concessions even before he is asked for them, to be willing to substitute stronger proposals the moment that those first drafted are declared insufficient, need not be anything more than moves in a carefully devised plan for amusing the Powers until such time as a Macedonian insurrection has changed the whole situation, and given the Turks the advantage of which the Powers have been so anxious to deprive them. The Sultan loses nothing by thus readily falling in with the Austro-Russian proposals. He has the whole machinery of delay in reserve, and it will be none the less effective because it is resorted to last rather than first."

UNTIE the KNOT with SYSTEM

System in business is protection from snarls—protection from knotty, vexatious complications—protection from the little nuisances that waste time and money. True system is automatic insurance against them. This page describes some of the appliances which smooth the way to a well-systematized business. These appliances save watching—save worrying. Read this page carefully.

An ERICSSON INTERIOR TELEPHONE SYSTEM shortens office work, saves actual time, saves confusion. To some men such a system seems a luxury. All who have installed the system *know* it is an economy. Cheap inferior 'phones soon get out of order. That's worse than no system at all. But the Ericsson is built to last the same quality and style used on long distance lines. No other concern anywhere has studied the telephone system so thoroughly, or devised so many special instruments and attachments to save time and bother in office communication. The Ericsson system contains all the best features of other 'phones and some features found in no other 'phones. Ask now for Catalog 4.

There was a time when any old chair would do for the office. Business and comfort were not partners. But times have changed, and ideas of business comfort have changed with them. McCLOUD'S NEW TWENTIETH CENTURY ADJUSTABLE SPRING BACK CHAIRS have been important factors in the improvement. "Back Resters" they call them—because they give complete back rest while at work, thereby enabling the man at the desk or woman at the typewriter to accomplish more work with greater comfort. Catalog 14 describes the McCloud Chairs and shows the adjustment which fits the back.

"Right men for right places; right places for right men." This is the watchword for Hapgoods', the incorporated company which has made a CLEARING HOUSE FOR BRAINS one of the most notable features of modern business methods. If you are an employer of high-grade men and want to bring to bear American brains, write for Hapgoods' Catalog No. 21a. If you are a capable man, desiring a high grade position, write for Hapgoods' Catalog No. 21b. Large offices are established in the Mutual Reserve Building, New York City; the Monadnock Building, Chicago, the Pennsylvania Building, Philadelphia.

No matter what you want to file—inform a-tion, papers, samples, documents—there is a Shaw-Walker way to do it. And that way is the best way because it is the most simple. Shaw-Walker card systems are better than books. Shaw-Walker vertical letter files better than flat sheet cabinets—Shaw-Walker sectional bookcases better than solid ones. All are built in sections so they will grow as your business grows. Send to-day for Catalog 19. It tells all about SHAW-WALKER SYSTEMS. The book is concise, terse, yet complete. Costs the Shaw-Walker Company 38c. to send it, but they will do so gladly if you simply sign the coupon on the corner of this advertisement.

Time is money. This is particularly true in the commercial world. BAIRD'S No. 12 TIME STAMP makes an absolutely accurate record for every purpose where time counts. The Receipt of correspondence, job time, the arrival and departure of employees and in countless other cases time is measured to the minute by this—the only durable time stamp. It is made of the finest materials, with finely polished steel bearings. The clock movement, being in an entirely separate compartment from the stamping mechanism, is unaffected by the hammer action. The price is remarkably low. Catalog 3 describes and illustrates the Baird Time Stamp.

For many years methods of accounting did not change materially, but when the BURROUGHS ADDING MACHINE was placed on the market this branch of office work was revolutionized. To day there are 14,000 of these great time savers in banks, mercantile houses, factories, wholesale and retail stores, etc. Wherever this machine is not part of an office equipment it is because its merits are not understood. It bears the same relation to figures that the typewriter does to correspondence. It adds figures with ten times the speed of the quickest clerk and it is mechanically impossible for it to make a mistake. Described in Catalog 13.

A postal scale is not a luxury—it is a necessity. The greater the amount of mail, the more actual necessity it becomes. The owner of a PELOUZE "MAIL & EXPRESS" SCALE will save its cost in a short time, and the heavier and larger his mail is the shorter the time will be. It tells the exact cost of postage on all mail matter. It weighs express packages up to 16 lbs.—every scale is warranted. Whether your mail just is large or small, it will help you to cut down your stamp bill, as well as facilitate the handling of mail. Catalog 10 will give you useful information about Reliable Postal Scales. Ask for it on the coupon.

The little things in an office sometimes save the most time, labor and money. RUBBER STAMPS, NUMBERING MACHINES, ETC., suited to your business, will aid you in a countless number of ways, and at little cost considering the valuable service they can render. There is system in using stamps, too, that you ought to know about. An ingenious little holder called "Rex" keeps them in order, clean and handy. The best ideas on Rubber Stamps and kindred articles are described in Catalog 12. New ideas for Rubber Stamps are being discovered almost daily. If you send for this catalog you will receive not only the latest and most practical ideas discovered up to date, but will be kept informed of new schemes that are being constantly originated in the leading mercantile houses.

Old-fashioned bound books for accounts are impractical and expensive. Loose leaf books admit of arrangement, rearrangement and expan-ion. They save time, for the yearly or semi-yearly opening of new books is done away with. They are self-indexing. No outside indexing is required. The JONES PERPETUAL LEDGER COMPANY'S LOOSE LEAF BOOKS have every advantage of any loose leaf book and more—absolute alignment of the leaves—a strong binder in which the leaves can not move a hair's breadth. Every progressive business man should read Catalog I. It explains JONES PERPETUAL LEDGER COMPANY'S LOOSE LEAF BOOKS and how you can use them in your business.

SOME business men are prejudiced against fountain pens. And that same prejudice has kept them from knowing how great a saving WATERMAN'S IDEAL FOUNTAIN PENS would make in their office work. Continuous writing without dipping and blotting saves so much of a man's own time—and the time of his stenographers and clerks—that a pen pays for itself in a short time. But the fountain pen must be a "Waterman," else the bother and leaks and breaks might offset the saving. Catalog 5 tells all about Waterman's Ideal Fountain Pens, and of special pens made for modern office work. If you are interested in manifold work, tell us.

File your clippings, memoranda and manuscript. Every busy man literary, business or professional realizes the great necessity of properly filing and classifying memoranda, clippings, data, etc.

Any one who has spent time searching through a mass of papers for a paragraph once marked, a misplaced clipping or memorandum, will appreciate the tremendous advantage of having such data arranged in order and at his fingers' ends.

The LIBRARY FILING CABINET is the solution of the problem of classification. It is the acme of simplicity and ready reference. Send for Catalog 8. It gives valuable information that can not be acquired from any other source.

No office is considered complete without an EDISON MIMEOGRAPH. In these days of commercial competition there is no surer, quicker or cheaper way of quickening business than by employing the many means offered by this valuable machine. There is a place in almost any business where an Edison Mimeograph will save time and money. Perhaps you see no use for it in *your* office. You probably will after you read Catalog 6 and understand what a Mimeograph will do. It will pay you well to read it. Cut out and sign the coupon on the corner of this advertisement, or better still write us a letter stating your business.

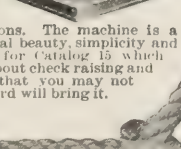
Every man who conducts correspondence is interested in the question "Which is the best typewriter?" There are twenty-five substantial reasons why the OLIVER TYPEWRITER is the best machine the world has produced. So phenomenally successful has this machine become that it has proven its unqualified right to the title. "The Standard Visible Writer," and the business world has decided that its adoption increases quantity, improves quality and reduces expense. Strong claims—but easily proven. The wide range of the Oliver Typewriter's usefulness makes it easy to adopt systems heretofore impracticable except with the pen. Catalog 2 explains in detail.

The ADDRESSOGRAPH is as necessary to a modern office as steam is to an engine. With it an office boy can do in one hour what it formerly took ten clerks two hours to do. It not only addresses envelopes in exact imitation of typewriting, but also fills in names on duplicate letters, prints names and addresses on shipping tags, pay envelopes, time tickets, monthly statements and loose leaf systems. Thousands of business houses now have their lists of names arranged for the Addressograph and kept by States or Territories so that printed matter can be speedily sent to any special list. There is at least one place in your business for the Addressograph. Learn now what it will do. Catalog 7 describes it, and illustrates its many uses. Write for it to-day.

The PROTECTOGRAPH absolutely secures the integrity of checks. It impresses a line like this:

NOT OVER FIVE DOLLARS 5

in strictly indelible ink upon any preferred part of the check so deeply as to make the line a part of the document itself and absolutely unalterable and ineffaceable. It is used by the U. S. Treasury and more than 10,000 financial and industrial institutions. The machine is a model of mechanical beauty, simplicity and efficiency. Write for Catalog 15 which tells some things about check raising and check protection that you may not know. A postal card will bring it.



Free information is offered you here. Mail us this coupon or write us a letter

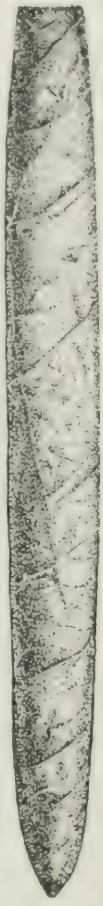
Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

MY cigars do not suit everybody. But they are made as good as I or any one else knows how to make them and be honest. The worst of them is on the outside—the wrappers. These are genuine Sumatra. Sumatra wrappers are used on millions of so-called clear Havana cigars, and contrawise the Sumatra wrappers on other millions of cigars are grown in Florida and Connecticut.



EXACT SIZE Panetelas EXACT SHAPE

The fillers of my Panetelas, Conchas Especials and Perfectos are long clear Havana, fine quality. Not all the tobacco grown in Cuba is even good.

Then again, I use clean stock. No drugged, doctored or flavored tobacco is ever used in my factory. (Look in a tobacco trade Journal and notice the extracts advertised).

I manufacture Panetelas $5.00 per hundred; Conchas Especials, $6.00 per hundred; Perfectos, $8.00 per hundred. These cigars cannot be duplicated at retail better than at almost double these prices. To get a really better cigar it is necessary to buy the standard imported brands.

I sell the entire product of my factory to the smoker at wholesale prices. I have nearly five thousand customers.

I solicit a trial order under the following conditions: Send me the price of a hundred cigars, $5, $6, or $8, and I will send them *on suspicion*, express prepaid. If you do not like the cigars after smoking ten of them you may send back the remaining ninety and I will pay return expressage, and refund the full amount of your money.

The publishers of this periodical will not insert offers of this sort from bogus concerns, and its appearance here is an evidence of good faith on my part.

Then again, think of what all this means to me. I risk one-tenth of my cigars and expressage both ways for the chance of making a customer.

I ship thousands of cigars every day to all parts of the United States practically on approval. Could I afford to send out cigars that would not stand this test?

If you are a smoker and still a doubter, write me and I will try and remove your doubts. Address Herbert D. Shivers, 44 North Seventh Street, Philadelphia, Pa.

CURRENT POETRY.

Richard Grant White.

BY PAUL HAMILTON HAYNE.

[This was written in 1878, a year before the author's death. The manuscript had been in the possession of the poet's son, William Hamilton Hayne, prior to its publication a few days ago in *The Independent*.]

His voice I had not heard, nor seen his face,
Yet have I marked all features of his mind,—
Their stalwart frankness and their cultured grace,—
And known what largess he has left mankind;
Wise thoughts, pure thoughts, a style as crystal clear
As the still waters of a Zetland mere.

His genius, molded in a form unique,
(Which shuddered at the touch of "Commonplace"),
Held in fair wedlock, goldenly combined,
Modern forthrightness with a charm antique,
A strength all Saxon and a depth half Greek.

And for the rest, he bore his spirit high,
Well-poised, serene, unwavering, even as one
Who, tho earth-bound, would rather front the sky,
And fiery blazon of the noonday sun,
Than crouch in shades of cool humility,
While the great Triumphs of the world sweep by.

He kept the royal ermine of his pride
Stainless,—for his that fast-decreasing clan,
Wherein the Sage and Scholar strives to lift

American and Australian Line
427 BROADWAY, NEW YORK

Line to New Zealand, Australia, and Around the World.

Above our reckless age's sordid drift,—
  Above its shallow scorn, or furious rage,
Those courtly virtues only fools deride,
  Which stamp the heaven-elected Gentleman.

Well were his nature and his toils allied,—
  Large both and liberal!—'tis no marvel then,
He walked in such security of ease
  Through Shakspeare's world of monarchs and great men,—
A kingly Realm he loved and magnified.

Ah, in that heavenly Country over seas,—
  We wot not of, all shadow-wreathed and dim,
I trust I care not its mansions man-fold,—
  I trust a happy Home remains for him,
Wherein the wise Grammarians born of old,
  Scholars and Poets, and bright souls of mark,
  Who starred the blackness of the ancient Dark,
May chorus welcome to the nightless lands,—
  And foremost there (upon his smiling face,
  The softened sweetness of that sacred place),
His Master Shakespeare, with warm, outstretched hands!

PERSONALS.

Descendants of Hiawatha.—New York recently witnessed a "Hiawatha" opera, in which real Indians took the leading rôles and the melodies of which were based upon Indian folk-song. In a recent issue of *The Youth's Companion*, the story is told of the affection existing between the poet and his Indian friends. We quote as follows:

"Longfellow's special friend, from whom he heard the Indian stories, was Bukwujjinene. A few years ago the old chief planned to visit Boston and Cambridge, but just as he was ready to start he was taken ill.

"When he realized that he was about to die, he called his nephew, Kabaoosa, and his grandson, Wabaunosa, and told them to go to the home of the poet and invite Longfellow's daughters to visit the scenes on Lake Huron, which their father knew so well. The chief gave his kinsmen a formal invitation written with a hot iron on a square of birch bark. Translated into English, it ran:

"Ladies. We loved your father. His memory will always live in our hearts, and his kindness will never die. Will you be so kind, you and your husbands, as to come and visit us in our own country, and live with us in our teepees for a little while in the island of Hiawatha, in the land of the Ojibways, to see the remainder of the Indians with whom your father lived, and about whom he has written so beautifully, and to camp together as our parents did. Kabaosa.
Wabaunosa.
In the moon of crusts on the snow.

"The two Indians went to Cambridge, visited the Longfellow house and presented the invitation to Longfellow's daughters. They sat in the chair where the poet sat, and wrote with the pen he had

...used to [illegible] Hawaiian[illegible]" The ladies accepted the invitation, and visited the Ojibways that summer."

When the President Tramps.—Washington people often wonder, says a writer in the Philadelphia Saturday Evening Post, why, in their numerous outings along the suburban roads, they never meet President Roosevelt except on horseback or in a carriage. It is said that the President never starts from the White House afoot; of course he takes long walking tramps whenever he can. "Stories are told of how he returns, his shoes and clothing giving unmistakable evidence of a long and vigorous tramp." The writer continues:

"When determined on a long walk he is driven to some point in the wooded environs of the city, where, after dismissing the driver, he disappears, returning many hours later, sometimes with dust, cobwebs, grass-stains, and forest mold from head to foot.

"Dr. Gifford Pinchot and other scientists who sometimes accompany the President can readily explain why eager carriage riders never enjoy meeting him. It is simply because he strikes right out through the woods and across fields, turning aside from every beaten path. There is scarcely any part of the beautiful woodlands within a day's tramp from the White House with which the President has not already become familiar. With special particularity he has located many fine springs. These halting-places for refreshing drinks have proved the salvation of several statesmen who in rash moments have put themselves in the way to be invited to share a walking trip with the President. To bolt straight up a hill thick with laurel and hazel underbrush and tangled with wild blackberry vines is a trying ordeal, particularly for men unaccustomed to exercise."

MORE OR LESS PUNGENT.

Nothing but Money.—HE: "Worth half a million, isn't he?"

SHE: "Yes; but otherwise he's worthless."—*Puck.*

Handicapped.—"But if the professor is so absent-minded that he can't remember his own name, why doesn't he write it on a slip of paper and carry it with him?"

"He tried that, but he found that he couldn't read his own writing."—*Brooklyn Life.*

Misunderstood.—FIRST LAWYER: "Well, I've just made a fortune."

Buy "Soo" Real Estate Now

And Make Money

Property Values Are To Be Increased Wonderfully

A few of the many Mills (Brown Stone Buildings) and St. Mary's River.

We will sell a choice lot, size 38 x 105 ft. to lane, in our Highland Park addition, beautifully located in Sault Ste. Marie, Ont., overlooking St. Mary's River, on our easy payment plan of $10 down and $6 per month.

Mark our exceptionally liberal terms to purchasers. In case of sickness or loss of employment, we will grant extensions and safeguard your equity; or, if you should die after one year's payments have been made, we will deed the property with clear title to your estate or heirs.

If, by the spring of 1904, lots similar to the one you buy are not selling for $250 each or more, we agree to return the money you have paid, with 6 per cent. interest, on your request.

Any one who buys a lot of us and who visits the Soo within two years from date of purchase, and is not fully satisfied with the investment, can have the money paid returned in full with 6 per cent. interest for the full time invested.

At present we are selling these lots for only $200 each, but they are worth more and on September 1st prices will be advanced to $225 each. Take advantage of this gain now. Send without delay or this choice tract will be sold out. All orders entered in rotation as received.

Highland Park has graded streets, shade trees, and strict building restrictions, and is only ten minutes' walk from center of the city by direct street. It promises to fully triple in value by 1905.

The Soo's Wonderful Growth and Prospects

In 1893 it was a village of 2,000 people—comparatively unknown and with no large industries. In 1900 it had grown to 5,000 and had 5 manufacturing plants, employing 500 hands, and Real Estate values assessed at $1,700,000. Now, 1903, it has over 18,000 inhabitants, 20 immense industrial plants, employing 5,000 people, with an annual pay roll of $2,500,000, and an assessed Real Estate value of $7,000,000 (with bulk of large industries exempt from taxation). This great increase has been mainly made in the past 18 months, through the gigantic enterprises developed by the "Allied Companies" (capitalized at $117,000,000), and when the further developments now planned by this great Company are completed, employment will be given to over 25,000 people, which indicates that our city will have a population of more than 100,000, making it a powerful industrial center, and providing numberless opportunities for the making of fortunes, and assuring an immense increase in Real Estate values.

The great "Soo" Locks through which 25,000 vessels pass annually

All this remarkable growth is the result of actual industrial requirements. There is no trace of the speculative "Boom" element about it and everything is being done on permanent basis. **500 houses** were built here last year and more than that will be built this year. Fortunes will be made in Soo Real Estate within the next few years.

Our "Soo Books" Free Our illustrated books describe this great city, its environs, its wonderful growth and prospects for the future. They explain our plan and tell just the things about the Soo that the investor, laborer, home-seeker, or business man wants to know. These interesting books and other literature about the Soo will be sent free to any one interested. Write to-day! Don't put it off. Don't let this great opportunity slip by.

Current Events.

Foreign.

SERVIA.

June 15.—Prince Peter Karageorgevitch is chosen King of Servia at a joint meeting of the Senate and Skuptschina at Belgrade; he accepts the crown under condition that the murderers of the King and Queen be exiled.

June 19.—The British Minister to Servia is instructed to withdraw from Belgrade for some time, on the arrival there of King Peter, and in the mean while not to recognize the new government.

June 21.—Promotions of the military deputation to King Peter are announced; they include several of the palace conspirators.

OTHER FOREIGN NEWS.

June 15.—The Empress-Dowager of China receives Rear-Admiral Evans at Peking.

June 16.—The Hungarian Cabinet resigns.

The French budget for 1904 shows a large deficit.

The Reichstag elections are held throughout Germany; the Socialists show great gains.

Mexico pays the award in the Pious Fund case.

Prince Wiosoff is appointed provisional governor of Bessarabia, Russia.

June 17.—China abandons the idea of transferring the commercial treaty negotiations from Shanghai to Peking, in consequence of the American and Japanese protests.

General Rolando, with an army of 2,000, proclaims himself chief of a new revolution against President Castro, of Venezuela.

Another unsuccessful attempt is made by the Liberals to induce the British Government to disclose Mr. Chamberlain's policy of imperial reciprocity.

June 18.—Austria and Chile officially announce that they will be represented at the St. Louis Exposition.

June 19.—Japan makes a formal demand at Peking for the opening of Mukden and Tai Tung Chow to foreign trade.

June 20.—Herbert Vaughan, Cardinal and Archbishop of Westminster, dies in London.

The sentiment in Bogota is reported to be changing in favor of the ratification of the Canal treaty.

G. Z. Zoubikov, a Russian Buddhist, returns from Tibet, where he lived for one year.

June 21.—The King of Italy accepts the resignations of Ministers Giolitti and Bottolo; the rest of the ministry is to remain.

Riots occur in several French towns between the Clericals and anti-Clericals.

The correspondent of the Vienna *Zeit* states that he has learned that von Plehve, the Russian Minister of the Interior, had prepared and managed the Kishineff massacre

Domestic.

THE POST-OFFICE SCANDALS.

June 17.—First Assistant Postmaster-General Bristow's report on the inquiry into conditions in the Washington Post-office is made public.

James T. Metcalf, superintendent of the money order division of the Post-office Department, is dismissed for indiscretion in awarding a printing contract.

THE FLOOD SITUATION.

June 15.—Five hundred persons are drowned by a cloudburst at Heppner, Ore.

June 18.—Thousands of acres of Louisiana cotton land are flooded and thousands of persons made destitute by the breaking of a levee.

Pears'

It is a wonderful soap that takes hold quick and does no harm.

No harm! It leaves the skin soft like a baby's; no alkali in it, nothing but soap. The harm is done by alkali. Still more harm is done by not washing. So, bad soap is better than none.

What is bad soap? Imperfectly made; the fat and alkali not well balanced or not combined.

What is good soap? Pears'.

Sold all over the world.

WILLIAMS' SHAVING STICK

It's So Convenient

No cup needed.

Just wet your face, rub on a little soap, work up a big, creamy lather with your brush and you'll shave with ease and pleasure.

Nothing like it.

Williams' Shaving Stick sold by all druggists. 25c.

The J. B. Williams Co., Glastonbury, Conn.

DIAMONDS ON CREDIT

ST. LOUIS, MO.

New England CONSERVATORY OF MUSIC

To be a student here is to enjoy privileges in a musical education that are within the reach of no other institution in this country or in Europe.

The scope of its courses is such that no limitations are set upon the student's ambition.

Every department under a master. Class or private instruction.

Pianoforte, Organ, Orchestral Instruments and Vocal Music Courses are supplemented by such other branches as Composition, History of Music, Theory, Literature, Expression, Interpretation, Diction, Piano and Organ Tuning, Choir Training and Musical Journalism. The Normal Department trains for intelligent and practical teaching in conformity with Conservatory Methods.

An affiliation with the Emerson College of Oratory gives unsurpassed opportunities to pursue courses in Elocution and Oratory.

The privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences and the daily associations are invaluable advantages to the music student. Diplomas are granted to those satisfactorily finishing their courses, and graduates are eagerly sought as teachers and musicians.

All particulars and year book will be sent on application.

GEORGE W. CHADWICK, Director, Huntington Ave., Boston, Mass.

5K2; p2p2p1; 2p2P1S1; 3R3r1/ S1k4/ 8/ P7/ 4p1P1Q/ P2p3r/ 1S5B/ 8.

White mates in three moves.

Solution of Problems.

No. 833. Key-move: Q—B 5.

No. 834.

1. Q—R 6 / K x R	2. Q—K 1 (ch) / K x Q (must)	3. P—Kt 8 (Kt), mate	
1. ..... / P x Q	2. Kt—B 7 (ch) / K—B 4 (must)	3. Kt—K 4, mate	

These are, probably, the most difficult and striking variations of this most remarkable problem. It will be a pleasurable task for solvers to get the other variations without our assistance.

Solved by M. W. H., University of Virginia; the Rev. I. W. B., Bethlehem, Pa.; M. Marble, Worcester, Mass.; the Rev. G. Dobbs, New Orleans; F. S. Ferguson, Birmingham, Ala.; H. W. Barry, Boston; A. C. White, New York City; A. Knight, Tyler, Tex.; the Rev. J. G. Law, Walhalla, S. C.; C. N. F., Rome, Ga.; W. T. St. Auburn, Grosse-pointe Farms, Mich.; O. C. Pitkin, Syracuse, N. Y.; G. Patterson, Winnipeg, Can.; R. H. Renshaw, University of Virginia.; "Chess-Club," Ouray, Colo.; E. A. C., Kinderhook, N. Y.; E. N. K., Harrisburg, Pa.; Dr. J. H. S., Geneva, N.Y.; S. H. D., St. Thomas, N. D.; Dr. J. L. Cardozo, Brooklyn; H. A. Seller, Denver.

833: "Twenty-three," Philadelphia; W. R. Coumbe, Lakeland, Fla.; M. Almy, Chicago; Z. G., Detroit; P. Moeller, Brooklyn.

Comments (833): "An average"—M. M.; "Clever key and otherwise good"—G. D.; "Beautiful, but not in Mr. Dobbs's best style"—F. S. F.; "Fine"—A K.; "Chaste and complicated"—J. G. L.; "First class"—C. N. F.; "Has many fine qualities"—W. R. C.

834: "Fine key and interesting variations"—M. M.; "Gives Mr. Dobbs a high place among problem-composers"—F. S. S.; "Has few equals"—A K.; "Worthy of its motto"—J. G. L.; "Exceedingly ingenuious and pleasing"—C. N. F.

In reference to 833, the key is not a violation of any rule, for, while the Queen is taken out of *en prise*, she is placed where she can be captured.

In addition to those reported, F. A. Kusel, Oroville, Cal.; [illegible]; N. Hallan, Holyoke, Mass.; and the Rev. S. Ream, Millcreek, Ill., 724.

In giving the award of prizes of our late Problem-Tourney we unintentionally omitted to announce the prize-winner in the Solution Tourney: First Prize, for best analysis of problems, Gen. F. S. Ferguson, Birmingham, Ala.; Second Prize, for best critiques on problems, H. W. Barry, Boston.

The "Studying" (June 6 was won by Black playing [illegible]; White must [illegible].

IN painting the use of Turpentine saves labor and the use of Dryer saves time, but the excessive use of either destroys the paint.

Safety lies in using Pure White Lead and Pure Linseed Oil, and having the paint thoroughly brushed out. This may require a little more time and labor, but it will pay. The paint will be satisfactory and it will last.

If interested in paint or painting, address
